A correspondent writes:—The capital was more than usually *en fête* on the 3rd. It seemed as if the city were trying to celebrate the Imperial Birthday as well as the country's victories at one and the same time. The display of bunting was very fine, while the streets were crowded with sight-seers and pleasure-makers in their best dresses; indeed, the whole city gave one the impression of a New Year's day fête. Kudan and the adjacent Yasukuni Shrine were thronged all day with enthusiastic patriots. Dango-zaka with its exceptionally fine chrysanthemum exhibit presented a pretty and lively scene until long after dusk had enshrouded the city. Ueno Park and its vicinity, with the Museums, the Panorama, and its various other attractions, were filled with happy people in their gala-dresses. Asakusa and the Kwanon Temple also had a busy day, and the pigeons that flutter down from the tall roofs to be regaled with parched peas and other dainties must have been more than satisfied with the hospitable treatment accorded them. Ginza and Nihonbashi were picturesquely lively. The mellow "Indian Summer," or *Koroku natsu* "little six (days) summer" as it is often called, gave a rare day: warm and full of golden sunshine, as if in sympathy with the fête. At every corner of the larger thoroughfares stood vendors of paper-flags, with either the words *Dai Nippon Teikoku Bannai* or *Dai Nippon Teikoku Dai Shori* ("Great Victory"), inscribed thereon. One enterprising firm of druggists gave away thousands of such flags, one side having the patriotic inscription as above, while the other was devoted to a panegyric on a certain kind of invalid-food sold by the firm. Many of the larger metropolitan newspapers published pictorial supplements, the illustrations being often based on patriotic themes, such as the Emperor in council at Hiroshima; the Empress and her Court engaged in making lint; well-grouped bunches of the Imperial flower, the chrysanthemum; scenes from the various battles, etc., etc. The parade outside the inner moat and the vicinity of the approach to the Imperial Palace were crowded all day long, the pedestrians bowing profoundly as they passed by the Palace-gate. Several schools went out on "Autumn Excursions" (*aki undo-kwai*), the students of the Unitarian College in particular spending a most pleasant day at Asuka-yama, where the maples were in all the glory of their rich autumnal tints. One large private school tramped all the way out to Oji, the scenery there being said to be unusually fine this year. Congratulatory dinners and suppers were given in many places, and as the evening wore on the various tea-houses near Shimbashi were well-filled with guests. On the whole Tokyo did its best to celebrate the Imperial Birthday in a befitting manner and the fête was one enjoyed by all.

BIG SAURIANS.

It may not be generally known, but we have the testimony of the *Tokyo Asahi Shimbun* for the interesting news, that lizards five feet in length are not uncommon in "the Country of Manila," by which we suppose our contemporary means the Philippine Islands. At all events a lizard of that size was recently bought by a Japanese for the sum of—let us be exact—one hundred and sixty-six *yen*. He brought the brute up to Tokyo and was preparing to exhibit it in Aso-

kusa, when a sudden and rapid cold carried off his pet to another and it is to be hoped a warmer world. Is then the iguana ever heard of in the Philippines? We very much doubt the reptile's having been a lizard. On the other hand, there is a kind of small crocodile found in the Archipelago, a first cousin of that curious archaic species met with in the swampy places near Wuhu, which has, according to some sinologists, given origin to the dragon-myth in China. Both this and the Manila crocodile are of small dimensions, while the former is very rare and highly prized by museums and "zoos" in Europe. The most interesting true lizard found in the Philippines or their vicinity is that parlous animal the "flying dragon"—a most ungainly, repellent lizard with thin membranes of skin capable of expansion, attached to the fore legs. With the aid of this membrane the lizard is able to make short flights, after the manner of the flying squirrel. But a five foot lizard would be a decided novelty.

SUICIDE OF A MILITARY ACCOUNTANT.

SUCH is the warlike spirit now predominating among the Japanese that we not infrequently hear of the suicide of persons not able to go to the war. Another case of the kind is brought to our notice by the vernacular press. Mr. Ishiyama, a military accountant, whose term of active service expired some years ago, was placed on the retired list. Though not a combatant, he was endowed with a highly martial spirit, and at the outbreak of the war eagerly waited to be recalled to active service. Nothing could exceed his satisfaction, therefore, when one day, soon after the removal of the Headquarters to Hiroshima, he was ordered to proceed to the southern city—he was then living in the Kojimachi district of Tokyo—and to join a certain regiment. He at once started for Hiroshima, wearing a sabre, the blade of which was a family heirloom and which he had caused to be specially mounted for the occasion. After his arrival at Hiroshima he awaited with burning impatience the day of departure for the scene of the war. Whether owing to the change of climate, or to the excitement to which he had been subjected, as the day on which the regiment was to start drew near, he contracted a brain trouble which developed an active form. He was at once removed to the Hospital of the Red Cross Association in Hiroshima, where he was well cared for. As there seemed to be no hope of his speedy recovery, the medical men thought it would be best for him to return home. That was a cruel blow to his warlike aspirations, but he was sent back to Tokyo about the middle of last month and was subsequently placed under the treatment of a military surgeon. His recovery did not advance. At last, angry with the disease that prevented him from carrying out his longed-for wish, he became attacked with fits of furious rage, when he would draw his cherished blade and cut at the pillars and doors of his room. On the evening of the 31st ult. he sent his wife on some errand, then, getting out of his bed, he muttered a few words before a portrait of the Emperor and plunged the blade first into his abdomen and then into his throat. His son, who was in another part of the house, hearing unnatural sounds in the direction of his father's room hastened there to find his father lying in a pool of blood before the Emperor's portrait. He at once sent for his mother and the surgeon, but help was of no avail. The wound in the throat was large enough to admit three fingers.

THE "TENKYO MARU."

THE *Tenkyo Maru*, a sailing vessel about which much has been written, was, as we have already noted, sent back to Nagasaki by the Chinese authorities. She arrived there on the 31st ult. and the next day officials from the Nagasaki Local Office proceeded to the ship and took formal delivery of her. The delivery was of course restricted to the ship and all the articles she contained at that time, for although many things must have been stolen from her by the Chinese, it was impossible for the Japanese

officials to ascertain them with any precision. The Local Office took delivery of the vessel for the proprietor who has been called to Nagasaki to send in his claim. He will it is believed, make a list of those articles which were lost while the ship was in the hands of the Chinese and will demand reparation from the Chinese Government. The crew that brought the ship back to Nagasaki consisted of an Englishman, an American, a Dane, and 20 Chinamen, 23 in all. The foreigners are supposed to be employed in the Chinese Customs House at Taku. The Chinamen apparently belong to the lower classes, as not one of them was able to carry on a conversation in writing. They evidently did not like the notion of coming to Japan, and entertained fears for their safety, for when the local officials visited the ship, they found the Chinamen crouched in a corner not daring to show their faces. The crew was sent back to China in the steamer *Cathay* which left the next morning for Shanghai. As the Chinese Government had detained the *Tenkyo Maru* contrary to accepted international usage, the Japanese were under no obligation to pay the crew's passages home. All that the Nagasaki officials did for them, therefore, was to treat them with courteous hospitality and to enable them to get on board the steamer bound for Shanghai.

A FRENCHMAN AT THE GERMAN COURT.

In a recent issue of *La Revue de Paris*, appeared a most interesting contribution from the pen of M. Jules Simon, in which this distinguished statesman and scholar gives an account of his recollections during his visit in Berlin. He went there at the head of a French delegation to attend a Congress which had been called by Emperor William for the purpose of a general consideration of social problems. It so happened that the ever-memorable event, generally called the "Bismarck Crisis," took place during M. Simon's sojourn in the German capital. He speaks, however, chiefly of his impressions of the Emperor and his personal intercourse with him. Among other things, he says: "I wish to give you a description of the personal appearance of the Emperor, but I am not sure that I shall succeed in this. I never saw him otherwise than in uniform, on the street, in the theatre, at Court ceremonies, and even at the simplest evening receptions. I believe he never wears another dress. On the day to which I refer, he wore the uniform of a white hussar, and as he is very slender, I took him, from a distance, to be a young officer. It is said that he has a special predilection to dress as a hussar in order to conceal the stiffness of his left arm. The fact is, I noticed nothing unusual, and it did not occur to me to observe whether or not he used his left arm with ease. I only know of this weakness from hearsay. Had I met him without knowing his rank, I should have regarded him as a perfectly healthy and luxurious young officer. His face is pleasant, his mien friendly and benevolent; his light brown hair has some gold blonde reflexes. Do you not detect that I am plunging into a style of expression used in passports of former times? However, in order to complete the similarity, I must add that the complexion of the Emperor is somewhat pale. On the whole he made the impression upon me of striking resemblance to our young noblemen of Normandy. He has precisely the same affability and humour. To state the truth, I believe I noticed behind this outward amiableness, something which suggested that it would not be advisable to contradict him in important matters. Perhaps this thought occurred to me because I knew his position, yet I believe I got this impression chiefly from a careful study of his features and his person. This impression was especially made vivid when I saw him in his pageantry in the Throne-room. We were in a neighbouring room, classified according to our rank, and when a group was called, each member thereof would pass in front of the Emperor and Empress, making a very low bow. Their Majesties stood before their chairs upon a low *estrade*. The reader knows the definition of a throne: 'Four boards made of fire-wood and covered with some velvet; its stability de-

pends upon its occupant.' I believe the throne of this young ruler is a very strong seat, and this he demonstrated two days later, when he broke the supposed almighty and everlasting Imperial Chancellor like a glass. The Empress was in deep mourning while the Emperor wore his white gala hussar uniform. On this occasion one would not have taken him to be a sub-lieutenant, as almost happened to me one time. * * * The cloth of his dalmon disappeared under the insignias of every order of the world. It was indeed the Emperor we saw before us—immovable, dispassionate, stern, and as Saint Simon would have said, 'quivering before none.' Before I speak of the conversation I had with him, I must insert a word with regard to his language. He spoke French. Fluent?—Very fluent. Correct?—Perfectly correct. Had he a peculiar dialect?—Not a trace. Of us both, it was he who spoke the purest, for I still retain a little of the Bretonic style, while the Emperor spoke like a Parisian. He asked me laughingly, how I found his pronunciation. You speak like a Parisian, I replied.—'This is not surprising' said he, 'I have a friend'—he is prone to use this term when speaking of his servants—who was with me and instructed me for ten years. He is a Parisian and a purist. Have you noticed that I use an expression which is somewhat doubtful? I am not only an academian, but also a member of the committee for the publication of the dictionary. 'In one single instance, I replied.' He became visibly uneasy. 'And when was that?' he asked. 'A little while ago when your Majesty remarked: We are here to *godailier*!' *Godailier* is good French, it is in the dictionary of the academy, I replied: 'It is in the dictionary, but in the academy one does not say so, nor in the academian salons.' 'I will remember this. And was this the only instance?' 'I swear it, your Majesty is a purist like your teacher!' This incident seemed to amuse him greatly. Later on he furnished me with evidence that he is thoroughly acquainted with our prominent writers. Knowing, as I did, that he concerns himself about the affairs of State and the army, even to the minutest details, and seeing how extremely busy he was in his daily life, I could not understand how he can find time to read our French novels. He assured me that above all else he was fond of family life, and he was never happier than when at home sitting by his wife at the table, like a true Berlinerburger, and could read a chapter from a novel before retiring. This must be true, because he says so, although such a universality seems almost incredible. The Emperor is never unoccupied. He never loses a minute, and grasps everything with astonishing promptness. I was concerned to learn his opinion with regard to our fashionable writers, and it required very little soliciting. He evinced admiration and aversion, both at the same time and with marked emphasis. He expressed great admiration for Mr. George Ohnet, of whom he spoke with the skill of an experienced critic. His aversion for Zola, I may say, was very severe. I undertook to defend my countryman by saying, he is an incomparable story-teller and a far-seeing observer. 'I readily admit that he possesses great talents,' interrupted the Emperor, 'yet he owes his success not to these but the obscene language and turpitude with which his writings are poisoned. You prefer this at present; it incites, and it justifies foreigners in condemning your moral condition most severely.' I felt not at all comfortable while he was saying this, because the Emperor manifested no ill-will towards us in his remarks, nor prejudice against us. 'It is said he will soon publish a new book: you will see how eagerly it will be devoured. Your whole literature will, for the time, disappear before this masterpiece.' I ventured to remark, that it will also be read in Berlin. 'With disgust,' replied the Emperor, and not out of curiosity. Moreover the number of readers here will be strewn very thin, while with you it will found in everybody's hands.' In this he was mistaken: On the following day I inspected the show-windows of the larger book-stores. I could see nothing else exhibited but Zola. In

order to show him to the best advantage, all other books had been withdrawn for the time. I learned that some of the larger houses had to supplement their orders by telegraph. And I heard afterwards that the success in London was in no wise inferior. I was exceedingly anxious to hear a few words about politics from the Emperor, but I could not, without violating the bounds of propriety, draw him out. With all the dexterity at my command and my shammed innocence, I approached him several times, but he developed a perfect art in the manner in which he overheard every word which referred to this subject. In spite of this, however, I succeeded in drawing out two remarks, which notwithstanding their generality, I heard with pleasure. We were speaking of war in the abstract, when he said: 'Since ascending the throne, I have thought over the matter very much, and I think in my position it is better to do good to man than to infuse them with fear.' I tried to enter more fully into the subject by referring to the war between our two countries, and added: 'The vast majority of the French people are peaceably disposed.' I speak to you with perfect impartiality,' said the Emperor, 'your army has worked, it has made great headway, it is ready to strike. If it stood in the arena over against the German army, which is unimaginable, no one could predict the outcome of the struggle. I would therefore regard him insane or a criminal whoever should drive these two nations into a war against each other.'

A NEW COÖPERATIVE COMMUNITY.

Mr. HOWELL's recently published work, "A Traveller from Alturia," has led to the foundation of a new coöperative community. The site is to be Santa Rosa—we suppose the island of that name off the Californian Coast. About two thousand acres have been purchased in a fertile, well-wooded, well-watered locality. Much of the soil is already under cultivation, producing fruit, grapes, grain, and hay in abundance. The government of the colony will be vested in a president, a vice-president, and an executive council, elected by the members. Each person is to labour where his ability can be used to the best advantage. There will be no money, the medium of exchange being in the form of "labour-checks." The pay of a day's work of whatever kind will be uniform, but the number of hours constituting a day's work will diminish in proportion to disagreeableness or the arduousness of the occupation. Members wishing to go abroad may cash their checks for coin of the realm, but they will always be subject to the supervision of the council as long as they remain members of the community. Unquestioning obedience to the decisions of the governing body will be demanded from all. Each worker is to have an equal share in the joint produce; there is to be no private profit, and no special privileges are to be awarded; and all are to carry on the common work in a spirit of fraternity.

The great difficulty that these communities have to face, the rock on which so many of them have suffered shipwreck, is that, in the existing state of society, in which such enormous spoils are offered to those that succeed in the struggle for existence, the best business heads of the coöperative community have constantly before them the temptation to abandon it in order to return to the ordinary paths of individualistic commerce. If all society were a great coöperative community so that opportunities were equalised, and rewards for one particular kind of merit (the faculty of business organization) were no longer so utterly disproportionate to its intrinsic importance, this temptation would be removed; but now it exists, and it has often proved irresistible. Another, though perhaps a minor difficulty in the way of such undertakings, lies in the dullness of life in such a community of enthusiasts, all thinking the same thoughts and all living in the same manner, when compared with the variety and excitement of modern town-life. This craving for variety and excitement, so

peculiarly characteristic of our age, and a product of our peculiar type of civilization, would disappear with the elimination of the forces that have tended to produce it; on the other hand, it is to be remembered, that a universal coöperative commonwealth, would not, like a limited group of socialistic enthusiasts, consist entirely of men and women with one particular bent of mind, but would offer to each member all that a reasonable love of variety could demand. The drift of these remarks is to show that the failure of many coöperative communities more or less similar to that now about to be started at Santa Rosa, is not, as has often been claimed, an effective demonstration of the impossibility of communism in general. A coöperative community in the heart of a competitive society is itself forced into competition with that society, and the terms of the contest are unequal.

THE PARACHUTE FOLLY.

ACCORDING to Mr. James Payn's exciting novel, "By Proxy," it is possible in China to find a substitute even for a criminal sentenced to death, and we imagine that there is better authority for the statement. In Canada, also, it appears to be possible to buy a man to kill himself for the small sum of ten dollars. At Vancouver recently an "aeronaut" named Soper, of Saginaw, contracted "to do the parachute act" for \$150. In his agreement there appears to have been no clause against sub-contract, and he found a man who was willing to act as his substitute for the sum of \$10. This unfortunate man had never been up in a balloon before and not unnaturally he mismanaged his parachute, and fell head downwards for a distance of several hundred feet, the fall being instantaneously fatal. But human life is cheap, and another substitute was forthcoming the next day, the aeronaut-in-chief having, apparently, no intention of risking his own skin. This time, fortunately, though there is no law directly prohibiting such exhibitions, the authorities were able to impound the balloon on some technical pretext, and thus to prevent the ascent.

Only a week earlier at Buffalo, N.Y., another was added to the long list of deaths caused by this parachute folly. The victim this time was a young woman of only seventeen years of age. She had been a "professional aeronaut" for three years, and had made eighteen previous ascents. On this occasion, while about to detach her parachute, she lost her balance and fell headlong for a distance of 1,600 feet. A sad feature of this case is that the girl was to be married in the ensuing week, and that this was to be her last performance of the kind.

In these days of enlightened civilization we look back with contempt on the gladiatorial shows of the Romans, but are there not some features in our own public performances that make us wonder whether our civilization is more than a veneer, beneath which courses as of old the blood of the savage? Bull-fights and prize-fights are little better than the gladiatorial shows; and what is it that attracts enormous crowds to these parachute exhibitions but the half-formed consciousness that there is a possibility of seeing a fellow-creature smashed before their eyes?

TRAIN-ROBBERY EXTRAORDINARY.

Two daring train-robberies were perpetrated in the United States last month. The first was the work of only two men, who stopped the east-bound overland express six miles from Sacramento at about half-past nine one evening and took away four sacks of treasure, worth \$50,000. The robbery was done in such a thoroughly workmanlike manner, that there is little doubt that the robbers were old railway men. The driver of the train was startled by the explosion of two fog-signals which the robbers had placed on the track signalling to him, in the proper manner, to stop the train. As soon as he had pulled up, two masked men, each armed with a Winchester

rifle, appeared. They made the driver and the fireman get down and uncouple the Wells-Fargo express car, which was next the engine, from the rest of the train. All four got back into the cab, and the driver was ordered to take them about half a mile up the line. Then all got down again and went back to the express-car. They called out to the express messenger to open the car. He replied by firing two or three shots through the window, a proceeding which was not relished by the driver and fireman, who had the robbers' repeating rifles prodding them in the back, and ran quite as good a chance of being hit by the express messenger's shots as the robbers themselves. One of the robbers then fired a shot in through the window of the car, and called out that they would shoot the driver and the fireman unless the messenger opened the car, and would then blow up the car with dynamite. These persuasions were irresistible, and the express messenger opened the car and unlocked the safe. The robbers then made the driver and the fireman carry the treasure back to the engine, having a parting and ineffectual interchange of shots with the express messenger on the way. The robbers got on to the engine, made the driver and the fireman uncouple it from the express car, and steamed away with their booty. A few miles up the line, they left the engine, which they reversed and sent flying back towards the express car. As the fire was almost out, however, the engine slowed down and did little damage when it crashed into the car. The robbers had not been arrested when the mail left.

The other robbery was of a similar character, and took place only twenty-four hours later on the Richmond, Fredericksburg, and Potomac Railway, in Virginia. Here, as in the other case, the train was signalled to stop. It was then surrounded by seven masked men, who fired a number of shots over the train to intimidate the trainmen and the passengers. They then told the express messenger to open the car. He refused, and the robbers blew the door to pieces with dynamite. One man then entered the car, and covering the messenger, gave him thirty seconds in which to decide to open the safes. The robber took money said to amount to \$150,000. Meanwhile, the other men waited outside in cheerful conversation with the passengers. They then uncoupled the engine from the train and sent it flying up the line, while they decamped with their booty. The loosed engine would have collided with a passenger train had not a signalman, whose box it passed, turned it into a siding, where it was wrecked against some coal trucks.

THE "KEISAI" ON JAPAN'S REVENUE.

JAPAN is capable of great progress, writes the *Keisai*, as is evident from the past history of her commerce, and from observation of its present condition. The commerce of Japan is still in an infantine stage, with the annual exports not exceeding 90 million yen and the import duty not more than 3 millions. The yearly revenue of the country is only 80 million yen or so, a quite inadequate sum. It should be at least double. The *Keisai* thinks that the only way to increase the revenue is through the customs duties. That is the chief source of income to Western countries and Japan should follow in their footsteps. Her foreign commerce must be encouraged, and to attain that object export duty should be abolished, more ports opened for foreign trade, import dues done away with, harbours improved and insured warehouses established. If all those matters are properly attended to the *Keisai* does not doubt that Japan's foreign commerce will be considerably augmented. In order to make the necessary preparations, the national outlay may for a while exceed the income.

DISCUSSION IN THE TOKYO CITY ASSEMBLY.

THE Tokyo City Assembly has once again been the scene of unusual disturbance in connection with the Water-works. A few weeks ago the Assembly voted want of confidence in the City Council on the ground that the latter

had failed to construct the Water-works as promptly as had been originally proposed. It was expected by the Assembly that the members of the Council would act upon the hint and resign their posts. The Council, however, appeared to ignore the vote of the Assembly. The latter were highly incensed at what they regarded as contempt of their decision, and their last meeting was of a very stormy character. The Assembly was convened to deliberate on the Bill introduced by the Council asking that the period for constructing the Water-works should be prolonged, the same bill which had been sent in on the occasion when the vote of want of confidence was passed. When the Chairman, Mr. Kusumoto, had explained why the meeting was convened, one of the members read the report of the Special Committee elected to enquire into the construction of the Water-works, which was to the effect that though the Committee recognized that the prolongation of the construction of the Water-works till the 31st fiscal year (1898) was unavoidable, they considered it necessary that the portion connected with the Hongo Reservoir should be finished by June, 1896. A hot debate then ensued between the Anti-Council Party and those members who backed the Council, whilst one of the Firm Policy Party moved that the persistent action of the Council be declared improper, and that all matters relating to Water-works construction subsequent to 1895, the period originally decided, should be ignored by the Assembly. Upon the Chairman's asking the opinion of those present on the above motion, 25 supported and 26 opposed it, and the motion was therefore rejected by a majority of only one vote. The meeting was then adjourned. The Bill is to be again discussed, and it is believed that the Assembly will follow the course advised by the Special Committee.

PROFESSOR OMORI'S REPORT ON THE RECENT EARTHQUAKES.

PROFESSOR OMORI, who was despatched by the Seismological Society to Yamagata and Akita to make investigations in connection with the recent terrible shocks felt in those districts, has forwarded from there to the Society the following brief report. After the recent earthquake, as on the occasion of the shocks that visited Mino and Owari a few years ago, extensive fissures in the ground were found in many places. There was also emission of sand besides subsidence of land and other interesting scientific phenomena. At Sakata many houses show how intense must have been the upheaving motion of the shock. The intensity of the shocks felt at Sakata must have been somewhat greater than those felt at Gifu on the same occasion. The area of the shock appears, however, to have been comparatively small, and the centre of disturbance not to have been situated very deep.

DEA EX MACHINA.

SOME people do seem to have the very hardest kind of luck. On the 20th of last month an enterprising and hardworking burglar entered the residence of a wealthy merchant in Nishikata-machi, Hongo District, Tokyo, during the absence of the latter. It was in the forenoon, and even the mistress of the house had gone out shopping, nobody being left at home but two maid servants. As both of these were at work in the kitchen, the burglar had the field to himself, and expeditiously and skilfully made up a large bundle of clothing, which he proceeded to wrap up in a handsome *furoshiki* taken from one of the closet shelves. Having got together about as much as he could carry, he set out cheerfully for home with his heavy burden, solacing himself with the reflection that he had done a good day's work and that this world was not without its pleasant features. From Nishikata-machi, to Kanda is quite a long walk, and by the time the burglar got to the latter place his arms were aching with the weight of the load. At other times

frugal in the extreme and not given to self-indulgence, the robber now thought it not inconsistent with the dictates of prudence to call a *kuruma*, however, much he grudged the expense. Nobody had stopped him hitherto, for nobody had suspected him to be a burglar. But just as he was about to step into a passing *kuruma*, a shrill voice called out, "Where did you get that *furoshiki*? It's mine I'm sure!" Looking around, the burglar found himself face to face with the mistress of the very house he had robbed. In the meanwhile, the woman was fumbling with the bundle and uttered an ejaculation of surprise on finding unmistakable articles of her own clothing contained therein. This was cruel for the tired man, and he resolved to get rid of the importunate claimant by fair means or foul. "Madam," he replied, "a curious story is connected with the manner in which I obtained these articles. If they really are yours, I shall at once return them. Oblige me with a five minutes' interview, and I'll tell you all: but not here in the open street. Let us choose some quiet thoroughfare." Her woman's curiosity aroused, the mystified claimant consented to this proposal and was speedily led behind some houses in a by-street. Here the man, without a word of warning, began beating her fiercely over the head, evidently with the intent of knocking her senseless. In this he was again—unfortunate fellow—unsuccessful, and her cries of *dorobo! dorobo!* being loud enough to start an intermediate resurrection, let alone arouse the police, he decamped, leaving his precious bundle on the ground. Subsequent investigation showed that he had not managed to make off with anything whatever. With the exception of one *haori*, everything in the *furoshiki* belonged to the lady's wardrobe. The unlucky burglar is still at large.

A RASH DEED.

THE *Osaka Mainichi Shinbun* has a sad story to tell of a sentinel in that city who neglected to keep proper watch while at his post. It appears that on the evening of the 29th ult., while the patrol was going the rounds, a soldier on guard in front of the barracks in Higashi District, was found "resting" on his gun the bayonet of which he had removed in order to use the weapon as a support. It was a cold and rainy night and the sentinel had moreover thrown the cape of his great coat over his head, so that he neither saw nor heard anything. A severe reprimand was at once administered to the careless watcher, who was threatened with court-martial. The next day the soldier, who believed that all chance of getting to Korea, not to speak of future preferment, was at an end, sent off two brief letters: one to an intimate friend, to whom he announced that "he should expiate with his life a fault that he had committed;" and the other to his former master, whom he begged not to be angry even though he should leave this world without seeing him and thanking him again. After having despatched these messages, the desperate man took a sword-bayonet and plunged it into his own throat, completely severing a large artery and dying at once.

PRINCE WI-HWA AT THE PALACE.

THE *Asahi Shinbun* speaks in a somewhat unfriendly strain concerning the visit of the Korean Envoy, Prince Wi-hwa, to the Imperial Palace and his reception by H.M. the Empress. The Prince was, says our contemporary, in the first instance greatly impressed with the size and grandeur of Tokyo, and was literally struck dumb by the elegance of the approach to the Palace itself. On being received by Mr. Sannomiya and the gold-laced body of Household officers, the prince stood still with wonder. He had never seen so much gold-lace and elegance in his life. The next step brought him into the presence of a number of Court ladies in full European Court costume. Here again the princely legs refused to do their office for quite a while: he could only stare with surprised delight at the bevy of magnificently dressed ladies about him. Upon finally being admitted into the presence of the Empress, the Prince was quite at a loss

for suitable words, and could do nothing but make repeated and deep obeisances. The *Asahi* then proceeds to enumerate the gifts made by the Korean Government, through its Envoy, to the Empress. Item: one six leaved screen with brass corner-pieces; item, several pictures of scenes in Sōul; item, a pair of Korean flower-vases, of very ungainly workmanship; item, four cranes, three with black heads, and one with a red head. The *Asahi* makes the gifts sound very poor, but the whole description is little short of being malicious.

INNER WORKING OF THE SPECIAL SESSION OF THE DIET.

PRIOR to the opening of the Special Session of the Imperial Diet, remarks the *Fiji Shimpō's* Hiroshima correspondent, party feeling ran very high. The intensity of political sentiment was noticeable not only between the Radicals and the strong Foreign Policy Party (*Taigai Kō-ha*), but even in the latter heterogeneous mass itself. With regard to the competition for the Presidency, the Radicals had intended soliciting the support of the Independents, and in return for having some Independent nominated to the Vice-Presidency, they were in hopes of obtaining the President's chair for themselves. Concerning this point difference of opinion was at first noticeable among the strong Policy partisans, but they soon perceived that anything of the kind was calculated to jar the smooth working of the coalition for the Presidential seat. They therefore decided to support Mr. Kusumoto as before. For Vice-President Mr. Sassa, a National Unionist, was first choice, but as his party preferred rather to have certain matters concerning which they were very much in earnest carried out than to obtain the nomination of this gentleman, the Vice-Presidency at last fell into the hands of Mr. Shimada, the Progressionist leader. Again, in the matter of electing the Chairman of the Whole House, the Radicals supported Mr. Taguchi, the Economic Reform Party leader, while the Strong Policy factionists were determined to have the post for Mr. Suyehiro. The result of the competition was another defeat for the Radicals. By this time the relative strength of the two opposing parties had become clear, and the Radicals were convinced of their own inferiority, even if backed by the Independent combination. It was the intention of the Radicals to introduce the project of a Representation on the subject of the present war. Such a step was not considered objectionable by the Strong Policy partisans; and as the Radicals desired to carry out their resolution with the aid of the largest obtainable majority—in order to render the Representation all the more efficacious—they shut their eyes in ancient party animosity and did their best to arrive at a compromise in the matter with the Strong Policy people, to the latter's great surprise. Now the Strong Policy members themselves contemplated the introduction of a Resolution thanking, in the name of the Lower House, the Army and Navy for the distinguished services rendered by them to the country. The Radicals somewhat objected to that step, on the score of its being premature. The Strong Policy party had also another bill on the stocks, those chiefly interested being the Progressionists, the object of which was to express the resolution of the House that the Empire should refuse the intervention of any foreign Power at the present juncture, and that unless China be willing to cede a portion of her territory and pay a large indemnity, Japan ought not to agree to peace. To this objections were again raised, not only by the Radicals but also by several members of the Strong Policy party itself; for it was argued that any resolution of the kind would be open to the charge of infringing on the Emperor's sovereign prerogative of making peace and war, and also be highly objectionable, as giving to the public the foreign policy about to be pursued by the Empire. Thus it was that the projected Representation of the Radicals as well as two bills which either the Strong Policy party, or a fraction of that party, desired to bring forward, appeared likely to come to naught.

at this point the out-come of the Budget Committee's proceedings showed quite clearly that the Government already had under consideration the chief items mentioned in the Representation of the Radicals. There was thus no need to carry this particular project any farther. The Progressionist programme was also withdrawn on account of objections raised by a portion of the Strong Policy representatives, and so it came about that two projects, upon the furtherance of which two great parties had bestowed no little pains, became unavailable. This was, however, deemed very regrettable by the respective politicians, so the Radicals and Strong Policy people came together and drew up a new Representation. It was for that reason that the phraseology of the Representation was of so ambiguous a nature; and the absence of any distinct declarations is attributable to the same cause. Yet the bill as agreed upon was not altogether without its use, for it served to foster friendly relations between two parties until that time bitterly opposed to each other. When the Resolution concerning the vote of thanks to the Army and Navy was introduced, the Radicals no longer stuck to their first objections and lent their support to the bill. It was in this curious way that all the bills, whether official or private, were carried through with the unprecedentedly unanimous support of the whole House.

BUDDHA AS A CREDITOR.

AN excellent story is told by the *Meikyo Shin-shi*—we find it also narrated in the *Asahi Shimbun*—concerning a most unselfish and patriotic act performed by an old lady of Echigo. She is stated to be sixty years of age and the mother of a resident of Miyo-mura in that province. Some time ago she retired from active work (*inkyō*) and set up a small separate establishment on a monthly allowance from her son. But Madame Misa is a devout member of the Zenkoji in Nagano, one of the most famous and ancient temples of the Jōdo Buddhist sectarians. The Zenkoji priesthood are noted for their sermons on future reward or punishment, and so the devotees of the temple are in the habit of making frequent presents of *omiyage-kin*, or money offered to Buddha as a security for happiness in the next stage of existence. Not having a large enough income to devote much to this purpose, the old lady has been accustomed to pass her time in sewing and embroidery, earning in that way some two or three *yen* a month. A little over three years ago she made a solemn vow to present a sum of one hundred *yen* to the temple, and by dint of hard work and economy managed to get that amount together by the end of last month. But Misa was no less patriotic than sincere in her religion, and seeing that many of her fellow-villagers were contributing to the war-fund, she resolved to give to the Authorities the whole sum that she had so painfully amassed. "Should I thereby lose salvation," she declared, "I am the only one to suffer; but with the funds I have got together many people can be helped and the cause of my country furthered." The money was accordingly handed over to the authorities as a free-willing offering. But there remained Zenkoji to settle with. So Misa set out with a trembling heart for the temple, and, on her arrival, begged one of the officiating priests to place a small document, which she had brought, on the altar. This was done, and after long prayer the patriotic old lady returned to her own home. The document is unique in its way, and reads as follows:—

ACKNOWLEDGEMENT OF DEBT.

One hundred *yen*.

It is my duty to present your Lordship with the above sum this month, according to my solemn promise, but a pressing need having occurred, I venture to withhold it for the present (I'll borrow it of you). These are facts. But I promise to lay up all I can spare and in five years' time to repay this loan. If I die before the full sum is paid up, I shall not complain, however great may be the punishment inflicted upon me. This deed has reference to the future. (Signed) Misa.

To His Lordship Amida Nyorai.

The conflict between patriotism and religious

superstition is evident from the above; but there can be no doubt that "His Lordship Amida Nyorai," otherwise Buddha, ought to be better pleased with Madame Misa's patriotic act and zeal than if he had received the hundred *yen*.

TWO SKETCHES.

IN a recent edition of the *Yamato Shimbun* there is a timely illustration not at all badly conceived. It represents a Japanese sailor of gigantic dimensions standing with one foot on the Liau-tung Peninsula and the other on Korea, while he bends forward and with a furious puff of wind from his mouth drives the Chinese fleet at a rapid rate towards the mouth of a river which may be the Peiho. The sketch would seem to show that it is believed that the Chinese fleet will make its last stand somewhere near the water-approach to Peking. On the other hand, the *Forosū Chōhō's* skit is not quite so clear. A pig dressed in foreign garb is standing on a marshy beach, marked "Yokohama," and is making frantic signals to a large man-of-war steaming directly toward it. The distress and excitement of the pig are quite evident despite the roughness of the sketch.

A BIG HAUL.

VISCOUNT AKIMOTO's residence at Kita Kōgacho, Suruga-lai, was visited by thieves on the night of the 29th ultimo. They cut their way through the thick glass windows of one of the godowns and succeeded in making off with a varied and valuable assortment of articles. No less than one hundred and fifty pieces of clothing, mostly silken, were taken, besides gold and silver ornaments, rare lacquer work, etc. The lowest estimate put on the missing things is eighteen hundred *yen*. The thieves were apparently over three hours at work and got away safely, leaving nothing by which they might be traced. Up to the third inst. nothing had been discovered of the whereabouts either of the goods or their unlawful possessors.

TIMELY WARNING.

A PARAGRAPH appears in several of the vernacular journals warning people against two swindling adventurers, named Ozaki and Yamagishi, who come from Niigata Prefecture. They are said to be men of good address and by no means illiterate, both having even a good acquaintance of English. They play the old confidence-trick on a large scale, and have recently been very successful in defrauding other people of heavy sums of money. One merchant of Kashiwa-zakki-mura was done out of over twenty-three thousand *yen* the other day, and in such a way as to render the recovery of the amount very difficult. Their warning is evidently timely.

AN ACCEPTABLE CONTRIBUTION.

THE wife and female relatives of a well-to-do house-contractor resident in Kobiki-cho, Tokyo, recently sent in to the Military Authorities several cases of very acceptable gifts for the soldiers afield. These include no less than three thousand large tins of boiled beef, every bit having been prepared and canned by the ladies themselves, no servant being allowed to take part in the patriotic work; and another thousand tins of dumplings (*dempu*) made of dried bonito, a very tasty and strengthening kind of food. Altogether sufficient was sent to feed about one thousand men for nearly five days. The *Miyako Shimbun* reports that the fair workers will soon have another donation ready, quite as large as the first.

SUPREME COURT, SHANGHAI.

THERE will be general satisfaction, says the *N.C. Herald*, at the news that Mr. George Jamieson is to act as Chief Judge and Consul-General during Judge Hannen's absence on leave, and that Mr. H. F. Wilkinson has been appointed acting Crown Advocate.

THE CONCERT IN TOKYO.

WE desire to draw our readers' attention to the fact that the concert in Tokyo, originally fixed for the 10th instant, has been postponed until the 14th inst. in consequence of the decease of His Imperial Majesty the Czar.

WAR NEWS.

MONDAY, NOVEMBER 5TH.

On Friday the 2nd instant a Shanghai telegram, despatched from that place at 11 a.m., announced that Feng-hwan had been taken by the Japanese and that the Chinese had fled to Mo-tien-ling. There was a disposition to credit this intelligence, despite the taint attaching to all news coming *via* Shanghai. The Chinese army, it must be noted, is in direct telegraphic communication with Tientsin, whereas the Japanese troops necessarily advance faster than the engineer corps can construct a line of wires. According to the latest intelligence, Chin-lien has been telegraphically connected with Wi-ju. But Feng-hwan is 33 miles beyond Chin-lien. Consequently, news can be sent from the former place to Shanghai by the Chinese about 12 hours more quickly than it can be sent by the Japanese to Hiroshima. Shanghai might, therefore, have been informed of the fall of Feng-hwan on the 2nd instant while Tokyo remained in ignorance. But the difference could scarcely have exceeded a day, and as no confirmation was received in the Japanese capital up to the night of the 3rd, people began once more to think that Shanghai was continuing its occupation of circulating canards. Further, Mo-tien-ling is a town 75 miles beyond Feng-hwan on the road to Moukden. Why should it be mentioned as the Chinese army's place of retreat? Nevertheless, in this instance Shanghai proved correct for once. A telegram dated at Chin-lien on the 3rd instant at 2.20 p.m. and received in Hiroshima at 10 a.m. on the 4th, says that Major-General Tachimi's brigade entered Feng-hwan on the 31st ultimo. Apparently no opposition was experienced. A part of the enemy fled in the direction of Moukden, a part toward Hai-chien, and a part toward Takushan. For the benefit of non-geographical readers we may interpret these movements more intelligibly by saying that the Chinese fled to the north, to the west, and to the south. Those that made Hai-chien their objective point, evidently desire to reach Newchwang, while those that headed for Taku-shan (near the mouth of the Yalu) probably hope to make their way back to Port Arthur. The intelligence is very important. It shows that the Chinese forces immediately north of the Yalu have lost all cohesion, and that the effective idea of each component division is to get back to the place from which it originally made its *début* in the campaign. After the fall of Chin-lien, a considerable force of the defenders fled down the Yalu to Ta-tung, thus eliminating themselves completely from all subsequent operations for the defence of Moukden. The remainder retreated to Feng-hwan where, doubtless, a numerous garrison was already assembled. Now Feng-hwan surrenders without striking a blow, and the forces concentrated there fly to three different points of the compass. It is added that the principal Generals retreated in the direction of Moukden, but from the above facts we may nevertheless infer pretty thorough disorganization of Chinese opposition to the Japanese army's advance upon Moukden. Indeed, a telegram sent from Shanghai on the 4th instant says that the Chinese defence of the Moukden road has completely collapsed. The same telegram reports that Feng-hwan has been burned. That is partially confirmed by a telegram in the *Nichi Nichi Shimbun* to the effect that the Chinese evacuated the place on the night of the 30th, having previously set it on fire. Field-Marshal Yamagata telegraphs that the inhabitants of Manchuria, harassed by the violence and rapacity of the Chinese soldiery, welcome the advent of the Japanese Army. That is easily conceivable. In no case do we hear of any looting of houses or sacking of towns by the Japanese troops. They seem to be conducting their warlike operations with the utmost moderation and good discipline.

From Feng-hwan to Moukden the distance is about 135 miles. It is evident that Field-Marshal Yamagata's Army is moving with considerable celerity. Chin-lien was captured on the 26th of October after three days' operations that should have entailed the capture of

some rest. In view of that fact and also of the circumstance that a column had been detached to pursue the Chinese fleeing westward to Antung and Ta-tung, we did not suppose that the northward movement would have been resumed before the 29th ultimo at soonest. But since Major-General Tachimi's brigade entered Feng-hwan on October 31st, and since Feng-hwan is 33 miles from Chin-lien, the advance from the latter place must have been resumed on the very day after its capture. The Japanese organization must be very complete to permit such uninterrupted continuity of progress in an enemy's country. Assuming 6 miles *per diem* as the future rate of advance, the 23rd instant should see the Army under the walls of Moukden. As winter is so close, however, the army may be pushed on even faster. The whole month of November is excellent weather for campaigning in southern Manchuria, and Moukden, after all, lies below the 42nd degree of north latitude.

The alleged conduct of the Chinese in setting fire to Feng-hwan—assuming the intelligence in that sense to be correct—suggests that they may have conceived a programme of embarrassing character. It is perhaps their intention to retreat before the Japanese, without offering armed resistance but laying waste the lands and burning the houses in all the districts south of Moukden. That would be an astute proceeding. It might cause the Japanese some inconvenience. But are the Chinese likely to attempt anything so resolute? We do not think so. To be successful such a programme must be thorough. It would not do to burn one-half of and city and leave the other half intact. Feng-hwan is said to be a town of 20,000 houses. There is very little probability that it has been reduced to ashes. Such a catastrophe could not fail to be noted by Field-Marshal Yamagata in his telegram announcing the capture of the place. His silence, and the absence of any official telegram on the subject, leads us to think that the conflagration set on foot by the Chinese soldiers was a trifling affair.

Field-Marshal Yamagata telegraphs that after the engagements immediately preceding the capture of Chin-lien, more than 300 Chinese soldiers were found dead upon the field. His Excellency adds that the spoils taken in the campaign to the north of the Yalu—*i.e.* in Manchuria—now aggregate 55 cannon, 1,500 stand of rifles, 20,000 rounds of field-gun ammunition and 2,500,000 rounds of small-arm ammunition. Thus the total number of field-pieces lost by the Chinese since the commencement of the campaign in Korea is 105.

The following telegram addressed to the Minister President of State, Count Ito, by the Commander-in-chief of the First Army, and despatched from Chin-lien at 8 a.m. on the 4th instant, is published by the *Nichi Nichi Shimbun*—

Having definitely entered the enemy's territory, it becomes necessary to take thought for the affairs of the people and their disposition toward us. During the past few days I have caused notices to be exhibited in various places, informing the people that the Japanese troops would not do any injury to innocent persons and urging them to resume their various occupations in tranquillity and confidence. The result has been very good. People who had left their homes fearing violence are now gradually returning, and some are even offering their services to our Army. Deeming it advisable under the circumstances, I have remitted all taxes for the year and for the purpose of distinguishing between military and civil affairs I have established the Civil Administration of the First Army in Antung and have appointed Mr. Komura, First Secretary of Legation, to hold the chief office therein and to hear all complaints that may be preferred. I have the honour to inform your Excellency of these facts.

(Signed)

YAMAGATA.

Dated at Chin-lien, October 30th.

The Shanghai telegram alluded to above as having been despatched from that place on the 2nd instant, says that Chin-chiu was then being attacked and that Talien and Port Arthur were in imminent danger. That may be true, though we can scarcely believe that Chin-chiu would have remained in telegraphic communication

with Shanghai after its investment by the Japanese army. We still remain uncertain as to the exact place of the Second Army's debarkation. The *Kokkai* gives Kwa-yuen-ken as the spot, and says that it is 4 days' march from Chin-chiu. But Kwa-yuen-ken written with the ideographs that the *Kokkai* employs, is not marked upon our maps, and 4 days' march is evidently a variable quantity. The *Yiji Shimo*, with equal confidence, says that the place of debarkation is 38 miles from Chin-chiu, thus evidently indicating Pi-tsz-wo: That is a statement already put forward by more than one authority, and seems after all to be the most trustworthy of the various indications hitherto published. But although the *Yiji* may be right as to the place, we cannot accept its calculation that the march upon Chin-chiu should have been accomplished in 3 days. Armies have marched at that rate before now, but not under the circumstances existing in the Liau-tong Peninsula. Six days seems to us a more reasonable estimate. Another correction has to be applied to the calculations of the vernacular newspapers:—They seem to think that an army can commence its march inland immediately after debarkation. That is practically out of the question. One of the quickest things on record is the procedure of the Gen-san column in the Phyang-yang campaign: the troops began to move westward 2 days after their landing. In that case, however, there was exceptional pressure: the whole campaign north of Seoul had been interrupted in order to allow of the Gen-san column's participation. Even if equal rapidity was achieved by the Second Army in the Liau-tong Peninsula, its march against Chin-chiu could not have commenced before the 29th ult., and the assault could not have been delivered before the 3rd or 4th instant. Thus in this instance also we believe Shanghai to have romanced as usual. The latest intelligence we have of the Second Army's movements is contained in a telegram from Hiroshima under date 9 a.m. on the 4th instant. It says that since the landing of the Army no special intelligence has been forwarded by General Oyama, but that, according to information furnished by the officers of a transport that had returned to Chemulpo, the Army began to land on the 24th October and the debarkation was completed on the 29th, Hwa-yuen-ken being the place. General Oyama and his staff landed on the 26th instant. The houses in the vicinity were only those of poor peasants and were deserted by their owners, who had witnessed the landing of the troops with great consternation. Extraordinary quantities of oxen, horses, pigs, beans, firewood, and charcoal were found, however. In consequence of re-assuring notifications issued by Count Oyama, the people were gradually returning to their homes.

According to the *Hochi Shimbun*, a telegram from Hiroshima dated 8.20 p.m. on the 2nd instant says that the whole of the Chinese ships effected their escape from Port Arthur at the first sign of a Japanese campaign in the Liau-tong Peninsula and are now lying in Wei-hai-wei. It is difficult to know what to believe among the various reports circulated as to the whereabouts of the Pei-yang Squadron. The *Shogro Shimo* says that a Japanese squadron of 8 ships reconnoitred Wei-hai-wei a few days ago, and saw a number of Chinese vessels lying there under the guns of the forts. The Japanese squadron consisted of 2 men-of-war and 6 converted steamers, so that had the Chinese ventured out they ought not to have found much difficulty in winning a first victory. But they did not venture out.

Torpedoes laid in narrow waters sometimes prove more destructive to those that lay them than to those whom they are designed to destroy. There have been several cases reported of Chinese junks blown up by striking torpedoes intended to keep off the Japanese. Another instance is now reported from Foo-chow. The river Min has been placed in such a thorough state of defence that a Chinese ship with a cargo of 6 guns at Foo-chow was shattered by a

torpedo. The *Shogyo Shimpō*, from which we take this information, does not mention the date of the incident.

If we may trust a telegram published by the *Kokkai*, the defenders of Feng-hwan were thrown into a state of great confusion by the fall of Chiu-lien and could not agree upon any plan for the defence of the place. That tallies with their subsequent conduct in evacuating the place without awaiting an assault.

Here is a typical specimen of the items with which some vernacular newspapers regale their readers during the intervals between important warlike operations:—"The First Japanese Army advanced to-day to a certain place and is bent upon taking Feng-hwan."

The *Nichi Nichi Shimbun* says that the Chinese Government is experiencing very great difficulty in obtaining recruits. Agents have been sent into all the provinces and tempting rates of pay are offered. The intention is to collect as many men as possible and distribute them equally between Shan-hai-kwan and Port Arthur. How it is proposed to get Chinese troops to Port Arthur at present we are at a loss to conceive.

In the *Fiji Shimpō* we find a telegram, again from veracious Shanghai, to the effect that the number of Chinese troops in Feng-hwan is 15,000. The same telegram says that there are an equal number of troops in the neighbourhood of Chin-chiu and Talien. Port Arthur being accredited with a garrison of 13,000, it results, if we believe Shanghai for once, that there are 28,000 Chinese braves confronting the Second Army in the Liau-tong Peninsula.

A curious piece of news is published by the *Fiji Shimpō*. It comes from Shanghai, and is to the effect that Mr. G. Detring, Commissioner of Customs at Tientsin, has left that place for Peking, having been summoned thither by the Emperor, who desires to learn the facts about the war from the lips of a foreigner. That is too good, even for Shanghai. Mr. Detring is a man of remarkable knowledge, and if the Chinese Emperor really wanted a foreigner for such a purpose he could not choose any one better qualified. But how on earth can Mr. Detring be supposed to know anything about the war that the Emperor does not know, unless, indeed, his Majesty has adopted the creed professed by foreigners in general, namely, that the higher one gets among Chinese officials, the more profound the ignorance one finds of everything Chinese.

The *Nichi Nichi Shimbun*, on what authority we do not know, says that the Chinese Government does not credit the presence of Japanese troops in the neighbourhood of Port Arthur, but believes that the Second Army has advanced northward with the object of attacking Chin-chiu from the West.

It is stated that between Feng-hwan and Moukden no position capable of strong defence offers south of Liao-yang, which is 98 miles from Feng-hwan. The river Ta-tsz flows past Liao-yang and greatly contributes to its defensive capabilities. But we do not believe that any effective resistance will now be offered on this side of Moukden.

In the *Yomiuri Shimbun* we find a statement that some 80 Tong-haks having assembled at Shyon-jiu and behaved in a lawless manner, a Japanese sergeant of gendarmes with 11 privates soldiers were sent against them on the 25th ultimo. The insurgents fired on the Japanese, and the latter, returning the compliment, shot the rebel leader. His followers were at once dispersed but were pursued and eleven of their number were captured. A party of 13 soldiers under the command of a gendarme received orders to continue the pursuit.

TUESDAY, NOVEMBER 6TH.

On the afternoon of the 5th inst. the *Chuō Shimbun* published the following telegram said to have been received from Hiroshima:—

The Second Army, which landed on the Chin-chiu Peninsula, has assaulted and taken Chin-chiu and advancing at once against Port Arthur has taken that place also after a violent engagement.

None of the leading journals published any similar intelligence nor have official telegrams in that sense been received from Hiroshima. We are therefore compelled to question the correctness of the *Chuō*'s information. Besides, the telegram itself is intrinsically difficult to credit. The Second Army did not commence its southward march, so far as we know, until the 30th ult. It had then 15 *ri* to traverse before reaching Chin-chiu. Assuming that it marched 3 *ri* daily, it could not have been up to the walls of Chin-chiu until the evening of the 3rd. There is, however, a strong probability that General Oyama would have strained every effort to deliver the assault on the 3rd instant. That he may have managed to do, but even then, how could the news have reached Hiroshima by 9.10 a.m. on the 5th instant? Moreover, Port Arthur is 15 *ri* (37½ miles) beyond Chin-chiu. If the latter place was taken on the 3rd, and if General Oyama, followed up his victory with the utmost possible celerity, a pursuing column of Japanese troops might have reached Port Arthur on the evening of the 5th. But Port Arthur is not the kind of place against which any General would venture to send a few hundred soldiers without ample provision of supports and reserves. These considerations force us to conclude that the *Chuō*'s telegram is untrustworthy.

Very likely Chin-chiu was assaulted on the 3rd inst., but we shall not receive the news until the night of the 6th or the morning of the 7th. We may here quote from the *Fiji Shimpō* the following telegram, said to have been sent from Hiroshima at 11.20 a.m. on the 4th inst.:

The Second Army concluded the landing of its horses, stores, and other war material by the 29th ult. at Hwa-yuen ken. The whole body of troops then advanced with the intention of assaulting Chin-chiu on the 3rd inst. Simultaneously with the advance of the troops, the Navy in full strength was to commence attacks upon Talien and other important harbours. It appears therefore that in accordance with previous arrangement Chin-chiu and Talien were to be taken on the 3rd inst. by way of celebrating His Majesty's Birthday.

The *Fiji* publishes another telegram said to have been despatched from Hiroshima at 1 p.m. on the 4th inst. It runs thus:—

In the naval attack upon Talien a number of torpedoes were taken by our ships.

From this we infer that Talien is already in the possession of the Japanese Navy. The approaches to Talien were understood to be thoroughly defended by torpedoes. Details of the naval operations there are awaited with interest.

The movements of the Chinese ships naturally attract great attention just at present. A telegram from Shanghai published by the *Fiji Shimpō* says that 15 or 16 war-vessels left Wei-hai-wei on the 2nd, but it was not known whether they intended to engage the Japanese squadrons or whether they were going to convoy transports. It was believed by some that their object was to assist in the defence of Talien, but if that were so, a naval engagement must have taken place before now.

Between Feng-hwan and Shan-hai-kwan, a distance of 200 miles, there are six strong positions, says the *Yomiuri Shimbun*, which the Chinese would be likely to hold against an invading army, namely, Chu-liu-ho-sz, Hwang-ning, the Ta-ling river, Siao-ling, the Ming-yuen river, with Sha-chwan-au-chang, and the Lin-shin river. The country between the two places is intersected by a number of rapid, deep rivers, all offering serious obstacles to the progress of troops, especially the Ta-liao, which rises on the borders of Mongolia, and flows past Newchwang into the Liau-tong bay.

WEDNESDAY, NOVEMBER 7TH.

Official telegrams from Chiu-lien show that the occupation of Feng-hwan took place at an earlier date than that indicated by previous intelligence. The advance guard reached that town on the 28th ultimo, and on the appearance of the Japanese troops the Chinese set fire to the place and fled. The following morning the advance guard occupied Feng-hwan, capturing 3 mountain guns, 2 mortars, and a quantity of

small arms, tents, and ammunition. On the 30th ultimo, Major-General Tachimi's brigade entered the town. The brigade can not have left Chiu-lien before the 27th. Hence it traversed the distance of 33 miles between the two places in less than 4 days—a rate of advance not hitherto attained during the campaign. It is extremely improbable that any such speed will be maintained between Feng-hwan and Moukden, but we may at all events conclude that the Army is pushing on as fast as possible.

We noted in previous issues that the movements of the Chinese troops when evacuating Feng-hwan indicated complete demoralization. They fled in three directions, north, west, and south, evidently abandoning all idea of subsequent cohesion. The official telegrams confirm that view. They say that, according to statements of the prisoners, the Chinese soldiers all fled toward the coast, some making for Newchwang, others for the Liau-tong peninsula, their dominant idea being to escape the necessity of fighting any more. Only the general officers and their immediate following preserved any semblance of order, returning along the Moukden road. The significance of this intelligence is palpable. Chinese resistance seems to have collapsed completely southward of Moukden. Whether there is any intention of vigorously defending the capital of Manchuria, or whether the Chinese now trust solely in winter and the difficulties presented by the country, we can not tell.

It will be remembered that telegrams from Shanghai, giving the first information of the fall of Feng-hwan, spoke of Mo-tien-ling as the place to which the Chinese had retreated. We doubted the assertion at the time, seeing that Mo-tien-ling is 75 miles from Feng-hwan, and is not shown upon the best maps as a place of any size or importance. But the *Fiji Shimpō* speaks of it as a most likely spot for the Chinese to organize a resolute stand. On the north it is protected by a mountain called Siao-ling, which, though of no great height, offers features that render its passage extremely difficult. Approaching it from the south one has to cross the mountain Ta-ling, which is not only precipitous but also bristling with peaks. All that sounds very formidable, but then we recall the fact that numerous obstacles, perhaps equally formidable, have presented themselves during the campaign, and that on each occasion the Chinese have been expected to take advantage of them. They have not taken advantage of them, however, and is it likely that they are going to turn over a new leaf now? In our opinion the fate of the war was settled at Phryng-yang. The Chinese did fight there—fought valiantly and stubbornly enough. They were beaten at every point, and beaten so thoroughly that their resistance ever since has been a heartless, nerveless kind of affair.

As we anticipated, there has been no confirmation of the telegram published by the *Chuō Shimpō* on the 5th instant announcing the capture of Chin-chiu and of Port Arthur. In the office of the *Chuō* itself there appears to be no doubt as to the correctness of the intelligence. Throughout yesterday placards were posted in front of the building with the telegram inscribed in letters large enough to be read by the passers, the majority of whom evidently believed the story. The latest authentic news with reference to the Second Army is published by the *Nichi Nichi Shimbun* on the authority of a telegram despatched from Hiroshima at 9 p.m. on the 5th inst. The telegram says that, according to information carried to Shimonoseki by the *Niigata Maru*, which left the Chin-chiu Peninsula on the 2nd inst., the Japanese fleet had entered both Talien Bay and Port Arthur and had found a very small force of defenders who made no attempt to fire on the ships. From the same source it is reported that the people in the vicinity of Pi-tsz-wo, where the Japanese landed, have entirely recovered confidence and are pursuing their avocations peacefully. Many of them bring oxen, pigs, fowls, and so forth in great numbers to the Japanese Army offering them for sale. Altogether the demoralization of the people toward the invaders is

said to be most friendly. Appended to this information is a statement that after the engagement on the north of the Yalu River many of the Chinese soldiers threw their arms into the sea and escaped in the disguise of merchants.

The *Nichi Nichi Shimbun* publishes another paragraph also with reference to the Second Army. The facts given purport to have been contained in a letter despatched from the Tadong River by an official who accompanied the army, the contents of the letter having been telegraphed from Hiroshima on the forenoon of the 5th inst. We learn from this letter that the landing of the Second Army in the Liau-tong Peninsula was at two places, namely, Hwa-yuen-ho-ken and Shih-tsui-tsz. Hwa-yuen in said to be 13 or 14 hours by steam from the mouth of the Tadong, and the district in its vicinity is marshy. The Japanese fleet went a day ahead of the transports to secure them against any attack from the Chinese ships. The latter had already left Port Arthur and repaired to Wei-hai-wei. We gather from this letter that the transports after leaving Hiroshima assembled in the first place at the mouth of the Tadong, and thence steamed across to the Liau-tong Peninsula *en masse*. The Second Army was to have established a commissariat station, but General Oyama seems to have ultimately abandoned the idea and made his base in the Liau-tong Peninsula.

A telegram sent from Hiroshima at noon on the 5th inst. and published by the *Yiji Shimpō*, says that the *Ahagi Kan* and the *Akitsu-shima Kan* visited Wei-hai-wei on the 27th of last month for the purposes of reconnoitring and saw six Chinese men-of-war with two torpedo-boats steam out of that harbour. The men-of-war were the two iron-clads, *Chen-yuen* and *Ting-yuen*, and the cruisers *Lai-yuen*, *Tsing-yuen*, *Chi-yuen*, and *Kwang-ping*. Whither this squadron was bound there is no information. It may be remembered that a telegram from Shanghai on the 2nd inst. spoke of 15 or 16 ships having left Wei-hai-wei. That was probably an exaggeration. Another telegram from the same place on the 4th said that the ships had been recalled to Wei-hai-wei. Everything seems to indicate that Wei-hai-wei is at present the rendezvous of the Pei-yang Squadron.

The *Mainichi Shimbun* reports that a severe engagement occurred on the 3rd instant near Sho-ko in Korea between 2,000 Tong-haks and two companies of Japanese infantry under an Ensign. The Japanese had one killed and four wounded, but they put the insurgents to flight.

THURSDAY, NOVEMBER 8TH.

The continued absence of any intelligence from the Second Army in the Liau-tong peninsula is beginning to be uneasily interpreted. The debarkation of the troops having presumably been concluded on the 26th ultimo, news of their advance to the neighbourhood of Chin-chiu, at any rate, if not of Port Arthur, is regarded as over-due. But that evidently depends on the place of debarkation, and concerning the place of debarkation many reports have been circulated. We need not now recapitulate the various places indicated. It is enough to say that the general belief is now fixed upon Kwa-yuen-ken, a place said to be in the vicinity of the mouth of the Pi-li river. Kwa-yuen-ken is not marked upon any map that has ever come under our notice. Even the remarkably accurate charts of the Military Intelligence Department do not show it. The Pi-li river, however, is clearly marked, and we measure the distance from its mouth to Chin-chiu as 54 miles. But here another factor disturbs our calculations. An official report sent from Kwa-yuen-ken on the 28th inst. says that the advance guard of the Army had then reached Pi-tsz-wo, "a place 11 *ri* (Japanese) distant from Kwa-yuen-ken." If that be correct—and we must believe it on the strength of such evidence—the distance from the landing place to Chin-chiu is 70 miles, and the distance to Port Arthur, 170 miles. The report from Kwa-yuen-ken explains that the landing of the horses and stores had not been entirely completed on the 28th ult. We cannot conclude, therefore, that the Army's general advance commenced before the 29th ult., and

on that hypothesis it could not reach Chin-chiu before the 8th instant, approximately. There is consequently no reason whatever to be impatient because news of decisive operations has not yet been received.

The first blood shed in connection with the operations of the Second Army was that of three Chinese who attacked a Japanese patrol. The next was that of three Japanese coolies attached to the Land Transport Corps. They murdered a Chinese and were summarily executed. General Oyama is evidently resolved that there shall be no paltering with his orders to treat the peaceful inhabitants of China kindly and considerately.

The discipline maintained by the Japanese troops in the field and their abstention from acts of violence against the people, are in marked contrast with the conduct of the Chinese. Field Marshal Yamagata telegraphs that the Chinese, retreating down the Yalu river from Chiu-lien, sacked and burned the towns of Ta-tung and Ta-ku-shan. That must have been out of pure lust of pillage and destruction, for the two places lie entirely apart from the Japanese Army's route to Moukden.

Contrary to expectation, the advance guard of the Second Army found no Chinese troops at Pi-tsz-wo. It passed through the place without encountering any opposition.

Major-General Tachimi telegraphs from Feng-hwan that some Chinese cavalry are to be seen at Sueh-li-chan on the road to the Liau-tong peninsula. Also that a small force of cavalry having been reported as present in the neighbourhood of Su-kien and Chang-kien, a squadron was sent against them, whereupon they retreated to Kwan-kien.

The total Japanese loss at the operations connected with the fall of Chiu-lien is now stated to have been 127 killed and wounded. Surgeon-Major Ishizaka telegraphs from Chin-lien that he has under treatment in the field hospital there 3 officers and 76 men of the Third Division, and 2 officers and 26 men of the Fifth Division, together with 7 Chinese. The deaths have been 1 officer and 15 men, and one man drowned.

The *Nichi Nichi* publishes a telegram from Shanghai saying that there has been a mutiny among the soldiers assembled at Shan-hai-kwan; that the Chinese Government is sending troops and stores northward; that the Emperor has appointed Prince Kung to be Commander-in-chief of the Army, Ching Chiu to be second in command, Li Hung-tso, Yu Lu, and Chung to be staff officers. The message adds that Admiral Ting is not to be deprived of his button, as was reported.

Count Oyama has issued another general order inculcating the obligation of treating all peaceable Chinese kindly, and promising the severest penalties for any violation of this regulation.

FRIDAY, NOVEMBER 9TH.

We are to-day almost entirely without intelligence from the seat of war. The Chefoo telegram published yesterday morning, to the effect that Port Arthur was then being assaulted seems to be considered true in Tokyo, though credence is not based upon any collateral information, but simply upon an estimate of the possibilities of the situation. The fact that the telegram comes from Chefoo is, in itself suggestive. Under ordinary circumstances Chefoo is in connection with the over-land wire from Port Arthur to Shanghai via Tientsin, but the arrival of the Japanese Army in the neighbourhood of Chin-chiu would, of course, mean the cutting of the wire and the severance of telegraphic communication between the Liau-tung Peninsula and Tientsin. Chefoo would then become the nearest route for obtaining information by sea from Port Arthur, the two places being only eleven hours steaming apart. Thus news coming from Chefoo possesses a vicarious title to belief, and suggests that Chin-chiu has fallen into Japanese hands, although nothing is said upon that subject. It suggests also that no engagement of any consequence took place at Chin-chiu.

General Oyama would hesitate to despatch a steamer specially with intelligence to Chemulpo unless he had to record some event amply justifying such a step. The unresisted occupation of Chin-chiu would not be an event of that character, and it may therefore be that the first news forwarded direct from the Second Army will be news of the taking of Port Arthur. That event being now in the very close future, many reports are circulated about the state of the defences at Port Arthur, the number of ships lying in the tidal basin, and so forth. But rumours of that character seem very untrustworthy and may be disregarded seeing that we are on the eve of exact knowledge.

The *Yomuri Shimbun* undertakes to give details of a Chinese steamer and various small vessels captured by Japanese torpedo-boats in Talien Bay, but it seems to us that it is a little "previous" in this instance.

General Oyama has issued for the guidance of the troops under his command a number of regulations relating to the requisitioning of stores and labour in the enemy's country. We need not reproduce these regulations. It is enough to say that they are based upon the most advanced principles of civilized campaigning.

SATURDAY, NOVEMBER 10TH.

We are still without any definite intelligence from the Liau-tung peninsula. A Shanghai telegram, despatched at 9 a.m. on the 9th inst., says that Talien was taken on the evening of the 6th, and that the Chinese fleet had returned to Wei-hai-wei. Possibly that news is correct. Letters—to which we allude elsewhere in detail—from war correspondents of Tokyo journals, show that the landing of the Army was not effected as speedily as the public originally imagined. The transports left Ujina in two batches, their departure separated by an interval of two days, and the second draft of soldiers does not appear to have disembarked before the evening of the 30th ultimo. From Pi-tsz-wo—which place the advance guard reached on the evening of the 28th—to Chin-chiu is 42 miles. The Army probably did not reach Chin-chiu in full force until the 7th or 8th instant. Talien is south of Chin-chiu. If therefore the Japanese have taken the former before assaulting the latter, the troops in Chin-chiu are cut off from Port Arthur, for at the northern inlet of Talien Bay the peninsula narrows to a width of less than 3 miles, so that the Chin-chiu garrison, if they attempted to fall back upon Port Arthur after the occupation of the Talien coast by the Japanese, would find a hostile force in their rear. It is not of much use speculating, however. Three or four days more must tell us something definite.

The *Nichi Nichi Shimbun* says that Admiral Ito has given the name of *Tairen Maru* (*Ta-lien Maru*) to the torpedo-laying steamer captured in the vicinity of Hoshang-shun, and is using her as a tug. She draws 6 feet and develops 20 horse-power. Hoshang-shun is in the northern corner of Talien Bay. It is plain, therefore, that the Japanese fleet must be in possession of the Bay. Chin-chiu is thus assailed from the front and the rear simultaneously.

Field-Marshal Yamagata telegraphs that the action of the enemy in setting fire to Feng-hwan when evacuating it was not a matter of strategy but purely the result of panic, as is proved by their having left behind them great quantities of tents and military stores.

A telegram from Shanghai published by the *Kokkai*, says that the Japanese Army in Manchuria is advancing steadily against Moukden, and that the Chinese who retreated from Feng-hwan together with re-inforcements despatched from Moukden, are concentrated in Fan-shui-fang, Mo-tien-ling, and Lao-yang. Their number is not great, however, and it is very doubtful whether they will make any resolute stand.

We read in the *Kokkai* that the Communications Corps of the Second Army, immediately on landing, set about establishing a postal system, which is now in full working order, a principal office and several branches having been organized.

According to a telegram from Fusan the

Tong-hak rebellion has been completely quelled by the Japanese troops.

A certain Chinese high official is quoted as having declared that the Chinese Government has not paid the Manchurian troops for 7 months, and has paid little attention to their supplies of food and ammunition. Hunger is the enemy they dread rather than the Japanese armies. It is for that reason that the Viceroy Li is urging the Pekin Government to make peace.

A telegram from Shanghai says that Manchuria is in a state of panic. Armed deserters and country folks are continually arriving in Newchwang. Two-thirds of the stores in Newchwang have been closed and the citizens are leaving in hundreds.

KOREAN NEWS.

Li Iashoku, who was arrested and brought to trial in Japan for the attempted assassination of Boku Yeiko, but who was subsequently acquitted and sent back to Korea, was again arrested at Chemulpo by the native authorities as soon as he landed there. He is now in prison at that port by order of the Governor of the place, who has asked for instructions from the Central Authorities how to proceed. An official of the Chemulpo Local Office is of opinion that the Government will inflict some severe punishment on Li. It is said that Li himself expects something of the kind.

The new Government have established a normal school and a common school in Söul. These schools were opened for instruction from the 17th ult. Educational and police reforms are the only ones thus far carried into effect. What is the Government doing? It is entirely employed changing the *personnel* of officialdom, inflicting punishments on officials convicted of one form of offence or another, and suppressing insurrections. The rebels agitating the southern portion of the Peninsula are said to aggregate more than thirty-five thousand, of whom thirty thousand are under one leader and the rest under another. By intimidating orderly folks into joining them they have succeeded in obtaining such a large following. The two parties of Japanese troops despatched from Söul to suppress the insurgents meet with no resistance: the rebels dispersed at the approach of the soldiers. The other day the troops came into conflict with a body of insurgents, killed four ringleaders and released the rest after severely reprimanding their disorderly conduct. Law-abiding folks who fled on the approach of the insurgents, rejoice at the advent of the Japanese troops to restore order, welcome them eagerly and treat them hospitably. Korean officials do not appear particularly desirous of being appointed Minister to Japan. In fact they are said to be decidedly disinclined to accept the post, their chief reason being apprehension lest they should be placed in a painful dilemma between the vacillating policy of their home Government and the firm policy of the Japanese Cabinet.

Count Inouye, Japanese Ambassador to the Court of Söul, arrived in Chemulpo on the 25th ult., with his suite. He was received by Mr. Sugimura, 1st Secretary of the Japanese Legation, and a high official of the Korean Foreign Office, who had specially proceeded to Chemulpo in the capacity of the King's envoy. Count Inouye put up at the Japanese Consulate. Boku Yeiko called on him and discussed certain matters for about an hour. The Count and his suite started for the Korean Capital next morning, accompanied by the Secretary and the King's messenger. It is said that Mr. Saito Shuichiro and Count Hirozawa, both in the suite of the Ambassador, were to come down again shortly to Chemulpo and to start for Ph्यों-yang by sea, proceeding even as far as Wi-ju, according to circumstances. Three business men of Shimomoseki accompanied the Ambassador to inquire into the condition of commerce between Japan and Korea. They will go to Ph्यों-yang with Mr. Saito. The prices of commodities used by the Japanese are now exorbitant in Ph्यों-yang. On the 10th

once to cost of transportation and scarcity of supply. For instance, 1 *sho* of *saké* is sold at 1 *yen*, 1 catty of sugar at 45 *sen*; straw sandals at from 8 to 10 *sen* a pair, a packet of tobacco worth 10 *sen* in Japan costs over 80 *sen*. Many merchants are therefore flocking to Ph्यों-yang laden with goods, mostly from Osaka, where business men are proverbially shrewd and enterprising. Owing to the presence of many abandoned fellows among the numerous coolies in Ph्यों-yang, gambling is extensively carried on after nightfall or even in the day time when work is slack. Consequently the demand for cards is extraordinary: a pack sells as high as 1.50 *yen*, and is not always procurable even at such a price. Sometimes a pack is hired. It is lent at one *yen* for a limited space of time. The coolies of the First Army having been hastily sent, comprise many worthless fellows. A certain commissariat officer is said to have declared in despair that a third of them are practically useless. Such, however, will not be the case with the coolies attached to the Second Army, for they were chosen after strict investigation and are generally under the orders of officers belonging to the territorial army. It is said that while a Japanese coolie can not carry a burden heavier than 4 *kwamme* any long distance, a Korean carries one twice as heavy without difficulty, and it is therefore advantageous for the Japanese Army to dispel the groundless fears of the Koreans and utilize their services. But we (*Japan Mail*) find difficulty in crediting such a comparison.

The *Kokkai* writes thus:—The suspicions entertained by many Koreans that Japan entertains aggressive designs against their country having now been greatly removed, the work of reform may prove unexpectedly easy. It is essential that Korea should engage a councillor from Japan who will assist in the task from within and thus cooperate with the Japanese Minister, who, in turn, will bring his influence to bear for the same end from without. The finances of Korea are in a terribly disordered condition. The yearly revenue is reported to be about 7 or 8 million *yen*, but the greater part of it is pocketed by local officials and only a small portion comes into the central Treasury, which is therefore in a miserable state. The salaries of certain foreign employés of the Court are in arrear for more than two years. The pay of the soldiers of the army alone, were it regularly disbursed, would swallow up all the available revenue. Under such circumstances it is easy to understand the financial embarrassments of the Korean Government. A foreign loan is a thing of pressing importance for the country at this juncture. But the Koreans regard anything of the kind with exceeding suspicion, thinking that to borrow money from another people is tantamount to selling their country. This foolish notion was more or less weakened by frequent remonstrances from Mr. Otori.

SHANGHAI NEWS.

Shanghai hears that Major Richter, formerly employed in the Chinese Military Academy, has entered the service of Japan on a salary of 2,000 *yen* monthly. That notion was raised on the bund, we imagine.

The rumoured suicide of the young Empress of China is reported to have been the consequence of a slap in the face from her Imperial husband. That canard emanates from Tientsin.

This from the *China Gazette* will be read with due scrutiny:—

We hear that the German mail steamer *Bayern* has been searched at Singapore and a large number of rifles, etc., for China taken out of her. She was then released after two days' delay, but on arrival at Hongkong the Japanese Consul insisted upon her being searched again, when a much larger quantity of arms, consigned to China in the name of a leading firm of German arms dealers, were discovered and seized. The arms seized at Singapore were brought out by an Austrian dealer, and the secret was given away by his business rivals in Tientsin, who thought to spoil his trade by suspecting that their own arms, which

were stowed lower down in the vessel, would ever come to light until they were landed safely at the wharf in Shanghai where no questions would be asked. The whole story is typical of Tientsin intrigue, and we expect to be in a position to give more about it in a few days. The affair is just now creating intense amusement in Government circles in Hongkong, by the orders of the Governor of which place the second and more important seizure was made. China anyway loses the rifles through the petty jealousy of the people who profess to be desirous of serving her in her time of trouble.

The *Hupao* says that the Emperor of China has issued an edict ordering the arrest of Generals Wei and Yeh. They are to be conveyed to Pekin "to answer for their shameful conduct in Korea while in command of the troops."

Here is an interesting item of news for Japanese journalists who have been speculating so much about the Chinese fleet—we take it from the *China Gazette* of October 27th:—

The steamer *Lienhsing*, which arrived to-day from the North, reports that when passing Wei-hai-wei on the 25th, on the voyage down, she met the Chinese fleet. It was in two squadrons, one consisting of six Alphabetical gunboats and a Foochow cruiser, being a few miles outside Chefoo, and the other, comprising seven powerful ships of the Peiyang Squadron, including the *Ting-yuen* and *Chen-yuen*, which seemed to be in thorough repair, and five other cruisers, about 10 miles outside Kai-ming Island, 14 miles from Wei-hai-wei.

We admire the illimitable credulity of some of our Chinese contemporaries. The *Pekin and Tientsin Times*, writing on the 27th of October, speaks of Japan's "naval defeat off the Yalu" and says "the Chinese victory checked the onward progress of Japan for three months and sent home her boastful navy riddled, reduced, and defeated." Tientsin is the residence of the Viceroy Li, and the journal from which we have quoted is published in Tientsin. Yet so crass is the darkness of ignorance in that city that 40 days after the fight in the Yellow Sea there is still talk of a Chinese victory.

The *North-China Herald* is reduced to desperate straits in its forlorn attempts to prove that Japan has not fared so well in the war as the general public supposes. Our contemporary's last device is to invent a programme for the Japanese and then to declare them defeated because they have not carried it out. The imaginary programme is the landing of an army somewhere on the shore of the Gulf of Pechili for the purpose marching on Pekin, and the reasons suggested for the Japanese not doing so are that the naval battle of September 17th crippled the Japanese fleet, and that either Great Britain or Russia, or both combined, have notified the belligerents to stop where they are or take the consequences. The *North China Daily News* is afflicted with a plethora of knowledge. If it only knew a little less, how much wiser it would be.

The Second Japanese Army commenced its landing in the Liau-tung Peninsula on the 24th of October and by the evening of the 28th the advance guard had marched 28 miles southward. Yet here is what the leading Shanghai paper writes on October 27th:—

The latest news is that the Japanese have again landed in Talienwan Bay, with a view to investigating Port Arthur. The news is unconfirmed, nor does it seem likely that such an expedition has been undertaken with the Peiyang squadron again in fighting order. If the Japanese have landed there, they have no easy task before them. Major von Hanneken is there, looking after the land defences, which extend for seven miles landward from the port itself. Every hill in the rear of the advanced line of defences has been fortified and is supplied with guns. There are over twenty thousand men defending Port Arthur, and it is well provisioned. The report may be true, but as we mention in another column, the latest information that we have by steamer from the North, which left Chefoo three days ago, is that up to that time no Japanese had been landed at Talienwan, Haiyuantao, or elsewhere on the Chinese side of the Bay of Korea.

It is impossible to be more insolent than the *North China Daily News* is. "There were unfortunately," it writes, "no foreigners as far as the Japanese ships, and we therefore do not know, and probably never

shall know, what the Japanese losses were." Were we to analyze the sentiments that such a statement must provoke in the breast of any Japanese naval officer, we should be accused of inciting to violence.

It seems to us that before charging the Japanese with total inability to tell the truth, the leading Shanghai journal should itself show some regard for that rare commodity. Writing of the Central News Agency's telegram to *The Times* of the 21st September with reference to the naval battle, the *North-China Daily News* calls it "the Japanese Official account." When was the Central News Agency appointed to represent Japan officially? In the very same issue our Shanghai contemporary commences a paragraph thus:—"There is an imaginative genius connected with the editorial department of the Central News Agency in London." Yet, when it suits the convenience of its own arguments, the Shanghai journal calls the Central News Agency's telegrams "official."

It is delightful to read the Shanghai editorial comments on the supposed summoning of Major von Hanneken to Peking. We now know that the gallant Major went to Peking accompanied by Mr. Detring with the hope of obtaining an audience, but deeming that consummation very problematical. Here, however, is what the *North-China Daily News* writes:—

A great change has already been wrought by the war at Peking if the news is true, as we believe it to be, that Inspector-General von Hanneken has been summoned to appear before the Emperor, because His Majesty is anxious to learn by direct enquiry from one who has taken part in the struggle what his soldiers and sailors have been doing. It is probably the first time in the history of the present dynasty that such an event has occurred. It is of the happiest augury that the Emperor should himself open the shutters to let a little light fall on the darkness of the forbidden city in which he and his predecessors have been made to move. It was a hopeful sign when His Majesty began to take lessons in English; but that he should summon a foreigner to his presence, not as a formal duty, but to learn the truth from his lips, is an innovation so significant that we may expect the most momentous consequences from it; we may hope that it is the prelude to the breaking-up of the present system which bids fair to break up China; that it means that the Emperor is about to investigate matters for himself, and be no longer the tool of favourites and eunuchs, who keep him shrouded in mystery, that they may the more easily rob his empire. It is a great opportunity this for which General von Hanneken was preserved from the bullets of the Japanese in July and September last.

We learn from Tientsin that the Emperor said that he could not believe the memorials as to the war sent him by the high authorities; but, he said, "as foreigners do not lie, I will send for a foreigner I can trust, who has done service for China, to tell me the whole truth." It is a lovely little myth.

On November 2nd folks in Tientsin did not know of the capture of Chiu-lien, which took place on October 26th; did not know of the evacuation of Feng-hwan, which took place on October 27th; and did not believe that there was any Japanese Army in the Liau-tung peninsula. This splendid ignorance is, however, surpassed by Shanghai. On November 3rd the *North-China Daily News* published the following editorial:—

The latest news from the seat of war is that there are no Japanese on the Liau-tung Promontory, or anywhere near Port Arthur, but that the Second Army Corps has landed at Takushan, at the mouth of the Wutao ho, to the west of the Yalu, with the intention of taking the Chinese force defending Fungluangcheng between two fires.

Herr Dowe's bullet-proof coat for use in time of war does not find favour in the Fatherland. The German *Reichsanzeiger*, in giving an official account of the various trials, furnishes results decidedly unfavourable to the cuirass. "The bullets traversed the shield," we are informed, but whether this means that they actually pierced it in such a manner as to kill or injure anyone wearing it is not made clear. But in any case the German experts have decided that the shield is worthless for the purposes for which it was intended.

LETTER FROM HIROSHIMA.

Hiroshima, November 3rd, 1894.

To-day being His Majesty's birthday anniversary, it has been excluded from the period of mourning (3 weeks) for the deceased Emperor of Russia. The news of the Czar's serious illness had in part prepared everybody here for the sad event, but none-the-less the intelligence of his passing away caused much genuine sorrow at Court. Among political circles, the probable effect upon the situation is eagerly discussed. So far as Japan is concerned, there is no ground to doubt that the more than cordial feelings existing between the Courts of Tokyo and St. Petersburg during the reign of the late Emperor will continue under his son. For the rest, I do not think it proper to mention the views freely expressed here.

The town of Hiroshima has apparently done its best to celebrate its beloved Sovereign's birthday. Each house front is decorated with a profuse display of flags and large paper lanterns, and what peculiarly adds to the picturesqueness of the scene, is that each doorway in the principal thoroughfares is adorned with a pair of large pine trees, while in the back streets their place is supplied by bamboos. At short intervals, the streets are spanned overhead by rows of paper lanterns, which at night give a very gay appearance to the whole scene. As I write this (shortly before noon), a military band is passing through the street playing a march. Gaily dressed maidens, officers in uniform, courtiers in full dress, soldiers in their brand new uniforms, country folks in their best home-made *kimono*—in short men of all sorts and descriptions throng the streets. I hear that in the afternoon a number or *yatai* will be driven through the streets. At three o'clock, the Mayor will entertain the Princes of the blood, the Ministers of State, and other high officials in the Park. Leaving the description of the afternoon scenes to my next letter, I shall devote the rest of the present one to a short narration of the grand entertainment that took place yesterday in the temporary buildings of the Diet, in commemoration of the recent military and naval victories.

The sole object of the entertainment was to offer diversion to His Imperial Majesty, whose self-denying devotion to the affairs of the war and whose cheerful resignation to the discomforts of his temporary residence have profoundly touched the hearts of every loyal subject. As I told you in a former letter, the apartment occupied by His Majesty on the second floor of the Military Headquarters is not only devoid of all attempts at ornamentation but is not even provided with the ordinary furniture of a private gentleman's house. The windows on both sides admit alternately the rays of the morning and the setting sun. His Majesty's devotion to business is such that he scarcely leaves his apartment; and when war news arrives thick, he often sits up until the small hours of the morning. The court physicians and Ministers of State have repeatedly advised him to pay occasional visits to the beautiful gardens of Sen-tei, the famous villa of Marquis Asano, not far from the castle, but His Majesty has not yet found time to act upon this advice. Neither would he give ear to the repeated prayers of his Ministers for permission to construct a temporary palace; it was not a time, he is reported to have said, to think of personal comforts or convenience, when his good subjects were undergoing all sorts of privations and hardships in their foreign campaign. No wonder that the lowest soldier is happy to die for such a Sovereign. But His Majesty's extraordinary diligence is matter of grave anxiety to the Court physicians. A happy idea struck the mind of His Excellency Count Ito, and the result was the entertainment of yesterday which was a complete success in every way.

It was half-past one when I arrived at the place. Outside the enclosure there had already gathered a large crowd of citizens and country people eagerly watching the distinguished personages who were arriving fast. Inside,

the spacious grounds were full of civil and military officers, the latter in ordinary uniforms and the former in tail coats and frock coats. I was agreeably surprised by the changed aspect of the usually bald and tasteless grounds in front of the temporary houses of the Diet. On every side the eye was greeted by really admirable representations of the incidents of the recent fighting and some comic scenes connected with the war. Just inside the central gate, and to its right as one enters was a large Chinese fort stormed by a party of Japanese soldiers; it represented an incident in the hard fighting by the column under Major-General Oshima. The fort was skilfully constructed of wooden frame-work covered with blue blankets which were actually taken at Phyoŋ-yang. The soldiers were of life size and very well made. To the left of the gate was an elephantine pig held by a rope one side by a number of marines and on the other by land troops. Proceeding further to the front doorway, one was confronted with a sort of *torii*, from the upper pole of which were suspended two big lanterns made entirely of straw ropes, with an inscription, also of ropes, signifying "Long live the Emperor" and "Long live the Empire" on each of them. Reclining against one of the posts, stood a warrior, whose head was made of a marine lantern; he represented the light to enlighten the darkness of China. Over the portal was a large *gaku* with the Imperial badge of the chrysanthemum and paulownia (*Airi*). In the space between them was inscribed "Long live His Majesty the Generalissimo of the Army and the Navy!" It is impossible to describe all the beautiful representations; nor is it in my power to convey to you an adequate idea of the skill and taste manifested by the soldiers and marines who designed and executed these picturesque works without the slightest assistance of special artists. But I will endeavour to refer to the more important of them. Turning to the left of the central door way, as you face it, you see a Japanese soldier holding a domestic fowl (signifying Korea) in one hand; while with the other he is brandishing a sword. Before him is flying a pig, from whose mouth he has rescued the helpless bird. Proceeding a little further, there towers before you Fuji, on the top of which has descended a troop of angels in the shape of hospital nurses (evidently of the Red Cross Society). At the foot of the mountain crouch, in worshipping posture, half a dozen Chinese soldiers wounded in battle. They appear life-like with their true uniforms on them (part of the spoils sent from Phyoŋ-yang). In the centre of the grass plot in front of Fuji, you see a reproduction of the Naval fight off the Yalu as things were at the commencement of the engagement: the ships are from three to five feet long. In the next enclosure are two ships of far larger dimensions, nearly fifteen feet long, one Japanese and the other Chinese. Beyond these Naval contributions, are a series of comic representations, the characters being the principal Chinese connected with the war. Here is Li Hung-chang sitting by a desk on which are heaped reports of the defeats of the Chinese army and navy. On his weeping face sits a wasp (the suggestion, a proverb, *naki tsura ni hachi*). General Yeh's parting scene with a Korean courtesan at A-san comes next. The next figure is far from comic; it excites a feeling of admiration and sympathy, for it represents the brave General Sahōki (左) in the act of falling in battle. General Yeh appears once more in the acting of flying, followed by a man with a box containing 20,000 dollars, a reward he afterwards received from his Government for his "masterly retreat." Lastly, Mr. Ynan, the well-known former Resident at Seoul, is blowing a huge Conch shell (signifying a *horafuki*, a big talker). Among the representations in the grounds to the right of the portal, the most conspicuous is that showing a Chinese General coming out of the gate with a white flag. The walls look massive enough, and the Japanese batteries planted on elevated spots opposite the wall are also well made. The outer enclosures around the whole grounds in front of the Diet

buildings are covered on the inside with the Chinese flags captured at Pyŏng-yang.

At a little past two o'clock, a rapid convergence towards the central gate announced the arrival of His Majesty the Emperor. After a short rest in the Imperial apartment, His Majesty came out to view the representations in the grounds described above, followed by Their Imperial Highnesses Prince Arisugawa Takehito, Prince Fushimi, who had arrived here the preceding night with his army corps, and Prince Nashimoto, a cadet in the Army; Their Excellencies Count Ito, Count Saigo, Viscount Hijikata, Viscount Kabayama, Marquis Tokudaiji and several other distinguished personages. Major-General Terauchi, chairman of the managing committee of the entertainment, had the honour to lead the Imperial train and explain everything to His Majesty, who made, with evident satisfaction, the minutest observation of the whole. On the approach of the Imperial spectators, the little ships in the grass plot began firing their guns in imitation of actual fighting; the mimic operations being managed by means of electricity. The bigger Japanese and Chinese ships in the next inclosure then fought each other on a larger scale, ending in the burning of the Chinese. After the inspection of these and other works by the Emperor been finished, the majority of those present were conducted to the rear of the Diet buildings, where an extensive ground was enclosed for the presentation of various exercises which the Emperor and suite viewed from the buildings. The first exercise was "a blind fight," in which two bodies of Naval cadets took part. They were accoutred in fencing style, the two parties being distinguished by red and black dishes attached to their head-gear (*men*), the breaking of which deciding the contest. Next, the Naval cadets from the Etajima College exhibited a reproduction of the naval fighting off the Yalu. The Japanese and Chinese vessels of about five feet long were carried on their heads, their bodies being screened by white cloth, with waves depicted on it, suspended from the sides of the ships. The evolution was carried out slowly, the hostile fleets firing at each other. It ended in the fight of the majority of the Chinese ships and the burning and sinking of others. The *Yang-wei*, which got stranded on an island, was destroyed by a Japanese gunboat, evidently propelled by means of a rope. Next came a fancy ball by the Naval Band. A party of men and women attired in various fantastic dresses were led by a small band dressed in the fashion of the feudal *samurai*, the rear being brought up by a big Beer Bottle, on which was inscribed "Great Victory Beer" (*Dai-shō beer*). They performed a series of European dances to the intense amusement of all the spectators. The further exercises consisted of an exhibition of the destructive powers of torpedoes, a number of miniature ships being blown up. Lastly the Naval cadets, marines, and the band that took part in the preceding exercises, all came out with a party of men dressed in various fashions representing the different classes of the people. They all sang the national anthem, *Kimi ga Yo*, many of the spectators eagerly joining in the singing. I must not omit to mention a large globe—nearly twenty feet in diameter, with national flags overtopping it—which was planted on the side of the ground just opposite the Imperial seat. When the national anthem was sung, the globe was moved to the middle of the ground.

The spectators then entered the hall of the Lower House, where the floor had been hastily prepared for the double purpose of an exhibition of fencing matches and *No* dances. In the former exercises, a large number of more or less well known masters of the art took part. When this portion of the programme was over, it was nearly dark. After a short rest, all present repaired to the hall of the Upper House, where a cold collation was spread for nearly 600 persons. At the end of the refreshments, their Excellencies Counts Ito and Saigo approached the Emperor and thanked him for the great honour His Majesty had done his officials by partaking of refreshments in the

same hall with them. The Emperor again rested for short time, and then witnessed in the hall of the Lower House a number of well chosen *No* dances performed by the best *No* actors of the locality. It was 9.40 before the Emperor left the place, immensely pleased with all that he had seen. Thus ended the whole affair without the slightest hitch and to the utmost satisfaction of all concerned, for which happy result much credit is due to the Managing Committee composed of Major-General Terauchi (Chairman); Colonel Manabe and Lieutenant-Colonel Obu (Army); Captains Tsunoda and Yamamoto (Navy); Procurator-General Okumura, Mr. Samehima, Private Secretary to the Minister President; Mr. Saito, Private Secretary to the Minister of the Household; Mr. Ogura, chief of the 1st Section of the Metropolitan Board of Police; and Mr. Seki, Secretary of the Prefecture.

LETTER FROM KOREA.

(FROM OUR CORRESPONDENT.)

Sōul, October 30th.

Count Inouye is in Sōul. The Koreans are sadly in need of help. Anarchy prevails all through the southern provinces. Officers and soldiers are sent day after day to put down the lawless Tong-haks. The only report heard from them is that they too have been "converted" to the faith of the disciples of Oriental Learning. Two young fellows appointed through the influence of the grandson of the Tai Wōn-kun were sent to Kong Choo to suppress the Tong-haks reported to be there. They went, saw, were conquered, were reported to the Sōul authorities for conspiracy, and were beheaded. The Governor of Chulla Province, a Mr. Kim, was found giving substantial aid to the Tong-haks and in consequence was dismissed from office. The Magistrates of two districts in the Chung Chong Province, hearing of the arrival of the Tong-haks, fled. They are now wanted by the central Government. Fifty thousand Tong-haks assembled, so it is reported, at Nam Won in Chulla, and 20,000 at Ha Tong in the Kyeng Song province. The authorities in Sōul have committed the task of dispersing these rioters to a certain Shin, who is to be assisted by several magistrates from the two adjoining provinces. Two hundred Tong-haks from Chi Pyeng, about 50 miles east of Sōul, went to Hong Chun and formed a camp there. The constable of the former district, with about a hundred men, attacked this camp, captured 58 guns (quality not specified nor age mentioned), and the three ringleaders, whom they sent on to the Capital. As a reward for this bravery, the sometime constable is now Magistrate of Chi Pyeng.

The King has issued an edict commanding the immediate beheading of any one who pretends to have received a royal order to clear out the Japanese, or who is found sympathising with the Tong-haks. An order of this description found on anyone's person is *prima facie* evidence that the fellow ought first to be put to death and report made afterward. This measure surely ought to be vigorous enough to please the most progressive. The Tong-haks in the province of Kang Non have been put under this ban and their eradication has been entrusted to capable hands.

The Government, as will be seen from the above, is clearly after the scalps of these plundering rascals who have recently relighted the torch of rebellion. Seng Choo, in the province of Kyeng Song, a small village of 650 houses, was burnt by the Tong-haks. Ha-Tong also, mentioned above, shared a similar fate. The matter is very serious. His Majesty has contributed from his private fund \$2,500 to the homeless and helpless sufferers. The Tong-haks are dangerous with the torch in hand. Korea's troubles are by no means over, even though the Chinese troops have been kicked out of the country. The Tong-haks, as at present constituted, do not want civilization, and especially not from Japan—they clearly prefer lawlessness.

The Mayor of the capital of Kyeng Song, having filched 5,000 dollars from the people, was

found out, the money was disgorged and returned to the people, and His Excellency is wanted in Sōul. He, however, for private reasons of his own, prefers to remain behind the "bush."

The usual presents that are sent from the country on the birthday of Her Majesty the Queen have been intercepted, and in the present disturbed condition of the provinces, His Majesty had released the officials from the obligation of sending them.

Sōul, November 1st.

Sōul is greatly agitated at this moment. Last evening, Kim Hak-ou, Vice-President of the new Law Department, and one of the most progressive men in the country, was murdered in a foul manner. The victim, with two friends, was sitting in his room, when a young man entered and bowed low to Mr. Kim, who returned the greeting. At this juncture the light was put out, and there was a rush of eight or ten men towards the room. The object of the attack was Kim, who was killed on the spot. His two friends were considerably hacked, but managed to escape, as also did the murderers.

Mr. Kim was a leader in the progressive party. He had travelled abroad, could speak Japanese, Russian, and Chinese, and latterly had been Superintendent of Trade at Chemulpo. His death is a great loss to Korea at this time, as men of his ability and experience are few.

Two men, it is reported, were beheaded this morning for the murder, and the Japanese police will patrol the residences of the leaders of the new party. "Tong-haks did it," is the first thought in the mind of everybody, but I have not been able to learn anything definite.

REFORMS IN KOREA.

Brief reference has already been made in these columns to Mr. Otori's views on the prospect of reforms in Korea, but the matter is of sufficient interest to justify the following reproduction of the account of an interview which the ex-Minister is said to have had with a certain person in Kobe on his way to Tokyo. The account is taken by the *Mainichi* from a Kobe paper.

As is well known, the King was first advised to undertake Administrative Reform in Korea by Japan. Being extremely solicitous for the independence of his dominions, he was very pleased with Japan's advice. As some influential person was needed to carry out these reforms, Japan recommended entrusting them to the Tai Wōn-kun, who accordingly superintended the business in person. The first step of the programme was the expulsion of the Ming faction. Next, a new Cabinet was organized with a selected *personnel*, the Central Reform Office (nearly equivalent to the Japanese Privy Council) was established, and 20 officials were appointed. The necessary mechanism having been created, the next thing to be done was to put it into operation. That was of course the most difficult part of the undertaking. For instance, when the Finance Department wishes to investigate the matter of taxes, it has to face the greatest difficulties, as it has no books or written regulations to serve as guides. The prospect does not seem very encouraging when we consider the men who are responsible for the reform of Korea. It is true that Kim Koshu, the Minister President, and Kim Inshoku, the Minister for Foreign Affairs, are both politicians of unquestioned capacity in Korea, but they have no supporters to back them. Then again, the Tai Wōn-kun is a statesman of the Chinese school, and is utterly ignorant of what civilization really is. In superintending the affairs of the State he still views things as he did more than a decade ago. He is moreover extremely excitable and liable to find fault with a Reform Bill submitted to him by the Cabinet or the Reform Office, and it consequently results that even a measure considered by its drafters to be of the greatest importance, is mere waste paper since it does not gain the consent of the aged administrator. Not infrequently Mr. Otori was asked by the Cabinet Ministers or others to persuade the Tai Wōn-kun to give his consent

to important drafts. His advice was always well received, but was never acted on. Indeed, it is said that more than once after Mr. Otori had left him, the Tai Wōn-kun showed himself highly incensed at what he considered uncalled-for interference. At one time he was advised by the ex-Minister to lessen the number of local offices and to give governors fixed salaries instead of leaving them to exact what remuneration they pleased from the local people. The Tai Wōn-kun promised to do so, but though months passed, Mr. Otori saw no sign of the fulfilment of the promise. Under such circumstances, however resolved the King may be to effect reforms in his country, Mr. Otori thinks it a hopeless task. Besides the gloomy outlook of administrative affairs the King is perpetually harassed by petty troubles. For example, there are some three or four hundred ladies in the Court, and every day they bring dismal news founded on superstitious notions to the ears of the King, such as, for instance, that a dog barked in an unnatural way or that a cock crowed at an untimely hour, and they advise the King to consult the Russian or Japanese Minister as to what such omens portend.

The Tai Wōn-kun's influence is indeed considerable. On the one hand, all the Court officials are in awe of him and extremely careful not to offend him, while on the other, the people of the eight provinces appear to regard him with an unusual degree of respect. It is therefore necessary that he should be the person entrusted with the management of the new Government of Korea.

The Japanese Party is ostensibly in the ascendant at the Korean Court, but is not so in reality. Headed by the Tai Wōn-kun, nearly all the Court officials are still prejudiced in favour of China. So strong is that sentiment that it was only after receiving intelligence from the Governors of the respective localities that they reluctantly gave credence to the victories achieved by the Japanese over the Chinese. They still adhere to their old notion of the invincibility of China and believe that she will prove victorious in the end. The so-called pro-Japanese Party is hardly more than a mere name, all that is required to be identified with that combination is to go to the Japanese Legation in case of any important event occurring to ask the advice and to solicit the help of the Minister.

It was through the mediation of Mr. Otori with the Tai Wōn-kun that Boku Yeiko was called back from Japan. Mr. Boku is a patriot, but has many enemies at the Korean Court who calumniate him to the Tai Wōn-kun. The latter is somewhat inclined to give credence to these slanders. Excluded from the Cabinet and beset by many difficulties, Mr. Boku made up his mind to return to Japan and even went as far as Chemulpo. When Mr. Otori heard of that, he lost no time in advising him to stay there and await his opportunity, impressing on him the fact that should he again proceed to Japan he might never be allowed to return home. Mr. Boku acted on that advice and is still in Chemulpo. He is a sound politician, but his great fault is that he does not know how to shape his actions to given circumstances.

Two persons were selected for the mission of Korean Ambassador to Japan before it was finally decided to entrust it to Prince Wi-hwa. First, Boku Teijo was chosen, then the grandson of the Tai Wōn-kun. It is not known why Boku Teijo was not sent, but the Tai Wōn-kun's grandson declined the post because, it is said, of his pro-Chinese tendencies and his aversion to come to Japan. It was Mr. Otori who suggested the choice of Prince Wi-hwa. Thinking that a visit to this country would be beneficial to the Prince, both for his own sake and for Korea's, as he is a very intelligent young man, the ex-Minister spoke to the Tai Wōn-kun upon the matter, and the latter made no objection. Mr. Otori considers it of urgent importance that the Korean Government should engage experienced Japanese advisers in connection with the contemplated reform of the Administration. Those chosen should be capable and persevering men, above all, not excitable.

As to the construction of railways, Mr. Otori did not remark any special inclination on the part of the Korean Government to construct a line between Fusan, Chemulpo, and Sōul.

The so-called Tong-haks, now causing disturbance in various districts of the peninsula, are widely different from the Tong-haks that rose up some time ago. Some of the latter were educated men and therefore comparatively reasonable, whilst the new insurgents are simply the refuse of society whose sole object in agitating is to plunder. They are consequently not at all to be feared, but have only to be looked on as troublesome pests.

In connection with Bin Yeishun and the Chinese ex-Resident Yuan, Mr. Otori remarked that the former was supposed to have been with the Chinese Army at Phōng-yang, and to have fled with it to Manchuria, whilst the latter was at the head of the commissariat at Phōng-yang and is not dead as has been rumoured.

THE SAFETY OF FOREIGNERS IN YOKOHAMA.

The sender of the telegram to London asking for a war-ship, on which we commented severely in a recent issue, has now come forward—preserving his anonymity, however—and explained that the object of the telegram was not to obtain protection for British subjects, but to procure a man-of-war to sell to the Japanese Government. The recipient of the telegram in London mistaking its meaning, conveyed it to the Foreign Secretary as a cry of alarm from Yokohama; the Foreign Secretary telegraphed to Her Majesty's Representative in Tokyo, asking whether a ship was needed; Her Majesty's Representative telegraphed in reply that there was absolutely no occasion for anything of the kind; the Yokohama merchant's correspondent in London telegraphed this information to the sender of the original telegram, and the collectors of news in London, ignorant of the official developments and knowing only of the sending of the original telegram and of the interpretation put upon it by its recipient, constructed a paragraph in that sense. It is an amusing story, and we are very glad to hear that the sender of the telegram was not guilty of the mischievous mistake attributed to him. The responsibility of the blunder rests with his agents in London, who certainly can not be credited with great discernment when they construe into a request for naval protection such a telegram as the following:—

British Man-of-war steam. Other is (are) wanted immediately. Can you arrange safely.

The unfortunate point of the story is that, whereas the original request for a man-of-war became speedily known to the news-collectors in London, they failed to learn anything of the mistake that had been made, and thus the public remained under a most mischievous misapprehension. However, it is pleasant to find that it was all a blunder, and that no one in Yokohama was so fatuous as had been supposed.

A CONSULTATION ON FOREIGN TRADE.

Admiral Viscount Enomoto, Minister of State for Agriculture and Commerce, invited on the 1st instant Messrs. Shibusawa, Masuda, Shioda, Okura, Sonoda and other leading business men to his official residence and consulted with them on points of Japan's foreign trade. The questions put to them, says the *Shōgyō*, were to this effect:—

1st.—Why have the majority of those who have attempted direct exportation failed to attain their object?

2nd.—If Japanese commerce were left in its present state, would it not acquire a stationary and unprogressive character?

3rd.—In attempting direct foreign commerce, which would be better, individual transactions or transactions by companies?

4th.—Why is it that direct exporters who establish branches abroad do not generally apply for registration to the respective foreign offices?

5th.—Would it be better, in carrying on foreign

trade, to sell various articles as foreign merchants in Yokohama and Kobe do, or to limit the variety of articles as do Japanese exporters?

To the above questions the following answers were given:—

1st.—The reasons why a large number of the merchants that have attempted direct exportation have failed are chiefly want of experience, a too sanguine and progressive spirit, and embarkation in trade with a view to gaining immediate benefits from it.

2nd.—The present foreign commerce of Japan cannot be considered entirely stationary. In such commodities as coal, copper, sulphur, cereals, silk cloths, and fancy wares not a few direct transactions have been made by Japanese merchants. In silk and tea, however, there have been very few direct transactions. That is specially the case with tea, as the number of merchants who export silk directly is gradually increasing. It must be said that the number of direct exporters is on the increase, though many of their enterprises have failed.

3rd.—The point whether individual transactions or transactions by companies are preferable cannot be definitely answered, as it depends upon the nature of the business. Still, where the effective use of capital is concerned, the latter are to be preferred.

4th.—The reason why those who are carrying on direct export business abroad do not register at the respective foreign offices is because, in order to undergo such registration, they are obliged to deposit a fixed amount of money in those offices. They would thus be subjected to no inconsiderable loss which would be more disadvantageous to them than not registering.

5th.—Why foreign merchants resident in Yokohama and Kobe deal in such multifarious articles is probably mainly due to the custom originated when they established their firms at the time of the Restoration, when they must have found it convenient to trade in various kinds of goods. Whether the variety of articles exported should now be restricted or not, is a point the settlement of which depends upon time and place. Of course transactions in diverse kinds of commodities must necessarily be on a smaller scale than when the variety of the articles is limited.

It is said that the Department is contemplating consulting the opinions of the different Chambers of Commerce as to the extension of Japan's foreign commerce.

INTELLIGENCE OF THE SECOND ARMY.

The War correspondents of the vernacular papers, who accompany the 2nd Army, have sent their first letters to Tokyo. The letters cover the period up to the 30th ult. We read in them that the first batch of troops reached Kwa-yuen at 7 a.m. on the 24th ult. As soon as the transports had cast anchor, some miles off the coast, about 60 sailors were sent ashore. The landing of Japanese troops at that point on the coast not having been dreamed of by the enemy, the only persons seen by the sailors were a group of natives collected on the shore, wondering at the sudden apparition of such a number of steamers. The sailors told the gaping natives that they were Japanese soldiers defeated at the battle of Phōng-yang, and that they had fled to the Liau-tung peninsula for sympathy and succour. This story was credited by the simple-minded Chinese, and they were even generous enough to offer help. But while the colloquy was going on, the van of the Army to began land, and the natives, alarmed by the advent of such a large number of troops, hastily fled some miles into the interior.

The hamlet, however, was not entirely deserted. The Japanese found several aged folks, and even three or four young men in a shop that stood not far from the shore. The shop dealt in oil, sugar, and paper, and as these articles were eagerly bought by the Japanese, the little stock was soon exhausted. The villagers began to return little by little on learning that they would not be molested. The divisions that started from Ujina between the 16th and 18th ult. effected a landing between the 24th and the evening of the 28th, and as the weather was very fine throughout, the debarkation presented no difficulty. The transports that carried the second detachment, namely, those that sailed

from Ujina between the 18th and the 20th ult., had arrived off the coast at Kwa-yuen by the time the letters from which we quote were being written, but the soldiers had not yet left the ships. Eight Chinese sailing-vessels were captured by the Japanese transports; some of them laden with timber to be sent to Talien and Port Arthur, and others carrying powder. These latter had come from Port Arthur and were bound for the mouth of the Yalu to supply ammunition to the Chinese troops supposed to be massed there. As already reported, by telegram, the place of the Japanese troops' debarkation abounded in provisions. Pigs and fowl were numerous, and the whole country for miles around was covered with Indian corn, a great part of which had been harvested, however, by the time the Japanese landed. The only inconvenience felt by the army was scarcity of water. The houses of the natives are superior to those inhabited by people of the same grade in other parts of China. They are generally built of stone or brick, and furnished with contrivances for warming them in winter. The thermometer indicated 60° F. at noon and fell to about 40° in the evening. Thus the temperature in the daytime does not differ from that of Tokyo at the corresponding period of the year. General Count Oyama being specially anxious to pacify the natives, caused placards to be posted upon the walls of houses in the hamlet, proclaiming the cause of the coming of the Japanese troops, and intimating that the natives would be allowed to pursue their avocations in peace. For the same reason he strictly warned the soldiers and coolies against committing any unlawful or violent acts against the natives, on pain of severe punishment. A few coolies were arrested on the charge of transgressing this order. On the 25th ult., while the van was stationed at Pi-tsz-wo, a Chinese assaulted a soldier on leave with a bludgeon, and was fatally stabbed by the soldier with a bayonet. Shortly after this two natives rushed into the camp of the Japanese troops and were instantly arrested. The cause of this mad conduct on the part of the natives is not yet known. It is said that four of the enemy's troopers were seen in the distance near Pi-tsz-wo on the 28th ult.

GOVERNOR KINOSHITA'S REPORT ON THE RECENT EARTHQUAKE.

From 5.35 to 5.47 p.m. on the 22nd of October two shocks of the most violent description were felt in Yamagata Prefecture. Many minor shocks followed. The origin of the seismic disturbance is supposed to have been in Chokai-san, on account of rumbling sounds being heard from the direction of that mountain and because the shocks apparently originated in the place where Chokai-san is situated. The shocks reached their acme at Sakata, whence one vibrated through the northern part of the Higashi Tagawa District, terminating in the Nishi Tagawa District, while the other travelled to Matsugatake, in the Atsumi District, then southward to Yamagata, Yonezawa, and other parts. The districts in which the earthquake was most disastrous were Sakata and Higashi Tagawa. Up to the 25th ult. the following casualties and damages had been ascertained:—

Persons killed	465
Persons wounded	443
Buildings totally destroyed	1,538
Buildings partially destroyed	841
Buildings burnt down	1,348

It has been discovered that ice can be made from natural gas. This is effected by expanding it down to, or near, the ordinary degree of atmosphere from its high initial pressure. The new invention consist of an ingenious arrangement of chambers into which the gas is passed from a well, and where, by the process of expansion, a supply of 1,500,000 cubic feet will turn out about fifty tons of ice daily, at the cost of 2s. a ton. The most notable feature in connection with this process is that the gas retains all its virtues and values for glasswork use and for heating limekilns and other furnaces. Nothing except the pressure is lost.

THE RECENT EARTHQUAKE.

The following extract from a letter sent from Dr. Greene, who, with the Rev. Mr. Newell of Niigata, visited the scene of the recent earthquake, will doubtless prove of interest to our readers:—

Sakata, October 31st, 1894.

We arrived this afternoon at 2 o'clock. On our way we passed through several villages which suffered heavily from the earthquake, and found this town in a fearful condition. In connection with the shocks, fire from falling lamps, &c., broke out in sixteen places and destroyed nearly half the town. In the district of Kori, of which Sakata is the chief town, over 3,700 houses, exclusive of temples, godowns, &c., were destroyed. In the adjacent districts perhaps half as many, making in all about 5,500. This means 25,000 people without homes. In this district 482 were killed, altogether over 600. We hear that \$200 and more was collected in Yokohama. That was well done, but I hope that more will come later. We have with us here Mr. Matsuda, the evangelist, in charge of the Presbyterian Church in Tsurugaoka, and as he had much experience in Nagoya at the time of the earthquake, we hope very much from his aid. We have had an interview with the local officials and hope to have another to-morrow. The first thing we intend to do is to purchase in Niigata household utensils, bedding, &c., and distribute them in co-operation with the local officials." In a letter previously received, Dr. Greene wrote that "unless special arrangements were made, all aid from Tokyo and Yokohama would have to be in the form of money, as railway officials refuse all freight for Niigata because of the war demands."

THE "GAELIC" AND "SYDNEY" SEARCHED.

Towards dusk on Sunday evening two Japanese torpedo-boats steamed into harbour and took up positions on each quarter of the O. & O. steamer *Gaelic*. They were followed by two boats containing Police and Customs officials, which lay off on either beam of the big liner. Then a Government transport with a detachment of marines in the bow steamed past and anchored astern. These manifestations caused considerable surprise to Capt. Pearne and his officers, which was heightened when a boarding party came up the gangway and asked permission to search the vessel for contraband of war. Captain Pearne said that he was in the hands of the Authorities, and they could do just as they wished, but he protested against his vessel being subjected to a search. Every courtesy was shown the search party as they went through the ship, and equal courtesy was displayed by them. Next morning the officer in charge of the party proceeded on shore to the O. and O. Agency, and then information of the search was given to the British Consul, and H.B.M.'s Minister at Tokyo.

Captain Pearne in an interview with a representative of the *Japan Mail* on Monday said, in answer to inquiries: "I give you my word as an officer and a gentleman that there is nothing contraband on board my vessel." The *Gaelic* left harbour about half-past three o'clock on Monday afternoon, the torpedo-boats preceding her by an hour and a half. During tiffin time a large number of Japanese and several foreigners gathered upon the Bund and Hatobas, not knowing that the men wanted were already held at Kobe, and that the *Gaelic* was free to proceed.

The *Nichi Nichi Shimbun* states that two men claiming American nationality, who travelled under the assumed names of John Brown and George Howie, and a Chinese, named Chan Fan Moh, were originally among the passengers on board the *Gaelic*. They passed the night of their arrival at Yokohama on board the *Gaelic*, but transferred to the *Sydney* the following day, and at once started for Kobe. The Americans declared that they were in possession of an invention, by which they were able to destroy any number of vessels with torpedoes on an improved plan. Moreover, it was stated that they were engaged by the Chinese Government for service in the

Chinese Navy. The foreigners, who promised the Chinese Government to sink all the Japanese ships within some eight weeks from the date of the conclusion of their agreement, were to receive \$100,000 down for the task, with \$1,000,000 for each Japanese Naval fleet destroyed, and other large sums if success attended their efforts. This report reached the Japanese Government, but no special attention was at first paid to it. Further investigations showed, however, that the foreigners were employed by the Chinese Government for warlike purposes, and further evidence was sought and obtained. The Japanese authorities accordingly proceeded to the *Gaelic*, but were told that the suspected men had left for Kobe by the *Sydney*. A telegram was then sent to Kobe and a search was there effected, three persons being arrested.

Upon information supplied from some sources not exactly known, says the *Kobe Chronicle*, the M.M. steamer *Sydney* was boarded by the Japanese authorities at 4.30 a.m. on Monday before any of the passengers were up. The Japanese officials declared they had information concerning the transfer at Yokohama of two Americans and one Chinaman (said to be an interpreter of the Chinese Legation at Washington) from the *Gaelic* to the French mail-steamer, and demanded these persons should be handed over to them. The Captain protested, and insisted that the matter should be first referred to the French and the American Consuls. Marines from the *Tsukuba Kan* were subsequently brought on board, in spite of the protest of the Captain, and set to guard the suspected passengers—who were followed from one part of the ship to another. Their luggage was opened and examined, and their cabins were searched. Some papers were seized,—one of which was said to be a contract for some war material, or military machinery. The search was further prosecuted in spite of the Captain's protest; all the cases on deck being broken open, even the ship's biscuit boxes were examined. It was then announced to the Captain that the hold must be searched and the cargo examined. All day long telegrams were being wired to Tokyo and Hiroshima, but after the preliminary search matters remained in *status quo* until a late hour yesterday.

Repeatedly during the day the Captain was told that by giving up the suspected passengers, with their baggage, to the Japanese authorities, he could proceed on his way. The Captain refused. The French Consul and the American Consul came on board; and the French Consul protested vigorously. The American Consul made inquiries; but naturally took no other immediate action, as the illegality of the Japanese proceedings had not yet assumed any form that could justify his interference. The French Consul's duty was, of course, plain enough; and he carried it out. The Japanese authorities, in view of his vigorous protest, telegraphed at once to Hiroshima for instructions. It appears that the reply was an order for the forcible arrest and detention of the suspected passengers.

At eleven o'clock on Monday night a strong force of armed marines from the *Tsukuba Kan* went on board, and in spite of the warning of the French Consul and the protest of the Captain, seized the three passengers and conveyed them as prisoners of war to the Japanese warship, where they remain in durance vile.

This action of course threw the matter also into the hands of the American Consul, who will now take prompt action,—two men who claimed to be American citizens being illegally under arrest. Telegrams are flying round the world; and the affair is likely to bring about some unpleasant complications.

At midnight the *Sydney* was suffered to go on her way.

The names of the three passengers have been given as Howie, Browne, and Chan Fan Moh. A fourth party, a Chinese missionary named Reid, is said to have been mixed up with the affair—he was very intimate with the prisoners on the passage from San Francisco, and narrowly escaped trouble in consequence. The Americans are said to have been travelling under *alias*s. The Chinese speaks English admirably.

The man who travelled under the name of Howie is said to have proclaimed while on the *Gaelic* that he had invented a *machine-de-guerre* which was going to blow the Japanese out of Korea. As the Americans would say, he seems to have "shot off his mouth too much"—a risky self-indulgence in war time on a steamer carrying Japanese hands or passengers who understand English.

THE EMPEROR OF RUSSIA.

THE death of his Imperial Majesty ALEXANDER the Third, EMPEROR of all the Russias, took place at 2.15 p.m. on the 1st instant. Only a few weeks have elapsed since the first news of HIS MAJESTY'S serious illness reached Tokyo. The fatal character of the malady was then indicated, as was also the fact that its ravages had remained unsuspected, and therefore unchecked, for nearly two years. None the less, people found difficulty in believing that a man of such exceptionally robust constitution and in the prime of life—HIS MAJESTY would have been fifty years old had he survived until the 13th of next March—could already have passed into the shadow of death, and although telegram after telegram confirmed the gloomy view originally held, hope was not finally abandoned until the very last. It would appear, from intelligence received immediately previous to the 1st instant, that congestion of the lungs was the immediate cause of death. Such complications frequently accelerate the advent of death in the case of strong men condemned to long confinement and inaction.

The civilized world is rapidly outliving the days when an autocrat's nod could throw nations at each other's throats. Whether democracy, irresponsible, unreasoning, impetuous, is qualified to wield power with happier results, time has yet to tell. But there remain upon the European stage, even in these closing years of the 19th century, two rulers whose capacity for good or for evil can not be measured by any known standard. The eyes of all the Occident are fixed upon these Sovereigns. When the untimely death of the Emperor FREDERICK called to the Throne of Germany a youth only twenty-nine years old, Europe trembled lest powers so enormous vested in hands so juvenile should be perverted to the ends of selfish aggrandisement or unscrupulous ambition. If the result has set those fears at rest, if WILLIAM the Second has already succeeded in winning the confidence of the world, his rare ability and still rarer prudence must be counted exceptional, and certainly offer no guarantee for the issue of the experiment to which the Great Northern Empire is now to be subjected. The Grand Duke NICHOLAS, who succeeds to the Throne of Russia, is only in his twenty-seventh year. His father, whose death we have now to record with profound sorrow, became EMPEROR at thirty-six, and was

even then known to have thoroughly imbibed the pacific and sagacious principles of ALEXANDER the Second. Russia, indeed, has had the good fortune to see her sceptre swayed during the past thirty-nine years by Sovereigns such as the most enlightened of her subjects would have chosen had choice been possible. ALEXANDER the Second, to a naturally peace-loving disposition added an exceptional endowment of common sense, and such faithful appreciation of his immense responsibilities that his foreign policy was always secured against every taint of phantasy, while his benevolent and liberal domestic policy produced results that secured for him in history the place of a great reformer. Not Russia alone, but the whole of civilized humanity had to mourn the horror of that March day fourteen years ago. ALEXANDER the Third was his father's worthy successor. It is true that the field of domestic reform was virtually closed to him by the necessity of leaving his subjects to digest the sweeping changes introduced by his predecessor. The abolition of serfdom, the institution of provincial, district, and municipal assemblies, liberty of the press, trial by jury, and a system of judicial procedure after the most advanced model—the assimilation of such reforms as these might well occupy two or three decades in the lifetime of a nation hitherto without any organization of classes and in everything subject to the absolute will of an autocrat. Not conservative choice but considerations of prudent statesmanship restrained ALEXANDER the Third from pressing forward along the route travelled perhaps too quickly by his noble father. But there never was any doubt of his mood. Europe long ago recognised in him a man obedient to the highest instincts, and counted confidently on his sagacious influence to preserve the peace of the nations. The untimely death of such a ruler when twenty or thirty years of his beneficent sovereignty might reasonably have been expected, is a universal calamity. Above all it is a calamity for England. We have not a particle of sympathy with the creed, unhappily too common among Englishmen, that Great Britain is Russia's natural enemy. But we have profound faith in the destiny of Christianity. We believe that the Christian nations must inevitably grow over the heads of the non-Christian, and that the growth cannot ultimately be checked whether, as in the case of Russia in Europe, it involves the downfall of the Turk and the Mussulman

Slavonian; or whether, as in the case of Russia and England in Asia, it signify the subjection of many minor peoples. Central Asia must sooner or later come under the sway of England and Russia, and it were idle to deny that in the processes leading up to that consummation, dangerous complications may occur. Hence the succession of a youth of twenty-six to the Russian Throne is an event fraught with the gravest contingencies for Great Britain in particular and for Europe in general. A heavy weight has been removed from the scale of peace, and the result must remain for the moment pure matter of conjecture.

THE CHINESE PRISONERS.

THE Chinese prisoners whose arrival in the capital we recently described, are now in the Red Cross Hospital in the Shibuya district of Tokyo. About 110 wounded Chinese were carried to Japan from the seat of war, and of these some were put into hospital at Hiroshima, some were sent to Osaka, and some were drafted to Tokyo. The Tokyo contingent numbered 55. Their condition when they arrived in the capital was essentially Chinese, that is to say, exceedingly dirty. That fact, however, need not be too harshly cited against them, for facilities conducing to personal cleanliness are not always accessible in transport steamers, and moreover the men had just completed a railway journey of over two days. On reaching the Red Cross Hospital they were speedily made acquainted with the luxury of thorough cleanliness as to person, habiliments, and surroundings. Have any of our readers visited the Red Cross Hospital? It enjoys the reputation of being the best arranged and best appointed hospital in Asia. We do not claim such large distinction for it on our own authority, but merely quote the verdict of experts. Certainly it is about as attractive a place as any resort of diseased humanity could well be. The laboratories, the museums, the operating theatres, the medical inspection rooms, the wards—all are admirably equipped with everything that science in its most advanced stage dictates, and all are arranged so as to suggest brightness and cheerfulness rather than suffering, the surgeon's knife, or the noxious drug. In a comparatively remote part of Japan the officials of old time selected an almost cruelly picturesque site for an execution ground. The path to it from the jail winds along the tranquillest of sea-shores, and offers at every bend glimpses of Fujiyama looking over the tops of undulating hills gracefully grouped about the feet of the peerless mountain. Here indeed must it have been for the condemned criminal to tread

that path and take his last leave of a world so lovely. A similar reflection is suggested by the environment of the operating theatre for specially dangerous cases at the Red Cross Hospital. The surgeons and their assistants, after undergoing a long series of prophylactic preparations, pass into a room from whose broad windows one looks across a foreground of richly stocked garden to the noble pines and soft glades of a park once the plaisance of a feudal noble. No particular praise is perhaps due on this account to the designers of the hospital. Tokyo is not like a Western city: its houses are not packed so closely that every square foot of available space commands a prodigious value. Grounds as ample as those of the Japanese Red Cross Hospital could not be appropriated for a similar purpose in London, except at an almost prohibitive outlay. But in Tokyo no difficulty whatever offers on that score. The Red Cross Hospital stretches itself luxuriously in all directions, pushes its arms into picturesque parterres and encloses between its wings courts full of blossom and greenery. The wounded Chinese prisoners are in the easterly wing. They numbered fifty-five when they arrived, but death, in the guise of typhoid and dysentery soon claimed two, and eight have been declared convalescent, so that there now remain only forty-five. Their hurts are not serious, as a rule. One man has lost a leg; another an arm; a third had a bullet through his skull and may suffer much before recovery; a fourth is lying with ice-bags to his head, an apparently trifling bullet-graze having produced concussion of the brain. But the rest are not too sick to enjoy themselves. It may be safely said that they never fared so sumptuously before. Bright, airy rooms; capital beds, soft as to mattresses and coverlets; excellent food; a spacious garden for exercise; scrupulous cleanliness everywhere; uniformly kind treatment and tender nursing; complete absence of toil and moil—how many Chinese have had experience of such a lot? Naturally the men want to stay in Tokyo. They find it an ideal place. Physically they are fine specimens of manhood: tall, muscular, intelligent-looking, just the kind of men that a recruiting sergeant would select. The Japanese look small beside them. There is something very much amiss somewhere when a huge nation of 270 millions possessing men of such thews and stature, is unable to make any stand against a little nation of 40 millions, short and small-boned. It is plain, however, that the contrast does not inspire the Japanese with any apprehension. They never doubted their ability to beat the Chinese, and they consequently accept the result with perfect equanimity. They know now that their own wounded are slaughtered and mutilated by the comrades

of the men they are nursing so tenderly. But that, too, they take as part of the inevitable day's work. They pity the Chinese for not knowing better, but they show no inclination to follow their degraded example. We have seen it somewhere stated that the wounds of these Chinese prisoners are, with rare exceptions, in the back. That is a misconception. Wounds received from behind are not in undue proportion.

The Japanese have suffered so much in Western estimation owing to the sin of omission committed by the Commander of the *Naniwa Kan* in neglecting to save the lives of the Chinese soldiers at the time of the sinking of the *Kowshing*, that their subsequent method of conducting the war and their treatment of prisoners deserve to be carefully noted. Many foreign critics have hastened to condemn the whole Japanese nation because of the act of the *Naniwa's* Commander, who, after all, can not be charged with any worse crime than that of showing no mercy to an enemy's mutinous soldiers when they refused to surrender and endeavoured to murder their own foreign officers. We do not by any means desire to palliate such conduct, still less to defend it, but nothing, we think, could be more unjust than to jump to the conclusion that because the *Naniwa's* people confined themselves to saving foreign life and left the Chinese to perish, the Japanese nation is lacking in the instincts of civilization and unworthy to be admitted to the pale of Christendom. Certainly final judgment should not be based upon that solitary act, even though it were unredeemed by others of a different character. But when we note the orders issued to both the Japanese armies in the field, the principles of mercy and moderation inculcated by their Generals, the treatment extended to their prisoners in the face of every provocation to inclemency, their method of tending the wounded Chinese, the discipline maintained by the soldiers, and the very significant fact that not one rumour of towns sacked or outrages committed in the enemy's country has been circulated, it is impossible to deny that the *Kowshing* incident affords no gage of the national character.

THE "SYDNEY" AFFAIR.

MESSRS. HOWIE and BROWN, two gentlemen of British extraction, apparently, but claiming American citizenship, saw in the present war between China and Japan an opportunity to enrich themselves. One of them had served in the Brazilian navy, and both thought that they possessed a secret for employing torpedoes in such a manner that the annihilation of a hostile fleet could be compassed with ease and certainty. They approached, or were approached by, an agent of the Chinese Government, and in the sequel of negoti-

ations it was agreed that, in consideration of a payment of one hundred thousand dollars, the two experts should hire their destructive services to the Middle Kingdom. Passage was taken for them to the Far East in the Oriental and Occidental steamer *Gaelic*, and they arrived in Yokohama on the 2nd of November. Of course they would gladly have selected a route that did not oblige them to set foot upon the soil of the empire whose ships they were about to blow up. But expedition being a prime object, they could not spare time to travel round by Europe and India. Unable, under the circumstances, to avoid visiting Japan *en route*, they naturally sought to abbreviate the period of their sojourn there as much as possible. To continue their voyage by the *Gaelic* involved remaining in Yokohama from the 2nd of November until the 5th, whereas by transferring themselves to the Messageries Maritimes steamer *Sydney*, they saw a means of continuing their journey on the 3rd. Accordingly, they engaged passages in the *Sydney*, and, still accompanied by their Chinese friend, steamed safely out of Yokohama harbour after a delay of only one day. Meanwhile, however, information having reached the Japanese Authorities, and it being understood that the two "agents of destruction" were about to continue their voyage Chinawards in the *Gaelic*, steps were taken to search that vessel on the eve of her departure from Yokohama. The search proved, of course, unsuccessful so far as the detention of the men was concerned, but it established the fact that they had proceeded by the *Sydney*, which steamer was then lying in Kobe, one of her ports of call. A telegram to Kobe set the necessary machinery in motion there. The *Sydney* was visited and searched, and the two men, together with their Chinese companion, were arrested, the contract under which they sold their services to the Chinese for the purpose of destroying Japanese men-of-war being found in their possession.

In all these proceedings the Japanese Government acted within its rights as a belligerent. The searching of either the *Gaelic* or the *Sydney* being unquestionably permissible on the high seas, was still less open to query within the territorial waters of the Japanese empire. It is alleged that, in the *Sydney's* case, the operation was conducted in the face of Consular protests. We must decline to believe anything of the kind. The exercise of an immemorably acknowledged belligerent right can scarcely have provoked the opposition of intelligent and responsible officials. Had contraband of war been discovered in either the *Gaelic* or the *Sydney*, the ship would have been confiscable as well as the article. But in this instance not goods but passengers were in question, and some critics appear to think that a hard and fast line is drawn

by international law between contraband of war carried in a neutral bottom and passengers travelling by a neutral ship. The case of the *Trent*, for example, has been cited as proving that the neutral flag covers passengers under all circumstances. But the case of the *Trent* is not apposite. What is established is that civil servants of a belligerent, proceeding in a neutral vessel from a neutral port to a neutral port, can not be taken forcibly from that vessel on the high seas by another belligerent. The conditions in the case of the *Sydney* are radically different. There we have the military employés of a belligerent travelling by a neutral vessel from a port in the territory of one belligerent to a port in the territory of the other. No precedent exists to regulate the procedure under such conditions. But precedents become superfluous where first principles are involved. It would be an outrage upon reason to suppose that military experts who had hired their services to a country's foes for the stipulated purpose of destroying her vessels of war, must be suffered to pass unmolested on their destructive mission through her territory simply because a neutral carrier undertakes to transport them. Such a contention is manifestly untenable on the face of it. Allusion, though apparently superfluous, may also be made to a claim advanced in certain quarters, namely, that in view of the extraterritorial system existing in Japan, the warrant of a Consul should have been obtained before proceeding to the arrest of Messrs. HOWIE and BROWN. That claim betrays strange confusion of ideas. The procedure appertaining to Consular Jurisdiction and the procedure sanctioned by belligerent rights are absolutely distinct.

Whether it was worth Japan's while to concern herself about Messrs. HOWIE and BROWN, we are inclined to doubt. Were the engine of destruction, of which they assert themselves inventors, capable of accomplishing much, they need not have travelled so far a-field to find a purchaser, nor would its value have been appraised so low as a hundred thousand dollars. We should be inclined to let such adventurers flock unmolested to China. But these are the reflections of irresponsible outsiders. After all, Japan's duty is to neglect nothing that makes for the success of her troops and the safety of their lives.

FULLER particulars, now obtained, as to the character and purpose of the two American citizens taken by the Japanese Authorities from the M.M. steamer *Sydney* in Kobe harbour, and still held in custody, go to modify the view that such adventurers might have been suffered to pursue their enterprise unchecked, since the invention of which they claim a monopoly would not have

been carried so far a-field in search of a market had it possessed real value as a destructive engine of war. Among the men's effects was found a letter from the Chinese Representative in Washington to the Viceroy Li, the contents of which have not yet come to our knowledge, and a duly signed agreement by which the Chinese Government was pledged to pay to the two experts a sum of one million dollars if they succeeded in destroying a Japanese naval squadron, and a fixed amount for every Japanese merchantman blown up by them. Our information being telegraphic, lacks explicitness. The words "a Japanese naval squadron" sound vague, and the reward for sinking a merchant ship is not specified. But the main facts are clear enough. The men had received a hundred thousand dollars down, and were promised a great sum if they made good their professions by destroying a number of Japanese war-ships or trading vessels. Whether their alleged invention was valueless or not, they were at least prepared to put it to practical test, and as one of them has served in the Brazilian Navy, their competence from a service point of view may be assumed. It is plain that such persons must be classed very differently from the general run of foreign employés. The latter, supposing that they consent to serve actively, are attached to a *corps d'armée* or placed in a vessel of war, and in either case their capacity for inflicting injury upon an enemy is very limited. But these torpedo experts would presumably have been furnished by the Chinese Government with whatever they declared necessary for the prosecution of their design, and would then have been free to dare anything. Resolute men under such circumstances might cause large loss of Japanese life and material. Success would mean a splendid fortune; failure would probably involve no very serious peril. We can not but think that the Japanese Authorities would have been guilty of culpable negligence had they, knowing the destination and purpose of these men, suffered them to pass unchecked through Japanese territory. The affair, as might have been anticipated, is evoking journalistic utterances of a very vehement nature. France is represented as having been insulted, and, wittingly or unwittingly, much editorial fuel is thrown upon the fire of popular excitement. It is a pity that a question in itself so interesting should be obscured by passion or prejudice. The French Government, however, will certainly take a calm and just view. Nothing is less likely than that French juriconsults will commit themselves to the monstrous proposition that a neutral vessel is entitled to carry, from a port in the territory of one of two belligerents to a port in the territory of the other, military experts who journey for the purposes of undertaking a destructive enterprise against the ships and

subjects of the former. Neutral rights can not be exalted so far above the head of belligerent rights as that theory would imply. With respect, further, to the peculiar status said to be claimed for French mail steamers, its obtrusion into such a context is not happy. Neither France's mail steamers nor any other Power's mail steamers can assert for themselves an exceptional character within the territorial waters of a foreign State, except by special agreement with that State. Still less reasonable does such assertion become in the case of mail steamers plying between the ports of foreign belligerents. For the rest, it is plain that if the steamers of the Messageries Maritimes possess the status of men-of-war, then their obligation to observe the strict duties of neutrals is all the more imperative. No one will contend, we presume, that a French warship would be justified in carrying to China torpedo experts engaged to blow up the Japanese navy and mercantile marine, unless indeed, France were China's ally.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE WAR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a recent issue of a magazine entitled *The Church in China*, in a letter of Bishop Graves, I find the sentiments copied below that should make glad the heart of every thoughtful foreigner in this country:—"The war with Japan is the absorbing topic at present, and it is with very mixed feelings that a missionary regards it. If it humbles the pride of China it will do a great good. It may bring disorder in its train and cause great interruption to our work for a time, but it must bring about good results in the end. Already the emptiness of Chinese boasts and the rottenness of the administration in many branches have been made manifest."

"We devoutly hope that the time is at hand when the refuge of lies in which China has been living will be swept away, and a new China arise on the ruins of the old. To one who believes in a God of justice it is plain that pride and deceit will bring about their own destruction and that of those who trust in them."

Yours, etc.,

KAMIWA.

November 2nd, 1894.

GO SLOWLY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I notice that some unreasonable foreigners are making a fuss about the delivery of their mail. Now let me labour with them, that they may preserve the serenity of their souls. They should remember that Japan exists for the Japanese and not for impatient foreigners. If the Japanese want to have things jog along easily, why not let them? Sweetness of temper is far more to be desired than sharpness and quickness either in temper or action.

Even telegrams come around in the course of time if they are not prodded too much. For example:—A telegram was sent to me from Aomori recently at 6.10 a.m. It took 20 minutes to get it to Sendai, arriving here at 6.30. It was delivered at 8.15 a.m., i.e. one hour and forty five minutes later, two hours after sending. Our house is a pistol shot away from the Post Office, and a person would have to walk pretty slowly to use up five minutes on the way. I didn't complain; nor do I now.

Do you think that strange? Here is one better. Some two years ago I had occasion to send a telegram in English from Kagoshima to Tokyo. There seemed to be some friction in getting it through, so I sent another in Japanese which arrived promptly, and I gave no more thought to my English telegram. Five days after I was

awakened at midnight, and stumbled out to the front gate in a pouring rain to read a polite notice from the Post Office that my English telegram had just been delivered. Did I swear? No; I thanked God, and took courage that Japan had progressed so far along the path of progress in western civilization that a telegram in the English language could be sent 700 miles in five days.

These Tokyo people who want their mail delivered so promptly should get up a subscription for a deep sea clerk to sort the mail in transit, and to translate the addresses.

Put me down for 10 yen per annum towards it, registering a protest at the same time against the impertinence of foreigners who make their own impatient dispositions an excuse for interference in the affairs of this empire:—

—Go yukkuri to itte irashai.

Sincerely yours,

H. S. J.

CHRISTIANITY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the *Japan Mail's* leader of to-day I find the following passage:—"But we have profound faith in the destiny of Christianity. We believe that the Christian nations must inevitably grow over the heads of the non-Christian,"

Now, I cannot help thinking that the words "Christian" and "non-Christian," as well as "Christianity," in such a context as this, are a little out of place. Would it not be more to the purpose to say, for instance, "better armed"—"in the possession of better guns"—"provided by Krupp, Armstrong," and so on—success in war certainly depending more on a good armament than on the creed of the belligerent nations. Perhaps I may be nervous in this respect, but I must confess that in my opinion the use of the word "Christian" in such a context as quoted above has the effect of making a simple-minded reader a little perplexed.

Yours truly,

PETER SIMPLE.

Tokyo, November 5th, 1894.

[Quot homines tot sententia.—Ed. J.M.]

THE SCANDINAVIAN ALLIANCE MISSION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Rev. F. Franson, who is now in Japan, writes as follows in the *Bombay Guardian*:—

On my arrival in India a couple of months ago, being on a tour for the purpose of visiting our different mission stations in India, China, and Japan, I was requested to write something, that would reach English readers about this new mission, its origin, the number of missionaries sent out, &c.

This mission is only about three years old, counting from the time the first missionaries were sent out. Its present force in the different heathen fields is about a hundred, of which five are in South Africa (Swaziland), thirteen in East Africa (Tanganyika), ten in India (eight of whom are scattered around the borders of Tibet, and two studying Hindustani), fifteen in Japan, and the rest in China.

The originator of this mission is, we trust, the Lord Himself.

After having been engaged about fourteen years in pastoral and evangelical work among the Scandinavian churches (of Sweden, Norway, Denmark, and among the many Scandinavians in America), as well as in Germany, Switzerland, France, Italy, Russia, and Turkey, the Lord laid upon my heart the mission to the heathen.

I was at this time holding evangelistic meetings in and around the two great cities Barman and Elberfeld in Germany. Already before that time, I had helped to bring out some workers on the heathen field from Norway in connection with the mission organisation that originated during my work there. This and several other things contributed to work up the missionary zeal in my heart to full flame. The chief inducement being perhaps the urgent calls from the missionaries in China, presented by private persons and Societies and unitedly through the great Shanghai Conference.

Germany was for several reasons not the best land to begin a new heathen mission in, but in connection with the religious awakenings in and around Barman and Elberfeld, persons were found willing and able to go out as missionaries. China was to be their field. A committee was appointed at Barman with headquarters at Panneweise, Barman, and the German-China Alliance Mission was founded.

That mission has already some nine or ten workers out and several others under preparation. It publishes also a monthly paper called the *China Bote* (China's Messenger), which seems to find great favour with the Christians of Germany. After this mission was fairly started and the first missionaries accompanied to England to perfect themselves in the English language, and after it was determined that the workers of this mission should work as associates to the China Inland Mission, I started for America, where I felt the assurance in my heart that the Lord had a still greater work for me among the Swedish Christians there, to whom I was well known since my previous evangelistic work among them. The Lord who put it in my heart to go over there, told me also how to work.

Long before reaching America, it was clear to me, that I should offer every church the privilege of supporting their own missionaries, and when the members of the

church would know personally and about whose capability they had had opportunity to assure themselves. This plan worked admirably well. The mission candidates after proper examination and training were sent out as evangelists to the churches at large. Great revivals broke out in many places, and it did not take long before the report came from one church: "We are willing to take this brother as our missionary and support him." And from another church: "We are willing to take this female evangelist as our missionary and support her," and so on until about a hundred had their support guaranteed. Money was at the same time gathered for their passage and outfit, and party after party sent out. The first party consisted of thirty-five missionaries who all went to China.

A committee was chosen at Chicago on Alliance basis. Rev. Mr. Dyrness is at present the secretary and Rev. F. Risberg, professor of Chicago Theological Seminary, is the Treasurer. The headquarters of the mission are at 81, Ashland Boulevard, Chicago, Ill. Those of our missionaries who have gone to China, are associated with the China Inland Mission on the same basis as the German-China Alliance Mission. I cannot but from the very bottom of my heart thank God, that he led me to work upon the principle of each church supporting its own missionary. I attribute next to God's blessing chiefly to this point the astonishing fact, that even during the present financial crisis in America, sufficient money has come into our society to supply all the necessary wants of our missionaries.

We have also had the great joy of hearing of great results, especially in the fields of Japan and China. Besides those hundred missionaries belonging to the Scandinavian Alliance Mission and those belonging to the before mentioned Norwegian and German Missions, the Lord has during my last stay in Sweden enabled me to pick out, train and send away to the North of China (outside of the Chinese Wall) forty-four Swedish Missionaries who are entirely supported and belong to the International Missionary Alliance of New York, and four more missionaries who belong to Miss Anna Taylor's Tibet party, now at Darjeeling—making in all over 100 missionaries, whom the Lord has enabled us to bring on to the mission field during the last four or five years.

But I am also glad to tell you that these missions are not the only ones operating from Scandinavian countries. Especially in Sweden, Norway, and Denmark there are several other societies, which have sent out and are sending out missionaries to the different heathen fields.

Many will have been surprised to hear about so many Swedes in America and about so much missionary interest among them; I have then to tell you that we have some two millions of Swedish speaking people in America; and further, that we have had during the last fifteen years as well in Sweden as in America the most wonderful and thorough religious awakenings, that our people ever had since the time the first missionary to Sweden, Ausgarus, set his feet upon our shores.

The grand Biblical truths about instantaneous conversion, about assurance of Salvation, about inquiry meetings, about a consecrated life, and the baptism of the Holy Spirit for work, about God's wonderful power exhibited also for healing of bodily disease through faith, the glorious truth of the unity of God's people, and the Lord's speedy coming, have done wonders and prepared the people for the great missionary movements inaugurated during the last few years. If the Swedes in the past years of this century have done very little comparatively for the evangelisation of the world, we are determined to use this last decennium of the 19th Century as well as possible.

We look upon ourselves as a child or at most a young man, compared to the great giants—the older Societies, but we hope the child will grow and prosper or the young man develop into full manhood, that we might be able to strike some heavy blow at and do as much damage as possible to the kingdom of darkness before our Lord comes to take us home to glory. Be it so, Amen!

At the same time, that we must gratefully acknowledge what the other old Societies already have done, I feel obliged to say, especially as to the large, rich Protestant bodies of America, that in my opinion the giants there could grow a great deal more still. If the small Swedish churches of America, consisting chiefly of people who have just settled in the country and consequently poor, can do so much—what might be done if the twelve million Protestants of America would show to the world their giants' arms and the strength already now in them, although not yet used as it might be.

Look up, especially all young people's Societies, let it be V.M.C.A., or Y.W.C.A., or Christian Endeavour Societies, or Epworth Leagues—look up, perhaps the Lord has some special work for you to do in this matter.

The Rev. F. Franson, Director of the S.A.M., being on an inspection to the different stations of the mission, has arrived in Japan from India, where he has spent five or six months, most of that time in the Himalaya mountains. He has succeeded in the difficult task of finding good openings for the eight missionaries who have now spent some two or three years at Ghoom and Darjeeling, occupied with the study of the Tibetan language and mission work. They are now located at four different places along the borders of Tibet and Bhutan two have their stations on the west side of Tibet. Two in the state of Sikkim, two on the south border of the state of Bhutan (Baksa Dwar), and the others are left at Ghoom and Darjeeling to take care of the work among the Tibetans there. These workers are thus compassing the walls of that modern Jericho "shot because of the children of Israel until the walls will fall," and "they shall ascend every man straight before him."

While waiting they have good work where they are among Tibetans and Tibetan-speaking people, settled on British territory. Besides other mission work they have already started several day-schools among them. They have also good opportunities of sending into Tibet proper those parts of the Bible—Genesis and the whole of the New

Testament—translated by the Moravians, as well as other Christian literature, which they are busily engaged in preparing.

After having visited different missions at Hongkong, Macao, and Canton, including the Swedish Mission at the last place, Mr. Franson has now arrived in Japan, where he will spend November and most of December. After this he hopes to visit Central and Northern China, and parts of Mongolia and Siberia before returning home.

Yours, etc.,

November 7th, 1894.

B.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, October 12th.

The *Gaelic*, carrying this letter, is to take a number of Baptist missionaries to work in Japan. Rev. and Mrs. R. A. Thomson return to Kobe; Miss Clagett returns to Suruga-dai, Tokyo; Misses Rolman and Wilson, formerly of Yokohama, will work in Odawara; and Miss Barlow, a new appointee, will assist Miss Church at Huneji.

A young Chicagoan, named Davidson, who accompanied Lieut. Perry on the recent Arctic expedition, is planning to join the Japanese army. While he was in Greenland, he passed his 21st birthday, and is said to be the "youngest American explorer that ever crossed the Arctic circle."

Secretary Gresham has publicly intimated that the new treaty between Japan and the United States will follow substantially the same lines as the new Anglo-Japanese treaty.

Rev. W. E. Griffis, D.D., in the October *Homiletic Review*, emphasizes very forcibly the need of "The Study of Comparative Religion in Our Theological Seminaries." The October *Cosmopolitan* contains an interesting sketch of the career of "Li Hung-chung," by G. T. Ferris, and a charming description (illustrated) by Laura B. Starr with the title, "By the Light of a Japanese Lantern."

San Francisco, Cal., October 6th.—It is stated here that the Pacific Mail Steamship Company is about to absorb the Occidental and Oriental Steamship Company. C. P. Huntington is now president of both companies and consolidation is proposed as a measure of economy. The Pacific Mail owns its own vessels, but the Occidental and Oriental leases its steamers from the White Star line.

The following is from an article on "Philately" in the *Chicago Tribune*:—

Japanese stamps are perhaps as artistically beautiful as any in the world. They display all that simplicity of design and delicacy of treatment that characterizes Japanese art generally. Designs of flowers and dragons in borders of conventionalized lines are their prevailing characteristics. They are printed on rice paper that is as fine as silk and in colors as delicate as blues, yellows, browns, lilacs, olives, and other harmonious colors.

It is reported at Washington, that the Chinese Government has ratified the new treaty with the United States, but is, for some reason, withholding the official notification.

I am unable to say how much truth there is in the following item:—

Forth Worth, Texas, Oct. 4th.—General F. M. Clark, formerly of the United States volunteers, for two years secretary of the Chamber of Commerce, left to-night for New York to consult Colonel Fred. Grant, his partner, in a deal with the Chinese government. General Clark to-day received a cheque from the Chinese government for \$5,000 to pay his expenses. He has discovered an explosive to be used in torpedoes which is his exclusive secret. He and Grant are to get \$1,000,000 for the sole right to use the explosive by the Chinese—Clark \$500,000 and Grant \$500,000. He will be in New York on Monday.

The latest news from Samoa is that the rebel chief, Tamasese, will probably not observe long the peace patched up in September.

General Antonio Ezeta is now in the City of Mexico; he denies any further warlike intentions and says that he will settle down peaceably as a coffee planter.

President Cleveland is expected to give a decision soon in the boundary dispute between Brazil and the Argentine.

The naval officers of the Bering Sea patrol declare that the protective regulations have been of little avail, and that at the present rate of slaughter seals will be exterminated within five years.

In the State election in Georgia the Democrats were, of course, successful, but gained the victory with a largely decreased majority. The Populists made large gains, and will have about 60 out of 175 members of the lower house. The silver question played an important part in the election.

The Populists of Illinois are rejoicing over the "conversion" of ex-Senator Lyman Trumbull of this city. He has always been quite careless of party ties. He was the first Republican Senator from Illinois, but was one of the five who dared to vote against the impeachment of President Andrew Johnson, and has since acted with the Democrats.

In Massachusetts Gov. Greenhalge (Rep.) will again make the campaign against Hon. John E. Russell (Dem.), his last year's opponent.

In New York Senator Hill and Congressman Acknowledged accept the nominations for Governor and Lieut. Governor, and Judge Chas. F. Brown,

of the Supreme Court, takes Judge Gaynor's places on the ticket for Judge of the Court of Appeals. The "Independent Democrats" have ratified all those nominations except the first, and will run Everett P. Wheeler for Governor. This seems to insure the election of ex-Vice-President Morton, who has accepted the Republican nomination.

The New York Constitutional Convention in its recent session accomplished the following, as summarized by a committee:—

1. We renew the commendation of the convention in 1867, providing for progress in agriculture by requiring general laws giving the right of drainage across adjoining lands.
2. We seek to separate in the larger cities municipal elections from state and national elections.
3. We have provided further safeguards against abuses in legislative procedure.
4. We have removed the prohibition against the sale of Onondago salt springs, which are a source of annual loss to the state.
5. We have removed from the constitution all mention of the office of coroner so that the legislature may deal freely with that branch of the public service now in such an unsatisfactory condition.
6. We have extended the prohibition against lotteries so as to include all pool selling, book-making and other forms of gambling.
7. We have abolished the statutory provision limiting the right of recovery for injuries causing death to \$5,000.
8. We have added to the throw greater safeguards around the elective franchise by prescribing ninety instead of ten days of citizenship before the right can be exercised.
9. We have provided for a new apportionment of senate and assembly districts.
10. We have declared in the constitution for principles of civil service reform.
11. In addition to the provision for the improvement of the state prisons' administration we have prohibited the contract system of convict labour.
12. We have authorized the legislature to provide for the improvement of the canals.
13. We have required the legislature to provide for free public schools, in which all the children of the state may be educated, and we have prohibited absolutely the use of public money in aid of sectarian schools.
14. The revision of the judiciary article is designed to remedy the existing evils arising from the overcrowding of the trial calendars.

The new constitution will soon be submitted to the suffrages of the people.

The obituary record of October already contains three memorable names. On the 7th inst. Andrew G. Curtin, the Republican war-governor of Pennsylvania, U.S. Minister to Russia, and Democratic Member of Congress (1881-1887) died. On the same day passed away Oliver Wendell Holmes, the famous poet, essayist, novelist, philosopher, and scientist, at the age of 85; and thus with the death of "The Autocrat" is finally broken up that noble galaxy of great writers in New England. The third name is that of Prof. David Swing, Chicago's great independent preacher in Central Music Hall. Although he was a year ago frozen out of the Presbyterian church by Dr. Patton, two orthodox ministers, Dr. Barrows and Dr. Gunsaulus, did not hesitate to eulogize his preaching.

Miss C. E. Haskell has made an offer of \$10,000 toward a David Swing memorial chapel at the University of Chicago. The recent Convocation address at the university was delivered by Rev. John H. Barrows, D.D., on "The Greatness of Religion." At the same convocation Edmund Buckley, formerly of the Doshisha, received the degree of Ph.D. In connection with the astronomical department will be published *The Astro-physical Journal*. The first woman to take Cornell's highest honour, the Woodford Prize in Oratory, is Miss Harriet Chedie Connor, of Burlington, Iowa, who won the prize from five men competitors. She has stood high through her entire course, and was the first woman ever elected to the board of editors of the *Cornell Era*. "Temperance Day" was celebrated here on the 10th inst. by an imposing parade by thousands of children and an immense mass-meeting at the Auditorium, where the Catholic Bishop Watterson, the Presbyterian Dr. Barrows, the Baptist Dr. Henson and others united to sing the praises of Father Mathew, Miss Willard, and other temperance workers.

The American Board of Foreign Missions is holding its annual session at Madison, Wis. The report of Foreign Secretary Clark spoke of the "peculiar difficulties" encountered in Japan; and that of Secretary Smith referred to the war and its possible good effect on the missionary cause in China. The Treasurer reported that the indebtedness had increased from \$88,318 in 1893 to \$116,236. The itemized cost of missions was given as follows:—

West Central Africa, \$21,564; East Central Africa, \$6,435; Zulu, \$27,827; European Turkey, \$31,052; Western Turkey, \$27,605; Central Turkey, \$34,474; Eastern Turkey, \$64,908; Marathi, \$24,131; Madras, \$54,303; Egypt, \$18,753; Poon Chow, \$17,428; North China, \$25,120; North China, \$70,344; Shansi, \$13,519; Japan, \$23,868; Sandwich Islands, \$5,177; Micronesia, \$28,496; India, \$19,506; Spain, \$18,585; Australia, \$11,272. Total, \$678,168.

Recent calamities have been in the shape of cyclones at Wichita, Kansas, and Little Rock, Arkansas, in both of which places great damage was done to property and many persons were either killed or severely injured. The Florida coast has also been swept by a disastrous storm.

Dun's *Weekly Review of Trade* for last week read as follows:—"With the chief money crops of

the West and South sinking in value it is not strange that purchases of manufactured products are smaller than was expected. Wheat has touched the lowest point ever known for options, and cotton the lowest ever known; in any form with the present classification of stocks both products are discouraging to purchasers for an advance. Producers are compelled to sell at prices below the ordinary cost of raising crops, and in some Western States there is also a lamentable failure of the corn crop. Under the circumstances it would be strange if the demand for manufactured products should be quite as large as in other years.

The U.S. Court of Appeals has rendered a decision in the case of Judge Jenkins's famous anti strike injunction. So much of that injunction as restrained the employes from striking is declared to be a violation of the rights of employes; but that part which restrained them from entering into a combination or conspiracy to quit with intention of crippling property and preventing operation of road is sustained.

According to the annual custom the first and second clubs in the base ball contest play a series of games for the Temple Cup. This year the champion Baltimore were beaten in four straight games by the New Yorks.

Geo. W. Wolfe, of this city, has recently established a "record" by making a trip on a bicycle from here to New York City in 6 days, 8 hours, and 30 minutes.

At the Pure Food Exhibition in this city, one can get, it is said, a dollar's worth of samples on an admission fee of only 25 cents!

Secretary Carlisle has offered to exchange the World's Fair souvenir half dollars for deposits of gold coin. These souvenirs have accumulated in the hands of the U.S. Treasury to the amount of \$1,795,890. It is thought that the big retail stores in the large cities will take large amounts of the coins, and that thus the gold reserve may be replenished.

The following is part of the programme of yesterday's sessions of the American Board of Commissioners of Foreign Missions at Madison, Wis.:—

Secretary Judson Smith's special address on "The Intellectual Preparation of the Missionary" was the most formal paper of the morning. President Angell, of Ann Arbor, declared, in discussing the paper, that there was a wrong idea that the brightest theological students must be preserved for the city churches and the cranks and dullards sent to the mission fields. It was a pernicious idea. The cranks could work untold mischief in the foreign fields, and the dullards were not worth exporting. No scope so wide could be found for the highest ability as in the foreign mission fields. The work covers everything, from knowing how to dig a ditch or baking bread to the highest problems of philanthropy and statesmanship.

In the afternoon session Rev. J. H. De Forest urged a continuance of missionary work in Japan, even though that nation was no longer heathen. Rev. John Holland said no religion at all existed in Mexico, where he laboured, and that the field of salvation was therefore open in that country. Rev. Dr. Purnham, of St. Louis, spoke earnestly in behalf of a more liberal church response to the missionary cause, while Rev. Dr. D. H. Clepp, of the Shanai mission, China, declared that, while the results of the past ten years in China had not been satisfactory, the work should be pushed all the more vigorously. Dr. E. M. Pease, of the Micronesian mission, told of the work in that far away land where spiritualism was rife among the natives. Rev. E. S. Hume described the method used for the conversion of people of India.

This evening a retrospect of twenty-nine years by Rev. N. G. Clark, the venerable retiring foreign secretary, was read by Rev. Dr. Webb, of Boston. Dr. Cyrus Hamlin and Rev. D. L. Moody also spoke.

CRICKET.

MR. READ'S COLTS V. A CLUB TWELVE.

The cricket season of 1894 was brought to a close in Yokohama on the Emperor's Birthday with an all-day match, a selected dozen of the Club meeting some two score and more Colts "toped in" by Mr. A. C. Read. As might only reasonably be expected the infusion of so much "new blood" gave rise to a good deal of genuine fun, the merit increasing as the day wore on. Some among these Colts, we may observe, were decidedly holicome despite the fact that their increasing waist-girths had induced many to abandon the glorious pastime, along with many another good thing which had accompanied them in the relaxations of their salad days. Others there were whose prowess with the willow is still on the tongues of present-day players, but who have, alas, made up their minds that the pursuit of the game is now freighted for them with more physical discomfort than they care to put up with. But Mr. A. C. Read's ready tact brushed aside any and every possible excuse of this description on Saturday. In fact he was delightfully oblivious of any factor tending towards making impossible an appearance at the wickets. He would have no shirking. And what was more, he sent every "Colt" down to the pitch with words of cheery encouragement, under the influence of which many a doughty swipe was conjured up, and sometimes—though not too often—brought off. Then the crowd gathered in and around the pavilion would cheer lustily in sheer delight and delight: whereat veterans yet to

go in would quietly seek counsel from those versed in the science of the willow and the ball as to the best and easiest means of achieving a like success when they essayed upon their fearsome venture. The Captain of the "Colts" was also watchful that his men were treated with due and courteous respect by the bowlers of the Twelve. Did the pace seem to be developing speed inimical to the orderly well-keeping of the aforesaid waist-girths he would send down a mighty cry of warning to the tunders, reminding them of their promise to "go slow." Sympathetic elders would unite in his efforts in this direction, so that the injunction, "not too fast," was one not to be disobeyed. Anon the Umpires would be instructed to see that the stumping propensities of the wicket-keeper did not develop above the normal and so lead to the distraction and utter demoralization of the out-of-practise bat. A more energetic Captain than Mr. Read for a team of "Colts" would be hard to find. After he had sent in all the "dry-bobs"—many of whom, we fear, had strolled down to fill the rôle of passive spectators of the game—he set about impressing all the "wet-bobs" in the good cause, so that at one time the field had the extreme felicity of seeing a gallant skipper of the B division of the Sailing Club going out to bat encased fore and aft with a double pair of pads. This player, too, tried his "prentice hand" at batting first with his right and then with his left, before settling down definitely to the former style: which spectacle of impartiality the crowd considered very edifying. Great were the deeds accomplished by some of the bats—Mr. N. P. Kingdon's score of 23 won him a deserved ovation. The Tokyo visitor, a mighty man in days not so long gone by, played his first and only ball right into Kenyon's hands—to the grief of the spectators and his own intense disappointment. Yet many a "life" was given through an inimitable "miss," at which no one had the heart to grumble. Not such good luck fell to the Captain of the "Colts," however. The echoes of the cheering amid which he went out to take the place vacated by Gordon, had scarcely died away when White's first ball distributed his bails to right and left, and he retired a wiser yet still a jovial man. At tiffin time 19 wickets had fallen for 60 runs, but it was not until 4 o'clock that the last "Colt" ran himself out, and the innings closed for 105. The Twelve then went in, and, notwithstanding the "ring fence" which surrounded them, managed to knock up, mainly by hard hitting and judicious "lifting," 112 for the loss of eight wickets. Darkness then put a stop to the merriest game played in Yokohama for many years. Scores:—

ORIENTAL HOTEL COMPANY.

FORTUNATE PAST AND BRIGHT PROSPECTS.

The Directors' report on the past year's working was printed in these columns some time ago. It was formally presented to the Shareholders in general meeting in the Municipal Hall, Kobe yesterday (6th) afternoon. The proceeding occupied about an hour. There were present Messrs. Crosse (in the chair), Hellyer, and Groom (the three Directors), and Messrs. Enslie, Lightfoot, Elliott, Allison, and Dr. Miller. The Secretary (Mr. Berigny) was absent on business, and the notice convening the meeting and the minutes of last year's meeting were read by the Chairman. The latter were formally confirmed.

The CHAIRMAN then rose to make his annual statement. The prosperity anticipated a year ago he said, had been realised. The report before them showed a total profit earned of \$15,568, while last year's profit was \$14,504. It must be borne in mind that the year had not been favourable for the hotel business; there were two chief causes that had militated against them—the plague in Hongkong kept many people from coming to the East at all and the war. But fortunately the Directors had been able to dispose of the property on Lot 11, making a profit of \$3,000, and they were able to present a total profit in advance of last year. But he hoped they had not reached the top of the tree yet. They were now in a position to control the whole of the hotel business in the port, and they did not see where rivalry was to come from. At the same time the Oriental Hotel was not at all afraid of competition; they would welcome wholesome competition that the hotel might prove itself what it claimed to be—one of the best hotels in the Far East, where the comfort and convenience of visitors were studied in every respect. They had carried the balance of profit to the Reserve Account they were building up instead of writing off anything on the Property Account because the Directors did not consider the property of the Company had depreciated in any way whatever. Property was more valuable in Kobe to-day than it was twelve months ago. They also considered the value of the good-will had increased. During Mr. Beguex's absence they had secured the services of a Manager who, as he heard from all sides, was giving every satisfaction. Mr. Beguex had entered into a fresh agreement with them for a term of three years. The Directors recommended a further dividend of 5 per cent., an interim dividend of 5 per cent. having been paid on May 7th. The latter absorbed \$3,700; there was now available a sum of \$8,800 odd. After paying 8 per cent. the Founders Shares were entitled to rank *pari passu*. Some \$17,000 worth of debentures had been issued; they had been mostly redeemed, or were in process of redemption. He reminded them that while 10 per cent. was very satisfactory, hotel property was always precarious, but they hoped to do even better yet than in the past. Mr. Hellyer was the retiring Director, he offered himself for re-election. Mr. Guinness, the Auditor, did the same. Their annual meeting had been a little delayed through the latter's deplorable illness of several weeks hindering the audit of the books. They had found it impossible for one man to do justice to the audit, and they had taken it upon themselves to appoint Mr. Rothwell to assist. He moved the adoption of the Report and Accounts as presented. On behalf of the Directors he would be happy to answer any questions.

In answer to Mr. ALLISON, the CHAIRMAN made it clear that the profit of \$3,000 on the sale of the Lot 11 property was in addition to the \$15,567 profit earned in the working.

Mr. ZIEGFELD elicited the information that while the Lot 11 property was purchased for \$37,000 and sold for \$44,000 (in round figures) a large portion of the difference was swallowed up in repairs, the purchase of furniture, loss of interest, and legal expenses amounting to \$1,000. It was also stated that the arrangement to hold the property till next March had been cancelled on good terms, and that it was now finally done with, although the settlement of the business did not appear in the present Report.

In this connection the CHAIRMAN added that he might tell them for their satisfaction that last month (October) was the best the Hotel had known in the course of its history, in the earnings being larger than ever before; September was also a very good month. As they were unable to pay down the purchase money for the property on Lot 11, they had been charged 7% interest on the outstanding \$30,000 odd; this had amounted to about \$2,000.

An explanation of the item \$606 as bad debts was given. The case in question, Mr. Clarke's

default ending with imprisonment, need not be recapitulated. It was added that since then the rule of weekly settlements had been absolutely inflexible.

Mr. ZIEGFELD mentioned complaints he had heard as to the charges being too high.

The CHAIRMAN expressed his regret at their Secretary's absence, as he had carefully prepared himself to rebut this charge entirely. He had obtained tariffs all through the Far East, and on comparing them they found their charges were not a bit in excess of any other hotel in the Far East. The rates for travellers were different from those charged to residents in China and Japan. The rule now for the former was \$5 a day, there was nothing under; and for the latter \$3½ or \$4. He put it to them if, at the present rates of exchange and seeing the number of things they had to import, this rate was too high.

Mr. GROOM mentioned Yaami's rise of prices to \$4, and thought they ought to charge as much he did.

The CHAIRMAN said Mr. Beguex on his way home had collected tariffs in Shanghai and Hongkong, and was to do so in Singapore. The tariff of the Oriental Hotel was not a bit higher than any of these, and in many instances it was lower. The only possible exception was the Club Hotel in Yokohama. Another side to this question was the really large number of people who congratulated the Manager on leaving the Hotel expressing themselves as satisfied in every way.

Mr. ENSLIE then seconded the adoption of the Report, and the motion was carried unanimously.

The remaining business was quickly disposed of. Mr. Hellyer was re-elected a Director; the Chief Accountant of the H. & S. Bank for the time being and Mr. Rothwell were nominated Auditors for the year. \$750 were voted as Directors' remuneration instead of \$500 as last year, in consideration of the special work that had devolved upon them; and for a like reason, a special sum of \$200 was voted to the Secretary, in addition to his regular salary of \$75 a month. A vote of thanks to the Directors, Secretary, and Manager concluded the proceedings.—*Hyogo News*.

A CRUISE IN THE "CALEDONIA."

There is a good story told in the P. & O. service of a party of young titled G. T.'s, including a duke and a stray earl or two, once making the trip to India, their exalted rank creating no little interest among the crew. While the steamer was coaling at Aden, as luck would have it, one of the tourists coming aboard missed his footing and fell among the coals, to the great consternation of a somewhat rough-and-ready quartermaster, who, in great agitation, ran to the captain with the question. "Please sir, what's to be done? Here's one of them *kings* fallen into the bunkers!" Had that same quartermaster been on the *Caledonia*, the new P. & O. liner on her recent trial trip from Greenock to London, there is little doubt that in similar case he would have applied not merely monarchical, but imperial rank to the distinguished guests, who for a week enjoyed to the full the hospitality of Sir Thomas Sutherland and the Company of which he is so energetic a chairman. Two of Her Majesty's Judges, a Civil Lord of the Admiralty, a Permanent Secretary of the Board of Trade, half a score of well-known M.P.s on both sides of the House, distinguished city officials, representatives of the Trinity Board, a posse of Admirals, to say nothing of a crowd of "personages," with a full complement of ladies, make up, it will be admitted, a passenger list which, had any mishap befallen the *Caledonia*, would have created, who knows how many vacancies on the Bench and in the Services, and, in these ticklish political times, might even have effected the balance of parties in the House.

It is, of course, the dearest hope of the directors of the P. & O.—and, let it be added, of her passengers *in posse*, of whom she has a full complement, nearly 500 booked for her first passage—that the *Caledonia* will materially reduce even the existing record of a 27 days' mail out and home. On her trial trip the stately craft, of which her builders, Messrs Caird of Greenock, have such well-deserved reason to be proud—has done her 18½ knots, which all who are acquainted with matters nautical are aware will enable the mails to be delivered even within the 12½ days which form the present record. The *Caledonia* with her 486 feet length and 54 feet beam is thus far the largest steamer the P. & O. Company have ever built and sailed, and it was with some justifiable pride that Sir Thomas Sutherland pointed out at the little function on board which marked the formal handing over the vessel to the Company,

that the first liner of the now magnificent fleet barely reached 200 tons, when in 1837 the mail service was first carried literally to "the Peninsula," in point of fact to Lisbon, and later to Gibraltar. The latest liner of the fleet, however, it may be accepted, marks the extreme limit of size. Atlantic steamers may be larger, but no vessel called upon to traverse the Suez Canal can exceed the tonnage or the length of the *Caledonia*. In many other respects, however, who can say what constitutes finality in the science of the ship-builder? The *Caledonia's* engines may be, or they are, the perfection of strength with the minimum of space occupied, her lines may be as they are, the most carefully studied, these are points on the possibilities of which no one which be wise to prophesy, but in creature comforts and in decorative effect it will be indeed hard for the naval architect to exercise further his skill. To those who recall the dingy, however solid sobriety of inland woods and mahogany, the restful, cheerful, bright white and gold carvings of the *Caledonia* will be grateful indeed. It is, of course, the hackneyed phrase to speak of such craft as "palatial," but the *Caledonia* as she lies at night in harbour, resembles truly a fairy dream, as, lit from stem to stern, the reflections of her electric lights glimmer in the calm water.

The chronicle of the cruise cannot be more appropriately concluded than by reproducing the following lines discovered on the last evening pinned up on the saloon companion-way:—

Oh *Caledonia*, stern and—white,
Where frocks are smart and eyes are bright,
Well we have learned from thee to know
The pleasures of the P. & O.
Fair was the promise of thy youth,
For Neptune showed unwonted ruth,
And at thy coming stilled his waves,
To prove that gods are sometimes slaves.
At thy behest the hours we spent
In endless forms of merriment,
And fast the moment sped along,
In dance and drama, whist and song.
We sought the classic stone of Bilarney,
And some folks said they saw Killarney,
In short, mid mirth and jollity
A pattern thou hast let us see
Of graceful hospitality.
Farewell! and pardon if I pay
This humble tribute ere I land
Of gratitude to Sutherland.

—Pioneer.

BALLOON ASCENT AND PARACHUTE DESCENT.

Though a very large crowd of Japanese and many foreigners assembled on the Recreation Ground yesterday afternoon, says the *Kobe Chronicle* of the 7th inst., to witness Mr. Léon Sagehomme's descent from a balloon by means of a parachute, we fear that the number who paid for admission was so small as hardly to cover the expenses. Shortly after four o'clock the filling of the balloon commenced, and in about twenty minutes was completed. Mr. Sagehomme then addressed the crowd, and said that though the amount of money taken was so small he would nevertheless proceed with the display.

Two or three minutes later the balloon shot up into the air amidst the cheers of the crowd, with the parachutist seated underneath on a trapeze, waving a white flag as he soared up into the air. There was very little wind, and though at first the balloon inclined towards the sea, another current of air at a little higher elevation brought it gently back again. A little higher, however, the balloon again commenced to drift over the sea. By this time the parachutist appeared so small that even the keenest eyes could hardly discover that he was waving his flag to the crowd below. After the balloon had steadily ascended for about five minutes, reaching an elevation variously estimated at from a thousand to two thousand feet, he disengaged his parachute and commenced rapidly descending to the ground. A rush of the crowd immediately took place to the sea shore, as every one believed he would fall into the sea, but as he steadily descended it was seen that it would not be very far out. As a matter of fact, he alighted so close to the shore near the Naval Yard that only the lower part of his legs got wet. He at once landed and returned to the Recreation Ground, amid the enthusiastic plaudits of a large crowd. The balloon, after remaining almost stationary for a few moments gradually collapsed, and, turning upside down, rapidly descended into the water, whence it was rescued by a steam launch.

THE RAIDING OF THE "ERRATIC."

"But the boy is honest," said old General Pilderberry, as he leant forward to reply to Lady Maldenford's lament.

"He's a bit wild, no doubt, careless and extravagant. Spent four thousand in a month?—pooh! that's nothing, the estate can stand a few thousand without impoverishment, and then there's the minority savings, you know, a cool hundred thousand. No, no, my dear Lady Maldenford, Arthur will be all right. As I say, he's an honest boy, and by gad, judging from the looks of eighteen one sees nowadays, and the *roues* of twenty, he's a cherub—a saintly cherub, by gad!"

"But, General, I haven't told you all yet," said her ladyship, wiping an imaginary tear from her eye.

"Eh? What? Not any—"

"O, General, you're his guardian, and the only friend his father ever had; you must save him."

"But save him from what?"

"From that designing creature—that woman he says he will marry—"

"Marry! Surely he's not such a fool as to marry Tottie Lallyerly—why, she's old enough to be his—"

"General!"

"Another, Lady Maldenford, what do you mean?"

"It isn't T—Tottie Lall—half, whatever her name is. The name of the abominable woman is Blanche Hayling—"

"And who on earth is Blanche Hayling?"

"I don't know. Arthur told me last night he was engaged to her, and said he was bringing her here—here, to my house, to see me! It appears that she works for her living, and can only get away after a certain hour, General! Think of the disgrace! Lord Maldenford marrying a woman who works for her living! But you must save him, for old times and his dead father's sake, General. Promise me you will," and she crossed over to where the General sat, and placing her hand on his, repeated her request.

"Of course we must," he said, starting to his feet with something like a blush tingling through his weatherbeaten cheeks. "But first of all we must find out who Blanche Hayling is."

As the General drove away from Lady Maldenford's, he lay back in his hansom and attempted to find a solution to the problem. Unfortunately for his own peace of mind, he was unable to assume the I-told-you-so attitude of the experienced man of the world and ex-guardian when thinking the matter out. For he, on his return from India, four years before—when young Maldenford was not quite eighteen—found the boy, to quote his own words, "a molly-codde and a damned milk-sop." This was not unexpected, or ought not to have been, for Arthur was the only son of his mother, and she was a widow. Accordingly he was, at an early age, proved to be "delicate," and the healthy rough-and-tumble pleasures of a public school and the serene joys of a University were not to be his. The General, with memories of Cherrelton before he succeeded to the title, now stood aghast when he saw his old friend's son. He had, he acknowledged to her ladyship, proved a very poor guardian; but he was not a rich man, and the last step—which he had just obtained—meant the difference between comparative poverty and affluence to him. But now that he was home he must make up for lost time. So Arthur was entered for Christ Church, and passed the entrance with a show of knowledge and ease which troubled the authorities. Later he troubled them in another way, and the General rejoiced with exceeding great joy, for someone—he liked to think it was himself—was "making a man of Arthur."

In truth, the young peer made up for lost opportunities in a marvellous fashion, and when after a couple of years at the University he came to town, there was not a healthier young spendthrift in London. Lady Maldenford could not grasp the situation. Her husband had taken her from a quiet West of England rectory to India with his regiment, and they were scarcely settled down at Barrackpore when the black-bordered solicitor's letter arrived to the captain, informing him that owing to the sudden death of his little nephew, he was now Lord Maldenford. Furthermore, they requested his lordship's instructions, and begged to remain his lordship's most humble and obedient servants, Wigg, Stump, and Blanderman. Two years after the new peer's home-coming he was thrown from his horse and killed outright, and his son Arthur succeeded. The solemn grandeur of Maldenford Court always depressed her ladyship, and I believe that she was happier in her little house in Mayfair than doing the honours in her husband's

or her son's home. For part of the year they lived at Maldenford, shifting between town and country in a quiet, unostentatious fashion. When Arthur took chambers and furnished them after his own tastes, and when his visits to his mother were confined to lunch on Sundays, or perhaps a dinner when "there was nothing on"—which was uncommonly seldom—and more when those dear kind friends who hang around every household told with hated breath, and you may be certain, graceful exaggeration, the story of Arthur's life, the poor widow quaked and quaked, and finally sent for General Pilderberry.

He, as I have said, was troubled in his mind. "The boy can't be going to make such a damned fool of himself," he muttered, as his cab swung round into Pall Mall. "It's all the result, in my way of thinking, of leaving a high spirited boy to be coddled and bamboozled by a doting mother. 'Ves, by Jingo,' he repeated, as though in argument, 'coddled and bamboozled by his mother, and now he's likely to be bamboozled and robbed by his damned —, who on earth is Blanche Hayling, I wonder? Never heard him speak of her. That makes the matter worse. Never saw her at any of the little parties, either'—the General had the grace to blush at his last recollection—"but I'll find out. Some one in the club must have heard of her —. No, no, the boy's honest—at least, I think he is," and muttering to himself he descended from the hansom, paid the cabby, and entered the club.

In the bay-window he found a few veterans, chiefly Anglo-Indians who had married money, for now-a-days the soldier seldom gets near enough the pagoda tree to shake it.

"How do, Lester? Vane, I hope you've recovered. Sanfain, I'm afraid you've been up to mischief again," said the General as he rolled into the little group of cronies. Pillinger says that the Anglo-Indians and the home men have an arrangement whereby they hold the window on alternate days between three and six, but no doubt this is merely some of Pillinger's humour. At any rate, one seldom sees an Anglo-Indian mixed up in the other crowd, or vice versa.

"Your young cub is distinguishing himself," said Colonel Vane to the General, after he had sat down.

"Is he, by gad, what's he up to now?"

"O, nothing very novel—the old story," answered Vane, with a laugh. "He'll be a credit to you some day, Pilderberry, take my word for it."

"I haven't seen him for a week. He told me he was going down to the Court—"

"But stayed at the Erratic instead."

"The Erratic—what's that? A club, I suppose."

"A club, he supposes!" cried Lester, rubbing his knees with his hands and chuckling. "Pilderberry, are you playing Rip Van Winkle on us?"

"No, upon my word I'm not," said the General, with almost unnecessary earnestness.

"So, then, I presume you've never heard of Miss Blanche Hayling—"

"Eh?" ejaculated the now startled General.

"Who's she?"

"You had better ask Maldenford," said Sanfain. "A number of people would not be averse to knowing her exact position in—shall we say society?"

"You don't mean to say that Maldenford has married her!" cried the General, starting to his feet. "I take it damned unkind of you men if anything has happened and you knew about it without telling me."

"Hush, hush, my tender guardian," said Lester. "Matters, as far as we know, have not quite gone so far as that—"

"But no one knows how far they may go," Vane clipped in.

"My God! this must be seen to at once," cried the General. "Where is this Erratic, and who owns it?"

"It's the latest development in supper clubs—I've heard," Lester replied cautiously.

"I wonder if Arthur is in his chambers—I must see him. Good-bye, all," and with that the General rushed off.

Some time ago I told you how Mr. Samuel Montagu created Montaguville, and at the same time enlightened you regarding that gentleman's ideas of smartness and commercial cuteness. With the responsibility of his new town off his shoulders, and the unfortunate closing of a couple of theatres he was interested in, Mr. Montagu found that he had a considerable amount of time on his hands.

The police had of late taken to raiding what are facetiously known as supper clubs, with the result that the demand for such accommodation speedily exceeded the supply. On all sides Mr. Montagu heard complaints on this score, and, to quote his own words, "a nod being as good as a wink to a

blind horse," he determined to supply the demand.

Novely, of course, was what he required. The old mixture of flaring gin-palace and fifth-rate hotel beat at once pronounced "no catch." After a couple of evenings' cogitation, he evolved the Erratic. His scheme had the merit of attempting to revive some of the glories of the "Back Kitchen," where Pseudennis and Warrington and Costigan and Foker regaled themselves after their arduous literary or social labours, and where Colonel Newcombe sang his song with young Clive blushing by his side. But there were, of course, the usual modern emendations, into the details of which I need not enter. But everything was plain to a degree; the supper room was also kitchen, the floor was sanded, and the chairs washed wood. The wines were irreproachable, and the dancing floor was perfection. When everything was ready, Mr. Montagu bled him to his club, the Leviathan, and there spread abroad the fame of the Erratic—whither he had been taken by a friend only the evening before. One or two of the meaner society papers paraphrased the venture in return for free drinks and a supper. By-and-by the fame of the place spread abroad in Clubland, and Mr. Montagu, whom you may be certain did not figure before the world as proprietor, rubbed his hands and chuckled over this two hundred per cent. investment.

Part of his scheme was the abolition of the foreign waiter. These menials he replaced with waitresses, under the care of Miss Blanche Hayling. And it was not many weeks before Mr. Montagu discovered that in Miss Hayling he possessed an *aide-de-camp* worthy of his enterprise. In other words, Miss Hayling "caught on" with the young men about town, and was rapidly making both her own and her master's fortune. Night after night Miss Hayling's tables were filled, and as the rule was no change, and notes for choice when paying, she was soon able to advance certain sums to her particular friends at rates which would make your hair curl if I were to divulge them.

Once or twice the police looked in, but finding everything *on regle*, left the establishment alone. Mr. Montagu had wisely chosen a spot removed from private residences, so no complaints could come from that quarter. Then there was no talk of high play or heavy losses—yet, and fond mothers had not commenced writing to the Commissioner regarding the Erratic.

Among one of the first members of what Mr. Montagu termed the "tip-toppers" was young Maldenford. He came, he saw, and Blanche Hayling conquered. For a time Mr. Montagu was delighted, but on discovering that there was an inclination on the part of the other *habitues* to leave Miss Hayling to Maldenford, his joy was less intense. She, however, did not object. Any loss in her receipts she took uncommon good care that he made up, and by and by the report that Maldenford intended to marry her was as common as cob-nuts in Kent. Nor did this please Mr. Montagu. With Blanche's departure he foresaw an enormous decrease in business, for whenever pleasure called Maldenford away from town, her tables were crowded and the ball-room deserted.

One evening—or rather early one morning—he spoke to her on the subject.

"Look here, Blanche, my dear, what's this I hear about young Maldenford and you. Here, you, bring us a bottle of Pol Roger '84, and you sit down, Blanche."

"What have you been hearing about Maldenford and me?" she asked.

"Why, they say the mug means to marry you."

"And why shouldn't he? I'm as straight as most, and he needs some one to take care of him."

"That's very true, my dear—drink up your wine; here, let me head it for you—but you're a lot too sensible for that—"

"We'll see," she replied.

"There's another matter I want to speak to you about. Young Spongely, I'm informed—"

"He's a dirty sneak," ejaculated Maldenford's idol. "If he can't pay up, he should be sold up."

"Exactly my sentiments, my dear. But under the present circumstances you will give him back his paper. I will see that you are paid, with ten per cent."

"I'll be shot if I will."

"I think so, I think so." And there was something in the way Mr. Montagu uttered these words that made Miss Hayling think better of her determination.

"Well, if I must, I suppose I must."

"That's right, my dear. Finish your wine and toddle off to bed. We can't have you losing your bloom at your age."

And Miss Hayling retired, muttering something about a "giddy old goat," which I am certain could never be applied to the proprietor of the Erratic.

III.

One morning, a day or two after Miss Hayling's interview with Mr. Montagu, General Pilderberry stepped into that gentleman's offices, and sending in his card, requested the pleasure of an interview. Mr. Montagu, sitting in his den, received the card from one of his clerks, and on looking at the name, whistled gently.

"Pilderberry," he murmured, and he held the card between his fingers. "That's Maldenford's old guardian, I think. Yes, I'll see him, Simons. Tell him to step in."

"Good morning, sir. You, I believe, are Mr. Montagu," said the General, as he entered the room.

"I am, General, and am pleased to meet you. Won't you sit down. Have a cigar; you'll find them good, and a good cigar, in my mind, often means good business."

"Thanks, no; I rarely smoke before lunch. Question of habit."

"Yes, yes, we're all creatures of habit, to be sure."

"I've called, Mr. Montagu," said the General sitting down stiffly in a lounge chair, and clearing his throat, "with regard to my ex-ward, Lord Maldenford."

"In difficulty? I always understood that there were large minority savings, and he hasn't had much time—"

"No, no, you misunderstand me. Maldenford's financial position is perfectly sound, I am thankful to say. It is with regard to another—a more delicate matter I have called to see you," and the General looked cautiously round the room.

"You may speak with perfect freedom here, sir," said Mr. Montagu. "These walls have no ears."

"I refer, to come to the point at once, to Lord Maldenford's infatuation for a lady, who, I am creditably informed, is one of your employes. I mean a Miss Blanche Hayling, at the Erratic Club."

"The Erratic Club—I'm a member, certainly."

"And also, I have reason to know, proprietor."

"But, my dear sir, I can assure you you are mistaken."

"The Commissioner, as a rule, is not the man to make an error in fact," said the General. Mr. Montagu's face fell. "That's one to old guinea-face," he muttered to himself.

"Eh? What's that?" asked the General, failing to catch the remark.

"What do you wish me to do?"

"Dismiss the woman. Hide her away. Let Maldenford forget her. He'll do so in a fortnight." Mr. Montagu leaned back in his chair and laughed.

"My dear General, you are asking me to destroy a magnificent business, merely because a young fool has become infatuated with one of my waitresses. If I dismiss Miss Hayling, I may safely calculate on losing half my income from the Erratic. Do you see?"

"Hum! That's a view of the situation which had not presented itself to me, I confess," said the General, for the first time grasping the commercial side of the question. "For a moment or two he pondered the matter over."

"I suppose, then, it is a question of buying Miss Hayling at her market value?" he remarked.

"That is a blunt way of putting it," said Mr. Montagu, with a smile.

"But it's the truth, isn't it?"

"I suppose so. Now, General, give me your attention for a moment. I think I see a way out of the difficulty." And leaning over to the General he unfolded his scheme, which evidently pleased the old Anglo-Indian, as now and then a smile—meant, I'm sorry to say, to show unutterable knowingness—spread over his countenance.

"Capital!" he cried. "The very thing; I'll get my friend at Scotland Yard to see to it."

"But my indemnity?"

The General took out his pencil and wrote £5,000 on the blotting pad. With a sad smile Mr. Montagu stroked out the figures with his quill. The General then wrote £7,500, and again Mr. Montagu obliterated the figures. After a moment's pause General Pilderberry put down £10,000, and Mr. Montagu threw his pen on the rack.

"Cheap at the price," he remarked.

General Pilderberry's interview with his ex-ward was hardly so satisfactory.

"But, Arthur, my dear boy, you cannot mean to tell me that you intend to you marry this woman. Think, my dear fellow, of your position, of your prospects, of your mother's—" he said.

"I have thought of everything. I mean to marry Blanche."

The General saw that further argument was useless.

"Well, promise me one thing," he asked, diplomatically,

"What is it?"

"You must let me give her away."

Maldenford started from his chair.

"Do you mean that, General?" he cried. "You really think I ought—"

"I refuse to commit myself," said the General, "on that point. But as your father's oldest friend, and your old guardian, you must promise me."

"Yes, on condition you don't say a word about it to the mater."

"I won't say a word about it to anybody. I promise you, there."

"Well, I've no doubt Blanche will be delighted. On her behalf I accept your offer."

"And the date?"

"Not fixed yet. Probably within the next five or six weeks."

Shortly after the General's interview with Mr. Montagu, the strangest reports were put about concerning the Erratic Club. Play, it was said, ran high—higher by thousands than the punters could stand. Further, it was hinted (and latterly brazenly asserted) that there was something more than play—to be blunt, cheating was the order of the evening.

The more cautious members ceased their regular attendance, but Maldenford's clique were assiduous as ever. The Hayling affair was in many quarters regarded as a foregone conclusion, and Lady Maldenford almost quarrelled with the General because he had failed to save her son from this disgrace.

"Wait," she cried. "Yes, wait until they are married! Why I'll go to the woman myself and—buy her off."

"But supposing she is not to be bought?"

"Of course she is. All these women are. Yes, I'll go at once. I'll offer her any—"

"Do leave it to me. I know a much more economical way out of the difficulty."

"Tell me, what is it?"

"I will in a week."

"But tell me now."

"I'm pledged to secrecy. Wait, my dear Lady Maldenford, and accept my assurances that all will be right."

"If I could only believe you."

The General did not press the point, which is in his favour.

Five days later the evening paper boys made the streets hideous with their yells. The contents bills ran something as follows:—"Raid on a supper club." "Aristocratic prisoners." "Accused before the Magistrates." The anxious purchaser learned that the police, acting on instructions, had raided a supper and gambling club known as the Erratic, and had there discovered the members playing *rouge-et-noir*.

The proprietor, a man named Simons, was in the act of "making the game," when the police entered, and was promptly arrested, as were all the members present. Among the prisoners were Lord Maldenford ("a young peer," to quote one exceedingly virtuous halfpennyworth, "whose follies and extravagancies during the past year or two have been a standing argument in favour of the abolition of the so-called 'Upper Chamber'"), Sir Frederick Vestey, Colonel Mayford, Lord Arthur Flayne, Mr. "Jack" Pittman, and Mr. Algernon Vincent Maxwell.

"A number of members who were merely supping at the time, and all the attendants," said the report already referred to, "with the exception of a woman named Blanche Hayling, were released on bail. The police refused to admit Hayling to bail, as on her person were found a number of papers which require further investigation."

From *The Morning Post* of a week later:—"We understand that Lord Maldenford, accompanied by his mother, Lady Maldenford, General Pilderberry, and a select party have left on a prolonged cruise on board his lordship's yacht, *The Gillyflower*."

"And what do I make out of the deal?" said Miss Hayling, who, I may as well mention, was almost immediately released after her arrest, as she plumped down in a chair in Mr. Montagu's office.

"I do not quite grasp your meaning," he said affably.

"Why did you promise you would see me through, if I got Maldenford into the roulette room on the night of the raid?"

"Did I now? Upon my word, the matter entirely escaped my memory. And I don't mean to try to bring it back, my dear."

"Do you mean to say—"

"I'll see you out."

"Well, do it then; I can't wait all day. Hand over the dibs."

"I said I would see you out. This way; that is the door."

"By Heaven! I'll make you part—you old—"

"My solicitors are Scaggum and Wimpit. You know their address. It's been often enough in the papers of late—"

"You shall hear from me—later," and she bounced out of the room.

But he didn't, and he never will.—ANTHONY SIGNOIT in *Figaro*.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Oriental Hotel, 87, Main Street, on Mondays and Thursdays in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

SOLUTION TO PROBLEM NO. 147.

BLACK. WHITE.
1—B to Kt Kt 8 1—Any
2—Mates accordingly.

Correct solutions received from Digamma, Omega, W.H.S., J.D., and Shogi.

PROBLEM NO. 149.

By S. LOYN.

BLACK.

WHITE.

White to play and mate in two moves.

The entries for the Yokohama Club Championship close on Monday 12th: and we hope to see a good contest for the honour left vacant by the departure of Mr. Balk.

Redeeming our promise of last week we reprint the game played in the Leipzig International tournament between Mr. Blackburne, the famous English expert, and Dr. Tarrasch, the first-prize winner of the tournament. The game was evenly contested throughout, and is probably one of the best, if not the best of the tournament.

GAME NO. 179.

QUEEN'S PAWN OPENING.

WHITE.	BLACK.
Mr. Blackburne.	Dr. Tarrasch.

36—Kt to K 5 (o)	36—Resigns.

Position after Black's thirty-second move.

BLACK—(DR. TARRASCH).

WHITE—(MR. BLACKBURN).

NOTES BY EMIL KEMENY OF THE PHILADELPHIA "LEDGER."

- (a) Kt to K3 or P to K3 is proper. The early advance of the Q P gives White some advantage.
- (b) Kt to K3 was still preferable. White then could not play P to K4. It seems, however, that White could then defend the pawn by continuing P to Q Kt4 and P to Q B3.
- (c) The line of play Black selects terminates in the isolating of Q P. It seems that P x P was a better continuation. The game would then proceed. (5) Q x Q ch, K x Q; (6) Kt to Kt5, K to K sq; (7) Kt x K4, P to B4, etc. White, of course, would hold the preferable position, but the black game, it seems, could be defended.
- (d) To prevent White from Kt to Q Kt5.
- (e) Black could not well play B x Kt, for White answers B x B and the Q P is attacked once more.
- (f) White threatens Q R to Q sq. and obviously it would be difficult for Black to defend the Q P. Black's present move, however, precipitates only the loss of the game. The advance of the Q P cuts off the black bishop on R4 and enables White to play his Q Kt to K4.
- (g) White displays excellent position judgment in this game. The present move leads to the exchange of two minor pieces, after which White commands the open K file with a strong attack on the king's side.
- (h) Necessary! White threatened R to K8 ch, winning the queen.
- (i) Better than Kt x Kt. White then would answer R x Kt, followed by R to R5, with a winning attack.
- (k) White threatened B x R P, followed by R x P ch, etc., winning in short order. The present move stops this line of play, but it does not relieve Black's game. Q to B5 was probably a better defence. Black's position, however, was compromised already to a great extent, and defeat could hardly be avoided.
- (l) Threatening B x P followed by R x P mate. Black seemingly has no other defence than Kt to K4.
- (m) Brilliant and decisive. This sacrifice of a rook secures a speedy win for White. He gets a piece and three pawns for the rook and Black's game becomes hopeless.
- (n) B to Kt3 was proper. After defending the rook Black could continue with Q to B5. The game, however, was beyond repair.
- (o) The final stroke. White now threatens Kt to B7 ch, followed by Kt to Kt6 mate. If Black defends with R to B sq, then White replies B x P and Black cannot guard the threatening mate. Black resigned after this move.

Lasker has written to Steinitz, stating that he will not be ready to meet him before October, next year. Lasker asserts that until he is beaten over the board he will remain chess champion of the world.

Steinitz in replying to Lasker's letter reclaimed the championship on the ground that Lasker had no right to hold the title if he is unwilling to defend it within a reasonable time. Steinitz claims that one year and four months is too long an interval. The New York clubs, especially the Manhattan Chess Club, think Steinitz is justified in his actions.

Mr. Steinitz has signified his intention to enter the National Masters' Tournament which is to be held in New York a week hence. Pillsbury, Showalter, Albin, and other well-known players will also compete.

Steinitz is authority for the statement that a match or series of games will be played between Tarrasch and himself when the former goes to America. Part of the games will probably be played in Montreal.

Five games have now been played in the match between Albin and Showalter. The score now stands Showalter three games, Albin two games.

Albin has annotated the second game of the match in the New York *Tribune*. The game and notes are reproduced below:—

GAME No. 180.

NOTES BY ALBIN.

- (a) The only way to prevent White from concentrating his forces on the queen's side. It is, however, doubtful whether the whole defence, as selected by Black, would stand the test of analysis.
- (b) To castle on the queen's side of the board would be next to suicide.
- (c) Black now proceeds with a counter demonstration in order to relieve the pressure.
- (d) P-KR5 would not prevent defeat, as will easily be seen from an analysis.
- (e) If R-B3, White would get a strong attack by the reply QR-Q sq.
- (f) Even now White can meet Black's intended R-B3 with Kt-B3, etc.
- (g) The game cannot be saved now, and it really was only a matter of time.

At a recent meeting of chess experts at Brooklyn, there was a discussion about the relative strength of the leading players of the world. All admitted (says the *Liverpool Weekly Mercury*) that Lasker is the finest living end-game player, and all agreed that the secret of his success lies in his wonderfully accurate handling of the Pawns and the minor pieces. One of the gentlemen present said that Lasker lacked power in playing the Queen to the best advantage, and added that he had heard Lasker acknowledge that he always played for an early exchange of Queens, provided that after such exchange there was equality of position. Another gentleman called attention to the fact that in most of Lasker's match games the Queens have been exchanged early, even at the expense of casting, and that he has played for a Pawn ending. Tschigorin, on the other hand, handles the Queen better than any living player—his brilliancy being due, in the main, to his manipulation of Queen and Rooks. But Tschigorin's Pawn play is weak. Thus Lasker excels where Tschigorin is deficient, and vice versa. As to Steinitz, he handles all the pieces with equal facility, though in the end-game he is hardly so accurate as Lasker. His special power lies in his position play. Idle pieces are rarities in his games; and the explanation of his success as a chess player is to be found in the capacity which he possesses for concentrating force.

A CHESS TRAGEDY.

The ♔ was in his counting house—
His ledger open lay;
Cash had not been so tight with him
For many a livelong day.
He bit his nails, he tore his hair,
With worry he perspired;
A new spring wimple, Paris-made,
Was what the ♔ desired.

"To wear my old one Sunday next,"
She cried, "would break my heart,
The ♔ is to preach, and so
I feel I must be smart."

Her royal mate, who loved her well,
Was seen his brow to smite;
In sheer despair for lack of funds,
He muttered, "Oh, good ♔!"

On all the ♔ fell a gloom,

And when a courtier spoke
It was to say with bated breath,
"His Majesty's stone-broke."

At length the Monarch, rising up,
With a determined frown,
Strode boldly through the startled throng,
And went and ♔'d his crown!

—Birmingham Weekly Mercury.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 1.

The Emperor of Russia is dead.

The Union Steamship Company's steamer *Wairarapa* has been totally wrecked on Great Barrier Island, and 111 passengers and 24 of the crew have perished. Sixty-six persons have reached Auckland.

London, November 6.

The Emperor of Russia will probably be buried at St. Petersburg on the 15th inst. The body will lie in State at Odessa, Kieff, and Moscow. The Grand Duke George Alexandrovitch has been proclaimed Czarévitch until a son is born of the union with Princess Alix.

M. Le Myre de Vilers has left the Hova Capital without any answer to the demands of France. War is imminent.

London, November 6.

China has formally appealed to the Powers to intervene between her and Japan for a restoration of peace. The European Cabinets are discussing the matter, and Great Britain and France have intimated their willingness to co-operate, but decline to take the initiative.

The Hovas have refused to comply with the demands of France, and an expedition, which will consist of about 12,000 men, is to be sent to Madagascar.

London, November 7.

In the United States, the Republican majority in the House of Representatives will exceed the Democrats and Populists combined by fifteen.

London, November 8.

The latest returns from the United States indicate that the Republican majority will be upwards of a hundred.

(FROM THE "N. C. DAILY NEWS.")

London, October 31.

General Count von Caprivi has received the order of the Black Eagle, and Prince Hohenlohe-Langenburg has been appointed Governor of Alsace.

The French Papers are irritated on account of Lord Rosebery having in a speech at Sheffield alluded to the anniversary of the battle of Agincourt.

London, November 1.

A sensation has been caused in Paris by the arrest of Captain Dreyfus of the General Staff, for treason. He is accused of divulging the plans made for mobilising, and for the defence against Italy and Germany.

(FROM JAPANESE PAPERS.)

Osaka, November 8.

The *Asahi's* war correspondent attached to the Second Army, under date 31st ult., states that the *Ting-yuen* and *Chen-yuen*, which were undergoing repairs at Port Arthur, fled to Weihaiwei on learning of the debarkation of the Second Army on the Liau-tung peninsula.

About 4 a.m. on the 28th ult., says this correspondent, the sound of firing was heard off

the shore of Kwa-yuen, and the horizon was obscured by black smoke. All thought that a great naval engagement was commencing, but it was ascertained the following day that some British men-of-war had saluted the arrival of the Japanese Fleet.

Another war correspondent states that on the night of the 26th ult. two Japanese torpedo-boats, which were scouting in Talien Bay, captured a small Chinese steamer, which was towing two cargo boats conveying gun-carriages, said to belong to the *Kwa-kiang*, which fled during the engagement in the Yellow Sea but subsequently ran on the rocks and was burnt. The steamer has been re-named the *Talien Maru*, and is now used by the Japanese.

Hiroshima, November 8.
Mr. Otori, ex-Japanese Minister to Korea, has been appointed a Privy Councillor.

Shimonoseki, Nov. 9.
A Ninsen correspondent, under date the 3rd inst., says that an officer of the French cruiser *Inconstant*, which arrived there from Port Arthur the night before the despatch of the message, reports that no unusual signs were noticed at that port up to noon of the 2nd.

Hiroshima, November 9.
A meeting of the Cabinet took place at Headquarters here to-day. The proceedings lasted late into the night, and it appears that some very important matters were under consideration. The question of the meeting place of the Diet and the date of its opening were to be settled at to-day's conference. It is said that some great diplomatic questions were also discussed.

Viscount Mutsu, Minister of Foreign Affairs, is very busy here on official business. The Viscount is expected to remain here for a week.

(A telegram from Rome received by the Government on the 8th inst.)

The Chinese Representative in Italy has asked the Pope to intervene between China and Japan for the restoration of peace. His Holiness is said to have answered that he would endeavour, in concert with the Sovereign Princes of Europe, to encompass that end.

Nagasaki, November 9.
The *Gaelic* arrived here yesterday, and willingly subjected to a search by the Japanese Customs authorities. Her cargo consisted of silver, wheat, and other merchandise. She left for Hongkong the same day.

Hiroshima, November 9.
Although no official report has been received as to the occupation of Chin-chiu, it is supposed that the town is now in possession of the Second Army, as a telegram dated the 3rd inst. announces that an advance party of the army had then reached to within four miles of the Chinese town.

A telegram despatched by General Yamagata was received by Count Ito yesterday, in which the General asked for the despatch of five able Civil administrators. These will be appointed Chiefs of District Offices, now opened at Ta-ku-shan, Feng-hwan, and three other important towns captured by the First Army.

Shanghai, November 9.
The Chinese outposts of the garrison of Port Arthur have come into collision with the advance columns of the Japanese army.

No. 42, Two-fold	43.00 to 48.00
No. 208, Bombay	—
No. 168, Bombay	—

METALS.

A very moderate demand for Bar Iron at quotations, but other sorts are easier in tone. Galvanized is cheaper and Wire Nails are sluggish. Tin Plates move to some extent, but there is no improvement in values.

	PER PICUL.
Flat Bars, 1 inch	\$3.30 to 3.35
Flat Bars, 1 inch	3.40 to 3.45
Round and square up to 1 inch	3.30 to 3.45
Iron Plates, assorted	3.45 to 3.65
Sheet Iron	4.45 to 4.60
Galvanized iron sheets	8.75 to 9.00
Wire Nails, assorted	5.60 to 5.90
Tin Plates, per box	6.50 to 6.75
Pig Iron, No. 3	1.60 to 1.65

KROKONK.

Market firm at quotations, with a fair amount of sales. Stock is once more below 500,000 cases, but holders do not see any reason for reducing prices at present.

	PER PICUL.
Chester	\$1.75 to 1.77 1/2
Comet	1.72 1/2 to 1.75
Devoe	—
Russian Anchor	1.72 1/2 to 1.75
Russian Moon	1.70 to 1.72 1/2

SUGAR.

Brown—Arrivals exceed sales, and the tone is weak. Total stock about 65,000 piculs, of which 50,000 is Formosa. Buyers have been holding off apparently for the Auction sale, ex *Nürnberg*, the result of which will probably affect quotations for the next week. White—Market weaker, and fair sales at lower prices. Present quotations given below.

	PER PICUL.
Brown Takao	\$4.30 to 4.40
Brown Manila	5.20 to 5.35
Brown Daitong	3.70 to 3.80
Brown Canton	3.70 to 4.25
White Java and Penang	7.00 to 7.40
White Refined	7.00 to 9.50

EXPORTS.

RAW SILK.

Business has fallen away to small proportions, and prices have accordingly receded. Buyers are not again attracted at present, and with a stock of 15,000 piculs sellers will probably listen to offers.

QUOTATIONS.—(NEW SILK.)

WASTE SILK.

Here also there is less doing. Shippers are not inclined to operate freely at present quotations, and holders (in spite of a 20,000 piculs stock) will only make small concessions. It looks as though we must have lower prices to induce a general business.

QUOTATIONS.—(NEW WASTE.)

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-cup of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

ATKINSON'S WHITE ROSE

Perfume and delicate, its sweetness is ever delightful. No one but Atkinson's, the original and only true Essence.

ATKINSON'S
OPOPANAX HELIOTROPE
WOOD VIOLET TREVIL

and other well known Perfumes are superior to all others for their strength and natural fragrance.

Of all Dealers.

J. & E. ATKINSON,
24, Old Bond Street, London.

CAUTION: Beware of cheap imitations with shield-shaped blue & yellow label & usual Trade Mark of "White Rose," and address in full.

YOKOHAMA: SATURDAY, NOV. 17TH, 1894.

DEATHS.

At the Château de Chassy, near Nantes, on August 1st, Madame GIOVANNA MARIA ISABELLA RICARIO-SFORZA, Comtesse Emile de Bondy, Dame de la Croix Etoilee d'Autriche et du Chapitre de l'hermé de Bavière, beloved wife of the Comte Emile de Bondy, Minister Plenipotentiary.

On the 16th inst., at 3 p.m., GEORGE BLAKEWAY, aged 60 years.

SUMMARY OF NEWS.

THE Crown Prince is to visit Hiroshima for a week.

THE eighth session of the Imperial Diet is to meet in Tokyo on the 22nd December.

THE first snow for the year fell in the towns of Aomori and Hiromaye on the 13th inst.

SOME promising half-bred fillies were drawn for by members of the N.R.C., on Wednesday.

PUBLIC subscriptions contributed to the Naval Department amounted to yen 386,999.79 on the 13th inst.

MR. KOMURO JUTARU, First Secretary of Legation, has been promoted to the rank of Minister Resident.

THE steamer *Afghan* discharged to the N.Y. & P. Co. went ashore on Saratoga Spit during a thick fog

on Tuesday evening. She floated off about 5 o'clock on Thursday morning and proceeded on to Kobe.

A FEW cases of small-pox are reported in Tokyo. Vaccination is being recommended by the authorities.

THE Red Cross Society acknowledges receipt of a sum of yen 200 contributed to the Society by Mr. Tata, of Bombay.

THE ninth anniversary of the establishment of the Nobles' School for Girls, Tokyo, was observed on the 13th inst.

THIRTY-SIX soldiers were burnt to death and thirty-one severely injured by fire at Hiroshima on the 12th inst.

THE death is announced of Professor Kume Kaibun, of the First Higher Middle School, which took place on the 10th inst.

SOME 142,363 persons throughout the Empire had been attacked by dysentery up to the end of last month, of whom 33,476 died.

THE Kanagawa Prefectural Assembly is at war with itself over the Prefectural Prison expenditures. Half the members have threatened to resign.

THE Vice-Minister of Foreign Affairs and fourteen other officials in the Foreign Department of the Sublime Porte have been decorated by the Emperor of Japan.

A GARDEN party was given on the 17th inst. at the detached residence at Kiyozumicho, Fuku-gawa, Tokyo, to celebrate the marriage of Mr. Iwasaki Kyuya and Miss Yasuko.

THE two Americans arrested on the M.M. steamer *Sydney* in Kobe, have been released on parole. They will leave for America on the out-going Pacific Mail steamer.

RUMOURS have been very prevalent during the week of the fall of Port Arthur, but up till Friday no official confirmation of alleged Shanghai and Tientsin telegrams had been received.

A PETITION for the rehearing of the case brought by the people of Kanagawa against the owner of the Hiranuma Oil Tanks, has been rejected by the Yokohama Chiho Saibansho.

MR. NAKANE ROKUSABURO, President of the Tokyo Navigation School, has resigned, and Mr. Matsuyama Ontoku, an instructor, has been commissioned to act as President *ad interim*.

H.I.H. PRINCESS KOMATSU, President of the Ladies' Nurses Association, leaves the capital about the 17th inst. to inquire into the condition of the patients in the military hospitals at Hiroshima.

THE three men who obtained some \$6,000 from the Hongkong and Shanghai Banking Corporation by means of a forged document purporting to be issued by the Mitsui Bussan Kaisha, have been sentenced to long terms of hard labour.

SINCE the outbreak of war between China and Japan, over one thousand five hundred persons are said to have intimated their intention of becoming nurses in the Red Cross Society. Some yen 23,000 has been contributed to the Society.

THE Government purposes constructing a military railway parallel with the Yokosuka line, and a few engineers have been despatched to Miura, Kamakura, Koza, and Ashigara-shimo Districts in Kanagawa Prefecture to survey the proposed route.

JAPANESE speculators are flocking to Ninsen.

Owing to lack of accommodation and the glut in all the markets, the Consular authorities are warning Japanese from proceeding thither unless they have capital or definite employments to take up.

THE laying of rails between Aomori and Hiromaye (24 miles) is completed, and the section will be opened for traffic at the end of this month.

REUTER telegraphs:—The *Standard* says that there is little prospect of the united action of the Powers in response to China's appeal for help to terminate the war. Russia and France are willing to intervene, but Germany considers that intervention would be useless. The *Times*, in a leading article, says that the utter collapse of China raises troublesome political problems, and Japan must not suppose that there is no limit to her expansion at China's cost. The Powers advise that China should make overtures for peace to Japan, China receiving the moral support of the Powers. Germany is still inclined to hold aloof. The death of the Czar has caused profound consternation in Russia. The Emperor Nicholas II. has issued a manifesto in which he says he will be mindful of his father's legacy, and he solemnly vows to make the peaceful development of the power and glory of Russia, and the happiness of his subjects, his sole aim. France has gone into mourning demonstratively, both officially and privately. The Princess Alix of Hesse has been anointed and received into the Greek Church. The remains of the late Czar Alexander III. were conveyed by torchlight from the Palace to the Church in Livadia and lay in state one day; then they were conveyed in a man-of-war to Sebastopol, and from thence to Moscow and St. Petersburg. Dinners are being given to the poor at every stopping place, and immense precautions are being taken. A bomb, which it is believed was intended for the adjoining house, occupied by Sir Henry Hawkins, who has recently sentenced several anarchists to various terms of imprisonment, smashed the front door and all the windows of the Hon. Reginald B. Brett's house in Mayfair, but nobody was hurt. The death is announced of Mr. John Walter, one of the principal proprietors of the *The Times*. The Amir of Afghanistan, who has been lately suffering from hemorrhage of the kidneys, has quite recovered. The Hovas are centring on Diego Suarez.

THERE is scarcely any alteration in the condition of the Import trade, small intermittent sales of Yarns, Shirtings, and other goods being the only business reported in the Cotton line, while Woollens are dull and difficult to move. There is some enquiry for certain Metals, but the trade generally can only be described as sluggish. The Kerosene market is steady, and stocks are ample. Dealers do not rush business, but Oil of all descriptions is firmly held, and no change is apparent in values. Two cargoes have come to hand in the interval—one from Batoum, the other from New York. The Sugar trade is quiet, and recent arrivals have considerably augmented stocks, as no equivalent sales have taken place. Prices are nominally unchanged, but are not particularly strong. The principal Export has attracted but small attention, the Silk business of the week being decidedly meagre. Holders will not do much business on the stand they now take as to values, but as the year is drawing to a close their necessities may possibly cause a smart fall in present rates. The same applies to Waste Silk, of which very large stocks are on this market. There is nothing to report in the Tea trade in the absence of any business worth mention. Exchange has been fairly steady during the week, and rates appear somewhat firmer at the close.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The terms of peace to be obtained from China in the sequel of the present war is the journalistic question of the moment. All the vernacular journals agree in declaring it inadvisable, for the future interests of Japan, that the war be terminated by any kind of foreign intervention. They are also unanimously of opinion that Japan's demands should not go an inch beyond what is necessary for the achievement of the objects mentioned in the Imperial Declaration of War, to wit, securing the integrity and independence of Korea and ensuring permanent peace to Eastern Asia. Coming to discuss the terms themselves, it is taken for granted that China will be required to renounce her claim of suzerainty over Korea and to pay Japan an indemnity sufficient to cover her direct and indirect losses in connection with the war. But with regard to the territorial demand to be made upon China, with the object of guaranteeing that she shall not in future trespass upon the sovereignty of Korea, or again unjustifiably disturb the peace of the East, there is a difference of opinion. The *Yifu*, for example, is in favour of taking the provinces of Kirin and Shing-king in Manchuria, whereas the *Kisai Zasshi*, to whose arguments we shall refer again, adds to those the Province of Chihli. The Radical organ opposes the *Kisai* on the ground that Kirin and Shingking are so rich in mineral products, and their fertile soil is capable of producing such abundantly increased crops under improved processes of agriculture, that they could not only support a Japanese colony but also become a source of wealth to the empire. It further contends that Chihli would be comparatively useless from a wealth-making point of view, and its possession would have no bearing on the objects aimed at by Japan in the present war. The *Kokkai* adds Formosa to the *Yifu's* claim, declaring in strong terms that Japan cannot for a moment be sure of the safe possession of the Loochoo Islands, so long as Formosa is in the hands of the Chinese. Our contemporary attaches so much importance to the Formosan question that, in the event of circumstances proving adverse to Japan's annexing the whole island, it advocates the seizure of one or two important places upon the coast as naval stations. Other papers do not so distinctly formulate the objects of their territorial ambition, but it is easy to see that not one of them would be satisfied unless the mammoth State's geography were more or less changed in favour of Japan. As regards foreign intervention, every journal speaks against it, declaring that China must sue direct to Japan, to the end that, in her true interests, she may be taught by her stronger and more enlightened insular neighbour how well the Orient can take care of itself without any guidance from the Occident.

The *Yifu* refers with regret to a rumour that the Bank of Japan is issuing, or is about to issue, an increased number of convertible notes. This, if true, writes our contemporary, is a grave financial blunder, as it will only tend to raise prices and subsequently accelerate the outflow of specie. The Authorities should rest satisfied that nothing is harder to stem than the financial current of a country. If a little over 100 millions *yen* be the amount of currency required by Japan, the experience of many years has proved, the Authorities should do all in their power to keep the note issues rigidly at that point. Already the *Yifu* professes to detect, in the appreciation of rice, a sign that there is an excess of currency. The rice crop of this year is reported to be at least 20 per cent. above the average. Hence there is no reason, other than redundant currency, to account for the present high price of the cereal. In view of this ominous economical phenomenon, the Authorities should not fail to resort to two remedies; first, the floating of a public loan at whatever rate of interest be deemed feasible; and secondly, the restraining of the Bank of Japan from further issue of convertible notes.

with directions, also, not to throw again upon the market any notes returned to it.

The time has come, writes the *Kokumin*, when the Japanese should dismiss their insular ideas and open their eyes wide upon the whole world. Many a thing that Japan has done of late or may do hereafter bids fair to influence the world at large. Should she, as contemplated, plant a colony on the Continent of Asia, the balance of power in the Orient will be altered. Further, inasmuch as she has carried into practice the letter and spirit of International Law in her dealings with China and the Chinese, the general principles of justice and humanity in belligerent operations have been established more firmly for all nations. Finally, inasmuch as a small Japanese fleet has defeated a comparatively large Chinese squadron, a general lesson in naval tactics has been learned by the nations. What Japan does, it is her destiny to do. She can not but appear upon the stage of the world, whether she will or not. It is high time for the Japanese of every class and profession to extend their views beyond the confines of their island home.

The *Nichi Nichi* alludes to the recent exorbitant price of rice in Tokyo, and, ascribing it to artificial rather than natural causes, says that the Authorities are in a position to bring about a considerable reduction. The first cause of the phenomenon is to be sought in defective means of transportation, so many vessels having been requisitioned for military purposes. A little more regard on the part of the Authorities for other affairs than the war would, in the *Nichi Nichi's* opinion, do much to lessen the effect of the transport factor. Considerably more can be achieved, however, by the Japan Mail Steamship Company and other transportation firms. They ought to make strenuous efforts to increase their fleet of steamers and sailing ships. A second and more intolerable cause is the sinister procedure resorted to at the Rice Exchanges. Were such doings checked by the Authorities, as they ought to be, the price of the staple would soon be reduced. Since the *Nichi Nichi* wrote in the above sense, it is to be noted that the price of the Japanese staff of life has fallen appreciably in Tokyo, but what may be the exact causes of the fall we are not informed by any of the metropolitan journals.

The *Yomiuri* has a long leader discussing the difficulties existing between the City Assembly and the Municipal Council of Tokyo. The Progressionist organ concludes by advising the members of both bodies to resign manfully. There is no reasonable hope of their reconciliation, and they have both incurred much blame in the eyes of the citizens of Tokyo.

Speaking of the demands reported to have been made upon China by Great Britain in connection with the *Chungking* affair, the *Nippon* traverses the interpretation put upon the matter by some Japanese; namely, that finding Japan stronger and more enlightened than she ever supposed, and China weaker and more barbarous than could have been anticipated, England has resolved to side with Japan. The *Nippon's* explanation is different. The *Chungking* affair, it says, has nothing to do with England's changed affections toward either Japan or China. She is acting uniquely in her own interests. If the Government in Peking could be relied on as a bulwark against the southward aggression of Russia, England would gladly treat it as a friend. If it may not be thus relied on, her project is to govern the Chinese millions herself, so that they shall be able to defend themselves, and consequently India, against the Northern Power. In pursuance of that purpose, it is evidently necessary to have English military and naval forces stationed somewhere in China. There is, therefore, no room to doubt that Great Britain's demands, out of all proportion as they are to the alleged grievance, are the outcome of some such thoughts as the following:—

Is it not necessary for England to occupy South China, if Japan occupy the North?

2.—Should the Peking Government be overthrown, would it not be for England's interests to take the Chinese under her own control?

The *Niroku* has an article headed "Russia must be studied." When the Korean complication occurred, people hastened to study Korea, and now, when the Chinese war is at its height, they make it their earnest business to study China. That is all well and good. But along with Korea and China, Russia and her situation in the Eastern Question have to be closely studied by all pretending to any political foresight, for who conceives the possibility of putting Russia out of sight in making plans for permanent peace in the East after the present war?

The people of China, writes the *Kokumin*, are often said to be difficult to govern. That means nothing more than that they are found hard to rule by the Chinese themselves. A government having some genius for organization, which attribute no Chinese Government seems to possess, would find the Chinese the easiest of all races to govern. The frequent failure of banking, and other commercial enterprises in China is variously traceable to defective organizing faculties. Is not the Chinese Customs service well managed under an Englishman, Sir Robert Hart? The Chinese may with reason find it difficult to govern China, but the Japanese, should destiny call them to undertake the task, would not experience any difficulty, for they are evidently gifted with the faculty of organization.

The *Mainichi* congratulates the Diet upon its 8th session being fixed in Tokyo. In this session, proceeds the Progressionist organ, the Budget will not be made the subject of any prolonged debates. The time is not fully ripe for that. The Diet, in the coming session, should devote most of its time and energy to making and amending laws, for the indifference, nay more than indifference, that it has always shown toward that branch of its duties, is far from creditable.

It is not within the *Hochi Shimbun's* knowledge that territory not occupied during a war, was ever make the prize of a conqueror on the conclusion of peace. Now when the war is so far advanced that any day may witness an armistice owing to the surrender of China—not through the intervention of any foreign Power, which Japan should under all circumstances reject—the military Authorities should make it their paramount duty to turn their eyes upon the South of China.

Referring again to Korean reforms, the *Yiji* says that the Japanese Authorities in the Peninsula must take it for granted that no Korean now in power, the Tai Wön-kun himself not excepted, can be counted persons of trustworthy character. They are just so many Machiavels. In carrying out her self-imposed task of reforming the Korean administration, Japan should consider no men other than Boku Eiko, Jo Kohan, and their friends as sincere in their promise to follow her directions. Referring to the same subject, the *Yifu* recommends the Japanese Government to form a number of the *shisoku* into an armed police force and send them to Korea. These men, who have some learning in addition to strong sinews, would be just the kind of persons to control the illiterate and fractious subjects of the little Kingdom.

EDITORIAL NOTES.

THE COMMERCIAL COLLEGE AND FOREIGN LANGUAGES.

No less than eight different languages, besides Japanese, are taught at the Higher Commercial School in Tokyo, and nearly all of them by professors who are natives of the various lands in which these languages are current. The curriculum embraces English, French, German, Russian, Chinese, Korean, Spanish, and Japanese. Every pupil is expected to be thorough in English, and from personal observation we

venture to say that in this direction the students are at least on a par with those of any other establishment in Japan. They speak, and write fluent idiomatic English, and are particularly proficient in commercial phraseology and the like. During the first two years in the Preparatory Department—the course is one of five years altogether—the students are made to learn English after the most approved methods. Upon entering the Academic Course, which begins in the third year, the study of some other foreign tongue becomes obligatory, and here we note several interesting phenomena. Each student is allowed to make his own choice as to the new language, with the result that French is first favourite. Then comes, strange to say, Spanish; then German; and then Chinese, Russian, Korean, and Italian, in the order named. In the new third-year class formed last month, the number of students studying each language is as follows:—

LANGUAGE.	NO. OF STUDENTS.
French.....	25
Chinese.....	24
Spanish.....	23
German.....	8
Russian.....	7
Italian.....	None.
Korean.....	None.

These figures show very plainly that the future of Japan's trade with the Philippine Islands is believed to be a great one; for it is obviously with the intent of engaging in that trade that so great a predilection is shown for the Spanish tongue, although some students may undoubtedly have chosen the language on account of its comparative facility. It is remarkable also that Russian ranks ahead of either Korean or Italian, and that is certainly attributable to the rosy prospects of international trade after the completion of the great trans-Asiatic railway. Italian has fallen unaccountably low in the list, and it seems equally regrettable that so little attention should be paid to Korean; for in that country more than any other are well-trained Japanese merchants, familiar with the language, an unquestioned necessity. The alumni of the Higher Commercial School are the men destined to have a preponderant influence on Japan's foreign trade within the next decade, so that the linguistic studies selected by them are not without significance. We should like to see Hindustani added to the above list. It is an easily-acquired and most useful tongue; there are only three irregular verbs in the whole language, while the grammar is of a very simple description. Japan's trade with India, where this Oriental *lingua franca* is everywhere current, is annually increasing; and a knowledge of Hindustani is indispensable to those who would deal directly with the natives. We have no doubt that a good instructor in this tongue could be obtained without sending to India.

181ST NIGHTS SO FEIN GESPONNEN.

In the early part of 1892 Mt. Tanazawa, in the south-western portion of Kanazawa Prefecture, was the scene of an unnatural crime. A wealthy old lady in Nishi Tamagori-mura had adopted her own nephew as her heir and proposed to leave him a large amount of valuable property. But the nephew, Yonekichi, was disposed to resent all restraint and lived a most dissipated life. His aunt frequently remonstrated with him, saying that she could not leave her money to one so sure to bring disgrace on the family name; he must change his course of conduct or take the consequences. Deaf to remonstrance and sick of her homilies, Yonekichi attempted to run away. The devoted aunt traced him and found him in the vicinity of Mt. Tanazawa, when she once again began to upbraid and beseech him to lead a better life. The sole reply of the young ingrate was to entice her into a secluded spot and then push her into a deep gully, the fall causing instant death. Frightened at the result of his violence, Yonekichi fled, believing that the body of the murdered woman would never be discovered. Some weeks later, however, some wood cutters found the mutilated corpse which was speedily identified. Suspicion at once attached itself to the missing

nephew, and for over two years the police have been seeking his whereabouts. Towards the end of last month a miner in the Ashio Copper Mine reported that one of his mates, a morose and surly fellow, was constantly brooding over some evidently recent crime and that he believed that murder had been committed. The matter was traced up and in the surly miner Yonekichi was finally disclosed, but so aged and changed that it was hardly possible to recognize him. He made a clean breast of it when captured.

BOUND TO GET TO CHINA.

SEVERAL instances have already been recorded of soldiers and sailors, condemned for the time being to serve ingloriously in Japan, doing all in their power to get to the seat of war and to that intent contriving all sorts of curious plans. One of the strangest of these manoeuvres is related in a recent issue of the *Tokyo Asahi Shimbun*. A sailor attached to one of the torpedo boats stationed at Yokosuka had repeatedly requested to be permitted to join the fleet in Chinese waters. He is represented as being a first-class seaman with a good record; yet the life of inactivity began to get unbearable and he resolved to desert for a while, and for the following curious reason. It seems that the sailors on board torpedo boats are degraded to seamen of the lowest rank and forced to serve in that capacity on a man-of-war in case they fail to report themselves or are absent without leave for the space of seven days. It was with this object in view that the sailor absented himself, intending to put in an appearance on the seventh day, when he would be degraded and sent, he hoped, to do work on some man-of-war on the China station. Unfortunately for his plan he was discovered and arrested on the sixth day, so that the punishment for his desertion will not be so heavy as he had intended to make it. The *Asahi Shimbun* says that the man was greatly dejected upon being captured, and it is more than hinted that he may find his way to some of the vessels in the Gulf of Pechili after all.

PNEUMATIC SKATES.

PNEUMATIC Skates constitute the latest invention for getting about quickly. Each skate consists of two pneumatic-tired wheels about nine inches in diameter, fixed, like bicycle wheels, one before the other. These skates do not, like ordinary roller skates, require a smooth surface, but can be used on any common road. It is said that twelve miles an hour can be easily accomplished with them, and enthusiasts prophesy that walking will be entirely superseded. The skates can be made for from fifteen to twenty-five dollars (gold). The inventor is a Scotchman named Wilson. If all these good things are true, the pneumatic skate will soon rival the bicycle. The exercise will probably be better than bicycling, and will not necessitate the assumption of that ungraceful spread eagle position, which is apt to cling to the enthusiastic wheelman even when not seated on his wheel.

AN EMBEZZLEMENT CASE.

KISHIDA KEN, an accountant in the Yokohama Branch of the Nippon Yusen Kaisha, was brought before the Yokohama Chihō Saibansho for trial on the 16th inst. on a charge of having embezzled yen 22,545.583 belonging to the Branch. Mr. Seki Naohiko defended. The money, which was under prisoner's control, was embezzled at various times and the matter only became public when prisoner himself confessed to the manager of the Branch. The Court sentenced the man to ten months' major confinement with costs, and ordered him to refund the money.

SOCIETY FOR THE PROTECTION OF COOLIES IN THE ARMY.

THE Society formed for the purpose of giving medical aid to the coolies employed in the Army, which has already been referred to in these columns, held, according to the vernacular press, a preliminary meeting in the Sanitary Association Office on the 7th instant. The leading projectors, Drs. Kitazato, Aoyama,

Kashimura, Messrs. Yamada, M.P., Suzuki, M.P., and others were present. One of them suggested that it would be better to entrust the matter to the Red Cross Society of Japan and to give their help for the furtherance of the scheme from outside. This motion failed to secure the approval of the majority of those projectors present, and it was settled to build a special hospital. According to the original plan, a sum of 200,000 yen was to be raised for the purpose, but, on consulting the Surgeon-General it was found that the outlay need not be more than 11,000 yen a year. The plan is to establish a trial hospital at Hiroshima and gradually to enlarge the sphere of action, and to found hospitals in Korea and China if a satisfactory result is obtained. The site of the first hospital is said to be a large piece of land which Dr. Kitazato and Mr. Miyamoto have found between Hiroshima and Ujima. Through the kind intervention of Mr. Fukuzawa, Prince Tokugawa consented to fill the post of President of the Society and promised to contribute 50,000 yen toward its funds. As the original programme has been considerably altered, the Prince has now asked to be allowed a certain time before deciding as to how he would act. The President and Vice-President were not decided on at the meeting, but in order to get them nominated in a week a committee of 15 members was elected.

HOW GENERAL YEH LED HIS TROOPS FROM A-SAN.

THE story is a little old, says the *Keisai*, but still it is worthy of publication — showing General Yeh's adroitness in effecting a retreat. The details are taken from the report of a Korean official sent to the Chinese Head-quarters at A-san, before the war had broken out. During the battle of Sōng-hwan, General Yeh was staying at A-san, and his second in Command, General Seh, was charged with the defence of that out-post. Yeh impatiently awaited for intelligence from the scene of the combat. Presently a message came, and soon after another. Yeh opened and read them both with great complacency. But when the third message arrived, he assumed a highly satisfied air, and loudly informed his immediate attendants that the Chinese had won a great victory and the enemy being in full retreat toward Hong-ju, the troops remaining in A-san must be led as quickly as possible in that direction. Yeh placed himself in the van of the army and urged on the imaginary pursuit. The troops were in high spirit. They hurried forward, but without meeting any enemy. By and by they began to be joined by their comrades who had fled from Sōng-hwan, and then it was known for the first time that the supposed pursuit was in reality a retreat. Yeh's tact saved his troops and their arms, for imagining that they were following their foes, the men took with them their arms and ammunition. It was thus that although a quantity of tents and provisions were left behind at A-san, very few arms were found by their real pursuers. Yeh is indeed an adept in the art of masterly retreat, comments the *Keisai*.

HIGHWAYMEN CAPTURED.

SINCE March of this year the vicinity of Hiramura, Hiki-gori, in Saitama Prefecture, has been undergoing a reign of terror in consequence of the proximity of a band of highway robbers. Stories of travellers being seized and robbed, of houses broken into, of violence offered to women, have been numerous, and many attempts were made to discover the lair of the desperadoes. The highwaymen were, however, fully aware of the search for their whereabouts and took every precaution to hide their traces. Grown bolder by their comparative immunity, they recently made a decidedly false step which resulted in the discovery of their hiding-place—a well-concealed cave in the fastnesses of Gonyen-yama, a mountain not far from the village. Here the police surprised them on the 2nd instant and succeeded in arresting, after a desperate fight, four out of the six bandits. The other two managed to make good their escape but with severe wounds. The whole band was composed of *eta*, the

former pariahs of pre-*Meiji* days, and the arrested men are related to be most repulsive in appearance. They are more than suspected of being implicated in one or two murders, and as the list of crimes attributed to them is long and black, it is probable that they will spend the remainder of their lives beyond the reach of temptation. The people of Saitama are said to be rejoiced over this notable capture. In the cave large quantities of stolen goods were discovered, the total value amounting to several hundred yen.

THE FRENCH LADIES AND THE WAR.

THE French ladies of Tokyo and Yokohama have made an admirable effort to promote to the comfort of the Japanese soldiers wounded in the present war. By contributions in money and in kind, and by the industrious aid of the Sisters of Mercy, who, together with the pupils of the Convent School in Tsukiji, worked assiduously and continuously through the space of several weeks, a large collection of useful articles has been brought together. The principal varieties are head-gear made so as to cover the ears and neck, flannel girdles, *mompas* vests, linen outer-garments, thick stockings, and so forth, the whole forming a collection of most respectable proportions, so well conceived that its usefulness is beyond doubt. This gift will assuredly be appreciated for its own sake, as well as on account of the kindly sympathy that dictated it. We understand that the same ladies have addressed, through their committee, to the various Foreign Legations in Tokyo, appeals for co-operation, but we have not learned the nature of the responses received.

ONE LOYAL HEART.

A HOMEY incident is related in one of the provincial journals which is not without a touch of pathos. Kuroiso is the name of one of the lesser stations on the northern route, the nearest village of any importance being known as Higashi Naau-no-mura, a little place of less than five hundred inhabitants. As many trains have lately been bringing soldiers down from the northern provinces, and as these trains have invariably to stop a while at Kuroiso, the people of the above-named village thought this an excellent opportunity to turn an honest penny by selling articles of food, tobacco, etc., to the soldiers *en route*. There was one poor old woman, however, who had a bigger conception of her duty and of what was owing to the defenders of her country than any of her fellow-villagers. Parting with everything she could spare, she spent all the result in buying a large quantity of chestnuts. These were then made into that kind of cake known as *kachikuri*. This done the old woman carried the cakes to the trains whenever they bore soldiers southwards, and presented each man with some of the sweets she had sacrificed so much to procure. She accompanied each little gift with a bow and the wish, "Conquer in battle, and come back to Japan victorious and unwounded." The soldiers were much touched by her simple words and artless demeanour and would have given her money, but she positively refused to receive anything in return for the loyal offerings. "This," says our provincial contemporary, "is the old chivalrous spirit of Japan; not that mercantile and sordid disposition that has so largely usurped the place held by the *Yamato-damashi* of yore."

ENGLAND, JAPAN, AND CHINA.

IKU-NO-HATA, of the vicinity of the Uyeno race-course, was recently the scene of a mimic battle of unusual dimensions. Towards dusk on the 9th instant a large number of boys began to gather in the western part of Uyeno Park, more than one hundred being present. Some of these were armed with toy-swords and others with sticks, and after the preliminaries had been agreed upon one-half chose the part of the Japanese army, while the other half were performance content with the rôle of Chinamen. A blast on a toy bugle was the signal for the onslaught. For over a quarter of an hour the battle raged fiercely, clouds of earth flying in all directions, when it was seen that the Japanese

were getting the worst of it. They were unexpectedly assaulted in the front and rear simultaneously, and seemed unable to extricate themselves from their disagreeable position. Just then another blast was heard, and a fresh batch of some thirty lads were seen approaching at full speed to the rescue of their compatriots. This immediately changed the complexion of affairs and the "Chinese" now found themselves surrounded. This was the signal for the attack of another body of youths, styling them English," who came to assist the Chinese. In another ten minutes, however, the Japanese were definitely in possession of the field, the Chinese being captured to a man and the "English general," having received a rather ugly wound on the head, led to police interference and the marching of the weeping general off to the nearest hospital. Hundreds of spectators enjoyed the scene, and great was the cheering when the result was evident and victory had declared itself for the Japanese. But it seems to us that this kind of play is just a little too rough; when clods are used stones are not far absent, and a wound necessitating medical treatment is an unpleasant reminder of what was intended to be mere boyish sport.

JUSTICE TO JAPAN.

IT is instructive and interesting to note occasionally the just and truthful character of the criticisms to which Japan is subjected by the local foreign press. Here is a very recent example:—

The Japanese are certainly distinguishing themselves in the manufacture of items of news. Port Arthur must be like a set of ten-pins, from the number of times it has fallen, and—we suppose—been set up again. Now they pretend that England is going to war with China because some subordinate Chinese troops at Taku took Japanese women out of an English steamer, an act which was immediately repudiated, and apologised for by the Chinese authorities.

Now every educated member of the foreign community knows perfectly well that Japan had nothing whatever to do with fabricating the stories about the fall of Port Arthur. The news came in each instance from Shanghai. It emanated from Chinese or foreign sources, and was merely re-published by the Tokyo press with an intimation of its source and, in nearly every instance, with an avowal of incredulity. The same is true of the story relating to complications between Great Britain and China in the steamer *Chungking*. That news appeared originally in the columns of the *North-China Daily News* and was telegraphed to Japan. The only sin committed by the Japanese was that they attached some credence to statements of English policy toward China published by the leading English journal of Shanghai. Yet now they are coolly held responsible alike for the canards relating to the capture of Port Arthur, and for the story about Great Britain's ultimatum. How eminently truthful and just are such slanders! They do lasting credit to English journalism in the Far East.

WAR CORRESPONDENTS.

THE war correspondents accompanying the Japanese Army and Navy are now so numerous that they form quite a party in themselves. One war-correspondent is allowed to be in each of the ships-of-war. They are all men of robust constitution and daring spirit, but death does not spare them. Already three are dead. The first victim was the correspondent of a Hiroshima paper. He accompanied Colonel Sato's column on its advance from Gensan to Phyoŋg-yang, and met his death from a stray bullet in the fierce fight that took place between the column and a portion of the Chinese garrison. The other two unfortunates were Messrs. Oba Hei, of the *Nippon*, and Okumura Bunsaburo of the *Shin-Choya*, who both succumbed to dysentery, Mr. Oba in the Hospital at the mouth of the Tadong River, and Mr. Okumura at the Jinsen Hospital. Mr. Oba travelled in Korea a few years ago and was therefore specially fitted for a war-correspondent to that country. He was only twenty-seven years of age. Mr. Okumura was the eldest

son of the chairman of the Ibaraki Local Assembly. It is very sad for a newspaper correspondent to lose his life on the field, for he has to run great risk without receiving any compensation beyond his expenses, and as far as we know, there is no agreement made between him and the office that employs him, against such accidents as those that befel the three men we have just mentioned. The Japanese newspapers have now drawn up a document to the effect that if any war-correspondent who has signed it, dies in the discharge of his duties, the fact will be intimated to the contemporaries of the newspaper for which he was working and obituary notice will be given in them of his death. It must not be concluded, however, that writers are averse to be despatched to the seat of war as correspondents. On the contrary, youths of robust health eagerly run the risk simply for the sake of witnessing the triumphant march of their country's Army.

DESTITUTION AND SUICIDE.

THERE can be small doubt that the war is not an unmixt blessing to the poor, especially to those of the capital where higher rates rule for everything appertaining to food, clothing, and shelter. A very sad instance of destitution is related in one of the metropolitan journals that will give an insight into the desperate situation of those whose best efforts fail to keep them from anything more than actual starvation. In Haraniwa-machi, Honjo District, not far from the Sumida River, is the shop of a small dealer in sweet potatoes. Here lived until recently the husband, his wife, and two little girls of ten and five years of age; while an elder girl had gone out into service elsewhere. Since the beginning of the war things have gone from bad to worse with the petty retailer; his relatives several times presented him with small sums of money, but nearly all of this had to be spent in buying rice to keep his family alive. Very little remained for the purchase of potatoes, and matters finally grew so bad that they were compelled to consume the tiny stock of *satsumaimo* on hand. On the 8th, the whole family were without food and without any prospect of getting it. As evening drew on the wife said she would take the children out for a little walk, and as she had a few *rin* left proposed buying some *sandai* for them to still their hungry cries. This she did, and then led the children on to Fukagawa, the youngest girl being strapped to her back. Suddenly on crossing one of the bridges she called the elder daughter to her and bade her "look in the water at the pretty fish," and as the child did so, pushed her into the dark, cold stream and then sprang in herself. The splash and acclam of the children aroused the attention of a constable near at hand and every effort was made to save the forlorn trio. When finally drawn out of the water the mother and eldest girl were found dead, while the younger child, strange to relate, was brought back to life. From her lipings the police learned the father's address, who was immediately sent for. On hearing of the death of his wife and child the man, gaunt and haggard with hunger and suffering, listened to the tale in speechless horror and then dropped in a dead faint to the floor. This is not an isolated case. The metropolis teems at present with people almost equally destitute and equally deserving of assistance. The approaches to Dango-zaka, where the Chrysanthemum exhibit is held, are painful on account of the poverty-stricken old men and women who line the roadsides and mutely appeal for that aid which the majority carelessly withhold.

THE "JIJI SHIMPO" ON ENGLAND'S ORIENTAL POLICY.

Now that China has proved herself impotent to give any help to England, says the *Jiji Shimpō*, and that it has become apparent that she would fall an easy prey to a strong Power, the public is anxious to know what policy England has determined to pursue in this crisis. The latest telegrams from Shanghai seem to give a clue to the answer of this important question. Presuming that the British Minister at Peking has really opened negotiations with the Taung-ii

Yamèn about the *Chung-king* affair, and that British troops have really occupied Boat Island as a pledge of the fulfilment of China's promise, the matter becomes one of the greatest importance, as it serves to show England's new Oriental policy. Is not that policy a proof that she regards China's destiny as already settled and that, rather than attempt to guard China against the aggressive designs of strong Powers, she considers it advisable to look to her own interests before others enter the field? The *Chung-king* affair, was, it is true, a grave outrage to England, but not serious enough to justify any occupation of Chinese territory. It must be considered that she has opened the road to revolutionizing the affairs of the East. The *Fiji* does not vouch for the authenticity of the Shanghai telegrams, and is therefore eager for precise information on the matter.

THE SAITAMA MURDER.

IN our issue of the 9th instant we gave the particulars of an atrocious murder committed on the 5th of this month at Tamanoi-mura in Saitama Prefecture, where in the house of a wealthy peasant no less than seven persons were killed in cold blood: the master and his wife and father; their three little daughters, the oldest being eleven and the youngest only three years of age; and finally a servant-maid not quite twelve years old. The story of the hired man was that noticing the unusual quiet in his master's house at an early hour of the evening he had proceeded to enter, when he was seized by some unknown person, less than five feet in height, who quickly bound his hands and bade him keep quiet on pain of instant death. While the man's back was turned he had made use of the opportunity to effect an escape and on reaching the rear-gate met with another ruffian who had given him a severe wound on the back of the head. The man ran for about five hundred yards and then dropped in a faint from loss of blood. When restored to consciousness the neighbours found that the house of the murdered man was on fire, and after barely getting an outline of what had happened from the wounded man ran to the rescue. All the bodies with one exception were carried out before the building collapsed, one horse being also burned to death. Great sympathy was expressed for the wounded man servant, who was kept at the police-station for the present. Inquiries, however, soon caused suspicion to fall on this very man. His hands had not been properly bound at all and the wound on the back of his head was not a slashing cut but such an one as anyone might give himself. When charged to confess, the criminal finally made a clean breast of it. He had been, it appears, enamoured of the peasant's wife, who indignantly repelled his advances. Enraged at this, he had first killed the husband, coming on him from behind, then the wife, the father, the three children, and the maid servant. The story of others being implicated was not wholly without foundation, for he had got one of his friends, a man of phenomenally short stature, to keep a look-out while he was glutting his revenge. The unnatural monster is now in jail and rapidly recovering from his self-inflicted wound.

THE STATE OF AFFAIRS IN CHINA.

THE vernacular press has been much given of late—and quite naturally so, all things considered—to publishing curious paragraphs concerning the state of affairs in China. The items that have so far appeared do not bear the stamp of unimpeachable veracity, yet they are often amusing though redounding not over-much to the credit of the Middle Kingdom. We learn from the *Yomiuri Shimbun*, for example, that an Imperial Edict has all at once forbidden the use of *kurumas* in Pientain and the northern cities. This, explains our contemporary, was prompted by the fact that the Chinese Government is experiencing the utmost difficulty in raising troops. No one wishes to become an animated target for the unerring rifles of the Japanese. But this Edict has the result of suddenly taking the bread out of the mouths of many wiry, hard-working men, who thereafter

in default of other employment, will naturally join the army in order to live! We are moreover told by the same authority that the Chinese Central Government is still in ignorance of the fact that the Second Army has landed on the Liau-tung peninsula. That is a little difficult to credit. It is easier to believe, as reported in another journal, that the Chinese Authorities knew nothing of the debarkation of the Japanese troops until a week after this had taken place.

News travels with exceptional slowness in China, so the war correspondent of still a third Tokyo journal may be quite correct in stating that the Second Army, upon landing, found the majority of the inhabitants of the Liau-tung Peninsula in utter ignorance of the fact that war had been declared between their own country and Japan. Many of the villagers were left in blissful unconsciousness of the real state of affairs, and were shrewdly led to believe that the whole action of the Japanese troops amounted to nothing more than a big military picnic, with real powder and shot thrown in as picturesque accessories. Moreover, the local inhabitants are described as having only a vague idea of what war really is. Long decades have passed since anything worse than occasional marauding hordes have come to disturb their tranquillity. Reassured as to their immediate personal safety, they readily fraternize with the Japanese and are given to admiring their military accoutrements and other military equipments with a childlike wonder. Most of the villagers are a peaceful race, contented with little and accustomed to hard-working lives in the open. Properly trained they ought to make good soldiers. As for their own government, they have only a vague general idea of its grandeur, with many hints of official peculation and dishonest pressure in their immediate administration. They are by no means so sharp at a bargain as the rest of their countrymen proverbially are. They do not demand exorbitant prices, and often give a good customer some little gift of small value for good luck, very much like the *laguappe* of the southern part of the United States. A temperate and just rule should make excellent citizens out of such material.

A FORTUNE-BRINGING BIRD.

A GOOD deal has been said lately concerning the hawk as a messenger of good omen in Japan, of course in connection with the now historic bird that took its station on the mast of the *Takachiho Kan*. But quite apart from any superstition, the following narrative, which is literally true, will show that a hawk once actually did found the fortunes of a manufacturing firm in Tokyo. Considerably over three hundred years ago, nearly four centuries we should say, the main thoroughfare of Nihombashi, or the *Tōri* as it is more commonly known, was the business centre of Yedo. Here at that time was the store of a large dealer in those miscellaneous articles grouped under the generic name of *Komamonos*, a word somewhat like the American "notions," or the English "fancy goods." One day Hidetada, the second Shogun of the Tokugawa line, swept through the street with his train. He had been out with a hawk party, and was returning to the castle after a long day's sport. Just as the cavalcade reached the *Tōri* the Shogun's most valued hawk broke loose, and a wide uncertain sweep of her pinions brought her into the store-room of the *Komamonoya*, who had the luck to catch the bird, which he was allowed to present to one of the high officials in the Shogun's train. Hearing of the incident, Hidetada declared that the hawk had intended to carry good luck to the merchant's house, that they should carry the bird back to the *Komamonoya* and tell him to keep it in memory of the occasion. More than this, the Shogun commanded that his immediate household should be supplied from the store in question, thus laying the foundation of the merchant's subsequent vast fortune. The firm is in existence to-day and the trade in and manufacture of fancy-goods is still plied with success, the present owner being a lineal descendant of the original family. They are well-known to foreigners under the

firm-name of Hayashi Kuhei, dealers in art-curios in general and metal *repoussé* work in particular. The chief treasure of the family is the skeleton of a hawk: that of the very bird that flew into their ancestor's store centuries ago. It is regarded, and with justice, as a precious heirloom, for it was owing to the above incident that the house enjoyed the favour of all the Shoguns of the Tokugawa line.

THE SPEAKING FOX-GOD.

THE shrine dedicated to *Inari-sama*, or the Fox-god, at Asagaya-mura, near Tokyo, has always been much visited by the neighbouring peasantry. Its fame recently reached an unparalleled height. For the past fortnight worshippers have declared that they heard a voice proceeding from out the shrine in answer to their petitions. It spake in muffled and sepulchral tones, as befitted such a deity, and told them to make offerings of wine and various eatables. The noise of this miracle got abroad, and credulous people flocked thither in shoals: some came to scoff but remained to pray, for they could not doubt the evidence of their senses. It was noticed, moreover, that the food presented at the shrine invariably disappeared during the night, and this was again attributed to the wonderful fox. All sorts of stories were circulated, some alleging that a *byakko*, or white fox, had been seen near the premises. Some days ago the time came for the periodical opening of the cash box (*saisen bako*) fronting the shrine. It was supposed that an unusually large quantity of cash would be forthcoming; but on opening the box there was not so much as a *rin* in it. This came to the ears of the police, who instituted a thorough search. Just back of the shrine they came upon the mouth of a burrow, and, the opening being exceptionally large, one adventurous constable crept in to find himself confronting an elderly man, one of the villagers, who had made quite a comfortable little cave for himself and had been profiting largely by the credulity and superstition of the villagers. He was promptly arrested and will be held answerable for "obtaining money under false pretences." The shrine now stands lonely and deserted, for the faith of its erst devotees has fallen several degrees below freezing-point.

A PRECOCIOUS ARTIST.

AMONG the many offerings made to Their Imperial Majesties on the occasion of the Imperial Silver Wedding none was more interesting of its kind than two scrolls, drawn by a youthful artist, Kosuke Morinaga, the child of a merchant residing in the town of Saiku, in Chikuzen. The picture represented, first, a jewel, of that pear-shaped, flame-surrounded type known as *hoju*; and, secondly, a large tortoise. Both are emblematic of good fortune: the *hoju* having a religious significance and symbolising divine favour, while the tortoise is, of course, typical of longevity. The execution of the scrolls is said to be bold and striking, quite worthy of a master-hand, and this is all the more wonderful as the child-artist is not quite four years old. Little Kosuke is reported to have evinced unmistakable predilection for drawing before he could speak, and he began to take lessons in the Japanese style before he was two years old. A document was recently sent the young genius from the Minister of the Household Department, with the autograph words that "H.M. the Emperor had expressed great satisfaction with the drawings." It is to be hoped that the boy will receive careful and judicious training, without undue pressure while young. Japan has need of a second Hokusai.

THE "KEIZAI" ON THE CONDITIONS OF PEACE.

SHOULD China, after the termination of the present war, fall a prey to some great Power, Japan's position in the East would become greatly endangered. This consideration, says the *Keisai*, leads us to think that after the war, Japan should demand the cession of such territory from China as would insure safety should the Middle Kingdom be absorbed by any strong Power. Some are of opinion that the Island of Formosa should be demanded from

China, but the *Keisai* does not endorse that view, as the successful defence of the island would require a special fleet. Altogether it does not consider that the step would be wise policy on Japan's part. Others hold that the two provinces, Kirin and Shang-kiang, should be annexed to this country, but the *Keisai* does not approve of that either, as those two provinces are very unproductive and could not even support the troops which Japan would station in them. The *Keisai* considers that to the two provinces above mentioned should be added Pechili, the latter being a position of great power for commanding the rest of China. The periodical expatiates on the history of China, and explains the important part played by Pechili in the formation of Chinese dynasties. The *Keisai* concludes by saying that its suggestions, if carried out, will be not only conducive to the interests of Japan but also to those of China, for the latter's people will then be well governed and will enjoy the benefit of being the subjects of a powerful and independent country. China, it says, is destined to play an important part on the world's stage, and this can only be done under Japan's supervision.

CHATEAU EN ESPAGNE.

THE domains of Japanese animal life as yet unexploited for instances of patriotic activity are few in number. We have already had occasion to enumerate remarkable examples of animal intelligence in this direction, the list including horses, swallows, butterflies, bees, and wasps. No particular mention has as yet been made of *Pulex irritans*, although we learn indirectly from those well acquainted with the habits of this agile insect that it has shown an unusual degree of fervid intensity and directness of purpose during the past summer months. The latest story of the kind refers to ants. The *Yomiuri Shimbun* relates that some weeks ago, in the front-yard of a barber's shop in Ushigome District, Tokyo, the ants began building a remarkable structure above-ground. Gradually this took the form of a well-defined castle, with battlements, turrets, and probably portcullis and drawbridge, all complete. Crowds of people came to see this wonder, which was in a somewhat out-of-the-way street—Kora-machi—and finally a speculative party offered to pay the barber twenty yen a month for the lease of his premises, intending to show the strange marvel to the curious at so much a head. But the barber not only refused to agree to the proposal but even went so far as to demolish the formic fortress. That is a great pity, for now there is nothing left to verify the *Yomiuri's* story but a heap of shapeless earth. To any but severely incredulous people, however, even that ought to be more than sufficient testimony.

THE CHINESE IN YOKOHAMA.

THE *Yorossu Choho* is responsible for the statement that the Chinese in this Settlement have to put up with a good deal of rough joking on the part of the local Japanese youth. Of course no direct molestation is permitted, as the police are careful to see that they are in no wise disturbed in the peaceful pursuit of their avocations; yet our contemporary avers that the Chinese are very shy of passing anywhere near a group of Japanese boys. "Where they once walked with a slow and sedate gait," says the *Yorossu*, "they now travel as swiftly as bicyclists." We do not, however, think that the local Chinese have anything to fear, either from Japanese youths or adults. They are now coming back to the port in large numbers, as they have learned that the safety of their lives and property will be as carefully looked after as that of Japanese citizens. The jibes of enthusiastically patriotic school-boys may be hard to bear, but are not dangerous.

AN IMPUDENT CHARLATAN.

THE absence of any efficient and generally applicable system of medical registration in the United States of America, sometimes leads to the putting of the most ignorant pretenders into positions in which they can speak and act with

authority. A notable instance occurred recently in New York. A young man committed suicide with a pistol. The body was taken to the public mortuary, and a person named Dr. Donlin was engaged by the Coroner to make a post mortem examination. We are told by the newspaper from which we derive our report of the occurrence, that the result of his examination surprised all who know anything about the subject, for he found that, though the brain in general seemed healthy enough, "the centre for amative-ness was fearfully and wonderfully developed. This convulsion was out of all proportion to the rest of the brain, so much that he was convinced at once that a disordered imagination somewhere in the line of love was a disturbing, or perhaps a controlling element in the mental operations." On these grounds the learned gentleman informed the coroner that the indications that the suicide was due to love were conclusive. It is sufficient to say that no such thing as a brain-centre of amative-ness ever has or is ever likely to be discovered; and to express dissatisfaction with the system that allows a charlatan of this character to make use of a Coroner's court to advertise himself before a sensation-loving public.

A SLANDER.

WE observe with astonishment that a libellous paragraph with reference to Mr. A. Michie is reproduced from the *New York World*, and apparently endorsed, by the *China Gazette*. The paragraph sent to the *World* from Tokyo is an example of one of those wretched slanders the publication of which disgraces modern journalism. The purpose of the writer is simply to belittle and discredit Mr. Michie, a gentleman whose reputation is happily beyond the reach of such cowardly attacks. Among other falsehoods it is alleged that Mr. Michie, when on a recent visit to Japan, "clamored for an interview with the Minister of State for Foreign Affairs;" that he was "treated with contemptuous silence," and that "the police were instructed to watch his movements." These assertions are absolutely untrue.

THE HALF-BRED GRIFFINS.

THE ten fillies secured from Niicapsu for the Spring Meeting next year are a decided improvement on the cast-off colts that have been sent down here during the past two years. The animals are not only larger, but are much better bred, while the price paid, including all expenses, is only \$113 per head. The finer bred ones were more coveted than the others, but in a lot so even-looking it was hard to pick out anyone that stood much above of the rest. The following are the names of the drawers:—

- No. 1.—Grey, by Bradley IV., dam (three-quarter-bred) by Bradley I.—Mr. R. Field.
- No. 2.—Grey, white blaze, by Bradley IV., dam (three-quarter-bred) by Bradley I.—Mr. Wada.
- No. 3.—Chesnut, by Mumouth, dam (three-quarter-bred) by King Richard.—Mr. Titherleigh.
- No. 4.—Bay, by Spooney, dam (three-quarter-bred) by King Richard.—Mr. Shimern.
- No. 5.—Bay, by Spooney, dam (half-bred) by Black Hawk.—Mr. Cavalette.
- No. 6.—Grey, by Bradley IV., dam (half-bred) by Kingsley.—Mr. Cavalette.
- No. 7.—Grey, by Bradley IV., dam (half-bred) by Ararangi.—Mr. States.
- No. 8.—Black, by Crown Prince, dam Japanese.—Mr. Cavalette.
- No. 9.—Grey, by Bradley IV., dam Japanese.—Mr. Shimern.
- No. 10.—Bay, by Spooney, dam Japanese.—Mr. Tatsuta.

FIRE AT HIROSHIMA.

THERE has been another conflagration at Hiroshima. It broke out at 5.25 p.m. on the 12th instant, in the quarters of the 2nd battalion of the 21st Regiment's reserves, and spread almost instantaneously to the barracks of the 3rd battalion. A large force of men being speedily available the flames were under control by 6.13 p.m., but not before from 30 to 40 men had been killed or wounded. The cause of the calamity was the upsetting of a kerosene lamp by one of the soldiers, who, in alarm and probably ignorance, attempted to extinguish the burning oil

with water, thereby, of course, intensifying the flame. It seemed at one time as though the Emperor would be obliged to remove, but happily that was avoided.

THE 3RD NOVEMBER INCIDENT.

THE account recently published by the *Fiji Shimpo* that a man had been cut down by an officer of the Imperial Guard when the latter were en route for their barracks from the parade ground at Aoyama, appears to have been incorrect. The *Fiji Shimpo* now inserts a withdrawal, from which we gather that though a man, named Takahashi Masakichi, was undoubtedly wounded owing to his having become entangled in the ranks when the Guards were trooping the colours, the cutting was not intentional and was, moreover, of a trifling character. The man was put into the hospital of the corps pending recovery, and moreover received a sum of money by way of consolation.

PRINCE KUNG.

THE good Prince Kung, according to a telegram from Shanghai, is said to have requested the Foreign Representatives to ask their Governments to mediate for peace on the basis of the independence of Korea and the payment of a war indemnity. So China does not yet understand that if she wants peace, she must sue directly for it. That has been the kind of pie prescribed for the consumption of defeated states from time immemorial. China must eat it, or continue to take a thrashing.

LI HUNG-CHANG TO BE SUPERCEDED.

THE Nanking Correspondent of the *Shanghai Mercury*, under date of the 1st instant, states:—From Chinese official sources I learn that Liu Kwan-yi, our Viceroy, has been ordered to the North to take Li Hung-chang's place as Viceroy of Chihli, and that Chang Chih-tung, another Hunan man, is appointed to Liu's place. I send you this for what it is worth. Liu Ming-chwang has also, I learn, been ordered out of private life, where he is making merry with his six or seven wives, to take part in the burdens of public affairs.

THE AUDIENCE QUESTION.

CHINA, being down in the mire, is getting trampled on all round. It is telegraphed from Shanghai that the perennial Audience Question has been settled, the Emperor agreeing, at the instance of the Russian and French Ministers, to receive Foreign Representatives after the manner of Western Rulers. And what are the French and Russian Ministers to do by way of return? That is left to public conjecture.

THE YAMAGATA EARTHQUAKE.

WE desire to call our readers' attention to the very interesting account of the Yamagata earthquake published in our correspondence columns from the pen of Dr. D. C. Greene. It is unnecessary to dwell upon the fact that a calamity of such dimensions invites charitable assistance from all quarters, or to make any elaborate appeal to the community of Yokohama, invariably generous as its members are in rendering assistance to the suffering. We shall be glad to receive and forward subscriptions.

THE TONKINESE BANDITS.

FROM the *Avenir du Tonkin* we learn that MM. Chesnay and Logiou, who were captured by pirates some time ago, were released on the 25th October. The terms of their ransom are not stated. Madame Chaillet and her daughter and M. Carrière, who were also seized by pirates, are still in the hands of their captors.

H.I.H. THE CROWN PRINCE.

THE Prince Imperial leaves the capital on the 15th inst. by the 6.20 a.m. train from Shinbashi for Hiroshima to pay a visit to H.I.M. Emperor. He will pass the nights of the 15th and 16th at Nagoya and Kobe respectively, and will reach Hiroshima on the 17th.

IMPERIAL DIET.

AN Imperial Ordinance was issued yesterday convening the next session of the Imperial Diet on the 22nd of December.

WAR NEWS.

MONDAY, NOVEMBER 12TH.

Chin-chow and Talien have both been taken by the Japanese. The former was attacked on the morning of the 6th instant. Contrary to all expectation it fell after a feeble resistance. Only a thousand infantry soldiers and a hundred cavalry took part in the defence, and after a skirmish of two hours they retreated southward. Chin-chow is a walled town lying at the junction of the two main roads in the peninsula, one of which passes northward along the east coast to Taku-shan and the Yalu; the other, along the West coast to Newchwang and Shan-hai-kwan. Chin-chow itself is not a place of any special importance, but a little south of it the peninsula narrows to a neck which, according to the map, measures 2½ miles across, but according to the statements of the Japanese, is only 2,400 yards from coast to coast. Whichever estimate be correct, it is plain that a few thousand men posted at the neck, if aided by entrenchments such as might be thrown up in a week, could check the southward advance of a strong army. Moreover, this neck being formed on the east by an inlet of Talien Bay, one of the best naval harbours in the Orient, can be swept from shore to shore by the guns of ships lying in the bay. A combined defence by even two or three Chinese gunboats and four or five thousand troops might have cost General Oyama's Army immense loss, or even completely foiled its attempt to penetrate to the Southern part of the peninsula where Port Arthur lies. Talien Bay itself is capable of being easily rendered inaccessible from the sea. Islands at its entrance limit the approaches to two channels, and the Bay being only 7½ miles across, the avenues of entry as well as the whole sheet of water might be effectually protected by torpedoes. Round the bay six batteries stand. They are armed with 80 guns, the heaviest being 24 centimetres (16 tons). In short, every means had been employed by the Chinese to secure the place on the sea side. Port Arthur is not naturally a good anchorage, and though a tidal basin has been constructed there capable of accommodating 14 large vessels, the entrance being a channel only 200 yards wide, there are evident disadvantages for a fleet desiring rapid access to the open sea. Hence Talien Bay has always been a favourite anchorage for the Pei-yang squadron. When Admiral Ting's ships were reported to be in Port Arthur, they were usually to be found in Talien Bay. To have attacked the place from the sea would have been an almost hopeless undertaking. But the apparently invariable fate of all Chinese military positions is to be impregnable on three sides and fatally vulnerable on one. Talien was no exception, and the Japanese had evidently assured themselves of the fact. It was arranged between Admiral Ito and General Oyama that while the army advanced against the forts from the land side the Fleet should coöperate as far as possible from the sea. The 6th was fixed by the General as the day for assaulting Chin-chow, and on the 7th he expected to direct his forces against Talien. We are still without any detailed account, and can not therefore say what system of signals, if any, was arranged between the troops on shore and the ships. But inasmuch as the army, in order to reach Talien, had to pass the narrow isthmus mentioned above, its arrival before the forts on any particular day, must obviously have depended in great measure on the quality of the resistance offered by the enemy. However, the 6th and 7th having been agreed upon, Admiral Ito, leaving the Third Flying Squadron and some special vessels to protect the landing place at the Army's base of operations near the Pi-li river, set out on the 6th inst. with the remainder of his available ships from the anchorage at the Chang-shan-lien islands. He had with him several small steamers provided with torpedo-searching apparatus, for it was plainly impossible to venture into Talien until the navigability of the approaches had been secured. At 2 p.m. he arrived off the entrance to the Bay and the

business of dragging for torpedoes was at once commenced. That night the vessels anchored off the Bay, and the following morning the Fourth Flying Squadron entered. The forts remaining silent, the Principal Squadron also passed into the Bay, and proceeding close inshore, found that the guns in the six forts had their muzzles pointing to the sky and that the Japanese flag was flying over them all. A landing was effected, and it was found that the forts were guarded by a small force of Japanese troops. Two Generals of Division and their staffs had inspected them in the morning, but had returned immediately to Chin-chow. Admiral Ito was therefore unable to obtain any exact details, but he immediately despatched the *Akashi Maru* to carry the news to the mouth of the Ta-dong river. Meanwhile, a British man-of-war had crossed to Chefoo with the intelligence, and it consequently resulted that a telegram coming by way of Shanghai reached Tokyo on the morning of the 11th instant. Shanghai news, however, is so proverbially untrustworthy that pending confirmation from Admiral Ito or General Oyama, the telegram did not obtain credence. A few hours later the Korean wires brought the required confirmation. As yet we know little about the fighting on shore. General Oyama reports that Chin-chow, as stated above, was defended by 1,000 infantry and 100 cavalry, and Talien by 3,180 of all arms. He also states that the casualties on the Japanese side were about 10 (killed and wounded), and that the enemy's losses can not have been large, from which it is to be inferred that the fighting scarcely exceeded the dimensions of a skirmish. The defenders of the two places fled to Port Arthur, the garrison of which thus received an addition of over 4,000. Two telegrams despatched from Hiroshima on the 11th say that there fell into the hands of the Japanese at Talien the 80 guns mounted in the forts, the stores of ammunition for the batteries, the torpedoes in the Bay, some torpedo-boats, and a quantity of torpedo apparatus, maps, and so forth. They add that the Bay was protected not by torpedoes alone, but by laweers, booms, and various other contrivances. As for the Pei-yang Squadron, it appears to have made no attempt to check the advance of the Japanese. Rumour says, indeed, that shortly after Admiral Ito's ships entered the Bay, Admiral Ting's Squadron made its appearance outside, and that an encounter seemed imminent, when suddenly the Chinese ships drew off and steamed away at full speed for Wei-hai-wei, scared, apparently, by the strength of the forces arrayed against them. But we do not think that credence may be placed in that story.

The 6th and 7th are indicated above as the days of the capture of Chin-chow and Talien, respectively, but we must tell our readers that we do not speak with absolute confidence. In some telegrams the 5th and 6th are mentioned, and these days tally with Admiral Ito's report. But other messages mention the 6th and 7th, and the balance of testimony seems, on the whole, to designate the latter days. However, we make no assured statement one way or the other.

On the morning of the 11th a telegram reached Tokyo via Shanghai saying that Port Arthur also had been taken. Of course we can not either credit or discredit the statement, but there is nothing absolutely impossible about it. According to our maps, the distance from Chin-chow to Port Arthur by road is 40 miles. As the crow flies it is only 33 miles, but the main road (that along the west coast) is devious, and measures fully 40 miles. There is another road along the east coast, but it saves nothing in point of distance, so far as we can see. Supposing that Talien was taken on the 6th—not the 7th, as we have assumed above—and that the advance continued without interruption from the 7th, the troops would have had to cover about 13 miles *per diem* in order to assault Port Arthur on the morning of the 10th. The thing, though not impossible, is highly improbable. Armies do not move at the rate of 13 miles a day, unless they are pressing forward by forced marches for some special purpose. Our cal-

culation is that Port Arthur will be assaulted on Thursday or Friday next. We may recall the fact that writing on October 31st, we said:—"Chin-chow can scarcely be reached before November 3rd unless the rate of progress is much more rapid than it has been in Korea." That forecast was based on two assumptions: first, that the landing had been effected at a point 59 miles from Chin-chow—whereas in reality the place chosen was 70 miles distant—and second, that the southward march of the army commenced on October 27th—whereas we now know what it did not begin until the 28th. Had the bases of our estimate been exact, the estimate itself would have tallied with the facts to a day. In brief, the record of the Army in Korea supplies a fairly accurate measure of the movements of the Army in the Liau-tung peninsula. Hence we are not without confidence in predicting Thursday or Friday next as the day of the attack upon Port Arthur.

The question of paramount interest now is whether any resolute defence will be offered by the Chinese at Port Arthur. There are 12 or 13 batteries there, mounting 40 guns, from 6 cent. to 24 cent. But it may be confidently predicted that these batteries are virtually useless for the purpose of repelling an attack from the land. They are distributed over four miles of sea-board on either side of the entrance to the port, and their prime object is to protect the place against a naval assault. At Talien there are six batteries mounting 80 guns of the same calibre approximately as the Port Arthur armament. Yet Talien with all its artillery, ammunition and stores was surrendered almost without a struggle. Is a different result to be expected at Port Arthur? On the Western side the forts are said to be protected by the shoaling of the harbour. On the east, there is a range of encircling hills, their heights varying from 350 feet to 650 feet. Here Chinese walls, fortified camps, and redoubts constitute a system of defence, doubtless tolerably efficient if resolutely and skillfully utilized. But the Chinese have not shown themselves either resolute or skilful at any stage of the present war, and nowhere has their apparent collapse been more conspicuous than in the Liau-tung peninsula. Of course there remains always the possibility that they may break the record some where, and that Port Arthur may be the place. But we do not anticipate anything of the kind. It is inconceivable that any strategist, charged with the duty of protecting Port Arthur against a land attack, should have neglected the splendid facilities offered by the neck of the peninsula at the head of Talien Bay. Such blindness or incompetence in the case of Talien forbids us to expect anything like a determined defence at Port Arthur. It has been said that the Chinese, caught between the Devil and the deep sea, may fight as they have never fought before. Will they be thus caught, however? Will not the Japanese contrive a road for the escape of the beaten foe? They have been careful to do so hitherto, and we see no reason to anticipate different tactics at Port Arthur.

The Emperor has addressed the following message, to the First Army, through the Vice-Minister of State for War, Major-General Kodama:—

We admire and applaud the loyalty and courage that have enabled you to brush aside a thousand difficulties, to drive the enemy back beyond the confines of Korea, to penetrate into his territory, and to capture his strongholds. You have now to face the rigours of winter. Take thought for each other and achieve the goal of final success.

The *Yiji Shimpō* gives the following details of grain and cash captured by the Army in Manchuria:—

	Shelled Rice bush.	Unshelled Rice bush.	Other Grain. bush.	Chinese Cash. kwan.
At Chin-lien ...	313,000	75,500	137,200	2,270
At Antung	2,000,000	500	1,000	8,820
At Feng-hwan..	100,000	—	5,437	10,000

In addition to the above, quantities of salt, *miso* (bean sauce), and other provisions were taken.

TUESDAY, NOVEMBER 13TH.

A telegram received yesterday from Shanghai

says that Port Arthur was taken by the Japanese Army on the 11th instant, the Chinese offering no resistance. The Taotai Kung with the Generals are alleged to have made their escape on the 6th instant, and that, of course, had the effect of completely disorganizing all opposition. There were plenty of troops, the telegram adds, and ample supplies of arms and war material to make a good fight. But it seems that after the fall of Chin-chow and Talien all idea of opposition was abandoned. It is difficult to determine whether this telegram deserves credence. We pointed out yesterday that if the progress of the Japanese Army from Chin-chow and Talien were in accordance with precedent, the assault on Port Arthur could scarcely be delivered before the 15th instant. But it is impossible to calculate the course of events when they are complicated by such an unforeseen contingency as the complete collapse of the defence. Count Oyama undoubtedly sent a flying column in pursuit of the Chinese retreating from Chin-chow and Talien. The object of such a column would be to give the enemy no time for rallying, and to supply information of his movements to the main body of the army. All strategical experience goes to show that rapid pursuit is generally the surest way of securing a victory's full fruits. Reconnaissances doubtless informed Count Oyama that neither at Chin-chow, nor at the formidable isthmus, nor at the strongly armed Talien, was any serious defence to be apprehended, and the forenoon of the 6th instant may have seen him urging forward his advance columns with the utmost speed southward of Chin-chow, so as to take advantage of the confusion and panic created in every garrison by the advent of beaten and hotly pursued troops. From the 6th to the 11th inclusive we have an interval of six days, in which time a strong force may have negotiated, without much difficulty, the 40 miles separating Chin-chow from Port Arthur. Thus the intelligence cannot be dismissed as impossible or even improbable. Indeed, we are disposed on the whole to attach credence to it, though to do so involves the conclusion that the Chinese Generals reserved their greatest fiasco for the position they were bound to defend with most resolution. If Count Oyama's Army, without losing more than a score of men, has captured two fortified harbours with batteries mounting 120 guns, and the only dockyard in northern China, it is one of the strangest pages in warlike annals. But comments are idle pending confirmation of the fact.

Telegraphic intelligence from Shanghai says that the Pei-yang Squadron was at Taku on the 10th instant, taking in coal and stores. The Pei-yang Squadron had better not risk another encounter with the Japanese if Port Arthur has fallen, for there remains no longer to the Chinese a dock to repair damaged ships.

The *Official Gazette* publishes telegrams showing that the torpedo stations, the torpedoes, and the charts showing the plan of submarine defence, fell into the hands of the Japanese troops when Talien was taken. All the arrangements for defence seem to have been on the most approved plan of modern warfare, not even telephonic communication being neglected. Apparently the only fighting was the skirmish at Chin-chow. The garrisons of the batteries at Talien fled without attempting resistance. That is not wonderful, perhaps, seeing that troops cooped up in them could not make as stout a stand as in the open. Complete failure of generalship was the secret of the collapse. The torpedoes were all exploded on the 8th instant, and the following afternoon a portion of the Japanese fleet entered the harbour and anchored in "Junk Bay."

The *Kokkai*, on the authority of a ship's officer said to have returned to Shimonoseki on the 11th instant, relates that, on the 7th instant, a Japanese man-of-war captured three boats and a steamer in Chin-chow Bay. In the boats and steamer there were some 30 officers and soldiers, together with a quantity of arms, but the account adds that the greater part of the people on board had jumped into the sea and disappeared. We do not clearly understand the story. So far as we can gather

an attempt was made by about 500 persons, consisting of soldiers and civilians, to escape from Chin-chow to Newchwang. They embarked in a steamer and three boats towed by her, but in making their way out of the bay, the steamer ran aground and the boats were upset. Presumably they were found in that position by a Japanese war-vessel.

The *Kokkai* is also responsible for a story that on receiving news of the fall of Feng-hwan the Generals at Shan-hai-kwan fell into a difference as to the better course to pursue, the Commander-in-chief being in favour of remaining to fight and the other two Generals urging retreat. The result was that a great number of the troops deserted. Considering that the distance from Feng-hwan to Shan-hai-kwan is 229 miles, we are perplexed to understand why the fall of the former should have produced an immediate commotion at the latter.

The business of quelling the Tong-hak insurrection is not ended. The *Nichi Nichi* writes that the officer commanding the force detailed for the duty, telegraphing on the 7th instant, reports an encounter in which six of the insurgents were killed and 27 taken prisoners. That kind of thing can not continue much longer, we should think.

Telegrams from Tientsin say that Admiral Ting has been severely censured from the Throne and stripped of some of his dignities, for his inefficient use of the fleet under his command. If that be true, we may perhaps expect to see the Admiral attempt to recover his lost fame.

WEDNESDAY, NOVEMBER 14TH.

No confirmation has yet been received of the reported taking of Port Arthur on the 11th instant. Shanghai is certainly the quickest route by which intelligence could be received. If, as is supposed, a vessel of the British fleet carried the news to Chefoo, Shanghai might be in possession of it within 13 hours, whereas fully 3 days seem to be required for sending news to Japan *via* Korea. For example, Chin-chow was taken on either the 5th or the 6th, and Talien on the 7th or the 8th, yet intelligence of the events was not received in Tokyo from Fusan until the 11th. It is therefore possible that Port Arthur may have fallen on the 11th, and that the news may have come to Japan *via* Chefoo and Shanghai on the 12th, though the morning of the 14th finds us still without any report *via* Korea.

The *Official Gazette* publishes a telegram despatched from Hiroshima at 12.25 p.m. on the 12th instant. We learn from it that with the exception of a body of men in Shui-yen, none of the enemy's troops can be discovered by the scouts of Field-Marshal Yamagata's Army. Possibly the Chinese Generals are endeavouring to concentrate a strong force for the defence of Moukden. But that seems doubtful. At all events they have lost the greater part of the troops that they had originally on the north bank of the Yalu.

To civilians it has probably seemed strange that Count Yamagata should have detached columns to pursue the portions of the enemy's Army flying in the directions of the Liau-tung peninsula and Newchwang. But a little study of the map will explain the matter. All troops sent overland from China to defend Manchuria must pass through Newchwang or its neighbourhood. Indeed, the quickest route for reinforcements to take, supposing the mouth of the Yalu held by a hostile fleet, would be to Newchwang by sea from Taku, and thence up the river to Moukden, or overland due east by the main road to Feng-hwan. An invading army entering Manchuria from Wi-ju and Chiu-lien, has to march northward leaving its flank exposed to Newchwang. Did the Chinese possess any of the dash or strategic perception shown by the Japanese, they would certainly endeavour to strike a blow at Count Yamagata's communications with Chiu-lien and the Yalu. That, in truth, is the chief danger to which the Japanese Army is exposed on its long march northward. The Chinese have not behaved in such a manner as to suggest that

they will attempt any coup requiring courage or military insight. But a good General neglects nothing. Field-Marshal Yamagata would have been unwise had he left even fractions of a disorganized enemy hovering on his flanks. Hence his vigorous pursuit of the troops detached from the Chinese Army and driven westward toward the Liau-tung peninsula and Newchwang.

Field-Marshal Yamagata telegraphs that the reports hitherto furnished with respect to the Japanese and Chinese casualties in the engagements on the north bank of the Yalu and the spoils taken by the victors, require correction. The figures as now given are 1 officer and 32 rank and file killed; 3 officers and 108 rank and file wounded, and 1 man missing. As for the Chinese losses, 495 of his dead have been buried by the Japanese, and a large but unascertained number of corpses are in the Ai river. The chief spoils taken are 74 field-pieces and 4 machine guns; 4,395 rifles; 36,384 rounds of large-arm ammunition; 4,300,660 rounds of small-arm ammunition; 1,470 *koku* of hulled rice; 245.5 *koku* of unhulled rice; a number of telegraphic machines and so forth. In addition to the above there are the spoils taken at An-tung, concerning which no exact report is yet forthcoming, but which are known to have included 20 guns and 2,000 *koku* of rice. These figures are very suggestive. The small-arm ammunition captured represents the supply that would be carried with the first line for an army of 21,500 men, at the rate of 200 rounds per man, and the field-gun ammunition would suffice for a park of 240 guns at 150 rounds per piece. It may be taken for granted, we think, that the Chinese lost at Chiu-lien and Feng-hwan the whole supply of ammunition, both rifle and artillery, carried in the waggons accompanying the Army. Further, considering that their dead do not number more than 600 or 700, it seems probable that they had about 3,500 wounded, if all the rifles captured were found on the field. Some of them, however, may have been in store at Chiu-lien or Feng-hwan. So far as we can judge, the total number of guns taken from the Chinese by the First Japanese Army, from the battle of Söng-hwan until the present time, is 150.

THURSDAY, NOVEMBER 15TH.

The news of the fall of Port Arthur on the 11th instant is not confirmed. On the contrary, we have now a telegram from Shanghai saying that intelligence received by H.M.S. *Mercury* from Tientsin declares the place to be still in the possession of the Chinese. We have already explained more than once the nature of the routes available for the transmission of intelligence from the Liau-tung Peninsula to the outer world, but it may be well to refer to the subject again in view of the crass ignorance still displayed by the editor of a local English newspaper, who expresses naïve surprise that if the Japanese are in possession of Port Arthur, they should have sent news of their victory *via* China instead of communicating it direct to the Government in Japan. The idea of the Japanese Generals in the Liau-tung Peninsula despatching news of their victories across Chinese wires is only a little less absurd than the notion of the Chinese transmitting such messages. Port Arthur is in overland telegraphic communication with Peking and Tientsin, and from Tientsin the wires pass to Shanghai *via* Chefoo. The line from Port Arthur is carried along an isthmus less than 2 miles wide, a little to the south of Chin-chow, and thence northward *via* Newchwang. Chin-chow was captured by the Japanese Army on the 6th instant, and from that moment at any rate the telegraph to China from Port Arthur became useless to the Chinese and of course to the Japanese also. Thenceforth intelligence of events in the Liau-tung Peninsula could not reach either China or Japan without the services of a steamer in the first instance. What then became the quickest route for getting news? From Talien Bay to the mouth of the Tadong River the distance is 183 miles, or, say 16 hours steaming, and from the Tadong River the telegraph *via* Fusan could bring a message to

Tokyo in 3 or 4 hours. By this route, therefore, we are within about 20 hours' reach of the present base of the Second Army's operations, and about 24 hours' of Port Arthur. That is the quickest route for direct communication with Japan. But from Port Arthur to Chefoo the distance is only 110 miles by sea, and Chefoo is within almost immediate reach of Shanghai by overland wire. Thus, after the cutting of the overland wires from Port Arthur, the quickest route for intelligence is *via* Chefoo, and news of events happening at Port Arthur might reach Shanghai within 12 hours if transmitted in that way. From Port Arthur to Tientsin the distance is 170 miles, so that news coming *via* Tientsin ought to reach Tokyo in about the same time as news coming *via* the Tadong River. Our readers will remember that during the past few days the fall of Port Arthur has been twice announced from Shanghai. It was said to have taken place, first, on the 10th instant, and secondly, on the 11th instant. The former intelligence seemed to us incredible, but the latter did not involve any extreme stretch of imagination, and being accompanied by details of an apparently corroborative character, was not accorded the short shrift generally merited by Shanghai news. Since, however, although three days have elapsed since the receipt of the intelligence, Tokyo remains without any direct news of the kind from Japanese sources, we conclude that Shanghai preserves its record as the head centre of canards. Port Arthur has not yet fallen into Japanese hands, and we revert to the prediction made in these columns on the 12th instant, namely, that the assault will be delivered on the 15th or 16th.

According to a telegram from Hiroshima to the *Yiji Shimpō*, Port Arthur is stronger on the land side than on the sea front. It is alleged that fully a hundred guns and mortars are in position in a number of forts on the hills that environ the east flank of the position, and that if the Chinese fight with any resolution, the assault must prove a very bloody affair. The forecast of the officers in Hiroshima was that the attack would be delivered on the 12th or 13th instant, but had the former date been chosen intelligence must have reached Hiroshima before now. The estimate formed in Hiroshima of the time required for the transmission of intelligence direct from Port Arthur tallies exactly with our calculation given above, namely, 24 hours. If the *Yiji's* statement as to the defences be correct, Port Arthur may prove a severe trial for Japanese military skill and courage.

A telegram from Shanghai alleges that the Peiyang Squadron has left Taku with the intention of engaging the Japanese fleet. We do not believe that. More credible seems another telegram from Hiroshima, published by the *Kokkai*, to the effect that Admiral Ting has received orders from the Government in Peking to withdraw his ships to Shan-hai-kwan. Yet, even this latter piece of intelligence presents one doubtful feature, namely, the intrusion of the Peking Government. Admiral Ting's orders would emanate naturally from the Viceroy Li, not from Peking. Whatever be the truth, however, it is surely wonderful that critics should still be found ready to claim the victory for the Chinese in the naval fight of September 17th off Takushan Bay. Who ever heard of a victorious fleet's disappearing totally from the arena and leaving the seas in possession of a beaten enemy? The thing is absurd on the face of it. If the Chinese fleet won the day, why has it carefully hidden itself away ever since, leaving the Japanese to land an army unmolested on the Liautung peninsula, to capture Talien, and to invest Port Arthur?

In the accounts received at Head Quarters of the crossing of the Yalu and the taking of Chiu-lien, there was one incident the very remarkable character of which must have forcibly struck every thoughtful person. For our own part, we hesitated to comment on it, pending confirmation of the facts. Later reports have now dispelled doubt, and it seems safe to conclude that a bridge was thrown over the Yalu river in one night by the engineers of Count Yamagata's

Army. The Yalu is a river of formidable dimensions at Wi-ju. Mr. Carles, in his "Life in Korea" describes it thus:—

The river at this point is very wide, and consists of three branches. The first branch is about 200 yards wide and shallow. Beyond it lies a sandy island only partly cultivated, about a third of a mile wide. On the far side of the island lies the main channel of the river, of about the same width but from 20 to 25 feet deep; and beyond it again the island of Chung-chiang, "mid-river."

It was this river that the Japanese engineer corps had to bridge, and the plan of attack required that the work should be begun and completed during the night of the 24th-25th of October. On the 24th, a brigade under Colonel Sato had waded across the Yalu ten miles above Wi-ju, and Field-Marshal Yamagata's programme was to pass the main body of troops to the northern bank opposite Chiu-lien at dawn on the 25th. Of course the engineers did not commence their preparations then and there. They had been collecting materials and building rafts since the 12th October, and by the evening of the 24th these rafts, together with the pontoons carried by the Army, sufficed for the purpose in view. Under cover of the darkness of a night without moon, the bridge was thrown across the river, and from dawn the following morning the whole army was able to pass. It was a very remarkable feat. That it would have been possible in the face of a resolute enemy can scarcely be supposed, but the Japanese worked so silently and swiftly and the Chinese trusted so implicitly to the impassability of the river, that the operation of placing the rafts and pontoons in position was accomplished without attracting any attention on the northern bank. It is said that the appearance of the Japanese troops on the slopes of Hu-shan took the Chinese completely by surprise. In connection with the building of the bridge, the *Mainichi Shimbun* tells a striking story. It appears that when the work was approaching completion the engineers found themselves under the necessity of obtaining a mooring on the opposite bank. That could be effected only by sending a rope over. The water was bitterly cold, the current swift, and the opposite bank was in possession of the enemy. To swim across with a rope under such circumstances demanded no little physical capacity, to say nothing of pluck. A Sapper of Tokushima Prefecture, Miwara Kunitaro by name, who had the reputation of being one of the best swimmers in the Army, volunteered for the task. But the cold proved too great for him. Despite the efforts of his comrades to succour him, the current, against which his cramped limbs refused to struggle, carried him down and threw his corpse against the other side below Wi-ju. His fate did not deter other volunteers, however. Miyake Hiyo-kichi, a Sergeant Major of Engineers, tied the rope round the waist of a Sapper, whose name is not given, and the two succeeded in swimming over in company. An Army that possesses such soldiers is bound to win victories.

In the early days of the war the Japanese complained because, while they had been induced to promise that Shanghai should be treated as a neutral port, no corresponding pledge had been exacted from the Chinese Government, and the settlement was consequently used by the latter as a basis of warlike operations. The complaint referred in part to the Kiangnan arsenal, which, in consequence of Japan's promise and China's license, was able to turn out munitions of war uninterruptedly. But a different tone is adopted now. The Chinese troops having afforded proof, time after time, that they attach no value to rifles and cannon, and that they are always willing to abandon such encumbrances to the enemy, the Japanese begin to say that the greater the output of the Chinese arsenals the larger the spoils accruing to this country. Thus the sometime obnoxious Kiangnan assumes the character of a benevolent source of supply.

FRIDAY, NOVEMBER 16TH.

General Sung is said to have retreated to Mo-tien-ling with the remnant of troops that followed him from Feng-hwan. Rumour, emanating

from a not very trustworthy source, alleges that, in a despatch to the Viceroy Li, he has explained the burning and evacuation of Feng-hwan by alleging that it was an indefensible place, and that he deemed it a wiser plan to hasten back to Mo-tien-ling and intrench it as strongly as possible.

Mo-tien-ling is on the Moukden road 65 miles from Feng-hwan. That the Chinese intended to make a stand there was announced from the outset. What their stand will amount to is another question. Meanwhile, the advance guard of Field-Marshal Yamagata's Army has reached Lien-shan-kwan, and is therefore within 13 miles of Mo-tien-ling. In one or two days we may expect to learn something definite about the enemy's force and his dispositions for defence at Mo-tien-ling.

From the northern bank of the Yalu at Wi-ju to Moukden is 182 miles. The distance is generally understated. We speak on the authority of the Japanese military maps, incomparably the most accurate geographical guides to China and Korea. Of that distance the advance guard of Count Yamagata's Army had covered 89 miles by the 11th inst. We do not pretend to be absolutely accurate in the matter of dates. The Field-Marshal's telegram announcing that the advance guard had reached Lien-shan-kwan is dated from Chiu-lien at 10 a.m. on the 13th. Telegraphic communication can scarcely have yet been established along the whole line of march. We may therefore assume that the news from Lien-shan took at least a day to reach Chiu-lien, and that the arrival of the advance guard at the former place was not later than the evening of the 11th. But the hypothesis may involve an error of a day. If we are correct, however, 89 miles have been negotiated in 16 days since the fall of Chiu-lien. That is not a great rate of progress, especially when we observe that only the advance guard has reached Lien-shan.

Intelligence gathered from Chinese citizens of Takushan who were sent out to make inquiries, is to the effect that 20,000 troops are massed in Sin-yau, a town some 40 miles west of Feng-hwan. General Ma Yu-kwan, who was wounded in the battle of Hu-shan, is also said to be there.

Some comments of a General officer reported in the columns of the *Yomuri* seem very just. He thinks that the greater part of the troops originally stationed in the Liautung peninsula were drafted away for the defence of Phyōng-yang and the Yalu, and that only a small body remains to defend Port Arthur. Readers who have followed the published accounts remember, doubtless, that among the defenders of Phyōng-yang, of Chiu-lien, and of Feng-hwan, troops from Talien and Port Arthur were frequently spoken of. These, in fact, were the soldiers most easily available for transport to Korea. Whether they were replaced from Taku or Shan-hai-kwan, we do not know. But certainly if all the troops said to have been despatched from Taku from time to time went to Korea, they did not take part in the fighting there. The probability is that some of them were destined for the Liautung peninsula, and that Port Arthur is not so poorly garrisoned after all. The soldiers that retreated thither from Chin-chow and Talien muster already over 4,000.

THE PRINCE IMPERIAL.

It is announced that the Prince Imperial will leave Tokyo on the 15th instant by the 6.20 a.m. train from Shinbashi for Hiroshima. His Imperial Highness will break the journey twice *en route*, spending a night at Nagoya and another at Kobe. He will consequently arrive in Hiroshima on the 17th at 5.56 p.m. The Prince is a Lieutenant in the Imperial Guards, which form part of the Third Army now assembled at Hiroshima. It is possibly the Emperor's intention that he should accompany the Army on its campaign, wherever that may be. But as His Imperial Highness is only in his 16th year, the experience he would derive in the field could not be of any very great service, and besides to send him with the Third Army might be an invidious choice.

SHANGHAI NEWS.

The title conferred on Major von Hanneken is said to be that of "*Ti-tu*," or Field-Marshal, the equivalent of a Provincial Commander-in-Chief. On the whole, the gallant Major has not fared badly. But the Chinese do not give him substantive command. Would he take it if offered?

The missionaries have been making hay while the sun shines in the city of Chêng-tu, the capital of a province having 30 million inhabitants. An examination was recently held there for the second degree of *Chujñ*, or M.A. There were only 129 degrees to be given and the candidates numbered from 14,000 to 15,000. They were all "penned up in little stalls, too small to lie down in at full length, for nine days with only two intervals at the end of each three days." The missionaries of the National Bible Society of Scotland resolved to take advantage of the occasion and present to each competitor a copy of the Bible, and the Central China Religious Tract Society followed suit with a book by Dr. John, entitled "Gate of Virtue and Knowledge." Thirteen coolies were required to carry the books. The Hsien magistrate allowed the nine missionary distributors to take their stand inside the outer court of the examination hall, and moreover gave them 12 runners to protect them. Ten thousand six hundred students are said to have "gladly received the books, evidently recognising the good intentions of the givers."

The celebrated men in buckram were nothing to the braves that China places journalistically in the field. From private telegraphic information, the *North China Daily News* alleged that 140,000 troops from Hunan and Hupoh have been pouring into Chihli during the last two months, and that they are to be commanded by Liu Kun-yi, Viceroy of the Liang-Kiang provinces. This same Liu has been ordered by Imperial Decree to proceed with all haste from Nanking to Tientsin, in order to take over the seals of the acting viceroyalty of Chihli from the hands of the Viceroy Li, who is to assume command in person of the Huai Army. Liu's successor at Nanking is Chang Chih-tung.

The farce about Major von Hanneken's audience with the Emperor is still kept up. Witness this wonderful paragraph from the leading Shanghai paper:—

What is generally regarded as the first result of General von Hanneken's recent audience was announced in a Tientsin telegram received yesterday, which stated that H.E. Hu Yü-tên, Judge of Kuangsi, ex-Taotai of Tientsin, had been appointed Chief of the War Commissariat and Pay Department, with the privilege of reporting direct to the Throne without the necessity of consulting with Li Hung-chang, Liu K'un-yi, or the Boards of War and Revenue at Peking. In addition to these powers the Throne has ordered him to raise an army on a new basis, having General von Hanneken as his only colleague, and under the special direction of that officer.

The following letter, dated October 31st, from the *North-China Daily News* correspondent at Newchwang, is worth quoting:—

No further details of the crossing of the Yaloo and the taking of Chihliencheng have reached us. General Sung has retreated to Fenghuangcheng, where a great battle is expected to take place within the next two or three days. Meanwhile, we hear of the landing of a Japanese army of 30,000 men at Takushan, about 80 miles south east of this port, and a body of 3,000 Japanese are reported to be at Pitzewu, which is on the same coast as Takushan, but nearer Tientsin Bay. Fenghuangcheng is about 120 miles east of this port. If the Chinese are defeated there, the Japanese will march on to Liaoyang, which is situated on this river about 75 miles north of this port, and from there they will probably go on to Monkden, if they dare to face a Manchurian winter. In less than four weeks' time this river will be frozen over. Will the Japanese take this port? They are south of us and east of us, and want to go north of us to attack Monkden. May the frost come soon and cool the blood of the hellfighters.

There are rumours amongst the natives that General Sung has been defeated at Fenghuangcheng, and that he is falling back on Liaoyang, but this requires confirmation. Generals Yi, Yeh,

and Nieh were engaged in the battle at Chihliencheng, from which place they all retreated to Fenghuangcheng.

The next move of the Japanese is of vital importance to the residents of this town. If they advance and capture Fenghuangcheng, and from there march to Liaoyang, this town will be full of refugees. To take Monkden they must go to Liaoyang on account of the range of mountains to the east running down south to Liaoyang. Once Liaoyang is taken, Monkden is at their mercy as there are only two or three thousand soldiers there now. The army reported as landed at Takushan, may be intended to cross from there to Liaoyang, and cut off the retreat of the army from Fenghuangcheng. Again, if the Japanese dare to ignore the Pei-yang squadron, they may take this port and land an army here and go up in boats to Liaoyang. Or in case they make a dash for Monkden they may retreat by this river. This is hardly likely, as by the 20th of November this river will not be safe for small boats.

KOREAN NEWS.

The Chinese, who had entirely disappeared from Söul at one time, have gradually begun to make their appearance there again, and are now seen in the streets, wearing a complacent air as if nothing had happened to their country. It is believed that they are some of the fugitives from A-san who, after wandering hither and thither in the interior of Korea, have been obliged to come up to the capital to seek a livelihood. Probably they would not be sorry to be taken prisoners, were that possible, now that they know how captives of war are treated in Japan. The company of Korean soldiers trained by Capt. Saiki, of the Japanese Army, left Söul on the 6th instant to suppress the insurgents. It is said that, contrary to all precedents established by Korean soldiers on the eve of such a departure, they were in great spirit and proudly declared that they should never come back again unless they successfully fulfilled the mission entrusted to them by their King. The new Japanese Minister is attending to his duties with extraordinary promptness and diligence. Every day his subordinates are at their desks from early in the morning till past 10 in the evening. What with receiving the calls of important personages, paying visits to the Court or to members of the Ministry, and deliberating about the Korean reform programme at the Legation, Count Inouye has not a moment to himself. A grave event is believed to be pending in the field of Korean politics. It is connected with secret communications said to have passed between some high Koreans and the Tong-haks. The secret was revealed through the arrest and subsequent examination of a certain Korean. Some say that the assassination of the late Mr. Kim, Vice-Minister of Justice, was in consequence of apprehensions entertained by those implicated in the affair that, in the event of his undertaking to unravel the plot, everything would have been discovered. Bokū Yeiko arrived in Söul on the evening of the 4th instant.

THE SACRED HAWK.

The following essay was compiled by Mr. Ito Miyoji, Chief Secretary of the Cabinet, and presented to his Majesty the Emperor, in connection with the alighting of a hawk on the mast of the *Takachiho Kan* after the battle of the 17th September:—

History records many instances of some sacred birds giving auspicious omens of and assisting in, the triumph of the Imperial army over rebels and enemies. To mention only the most remarkable of these instances:—when the Emperor Jimmu was marching his forces against Nagasuehiko, a crow of dazzling brilliance perched upon the point of his bow, and the Imperial host gained a complete victory over the redoubtable enemy. A similarly mysterious incident lately took place. In the autumn of the present year, after a great naval engagement, a hawk descended upon the mast-head of one of His Majesty's ships. The undersigned, His Majesty's humble servant, has had the great honour to be allowed to have a glance at this sacred bird at the Imperial Military Head-quarters, where official duty requires his daily attendance. With eyes brilliant like gold,

claws glittering like jewels, the bill sharp like a sword, and wings stout and strong to perfection, it has a lordly air and doughty carriage, as if ready with a flap of its wings to cause the whole feathered fraternity of China to tremble with fear. It is in truth a bird of singular intelligence and power.

In the memorable Naval fight on the Yellow Sea, desperate engagements took place between the fleets of Japan and China from noon till dusk, and several of the enemy's ships were sunk and burnt, the rest taking flight. It was nearly dark when the battle ceased. Just then something was observed to descend from the skies with great force and hove about over His Majesty's ship *Takachiho*, finally perching upon the top of her main-mast. It was discovered to be a hawk. The commander of the ship, Captain Nomura Tei, ordered one of the marines to ascend the mast and catch the bird. The latter, stooping its head, did not attempt to move, but seemed glad to be caught. The bird obtained in this singular manner was naturally welcomed with enthusiasm as Heaven's messenger, and it was decided to preserve it with care. There being at that time no meat in the ship to give to the bird, the whole vessel was soon in a bustle to hunt for rats, a circumstance which, by-the-by, illustrates how inexhaustible is the energy of the officers and men in the Japanese Navy. It was after the vessel returned to the mouth of the Tai-dong-gang that the bird was first fed on pure meat. Shortly afterwards Commander Saito Minoru, a Naval officer in attendance upon His Majesty, paid by Imperial order a visit to the Japanese fleet in the Tai-dong-gang. On hearing from the commander of the *Takachiho* about this bird, he took it back with him to the Imperial Military Head-quarters, where he had the honour of presenting it to His Majesty, at the same time submitting to His Majesty an account of the circumstances connected with its acquisition. His Majesty caused it to be preserved at the Head-quarters, naming it "*Takachiho*" after the vessel on which it alighted.

The hawk is a most fierce, brave, and daring member of the winged community. It is a remarkable circumstance that a hawk was presented to the Emperor Nintoku in the 43rd year of his reign by a King of Kudara, the present Korea, which was then under the sway of the Imperial Court. As to the Emperor Nintoku, he is remembered in history as a great sovereign, wise and benevolent, and always solicitous for the welfare of his subjects. Again *Takachiho* is the name of a mountain at the top of which the Imperial ancestor Ninigino-Mikoto stayed a while after his advent to this nether world, and which, consequently, has since been regarded as one of the most sacred spots in the Empire. In consideration of these significant historical associations, it was perhaps not a mere accident that this bird alighted on the mast of a war vessel, bearing the historic name of *Takachiho*, just after a memorable victory in Korean waters, and that it was, furthermore, glad to be caught and brought to the Imperial Military Head-quarters to bask in the beams of Imperial favour. His Majesty, combining in his person the statesmanship of the Emperor Jimmu, with the attribute of far reaching benevolence, has been pleased to send out the present punitive expedition, for the purpose of affording help to weak and friendless Korea, and in the cause of truth and justice. With the sympathy of both Heaven and men enlisted on its side, the Imperial host has been everywhere favoured with triumph and success. Who, then, knows whether the appearance of this bird under these circumstances may not be regarded as a special manifestation of Heavenly favour and a sign of the continued success of the Japanese arms? The undersigned, His Majesty's humble servant, being honoured, worthless as his ability is, with a place in the Imperial retinue, and having thus been permitted to witness this unprecedentedly auspicious omen, knows not how to express his joy and gratitude, and has ventured to put down in writing the circumstances connected with this singular incident, humbly hoping that they may hereafter serve as material for future historiographers.

Ito Miyoji,

Secretary-General of the Cabinet,
and a Member of the House of Peers.

October, 27th year of Meiji (1894).

As the result of an overhaul of the cruiser *Gibraltar*, it has been found that if she is to be commissioned for the China Station, so many alterations will have to be made to her engines as will keep her in the dockyard hands for quite another two months.

MR. OTORI.

Mr. Otori Keisuke, who recently represented Japan at the Court of Korea, has been appointed a Privy Councillor. The public now understands very well that Mr. Otori's recall was not due to any lack of ability or tact displayed by him. Perhaps the briefest explanation is that the situation demanded a man of greater prestige. Since Japan undertook to lead Korea into the path of reform, it has been her endeavour to divest the proposed changes as far as possible of any alien character. In other words, she has sought to introduce them to the nation through domestic channels. It was for that the Tai Wōn-kun was chosen to head the Government of reform. His position and reputation were sufficient to insure a measure of popularity for any reform fathered by him, and his relationship to the Royal Family afforded a guarantee that no dynastic change was contemplated. But the Tai Wōn-kun was not a success in the rôle assigned to him. He understood very well that reforms were inevitable and that the integrity of the Kingdom depended upon their successful introduction, but his manner of introducing them would have been totally incompatible with their character, though consistent enough with the lessons of his own semi-barbarous experience, and moreover, he held himself in too high esteem to brook advice, still less remonstrance, from a foreign official of inferior rank. Yet Mr. Otori had to advise him, and it is said that the truculent old statesman sometimes developed a mood of almost fierce conservatism after a visit from the Japanese Representative. But without entering into any detailed explanation, it is easy to conceive that such a work as Japan has undertaken in Korea fully merits to be directed by a statesman whose prestige will command respect both in Korea and abroad. It seems to be felt that Mr. Otori did as well as he could have done under the circumstances, and his appointment to the post of Privy Councillor does not by any means signify permanent removal from the field of active official duties.

REPRESENTATION OF THE YOKOHAMA CITY ASSEMBLY TO THE HOME MINISTER.

The Yokohama City Assembly has approved a representation, introduced by one of its members, with reference to the completion of the Harbour-works, and has submitted it, with the signature of the chairman, to the Home Minister. The representation is to the following effect:—The construction of the Yokohama Harbour not only bears an important relation to the national policy, but is also of the most vital importance to the prosperity of the trade and industry of Yokohama, especially of its foreign commerce. When, in 1889, the work of improving the Harbour was started, the plan pursued being to construct breakwaters so as to secure safe and tranquil anchorage for big ships, and to provide piers in connection with railways, it was thought that it would not be difficult for Yokohama to become the mistress of the Oriental and South-sea markets. But what was the surprise of the Yokohama people when, on the discovery of some defects in the concrete blocks, the of construction was suspended, and the partially completed works now simply constitute dangerous obstacles to the passage of small craft, while, moreover, various enterprises contemplated in the sequel of the Harbour-works, such as a Dock Company and so forth, remain in statu quo, and the pier, though completed, serves no practical purposes. In fact, the suspension of the Harbour-works has filled the minds of the citizens with apprehension and has affected the prosperity of the city to a considerable degree. The Government, too, is subjected on this account to no small loss. The suspension of the works prevents the imposition of charges connected with lighthouses, anchorage, and the use of the pier. In view of these pecuniary losses and also of the dignity of the foreign policy of Japan, the suspension of the work is to be strongly deprecated as contrary

to the interests of the Government, and in a still graver sense to those of the city of Yokohama. The subscribers of this document learn with extreme regret that the attempt of the Home Minister to obtain the consent of the Imperial Diet in its sixth session for the resumption of the Works, was not successful. It is to be earnestly hoped that the Home Minister will take suitable measures for securing the consent of the Diet in the coming session. If, on the ground that other affairs, as the war and so forth, require the undivided attention of the Diet, this matter of the Harbour-works be left unheeded much longer, Yokohama's opportunity to obtain commercial supremacy may be for ever lost, and the incomplete works will remain an object of ridicule.

LETTER FROM HIROSHIMA.

(FROM OUR SPECIAL CORRESPONDENT.)

Hiroshima, November 7th, 1894.

All the open air and street demonstrations having been marred by rain in the afternoon and evening, little remains to be added to what I said in my last letter about the fête of the 3rd instant. At noon, the Princes of the Blood, the Ministers of State, Marquis Asano, and officials of *Chokunin* rank were entertained by the Emperor at the Imperial Military Head-quarters. In the evening the Mayor of the city invited to dinner the Princes of the Blood and the principal officials now staying here.

Yesterday, His Majesty, finally complying with the repeated solicitations of Marquis Asano, honoured him with a visit at his villa, the Sen-tei, leaving the Head-quarters at 2 p.m. The suite included their Imperial Highnesses Prince Arisugawa, Senior, Prince Arisugawa, Junior, and Prince Fushimi; their Excellencies Count Ito, Count Saigo, Viscount Hijikata, Viscount Kabayama, and so forth. The Emperor and his suite were entertained with performances of *dakyn*, and fencing with swords and spears; in which exercises the former retainers of the noble host took part, showing remarkable skill. It was a little past five when the exercises were finished. The Emperor then entered one of the buildings in the garden, when a number of artists, also belonging to the former clan of Asano, had the honour of painting pictures in the Imperial presence. His Majesty and suite were then entertained at dinner by the host. At little past eight, the Emperor left for the Head-quarters, highly pleased with the whole entertainment.

Late on the night of the 5th instant, eleven Chinese captives taken at the battle of Phŷng-yang arrived at Ujina, but they did not land until half-past seven the following morning. They are officers of various grades, one of them, Yuen Tsing-tang, holding the rank of Major-General. The latter is the oldest man of the party, being forth-eight years of age. They are clad in their ordinary national garments, but unlike the other captives who have thus far passed through this city, they all wear their queues. Neither did they look so ignorant and indifferent as the captives whom I described in a former letter. They were conducted to the artillery barracks of the Garrison, and there interviewed by Prince Arisugawa and a number of distinguished military officers. The captives are now staying in a temple in the north-eastern suburb of the city overlooking the eastern parade ground, which happens to be full of troops who engage in drill exercises from morning to dusk. When asked about the present war, they evade all answers by quoting the well known saying, "A beaten general does not discuss war." They are treated with more than the respect and consideration due to their rank. For convenience of identification by some of your Chinese readers, I may mention the names of these their distinguished countrymen. They are 譚清遠, 王輔廷, 世宗伍, 康階平, 榮騰, 張平西, 王國星, 德成阿, 李壽恆, 張鳳竹, 和歐陽屏南.

The city is now once more full of troops, whose nasal twang betrays their birth in the north-eastern provinces. Another circumstance that distinguishes them from the men that have pas-

sed through the town before is that they are of fairer complexion. The inhabitants feel great difficulty in understanding the peculiar dialect of the troops now quartered among them. How long they are to stay here, is not known, but at least several days must elapse before they leave for the seat of war, seeing that the port of Ujina is as yet very quiet.

There is now a rumour that the coming regular session of the Diet will be convened here in the temporary buildings. I will not say that such a thing is impossible or improbable, but as matters now stand, the question seems still undecided. The exigencies of war may make it desirable to assemble the Diet here. At all events, the point will be decided before long. Meanwhile, the temporary buildings, where the extraordinary session of the Diet took place, and which, according to the original plan, were to have been handed over to the Military authorities for hospital purposes, are still kept in charge of the guards of the Imperial Diet.

Her Majesty the Empress is shortly expected here. On arrival, Her Majesty will personally superintend the working of the Red Cross Society. Her Majesty will probably be attended by Countess Ito.

THE PERFORMANCE AT THE "KABUKIZA."

The war mania is at present so predominant that even the classic stage of the *Kabukiza* has been whirled into the vortex. That theatre which was re-opened on the 1st instant, is now representing a melodrama of the Korean affair, the whole divided into 6 Acts, specially written by Mr. Fukuchi. The 1st Act represents the insolence of the Chinese ex-Resident Yuan (Ichizo) toward the Korean statesmen, especially Bin Yeishun. Then follows the entry by force of the Japanese Minister Otori (Danjuro) into the Korean Court where he meets the Tai Wōn-kun (Matsusuke) and explains to him that Japan is resolved to support Korea and help her to maintain her independence. Next comes the scene of the encampment of the Japanese troops at Shin-i, where the commanding officer, Major Kashimoto (Kikugoro) receives the message from Major-General Oshima to the effect that he has been asked by the Korean Government to drive the Chinese out of A-san. The battle of Sōng-hwan follows in which the Chinese soldiers are worsted, but the Major (Kikugoro) receives a wound on his left foot. The 3rd Act represents the humble dwelling of an old *Shisoku*, Kondo Shinzaemon (Danjuro), his son Shingoro (Kikugoro), and his daughter. The house is visited by a usurer (Matsusuke) and a bailiff, who have come to distraint the property in payment of a sum of money for which Shingoro stood surety to a friend in distress. Shingoro, being a soldier on the retired list, receives a message from a district office to join the regiment to which he belonged. At this perplexing stage of affairs a pupil of the old gentleman, who was formerly a fencing-master, appears upon the scene and pays the money. In the 4th Act we have the battle of Phŷng-yang. The 1st scene is the burial of the mutilated remains of the Japanese soldiers; the 2nd scene shows us the assault on the Gemum Gate and the bravery of Harada Jukichi (Kikugoro), who is in reality Kondo Shingoro, and in the 3rd scene the soldier's heroism is rewarded. The 5th Act represents the Japanese coolies carrying provisions at the mouth of the Tadong River. A sailor from the *Naikyo* (Danjuro) comes to see the coolie-inspector (Matsusuke) and narrates the fight in the Yellow Sea. In the 1st scene of the last Act we are shown the wounded soldiers being carefully tended by the nurses of the Red Cross Association, and in the 2nd scene the Chinese prisoners are examined by General Nozu (Kikugoro) who assures them, to their great surprise and gratitude, that they will be kindly treated and sent home after the war is over.

Between the 5th and 6th Acts, another drama of great interest is interpolated. It treats of a celebrated Japanese painter of olden times, Domono Matahei (Danjuro) or Matahei the Original from

stammerer. Matahei, accompanied by his wife (Kikugoro) visits his master Tosa Shogen (Ichizo) to ask for the favour of being allowed to use the family name of Tosa. Shogen, however, refuses flatly in spite of the earnest pleading of Matahei and his wife, and gives preference to his second student—Matahei being the first—upon whom he confers the honorary title of Tosa. Made bitter by despair and humiliated by his physical defect, Matahei resolves to die in the master's house, his wife agreeing to share his fate. The wife asks her husband to sketch his portrait as a last memorial upon a smooth granite cistern standing in the yard. Such is the force conveyed to the brush that the lines of the picture are visible on the opposite side of the cistern. The surprise of the couple when they discover this fact and their rapture when Shogen, who reappears on the scene, struck with admiration at Matahei's miraculous performance, grants the honorary title to him, are depicted with consummate skill by the two greatest masters of the Japanese stage. The scene closes with a congratulatory dance by Matahei. The latter's *role* is a most difficult one, but is rendered by Danjuro in a manner that evokes tremendous applause from the audience. It is artistic in the highest sense of the term.

The theatre opens at 10 o'clock every morning, but most visitors will find it more convenient to go at noon.

THE TOKYO WATER-WORKS.

We are informed by the Domestic and Foreign News Agency, write the *Nippon* and other vernacular papers, that another scandal is attracting attention in connection with the tenders for the pipes of the Tokyo Water-works. The tenders were all submitted by June 14th, but though several months have passed since then, the matter is, strange to say, still unsettled. Mr. Norris, of Howard, Harrison and Company, of America, undertook to supply the given amount of pipes for something over 576,000 *yen*, and Mr. Favre-Brandt for about 1,000 *yen* more. Thus, according to usual methods, Mr. Norris' tender ought to have been accepted, but on July 13th he sent a notice to the Council to the effect that as he could not fulfil the conditions demanded of him, he desired to withdraw his tender. The Council consequently struck his name from the list and privately decided to accept the next lowest tender. After some time, however, Mr. Norris asked that he should be again allowed to submit his original tender. Upon this, the Council telegraphed to the American Firm which Mr. Norris was said to represent, to enquire into the authenticity of the application, and received an answer saying that the firm had invested Mr. Norris with no such authority, and adding that, should the Council wish to enter into a satisfactory agreement with the Firm, they should send a deputy to it. Under the circumstances, the Council naturally resolved not to place any further confidence in Mr. Norris. In the meanwhile, however, the City Assembly appointed a Committee to investigate the credit and means of those who had submitted tenders and the quality of the pipes they undertook to supply. The result of their investigations was that the majority declared that Mr. Norris' tender should be accepted. Messrs. Nakajima, M.P., and Iwaya—especially the latter—are reported to be chiefly interested in bringing about the acceptance of Mr. Norris' tender. Mr. Iwaya is a merchant who has a shop in Ginza, and when Mr. Nakajima was one of the Kyobashi candidates at the last general election, Mr. Iwaya canvassed assiduously for him on condition that if Mr. Nakajima was returned, he, as a member of the City Assembly, should repay that kindness by exerting himself to get Mr. Norris' tender accepted. The promise has been kept, and the Committee has decided in favour of that tender, but it has yet to be passed by the Assembly and approved by the Governor before the matter can be considered definitely settled. Of course we do not vouch for the correctness of all these statements, but merely extract them from vernacular papers.

JAPANESE SPINNERS AND THE BOMBAY SERVICE.

The chief motive that led Japanese spinners to conclude a special agreement with the Nippon Yusen Kaisha and to induce the latter to undertake the regular service to Bombay, was the procuring of cheap raw cotton from Bombay which they proposed to export in the form of yarn to Shanghai. They have agitated considerably and have at last succeeded in obtaining the exemption of cotton yarns from export duty. This Bombay Service came to exist in consequence of an agreement between the Yusen Kaisha and Mr. Tata of Bombay, one of the conditions of which was that both the steamship company and Mr. Tata should run one of their ships once in three weeks. Mr. Tata had reasons of his own for giving his consent to the proposal of the Yusen Kaisha, as he intended shipping his yarns to China and selling them there. Thus the Japanese spinners and Mr. Tata were antagonistic from the beginning, and it was feared that a collision would take place sooner or later, which apprehensions have been verified. Mr. Tata having shipped his yarns to Shanghai since the starting of the service, many of the Japanese spinners were dissatisfied, and the last time Mr. Tata came over to Japan, they applied to the Nippon Yusen Kaisha to induce Mr. Tata to discontinue his transactions in Shanghai during the period covered by the company's contract, as the disposal of his yarns in that place obstructed the purpose for the attainment of which they had asked the Company to undertake the service. The Yusen Kaisha deliberated upon this demand, and at last laid the point before Mr. Tata. The latter replied that he had incurred a loss at the rate of 80 to 90 thousand *yen* per year since he undertook the service, and as the loss would be still greater were he obliged to stop shipping his yarns to Shanghai, there was no alternative left him but to give up the service altogether. The Yusen Kaisha was thus placed in a difficult position, as it has a contract with the spinners for two years, of which time one-half has not yet expired. A compromise was, however, effected. The spinners are to have their yarn shipped to Shanghai at a very cheap rate on condition that they overlook Mr. Tata's transactions there. For the time being, therefore, the difficulty is settled. The *Asahi* thinks, however, that it is only a temporary settlement. It is said that as the fund laid out by the spinners already amounts to 80,000 *yen*, they intend to buy a ship of their own, contributing themselves what additional sum is necessary after the expiration of their contract with the Yusen Kaisha, so that they will thus get raw material from Bombay by their own vessel.

ACCIDENT TO THE "AFGHAN."

The N.Y.K. chartered steamer *Afghan*, Captain Barton, went aground on the 13th at Saratoga Spit. The vessel left port on Tuesday evening, during a very thick fog, and ran aground, very close to the fort, at 5:30 o'clock. Information of the affair reached Yokohama by wire from Yokosuka, and Supt. Captain Forbes of the N.Y.K., went down at once with lighters to render assistance. Capt. Efford, Lloyd's Surveyor, was quickly on the spot, and finding the vessel badly on the ground, ordered anchors to be laid out. Capt. Hardy, with his diving apparatus, also went down at the Spit. An idea of the density of the fog which hung over the Bay on Tuesday evening can be gathered from the fact that the steamer *Glengyle*, which left the anchorage about the same time as the *Afghan*, was completely lost to sight after passing the lightships at the harbour entrance. The *Afghan*, after discharging about 400 tons of cargo, was got off at 5 o'clock on the 15th, without having sustained any apparent damage. She did not come back to Yokohama, but proceeded straight to Kobe. The vessel has lost one anchor and a wire hawser, but these may be recovered.

MAJOR VON HANNEKEN AND THE CHINESE EMPEROR.

Among all the silly tales recently circulated in China—and their name is legion—none has seemed to us sillier or more obviously impossible of credence than the story that the Emperor of China had sent for Major von Hanneken, desiring to hear from a foreigner's lips an account of the war, and openly declaring his want of faith in the reports presented to him by his own Ministers and high officials. Was ever Sovereign credited with such a declaration, above all a Chinese Sovereign, and were ever journalists so fatuous as the editors in Shanghai, Yokohama, and Kobe who, implicitly believing the story, have inferred from it a sudden awakening of the Lord of the Vermilion Pencil, and predicted a corresponding influx of light into the dark places of Chinese conservatism? It is about as funny an incident as we can recollect in a pretty long experience of Far-Eastern news-mongering. The sequel is that Major von Hanneken has returned to Tientsin without having seen the Emperor at all. He did obtain access to the Ministers of the Tsung-li Yamen, but he never got near the Emperor, nor ever had any chance of getting near him. Will the credulous editors be at all abashed by their extreme want of discernment? Not a bit.

MARRIAGE CUSTOMS IN KOREA.

We are indebted to the *Hochi* for some interesting information about the marriage customs of Korea. Three things strike a foreigner as very curious, first, the seniority of the bride over the bridegroom, sometimes by as much as 14 or 15 years; secondly, avoidance of consanguinity to the 15th degree; and thirdly, not marrying anyone of the same family name. When a suitable bride, who satisfies all the above requirements, is found, the parents of the would-be husband choose a go-between. Upon the consent of the girl's parents having been obtained, the wedding-day is appointed, and early on the morning of the day fixed, the bridegroom visits the bride's house and presents a wild goose. He is then entertained and sees his future wife for the first time. The feast being ended, he returns home followed by the girl in a palanquin. She is next entertained at her future home and returns after a short while. On the evening of the same day the young man again starts for his bride's house. That is the proudest occasion of his life, for he is not required to alight from his horse or palanquin however high a personage he may meet on the road. Arrived at his destination he is again entertained and a certain ceremony is performed. He does not return to his own house till the next morning and in the evening again visits the home of his bride. On the morning of the third day the two come back together to the bridegroom's house as man and wife.

YOKOHAMA CHIHO SAIBANSHO.

Before Judge MARUYAMA.—MONDAY, SEPT. 12.

THE BANK FRAUD.

The trial of the three Japanese, Harada Matsutaro, Okazaki Meiji, and Yamagami Michiya, who obtained *yen* 6,324.23 from the Hongkong and Shanghai Banking Corporation, at Yokohama, by fraud, took place at the Yokohama Chiho Saibansho on the 9th inst., before Judge Maruyama. Judgment was given to day: Harada Matsutaro was sentenced to 7 years' minor confinement; and Okazaki Meiji and Yamagami Michiya to 6 years' minor confinement. The defendants were ordered to pay the costs of the Court. The money fraudulently obtained was ordered to be handed over to the Mitsui Bussan Kaisha, it having been impounded by the Court immediately after the discovery of the fraud.

We learn from Newcastle-on-Tyne that work is proceeding day and night at the Elswick works on the two recently ordered Japanese war-vessels of 12,000 tons each.

ENGLISH NEWS.

The chief item of interest in the English papers that arrived by the last mail is the scare that arose in connection with the sudden summoning of a Cabinet Council for Thursday, October 4th. The actual subject for consideration by the Council is now believed to have been the necessity for the protection of British subjects in China, but the idea got abroad that there was trouble brewing between England and France, in connection with Madagascar or some place nearer home, and this gave rise to a war-scare.

It does not seem to have been a very serious scare, being one of those occasions in which everybody says that there is a war scare, but no person can be found to admit that he is one of the scared. Still, it stirred the depths a little, and showed that considerable uneasiness as to Anglo-French relations prevails on both sides of the Channel, and that it is widely believed to be possible that a war between England and France may be the first to disturb the peace of Europe. It is satisfactory to note, however, that the tone of the leading English and the leading French papers alike has been moderate and unimpassioned, all insisting that the relations between the two Governments are thoroughly cordial, and deprecating a war between England and France as midsummer madness.

The report of the Royal Commission appointed to enquire into the conditions on which the amalgamation of the City and the County of London can be effected was issued on September 30th. The Commissioners recommend that certain functions pertaining to the government of London should be entrusted to a single body, certain other functions remaining, as heretofore, in the hands of local bodies, the central body and the local bodies deriving their authority as representative bodies by direct election. By the recent treatment of the large area of London outside the City as a county, while the essential unity of London was adequately recognized, undue prominence was given, say the Commissioners, to county rather than to city characteristics. London is really a great town, and requires town and not county government.

The Commissioners recommend that the whole area of London should in future be called the City of London, while the area hitherto known as the City should henceforward be called the Old City. The governing body, elected on a similar basis to that of the existing County Council with the inclusion of representatives from the Old City, should be incorporated under the name of the "Mayor and Commonalty of the City of London." A Lord Mayor should be elected by the Council from the citizens of London, to be admitted with the same ceremonies as those with which the Lord Mayor of the Old City is now admitted. The Commissioners would transfer to the new Corporation the whole of the general estates of the Corporation of the Old City, with all the attendant liabilities; in return for which the new Corporation should pay over to the authorities of the Old City an annual sum of, say, £10,500. Various administrative and judicial changes should take place to bring about the fusion of the Old City with the existing county of London, and the City Police should be fused with the Metropolitan Police and be under the same control. The Commissioners recommend that there should be one city or borough rate for London, to be levied by the new Corporation. The report closes with remarks on the relation of the local authorities throughout London to the proposed new Corporation.

The comments of the Press on the reports of the Commissioners are very various, but, generally speaking, there is a chorus of approval from the Gladstonian organs, and the reverse from their opponents. The Unionist journals, which have always made it their business to denounce the London County Council and all its works, is angry because the Commissioners takes it as a postulate that the unification of London is desirable, when this is the very point, say the Unionists, that is primarily

in dispute. The *Standard*, for instance, calls the report a piece of symmetrical pedantry, which savours strongly of political priggism. Those who inspired the Commissioners' report are practical persons with an appetite for plunder. London is too vast to be dealt with in the fashion of the Report. To speak of it as 'one large town' is a disingenuous and utterly misleading phrase. To make it such for purpose of government, would be to incur the risk of creating that gravest of all political and social perils, an *imperium in imperio*.

It is curious that such a question as this should divide the arena of party politics; but it is refreshing to find that *The Times*, which since 1894 has to a large extent fallen from the high estate it used to occupy above the field of political strife, considers the report in an impartial spirit, and shows admiration tempered with criticism. It admires the manner in which the Commissioners have analysed a very intricate question and digested an enormous mass of evidence, as well as for the fairness and moderation of the specific and practical proposals it was part of their duty to formulate. It cannot assent to the view that the whole movement is an attack, the main object of which is plunder, and a subsidiary one iconoclasm, on the ancient Corporation of the City of London. But it makes a very just criticism on what seems "the pedantic and essentially unfair course of taking the night population of the City as the basis of comparison." The Commissioners admit, indeed, that the fact that the City pays one eighth of the whole burden of rating must be taken into consideration, and they propose that the City should have eight representatives in the new Corporation. But this is merely a mitigation of the injustice. The basis of representation and of election in the Old City should have no connexion with the handful of caretakers who form the night population. "In destroying the exceptional privileges of the Old City, the County Council shows an excessive desire to impose disabilities to which other administrative areas are not subject. This cannot be permitted; for, in becoming part of London, the Old City has the right of every part of London to even-handed justice."

With regard to the allegation that the Commissioners allowed themselves to become the instruments of a clique whose object is the spoliation of the City Corporation, the best answer is to give the names of the Commissioners. Mr. Leonard Courtney, Lord Farrer, Mr. Robert Holt, and Mr. Edward Orford Smith are the last men in the world likely to allow themselves to be used as cat's-paws for the grasping of the socialistic chestnut. The reorganization of the government of London may not take place exactly on the lines proposed by the Commissioners, but there can be no doubt that it will take place very shortly, and that, again to quote *The Times*, "whatever shape the settlement will ultimately take this report will have a high educational value, and will form an admirable basis for discussion."

It now appears that Mr. Gladstone was misrepresented when it was stated that, in approving the Gothenburg system for preventing the evils of the liquor traffic, he expressed an opinion unfavourable to the local option scheme. There is, of course, no inherent reason why a man may not advocate the simultaneous application of two remedies for the same disease; and though the extreme teetotal party, which advocates local option, will have nothing to do with any measure that proposes to put the sale of liquor in Government hands, it would be unsound logic to infer that those who advocate the adoption of the Gothenburg system may not also be in favour of local option. What Mr. Gladstone actually said in the letter to Lord Thring was: "For many years I have been strongly of opinion that the principle of selling liquors for the public profit only offered the sole chance of escape from the present miserable and contemptible predicament, which is a disgrace to the country. I am friendly to local option, but it can be no more than a partial and occasional remedy."

The latest, and in some respects the greatest,

of the converts to bimetalism is Mr. Leonard Courtney. He is a leading authority on economic questions, and a man regarded with respect by members of all parties alike. He was a member of the Gold and Silver Commission, and was one of the six who declared that there was not sufficient ground for advocating a change in the currency. But at a gathering of agriculturists at Liskeard recently Mr. Courtney made a speech which consisted almost entirely of an explanation of the existing agricultural depression as due to the appreciation of gold, followed by a cautious advocacy of the double standard. It was possible, he said, that the development of gold mines would lead to a depreciation of gold and to a rise in prices, but if this return of prosperity did not come about would it not be necessary to consider whether they were tied and bound to gold as the medium of exchange or whether they might not associate silver with it. He quarrelled with no one for hesitating to accept such a change if only he would look into the facts; but what was the attitude of public men towards the question? The present Chancellor of the Exchequer would not look at it at all. He referred to it every now and then, but his temper towards it was rather characterised by the temperament of the very wise animal which consumed a good deal of what the farmer would otherwise be unable to get rid of, but was not renowned for its docility. If he were to state that in respect to bimetalism Sir William Harcourt was a little pig-headed, he should be stating the literal truth. Mr. Gladstone never applied his mind to it, because it was a new matter which he was not called upon to probe to its depths, and he himself did not find fault with Mr. Gladstone for that. The ex-Premier made a speech some two years ago which monometallists as well as bimetalists agreed contained a good deal of nonsense. It was a clever speech, wonderfully well delivered, but it was the speech of a man who had never examined the question at all. Mr. Goschen, on the other hand, had examined the question thoroughly and understood it from top to bottom; but in order to do good work in legislation as in other functions of life one must have intelligence and courage. Mr. Goschen had plenty of intelligence—he would not say much about the other quality. Mr. Goschen was very much alarmed about the possibility of such a change, and he allowed his alarm to carry him so far as to refuse to consider the necessity of a change where change had become necessary. But there was one man who had really been both courageous and intelligent; he referred to Mr. Arthur Balfour, who had been chairman of the Gold and Silver Commission; and he was only expressing the opinion of every member of the Commission in saying that a more intelligent and clear headed, a keener and more able chairman never existed. Mr. Balfour had looked into the question of bimetalism and had come to no uncertain conclusion about it. Personally, he thought it probable, said Mr. Courtney in conclusion, that the gold mines of South Africa and Australia might remedy the evils from which they suffered, and do away with the necessity of considering any legislative action. But they might not; and in that event they would have seriously to consider whether action was necessary or not, for in the determination of a stable medium of exchange they found the security of a stable and prosperous industry, whether it be in agriculture, manufactures, or commerce, all over the world.

Lighted cigarettes were distributed a short time ago among a lot of monkeys at the Zoo in Paris by some mischievous urchins. The animals puffed away at the weed with evident enjoyment until the advent of the keeper, who put a stop to it.

The harvest of 1894 will take rank as one of the most disappointing in the history of British agriculture. Until the end of July no prospect could be fairer than that presented by rural England; but then came storms and rain which beat down the luxuriant crops and spoilt the potatoes. The farmers have had to gather in with difficulty their harvest, which has been deteriorated in quality by the weather. But, to crown all, prices have sunk down so low that something like a panic exists.

GREAT BRITAIN AND CHINA.

TELEGRAPHIC advices from China indicate very strained relations between Great Britain and the Middle Kingdom. It is doubtless fresh in the recollection of most of our readers that on August 2nd, while the steamer *Chung-king* was lying alongside the coal-wharf at Tong-ku, on her way from Tientsin to Shanghai, she was boarded by some fifty armed Chinese soldiers under the command of two officers, who raided the Japanese passengers, bound several of the women, carried them ashore at 1 a.m. in a brutally rough manner, detained them until 5 a.m. tied in a godown, fired a volley over the ship's side, robbed the Japanese Consul's wife, and altogether behaved as though a British steamer were an enemy's territory, and as though the British flag constituted no kind of protection to those over whom it floated. This outrage immediately became the subject of official investigation, in the sequel of which certain demands were preferred by HER MAJESTY'S Government to China. Of course the fact that the sufferers were Japanese did not affect the British view of the matter. Every peaceful passenger in a British ship is for the moment under the protection of the British flag, and in no case has that protection been disregarded with impunity. It appears that China hesitated to give the satisfaction claimed by Great Britain, or at any rate treated the question in a perfunctory manner, for it is now alleged that an ultimatum was presented by H.B.M. Representative, Mr. O'CONOR, on the 1st instant, the terms announced being, the dismissal and degradation of the Tientsin Taotai, the payment of an indemnity to the sufferers, and the saluting of the British flag by the Taku forts in the presence of the British fleet. We do not vouch for these details. They are not obtained from official sources and may be erroneous. Neither do we know whether the ultimatum contained any menace as to Great Britain's action in the event of China's failure to comply with the conditions prescribed. The story runs, however, that the communication was backed by a menace pointing to some decisive naval and military action as the alternative offered for China's choice. Whether the account be accurate or not, it receives a certain amount of confirmation from telegrams forwarded on the 11th instant from Shanghai, to the effect that Admiral FREMANTLE has ordered the whole British fleet to assemble near Shanghai on the 15th instant, and that the six thousand Indian troops whose advent was some time ago announced as imminent, will probably occupy Chusan on their arrival. Another item of intelligence is that the Chinese Government was allowed until the 7th instant to reply, and that it failed to do so.

All these statements, we repeat, are not endorsed by us and must be received with due caution. We can not but think that they greatly exaggerate the facts, if, indeed, they do not wholly misrepresent them. The *Chung-king* affair was a disgraceful outrage. It admitted of no palliation whatever. From the very first its unpardonable character was said to be fully recognised by the Viceroy Li, upon whom the immediate responsibility of dealing with the offenders rested, and his Excellency was represented as only too anxious to make all proper reparation. Is it conceivable that, in such a case, he can have pushed matters to the verge of a rupture with Great Britain, above all at a time when China's hands are more than full of other troubles? We do not think so. It seems to us much more likely that we are here in presence of one of those tea-pot storms so often set blowing by news-mongers in the Far East. Yet, in view of the telegrams that have reached Tokyo, we can not choose but submit the tale for our readers' examination.

THE SEVENTH SESSION OF THE DIET.

AN Imperial Rescript, issued on the 12th instant, announces that the seventh session of the Diet will be held in Tokyo from the 22nd of December. It seems a curious date to select, inasmuch as the habit of the Diet hitherto has been to rise on the 24th of December for the New Year's recess. Possibly the usual holiday will be greatly curtailed on the present occasion, though there is no apparent reason for anything of the kind. From the writings of some of the Opposition journals it has been evident that the place chosen for the Diet's session might easily become a topic of contention. Politicians are proverbially on the look-out for mare's nests, and the extreme wing of the Opposition appear to have made up their minds that if Hiroshima were selected, it would have been in pursuance of some sinister design on the Government's part to take undue advantage of the state of siege existing there. We fail to perceive how anything of the kind could have been contrived, or how the legislative independence of the Diet could be hampered by conditions relating to military affairs only. However, there exists an undefined antagonism between the civil party, *alias* the Radicals, in Japan and the military party, or Conservatives. It may be that the Radicals mistrust their resolution to reject Government measures within sight of great military preparations. Conjecture is immaterial, however, seeing that the Government has designated Tokyo as the place of session. Tokyo has fared ill during the present war. It has been deprived of the presence of the Court and a great part of officialdom, and it might well

complain did it lose the advantage of the Diet's session also.

As for the political prospect, we are inclined to think that despite the remarkable unanimity shown by the Diet in voting war supplies last month at Hiroshima, the strife of parties is not unlikely to make itself audible once more in the approaching session. The Opposition show an evident disposition to choose as points of attack the policy of the Government with respect to Korean reforms and the financial expenditure of the Administration. Probably no very serious fight need be anticipated about the former. Events in Korea have not yet furnished any solid data for criticism. Only three months and a half have elapsed since Japan undertook her programme of reform in the peninsula, and the most impatient politician could not expect that seed sown in such soil should be already bearing fruit. The most that we look for in that context is a representation to the Government, couched in the language of platitude and generalization habitually affected by the compilers of such documents. Administrative expenditure, however, is a different question. The Opposition have never abandoned their contention that four or five million *yen* may be retrenched in that direction without impairing Administrative efficiency. They are not likely to yield the point now. On the contrary, the nation's need of funds to carry on the war will probably be construed into a new plea for economy, and so the weary fight will be re-opened over the Budget. It is, however, conceivable that patriotic instincts may prove stronger than party interests. A collision between the Government and the Diet would necessarily be construed by the world as evidence of a disunited nation, and national disunion when the country is fighting for its life means an immense loss of belligerent vigour.

THE "SYDNEY" AFFAIR.

THE two American citizens taken from the M.M. steamer *Sydney* in Kobe harbour have been released. The documents found in their baggage furnished ample testimony as to the purpose of their journey to China, and there can be no question that Japan would have been justified in detaining them until the close of the war. But it may be assumed that there was no desire on the part of the Japanese Government to travel beyond the barest necessities of the case. Nothing was essential except to provide that the two men did not lend their services to China in a military capacity, and as they gave their parole in that sense, they were set at liberty, pending the departure of the next American mail, by which they will be returned to the United States at Japan's expense. We need scarcely add that during the period of their arrest they were

treated with the utmost courtesy, being lodged in the best foreign hotel in Kobe, and faring well at public charges. It is to be regretted that the incident caused excitement among the foreign communities at the open ports, and evoked so much of the inflammatory writing that serves the part of patriotic demonstration with a certain class of local journalists. Truly one would imagine that the *métier* proposed to themselves by not a few editors in the Far East was to aggravate the unpleasant features of every incident, and to endeavour as far as possible to stir up international strife. What could be more extravagant, for example, than to set up a parallel between the outrage committed by a band of lawless Chinese soldiers against the passengers of the steamer *Chung-king*, and the orderly and deliberate procedure of the Japanese Government in putting a belligerent right into practice against the steamer *Sydney*? In the one case helpless women were seized, tied hand and foot, hauled out of a ship with brutal roughness, thrown into a godown and held prisoners for several hours, bound as they were. There was not the smallest pretence of any exercise of duly constituted authority. It was simply a disgraceful act of cruelty and revengeful violence, perpetrated by infuriated soldiers in defiance of all law. In the other case, the Japanese authorities visited a ship, quietly informed her master that they had come to search for two Americans, who, contrary to American law, were proceeding to China with the intention of endeavouring to destroy Japanese men-of-war and merchantmen; arrested the men; lodged them in the best hotel in Kobe, and finally released them on receiving their promise not to prosecute their illegal design. It would be difficult to insult Japan more grossly than by declaring that the deliberate and orderly action of her Government belongs to the same category as a lawless and brutal outrage committed by Chinese roughs against helpless females. No intelligent man could honestly set up such a parallel. Its enunciation in the leading columns of a foreign journal published in Yokohama certainly can not have the approval of the foreign community. There has been much other writing of a mischievous and unreasoning character, but none so bad as this latest extravagance. We can understand, indeed, that some surprise and even resentment may have been caused by the display of armed force that accompanied the search of the two steamers. But it is easy to perceive that the motive of the Japanese Authorities was to prevent all misapprehension as to the character of their action. They evidently desired to show that their procedure was based uniquely on the empire's belligerent rights, and bore no relation whatever to civil jurisdiction. They were wise to emphasize the distinction, for despite the object

lesson thus afforded, there are still some local critics who remain confused, professing to think that extraterritorial privileges were outraged because Consular assistance was not invoked by the Japanese.

HERMANN VON HELMHOLTZ.

WILLIAM JAMES, Professor of Psychology at Harvard University, writing of HELMHOLTZ'S "Physiologische Optik," says that he imagines it to be, on the whole, "one of the four or five greatest monuments of human genius in the scientific line." To those whose work lies outside the domain of science, this classing of the illustrious man who has just passed away among the greatest leaders of science, may seem somewhat surprising, for, outside of Germany, the name of HELMHOLTZ was little known except to special students of one or more of the many branches of science in which he was a master. The theories of HELMHOLTZ were not, like those of DARWIN, of a nature to arouse the *odium theologicum*; his discoveries in the sphere of practice were not such as could easily be used as weapons with which to attack credulity and superstition; he did not, like HUXLEY, TYNDALL, and HÆCKEL, take part in the heated controversies that have been waged between the teachings of science and the authority of revelation. Hence it happens that this man whose work, as JAMES says without exaggeration, deserves to rank with that of NEWTON, of FARADAY, and of THOMPSON, has remained nothing more than a barely known name to the general reader.

HERMANN LUDWIG FERDINAND HELMHOLTZ was born at Potsdam in 1821. His father was professor in the Gymnasium in that city, his mother, CAROLINE PENN, was an Englishwoman. While still at school he showed an irresistible bent for physical science, but in those days it was hardly possible to make a living out of physics, and HELMHOLTZ therefore applied himself to the study of medicine. At the Army Medical School he came under the influence of JOHANNES MULLER, the man whose work on the "Elements of Physiology," published more than fifty years ago, gave such a profound impetus to the study of physiological science. Until 1848, HELMHOLTZ worked as a military surgeon, when he received some minor anatomical appointments at Berlin.

A year earlier than this HELMHOLTZ had published his memorable work "Ueber die Erhaltung der Kraft," in which he gave an exposition of the great principle of the conservation of energy—or, as SPENCER prefers to call it, the persistence of force. Like all great scientific generalizations this was foreshadowed by earlier investigators. In effect, in all exact scientific investigations it was assumed that force, though it may change in quality, cannot disappear out of existence; but the assumption was unwittingly made. By

KANT, who, with all his philosophy, ever remained a physicist, it was explicitly suggested that there is in the universe but one force, eternal and unchangeable; that all the different manifestations of energy, heat, light, sound, and so forth, are but various modes of motion. By JULIUS ROBERT MAYER'S work, "Remarks on the Forces of Inanimate Nature," published in 1842, and by JOULE'S researches on the mechanical equivalent of heat, HELMHOLTZ was still more definitely forestalled. But still, his work was to a large extent independent of earlier investigations, and it is to his work that was chiefly due the wide currency that the theory of the conservation of energy so speedily obtained.

It is curious and interesting to note that in contradistinction to JOULE and MAYER, HELMHOLTZ was not led to his investigations on this subject from a purely physical starting-point. It was as a physiologist that he formulated the doctrine. At that time the theory of STAHL, that every living body has the nature of a *perpetuum mobile*, was almost universally accepted by physiologists. HELMHOLTZ undertook a critical investigation to determine whether the inter-relations among the natural forces were such as to render perpetual motion possible. But physicists rather than physiologists, were the first to perceive the transcendent importance to science of the theory that though energy may change the mode of its manifestation, though it may be now kinetic, now potential, yet the total sum of energy in the universe is a constant. A complete review of the physical science of half a century would be required in order to trace the marvellous influence of this generalisation alike on the theoretical knowledge and on the paractical welfare of mankind.

In 1849, HELMHOLTZ went to Königsberg as Professor of General Pathology and Physiology. It was while he held this post that he made an invention second only to LAENNEC'S invention of the stethoscope in its importance to medical science. What more than any other single advance has served to place modern medicine on a different footing from the crude empiricism of the Middle Ages has been the introduction of instruments of diagnosis, and among these the ophthalmoscope of HELMHOLTZ unquestionably holds the second place. It is an instrument by means of which physicians are enabled to observe the interior of the eye, and thus to derive information, not only concerning the state of that organ itself, but, inferentially, concerning the seat and nature of many important diseases.

From Königsberg, HELMHOLTZ went to Bonn as Professor of Anatomy and Physiology; and in 1871 he was appointed Professor of Natural Philosophy in the University of Berlin, a post which he occupied till his death. During the whole of this period he continued to exhibit in most of the fields of natural science his

untiring and many-sided activity. In the catalogue of the Royal Society he is credited with more than a hundred papers of the highest importance, in addition to the two great works in which he embodied the results of his investigations on the physiology and psychology of sensation, "Physiological Optics," and "Sensations of Tone." It would be tedious to enumerate all the departments of physical, physiological, and mathematical science in which he was at once an authority and a discoverer. He had, as CLERK MAXWELL said, that thoroughness which of itself demands the mastery of many sciences, and in doing so makes its mark on each.

We said just now of KANT that he always remained a physicist in spite of his philosophy. It is equally true to say of HELMHOLTZ that notwithstanding his physics he was from first to last a philosopher. From isolated utterances, read without an understanding of the limits of their application, it might appear as if HELMHOLTZ thought the mechanical theory was the end and aim of philosophy. The goal of natural science is, he tells us, to reduce the phenomena of nature to motions of material points with inalterable motor forces acting according to space-relations alone. The solution of this task is the condition of Nature's complete intelligibility. And when he tells us that the law of the conservation of energy is applicable without reservation to living beings, we seem to find him committed to regarding man as the thinking automaton of LAMETTRIE. But in truth, this was not the case; and we do not find in HELMHOLTZ a representative of the materialism which, though it was an important advance in the eighteenth century, is in the nineteenth an anachronism and a retrogression. There are limitations in the words we have epitomised above. The mechanical theory is the goal of natural science, the perfection of the mechanical theory is the condition of Nature's complete intelligibility. These are irrefutable truths—it is only as a mechanism that we can understand nature, and therefore the conception of nature as a mechanism is the goal of *natural science*. But the mistake of materialism, the mistake of excluding from our view of the universe the whole realm of the ideal, or, at best, of treating the ideal as a mere function of the material, is nowhere made by HELMHOLTZ. He fully recognizes that science is nothing more than a mode of regarding nature, a mode necessary for intellectual purposes, but not the only mode; that in fact, as it has been pithily expressed, "science is only a point of view." He agrees, for instance, with THOMPSON, in the admission that the assumption of atoms can explain no property of bodies that has not previously been attributed to the atoms themselves. He does not admit, indeed he expressly denies, the psychological theory that

is a direct corollary from the mechanical theory of the universe, namely that the idea of causality is purely a product of experience. In this respect HELMHOLTZ, like most of the leaders of modern thought, is at one with KANT, and we may fitly conclude with a quotation from a passage in which he expounds his views on the subject:—

"It is clear," he says, "that starting with the world of our sensations, we could never arrive at the conception of an external world, except by admitting, from the changing of our sensations, the existence of external objects as the causes of change; though it is perfectly true that after the conception of such objects has once been formed, we are hardly aware how we came to have this conception; because the conclusion is so self-evident that we do not look upon it as the result of a conclusion. We must admit therefore that the law of causality by which from an effect we infer the existence of a cause, is to be recognized as a law of our intellect, preceding all experience. We cannot arrive at any experience of natural objects without having the law of causality acting within us; it is impossible, therefore, to admit that this law of causality is derived from experience."

"THE SOUL OF MAN UNDER SOCIALISM."

(COMMUNICATED.)

FEW arguments against Socialism have obtained wider currency, none, certainly, is more worthy of serious consideration, than the argument that Socialism, while it might perhaps diffuse greater material comfort, would tend to crush out individual peculiarities and to paralyse individual energy, and would thus be blighting to the community as a whole. Our bellies would indeed be filled, but our souls would starve. We suppose that this view of Socialism obtains so widely from the natural tendency of the average reader to be half a century behind the times in a subject in which he does not take a keen interest, for the Socialism of which it is true is the Socialism of OWEN and of FOURIER. But it must be admitted that the most widely read Socialist tract of modern times, EDWARD BELLAMY'S "Looking Backward," did ominously suggest to the reader a prosaic, if comfortable, despotism, in which literature would not flourish and art would die. But if BELLAMY chose to dwell chiefly on the material aspects of Socialism, there is no lack of other writers who present to us its spiritual side, prominent among whom is OSCAR WILDE.

In passing, let us remark, that if it be true that the growth of Socialism implies the decay of Individualism, it is to say the least curious that among the advocates of Socialism we find some of the most striking Individualists of our time. All artists are Individualists, for free play of individuality is the very life-breath of art, and yet as year follows year we find an increasing number of poets, painters, and novelists who avow their sympathy with the essential aims of Socialism. To speak of Englishmen only, are there in all England men to whom the overthrow of Individualism would appear more grievous

a disaster than it would to GRANT ALLEN, to WILLIAM MORRIS, to BERNARD SHAW, to WALTER CRANE; is there in all the world a more thorough-going Individualist than OSCAR WILDE?

If we were compelled to name the most brilliant of the younger writers of the day, we should do it under protest, for literary class-lists are fond things vainly invented, but we should without much hesitation fix on OSCAR WILDE. Observe, we say the most brilliant, not necessarily the most weighty or the most inspired. And this view is supported by an examination of his paper on "The Soul of Man under Socialism." Like all his writing, it sparkles with paradox; and yet every paradox when examined is found at once to conceal and to enforce a truth. The main object of the paper is to combat or rather to push aside the view that Socialism implies the withering of the individual and his absorption into the economy of a great machine, and to insist on the truth that whereas, in the present order of society, opportunities for the development of personality are granted, almost accidentally, to a few, under Socialism the growth of Individualism would, for the first time in the history of the race, be unhampered by the artificial constitution of society.

We shall not attempt to summarise the essay. The effect would be like that of gathering the dew in a bucket. We cannot hope to do more than allude briefly to a few of the aspects of society the writer examines. In the present state of society, he remarks, the only persons among whom individuality can be developed are the rich, amongst whom a few, those who are not too much weighed down by the burthen of property, have become artists, poets, philosophers, and men of science: these are the men who have realised themselves and in whom humanity gains a partial realisation. But the bulk of the people live lives of hopeless drudgery: among them there is neither charm of manner nor joy of life, but upon them humanity depends for its material prosperity. It is true that the poor are as a rule virtuous, but their virtue is much to be regretted. The best among the poor are ungrateful, discontented, disobedient, and rebellious, and rightly so; they are in a condition of healthy protest against the conditions in which society condemns them to live; from the Individualist point of view there is about them some real personality, whereas there is none about the virtuous poor, who must moreover be extraordinarily stupid, or they could not possibly acquiesce in the continuance of the laws of private property by which their lives are marred and made hideous.

But no authoritarian Socialism will do. Every man must be left quite free to choose his own work. It is only in voluntary associations that man is free. But the abolition of private property is neces-

sary for the realisation of Individualism, for private property, making gain, not growth, its aim, has led Individualism astray. The true perfection of man lies, not in what man has, but in what man is.

The development of man's personality will be assisted by Christianity if men desire that; but if Christianity be abandoned the development will be none the less sure. In any case, man will love those who sought to intensify personality, and of these CHRIST was one. In contradistinction to the old Greek, "Know thyself," the message of CHRIST to man was simply "Be thyself." When JESUS talks about the poor he means simply personalities, just as when he talks about the rich he means simply people who have not developed their personalities. It was in this spirit that he advised the wealthy young man to give up private property, because it was such a hindrance to his development; it was not because poverty is in itself a good. Far from it; there is only one class in the community that thinks more about money than the rich, and that is the poor.

Abolish property and let the State give up all ideas of Government. All modes of Government are failures. High hopes were once formed of democracy; but democracy means simply the bludgeoning of the people, by the people, for the people. And when the bludgeon is not apparent and the Government is kind, the condition is worst of all, for no opposition is aroused, and the people live in a kind of coarse comfort like petted animals, never being themselves for a single moment. Punishment for crime is a direct mistake, for a community is infinitely more brutalised by the habitual employment of punishment, than it is by the occasional occurrence of crime. When there is no punishment at all, crime will either cease to exist, or, if it occurs, will be treated by physicians as a very distressing form of dementia, to be cured by care and kindness.

But, as the State is not to govern, it may be asked what the State is to do. The State is to be a voluntary association that will organize labour, and be the manufacturer and distributor of necessary commodities. The State is to make what is useful, the individual is to make what is beautiful. Disagreeable labour will be done by machines. That is their province. At present machinery competes against man, but under proper conditions it will serve him. Civilization requires slaves; the Greeks were quite right about this. But human slavery is immoral, and our slaves will be machines. Is this Utopian? A map of the world that does not contain Utopia is not even worth glancing at, for it leaves out the one country at which Humanity is always landing. And when Humanity lands there, it looks out, and seeing a better country, sets sail.

Progress is the realisation of Utopias. And in this Utopia on which we are about to land, we shall for the first time see Individualism truly realise itself in art.

We have not space to examine further this fascinating paper, and must refer those interested in it to the original. Most readers will differ strongly from much that OSCAR WILDE writes; but in this very fact lies his charm. He has learned his own lesson well, and writes to develop his own personality, not to satisfy the public, wherein, as he says, lies the strength of all true art, such as that of SHAKESPEARE, of RAPHAEL at his best, of BROWNING, of IBSEN, and of GEORGE MEREDITH. It is because they realize that in Socialism alone lies the hope for art amid an increasingly material civilization, that so many of our artists are taking their places in the front rank of the apostles of Socialism.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.

SPECIAL SERVICES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I call the attention of the Christian public, through your columns, to the fact that this week (Nov. 10-18) is observed by the Young Men's Christian Associations the world over as a week of prayer for young men, and request friends of that movement and all friends of young men to unite in its observance as far as practicable?

Special services are to be held at the rooms of the Tokyo Association on Thursday, Friday, and Saturday nights, conducted in Japanese.

Yours truly,
R. S. MILLER.
Tokyo, November 13, 1894.

THE REV. MR. ATKINSON.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—While engaged looking over the numbers of your last month's issue, my eye fell upon your article on "Freedom of Conscience in Japan," giving a succinct review of the Rev. Mr. Atkinson's assertions and allegations addressed by him from Kobe to the *Independent*. I do not know what kind of a personage this reverend gentleman is, but for myself, as an educated man and as a politician well acquainted with the modes of western thought, and as an ardent advocate of the civilization of the West, I can not refrain from making comments on the subject, and beg you will allow me space in your columns for a few remarks.

One thing that I have to notice is, that those westerners who make the most selfish and unjust remarks about us and adduce the most unfounded accusations against us, are generally found in the ranks of those who should be the fairest and most just in their arguments; I allude to the members of the missionary societies among us. Are those gentlemen blind—in their conscience shut to the grand results that have been obtained by the noble and assiduous efforts of our statesmen for the last two decades and over to secure toleration of conscience? Have the reverend gentlemen any just ground of complaint, or any accusation to make against our officials or against the Government? Do they entertain any feelings of hostility toward us? I presume they do not, yet their sayings imply that they do. If they persist in declaring themselves in the way that the Rev. Mr. Atkinson has done, the greatest enemy to their missionary labours will be found to reside in their pens and in their enunciations, and then those, the most tolerant Japanese, of whom I am one, might be compelled, I fear, to antagonism against such proceedings, not laying any blame upon the creed they profess but upon the conduct of the individuals themselves whose mission it is to propagate that creed.

These remarks are short, they are a mere outline of what I have to say, and I ask you not to imagine that I am not in possession of solid facts to sustain my meaning. As to the phraseology I have here

used, it may seem severe; but it is not so when compared with the Rev. Mr. Atkinson's denunciations. Moreover, if ever any reaction in our progress of civilization should come about, it will arise from the misguided conduct, my fear is, of those gentlemen belonging to missionary societies, so I can not enter here too strong a protest against such proceedings as the Rev. Mr. Atkinson's.

I enclose my card, and remain, Sir, yours sincerely,
AMAMUS,
(A Japanese.)

Tokyo, 10th November, 1894.

INTERNATIONAL LAW.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There seems to be some confusion about international law amongst the foreigners in the Far East. In your paper of the 8th November I find, under "Hongkong News," the following passage relating to the exportation of saltpetre and rifles from German ports: "It seems strange that contraband of war should be allowed to leave a German port, when Great Britain is imposing a strict enforcement of the neutrality regulations." The author of these lines seems to believe that there is some rule of international law forbidding the merchants of neutral nations to supply belligerents with arms or munitions of war. I am a German, and beg leave to tell the English critic that such commerce does not involve a breach of neutrality at all. In doing so the individual citizen of a neutral power exposes his person and property to some hazards of war, but no government is bound by international law to forbid his subjects to carry on such commerce. In the time of Lord Palmerston, when English ships were busily engaged in carrying arms and munitions to one of the belligerents, the Minister of the other belligerent Power remonstrated with Lord Palmerston, but the great Englishman answered coolly: *Catch them, if you can!* This answer, short and sharp, is as right now as it was in the time of Palmerston. In his message to Congress, the President of the United States, Pierce, says: "The laws of the United States do not forbid to sell to either of the belligerent Powers articles contraband of war, or take munitions of war or soldiers on board their private ships for transportation."

Another blunder is the idea entertained by some people that the Imperial German and the French Mail Steamers are to be treated as men-of-war. A man-of-war is a ship belonging to the fleet of a State, commanded by a naval officer and manned with a crew organized in a military manner. A ship owned by a private company and transporting passengers and goods for money from one port to another can never be regarded as a man-of-war, and no Government has the right to give such a ship the character and the privileges of a man-of-war, nor has the fact that the company gets subsidies from its government any effect at all upon the international character of its ships. These are and remain purely private ships.

Finally, it might be advisable to state that extraterritoriality cannot impeach in any way the rights which international law bestows on a belligerent Power in regard to subjects of neutral countries. The same rights that England may exercise in a war with France against Russian or American subjects, just the same rights may Japan claim for herself against any foreigner violating the laws of neutrality.

If the foreigners in Japan just now would apply a little more impartiality and a little less prejudice in their criticism of the acts of the country they are living in, I think it would further their true interests much more than the highly excited manner in which a part of the foreign community habitually acts against this country.

I am, Sir, your obedient Servant,
DR. L.
Tokyo, 9th November, 1894.

(The reference to contraband of war was quoted from the *China Mail*. Of course all the principles enunciated by our correspondent, himself an undoubted authority on the subject, are beyond question.—Ed. J.M.J.)

THE YAMAGATA EARTHQUAKE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Though the *Mail* has already devoted considerable space to the earthquake of October 22nd, and has given with detail the reports of expert observers, it may yet be worth while to record the impressions of one who, while making no claims to expert knowledge, has yet been on the ground and has learned by careful inquiry and observation something of the suffering which has resulted from this calamity.

On the day following the earthquake I reached Kashiwagaki, on my way to Niigata, and heard startling rumours of the shock, but beyond the

vague belief that it came from the north I could learn nothing of importance. At Nagaoka, on the 24th, I received the first clear intelligence of the disaster. At Niigata we learned, from one who had actually been to Sakata, further details. It was evident that the war had so far absorbed the thoughts of the Japanese people, that it would be difficult to awaken in those not closely connected with the sufferers any adequate appreciation of their great needs. Accordingly, the few foreigners in Niigata determined to appeal at once to the generosity of the foreign communities in the other open ports. At the same time, Mr. Newell and myself, the only persons in the vicinity, so far as we knew, who were furnished with the requisite passports, arranged to go at once to Yamagata and see what could be done in the way of relief work. Messrs. Pedley and Dunlop agreed to follow, in case it seemed desirable to undertake the direct distribution of aid.

Sakata, which suffered the most serious loss, is only ten or twelve hours sail from Niigata, but as there is some uncertainty in the movements of the steamers at this season of the year, we concluded to go by land. This involved three days of hard riding owing to bad roads and imperfect *jinrikisha* service. At Tsurugaoka (Shonai) where we spent the night of October 30th, we met Mr. Matsuda Junpei, an old friend of Mr. Newell, who had himself already visited Sakata and collected much accurate information. He had also been connected with relief work in Nagoya and Gifu. He very kindly agreed to go with us and aid us in our investigations.

The districts seriously affected were Higashi Tagawa, Nishi Tagawa, and Akumi. Tsurugaoka, the principal town of Nishi Tagawa, was not materially injured, and the first striking effects of the earthquake were seen about six miles north-west on the Sakata road, at the entrance to the village of Oshikiri. Here the roadway was badly broken by fissures. Out of a total of about 200 houses in this village, 147 were destroyed. In the case of thatched roofs, the walls had given way, leaving the roof standing, like a wigwag, often very little broken, and furnishing a temporary shelter, by no means to be despised. Here ten men and sixteen women were killed, six of them in a single house. We next came to Sakai where ninety four houses went down and twenty persons were killed. After leaving Sakai the fissures became more frequent and often extended far out into the fields on both sides. They could be traced by the sand thrown up in low ridges along their course, which stood out in strong contrast with the dark soil. The frequency of these fissures helped us to realize how fearful the situation must have seemed to those who rushed out of their houses only to find the ground crumbling beneath their feet. A little to the left, the village of Hirano was pointed out, where 149 houses fell and forty-nine persons were killed. At Niibori the ground was still more badly broken up. One fissure, varying from one foot to eight feet wide, extended for nearly 2,000 feet, and alternate elevations and depressions were seen on either side. The change in elevation was not great—a foot or two in extreme cases—but all through the village there must have been a most frightful state of affairs. In a distance of 320 feet, fifty fissures were counted. The abutments of a bridge across a stream had been crowded inward so as to force the braces into an upright position, taking with them the bridge, which stood with one end six or seven feet in the air. Here 192 houses were destroyed and thirty people were killed. About four miles to our right was the town of Matsumine: out of 430 houses only ten were left standing, and these were all badly damaged. From Niibori to Sakata, about two and a half miles, our way was much impeded by the rents in the road and the ridges of sand which had issued from them. These had been rudely bridged—in some cases being filled with stalks of broom corn. Sakata before the earthquake was a town of 3,460 houses, with a population, according to the census of December, 1890, of 21,030. It was the most important commercial town on the west side of the island north of Niigata. It is the natural outlet for the trade of the Shonai and Yamagata valleys, one of the most productive rice fields of Japan. The town was relatively rich and prosperous. There is, excepting in winter, almost daily communication with Niigata by means of small steamers which, under favourable circumstances, make the trip in ten or twelve hours. Even in the winter these steamers pass back and forth every quiet day.

At the entrance to the village formerly stood forty-eight godowns belonging to Mr. Homma Kyushio, one of the wealthiest men in Japan. The ground around them was set with trees, and must have formed an attractive little park. Of these buildings hardly anything remains but the broken tiles. Of the 60,000 bushels (30,000 *hyo*)

of rice stored in them, only a few were saved, and these badly damaged by fire and smoke. Same estimate the loss as high as yen 25,000. In the whole town 1,577 dwelling-houses were destroyed beyond hope of repair, besides 435 godowns and many public buildings. It is impossible to say how much destruction of life and property was owing directly to the earthquake shocks, for almost immediately fire from falling lamps broke out in sixteen places and finished the work the earthquake had begun. The number of houses mentioned fails to give an adequate impression of the extent of the calamity, for the better portions of the town where the houses were relatively large, suffered the worst, and it is estimated that two thirds of the town are in ruins, not to speak of the large damage done to houses still standing. The buildings in foreign style, though none of them built of brick, are all, I think, badly injured: 162 persons were killed in Sakata alone; in the whole district (Akumi) 482 were killed and 661 wounded. In the three districts affected the number of deaths was 720, while the wounded number 905. The number of houses destroyed was 5,099, "uninhabitable until repaired" 3,000. The statistics for Akumi District are taken from a printed table handed us at the office of the Headman; those for the other districts were obtained by Mr. Matsuda from the police authorities. In two places in Sakata large holes were opened in the ground, from one of which sand and water were thrown out in large quantities. Into the other five or six persons fell and were buried alive by the sandy soil, which immediately flowed in from all sides. In another place thirteen persons were killed in a single house. One poor priest was pinned down by a fragment of timber which pierced his thigh and then buried beneath the ruins of his temple. He was taken out alive, but died within two days. A *soshi* who had put up at a Sakata hotel had taken his bath and settled down to a comfortable supper when the shock came. He seized two children, carried them to a place of safety, and then hastened back for a third, only to be himself killed by a falling timber.

At a low estimate the number deprived, at least temporarily, of their homes, must be over 25,000. While no doubt most of these are far from having lost everything, and can very soon get upon their feet again, either by their own exertions or the help of relatives and friends, the number left after the largest reasonable discount is still large enough, and the distress great enough to call for the deepest sympathy. The resources of the region are inadequate to cope with this distress, while the people of other provinces fail to appreciate the great need because of the absorbing interest attaching to the progress of the war. While confessing my inability to make an entirely just comparison, I cannot rid my mind of the impression that the disturbance to local trade from this disaster must be, relatively to the resources of the community, greater than at Nagoya and Gifu. Then again, the greater severity of the winter in the north, with the bleak winds and heavy snows so frequent on the west coast, will make it much more difficult for these poor people to protect themselves this winter. There could hardly be a more deserving cause. In response to our appeals about yen 1,000 have been received, of which a detailed report will be made in due time by Mr. Hilton Pedley, who is the treasurer of the fund; but I may say here, that of this sum, yen 50 were paid in cash to the Headman of Akumi District, and the remainder is being used for the purchase of clothing, bedding and some of the more necessary household utensils. These are being sent forward from Niigata as rapidly as possible to the office of that district, for the most part, because the distress is greater there, on the whole. A part of the goods will, however, be sent to the headmen of the other two districts. After looking over the ground carefully, we became convinced that it would be far better to secure the cooperation of the local officials than to attempt to create an independent system of aid. The Headman of Akumi District seemed to us to have the matter well in hand, and while evidently disposed to be cautious, appeared thoroughly sympathetic. We thought, however, that Niigata offered an unusually good market for supplies, and that we could, with the aid of Japanese friends there, be servicable in turning the money into clothes, bedding, etc. The Headman agreed with us in this and gave us valuable suggestions as to the kind and quality of the goods to be purchased. The prices of the goods thus bought have been extremely low, and yet our Japanese advisers assure us that they are well suited to the needs of the people. Over 600 *futons* have been bought, besides a large amount of clothing, and nearly 2,000 miscellaneous articles for household use.

We learned that the Abbé Dalibert of Tsurugaoka was actively engaged in relief work. It may

be that many will wish to have their gifts distributed under his personal care.

While thanking those who have so promptly and generously responded to our appeal, we trust there may be others who will be glad to share in the effort to relieve this terrible suffering.

Yours, &c.,

D. C. GREENE.

TOKYO SUBSCRIPTION LIST.

The following subscriptions have been received in response to Dr. D. C. Greene's appeal:—

THE CRUSADE OF THE CENTURY.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—Some years ago when Christianity was a fashionable fad in Japan, it was not only prophesied that Japan would be so far converted in ten years that foreign missionaries would be no longer needed, but that the Japanese would in addition to supporting their own pastors send missionaries to all Asia. Without discussing the wisdom or the folly of these predictions, all will admit that the Chinese have not up to the present been in a very teachable frame of mind; nor have they shown any desire to emulate the example of Japan or receive her subjects as their teachers in the science, art, or religion of the West.

But after Japan has taken Korea away from the leading straits of China, and has shown the results of her methods of education in the arts of peace and war, is it too much to hope that China may be willing to listen to what Japan has to teach her?

Can we not regard this as the time of the ploughing of the fallow fields of China?

The time for sowing will come soon, and the reaping will come in due time if anything is sown. But how can anything be sown unless the sowers be sent?

The soldiers of Japan are every one of them missionaries to spread the light of good-government and pure patriotism. After the regeneration of Korea is accomplished they may have a further mission to China itself.

Whether the deeper influences of corporate Christianity shall follow in their wake, depends

somewhat upon the success of efforts for the conversion of the Japanese themselves.

The very least thing that the Christian nations can do is to preserve a masterly inactivity, and allow Japan to push to a successful completion her present laudable effort to carry some of the best results of Christian civilization into "the dark places of the earth that are filled with the habitations of cruelty."

The Japanese of to-day quote the name of Commodore Perry as one of their benefactors. In America "the son of John Brown" kept "marching on" until that country was truly "the land of the free" as well as the boasted "home of the brave." Is it too much to believe that Koreans and Chinamen of the next, if not of this, generation, will visit the shrine of Saigu Takamori to offer thanks that his soul marched on to the successful accomplishment of the object dearest to his heart? Is not this a war for righteousness and against corruption, and do not the Japanese deserve the sympathy and the prayers of every person who believes in "a Power not of ourselves that worketh for Righteousness?"

It seems to me that there should be no talk of peace until China has experienced a change of heart and given evidences of a repentance not to be repented of.

The Chinese may not believe it, but the Japanese are the best friends that they have at present, and in future ages they will rise up and bless the Japanese for the benign influences that will surely follow this war, if the Chinese are once well whipped by a smaller nation from their own side of the world.

Japan may not yet be classed among the nominally Christian nations, but in her conduct of this war she is Christian, and she is teaching China how the horrors of war may be modified by sentiments that have their full fruition under Christian influences.

When I see Japanese nurses clothed in the white garments that mark their angelic mission, signed upon their brows with the blood red symbol of our salvation, and other strong men, soldiers in uniform, bearing upon their arms the sign that their mission is to save and not to destroy, I am inclined to look upon this as a holy war, the crusade of the 19th century.

Your nervous correspondent of the 5th instant, would probably allow that Krupp guns may become powerful factors in the civilization of a country.

Christian Europe is pretty busy at present civilizing Africa: there it has been proved necessary that bullets should go before Bibles.

If the Christian nations could be induced to combine with Japan for the partition of China for, say, a century of teaching in western civilization, it would be a great blessing to the Chinese. It may be necessary some time for Christian nations to combine for the partition of China, for if the Chinese had the sense to hire some competent foreigners to do for their navy and army what has been done for their Customs, they might become a dangerous menace not only to Japan but to Europe and America. This is the old fight of civilization against barbarism, the unending conflict of Saint George and the Dragon.

Let us see to it that our sympathies are on the right side.

Yours,

PETER THE HERMIT.

PHOTOGRAPHIC SOCIETY OF JAPAN.

An ordinary meeting of the above-mentioned Society was held at the rooms of the Geographical Society (Chigaku-kyokai), Nichikonyacho, Tokyo, on Friday, November 9th, at 5 p.m., Mr. C. D. West, M.A., in the chair.

The minutes of the last regular meeting having been read and approved, the results of printing on Ilford "Printing Out Paper" were shown. The texture of the paper and the tint of the prints (commonly called by photographers "tone") were generally admired. The prints had been taken directly from the printing frames and placed dry in a mixture of a solution of hyposulphite of soda and chloride of gold with chalk to insure neutrality. Dr. E. Divers, F.R.S., in answer to a question, stated that he considered there was no danger of "sulphur toning" in using such a bath.

Mr. K. Ogawa showed a set of prints from negatives by Viscount Okabe, Vice-President of the Society, of views at Miyajima, and at Takao and Hozogawa, near Kyoto. Great artistic taste had, it was considered, been exhibited in selecting the subjects and the point of view.

The Chairman showed an album containing many prints, the result of work during the past

summer with a 5 x 4 hand camera. The prints were of a fine black tint, on matt-surface paper. It was explained that they were silver prints toned with platinum—in fact prints by Lionel Clark's process.

Mr. R. Konishi presented to the Society samples of "tabloids" by Messrs. Burroughs, Welcome, & Co., of London, the brands being different from those that had before been sent directly to the Society by that firm.

Messrs. W. K. Burton and M. Kondo showed prints by the Kalotype Process. The tints were as good as those of platinotype, and excellent prints could be got from thin negatives. Mr. Burton expressed the opinion that, with the present enormously increased price of platinum the Kalotype process seemed a likely rival to the platinotype, and stated that, with the permission of the Society, Mr. Kondo and he would give a demonstration of the process at the regular meeting.

A pair of prints which had been sent to the Society by Mr. Marcus H. Rogers were shown. They were on American "Aristotype" paper—a paper coated with a gelatino-chloride, or colodion-chloride emulsion—and showed the very wide range of tones that could be got on that paper.

The proceedings ended with a vote of thanks to the Chairman.

At a committee meeting held on the same day, it was decided that an out-door meeting should, if possible, be held towards the end of the present month, and that there should be a lantern exhibition in Yokohama next month.

CRICKET.

A "BASE BALL" TEAM V. A "CRICKET" TEAM.

A rather unique game was played on Saturday afternoon, a team of cricketers battling with base ball bats meeting an eleven of base-ballers equipped with the orthodox willow. We have seen gentlemen playing with broomsticks against a team of ladies, but this is probably the first occasion on which base-ball bats have been used in competition with the cricket bat. The game on Saturday resulted in a draw, but Mr. Walford's team had decidedly the advantage, totalling up 204 runs to their opponent's 49, with three wickets still to fall. Much amusement was caused through the vagaries of some of the players, both in batting and fielding, the whole game proceeding amid an accompaniment of hearty laughter. Below are the scores of the respective sides:—

THE "BASEBALL" TEAM.					
Mr. H. V. Dickenson, b. Stokes	5

THE SEA FIGHT OFF THE YALU RIVER.

By Sir E. ASHMEAD BARTLETT, M.P.

It is hard to understand how anyone who reads critically the accounts from both sides of the great sea fight of Monday, September 17th, can believe that the Chinese had the best of the action. It seems rather that the Japanese gained a decisive success, and that against considerable odds. I form my estimate upon the telegrams from Tientsin and Shanghai; that is, from Chinese sources.

And here let me say that, thus far, the reports from Japanese sources have been as moderate and truthful as those from China have been unreliable and mendacious.

Even the statements made on Japanese authority as to the sinking of the *Kowshing* early in the struggle have been fully corroborated by the evidence given on oath before the court by the British officers of that ship. The correctness of the conduct of the Japanese commander and the endeavours made by him to save the lives of the British officers and others on board the *Kowshing* are fully proved.

The following conclusions as to the Naval Battle are clear:—

CHINESE LOSS IN SHIPS.

1. By their own showing, the Chinese lost four good warships: one battleship, the *King-Yuen* (2,850 tons); one protected cruiser, the *Chih-Yuen* (2,300 tons); and two smaller cruisers, the *Chao-Yuen* and *Yang-Wei* (each of 1,400 tons). To this has now to be added a fifth ship, which, we since learn, was stranded on a reef in the flight from the Yalu. This vessel was the *Kwang-Kai*, a deck-protected cruiser of 2,000 tons. The Japanese did not lose a single ship, though Admiral Ito's flagship, the cruiser *Matsumoto*, was seriously crippled and has had to be sent home for repairs. The Chinese telegrams, indeed, asserted that three Japanese vessels were sunk, but they expressly added that none of the Chinese officers could say which Japanese ships were thus unfortunate. Such vague allegations cannot be set against the definite report of Admiral Ito to his Government that he did not lose a single ship. A late telegram which has just come to hand from *The Times* correspondent at Shanghai, states that a Chinese warship rammed one of its own consorts by mistake and sank her. This, if true, would readily explain the belief among the Chinese officials that a Japanese vessel had been destroyed. The Japanese Admiral states that all the other damage to his vessels can be made good on board within a week. In proof of this the whole Japanese Fleet has returned to its watch and ward at Hai-yau-tau, an unfortified island in the Gulf of Pechili.

The latest news shows that the victorious Japanese squadron has left Hai-yau-tau, and is now escorting the transports which are conveying the second Japanese army for its *coup-de-main* upon the Chinese coast.

CHINESE LOSS IN MEN.

2. By their own showing, the Chinese Fleet lost 1,500 in killed and wounded. Nor is this surprising when we know that four Chinese warships were destroyed in action, two of them sinking in the blue water. The Chinese estimate the Japanese loss at 1,000, a vague figure based upon mere surmise, and not to be taken against the Japanese official statement that their loss was 237 killed and wounded. Moreover, a Central News telegram from Shanghai describes the Chinese loss in leading officers as "lamentably large." It says:—"In addition to those who went down 'in the *Chin-Yuen*, the captains in command 'of four of the warships which have reached 'Port Arthur are reported to have been 'killed while fighting their ships."

A *Times* telegram from the correspondent at Shanghai, who is very favourable to the Chinese, says:—"Some half-dozen ships have 'put into Port Arthur all badly knocked about, and full of wounded men." A Central News telegram from Shanghai states that the two principal Chinese battleships, the *Ting-Yuen* and the *Chen-Yuen*, both of 7,280 tons, were seriously knocked about by the Japanese fire. Their armour, indeed, was not pierced, so that the vitals of both ships escaped injury. But the *Chen-Yuen* has 120 shot-holes in her sides, and the *Ting-Yuen* 200 shot-holes in hers. This proves at once the excellence of the Japanese gunnery, and the value of protective armour.

THE JAPANESE HOLD THE SEA.

3. It is clear that the remnant of the Chinese fleet is now hiding behind the land fortifications at Port Arthur and Wei-hai-wei; whereas the Japanese fleet is now, as before, holding command of the Gulf of Pechili, and watching for its enemies from an open roadstead, or openly conveying a fresh Japanese army against China. This fact alone is conclusive to my mind as to which of the two combatants was victorious in the recent engagement.

I am aware that the Chinese assert that the Japanese retired at nightfall in a crippled condition. But is it likely that, if this were true, the Chinese Admiral would have left the wretched Hunanese Army Corps, which he shovelled on shore in such hot haste, without a single warship to support it and to keep up communications? The statement of the Japanese Admiral is shown by all evidence to be more accurate. Admiral Ito reported to his Government (a) that his fleet

had destroyed four Chinese warships. This we know to be true. (b) That three other Chinese vessels were set fire to by Japanese shells. This also is confirmed from Chinese sources. And, Admiral Ito finally says (c) "at dusk the Japanese squadron withdrew and prepared to renew the engagement on the following morning. During the night, however, the remnant of the Chinese fleet stole out of the Yalu Estuary and fled towards the Chinese coast." The Japanese tried to pursue, but the crippled machinery of some of their vessels prevented their overtaking the Chinese. The statement which comes from Chinese sources that the ammunition of some of the Japanese ships had been exhausted is very likely true. The Japanese firing is described as exceedingly heavy and continuous.

BATTLESHIPS AND CRUISERS.

But the full importance of the Japanese victory can only be appreciated when the fact is remembered that the Chinese had no less than five battle-ships in action, whereas the Japanese had not a single battleship, excepting, perhaps, the *Fuso*. The *Fuso* has a side belt of from four to nine inches, and its citadel is defended by seven inches of armour. The *Hiei* has a belt of four inches. The Japanese cruisers, though powerful of their class, have nothing but a protected deck of from three to two inches of steel. Two of the Chinese battleships were of 7,280 tons each, and had twelve inches of armour on their turrets, and a belt of fourteen inches. The other three armour-clads are much smaller, but have a belt of from 5½ to 9½ inches.

So far as we know, the Chinese Fleet consisted of the five battleships, five cruisers, and two gun-boats. The Japanese consisted of nine cruisers (three first class, and four smaller vessels). The two fleets were, on paper, not unequally matched in tonnage and the weight of shell-fire. The Chinese men of war engaged had a total tonnage of 36,830 tons, and could, at a single discharge, fire 12,460 pounds of shell. The Japanese had a total tonnage of 36,650 tons, and could, at a single discharge, fire 10,946 pounds of shell. But the Japanese, having more quick-firing guns, could, of course, in a given time, concentrate a much heavier fire upon their opponents. The Japanese undoubtedly had more quick firing guns. And to these guns and their superior tactics their victory is undoubtedly due.

LESSONS OF THE FIGHT.

The fact is that the Japanese are as superior on the sea, in skill, discipline, and gunnery, to the Chinese as they are on shore. The Japanese have won their victory, with inferior ships, by superior tactics and better gunnery. It would be a disastrous mistake to assume from this engagement that cruisers are a match for battleships. The fact that the Chinese loss was entirely confined to cruisers, with the exception of the small battleship *King Yuen*, which was sunk by a torpedo, and that the armour of the larger Chinese battleships, though constantly struck, was not pierced, proves the immense superiority of battleships in action. Had the Japanese possessed a single battleship as strongly protected and as good as the *Chen-Yuen*, it is doubtful if a single Chinese ship would have escaped.

Two of our first-class battleships of the *Royal Sovereign* type can throw a greater weight of metal in a single discharge than the whole Japanese squadron engaged in the recent battle. With moderate good fortune, two or three *Royal Sovereigns* should be able to destroy the whole of both the fleets that fought so desperately off the Yalu River. Other things being equal—that is, the skill, courage, and discipline being fairly equal on both sides—battleships are bound in action to overcome cruisers.

HOPELESS INFERIORITY OF THE CHINESE.

The wretched character of the Chinese naval strategy is shown by the fact that, with a superior navy, they have allowed the Japanese to dominate the sea and to pour thousands of soldiers into Korea without any interference. Their wretched tactics are shown by the fact that Admiral Ting is said to have engaged the enemy in such a cramped position that his ships could not manoeuvre, and that two actually ran aground. Probably, however, the Chinese could not manoeuvre their ships even in the open sea. Admiral Ting is said to have begun the action with his ships arranged in the form of a V, his own flag-ship being at the apex. This was no doubt courageous, but exceedingly stupid. The Japanese were able to alternately attack the starboard and port sides of his eccentric formation. While one side was being pounded by all the Japanese guns, the Chinese vessels on the other wing dare not fire for fear of hitting their own ships. It must be said in defence of the Chinese admiral, however, that he was probably aware of the inability of his

officers to manoeuvre. The admiral wished to set them an example of forwardness and courage. The telegrams state that one of the Chinese captains has since been executed for cowardice.

Indeed, so execrable were both the Chinese tactics and gunnery that it would be very dangerous to draw conclusions from the recent sea fight as to what might happen in a similar action between two European powers, where the skill of the officers and the courage of the sailors were nearly equal. The Chinese were hopelessly out-manned; and owing to the superiority of the Japanese quick-firing guns, as well as to the better gunnery of the Japanese, the odds against the Chinese were overwhelming. I do not think we shall hear much more of the Chinese fleet during the present war.

The hapless Hunanese army corps landed, without artillery and probably with scant provisions, on the Korean frontier, must fall an easy prey to the victorious Japanese army, or else fly precipitately into Manchuria. We may expect at any moment to hear of a second Chinese disaster like that of Ping-Yang, and a Japanese *coup de main* upon Newchwang.

JAPAN AND ENGLAND.

Anyhow, the Japanese triumph is most fortunate for England. The Japanese are our natural allies in the far East. They are a highly civilised, liberty-loving, progressive people, and well deserve their victory. Korea will be much better in the hands of civilised Japan than in those of barbarous China. The most interesting and important feature of the Japanese victory for England is that the Japanese are both able and willing to keep the Russian Power out of the Korean Peninsula.

THE CHINESE NAVY.

INTERVIEW WITH ITS ORGANISER.

A representative of the Central News has had an interview with a well known British officer, who for nine years held the post of organiser to the Chinese fleet, and during that time commanded the Northern Squadron, which took part in the recent naval battle of Yalu. It is not, of course, too much to say that the officer alluded to can only be Captain Lang.

"I am afraid," he said, "that the Chinese naval forces are not as I left them four years ago. There is splendid material in the men, but the inherent conservatism of the Chinese people, their absolute indifference to all that goes on outside their own country, and the want of anything like *esprit de corps*, are an immense bar to progress. When I was there the fleet was capable of doing anything; but it is too much to expect that the state of efficiency has been maintained. The fact is, the Chinese never expected to go to war. Such a thing as a war with Japan had never been contemplated. They treated Japan with the utmost contempt, and Japan, for her part, has the same feeling towards China. There is no doubt that the Chinese are less prepared for naval warfare than they would have been a few years ago. It is not that the ships are inefficient or the men wanting in courage; but they are essentially an eastern race, with the worst characteristics of eastern races fully developed. There is not the least patriotism amongst either officers or men. They are, however, as brave as one could wish—absolutely fearless of death, and I could not desire better material than the men of the fleet in my day. The officers are of a different class; they are indifferent to most things that do not tend to their personal advancement. I am not surprised to learn that the Chinese fleet did not seem in a hurry to offer battle. They are not likely to do this on any occasion, but when forced into a corner they will fight admirably, and in the long run they will gain the victory, in spite of their present reverses. In one respect the Chinese are better on land than on sea. Their armies are raised in provinces, and each is composed of men of the same province. There is, therefore, to be found something more approaching to a patriotic sentiment than exists amongst a body of men drawn, as were the crews of the ships, from different provinces.

"Admiral Ting is a most brave and capable man, and, personally, I would follow him anywhere. Many of the captains are less capable, and, with Chinese obstinacy, and ignorance, cannot be made to understand the importance of drill and discipline. I do not understand what is meant by the reference to the superiority of the Japanese in the matter of quick firing guns. The four Chinese ships of the *Ching-Yuen* class, which were added to the fleet of 1887, were admirably equipped. They were armed to the teeth, and were capable of a speed of eighteen knots. There could not be any superiority in the Japanese

fleet in the matter of quick-firing guns, and if they really vastly excel the Chinese in their armament, as the latest reports say, it would confirm the impression that the Chinese fleet has not kept pace with the times since the withdrawal of European influence. There was torpedo practice every week in my day, with constant 'exercise' and drill of every kind day and night. The officials did not like it. They would rather have been ashore and let things go along as they might; but I told them that I had a duty to perform and that it must be done. No doubt things have altered since. Even in my time there was some difficulty in preventing men being brought into ships through family influence, and put into positions for which they were unfit owing to want of training. I came across a few cases and stopped the practice. But there is nothing to prevent that kind of thing now, as there has been no better influence, since that of the Europeans was withdrawn, to keep the officers up to their work."

"When they do not readily assimilate European ideas?" On the contrary, they hate them and are. The official classes are not less conceited and obstinate than they were when they first came into contact with Western nations, and the Japanese are the same, and perhaps a trifle worse. Both races are eminently tractable, but the colossal conceit of the Mandarins is only surpassed by their ignorance. It is probably true to say that 'if you scratch a Russian you will find a Tartar.' It is certainly true to say that if you go below the mere surface polish of a Chinaman you will find a savage."

"And yet you say China will win?" "Yes, for her resources are infinite."

"But there are rumours already of a Japanese descent upon China?" "I think that very unlikely. Even if the Japanese troops could effect a landing in effective numbers they would gain little by such a manoeuvre, and in the end they would be driven into the sea by the hordes of troops brought against them. Japan has a good deal of pluck and hates China, but she cannot beat her."

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 9.

The *Standard* says that there is little prospect of the united action of the Powers in response to China's appeal for help to terminate the war. Russia and France are willing to intervene, but Germany considers that intervention would be useless.

London, November 10.

The Prince of Hesse is recovering.

The Powers advise that China should make overtures for peace to Japan, China receiving the moral support of the Powers. Germany is still inclined to hold aloof.

The Hovas are centring on Diego Suarez.

London, November 13.

The *Times*, in a leading article says, that the utter collapse of China raises troublesome political problems, and Japan must not suppose that there is no limit to her expansion at China's cost.

London, November 14.

The marriage of the Emperor of Russia will take place one day next week, but the day has not yet been fixed.

The United States have offered to mediate between China and Japan.

(FROM THE "N. C. DAILY NEWS.")

London, November 6.

A bomb, which it is believed was intended for the adjoining house, occupied by Sir Henry Hawkins, who has recently sentenced several anarchists to various terms of imprisonment, has smashed the front door and all the windows of the Hon. Reginald B. Brett's house in Mayfair, but nobody was hurt.

The death is announced of Mr. John Walter, one of the principal proprietors of *The Times*.

General Sung's troops have been defeated at Fenghwang, and now occupy a mountain-pass on the road to Peking, where the Japanese intend to endeavour to turn their position.

London, November 8.

Congressman Wilson of Virginia, the author of the present Tariff Bill, has been defeated in his election to Congress.

The Amir of Afghanistan, who has been lately suffering from hemorrhage of the kidneys, has quite recovered.

The Chinese loan has been largely covered.

London, November 9th.

The remains of the late Czar Alexander III. were conveyed on Tuesday evening by torchlight from the Palace to the Church in Livadia and lay in state all Wednesday.

Yesterday they were conveyed in a man-of-war to Sebastopol, and from thence to Moscow and St. Petersburg.

Dinners are being given to the poor at every stopping place, and immense precautions are being taken.

[FROM JAPANESE PAPERS.]

Fusan, November 14.

The Tai Wōn-kun has changed his opinions since the arrival of Count Inouye, and is inclined to follow progressive principles. It seems that he is anxiously waiting the report of Prince Wi-hwa, which is expected to cause some remarkable changes in the relations between Japan and Korea.

Nagasaki, November 14.

The British war-vessels *Centurion*, *Mercury*, and *Daphne* proceeded to Chefoo yesterday.

Fusan, November 14.

Prince Wi-hwa arrived here safe to-day.

Hiroshima, November 15.

(The following telegram, said to have reached Tokyo yesterday, appears in to-day's *Asahi*.)

As England, France and Russia have all great interests at stake, in the East they will intervene between Japan and China if requested to do so, but Germany will stand aloof from these Powers. The three Powers above mentioned will maintain this attitude until Japan accepts their proposals for peace, but if Japan definitely refuse their overtures, nothing more can be done as none are authorised to bring about peace by demonstration of force. At all events the actual intervention can not commence until after the fall of Peking.

Kobe, November 16.

H.I.H. the Crown Prince, who passed through Kyoto at 3.02 p.m., arrived here at 5.30 p.m. Among the large number of persons who assembled to welcome the Prince, were high local officials, peers, parliamentary representatives, and others. The students of various common schools densely thronged both sides of the Imperial route. The Prince was conveyed to the official residence at Benten-hama.

Hiroshima, November 16.

A telegraphic message despatched by the Chief of the Japanese Commissionariat at Fusan on the 15th inst., states that a report from Lieutenant Suzuki, who was despatched to Pu-ju, has reached Fusan to the effect that from 8 a.m. up to 11th a.m. on the 11 inst. the Lieutenant's soldiers engaged a large number of Tong-haks between Pu-ju and Won-sung, and the rebels were scattered. Three Japanese soldiers were wounded; some 136 dead insurgents were discovered and the number of wounded is not yet ascertained. A large quantity of warlike articles were captured.

A telegram dated the 16th inst. despatched by Lieutenant-Colonel Ito at Ninsen, announces that Count Inouye, the Japanese Minister, has decided to despatch a party of Japanese guards now in Seoul to prevent the Tong-haks escaping into Kang-won-do and Hang-yong-do. The soldiers left the Korean capital on the day of the despatch of the message.

It is stated the temporary buildings of the Imperial Diet will be used as a Military hospital.

The attack on Port Arthur commenced on the 15th. A report of the battle is expected to reach here on the 19th or 20th.

An official telegram relative to the condition of the enemy at Mo-tien-ling, which reached here this morning, states the number of Chinese soldiers defending Mo-tien-ling is said to be over 25,000. They are commanded by Generals So Kei and Ko Dai-cho, Yuan also being on the staff. Several strong forts have been constructed there, and the foreign employes, who lately fled from Chiu-lien, have joined them. The best troops of the enemy are the "Mei" army,

but they are only in small numbers, and the rest are newly raised levies.

Shanghai, November 16.

General Wei, commander of the Chinese troops at Phyang-yang, has been beleahed.

The *Sydney* affair has been laid before the French Government, which has deemed the actions of the Japanese authorities in connection with the affair to be proper. This has been intimated to the Japanese Government.

Hiroshima, November 16th.

In the Chinese Navy one foreigner has been newly-appointed as Captain, and two as Lieutenants.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Oriental Hotel, 87, Main Street, on Mondays and Thursdays in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

SOLUTION TO PROBLEM No. 148.

WHITE. 1—Q to Q Kt sq. 2—B to B 4 ch. 3—Q to Kt 8, mate
BLACK. 1—K x R 2—K x Kt
if 2—K to K 4
3—Kt to B 7, mate
2—B to K 7 ch. 3—Q to Kt 8, mate
if 2—K to K 4
3—Kt to B 7, mate
2—Q to K 4 ch. 3—Q x B, mate
2—Q checks 3—Q or B, mates accordingly.
Correct solutions received from Diganma, Omega, J.D., and Shogi.

PROBLEM No. 150.

By A. S. MACKENZIE, Jamaica.

(This splendid composition obtained the first prize for three-movers in the International Tourney of the *Staats Zeitung*.)

BLACK.

WHITE.

White to play and mate in three moves.

PROBLEM COINCIDENCES.

The *Newcastle Weekly Chronicle*, under the caption of "Problem Coincidences," lately published the following positions:—

1. By Mrs. Baird, October, 1893.—BLACK—K at Q R 8, Q at Q Kt 8, R at Q R 7, B at Q Kt 7, Pawns at K Kt 2, and K Kt 6. WHITE—K at Q B 6, Q at K R 8, Rooks at K R sq., and Q R 8, B at Q B 3.
2. Tourney Problem, *Leeds Mercury*, July, 1894.—BLACK—K at K R 8, Rooks at K R 7 and K Kt 8, B at K Kt 7, P at Q B 6. WHITE—K at Q B 5, Q at Q R 5, Rooks at K R 8, and Q R sq., B at Q Kt 7.
3. By G. C. Heywood, September, 1873, and often republished since.—BLACK—K at K R sq., Q at K Kt 2, R at K Kt sq., P at K R 2. WHITE—K at Q R 6, Q at K R sq., R at Q R 8, B at K B 6.

These problems are all two-movers, and their resemblance to each other is certainly remarkable. Commenting on this subject, the *Bradford Observer* says:—"It only remains for someone else to unearth a fourth variant with the King in the

left-hand top corner as a fitting climax." Extraordinary as it may appear, we are able to do this. The following position has been known to us (although ignorant of the authorship) for years, and has, at various times, been shown to local players. It bears a perfect family likeness to the three positions above, but is, in our opinion, the most artistic of the batch. Mr. Heywood has long been recognised as one of the leading and brightest of English composers; Mrs. Baird also enjoys a high reputation; the *Leeds Mercury* position savours of plagiarism; who will lay claim to the paternity of our contribution to the list?

PROBLEM No. 151.

BLACK.

WHITE.

White to play and mate in two moves.

TARRASCH V. WALBRODT.

Passing over the third game, which was the solitary drawn game of the eight played, we now give the fourth. In this, again, Tarrasch shows to great advantage, his treatment of the ending being exceedingly fine and masterly. The score and notes are from the *Daily News*:—

GAME No. 181.

RUSSIAN DEFENCE.

WHITE. Tarrasch. 1—P to K 4 2—K Kt to B 3 3—Kt takes P 4—K Kt to B 3 5—P to Q 4 6—B to Q 3 7—Castles (b) 8—R to K sq. 9—B to K B 4 10—P to B 3 11—Kt to K 5 12—Kt to Q 2 13—Q Kt to B 3 14—P takes Kt 15—B to Kt 3 16—Q to B 2 17—B to K B 4 18—K to R sq. 19—Q to Q 2 (g) 20—Kt to Q 4 (i) 21—B to K Kt 5 22—Q to B 4 23—Q to R 4 24—R to K 3 25—Kt takes B 26—P to K Kt 4 (m) 27—Q R to K Kt sq. 28—R takes P 29—B to B 6 30—R to R 3 31—Q to R 8 mate.
BLACK. Walbrodt. 1—P to K 4 2—K Kt to B 3 3—P to Q 3 4—Kt takes P 5—P to Q 4 6—Q Kt to B 3 (a) 7—B to K 2 8—Kt to B 3 (c) 9—Castles 10—B to Q 3 (d) 11—R to R sq. (e) 12—K Kt to Kt 5 13—Q Kt takes Kt 14—B to Q B 4 (f) 15—Kt to R 3 16—P to K Kt 3 17—Kt to B 4 18—P to Q B 3 19—B to K 3 (h) 20—Q to Q 2 (j) 21—B to B sq. 22—Kt to Kt 2 23—P to Q R 3 (k) 24—P to Q B 4 25—Q takes Kt. (l) 26—P to K Kt 4 27—P takes P 28—Q R to B sq. (n) 29—B to K 2 30—B takes B

NOTES (CONTINUED).

(a) This course is preferable to 6..... K B to K in conjunction with 7..... Castles and 8..... Q B to K 4.
(b) The books give 7 P to B 4, but most strong players now recognise that in close games development is more effective than premature attack.
(c) By retreating this Knight to avoid further trouble, Black loses a move as compared with the French Defence. Still we do not see any better move.
(d) Our choice would have been 10..... R to K sq.
(e) And now we should have preferred 11..... Kt to K 2.
(f) An ingenious attempt to divert the Black K B, so as to allow White to play B to K Kt 4 and B to B 6.
(g) This lets in the Bishop. We should have preferred 20..... Kt takes Kt, 21 P takes Kt, B takes P, &c.
(h) As he intends playing..... P to Q B 4 to disestablish the Knight he played..... P to Q R 3, to prevent B to K 5. But..... K R to B sq. was preferable.
(i) In this difficult position Black might have placed reliance on 25..... P takes Kt, for if then 26 P to K Kt 4, 26..... K R to B sq. followed by..... Kt to B sq., &c.
(m) White did not play 26 R to R 3 at once, because after..... P to K R 4 he would have been compelled to lose time to prevent..... Q to Kt 5.
(n) Rather a helpful move, but neither 28..... Kt to B 4 nor..... Kt to R 4 would have availed to avert the inevitable defeat.

In a new chess column which Mr. John A. Galbreath is now editing in the *New Orleans Daily*

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

States, he gives the following as a curious calculation recently furnished to the *Schachzeitung* by Herr Richard Kobb, of Augsburg:—"Place a Knight on Q R sq. He commands two squares. On Q K square he commands three squares, &c., &c. Sum for the 64 squares=336. Place a Bishop on Q R square. He commands seven squares. On Q K square, he commands seven squares, &c., &c. Sum for the 64 squares=560. Continue the process with one of the Rooks. Wherever placed he commands 14 squares, the sum for the 64 squares being $64 \times 14 = 896 = 336 + 560$, precisely the same number as for the Knight and Bishop combined. From this it would appear that in theory a Bishop is better than a Knight by 224 points in 560. Such conclusion is not verified, however, by actual play over the board." Herr Kobb's figures are interesting, but there is one obvious objection to the use which he makes of them. The total of 560 corresponds not to one Bishop, but to two Bishops which move on opposite colours. It follows that for the purpose of numerical comparison the number 336 ought to be placed in juxtaposition not with 560 but with the half of 560, which is 280. The consequent theoretical deduction suggested is that the Knight is better than the Bishop in the proportion of 6 to 5. In this matter, however, as it is hardly necessary to add, theory and practical experience do not quite agree.

MR. J. H. BLACKBURN.

The appended game, at the odds of the exchange and move, was recently played at the Hastings Chess Club against Mr. E. Jukes and Mr. A. Muller in consultation. Mr. Blackburne simultaneously conducting a second game against two other members of the club, to whom he conceded the odds of a Rook.

GAME No. 182.

"KUY LOPEZ."

Remove White Q Kt and Black Q R.

WHITE.	BLACK.
The Allies.	Mr. Blackburne.
1-P to K 4	1-P to K 4
2-Kt to B 3	2-Kt to Q B 3
3-B to Kt 5	3-P to B 4
4-P to Q 4	4-B P takes P
5-Kt takes P (a)	5-Kt takes Kt
6-P takes Kt	6-P to B 3
7-B to Q B 4 (b)	7-Q to R 4 ch.
8-B to Q 2	8-Q takes K P
9-B to B 3	9-Q to K Kt 4
10-P to K Kt 3 (c)	10-P to Q 4
11-P to K R 4 (d)	11-Q to B 4
12-B to B sq.	12-Q to B 2
13-B to R 3	13-B takes B
14-R takes K	14-Kt to R 3
15-Q to K 2	15-B to B 4
16-R to R 2	16-Castles
17-B to K 5	17-Q to K 3
18-B to B 4	18-Kt to Kt 5
19-R to Kt 2	19-P to Q 5 (e)
20-P to Kt 3 (f)	20-B to Kt 5 ch.
21-K to K sq.	21-B to B 6
22-R to Q sq.	22-P to Q Kt 4
23-K to Kt sq. (g)	23-Q to B 4 (h)
24-R to K Kt sq.	24-P to K R 3 (i)
25-P to K 3 (j)	25-P takes P
26-R takes P	26-P to Kt 4
27-P takes P	27-P takes P
28-Q to K 7	28-R to B 2
29-Q to K 8 ch.	29-K to R 2
30-R to K 2	30-B to Kt 5
31-R to K 6	31-P to Q 6
32-R takes Q P	32-B to B 4 ch.
33-K to Kt 2	33-P takes B
34-P takes P	34-R to K Kt 2 (k)
35-K to B 3	35-Kt to B 3
36-R takes Kt	36-Q to Kt 5 ch.
37-K to K 4	37-Q to K 7 ch.
38-K to B 5	38-Q takes Q (l)

And the allies resigned.

Notes.

- (a) 5-B takes Kt, Q P takes B; 6-Kt takes P should have been the continuation. The text move loses a valuable Pawn.
- (b) 7-B to K 2 would have been better now, as the Bishop becomes shut out in any case, after Black's 11. P to Q 4. After 7-B to K 2, Q to R 4 ch. 8-P to B 3. White has still a fair game, for if Black replies 8..... P to Q 4, instead of losing a move, as in the text, they could play 9-B to Kt 4, &c.
- (c) This is already weakening. White would have done better to Castle, and if 10..... P to Q 4, then 11-P to B 4, with a good attack.
- (d) Still more weakening; 12-B to B sq., or B to K 2; and if 11..... B to Q 4, then 12-B to Q 4, &c.
- (e) To prevent Castling.
- (f) 13-P to R 3 should have been played.
- (g) Intending 24-P to B 3, which cannot be played now, because of 24..... Kt to E 6 ch. 25-B takes Kt, Kt takes P, &c.
- (h) To guard the centre, for if 24 P to B 3 (which is the threat) then..... P takes P; 25 Q takes B, P, Kt to E 6, &c.
- (i) Very well played again. Still keeping the object in view of preventing P to B 3, which would release the R at Kt 2.
- (j) 25 B to Q 6, R to B 6, would have staved off the conclusion momentarily, for White could only move the Bishop again, then 26..... P to Q 6; 27 P takes P, P takes P, followed by B to Q 5 and P to Kt 4.
- (k) A subtle trap. If 35 R to R 3 ch, then 35..... Kt to R 3 dis. ch; 36 R to K 3 if 36 Kt to R 2, then 36..... B to Kt 8 ch, and mate next move. R takes R ch; 37 K takes R, Q to Kt 5 ch; 38 K to R 2, Kt to Kt 8 mate.
- (l) This game was played by Mr. Blackburne in his happiest style.

The *Baltimore News* gives the following as a quotation by Twiss, the "learned trifler," in his work on Chess (1787) from Olaus Magnus's *History of the Goths, Swedes, and Vandals* (1555)—in Latin:—"It is the custom amongst the most illustrious Goths and Swedes, when they would honestly marry their daughters, to prove the disposition of the suitors that come to them, and to know their passions especially by playing with them at chess. For at these games their anger, love, peevishness, covetousness, dulness, idleness, and many more mad pranks, passions, and notions of their minds, and the forces and properties of their fortunes are used to be seen; as whether the winner be rudely disposed, that he will indiscreetly rejoice, and suddenly triumph when he wins; or whether when he is wronged he can patiently endure it, and wisely put it off."

REPORTS.

The American steamer *City of Rio de Janeiro*, Captain J. T. Smith, reports.—Left Hongkong the 7th November, via Nagasaki and Kobe. Arrived at Yokohama the 14th November at 7.15 p.m.; had fine weather throughout the passage. Passage, 7 days 11 hours from Kobe, 27 hours 27 minutes.

The British steamer *Victoria*, Captain J. Pantou, R.N.R., reports:—Left Hongkong the 6th November, Shanghai the 10th, and Kobe the 15th at 11.30 a.m.; experienced fine weather throughout the passage.

LATEST COMMERCIAL.

IMPORTS.

• The same dreary tale of stagnation in imports generally. Yarns.—Sales reduced to a minimum and with the large Cotton crops of the present year buyers expect lower prices for what they do buy in Yarn or Cloth. Shirtings.—Still some little enquiry in qib. for "spot" or early arrival. Fancies.—A few retail sales are not enough to make a market. Woollens.—Slow and dull, deliveries of former purchases are none too brisk and seems to hang fire.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8 1/2 yds. 30 inches	\$2.25 to 2.75
Grey Shirtings—9 1/2 yds. 30 inches	2.50 to 3.25
T. Cloth—7 1/2 yds. 32 inches	1.60 to 1.90
Indigo Shirtings—12 yds. 44 inches	1.70 to 2.35
Prints—Assorted, 21 yards, 30 inches	1.20 to 1.75
Cotton—Italian and Sateen Black, 32 inches	1.20 to 1.75

	PER YARD.
Velvets—Black, 35 yards, 22 inches	0.85 to 0.95
Victoria Lawn, 12 yards, 42-3 inches	0.85 to 1.00
Turkey Reds—2.0 to 2.4 1/2, 24/25 yards, 30 inches	1.55 to 1.65
Turkey Reds—2.8 to 3 1/2, 24/25 yards, 30 inches	1.75 to 1.95
Turkey Reds—3.8 to 4 1/2, 24/25 yards, 32 inches	2.20 to 2.50
Turkey Reds—4.8 to 5 1/2, 24/25 yards, 32 inches	2.70 to 3.00

WOOLLENS.

	PER YARD.
Flannel	\$0.27 1/2 to 0.45

No. 308, Bombay	—
No. 169, Bombay	—

MISCELLANEOUS.

Some enquiry for favourite assortments; but the trade generally is sluggish with no improvement in value.

	PER PIECE.
Flat Hats, 1 inch	\$3.30 to 3.35
Flat Hats, 1 inch	3.40 to 3.45
Round and square up to 1 inch	3.50 to 3.45
Iron Plates, assorted	3.50 to 3.65
Sheet Iron	4.45 to 4.60
Galvanized Iron sheets	8.75 to 9.00
Wire Nails, assorted	5.50 to 5.90
Iron Plates, per box	6.50 to 6.75
Pig Iron, No. 3	1.50 to 1.65

KEROSENE.

Market steady. Two cargoes have come in, one by steamer from Batoum, the other by ship *Cavador* from New York. These arrivals bring the stock up to 600,000 cases, and dealers do not seem in a hurry to operate. No change in quotations, the oil being held in strong hands.

	PER TON.
Chester	\$1.75 to 1.77 1/2
Comet	1.72 1/2 to 1.75
Devoe	1.72 1/2 to 1.75
Russian Anchor	1.72 1/2 to 1.75
Russian Moon	1.70 to 1.72 1/2

SUGAR.

Brown—Fresh arrivals from the south have increased the stock. Prices nominally unchanged, but in effect sales of any magnitude lower values would have to be accepted. White—Unchanged at last rates.

	PER TON.
Brown Talao	\$4.30 to 4.40
Brown Manila	5.20 to 5.35
Brown Daitong	3.40 to 3.50
Brown Canton	3.70 to 4.25
White Java and Penang	7.00 to 7.40
White Refined	7.00 to 9.50

EXPORTS.

RAW SILK.

Small trade at prices which show a tendency to decline. Holders must make up their minds to accept a reduction if they want to do a large trade. Meantime, prices at the Produce Exchange show fairly strong for December and January delivery.

QUOTATIONS.—(NEW SILK.)

URBANA-CHAMPAIGN

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1894.

January 13th, 1894.

THE NEW TREATY

COPIES of the NEW TREATY, in Pamphlet form, are now on Sale at this Office, Price 50 Sen.

YOKOHAMA: SATURDAY, NOV. 24TH, 1894.

SUMMARY OF NEWS.

PORT ARTHUR was taken by storm on Wednesday evening last. The fighting was severe and continuous. The torpedo-boats engaged the forts on the sea side, but the fighting fleet took no part in the assault.

THERE has been another fire at Hiroshima.

THE first Football match of the season was played to-day.

PRINCE ARISUGAWA (Junior) has been ordered to China on military duty.

THE Aomori-Tatekawa section on the Aomori Railway opened for traffic on the 12th inst.

H.I.H. THE CROWN PRINCE is expected to leave Hiroshima about the 23rd inst. for Tokyo.

THE Yokohama General Hospital starts the new year with a debit balance of \$27.83.

INTRIGUE is still undermining the Councils of the Korean Ministry and further trouble is anticipated.

A DULL game of cricket, played with baseball bats and balls, took place on Saturday in very chilly weather.

THE Oriental Hotel, Yokohama, was gutted by fire on Monday night, and some of the guests had a narrow escape.

ACTING upon the advice of Viscount Sano, President of the Japan Fine Art Society, a number of prominent masters in various styles of

crafts have agreed to manufacture immediately some fine art objects to present to H.I.M. the Emperor, who is staying in bare, comfortless apartments at Hiroshima.

IN the infectious diseases ward of the Yokohama General Hospital eight small-pox patients were admitted during the year.

PUBLIC subscriptions received by the Naval Department amounted to yen 423,056 in round numbers on the 19th inst.

MR. ISOBE SAISHIN, Superintendent of the Taisei Sect, has been released from his post by the Minister of Home Affairs.

LIEUTENANT-COLONEL ICHJI, of the Artillery, an Attaché in the Japanese Legation in France, returned home on the 16th inst.

A MEETING is to be held next week to decide whether the Victoria Public School shall be given up at the end of the year or not.

THE mortal remains of the late Mr. George Blakeway were followed to the grave on Saturday by a very large number of residents.

THE Doshin Kaisha has decided to discontinue the direct export of silk to France, and the Company's branch at Lyons has been closed.

THE steamer *Mount Lebanon*, loaded with Rangoon rice, ran on to one of the forts at the entrance to the Bay on Thursday morning but got off next day.

EIGHT patients were admitted to the general ward of the Yokohama General Hospital during the past year, of whom seven were discharged and one died.

SOME female stowaways were discovered on the N.P. steamer *Victoria* just before she sailed for America last Saturday. A Japanese man was concerned in their escapade.

KAWAKAMI OTOJIRO, the *soshi* actor, who has been visiting Sôul, the Yalu, Tai-dong, Chiu-lien, and Phyang-yang, returned to the capital on the 21st inst.

FIVE boxes of bandages, each containing 1,200 pieces, manufactured by H.I.M. the Empress and the Court Ladies, have been presented to the Red Cross Society.

THE telegraph wires between Kwa-yuen-ken, Chiu-chow, and Talien are completed, and the workmen are now engaged conducting wires between Wi-ju and Talien.

THE number of telegraphic messages sent by members of the Imperial family, peers, Ministers of State, Local Governors, and others inquiring into the safety of H.I.M. the Emperor after the recent fire at Hiroshima, exceeded 720.

MESSRS. OGOSHI, Japanese Consul-General at Shanghai; Arakawa, Japanese Consul at Ninsen; Nakajima and Tei, Secretaries, and Matsukata, an Attaché in the Japanese Legation in Korea, have been released from their posts.

THE torchlight procession organised by patriotic Japanese of Yokohama on Saturday evening was somewhat of a farce. The police refused permission to light many of the torches, and a dispute arose over the refreshments, which, though promised to the subscribers, were not forthcoming.

MATTERS relative to military prisoners and spies have not been fully provided for in the existing law, and the Authorities propose to add clauses having reference to them. The matter has already been discussed and decided by the

Privy Council, and the additional rules will shortly be promulgated by an Extraordinary Ordinance.

THE Kanagawa Prefectural Assembly is much disturbed over the police expenditure, especially in regard to the disbursement of funds voted out to the Odawara local office.

MARQUIS KURODA, ex-chief of the Fukuoka clan, has sent a sum of money to the Governor of Fukuoka, asking the latter to distribute it among the poor families of the Fukuoka residents engaged in the present war. Residents entitled to receive this support exceed 2,000, and a monthly sum of yen 656 will be distributed among them. The Marquis intends to support these people during the war.

A MEETING of the Committee for the Investigation of Methods for the Prevention of Earthquake Disasters took place on the 21st inst., and was attended by Professor Kikuchi, Chairman, and twelve commissioners. Mr. Makino, Vice-Minister of Education, was also present. Messrs. Omori, Mano, Tanakadate, Tatsuno, Koto, Nakamura, and Tanabe, who were despatched to Yamagata and Akita to investigate the recent big earthquake, laid their reports before the assembly. The committee then proceeded to discuss the construction of buildings capable of resisting earthquakes. Finally Messrs. Tatsuno, Nakamura, Sone, and Katayama were chosen to form a special committee to draw up a scheme of such constructions. The results of the investigations are to be circulated in the earthquake districts.

REUTERS telegraphs:—The body of the late Czar reached Moscow on Sunday, November 11th, escorted by the Emperor Nicholas II. and all the Royalities, and then lay in State in the Cathedral in the Kremlin. The funeral took place on the 19th with great ceremony. It has been generally noticed in St. Petersburg that the Czar missed no opportunity of honouring the Prince of Wales. The marriage of the Czar was to take place on Friday. *The Times* Tientsin correspondent telegraphs that Russian officers have been instructed to maintain a conciliatory attitude towards British naval officers. Further reports from the North state that the Emperor of China and the Court are preparing to leave Peking. *The Novosti* applauds Great Britain for seeking to terminate the Korean war before it becomes too late, and condemns the policy of Germany in declining to join with other Powers. Japan, while thanking the United States for its friendly offices, has replied that China must approach Japan directly on the subject of peace. *The Times* says that at Odessa two transports that were filled with troops have been suddenly ordered to Vladivostok. Her Majesty's first-class cruiser *Gibraltar* has started for the China Station.

THE week's review of the Import market discloses nothing favourable in any line. Woollens, which usually command a good business at this time of year, are in very poor request. Yarns and Grey Shirtings are in the same position, while Fancies are unchanged. Metals are inactive. Kerosene is unchanged from last week, holders declining to lower rates. The recent demand for Sugars continues, with no fresh business of importance to report. A moderate trade has been done in Raw Silk at irregular quotations, and it looks now as if consumers had provisioned themselves for some time. Nothing doing in Waste. The Tea season is now all but dead, with no hope of revival till the Spring. Exchange has been dropping steadily

CHICAGO, ILL. AT
URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Not one Tokyo journal has yet abandoned the discussion of the terms of peace to be obtained from China. The *Nichi Nichi* calls upon the public in large, and especially the Members of Parliament, not to fail to advise the Government on this important subject. It also invites the attention of the Government to the grave duty of paying more than usual heed to the people's voice in such a national crisis. "The Ministry's aim must be to terminate the war in the way best calculated to promote the interests of the empire. In choosing that way, they should not in the least fear the disaffection of the military class or flatter the wishes of the Members of the Diet. Beaconsfield gained all that was necessary for his country without losing a drop of English blood. Gortschakoff failed to obtain what he ought to have obtained after seeing the enemy's strongholds destroyed. But the *Nichi Nichi* reserves its own opinion as to the exact terms of peace that should be formulated. It appreciates the value of silence on certain occasions. The *Nippon* remarks that Formosa, so important from commercial and military points of view, must at all events be taken. Having detailed what an immense expenditure must be incurred by Japan in supporting Korea and protecting Japanese interests in the North of China after the war, the Independent paper declares that Formosa will have to be annexed as a resource from which to draw receipts at least equal to these prospective expenditures. Turning to the *Kokumin*, we read that China has lost more than 6,000 in killed, wounded, and prisoners, and sees a not inconsiderable part of her territory occupied by an enemy whose forces threaten to seize the gates of Peking itself within a few months. Under these painful circumstances, China would best consult her interests by making overtures of unconditional surrender direct to Japan. Foreign intervention does not promise to succeed better this time than when China solicited the mediation of Russia after the combined attack of England and France. What Western State is so quixotic or silly as to undertake a task of intervention unlikely to bring a reward bearing reasonable ratio to the danger incurred? The *Nippon* and not a few other papers tell the Chinese Government to be fully convinced that though Europe has many Christian men, it has not a solitary state so virtuous and upright in its dealings with its neighbours as to deserve the name of Christian. The *Kokkai* enters a strong protest against certain Metropolitan papers that seem to be intoxicated by the victories thus far won, and unscrupulously advance claims upon Chinese territory utterly out of proportion to the objects for which the war was undertaken.

The *Yiji* has still much to say about Korean reform. It urges the advisability of celerity before all things. As time goes on, many an obstacle now unlooked-for may present itself. The Koreans may come to see that they can disobey the Japanese Authorities with impunity. The crafty politicians of the Peninsula may learn to contend that Japan has no right to interfere with the internal affairs of an independent State as Korea is, and that knowledge may precede their sense of gratitude for what Japan has done for their country. The civilized world takes it for granted that Japan's interference with Korean affairs is single-minded and not at all tainted by ambition. Little reflection is therefore needed to see that the world is more ready to laugh at any hesitation Japan may show in pursuing the path she has commenced to tread, than to blame her for any fresh display of energy in leading the little Kingdom forward toward civilized progress.

The *Shin Choya* urges the Government and the Diet to take steps at the earliest opportunity to have the military forces increased. Hitherto it has sufficed for Japan to possess military strength for the defence of her territories against foreign invasion. In the future, however, her

position and influence in the politics of the world render it advisable that her armaments should have more than merely defensive competence. The Diet, in its 8th session, will neglect its plain duty unless it fully deliberates upon this subject, the political and commercial importance of which is only too clear.

The English Postal Savings Bank, writes the *Hochi*, had last year, in round numbers, 5,740,000 depositors, with £80,600,000 to their credit. This means that the Bank received a deposit from one in every seven subjects, and that the average sum deposited was over £14 per head. In Japan, the Savings organization of the same description had *yen* 24,000,000 deposited by 98,000 persons, which means that only two out of every 100 Japanese were depositors, and that the average sum deposited was *yen* 24. These figures show that the Japanese depositors belong to richer classes, comparatively speaking, than the prudent and frugal British depositor. Twenty-four *yen* in Japan is quite a respectable sum. It is not therefore too much to say that the lower classes of Japan have not yet developed the habit of saving, there being only two or three private agencies in the whole empire to receive the petty savings of the masses. Such a record is emphatically opposed to the prospect of Japan's rising as a new Power of any great strength. Nothing, the Progressionist organ proceeds, should be deemed more important by patriotic Japanese than to see savings banks founded everywhere throughout the country.

The Japanese members of the Diet are declared by the *Nippon* to be mere children in parliamentary affairs. The Government can silence them on a legislative or financial question of any complexity by spreading before them an explanation couched in technical terms and complicated by intricate figures prepared in a single night. Such ignorance is incompatible with the proper discharge of their legislative and financial functions. Now-a-days, when everything other than the war is lost sight of by the public, the members, recognising that it belongs to an obsolete school of statesmanship to consider a legislator above the details of state papers and the intricacies of financial arithmetic, ought to betake themselves to the study of law, politics, finance, and figures.

Speaking of the War Loan Notification issued by the Minister for Finance on the 22nd instant, the *Nichi Nichi* hopes to see the Loan easily and successfully floated as its predecessor was, two months ago. The state of the money market of Japan has not, in its opinion, changed appreciably since the first loan was raised, and people being as patriotic as ever, there is no reason why the new loan should fare worse than its predecessor. The Finance Minister's precaution, shown in his proposing to receive 95 *yen* for a 100 *yen* bond, is doubtless wise and prudent, but the patriotic subjects of His Majesty will feel it a disgrace unless they prove it to have been unnecessary.

The *Yomiuri* has a leader headed "The War and Agriculture." The former Vice-Minister of Agriculture and Commerce, Mr. Mayeda Masana, in his present capacity of Chief Manager of the Dai Nippon Agricultural Society, has sent to every agricultural association in this country, a circular, the gist of which is that the agriculture of Japan, having for years past experienced the dominant influence of its rivals abroad, will, if left to itself, be soon reduced to a most deplorable condition. Therefore, the Japan Agricultural Society feels it a duty to draw up, at the earliest possible opportunity, a plan for an improved system of agriculture on the basis of national economy. The agriculture of a particular locality can no longer stand aloof in happy seclusion from its rivals at home and abroad. A purely local association for the improvement of this art, however perfect its organization and however strenuous its efforts, would find itself unable to accomplish anything remarkable. In view of this helplessness on the part of

an isolated associations, the Japan Agricultural Society, with the object of centring in itself the labours of all brother institutions in the country, invites a grand meeting of agriculturists representing Prefectures, Provinces, or Districts, to be held in Tokyo for three days from the 1st to the 3rd of December. Referring to the above circular, the *Yomiuri* entirely shares the opinion of the Association represented by Mr. Maeda, and declares the present to be the best possible time for rousing attention to the evils of lack of union and the importance of combination, because a notable object lesson in the results of defective combination is being taught by the Chinese armies in their frequent disgraceful defeats.

The *Yiji*, speaking of the strange and manifold phenomena shown by individuals and nations in their competition with one another, writes:—"The time is ripe for Japan to prove whether her power and energy suffice to make her the leading spirit in the East, or, what is vastly more important, to ensure her rise as the guiding star of civilization and progress in the whole world."

The *Mainichi* writes as follows about the probable future of the Chinese Empire:—"There has existed in China from time immemorial a political idea, embodied in these words, 'The State is the State of the State and not the State of one man.' All Chinese political changes have been the result of that idea. Any one whose prowess or virtue or both were sufficient to force the people into submission, could become Emperor of the Chinese. The present Manchu dynasty appears doomed to destruction and on its ruins another line of emperor is likely to rise. This old law of political mutation seems too firmly established to be abrogated. China, it is true, after the destruction of the reigning dynasty, may remain for a time in a state of anarchy, but that will end when a strong hero has forced his way to the throne of the old Emperors. The colossal Kingdom is not likely to share the fate of either Rome, India, or Poland. Among all future political changes in China, the most impossible is that she should experience the sorrows of Poland, for Japan, whose position is specially favourable for bringing about such a result, is not only against it, but even ready to prevent any other Power or Powers from accomplishing it."

The *Kokkai* believes that all the Chinese brought under Japanese rule by conquest in Northern China have declared themselves obedient and dutiful, and some of them have gone so far as to use the pronoun "our" before the word "Japan," as though they were already genuine Japanese subjects. Such a deficiency, nay absence, of national spirit, not to say patriotic fervor, proves the Chinese to be innate slaves, destined to grovel under the rule of a nobler race.

EDITORIAL NOTES.

JAPANESE BUSINESS ENTERPRISE AFTER THE WAR.

Now that victory after victory has been gained by the Japanese, observed Mr. Kaneko, Vice-Minister of State for Agriculture and Commerce, to a representative of the *Mainichi*, there is no need to enquire as to how the business of this country is affected by the war, seeing that its successful termination is not far off. It is more important to look forward to Japan's business prospects after the present war. On referring to the history of the United States of America after the great Civil War and to that of Germany after the Franco-Prussian War, we find, continued Mr. Kaneko, that in the first case the termination of the war gave rise to the sudden development of various enterprises in the Northern States which prospered for some years. In 1871 or 1872, however, the supply so far exceeded the demand that a serious panic seized the American market, involving the ruin of many merchants. That evil was avoided in Germany's case by the wise measures of the Iron Chancellor, who greatly encouraged

colonization. How Japan ought to proceed at this juncture is a question which requires the greatest deliberation, above all in the Department with which Mr. Kaneko is connected. The Noshomusho has therefore been holding consultations about the matter for some time past. The investigations being far from concluded, Mr. Kaneko can not yet give any definite opinion upon the subject, but he considers personally that the extension of direct exportation is of the greatest importance. The leading business men of Tokyo were consulted about this a few days ago, and their replies strengthened the opinion held by Mr. Kaneko as to the future of direct exportation. The Mitsui Bussan Kaisha, the Takeda Shokai, and other Companies, all of which are carrying on direct transactions with foreign merchants, are good proofs of the possibility of doing without outside aid. The foremost staple of Japan's direct exports, silk, requires thorough improvement to secure the extension of its sale. Japanese silk is considered by American and French weavers to be too brittle to be used as well, and can only be used as warp which, too, is not quite satisfactory. Japanese silk is not suited to the large American and European factories. This fact is owing to the diverse kinds of cocoons used, especially in Joshi and Shinshu. These cocoons are accumulated from almost every district in Japan, and even from the opposite coast of China, and the different qualities of silk obtained from them may well be imagined. It is therefore of vital importance that a radical reform should be effected in the manufacture of silk. If a little attention were paid to the procuring of cocoons, Japanese silk would obtain a better reception from European and American weavers.

CONGRATULATORY DEMONSTRATIONS IN UYENO.

The leading citizens of Tokyo have decided to hold a congratulatory demonstration in Uyenno Public Gardens to celebrate the victories won by the country, and to show how intense is the warlike spirit which pervades the people of Tokyo. An announcement published by vernacular newspapers informs us that every man over 15 years of age may join in the ceremony on paying a sum of 50 *sen*, and that a portion of the money thus obtained, and of donations from the citizens, will be presented to the families of the soldiers and marines who have been enlisted in Tokyo and are now at the seats of war. A Committee is to be organized from those who contribute 5 *yen* and upwards, and from those who are to take an active part in the project. Already some fifty distinguished citizens, including Marquis Hachisuka, President of the House of Peers, Mr. Kusumoto, President of the House of Representatives, Messrs. Sonoda, Okura, Yokoyama, and others, have consented to become projectors. All the newspaper offices of Tokyo are also to the fore. The date of the celebration is still uncertain, but it is believed that it will take place early next month. One item of the programme is the floating on the Shinobazu Pond in Uyenno of two men-of-war composed of wooden frames covered with paper, one of which is to represent the *Matsushima*, and the other, the *Ting-yuen*. The latter is to be set on fire by an imaginary shot from the former. The ships will be 40 yards long and about 16 yards wide.

AGITATION IN THE KANAGAWA LOCAL ASSEMBLY.

We have already made brief reference to a difficulty that has arisen in the Kanagawa Local Assembly, now in session, between the members representing the urban section and those who represent the rural section. The cause of the trouble is the construction of the local prison-house. Prison expenditure has been a bone of contention between the two parties since the establishment of the Assembly. The Kencho's bill used to divide the burden into two equal parts, one for the rural district and the other for the city proper, but as the former sends a larger number of members than the latter, the result of the discussion is invariably the imposition of twice as much on the urban,

as on the rural, section. Last year, however, the city members appealed so earnestly against this injustice that a resolution was made to divide the burden equally between the two sections. The principal cause of hostile relations between the two parties of the Assembly was thus removed, and for a while the deliberations went on peaceably. It had even been decided that the work of re-constructing the prison-house, which was originally to be finished in 7 years, should be completed in 5 years. These cordial relations did not last long, however, for at the meeting this year the country members again brought up the question of prison expenditure with the object of reviving the old method of dividing the burden. As a preliminary, one of them moved that, on account of the war and the drought this year, the period for re-constructing the prison-house should be postponed by one year. This motion was carried in spite of the violent protestations of the city members who then left the room and have not attended the deliberations since that day, the 13th instant. They are also dissatisfied with the Kencho, which has this year imposed double the burden on the city members that they considered their due. They resolved to resign in a body, but through the intervention of the Governor, they have been induced to desist from taking that step. They are now waiting to see what satisfaction they can obtain from the Governor, and for the present the Assembly is closed. The above particulars being taken from the *Mainichi*, which is prejudiced in favour of the city, we do not vouch for the impartiality of its information.

THE AMATEUR THEATRICALS IN TOKYO.

The public evidently looks forward with no little pleasure to the treat that will be afforded by the amateur theatricals in Tokyo next month. Already the demand for tickets has been so great that it is found necessary to repeat the performance on two consecutive nights—the 11th and 12th of December—so as to accommodate all the audience without uncomfortable crushing. We are requested to make this statement, and to add that purchasers of tickets will consult their own convenience and greatly assist the management by kindly selecting the night on which they desire to be present. It is now known that the pieces chosen for performance are "Uncle's Will" and "A Lord in Livery."

DEATH OF AN OLD RESIDENT.

A somewhat sudden death occurred yesterday afternoon in the taking-off of Mr. George Blakeway, who had been ailing for several weeks past and under medical treatment, but was not thought by his friends to be in a dangerous state of health, at least not in a condition likely to terminate in sudden decease. A few weeks ago, Mr. Blakeway had an attack of yellow jaundice, and when sufficiently recovered went up to Hakone, but did not appear on his return to have benefited much by the trip. Since then he had been able to get about, and had only been confined to his room during the past few days. But a rather sudden change occurred yesterday, and he passed painlessly away about three o'clock. Mr. Blakeway came out to the East in 1850, to a firm in Canton, and some years afterwards was in business in Hongkong on his own account, associated with Mr. Vaucher. Mr. Blakeway subsequently came to Japan—in the year 1868—where he has resided ever since, with the exception of occasional visits to Europe. Few men now living in the Far East have so long an acquaintance with the affairs of this part of the world as had the deceased gentleman, who will be missed by many friends and associates especially among the older residents.

The mortal remains of the late Mr. George Blakeway were interred in Yokohama Cemetery on Saturday afternoon amid most impressive ceremonies. The large concourse of residents who gathered at Christ Church, where the first part of the service was read by the Rev. E. C. Irwine, testified to the esteem in which the deceased gentleman had been held by all classes

of the community. Before the cortège reformed in the Churchyard, Miss Leach, who presided at the organ, played the Dead March in *Saul*, then the coffin was borne out, the bearers being Messrs. C. Jubin, A. Coye, S. Cocking, J. W. Hall, R. Ward, and J. Colomb; the chief mourners being the Directors and Manager of the Club Hotel. At the head of the procession were carried ten large stands of natural flowers sent by the Japanese employees of the Club Hotel. Behind these came two large garlanded cages of birds, also sent by the staff of the Club Hotel. The coffin and hearse was covered with wreaths sent by Messrs. C. Jubin, J. W. Hall, J. and P. Colomb, S. Cocking, A. Coye, Mrs. J. Ph. von Hemert and family, Dr. T. H. Tripler, Mr. A. Conil, Mr. and Mrs. G. Booth, Mrs. A. Hearne, Messrs. E. Knaff, J. Favre-Brandt, L. Boehmer, A. Unger, L. L. de Micheaux, E. Andreis, L. Biagioni, F. R. da Silva, J. Tanabeya, Kamataro, Tazuki, Y. Tatani, K. Masakichi, and Kinjiro. At the close of the service the birds were released, and the Rev. E. C. Irwine addressed a few remarks to the assembly. He said:—We would say farewell to our old friend and well known brother whose friends of many nationalities are gathered around to-day to commit his body to the ground; and we trust that in that great assembly of all peoples, nations, and languages, our brother and his friends may one day be found.

KINDLY INFORMATION.

The *Miyako Shimbun's* correspondent, who is following the steps of the First Army, writes that the native Manchurians are decidedly in favour of the Japanese. Although unable to communicate in spoken or written language what they would say, they express in dumb show that they hope for the ultimate success of the invaders. That seems a little incredible, although we are quite willing to believe that the natives meet with juster and more considerate treatment from the Japanese than from their own countrymen. The same authority states that the Manchurians constantly give secret information as to the whereabouts of mines or ground-torpedoes, thereby rendering an inestimable service to the First Army. They charge by no means exorbitant prices for the cereals and vegetables they have to sell, which are of a coarse and distinctly unpalatable nature. The fowls are excellent eating, however, and compare favourably with the Japanese *shamo* or *kashiwa*. Pork is the great national dish, as in most parts of the Chinese Empire, and it is described as being really very tasty.

ENGLISH OPINION ON THE WAR.

It will be remembered that two or three months ago the *Spectator* told us that national feeling was an almost unknown quality in the East, and that an army of 10,000 Chinese, landing at Nagasaki, could conquer Japan without any appreciable difficulty. It has now found out its mistake, and recognizes that the strong national feeling of Japan, manipulating European armaments with European skill, makes her a truly formidable power. The *Spectator* is not altogether pleased with the prospect. Hitherto war in Asia has been war with limited liability; undertaken when necessary without fear, and without a thought of reprisals. But now in all future operations in Eastern Asia "Japan must be reckoned with as if the people were white men. Japan cannot be coerced, or even bullied any more, for no Power could attack her without all the labour and expense and risk which would attend a European campaign." An ingenious avowal of the gospel of colour; but one that we are somewhat surprised to find in the columns of the humanitarian *Spectator*. One of the most glorious elements in the glorious destiny of "white men," lies, it appears, in their ability to coerce or to bully with impunity "yellow men," and "brown men," and "black men;" and it is to be a matter for grief to the "whites" that a race of "yellows" is now in a position to strike back. The attitude of *The Times*, that of welcoming a new-comer into the hierarchy of civilized nations, seems to us much more in accordance

with the principles that one of those nations ought to profess.

The *Economist*, in an able and temperate article, examines the situation from the point of view of the European trader and the European tax-payer. What such desire is, of course, peace, as speedily as possible and upon moderate terms. Whichever way the war ends, it is not, thinks this paper, likely to be in any way advantageous to Europeans. If the Chinese should win, they would probably demand an indemnity from Japan, and would for years after be less ready to listen to European remonstrances. On the other hand, if Japan should gain a complete victory, a new Power would have been born, which would compel the great Powers to increase the costly fleets they already maintain in the Northern Pacific. Japan, too, would for some time be a heady and excitable State, ready for fresh adventures, and not disinclined, perhaps, to ally herself firmly with some European Power in order to undertake some enterprise of the greatest moment. She will in fact try to become a conquering Power, and dependencies to govern. That would not be to the advantage of any European country, or of general civilization, and might indeed seriously hamper Europe in keeping order in Asia, a task which she accomplishes at present with very little expense to herself.

OCCUPATION OFFICES.

ACCORDING to the *Kokumin*, a civil office has been established by Field-Marshal Yamagata for the districts occupied by the Army under his command, and Secretary Konura has been entrusted with the management of matters relating to the office. As he is only manager of its business, it is believed that some competent person will be appointed at Head-quarters to be Governor of the First Occupation Office. As probable candidates, officers on the retired list are spoken of: for example, Admiral Count Kawamura and General Viscount Tani and Torio, it being considered advisable to give the post to such men rather than to civilians. No definite conclusion has been arrived at by the Government as to whether or not a distinct Administration Office is to be established for the districts occupied by the Second Army, some maintaining that as the two districts are in the same province of Shangkang and are not greatly apart from each other, they should be placed under one office. This point and that relating to the Chief of the first Occupation Office will be settled after the taking of Port Arthur. The *Hochi* says that should a retired General be appointed, the choice will fall on Lieutenant-General Viscount Torio, as he is with the First Army.

ILLITERATE MANCHURIA.

A CORRESPONDENT of the *Yomiuri Shimbun* would have us believe that the First Army on its northward march is constantly meeting with villagers still in sublime unconsciousness of the war. A great many of the peasants have never heard of Japan and have only the vaguest idea of the Pacific, which represents to them the ultimate boundary of the habitable globe. Still more remarkable is the fact that the majority are absolutely unable to read or write; most of them are even ignorant of the numeral ideographs and have invented certain signs to express their simple ideas of numbers. He who can read or painfully write at best a half-dozen characters is considered a man of superior education and is proud of his erudition. The common people are completely unacquainted with any Chinese dialect: they speak an old-fashioned, barbarous Manchu that is quite unintelligible. In making purchases there is no possibility of any chaffering or bartering; the Japanese buyer has only to keep on adding one coin to another until the seller is satisfied or the would-be purchaser refuses to give more. Withal the people are good-natured and simple in their tastes. They are very fond of gaudy colour, so that the Japanese uniform takes their fancy amazingly. They laugh readily and are given to practical joking among themselves. We suspect

that a good deal of this is greatly exaggerated. But from all accounts it would appear that the Japanese armies readily fraternize with the Manchurians, and that there is very little of the feeling of being in a hostile land.

COUNT ITO IN TOKYO.

THE return of the Minister President of State to Tokyo has of course given rise to many rumours, not a few persons alleging that his Excellency's immediate business is connected with the termination of the War. We attach no importance to the latter allegation, in so far as it involves the assumption that an acceptable basis of peace has been proposed, or that the mediation of any Western Power has been accepted. It is, however, neither improbable nor impossible that Count Ito may take advantage of his visit to the capital to inform himself more fully about the drift of political opinion on the subject of the war. Japan has reached a momentous page of her national history. The course she determines to adopt at present may influence the fate of Eastern Asia for a century to come, and a statesman of Count Ito's prudence must be expected to collect all procurable data before adopting a final decision at such a crisis. But we believe that the proximate purpose of the Premier's return to Tokyo has relation to the coming session of the Diet, for which the Government, of course, has many preparations to make and an interval of only a month to make them.

CONTRIBUTIONS TO THE WAR-FUND.

THE noble families of Japan are making large contributions to the war-fund at present. We have already referred to the great gifts of Prince Shimazu, the Mito family, and Marquis Mayeda. Now again the House of Tokugawa, or rather the seventeen families acknowledging Prince Tokugawa Iyesato as their head, have come forward with a sum of twenty-five thousand yen, all of which is to go to the Navy, which appears to be particularly favoured by the nobility. We note also that Marquis Yamauchi has contributed three thousand yen, and Viscount Yamao five hundred, both sums going to the Navy.

The great Mitsui family, the Rothchilds of Japan, have presented to the Authorities a full set of all the machinery necessary in forging or casting large pieces of ordnance, as well as the making of war material of various kinds. The machinery is to be set up in Moji, according to a Tokyo contemporary. What the total cost has been is not distinctly stated, but it must have been a great sum. The gift is a most sensible and timely one, and has met with both official and popular approval.

LIEUT.-GENERAL VISCOUNT TORIO.

LIEUT.-GENERAL VISCOUNT TORIO, who was ordered some time ago by the Emperor to inspect the battle-fields and the condition of the First Army, is now in Seoul, having fulfilled the task assigned to him by His Majesty. When he reached the Korean capital he at once called upon Count Inouye, for the two peers, being natives of the same province, are on intimate terms. An animated conversation on the past and the present commenced, and in the course of it, a servant of the Legation brought in a bottle of wine and two glasses on a tray. The Viscount, who had been in great spirits a moment before, became suddenly dejected and, without showing any inclination to touch his glass, evinced signs of considerable emotion. His host asked in some surprise whether anything had occurred. Viscount Torio replied that the more he thought of what he had lately seen, the more it became impossible for him to touch his glass. He thereupon narrated the following story:—When he overtook the First Army and saw the Field-Marshal, the officers and the troops under his command, he found to his wonder and admiration that all those in the Army, from the Commander-in-chief down to the private soldiers, were not merely suffering the same privations but also enjoying the same comforts. They slept in the same manner and eat the same coarse diet. The Viscount was deeply moved at the earnest and self-denying zeal shown by

Field-Marshal Count Yamagata in his command of the army. He observed, however, that the Field-Marshal was rather emaciated, and learning that he was not quite well, he could not but feel that he ought to take better care of himself. He advised him, therefore, in the sense that, as he was advanced in years and accustomed to lead a different kind of life from the younger officers and soldiers, he had better take a few glasses of wine every day. On hearing that, the Field-Marshal shook his head, and, while thanking the Viscount for his kind intentions, replied that, as he had undertaken this grave task with the firm resolution of sacrificing his body for the weal of the Empire, it was his invincible resolution to establish the most cordial relations with his officers and soldiers by exposing himself to the same dangers and suffering the same privations as they. Hence to be without comforts was a source of pleasure rather than of pain to him. He was extremely solicitous to have the many soldiers wounded in battle restored as quickly as possible to health, but situated as they were in a strange land, much inconvenience was unavoidable and recovery was necessarily delayed. How, then, could he, who was only slightly indisposed, regale himself with wine which was beyond the reach of even a soldier suffering from a dangerous wound? Such a proceeding would be entirely antagonistic to his original resolution. When the Viscount heard the Marshal speak in such a manner, he was deeply touched by his sincerity and patriotism, and thenceforth the very name of wine became associated in his mind with the hardships that Japan's officers and soldiers were experiencing in the discharge of their duties. The sight of the bottle had called up that reminiscence so vividly, and the thought of what hardships the Field-Marshal must be enduring had come over him, so strongly, that he had been unable to hide his emotion. The narrative moved Count Inouye in the same way, for he recalled the old days when he and the Field-Marshal had shared privations at the head of the troops that they led against the Shogun's army when it invaded the Choshu fief prior to the Restoration. "Impossible to touch the wine," muttered the two statesmen, wrapt in stirring reminiscences. This is the *Yomiuri*'s story.

THE PEERS' FUND.

THE project of contributing to the War Expenses what will remain of the fund of the Peers' Club, after deducting a sum of 200,000 yen, is still far from being carried out. As we mentioned some time ago in these columns, the idea originated with a number of the members of the Club, and, with the sanction of the Chairman, a circular was sent to each of the members. A large number of the circulars have not yet elicited replies. The objections made by many of the peers to the scheme are that the Fund exists for the purposes of maintaining the Club and giving aid to the Boys Nobles' School, and that it ought not to be appropriated for the war, and also that the contribution of such a sum paltry in the name of the peers would be derogatory to their dignity.

The purchase of the Rokumeikwan by the Club for the sum of 100,000 yen is not considered a success by the *Fiji*. It is said that the land is worth 65,000 yen, so that the building alone is to cost the Club 35,000 yen. The opinion of an expert who has thoroughly inspected the Rokumeikwan is that the recent big earthquake shook it into a dangerous condition. It ought therefore to be entirely reconstructed, which would cost about 40,000 yen, so that the Club is at a loss what to do. The Tokyo Club will be removed within the year to some other place.

A LITTLE PATRIOT.

ONE of the largest primary schools in the metropolis is that known as the Fujimi Gakko, in Kojimachi District. The pupils of this establishment recently had their annual autumn excursion, marching out to Waseda in soldierly order; for by a preconcerted arrangement the boys and girls were drawn up in miniature regiments:

infantry, artillery, sappers, and a large Red Cross contingent, the latter being represented by the girls. The ground chosen for their evolutions and sports happened, however, to be already taken up by a number of real soldiers under drill. After watching them for some time the little fellows petitioned for a corner of the parade-ground, and this request being granted, proceeded to imitate their models with admirable precision and great applause from the part of the onlooking soldiers. One of the boys, just turned eleven, happened to be carrying an unusually fine flag, with plenty of gilt and long streamers attached to the pole. "That's more like a Chinese flag than a Japanese," said one of the soldiers jokingly. On this the boy flared up at once. "What!" he exclaimed indignantly, "do you think I could be even for an instant happy if carrying the flag of our country's enemies? You insult me, and must take the consequences!" and with these words he made a sudden onslaught on the laughing soldiers. They did not fail to admire the pluck and spirited bearing of the sturdy little patriot, and the prime offender asked his pardon and stated that he had not intended to insult him. The lieutenant in charge of the men asked who the boy was, and was not a little gratified to learn that he was the only son of Rear-Admiral Kodama.

FAME THRUST UPON THEM.

HARADA JUKICHI's truly heroic exploit at the Gemum Gate, is a subject of which the Japanese people never seem to tire. It has been illustrated in a round dozen of magazines—excellently well in the pages of the *Yonen Zasshi*—and scores of daily papers; it is played with consummate histrionic skill on the classic boards of the Kabuki-za by Kikugoro; it is depicted life-size in blooming chrysanthemums at Dangozaka; it graces as a chromo-lithograph the lids of the boxes containing that popular soap of the moment *Bundori-shabon*, or "Trophy Soap"; it is sold by hundreds as clay models or Wooden toys; and finally the men of the First Regiment of the Imperial Guard recently gave a rather comic representation of the scene, erecting a huge gate and an impossible hero out of their coats and shirts, just a little to one side of the French Legation. Now the vernacular press reports that Harada's elder brother, Kikugoro by name, is serving as a sort of waiter in a vermicelli-restaurant in Tokyo. Humble though his station is, he is besieged by callers from morning till night, who ply him with questions about his famous *otoko-sama* until his patience is pretty nearly exhausted. Not far from this house lives another relative of the hero, who plies the trade of a tobacco-conitist. He is doing a roaring business on the strength of his consanguinity. The actor Kikugoro recently called on the elder brother and put a number of questions as to Harada's personal appearance, peculiarities, if any, and so forth. The result of this interview is a very life-like and true make-up on the part of this favourite Thespian. Gifts of all description have been made to the elder brother, and people stand all day long before the restaurant just to get a glimpse of the relative of so celebrated a warrior. This indirect fame must at times be a little irksome to the non-combatant.

PROBABLY QUIET.

It is alleged that in so far as two political factions, represented in the present Lower House, are concerned, the programme of the coming session is to be particularly conciliatory. These are the National Unionists and the Progressionists. It is quite possible that the friendly overtures made by the *Yiyu-to* to the former party in the last special session have something to do with this; at all events, it is distinctly stated by Progressionist leaders that the great question of the Budget will this time be handled with gloves, and that in everything appertaining to the war with China and its conduct, the lead taken by the Government will be followed. It seems thus quite evident that the chances of dissolution are, this time, fortunately small; that the members of the Lower House have fully grasped the truth that there is force in union and never more so

than in war-time; and finally that there is to be less bickering and venomous attacking than in any session hitherto. It is to be hoped that the report is true.

CUSTOMS RETURNS.

The following is a summary of the Customs Returns for October showing the foreign trade of the empire for the month:—

	1893.	1894.
Exports	7,995,690.730	11,008,879.170
Imports	6,619,437.920	10,546,313.980
Total exports and imports	21,555,193.150	462,565.190

MEETING OF BUDDHISTS.

The *Bukkyo Seinen Kwai*, or Young Men's Buddhist Association, held their second annual meeting at Uyeno, Tokyo, on the afternoon of the 18th instant. Over one hundred young men were present, representing the Imperial University, the Keio-gi-juku, the First Higher Middle School, the Unitarian College, and several other public and private educational establishments of note. Among other things it was resolved that each member in future should be provided with a certificate of membership and be entitled to certain rights not enjoyed by those unenrolled; further, that a Buddhist Summer School be opened next year in Miura, province of Awa, and that the best talent should be requested to deliver lectures. Dr. Watanabe, a

graduate of Michigan College, recently returned from the United States, then addressed the meeting. His remarks were so astonishing—and so far from presenting a truthful picture of the state of religion in America—that we quote a few of the most pertinent points. Christianity, said the lecturer, was at a very low ebb in the United States. Only the lowest grade of people professed the tenets of the Roman Catholic or Greek Catholic churches; Presbyterianism and the Episcopalian creed were largely believed in by the middle class, while those who had any degree of education or scientific attainments were either Universalists or Unitarians. He did not believe that in the whole nation there were thirty thousand true believers in Christianity, or who acted up to the doctrines of Christ. A wave of materialism had swept across the country, breaking down old barriers of religious superstition and leaving the greater part of the Americans without any whole-hearted belief in any creed whatever. Christianity, such, was now openly professed only by ignorant men and women. Mr. Watanabe is a Ph.D., we understand, of the College above referred to; but it seems a pity that he has been either so prejudiced or so wilfully blind as to fail to understand the true religious state and mighty Christian movements of the country of which he has formed so wholly misleading an opinion. Speeches of this description are calculated to do a great deal of mischief and should be rebutted by every one aware of the true facts of the case.

THE SHOGUN'S KITCHEN.

ONE of the most amusing serio-comic novelists of the present day in Japan is known best under the pseudonym of Minami Shinji. This writer has recently been contributing a series of entertaining articles to the *Yamato Shimbun*, the subject under consideration being certain domestic arrangements of the Shogun's household under the old feudal system. The essayist speaks from personal experience and observation; as a boy he had the run of the kitchen and servants' quarters, so that he writes with authority. Nearly one thousand people, it appears, had to be fed daily in the Castle, that being the approximate number of the Shogun's immediate attendants. From morning till night the great rice-kettle or cauldron was kept boiling; there was no time to clean it, but once a year at the annual *sunu-haki* or general house-cleaning; all the cooks could do was to fill it up with rice and hot water, time after time. In consequence of this, some queer things were occasionally found in the great cauldron when it received its yearly cleaning. Once a stick of fire-wood was discovered, and at another time a cast-off sock, of the kind known as *kon-tabi*, boiled to shreds. Most of the kitchen attendants, the under-cooks and scullions, never sat down to their meals. The room they were supposed to eat in was indeed covered with *fatami*, but they were so filthy that it was impossible to sit on them. When hungry it was the custom of any comer to plunge his hand uninvited into the cauldrons containing the pickled vegetables—*o-koko*—and eat what he had the luck to grasp. The salt bran-mash in the tubs thus grew simply black with filth of all kinds before many months were over. On the whole the writer's description of the Shogun's kitchen is as unappetising as possible; it must, however, be remembered that this kitchen and its grimy utensils were used in preparing the food only for the Shogun's immediate retinue, not for officers of state or the Shogun himself.

A MAN OF NERVE.

THE *Yomiuri* is responsible for a story requiring a high degree of mental training to credit without injurious effort. The other day a body of the Third Regiment of the Imperial Guard was out at target-practice on Etchu-jima. After several rounds had been fired by the men, one of them, a first-class soldier, complained of a little stiffness in his right arm; if pained him to move it, he said. The hurt was however not sufficient to keep him from going on with the drill, which he attended to the end.

On the way home the strange sensation was experienced again, and he was advised to have the doctor look at him. This he did, and on being stripped a bullet-mark was found just below the base of the right lung. Careful probing revealing no bullet, a further investigation was made, which resulted in the surprising discovery that the man had been actually shot through the body, the bullet coming out between the muscles of the back. Every vital organ had been left uninjured, and as the ball must have hit him at close range, its transit was so rapid that he had experienced hardly anything more than a slight shock. Bed for a fortnight and careful nursing were at once prescribed, for it was feared that any undue exertion might cause internal hæmorrhage. The wounded man said that he had felt the pain, but as it was not severe he had managed to bear it. He could not explain how it was possible for a bullet to have struck him.

JOURNALISTIC COURTESY.

UNDER the above heading the *Japan Advertiser* publishes the following:—

Our report of the recent meeting of the Asiatic Society has been extracted from a proof which reached us at half past ten yesterday forenoon from the *Japan Mail* office. It is unnecessary to say that it was sent to us "by request," that is to say, one of the conditions on which our morning contemporary received the manuscript was that a proof should be sent to the *Japan Daily Advertiser*. The promise has been kept to the letter, but it has been deliberately broken in the spirit, for the proof was kept back till yesterday's issue of our journal was in the hands of most of its subscribers. We cannot believe that such paltry childishness was in the minds of those who decided that in the matter of reports the two newspapers should be placed on equal terms.

In reply to the above, the following letter was sent to the *Japan Advertiser*, but the editor declined to insert it, taking shelter next day behind a paragraph which is merely an irrelevant subterfuge:—

TO THE EDITOR OF THE "JAPAN ADVERTISER."

SIR,—As I am the individual upon whom your attack falls contained in a paragraph under the head "Journalistic Courtesy," published in this day's issue, I request that you will be good enough to insert this correction of the errors into which you have fallen. You say that "one of the conditions on which our morning contemporary received the manuscript was that a proof should be sent to the *Japan Advertiser*." This is entirely incorrect, no condition of any kind whatever attached to receiving the manuscript. You say that "the proof was kept back." This is absolutely untrue. The proof sent to the Secretary in Tokyo was not returned to the printer till Monday morning, and as soon as the corrections were made a clean proof was sent to you and to other papers. With these facts before you I beg to point out that the "paltry childishness" you so lightly impute to others without cause must have been present in your "mind" when you penned the offensive paragraph complained of.

I am, Sir, yours, &c.,
November 20th, 1894.

JAS. ELLACOTT BEALE.

KOREAN SONGS.

MOST of the metropolitan journals are now publishing descriptions of Korean life and manners, and much of their writing is very interesting reading. From all accounts, the Koreans would appear to be in their domestic and social relations a simple-minded folk, content with little and counting a pleasure things that would not be thought either profitable or amusing in Japan. The *Asahi Shimbun* gives several short songs, somewhat in the style of the Japanese *ha-uta*, that are at present fashionable among the young bloods and *geisha* of the Korean capital. Three of these songs are reproduced phonetically, although it is impossible to transliterate the strange vowel-sounds of the Peninsular language with Japanese *kana*. The first runs thus:—*Nangun moruk'hō, mon tak'hō mon jon-i; suruma jata*, of which the meaning is, "I knew not 'twas thou that stood before the door; alas that I should have shut it upon thee!" Another very popular song is, if possible, still simpler as to language,—"Come, let us play: come let us rest; let us play till the moon rises." But the simplest of all is said to be most popular and known to everybody in the Korean capital:—*Nanun kanda, nanun kanda, dā tmu jarō hayossō, nanun kanda*, or "I go now, I go now; 'tis for they sake I go." We do not vouch for the transliteration of the Korean originals; it is the *Asahi's* own. According to the same authority the hard times have not interfered

any extent with the incomes of the Sōul song-stresses; they have more than they can do, for Japanese visitors patronize them as well as their own countrymen. But to judge from all accounts they are ungainly, and good looks are a rarity among them.

THE LOCAL GOVERNMENT ACT OF 1894.

THE first elections of Parish Councils under the New Local Government Act are to take place on December 4th. The attention that this measure has attracted is hardly commensurate with its importance as one of the most strikingly democratic measures of modern times, hardly second to Mr. Ritchie's Act of 1888. In a sense, indeed, the Act of 1894 is supplementary to that of 1888, doing for the rural districts what that act did for the towns. It places all the important details of parochial life in the hands of the inhabitants, abolishing the squirearchy and the parsonocracy that have hitherto continued to dominate country life. The lower franchise on which the parish councils will be elected is an immense change, which will be viewed with approbation or with uneasiness according as the observer is or is not imbued with a belief in the virtues of democracy, but it is one, at least, the effect of which all must watch with interest. One aspect of the change, though a minor one, is especially interesting. It is now generally admitted that not by economic pressure alone is the steady drift of population into the large towns to be explained. There has also been an attractive force at work, the excitement of town life when contrasted with the dulness and stagnation of life in the country. The labourer has not merely been forced out of the country, he has also been drawn into the town. But by giving him an active interest in parochial affairs, which the annual elections of the Parish Council on the extended franchise bid fair to do, it is hoped to do something to relieve the dull monotony of his life, and to offer something to counteract the superior attractiveness of the towns.

The powers granted to the new parish council are extensive. In the first place, it becomes heir to the vestry, the churchwardens, and the overseers, in many matters, and "except in so far as relates to the affairs of the church or to ecclesiastical charities." In virtue of this clause it will, with the aforesaid exception, have the management of parish property, including village greens and allotments. In the second place, it will determine whether "the Adoptive Acts" are to come into operation in a rural parish. Of these the most important are the Bath and Wash-houses Acts, the Public Improvement Act, and the Public Libraries Act. In the third place, the following important new powers are granted to it: to provide or acquire buildings for public offices and for meeting, and for any purposes connected with parish business or with the powers or duties of the parish council or parish meeting; to provide or acquire land for such buildings and for a recreation ground and for public walks; to utilize any well, spring, or stream within their parish, but not so as to interfere with the rights of any corporation or person; to acquire by agreement any right of way, whether within their parish or an adjoining parish, the acquisition of which is beneficial to the inhabitants of the parish or any part thereof. In the fourth place, land may be compulsorily purchased for allotments, but action for the purpose must be taken through the county council, and the action must be endorsed by the Local Government Board. An entirely new departure, and one which is viewed with small favour by land-owners, is the right granted to the parish council to obtain from the county, should the latter approve, powers for the compulsory hire of land for allotments for periods of 14 to 35 years.

But though the measures last named are important in respect of their open interference with the "rights of private property," the provisions of the Local Government Act that concern the administration of the Poor Law are probably those of most practical importance. The

officio Poor Law Guardians are entirely abolished, thus at one stroke sweeping away the non-elective chairmen of about 250 Unions; and the system of plural voting also disappears. What is chiefly dreaded in connection with the present Act is that it will go far to undo the results of the Poor Law of 1834, the chief aim of which was to abolish the system of outdoor relief. Mr. Charles Booth, one of the leading authorities on Poor Law administration, says "The Poor Law and regulation of the Local Government Board leave the most complete liberty of administration. Never was there a law less peremptory and exact in its prescriptions. Each Board is free to give any sum it may think fit as outdoor relief; free to contrive 'destitution' as it pleases; free to make what arrangements it thinks right for the maintenance and comfort of the inmates of the workhouses." It is greatly feared that the new method of election of Guardians may lead to laxity in the granting of outdoor relief. That would be little short of a national disaster—a fact that would be admitted by persons of all shades of opinions, including socialists. For outdoor relief is socialism beginning at the wrong end. We hope, however, that the Guardians elected under the new Act will have a proper sense of their responsibilities, and that this disaster will not occur.

A NOVEL GUN.

ACCORDING to the *Yomiuri Shimbun*, a farmer residing in Okuno-mura, Fukushima Prefecture, has exhibited much ingenuity and a high degree of inventive genius in making a gun of compressed paper. The inventor claims that, although this idea is not perfected yet, the use of paper will gradually supersede that of iron; for the gun is light, easily handled, and very accurate. At present he uses only bullets made of stone, but states that metal bullets could be employed in the same manner. The gun exhibited is of the obsolete fire-lock pattern, and hence useless for practical purposes: still the fact that even such a weapon can be repeatedly fired with a comparatively heavy charge of powder has led the inventor to predict that paper, treated according to his process—which is yet to be patented—will be found more durable than either iron or steel. Car-wheels and boats of compressed paper are surprising enough, but a gun made solely of this material is a decided novelty.

CHRISTMAS CARDS.

THE first notice of the approach of Christmas comes in the form of Messrs. Kelly and Walsh's Cards. They seem to be more charming and various than ever this year, and that is saying a good deal. The landscapes, of which there are many, all daintily and artistically rendered, have a genuinely Japanese atmosphere about them, and are free from the occasional traces of foreign influence noticeable in former work of the same class. The figure subjects are not less excellent, but we could wish that there were more of them. It is pleasant to be able to send such pretty and characteristic souvenirs to our friends in the old country.

THE JAPANESE REPRESENTATIVE IN RUSSIA.

HIS Excellency Mr. NISHI, Japanese Representative at the Court of St. Petersburg, has been raised to *Shinnin* rank, doubtless in order that he may fitly represent this empire at the approaching coronation of the Czar. The *Nichi Nichi Shimbun*, noting the intelligence, speaks in very high terms of Mr. Nishi, and says that he shares with Viscount Aoki the reputation of being the best diplomat among Japan's Representatives abroad.

FIRE AT HIROSHIMA.

ANOTHER conflagration is reported from Hiroshima. It broke out on this occasion at 12.40 a.m. on the 22nd instant in a store-house of the Eleventh Regiment, and was extinguished at 2.15 a.m. No lives were lost. The vernacular press laments the fact that His Majesty the Emperor should have been twice disturbed by conflagrations in his neighbourhood since he raised his flag in Hiroshima.

WAR NEWS.

SATURDAY, NOVEMBER 17TH.

There is a difference of opinion about the force defending Port Arthur. The *Shogyo Shimpō* alleges that it was part of Japan's strategy to draw away to Chiu-lien the troops originally stationed in the Liau-tung peninsula, and that the plan having succeeded admirably, there can not now be more than ten thousand men in garrison at Port Arthur. Readers of the War news published in these columns doubtless remember that among the Chinese fighting at Phyōng-yang and on the northern bank of the Yalu, the Itz and Mingtz troops were spoken of as an integral part. These men had come from the Liau-tung peninsula. They were more readily available for the defence of Korea than any other troops at China's disposal, since they could be shipped conveniently in Talien Bay, whence the voyage to the mouth of the Yalu is only 183 miles. It was obviously because they belonged to the Liau-tung peninsula that they retreated westward after the fall of Chiu-lien and Feng-hwang, hoping to make their way back overland to Talien and Port Arthur. But already the Second Army had thrust itself between them and those destinations. These troops, therefore, or whatever remained of them were eliminated from either arena. But does it follow that the garrison of Port Arthur is reduced to ten thousand men? Other authorities, possessing apparently better means of judging, put the number at fifteen or sixteen thousand, and add that two men-of-war are lying in the tidal basin. It is evident, also, that the Chinese mean fighting, for when some Japanese torpedo-boats recently reconnoitered Port Arthur, the batteries are said to have fired more than 50 shells at them. As for the Peiyang Squadron, it is reported to have left Taku on the 11th instant, but its destination is not known. If it does not attempt to assist in the defence of Port Arthur, its uses as a fleet will be difficult to divine.

At Hiroshima the most recently entertained hypothesis was that the attack on Port Arthur would be delivered on the 15th or 16th. It may be remembered that in our issue of Monday last we indicated these same days as apparently the most probable.

General Sung, according to the *Yomiuri Shimbun*, a newspaper unexpectedly accurate in its war news, seems to be perplexed as to his wisest movements. Hearing that a Japanese Army had landed in the Liau-tung peninsula, he marched southward, as far as Siu-yen, a town lying about 40 miles west of Feng-hwan. There, however, he learned that Chin-chow had fallen, whereupon he retraced his footsteps and is now in Mo-tien-ling. Sung must be an active person if he has accomplished such journeying at the head of troops.

The *Nichi Nichi* has a paragraph that gives an idea of the commissariat work in Korea. It says that 2,000 coolies have just arrived in Phyōng-yang, for distribution, in the proportion of 200 each, among ten commissariat stations. Every day 1,000 *koku* of rice goes to Phyōng-yang from Chi-tsing, and 500 *koku* are forwarded thence to each commissariat station in the north.

MONDAY, NOVEMBER 19TH.

The forces massed in Mo-tien-ling under the command-in-chief of General Sung are said to aggregate 25,000 men. Wu Ta-chang and Yuen Shi-kai are also with the troops, and it is reported that great efforts have been made to entrench the place, so that it is now strong enough to defy attack. But we imagine that these accounts must be received with caution. Whence can General Sung obtain guns to mount in a number of intrenchments? Since the campaign commenced at Sōng-hwan the Chinese have lost over 250 guns—field-pieces, mountain guns, and Gatlings. Have they an unlimited supply? If Mo-tien-ling were within easy reach of Newchwang or even Moukden, these wholesale losses of artillery might be quickly compensated. But it is 82 miles from the latter place and about 85 from the former. With the exception of the guns that Sung sac-

ceeded in carrying away from Chiu-lien and Feng-hwang, supplemented, perhaps, by some already in Mo-tien-ling, we do not see what artillery he can possess. As for his 25,000 men, the only well disciplined soldiers among them are said to belong to the Mingtsz contingent, a small force not now in an efficient condition owing to the presence of many recruits. By the Japanese military authorities, as quoted in the *Kokkai*, it was expected that a battle would take place at Mo-tien-ling on the 17th instant, and that it would be the bloodiest fight since Phyōng-yang. But there is palpable lack of accurate information in Tokyo as to the state of affairs in front of Marshal Yamagata's Army. The *Yomiuri Shimbun* quotes a telegram from Hiroshima, dated 9.20 a.m. on the 17th instant, which says that Sung has retired from Mo-tien-ling, and is falling back upon Moukden, to unite his forces with the 16 regiments still in garrison at that city. This is confirmed by a telegram from Shanghai, dated the 17th and published in the *Kokkai*, according to which the Chinese have withdrawn from both Mo-tien and Fan-shui, and the van of the Japanese Army has reached Lao-yang, 45 miles from Moukden. The telegram adds that in the interval between Mo-tien and Moukden, the inhabitants have all fled from their dwellings. If that be so, the presumption is that they have fled to Moukden, to throw in their lot with the 250,000 or 300,000 citizens already there. A Shanghai telegram must always be regarded with great doubt. The latest intelligence received from Marshal Yamagata showed that his advance guard had reached Lien-shan on the 11th or 12th instant, probably the former. Lien-shan is 50 miles from Lao-yang according to the military map, and it is most improbable that the Japanese van covered 50 miles between the 11th and the 16th. The preceding stretch of 50 miles—from Feng-hwan to Lien-shan—seems to have occupied about 11 days. Thus the Shanghai news is scarcely credible, on the face of it. In truth, it is difficult to choose between the various reports. The *Hochi Shimbun*, for example, alleges, without any semblance of doubt, that the garrison of Moukden consists of 35 regiments, under the command-in-chief of General Yu, and that General Tsi, the second in command, has 15 other regiments in Lao-yang, while Sung himself is in Tang-ho with 13 regiments, his advance guard of 5 regiments being in Mo-tien. If all that be correct, there are about 12,000 troops between Yamagata and Moukden, and about 14,000 awaiting him in Moukden. Being without any means of discriminating between the various rumours current, we pin our faith for the moment to the last official telegram, namely, that on the 11th or 12th instant Marshal Yamagata's advance guard had reached Lien-shan, 50 miles beyond Feng-hwang, 87 beyond Chiu-lien and 95 (100 according to some authorities) from Moukden.

We have spoken above of the Chinese forces in front of Yamagata's Army, but notice has also to be taken of some twenty thousand men said to be massed in Siu-yen, a fortified town about 40 miles west of Feng-hwang. It appears probable that the disintegration of the Chinese army after the capture of Chiu-lien and Feng-hwang was not entirely the result of panic; uncertainty had something to do with it. The Generals could not determine whether Yamagata aimed at Moukden, or whether he might not take the Newchwang road from Feng-hwang, with Shan-hai-kwan, and ultimately Peking, for objective points. That uncertainty being translated into action, some retreated in the Newchwang direction, halting and concentrating in Siu-yen, and the rest retired along the Moukden road. The former appear to be temporarily eliminated from the fighting army, but in point of fact they constitute very serious menace to Yamagata's communications. Assuming a little strategical insight and a small capacity for offensive operations on the part of the Chinese Generals, and it becomes plain that Yamagata's long northward march from the Yalu to Moukden involves

some disquieting contingencies. The Japanese dispositions have hitherto been so sound and prescient, that we look with confidence for some provision against their flank danger, and find it in the Second Army. After the fall of Port Arthur, Marshal Oyama's forces, marching northward up the Liau-tung peninsula, can strike directly at Newchwang, and effectually free Yamagata's left flank, since they will then be operating in rear of any Chinese forces hovering between Newchwang and the Yalu-Moukden road. We do not, of course, allege that the programme is such as we have here indicated, but it appears to us that unless the Second Army coöperates in the above manner with the First, after the fall of Port Arthur, there will be a decidedly weak point in the strategical conception of the Japanese campaign in Manchuria. Of course, Generals do not always provide against every contingency. Something must often be adventured on the principle that daring not infrequently succeeds where calculation fails. In the presence of such foes as the Chinese have shown themselves, strategical liberties may be taken without many qualms.

Among the 4,395 rifles captured by the Japanese in the operations immediately north of the Yalu, there were numbers of new Mausers that had never been used; never even taken out of the cases in which they performed the journey from Germany to Manchuria. They were found snugly packed in boxes in Feng-hwang. Such incidents occur to beaten troops in every war. Commissariat, land transport, everything disorganized, and commanding officers do not even know what resources are available.

It seemed at one moment as though the Chinese were about to adopt the tactics that destroyed Napoleon's "grand army," namely, a series of retreats, gradually drawing the enemy into a country where only towns in ashes and devastated fields awaited. An-tung they reduced totally to ruins, and the greater part of Feng-hwang shared the same fate. But it would now appear that the destruction wrought at those two places was purely due to the wanton savagery for which beaten Chinese soldiers have earned an unenviable notoriety. Between Feng-hwang and Lien-shan, to which the Japanese advance guard had pushed at the date of most recent intelligence, there are 13 towns, or perhaps we should call them villages, none of which seems to have been fired by Sung's retreating troops. At Headquarters in Japan there is said to have been a momentary idea that Moukden might be burned. But Moukden is a sacred city, containing the cenotaphs of the Tsing Emperors. Its destruction, whether a direct or an indirect result of the Japanese invasion, would be as fatal to the prestige of the reigning dynasty as its capture.

There are some foreigners with Sung's forces, but as to their nationality or names, we have no information. They were at Chiu-lien also, from which place they retreated with its defenders. There are foreigners in Port Arthur too—quite a number, according to rumour—and it is alleged that the Pei-yang Squadron has taken on board at least three additional European naval experts, one in the capacity of a captain, and two as commanders. But, after all, these men can accomplish little unless they are entrusted with real executive authority and unless they lead their men. Ward, Burgevine, Gordon, all showed what Chinese troops can do if properly disciplined, but the Chinese Government of to-day does not appear disposed to place any European or American in positions so responsible as those occupied by the foreign saviours of the dynasty in the time of the Taepings.

Correspondence from the Second Army is beginning to reach the Tokio journals. As yet the details given are very meagre. Here is a translation of one of the fullest of the letters, taken from the *Yomiuri Shimbun*:—

Leaving but a small garrison in Kwa yuen, when the landing of the troops was effected, the Second Army arrived in the vicinity of Chin-chow on the 5th instant, and on the afternoon of that day the place was assaulted, the enemy retreating towards Port Arthur. A flying column was despatched in pursuit, while another division entered

the town and occupied it. The military telegraph not being laid to Kwa-yuen, no information beyond this brief news has reached the latter place up to the time of writing this letter, namely, the 10th instant. When Chin-chow was taken, the troops of the Tokyo Division immediately proceeded to attack Talien. On the afternoon of the 7th instant the garrison fled, leaving the place in the hands of the Japanese. In this affair, and in the assault of Chin-chow, the Mixed Brigade under Major General Hasegawa acted in concert with the troops under the direct command of Lieut.-General Yamagi. The road between Kwa-yuen and Pitzwo, unlike the roads in the interior of Korea, is wide and generally level, permitting the passage of waggons. Great facilities are thus afforded for the transport of guns and vehicles loaded with provisions and ammunition. Moreover, whether from fear or indifference to their country's misfortunes, the people, who were entirely ignorant of the existence of a state of war until they were informed by the Japanese, supply provisions quite readily, provided that proper prices are paid—very reasonable prices, too, they ask. What chiefly embarrasses the troops of the Second Army is the difficulty of holding converse with the natives. Several interpreters who can speak Chinese very fluently accompany the Army, but to their great chagrin they can not understand what the country-folks say or convey their own ideas to them. The language spoken by the natives of the peninsula is not pure Chinese or Manchurian, but a dialect peculiar to the place. Moreover, they are for the most part illiterate, only two or three out of every hundred being able to converse in writing. The engineering and telegraphic corps of the Army landed at Pitzwo, and the former constructed a durable pier, 400 yards long, in two days and nights. The telegraph is now in process of being laid from post to post. When the *Ogura Maru*, a transport, was about to convey ammunition from Kwa-yuen to Pitzwo on the 2nd instant, a junk with 12 natives was hired to assist. The junk was loaded and taken in tow by the steamer. As evening fell a sentry was posted on the junk, but during the night the junk people surprised him, threw him overboard, and cutting the hawser, made away with the junk.

Various reports are circulated with reference to the attack upon Port Arthur. The *Nippon* has a telegram from Hiroshima stating that the assault was to take place on the 15th and 16th, and that the final storming would be on the 17th. That is a difficult announcement to comprehend. The *Fiji Shimpō*, however, on the strength of a telegram despatched from the same place 40 minutes later, also indicates the 15th as the day when the ball was to be opened. But in other quarters it is confidently alleged that Marshal Oyama made a halt at Chin-chow to assemble the whole of his Army, before leading it to its great objective point, and that he did not resume his southward march until the 15th instant. If that be so, the assault be can not be delivered before the 21st or 22nd, for the distance from Chin-chow is at least 37½ miles—41 according to some authorities. There seems to be no doubt that the fortifications of Port Arthur on the land side are much more formidable than was at first reported. The natural facilities for defence are great. A semicircle of hills, varying from 350 to 650 feet in height, present ideal sites for batteries to command the approaches, and it is said that these sites have been taken advantage of to place in position a number of guns, from field-pieces and Gatlings to heavy artillery. Such a position seems to defy the strategy of flank attack approved by modern authorities, and so successfully used up to the present by the Japanese. Apparently it must be a square affair of front attack, and if the Chinese stand to their guns at all stoutly, the Japanese losses may be very heavy. One can not but recall at this juncture the story of the Anglo-French campaign in 1860. The allies did not attempt to land at Taku, where Admiral Hope had been so vigorously repulsed a year before. They effected their debarkation at Pechang, and marched thence to take the Taku forts in rear. En route the intrenchments at Tang-ku had to be taken. They were easily accessible to the troops moving along the bank of the Peiho, nevertheless no attempt was made to assault them until they had been battered almost to ruins by a cannonade from 36 pieces of the

best artillery of the time. "Even then," we read, "the garrison gave no signs of retreat, and it was not until the Armstrongs had been dragged within a very short distance of the walls, and the foot-soldiers had absolutely effected an entrance, that the garrison thought of their personal safety and turned to flight." Colonel Fisher, in his "Narrative of Three Years' Service in China," quoted by Boulger, says:—"The Tartars really for a time fought nobly. I saw one man, stripped to his loins, fighting his gun single-handed after every bit of parapet near him had been knocked away and our shot was crashing in all around him." * * * Having seen that one brave man, the survivor of all the gun detachment, working his gun alone, loading and firing among the corpses of his fellows, with no one near to applaud him or witness his fall, working away, whatever his motive might be, until he fell like his comrades, I could not but picture to myself in all those grim groups of eight or ten at a gun, how one by one they had fallen and yet the survivors disdained to fly." The reduction of Tang-ku placed the allies in rear of the Taku forts. One of these constituted the key of the position. It was attacked on the 21st of August, the attack commencing with a heavy fire from 11 seige pieces, 24 field guns, and a rocket battery. The assailing force consisted of 2,500 British troops and 500 French. The Chinese are said to have fought with "extraordinary courage." Even the explosion of their magazine did not deter them. They waited for the smoke to clear off and then renewed their fire. There were only 500 men in the fort, but their vigorous resistance cost the British 22 killed and 179 wounded, among the latter being 21 officers. Of the Chinese themselves, only about 100 escaped. At one time it seemed as though the attack must fail, but the scale was turned by cutting the ropes that held up a draw-bridge and thus giving access to the work. These same Chinese have been fighting against the Japanese at Sōng-hwan, Phyoŋ-yang, and Hu-shan, and from 15,000 to 16,000 of them are now splendidly intrenched at Port Arthur, behind parapets mounting artillery of the best modern construction. Possibly they may do something worthy to parallel their deeds against the combined strength of England and France 34 years ago. Rumour says that they are without a head, their commander-in-chief, General Sung, being now in Manchuria. But Sung was not the only general officer in the Liautung peninsula at the outbreak of the war. Besides, there are several foreigners in Port Arthur, and it may be that the Chinese, in their extremity, will place these men in control. We know what effect upon the fate of Kars was produced by the presence of five Englishmen. It is true that the foreign experts serving with the Chinese on the northern bank of the Yalu did not perceptibly influence the result of the battle of Hu-shan, but no conclusive inference as to Port Arthur may be drawn from that fact. Besides, the Chinese in Port Arthur are caught in a trap. If Marshal Oyama pleases, he can effectually close up the one over-land exit from the peninsula, namely, that by the Chin-chow isthmus. We may assume that, if possible, he will leave a road of retreat, for he neither desires to drive the garrison to desperation nor wishes to take prisoners. But evidently he is placed in the curious position of not being able to provide any easily recognisable route for the escape of the enemy. One thing may be taken for granted: the absence of intelligence does not imply Japanese repulse or disaster. Had the attack been delivered unsuccessfully, we should have heard of it at once *via* Chefoo, for war-ships of England, France, and America are constantly watching the operations.

Meanwhile, the movements of the Chinese northern fleet remain a mystery. That it left Taku on the 12th instant, having taken in ample stores of coal and ammunition, seems tolerably certain. Rumour alleges that Admiral Ting had received orders to relieve Port Arthur at all hazards. But rumour also says that his instructions were to abandon the place to its fate, and retire to Shan-hai-kwan, so that his ships

might remain available for the supreme purpose upon which China is concentrating all her residuum of energy—the defence of Peking. When we begin to think what the loss of Port Arthur would signify for the Chinese Fleet, and what the abandonment of the place to its fate would imply under the circumstances, we can not but marvel at China's apparent inaction. Port Arthur is the only dock in north China. Did it come into Japanese possession, the Chinese war-ships would have no place to go for repairs and consequently dare not risk an engagement. Moreover, Port Arthur alone is not invested. The Japanese are holding the entrance to Pechili Gulf. Their vessels are off Wei-hai-wei, China's second fortified harbour, and to gain access to it Admiral Ting must fight. What, then, is to become of his ships? There is no harbour at Shan-hai-kwan: it is a roadstead. There is no harbour at Taku: vessels of any considerable draught must lie some seven miles off shore. From Port Arthur to Shan-hai-kwan the distance is only 110 miles, and to Taku 170 miles. Hence China's most important naval station is within 9 and 14 hours' steaming, respectively, of her principal military bases. Yet despite its easy accessibility for purposes of relief, and despite the crippling consequences involved in its capture, the Chinese seem resolved to leave it to its fate. If they persist in that resolve, who can any longer pretend to entertain doubt as to the real issue of the battle of the 17th of September? Admiral Ting left Taku on the 12th. Had Port Arthur been his destination, he must have been off that place on the morning of the 13th, and a severe naval engagement would have taken place six days ago. Men must have an infinite fund of partiality to draw on, who can still regard the Peiyang Squadron as a respectable fighting factor.

It is stated that the *Yoshino Kan* steamed to within ten thousand metres of Wei-hai-wei on the 2nd instant, and ascertained that the craft in the harbour were limited to two torpedo-boats and 3 gun-boats. The forts fired 4 shells at the *Yoshino*, the first of which fell some 700 metres, and the fourth about 300 metres, short. They appeared to be 24 centimetre projectiles. The *Yoshino* has the heels of any ship the Chinese could send after her, but certainly this exploit of hers betrays a good deal of contempt for the enemy.

Detailed accounts now to hand of the fighting on the northern bank of the Yalu, show that the Chinese dispositions for defence and the force they had at hand were more formidable than the original telegrams led us to suppose. General Sung's line of defence extended 17 miles along the Yalu, from An-tung, 7 miles below Wi-ju, to Sui-ken, 10 miles above it. In that distance he posted 48 regiments, nominally aggregating 24,000 men, but probably mustering not more than 15,000 or 16,000. Hu-shan, the centre of the position, was also its key. There 18 regiments were massed. The reserves, consisting of 20 regiments, were in Chiu-lien. Their effective strength was probably about 7,000, so that the total Chinese army cannot have fallen far short of 22,000 or 23,000. Sung was in Chiu-lien for about 40 days, during which time his men threw up 43 earth-works, mounting nearly 100 guns, and having solid parapets from 9 to 12 feet high. The force mustered by Marshal Yamagata for the Yalu operations is not known exactly by the public, but it cannot have exceeded 17,000, seeing that the nominal total of his army is only 25,000. Yamagata entered Wi-ju on the 23rd of October, and during that night his dispositions for the attack were completed. The main feature of his plan was to hurl virtually the whole of his force at the enemy's centre, having previously delivered upon his left wing an attack partly in the nature of a feint and partly intended to turn his flank. To carry out this programme he divided his forces into six bodies. One, under Colonel Sato, was sent to ford the Yalu at Sui-ken, the eastern extremity of the enemy's line of defence. This brigade effected its object skilfully, and with original ideas. Crossing the river in the

face of a desultory and innocuous fire, it rolled the enemy back, and at night-fall took up a position threatening his left rear. That was on the 24th of October. During the night of the same day, the engineers threw a bridge over the Yalu immediately above Wi-ju. They had been collecting materials for the work for 13 days, and they achieved it in the dark without attracting the enemy's notice. The accomplishment of such a task under such circumstances—the Yalu runs in three branches having a total width of 600 yards—is worthy of note. At day-break on the 25th, four of the remaining five divisions of the Japanese Army crossed the bridge. The sixth, a park of artillery, posted itself on an eminence east of Wi-ju to cover the passing of the river and to shell the enemy's position at Hu-shan, against which the main attack was to be delivered. Of the four divisions that crossed the bridge, one marched against the Chinese front at Hu-shan; the other three engaged in flank attacks. Such was the general plan. Into its detailed working we need not enter, further than to say that the movements of the various corps seem to have been timed with remarkable precision and so as to develop a maximum of mutual helpfulness. At each critical moment of the fight the Chinese found themselves threatened from a new quarter, and when a part of their reserves attempted to march out of Chiu-lien to the assistance of Hu-shan, they were met *en route* and not only driven back across the Ai, but also headed off from Chiu-lien itself, and compelled to fly northward. That the Chinese evacuated Chiu-lien, on the night after this battle, without striking a blow, is not wonderful. Their line of defence had been broken at the centre; all their forces westward of Hu-shan had been separated from the main body and ruled out of the immediately subsequent operations; of troops that had not been engaged and beaten during the 24th, and 25th, there were only some 4,000 in hand; the greater part of their artillery and the whole of their first reserve of ammunition were lost; and, finally, the dispositions of the Japanese Generals made it plain that if Sung risked another fight and failed, the northern route would be closed for his retreat.

The following facts relating to the fall of Talien are taken from letters sent to the Tokyo press by war correspondents who were on board Japanese ships:—

With the intention of bombarding Talien in concert with the land forces that were to deliver an attack on the 7th instant from the rear of the stronghold, the Fleet steamed from its anchorage at 6.30 a.m. of the 6th instant, and proceeded toward Talien Bay. The distance to be traversed was a little over 50 miles, and as there was no occasion for the Fleet to anticipate the Army, it reached the mouth of the Bay at about 3 p.m. the same day. At half-past 7 on the morning of the 7th instant, the ships steamed between the three islands that lie at the entrance of the Bay and the watch-tower standing at its eastern extremity. The Fourth Flying Squadron was ordered to reconnoitre the interior of the Bay, it being arranged that the *Maya* and *Oshima*, of that Squadron, should open fire from the direction of Ker Inlet, situated in the north of Talien Bay. The Squadron passed into the Bay, and a few minutes subsequently the sound of its guns was heard twice. It was afterward found that two of the shots fired hit one of the forts. At about 7.40 a.m. about a dozen rifle volleys were heard from the direction of a promontory that projects into the middle of the bay and is crowned by a fort. These volleys, as afterward learnt, were fired by Japanese troops assaulting the batteries from the rear. The Principal Squadron then replaced the Fourth Squadron and moved a little further into the bay, the flagship opening fire at the fort on the northern extremity of the entrance. To all this cannonading from the Japanese ships not an answering shot was fired from the shore. At about 8 a.m. a white flag was seen floating over the fort on the middle promontory, and the Commander of the Fleet ordered the *Naniwa*, *Takachiho*, and *Matsushima* to despatch steam launches to ascertain what was meant. Three torpedo-boats were also sent on the same mission. At 11.40 a.m. the launches returned and reported that the flag had been hoisted by the Japanese troops, and that they were in possession of the fort. It had been captured by only two companies, but as they had no flag with them at

the time, they fastened a piece of white cloth found by them on a pole and hoisted it. Previously to this, a torpedo-boat had brought tidings from Ker Bay that the Japanese flag was flying over another fort. Thereupon Lieutenant Shinamura, a staff-officer, proceeded in a steam launch toward the fort standing on the middle promontory, and there met Lieut.-General Yamaji, from whom he learnt that Chin-chow had been assaulted on the evening of the 5th instant and occupied the next morning, and that the defenders of Talien had fled and left the place in the hands of the Japanese troops. Several important topographical maps were found in the forts giving, among other information, minute descriptions of the torpedo-boats sunk in the bay. They all tallied with the indications of other maps that the Fleet had obtained from Chinese sources. Steps were then taken to raise the torpedo-boats, which work was completed by the evening of the 10th instant. British and German men-of-war were watching the operations.

TUESDAY, NOVEMBER 20TH.

Of war news there is almost a complete dearth. It is scarcely possible to determine the exact point to which the advance guard of the First Army has reached. A telegram from Marshal Yamagata, dated at Chiu-lien on the 13th instant, and published by the *Official Gazette*, said that the advance guard had entered Lien-shan-kwan, but did not name the day when it reached that point. Lien-shan being 87 miles from Chiu-lien, and there being as yet no line of telegraph between the two places, an interval of 4 days might be required to transmit news not of a pressing nature from one place to the other. Count Yamagata's telegram was despatched on the morning of the 13th. Consequently, Lien-shan may have been reached on the 8th. But the *Yomiuri Shimbun*—which generally contains accurate intelligence from the seat of war—gives a telegram from Hiroshima dated 9.35 a.m. on the 18th, saying that the advance guard had pushed to Lang-tsz-shan on the 9th inst.; that it had a skirmish with about 500 troopers at that place; that it put them to flight, and that it took possession of their entrenchment. Now Lang-tsz-shan is 26 miles beyond Lien-shan. Moreover, to reach it, the troops must have passed through Mo-tien-ling, where the enemy was supposed to have made considerable preparations for resistance. What are we to conclude? Had the van of the army really reached Lang-tsz, 76 miles beyond Feng-hwang, on the 9th instant, or was it at Lien-shan, 26 miles nearer Feng-hwang? We cannot tell. Another paragraph in the same journal says that Major-General Tachimi, at the head of the Mixed Brigade, was to assault Lao-yang on the 18th instant. That may be true, but we dare not attach credence to any of these reports. What seems pretty certain, however, is that the resistance anticipated at Mo-tien-ling was not actually experienced. The telegram sent from Chiu-lien on the 13th instant, announcing that the advance guard had reached Lien-shan-kwan, was published in the *Official Gazette* of the 15th instant. Lien-shan being only some 13 miles from Mo-tien-ling, it seems a reasonable conclusion that had there been any fighting at the latter place, news would have come to Tokyo before now. Knowing then, that the advance guard was in Lien-shan on the 9th at latest, and assuming that no resistance of a serious nature was encountered between that place and Lao-yang, some 53 miles farther on, the *Yomiuri*'s statement, that Lao-yang was to be attacked on the 18th, would be consistent with the rate of progress hitherto attained by the army. However, it seems fruitless to form conjectures. Definite intelligence must arrive very soon.

Lao-yang is a town of considerable importance. It lies at the junction of the roads from Chiu-lien and Newchwang to Moukden. It has been conjectured that Marshal Yamagata's northward march will not be carried beyond Lao-yang, and that he will there diverge westward *en route* for Pekin. Such a notion is difficult to accept. An army marching toward Pekin from Lao-yang must either proceed to Moukden (47 miles distant), and thence take the main trunk-road to Pekin; or turn southward to Newchwang (68 miles), and thence follow a greatly inferior road along the northern coast of the Gulf of Pechili.

From a strategical point of view the latter programme would be palpably defective, since an army marching south and west from Lao-yang, without previously reducing Moukden, would leave a formidable enemy on its right flank. Besides, unless Yamagata takes Moukden, his campaign will have nothing like a climax until he reaches Pekin, whereas if Moukden be once in his possession, he will have made a signal coup even though his march be carried no further. The Newchwang route awaits the Second Army. With the First Army pushing west and south from Moukden, and the Second marching west and north from the Laou-tung peninsula and Newchwang, we have a complete plan of campaign, the two corps converging with about equal distances to cover, and having their flanks thoroughly protected.

It is alleged that H.I.H. Prince Arisugawa (Junior) has been ordered to proceed on a tour of inspection of the Second Army's operations by land and sea, that he will leave Hiroshima on the 20th instant.

The absence of news from Port Arthur is regarded in some quarters as ominous. We do not share that view. Had there been any Japanese repulse, intelligence would surely have reached Tokyo ere now, if not from Hiroshima, then *via* Chefoo and Shanghai. Several foreign men-of-war are watching the operations, and some of them would not fail to run over to Chefoo with news of a defeat sustained by either side. The truth is that the attack has been delayed somewhat longer than was at first anticipated. Marshal Oyama and General Yamaji did not leave Chin-chow for the front until the 15th instant. Supposing everything to be in readiness when they reached the entrenchments of Port Arthur, the attack may have commenced on the 18th. Without full information as to the nature of the defences, it is, of course, impossible to form any idea of the plan of attack. But we may be tolerably certain that a preliminary bombardment would be necessary, and when an event is complicated by such uncertain factors as the construction of batteries of position and the effective results of cannonade, a considerable margin must be allowed in any forecast.

WEDNESDAY, NOVEMBER 21ST.

Great interest centres on the proceedings of the Pei-yang Squadron. Some accounts represent Admiral Ting's ships as lying snugly in Wei-hai-wei, protected by the guns of the forts. Others allege that they left that port on the 17th instant, with the intention of engaging the Japanese squadrons now blockading Port Arthur, and that a great naval engagement must have taken place on the 19th or 20th. The *Kokkai* is a particularly explicit exponent of the latter view. It puts the number of the Chinese ships at ten, says that the two ironclads have several foreigners on board, that Admiral Ting remains in chief command, and that an attempt will undoubtedly be made to relieve Port Arthur. The *Nichi Nichi Shimbun*—an authority of the highest importance—alleges, on the contrary, that Ting and his vessels have been lying in Wei-hai-wei since the 16th, and that there are no indications of their venturing out to fight. Meanwhile, the Japanese ships are watching both Port Arthur and Wei-hai-wei, but despite their presence the *Yomiuri Shimbun* reports that the two Chinese cruisers hitherto lying in Port Arthur, have escaped to Wei-hai-wei.

With regard to the attack on Port Arthur, we have now two pieces of intelligence, both coming from excellent sources, but difficult to reconcile. The first is a telegram despatched from Hiroshima at 9.30 a.m. on the 18th instant, and published by the *Nichi Nichi Shimbun*. It says that the dispositions for attack were made on the 17th, and that the assault was to commence on the 18th at daybreak. The second is a telegram, also from Hiroshima, but despatched at 11 a.m. on the 19th instant. It appears in the *Fiji Shimpō*, and says:—"Definite information has been received that the Second Army's advance was delayed beyond the time originally projected. It left Chin-chow and Talien on the 15th and 16th instant, and marched south in two bodies, driving the

Original from

enemy's outposts before it. The attack was to be a combined affair from the land and sea simultaneously, and by this time (19th) Port Arthur has been captured." The second of these telegrams being the later of the two, and being also confirmed by our own private advices, appears to be the more trustworthy. As to the exact time of the attack, however, we are still doubtful. From Chin-chow and Talien there are two roads to Port Arthur, one along the coast, the other along the west coast of the Peninsula. The distance by each is about the same—38½ miles according to our maps. As the crow flies it is only 32½ miles, but the road is devious, following the sinuosities of the coast in parts where hills obstruct its passage inland. Leaving Talien on the 16th, it is difficult to see how the Army could be up to Port Arthur before the 21st, in which case the assault would be delivered on the 22nd. News can reach Tokyo in 24 hours *via* the Ta-dong river. If the place had been attacked on the 19th, the fact ought to have been known here yesterday evening.

The *Yomiuri* says that the military telegraph between Kwa-yuen and Chin-chow has been completed and that the Engineer corps of the Second Army are now carrying the line northward to connect with the First Army's wire at Wi-ju.

Readers who have followed the course of the campaign in Manchuria will remember that a considerable part of the troops commanded by Sung at Chiu-lien and Feng-hwang retreated westward, and assembled in a town called Siu-yen, 41 miles west of Feng-hwang, as the crow flies, and 37 miles northward of Takushan by road. They will also remember that Sung's line of defence on the northern bank of the Yalu extended 17 miles, and that all his troops in the 7-mile section between Chiu-lien and An-tung were rolled back by Yamagata's central attack, and had to retreat down the Yalu in the direction of Ta-tung, which town they burned to the ground on October 27th, and fell back on Sui-yen *via* Takushan. Yamagata detached a column under Major-General Oseko to pursue the enemy along the An-tung-Ta-tung road, and this column, pushing on, established its head-quarters in Taku-shan, thus protecting the left flank of the Army's base of operations. News having subsequently been obtained that the enemy had collected a considerable force—20,000 according to local reports—in Sui-yen, Major-General Oseko received orders to march against that place. He set out the 15th from Taku-shan, and moving rapidly, reached the neighbourhood of Sui-yen on the night of the 17th. The following morning at 3 a.m. he attacked the town, and at 9 a.m. it was in his possession. The enemy do not appear to have made any resistance worth mentioning, for no casualties are reported on the Japanese side. We do not know what force General Oseko had, but considering the celerity of his movements—37 miles in three days—and the fact that the main body of the Army is marching northward with Yamagata, his troops can not have mustered more than a couple of battalions, or, say, 1,500 men. The casualties on the Chinese side are not reported, but, as usual, they left their guns—five—behind them. Marshal Yamagata despatched this news to Tokyo from Chiu-lien at 11 p.m. on the 19th instant. Evidently, therefore, a military telegraph must have been laid from Chiu-lien to Taku-shan—48 miles—for without such means of communication a report from Oseko at Sui-yen, 37 miles north of Taku-shan and 85 from Chiu-lien, could not possibly have reached the Commander-in-chief in 36 hours. Taku-shan is on the coast of the Yellow Sea west of the mouth of the Yalu. A wire carried from the Second Army's position in the Liau-tung peninsula, would pass through Taku-shan. Thus we see one stage of the communication completed. The Marshal's telegram says that the enemy retired from Sui-yen to the north and west. Independent of the road entering it from the south, there are two roads out of Sui-yen. One leads westward, and the probable objective of troops taking it would be Newchwang, though they

might turn into the Hai-chien route a few miles outside Sui-yen. The other goes north until it strikes the Feng-hwan-Hai-chien route. We enter into these details because from the movements of the Chinese troops in retreat an inference can be drawn as to the strategical plan adopted by their leaders. It is now evident that Sung's army is completely cut in two, and that its parts are operating without any idea of combination. The Sui-yen force, whether it retreats upon Hai-chien or Newchwang, is practically eliminated from the Moukden campaign. Its concentration at Hai-chien—a town on the road from Lao-yang to Newchwang—would be totally meaningless, and the probability is that it will either disperse altogether, or unite with the Newchwang garrison. Meanwhile, by the capture of Sui-yen and Taku-shan, Marshal Yamagata has effectually cleared his flank and guaranteed the security of his line of communications. Troops marching from Newchwang or Hai-chien by the inland routes to strike at the Chiu-lien-Moukden line must pass through Sui-yen, and troops marching by the coast route for the same purpose must pass through Taku-shan. The more carefully we study the strategy of the Japanese General, the more convinced are we of his high qualities as a military leader. Of course it is not to be presumed that the campaign in Manchuria has been planned by one man. Unquestionably the General Staff, and notably Lieutenant-General Kawakami, must be credited with many of the conceptions. But whatever mind be chiefly responsible, we offer our tribute to the thoroughness and excellent provision of the programme. Our readers may remember that, some days ago, we spoke of the gradual massing of Chinese troops in Sui-yen as a menace to Yamagata's communications. They were beaten troops, it is true, but still their rendezvous was so well chosen as to suggest apprehensions. We did not then suppose that with such a small army under his command, Yamagata could have undertaken flank operations at distances of 70 or 80 miles. Our hypothesis was that the ultimate movement of the Second Army in the direction of Newchwang would be trusted to clear the left flank of the First and secure its line of communication. That will ultimately be necessary, should Yamagata take the main-trunk road from Moukden to Peking, for without the co-operation of the Second Army the First would then be in the worst possible strategical position, namely, moving on the circumference of an arc the chord of which is occupied by the enemy. But for the present it seems that Yamagata is strong enough to sweep the Chinese back from his flanks, and hold on his way northward without fear of interruption.

With regard to the exact point reached by the van of the First Army in Manchuria, nothing has been added to our information of yesterday. It will be observed, however, that Marshal Yamagata was still in Chiu-lien on the 19th instant. That fact shows that no important operations were immediately expected at the front. So long as the Marshal remains in Chiu-lien, we may assume that the attack upon Moukden is still today at least distant.

The correspondent of the *Kokkai* sends the following letter from Feng-hwang, under date of the 5th instant:—

The castle of Feng-hwang is circular in form and measures about 20 *cho* (2,400 yards) in circumference. The walls are very strong, but the castle is not suited for occupation by a large army. The dwellings of the people stand outside the four gates communicating with the surrounding country. There used to be about 5,000 houses, but a third of them were burnt down by the Chinese troops that fled on the evening of the 29th ult., and the rest all bear traces of having been plundered by those lawless soldiers. Within the walls, plenty of houses stand intact which were used for the quarters of civil and military functionaries. When the van of the Japanese Army, led by Major-General Tachimi, took possession of the castle, the first thing that occupied the attention of the Commander was to contrive means of assuring the natives of their safety and inducing them to return and resume their peaceful avocations. It was not an easy task, for the men of means had fled to remote

villages, more than 20 miles off. The announcements placarded in many places in Feng-hwang and its neighbourhood, and the personal explanations of several officers who rode through the country for the purpose, succeeded, to a certain extent, in persuading the poorer folks to come back. In a suburb of Feng-hwang one of the wealthiest citizens of the city stayed in his villa with a number of man-servants. His name was Ngō. He had had his two shops in Feng-hwang burnt and plundered. He and a few others that stayed behind received very cordial treatment from the Japanese troops. They were invited to an entertainment that the Brigade constituting the van held on the 3rd inst. in the castle in honour of the Emperor's Birthday. A greater honour awaited them, however, for when the necessity of establishing an office for the special purpose of pacifying the inhabitants was perceived, and when steps were taken for the purpose on the 4th instant, Ngō was appointed manager with several commissioners to help him. The office he consented to accept. General Sung, commander of the Chinese troops that had fled from Chiu-lien and Feng-hwang, is above 80 years of age. A Chinese prisoner says that he declared his resolve to remain in Feng-hwang and die at his post, but he was forcibly carried away by his subordinates toward Moukden.

THURSDAY, NOVEMBER 22ND.

As yet no intelligence has come of the assault upon Port Arthur. Explanations of the delay are given by some vernacular newspapers. It is stated, for example, that in view of combined operations by the Army and Navy, there was a strong desire to bring about an engagement between the Chinese and Japanese fleets prior to the attack on Port Arthur, and that Admiral Ito spent several days outside Wei-hai-wei endeavouring to induce Ting to come out and give battle. The Chinese, however, declined to be tempted, and Ito had nothing for it but to return to Talien *re infecta*. Pending his return, the assault upon Port Arthur was delayed. We do not attach the smallest importance to that theory. It is true that a telegram is said to have been received from Admiral Ito at Talien, dated the 18th instant, to the effect that the Peiyang Squadron and four gun-boats are in Wei-hai-wei and that every possible effort having been made, without the least success, during two days to induce them to come out, the greater part of the Japanese ships had returned to Talien, a few remaining to watch the enemy. But there is no reason, so far as we can see, to suppose that Admiral Ito kept the Army waiting while he essayed to bring the Chinese ships to close quarters. His visit to Wei-hai-wei was doubtless made in the interval while the land forces were preparing for the assault. For our own part, we are persuaded that if any explanation be required, it must be sought in the difficulty of getting heavy guns into position to bombard the intrenchments. Unless the defences on the land side are weaker than all reports agree in representing them, it is very improbable that the troops would be marched to the assault without a preliminary bombardment. A telegram sent from Hiroshima at 7.30 p.m. on the 20th instant indirectly confirms this view. It mentioned incidentally that the siege-guns brought up by a Major, whose name is not given, had at length arrived at the front, and that the attack would commence on the 21st instant. The mention of "siege-guns" may lead some of our readers to suppose that Port Arthur is to be regularly invested. We do not think so. Of course it would be easy for the Japanese to sit down before it and starve it out, since they command the approaches on the land and sea sides. But they can not, according to our calculation, afford time for such a leisurely method of procedure. The reference to siege-guns simply means that artillery of larger calibre than the ordinary field-pieces carried in the train of an army is to be employed. A commanding-officer has to be guided in such matters, to great extent, by the forces opposed to him. Intrenchments mounting heavy guns can not be breached with field artillery: the breaching batteries would have to be placed at a distance so close that the enemy with his big cannon would have them at his mercy. But for the rest, recourse to siege-guns need not signify anything more than that the

artillery attack preceding the escalade is to be vigorous, and that the weight of metal thrown by the assailants is to bear a reasonable ratio to that available for the defence. It should be premised that we speak conjecturally as to the Chinese artillery. No detailed statements have been published on the subject. It is merely alleged that the fortifications are very strong, and that the garrison numbers 20,000, but we imagine that the figure is somewhat exaggerated. A telegram from Shanghai, which must be received with all caution, says that the Chinese troops are deserting from the place, but it is difficult to perceive whither they could desert; unless they disguised themselves as peasants and dispersed through the peninsula. In the *Hochi Shimbun* we read that five Japanese spies have been caught and killed by the Chinese in Port Arthur. That is the common fate of spies.

The *Hochi Shimbun* asserts that only six ships of the Peiyang Squadron are in fighting trim, namely, the two iron-clads, and the *Tsi-yuen*, *Ping-yuen*, *Kwang-yuen* and *Tsing-yuen*. The grounds of the assertion are not given.

A telegram from Shanghai says that an accident is reported to have happened to one of the Chinese iron-clads in Wei-hai-wei, and that Commodore Liu, who commands the *Chen-yuen*, has committed suicide. We give this for what it may be worth.

According to the *Yomiuri Shimbun* the First and Second Armies are now in touch with one another. Our contemporary's statement is this. After the capture of Chiu-lien, Major-General Oseko with two battalions was sent by the main road to Taku-shan, and Colonel Fukushima, with another battalion, proceeded in the same direction by the mountain road. Oseko reached Taku-shan on the 2nd instant, and immediately despatched a squadron of cavalry along the coast road toward the Second Army's landing place. A body of cavalry having been similarly sent northward by the Second Army, the two parties are now said to have met, but the place of meeting is not mentioned. The thing is of course more than probable, since the distance from Taku-shan to Kwa-yuen, where the Second Army landed, is only 57 miles.

The importance of the occupation of Sui-yen, as reported on the 20th instant by telegram from Chiu-lien, is recognised by some of the vernacular newspapers, but they regard the incident rather from the point of view of the junction of the First and Second Armies, than from that of guarding the First Army's communications with its base. Both considerations evidently deserve attention. A strong Chinese force massed at Sui-yen would have menaced the road from Taku-shan to Kwa-yuen (in the Laou-tung Peninsula) as well as the road from Chiu-lien to Monkden. The *Chuo Shimbun* seems to think that Major-General Oseko will push on to Hai-chien, a town 53 miles distant, on the road from Newchwang to Lao-yang. That is possible. From Hai-chien to Lao-yang the distance is only 40 miles, and the road is good. The occupation of Taku-shan, Sui-yen, and Hai-chien would effectually guarantee the First Army's line of communications, and the Second Army's also, supposing that it ultimately marches along the coast to Newchwang.

The *Shogyo Shimpō* says that, according to official estimates, the total number of Chinese troops collected in and about Monkden is only 3,629.

FRIDAY, NOVEMBER 23RD.

War Correspondents accompanying the Second Army send to the Tokyo newspapers various details of the fighting at Chiu-chow. They allege that their information emanates from the Staff Office of the Army. We extract the following:—

The total number of prisoners captured between the evening of the 6th instant and the morning of the 7th was over 280, but of these only 16 were judged to be Chinese soldiers. The rest were released. The number of Chinese killed by the fire of the Japanese including both soldiers and people who were living in the fort, was about 200. In addition to these a considerable but unascertained number, committed suicide under the influence

of terror, by throwing themselves into wells or taking large doses of opium. The spoils found at Chiu-chow were numerous. The small arms left behind aggregated over 1,000 stand, of which the greater part were Mauser rifles, the remainder being Enfields and Remingtons. The guns totalled 229, of which 26 were Gatlings. The Krupps found were of the newest type; their calibres were either 21 centimetres or 15 centimetres. They can be used at once. The quantity of ammunition that fell into the hands of the Japanese is not yet accurately ascertained, but that it must be large may be inferred from the fact that several places in the castle there exist magazines well stocked with ammunition. Specie to the value of about 6,500 *yen* was obtained when Major Akiyama's battalion, marching upon Chiu-chow, encountered the enemy on the 5th inst. The provisions found thus far are 2,000 bales of rice, both hulled and unhulled, but it is believed that more will be discovered on further search. The Japanese Army now in the Peninsula consumes about 150 *koku* of rice per day, so the 2,000 bales seized at Chiu-chow can support it for about 13 days. On the Japanese side 31 officers and soldiers were wounded, and of these two died under medical treatment. Many of the people who fled to safe retreats at the beginning of the battle came back subsequently, on learning that the Japanese guaranteed safety of person and property in the case of peaceful folks. They have already begun to re-open their shops and sell their goods. From the 11th instant, millet gruel was served out to the inhabitants, who, on account of their trade having been interdicted by the Chinese for some days past, were unable to procure even the daily necessities of life, and were found by the conquering army in a miserable half-starved condition. Fortunately about a thousand *koku* of millet were discovered in warehouses within the castle premises, and hundreds of poor folks are being fed upon the gruel every day. Since the 9th instant, coolies have been forbidden to separate from the groups into which they are organized, the object of this injunction being to provide against lawless conduct on their part. With the same object soldiers are forbidden to enter the dwellings of the Chinese people. There are about 4,000 houses in Chiu-chow inhabited by some 13,000 people. In the official record left behind, a statement was found that three Japanese spies, Yamasaki, Kanazaki, and one other, had been hanged to death. It appears that these men fell into the hands of the Chinese, somewhere in the neighbourhood of Chiu-chow, whither they had come from Pitsz-wo. From the 12th instant an administrative office, with Consul Arakawa at the head, was opened within the premises of the castle, and thither the people came to lodge their complaints and state their grievances. It is said that a foreign *employé* of the Chinese Government was killed in the fight at Chiu-chow. The barbarous Chinese again disregarded international usage and attacked the outposts where officials of the Red Cross Society were busily engaged carrying away the wounded soldiers. They shot at the coolies, and their onset was met with pistol and sword, one Chinaman being killed and four taken prisoners. The coolies fortunately escaped unhurt. Major Akiyama's battalion, which was ordered to proceed from Pitsz-wo to Chiu-chow by way of Fushchen, was on the point of capturing General Lin Shing-tsang, commander of the Ming troops. At 10.40 a.m. on the 5th instant, when a troop of cavalry had dismounted to take refreshments by the road-side, a party of Chinese horsemen, some 35 or 36 in number, were seen coming toward them, at a distance of about 2,500 metres. An officer rode forward to recommitte and if possible to decoy the enemy. The remainder of the troopers concealed themselves in the bush and awaited the approach of the Chinese. When the latter had advanced to within about 1,000 metres of the ambush, a company of Japanese infantry that had been marching at some distance behind the cavalry, emerged from the by-path taken by the battalion in its advance against Chiu-chow. Seeing these troops, the enemy suddenly turned and fled back along the road by which they had been advancing. The Japanese cavalry gave chase, firing as they went, but the Chinese, being perfectly familiar with the topography of the place, had a very great advantage and were soon lost behind a hill. When the Japanese troopers reached the foot of the hill, they found a coach and a waggon, drawn by four horses each, which had been abandoned. In the coach documents bearing the signature of Lin Shing-tsang were piled up, and the waggon contained arms, provisions, and so forth. It was suspected by the Japanese at the time that the inmate of the coach might have been General Lin, or at any rate a person of some consequence. When Chiu-chow was taken next day and the documents found

in the telegraph office fell into the hands of the Japanese, this suspicion was verified beyond doubt, for a telegram despatched from the Viceroy Li to Liu to was found directing the latter to return promptly to Chiu-chow from Chiu-lien by a by-path. The *Nippon's* war correspondent, who pens these particulars, says that while the troopers gave chase they saw that two of the Chinese hit by their fire, fell from their horses, and two others were wounded. All, however, managed to get away. The enemy also fired at the pursuers but ineffectually. Both the foreigners accompanying the Second Army and the Japanese officers who have inspected forts in Europe, are unanimous in rating the defences of Talien over those at Aden, Gibraltar, or Crustadt. The equipment was so perfect and the natural strength of the position so great that they thought it would have been easy for a garrison numbering only a thousand to successfully resist the attack of an enemy twenty or thirty times more numerous, for several months. The officers and men of the First and Fifteenth Regiments, who were ordered to attack Talien, expected such a stout resistance that they all looked forward to death on the field. This idea was shared by everybody in the Army, and the news that Talien had been taken without the fall of even one soldier was at first received with incredulity. The *Nichi Nichi's* war correspondent mentions with some indignation that certain foreigners, there are five foreign newspaper correspondents with the Second Army—who witnessed the fighting between the Japanese and Chinese for the first time, show a disposition to base their estimates of the issues of the other battles thus far fought on this miserable retreat of the Chinese, and to hold that the Japanese even victorious not so because of their bravery and good discipline, but because their foes are not worthy to be called soldiers or even men.

There is as yet no news from Port Arthur. The *Yomiuri Shimbun* publishes a telegram from Hiroshima, dated 9.40 a.m. on the 21st instant, to the effect that the attack did not take place on the anticipated day, but was to begin on the 21st. That is confirmed by another telegram, despatched from the same place at the same time and published by the *Kokkai*. It says that the troops undoubtedly left Chiu-chow and Talien on the 15th instant to march against Port Arthur, but that reconnaissances and preparations involved some delay, and that the assault was to be delivered about the 21st. We pointed out some days ago that if the southward movement from Chiu-chow did not commence until the 15th instant, the attack upon Port Arthur could hardly take place before the 21st or 22nd, seeing that the distance to be covered by the Army is 38—some say 47—miles. Hence there is as yet no occasion to speak of delay caused by reconnaissances or preparations after the march from Chiu-chow commenced. Various statements have been published as to the force defending Port Arthur, some estimating it at 15,000 and some at 20,000. The *Kokkai* now puts it at 25 regiments, which means a nominal strength of 12,500, but a real strength of probably 7,000. The *Yomiuri Shimbun*, on the contrary, alleges that there are not more than 3,000 trained and disciplined troops in the place.

It is predicted that Newchwang, if attacked by the Japanese, may offer a formidable resistance, inasmuch as its forts were reconstructed last year, and in addition to its regular garrison, it is receiving large increments of force in the shape of fugitive soldiers escaping from the Manchurian campaign. Fugitives whose fighting capacity is such as the Chinese troops in Manchuria have exhibited, could not add much to the strength of any garrison, and it is moreover reported by foreigners residing in Newchwang that men running thither from the front, are immediately disarmed, by order of the Governor, and placed under arrest.

The *Asahi Shimbun* publishes a telegram from Shanghai, dated at 9 p.m. on the 21st, to the effect that, according to intelligence received *via* Chefoo, the Japanese troops have obtained possession of the fort on the extreme west of the Chinese defences, and that the Chinese have retired to a position on the summit of one of the highest hills, where they are already suffering from lack of provisions. The telegram adds that the Japanese Army is advancing down the peninsula in two sections. This last item we know to be true, but the former part of the

intelligence must be taken with all the reservations appropriate to Shanghai telegrams.

Another telegram from Shanghai published by the *Yomiuri Shimbun*, says that scouting parties of the First Army have reached Lao-yang, and that the Chinese troops defending it have retreated toward Moukden, without offering any resistance, the citizens also flying in all directions. No conflagration occurred, however. The telegram says also that Hai-chien is to be Marshal Yamagata's Head-quarters. The *Yomiuri* considers this last statement very apocryphal, and so do we.

With reference to the establishment of a civil administration in Chin-chow, of which place Mr. Arakawa is appointed Governor, the following regulations have been issued, according to the *Yiji Shimpō* :—

I.—A Civil Administration is hereby appointed in Chin-chow, with authority extending to all within the town and to the hamlets in its environs.

II.—The powers exercised by the Civil Administration of Chin chow being based on the rights acquired from actual military occupation of that place and its vicinity, shall be determined by the Commander-in-Chief of the Second Army in his official capacity.

III.—There shall be one Governor, as head of the Civil Administration, with a certain number of officials attached, the whole being appointed by the Commander-in-Chief of the Second Army.

IV.—A certain number of gendarmes shall be detailed to discharge the functions of guards and police in connection with the Civil Administration.

V.—The Governor, acting in the interests of the Japanese Army, shall discharge the necessary administrative functions within his administrative district, seeking the instructions of the Commander-in-chief in grave matters, and taking counsel of the Commissariat with regards to matters relating thereto.

VI.—The Governor, acting in the interests of the Japanese Army, shall exercise criminal jurisdiction within his administrative district over Chinese subjects and foreigners, in accordance with the provisions of international law. Provided that, capital punishment must not be inflicted without the approval of the Commander-in-chief.

VII.—The Governor, for the purpose of preventing unlawful conduct on the part of the Japanese troops in conquered territory, shall exercise jurisdiction over Japanese subjects within his administrative district, applying the provisions of the Military Criminal Code, Code of Criminal Procedure, and Punishment Regulations, and having recourse to the Military Combatant or Commissariat Authorities for the due execution of sentences. With regard to other matters, he shall seek the preliminary instructions of the Commander-in-Chief, and proceed in accordance with fixed military laws.

VIII.—The Governor shall inspect the property and businesses of the people within his administrative district and shall report their condition to the Commander-in-chief's office. He shall also be furnished with information and shall be entitled to offer his opinion concerning any orders or measures that may be about to be issued or taken by the Military Combatant or Commissariat Authorities with reference to the Chinese subjects within his administrative district.

IX.—The Governor, in the discharge of the administrative and judicial functions pertaining to his office, may employ Chinese subjects as his assistants, and if necessary may give them pay and rewards.

X.—Expenditures incurred in connection with the Civil Administration of Chin-chow shall be defrayed by the Military Superintendent Department.

A telegram from Shanghai says the Viceroy Li has refused to leave Tientsin. That refers, of course, to the rumour recently circulated that he had been summoned to Peking to assist Princes Kung and Ching in the administration of foreign affairs and of the war, his Viceroyalty of Chihli being temporarily given to Lin Kuu-yi. If the telegram be correct and if the rumour be trustworthy—truly the reservations necessary in the case of news from China are troublesome—something like a serious complication seems to be impending. But to discuss such contingencies in presence of the fact that another wire may contradict all the bases of our conjectures would be an idle task.

SATURDAY, NOVEMBER 24TH.

Intelligence from Port Arthur is still awaited, but all accounts agree in saying that the attack was to commence on the 21st inst. According

to the *Nippon*, the original plan of the Japanese Generals was to push on at once after the capture of Chin-chow and Talien, and deliver the assault against Port Arthur without any delay. That programme was based on the hypothesis that the enemy would offer strong resistance at Chin-chow and Talien, and that his defeat at those places would throw the garrison of Port Arthur into disorder. But the Chinese having made no stand of any consequence at either Talien or Chin-chow, and having reserved all their strength for the defence of Port Arthur, it became necessary to modify the Japanese plan. The 15th or 16th was then fixed for commencing the assault, but in the first place the convenience of the Navy had to be consulted, with reference to a combined attack; and in the second, the great strength of Port Arthur made it necessary to proceed with due caution. Hence the delay. That version of the circumstances is partly borne out by the *Yiji Shimpō*, which alleges, on the authority of a telegram from Hiroshima, that the attack upon the fortress would have been commenced immediately after the fall of Chin-chow and Talien had not Lieut-General Yamaji urged the advisability of awaiting for the arrival of the Mixed Division under Major-General Hasegawa. In point of fact no explanation is necessary. A week more or a week less where an operation of such difficulty and magnitude is concerned need not surprise anyone. Naturally the delay is inspiring the public with an exaggerated idea of the strength of Port Arthur. The *Nippon* and the *Hochi* both write about the defences of the fortress on the rear face, the former calling it the Sebastopol of the East, and the latter alleging that it is so well protected behind as to make it questionable whether an attack from the front might not be easier. The roads, we read, purposely made narrow and hard of access, are completely swept by the fire from the forts, and the position of the latter is so well chosen that to batter them with artillery is a task of the greatest difficulty. We can not tell how far these views may be consistent with actual facts, but it will certainly be safe to conclude that Port Arthur possesses defensive capacities of a high order.

The *Nichi Nichi Shimbun* contains a telegram from Hiroshima to the effect that a Chinese man-of-war is still in dock at Port Arthur, and that the inhabitants of Talien, who deserted the place prior to its capture, effected their escape subsequently by ship.

In the *Shogyo Shimbun* we find a statement of the spoils taken at Chin-chow and Talien. The figures do not tally with those already given by correspondents of the vernacular press, but pending the publication of some official intelligence on the subject, we are unable to discriminate between the various accounts. The *Shogyo Shimpō's* catalogue is this :—

Horses	85
Small Arms	621 stand.
Guns	129
Small-arm Ammunition	33,814,300 boxes.
Large-arm Ammunition	2,468,271 rounds.
Rice	3,210 bags.

The number of prisoners is put at 16. The above statement requires confirmation so far as the ammunition is concerned.

A telegram from Hiroshima, dated 11.10 a.m. on the 22nd instant, says that all preparations have been completed for moving the Court from Peking, and that if the Japanese troops show any disposition to approach the capital, the Emperor will at once leave it. The probable place of retirement is given as Chang-chia-ken.

Mr. Kuroda, the now famous war-correspondent of the *Nichi Nichi Shimbun*, writes from Feng-hwang under date of the 1st instant. It was, he says, on the 31st of October that the main body of General Tachimi's Brigade marched into the castle of Feng-hwang and took possession of it. As the correspondent entered the city in rear of the Brigade, he saw in the streets many corpses of citizens scattered here and there. They had evidently been murdered by soldiers of their own country, for their bodies all showed wounds inflicted by blunt swords. According to statements made by the prisoners and citizens, General Sung and the ex-Chinese Resident Yuan

were in Feng-hwang from the first, and when the news of the fall of Chiu-lien reached them, the latter fled to Peking, while Generals Sung, Ma, and I—the last being in command of the Amoor troops—retreated toward Moukden with about 3,000 soldiers. It is said that seeing the hostile Army quartered in Wi-ju with no apparent sign of moving, all these Generals imagined that the Japanese were waiting for the river to freeze. Mr. Kuroda writes in high terms about the bravery of H.I.H. Prince Kanin, in the battle of Chiu-lien. The Prince is a captain and serves as aide-de-camp to Lieut.-General Katsura, the Commander of the Nagoya Division. The fight at Lita-yuen, in which the Nagoya troops were engaged, was the hottest in the battle of Chiu-lien. During the fight, occasion arose for the General to send a message to Lieut.-Colonel Tomosa, who commanded the left wing. The Prince volunteered to undertake the mission, and fulfilled it under circumstances of great danger, the bullets flying around him as he rode. The cold has become intense since the Army crossed the Chinese frontier. The temperature in Feng-hwang at the time Mr. Kuroda's letter was written corresponded with that of Tokyo at the end of December. In the context of that statement we read that General Tachimi still wore a summer shirt and summer pantaloons, which having been in use for more than a hundred days were torn in many places. He had no blanket to cover him at night, but slept in an overcoat on a bundle of straw. The *Nichi Nichi's* correspondent commends these facts to the consideration of its countrymen, on whose account the soldiers are suffering such privations.

Perhaps the most conclusive explanation of the delay in attacking Port Arthur is that the southward march of the troops from Chin-chow was postponed pending the arrival of a seige train of thirty 12-centimetre guns and six howitzers. The overland carriage of heavy artillery being an operation of the most tedious and troublesome character, these guns were not carried ashore at Kwa-yuen or Pitszwu, but were disembarked at Talien, the operation being delayed until that harbour became available for Japanese transports. We may here allude to an idea that has found journalistic expression, namely, that the guns taken at Talien should have been available for the attack on Port Arthur. No one possessing military knowledge could fall into such a misconception. Guns mounted in permanent fortifications can not be used for field purposes without modifications that would involve the work of an arsenal and gun-carriage manufactory.

The garrison of Port Arthur is confidently affirmed to be 20,000, and they are said to have six weeks' provisions, but how much truth there may be in these statements, we can not tell.

With regard to the accident reported to have occurred to the Chinese iron-clad *Chen-yuen*, the details now given are that she struck on a sunken rock near the entrance to Wei-hai-wei. It is alleged that her repairs will occupy a considerable time. But how are they to be effected? She can not go into dock at Port Arthur, and there is no other dock available in north China.

Rumour has it that Mr. Detring has started for Japan to see whether an understanding can not be arrived at between the two empires. That, also, we give merely as a rumour.

From Moukden intelligence is said to have been received that the city is deserted by the populace, which is very likely, in view of the licence exercised by Chinese soldiers when defeated and disorganized. There is also news that Manchuria is over-run by plundering deserters, and that utter anarchy prevails. That, too, seems very probable. The sooner the Japanese come into full possession of the place, the better for the unfortunate people.

It is reported that a portion of the Second Army is marching north-west; that is to say, in the direction of Newchwang. But we find it difficult to imagine that Marshal Oyama would detach any considerable part of his troops on the eve of a great enterprise. That would be contrary to one of the fundamental maxims of strategists. If he has done

so, the inference is that he has entire confidence in his ability to take Port Arthur. Another inference would be that he intends to reduce Port Arthur by regular siege. The place is at his mercy. He can starve it out. Ten thousand troops aided by the Navy would suffice for that purpose. Perhaps the second half of the Army has moved against Newchwang. But these, too, are rumours.

From China comes intelligence that the fleet commenced to bombard Port Arthur on the 20th; that is possible. The fleet would probably precede the army in such a business.

It is surprising that the delay in attacking Port Arthur has not been productive of a crop of rumours from China unfavourable to Japan. The delay before Phyang-yang, the delay at the Yalu—we remember what these intervals brought forth. However, there is a commencement. Tientsin telegraphs that the first three Japanese attacks on Port Arthur were repulsed. Tientsin is not in the route for receiving intelligence, but that detail does not deter its canard-mongers.

A Japanese cruiser is reported to have been seen off Ningpo, but it is scarcely probable that Japanese men-of-war would be travelling about so far from the present basis of important operations.

THE NIPPON YUSEN KAISHA & THE TRANSPORTATION OF GOODS.

The vernacular papers give a statement made by the President of the Nippon Yusen Kaisha of the plan by which the Company is endeavouring to meet the exigencies of the time in the matter of the transportation of goods. The appropriation of steamers for this purpose must depend on the condition of the markets of respective localities during the past month. A special difficulty presents itself in the fact that so many of the Company's steamers have been requisitioned by the Government. Resolved, nevertheless, to fulfil its duties, the Yusen Kaisha has bought or chartered more than 20 steamers, all of from 2,000 to 4,000 tons. The programme adopted by it to facilitate the coast trade is to place six steamers of from 2,500 to 4,000 tons on the line between Kobe and Otaru via the eastern coast of the main island. For another line running between the same ports but passing along the western coast, three or four more steamers of similar capacity will be employed, and two steamers of about 2,000 tons each will run between Kobe and Yokohama, five steamers between Kobe and the Korean ports, three between Yokohama and Fushiki, and another between Yokohama, Kobe, and Nagasaki, calling at coast ports en route. In addition to the above, two or three vessels will visit the Hokkaido ports when necessary. The Kobe-Shanghai service and the Bombay service will also be continued. Not only is the scarcity of ships felt, but the fact that the railway which formerly greatly facilitated the conveyance of goods is now almost exclusively used for military purposes, greatly inconveniences the Company. To give an example, steamers which used to unload and load at Kobe cargoes for and from Osaka, are now frequently obliged to proceed direct to the latter place, which of course means a loss of several days. The carriage of rice from Fushiki to Tokyo is a matter of urgent necessity, for while a large quantity of the cereal is awaiting transportation in the great rice centre, the stock in Tokyo is considerably diminished, causing a noticeable rise in its price. Six large steamers have now been despatched for that port, and it is believed that by the 22nd or 23rd instant they will be on their way back to Tokyo carrying more than 100,000 *koku* of rice. Besides the many disadvantages attending the chartering of foreign vessels, there are practical inconveniences, as for example, the insufficient experience of their foreign crews in the coasting trade of Japan. The Company's difficulties are at present, therefore, very considerable.

KOREAN NEWS.

A serious affair is now looming on the Korean political horizon, writes the *Jiji's* Seoul correspondent; so serious that it may ultimately bring disgrace on many Korean statesmen, including the Tai Wön-kun. It had its origin in the surrender of Li Heiki, a favourite of the Tai Wön-kun, to the Korean Police, in whose custody he is now held. It appears that Li took part in all the deliberations of the faction headed by the aged statesman, and is therefore acquainted with its secrets. Shortly afterwards he was made a police official and had frequent occasion to meet members of the Japanese Police now in the capital. Interchange with the latter gave him an insight into the real intentions entertained by Japan toward Korea, and also taught him to comprehend the civilization adopted by the empire. Thus newly enlightened, his hatred of the crooked artifices, and ignorant devices of the faction with which he had been connected grew more and more intense and conscience finally drove him to confess to the police what he knew of the faction's doings. He was at once placed in confinement. Before his judicial examination by the competent authorities, several of the faction against which he had informed, visited him and in vain pleaded with him not to confess the truth, promising that should he keep silence they would procure his speedy release and appointment to high office. To all entreaties and remonstrances he turned a deaf ear, however, and when brought, shortly afterwards, before the Korean Minister of Justice and the Japanese Consul in Seoul, for examination, he made a clean breast of what he knew and had done. Another Korean lately arrested on a charge of engaging in some secret intrigue was also examined and had to confess everything. The next thing to be done was to summon and examine all the persons implicated in the affair and the witnesses. As a preliminary step, Li Inyo, ex Chief of Police, was about to be examined, but at this point some difficulty arose between the Korean Government and the Japanese Minister. The former, or more properly the adherents of the Tai Wön-kun, maintained that to examine an official of *Chokunin* rank as a criminal would be contrary to the time-honoured usage of the country. To this the Japanese Minister replied that Korea, being an ally of Japan in the present war, should endeavour, to the utmost of her power, to quell the insurgents that cut the military telegraph, attacked Japanese commissariat stations, and killed their guards. Count Inouye expressed his surprise that such an obstacle should be placed in Japan's way when she was seeking to arrive at an impartial judgment in this grave case. He therefore demanded the examination of all those implicated, commencing with Li. He added that he knew nothing of the old custom referred to, and was determined that everything should be done in conformity with the new system, which did not preclude the examination of a *Chokunin* official by the Judicial Department, especially since Li was to be examined not as a culprit but as a witness. The result of this first collision between Count Inouye and the Korean Government was not yet clearly known at the time the *Jiji's* letter was written, namely, the 11th instant, but doubtless the Government was compelled to give way. The *Jiji's* correspondent says that letters by means of which the faction instigated the Tong-hak insurgents, together with other documents bearing on the same point, secret despatches sent by the Tai Wön-kun to the Chinese generals in Phyang-yang, have all fallen into the hands of the Japanese authorities, and the sinister project of the old statesman and his followers against Japan is now an open secret. The Tai Wön-kun and his grandson are said to be very uneasy, and it is reported that when Count Inouye saw them for the first time they declared, with the view of paving the way for the subsequent fabrication of some plausible excuses, that they were extremely pained to find various groundless rumours circulating with reference to them. The Tai Wön-kun's hatred against the

influential members of the Reform faction is very intense, and had he been allowed to proceed as he did a dozen years ago, such Koreans as Kim Kachin, An Keiju, Cho Giyen, and so forth, would have been put to death. Constrained to adopt gentler methods, he was contriving to have them removed from the capital, and would doubtless have succeeded had not Count Inouye stepped in and frustrated his designs. Taking advantage of the fears entertained for their personal safety by these advocates of reform since the assassination of Kim, the Tai Wön-kun had so craftily arranged affairs that they were induced to ask to be removed to provincial offices. The only thing necessary to make their removal an accomplished fact was the King's sanction. But when the scheme reached the ears of Count Inouye, he at once interviewed the Foreign Minister, and demanded an explanation why the Government contemplated the removal of such officials in direct violation of the assurances previously given by the principal statesmen of the Kingdom that the removal of officials should be avoided as far as possible. The Foreign Minister had no answer to give, but simply offered an apology. Count Inouye, next addressed himself to the terrorized officials, and induced them to abandon their idea of leaving the capital.

CHINESE NEWS.

If the things written in the Shanghai journals be credible, Peking was in a state of grievous scare in the early days of the present month. Prince Kung had asked the Foreign Representatives to intervene once more, and having received an emphatically negative reply, was reported to have metaphorically thrown up the sponge; the court officials were flying; the Emperor himself was getting ready to run; the ladies of the Imperial Harem had already been carried away, and panic prevailed everywhere. What may be the dimensions of the grain of truth contained in all these tales, we do not pretend to estimate, but we do think that if Japanese journals published such canards, foreign editors, whose capacity for exaggeration and falsehood is on an incomparably larger scale than that of any humble Japanese newspaper-man, would choke with indignation. We are inclined to hope, however, that the outcry against Japanese and Chinese lies will calm down henceforth. It was purely a question of jealousy. The foreign Munchausen could not endure to be challenged in his own specialty. But having now distanced all chance of competition, he can afford to be magnanimous, and grant a little license to such petty imitators as the *Shenpa*, for example, which says of the fall of Chiu-lien:—

Three thousand of the enemy's troops crossed the Yalu and when they were landing the Chinese fired on them, and many were killed, but they were immediately reinforced by 40,000. The enemy raised a frame work from which they shelled the Chinese with deadly effect. General Sung endeavoured to get his men to advance on the enemy, but his order was disobeyed so the fall of Chiu-lien-cheng was the result.

They may even suffer Admiral Ting to tell his story of the great naval fight thus, as reported in the *Peking Gazette*:—

In the engagement off the Ta-tung river ten of our vessels were engaged with twelve of the Japanese. The Japanese ships and guns were both very swift (in action). Our Squadron met them in a bloody engagement which lasted for more than six hours. In the commencement injuries were equally inflicted on both sides, but eventually what with such ships as were sunk, such as were burnt, such (as had to retire) for repair of injuries and such as were (scattered) in pursuit of the enemy's ships there remained only the two armoured vessels *Ting-yuan* and *Chen-yuan* which surrounded by the whole Japanese fleet sustained the fire of their guns for over three hours. Thus, vowing to die in opposing them, we were enabled in our weakness to overcome their strength and to turn defeat into merit. We succeeded at this time in sinking the Admiral's ship with one other war-vessel and one transport, three in all; while the number afterwards sank through injuries received

Original from

was still greater. The enemy's object was to land troops at Taku-san to act upon our borders, but he was prevented from accomplishing his object; while we during the action succeeded in landing safely the eight camps of the Ming Army which were engaged in transporting. The hardship of this engagement has already been represented in detail (in a despatch) of the 9th day of the 9th month. All the officers fought with increasing courage and energy as the battle proceeded and are worthy of all praise for their admirable bravery.

The following appointments and punishments are said (by the *China Gazette*) to have been announced in Peking:—

Prince Kung, Director General of all military and naval operations, and all commanders are hereby notified that if they disobey his orders they will be tried by court-martial and punished accordingly. Prince Ching, by the same decree, is appointed Vice-Director General; Weng Tung-ho, Li Hung-tsao, Yung-in and Chang-fan are appointed Associate Directors, and are called upon to exert their utmost abilities to protect the empire and avert calamities. From the same source I learn that the divisional general of Ning Hsia, lately commanding the Sheng brigade of Chinese troops in Korea, Wei Ju-kwei, having shown his incapacity in war-like affairs and allowed his troops to be beaten and dispersed, robbing the people on the march, without restraint, and having extorted or squeezed the soldiers of their pay and rations, is hereby cashiered and condemned to be arrested and sent as a prisoner to the Board of Punishments at Peking, for trial and sentence. Admiral Ting Ju-chang, commander-in-chief of the northern squadron of the fleet, is also deprived of his rank and handed to the Board of War, for judgment, and a penalty for his incapacity and inability to defeat the enemy.

General Sung, as our readers know, commanded the Chinese troops on the northern bank of the Yalu. There he lost the battle of Hu-shan, evacuated Chiu-lien, and has been retreating ever since until he is now more than 120 miles away from the Yalu. The fight of Hu-shan had been fought and Chiu-lien and Feng-hwang had fallen into Japanese hands before the end of October, yet we find the following paragraphs in correspondence dated from Peking on November 2nd and sent to the *China Gazette*:—

An Imperial Decree has just appeared, conferring high honour and noble rank on General Sung Ching for his recent very important victories over the Japanese, which sounds like a parody on the General's performances, and reads as follows:—"For pacifying Korea, and dispersing the Wajen (Japanese), Sung-Ching, who of old is experienced in military matters, has bestowed on him the honours of Senior Guardian of the Heir Apparent, and the noble rank of Viscount of the first class. Sung-Ching is ordered to encamp on the banks of the river, and await the arrangement for peace by the various Powers."

Rumour has the field to itself in Shanghai and Tientsin. The great Viceroy has been summoned to assist Princes Kung and Ching in the administration of foreign affairs and the war; the viceroyalty of Chihli is to be taken over by Liu Kun-yi; General von Hanneken is entrusted with an important military command and has telegraphed for 400 German officers to assist him; the Court is to be transferred to Hsianfu, the capital of Shensi, if the Japanese invade Chihli; Sheng, Taotai of Tientsin, has offered two million taels to any one that will save Port Arthur, and so forth. More trustworthy are the accounts from Newchwang to the effect that soldiers are arriving by hundreds, having deserted from Sung's army; and from Chefoo that every steamer brings numbers of refugees from Newchwang. We observe that Commander Squire arrived at Chefoo from Port Arthur in the *Kwangchi* on the 5th of November. Apparently he has no idea of trying to earn the two million taels.

The *North-China Daily News* has more than one leading article on the vigorous action recently taken by Great Britain with regard to the *Chung-king* outrage. The incident being closed, we need not again refer to the details, especially as our Shanghai contemporary's account of the 14th instant was published in these columns on the 12th instant. But we adhere to our belief, then expressed, that Great Britain's action in this instance has been exaggerated by rumour.

The absurd fiction that Major von Hanneken

was summoned to Peking by the Emperor in order that his Majesty might receive a truthful account of the war, is now finally disposed of. Major von Hanneken was not summoned by the Emperor and did not see His Majesty at all. He was summoned by Prince Kung and he saw Prince Kung.

THE WEI-HAI-WEI AFFAIR.

Error dies hard. Generally it may be left to commit suicide at leisure, but sometimes its protracted vitality is mischievous. The Wei-hai-wei story seems to be of the latter character. It lingers tenaciously in the minds of many Japanese; it resists all contradiction, and it has now found its way into the *Army and Navy Gazette*. The incidents as credited by the Japanese are these:—Early in August, Admiral Ito, sensible of the immense importance of crippling the Chinese Navy, planned a night attack upon Wei-hai-wei, where the Peiyang Squadron was supposed to be lying. He chose the 10th of August for the attempt, as the moon would set at about 1 a.m., leaving a period of complete darkness before dawn. Knowing that there was no provision of electric search lights on shore, his plan was to send a number of torpedo-boats into the harbour, and simultaneously to bombard the forts so as to cover the movements of the torpedo-boats. This project was entirely frustrated, however, by an unlooked for incident. When the Japanese ships drew up towards Wei-hai-wei, H.B.M.S. *Mercury*, which was observing events, suddenly turned on her electric search light, thus rendering everything visible from the shore, and effectually defeating the Japanese programme. Nay more, soon afterwards, but still long before sunrise, she fired a salute to Admiral Ito. Under the circumstances the only course open to the Japanese squadron was to abandon the attack and steam home, all chance of secrecy having been lost. That, we say, is the Japanese story, firmly believed by many persons, and even now recounted confidently as an evidence of something more than impartial passivity on the part of the British Admiral, who happened to be in the *Mercury* at the time. How such a tale ever came to be constructed, we are at a loss to conceive. At the time of its first circulation it was laughed at in these columns, the saluting incident, at any rate, being an obvious absurdity, such a thing as a salute at sea before sunrise never having been heard of. Nevertheless, people are still credulous, and since we have now ascertained exactly what happened, as far as the *Mercury* is concerned, we deem it wise to demolish the canard once for all, premising that the details which we give here are absolutely beyond question, having been obtained from the most unimpeachable source. The *Mercury* observed the smoke of the Japanese fleet on the evening of the 9th, and slowed down so as to keep the ships in view throughout the night. Imagining that a night attack by torpedo-boats might be on the tapis, she remained behind the squadron. Early in the morning, the Japanese stood in to within 4 or 5 miles of Wei-hai-wei with all their flags flying. It seemed as though a challenge, or simply a demonstration, was intended. As far as could be seen, the only craft in the harbour at the time were 3 gun-boats, 1 cruiser, and 2 merchant ships. Hence, if there had been any idea of a torpedo attack, it must have been abandoned as fruitless. The *Mercury* kept well clear of the ships and outside them until 6.30 a.m., the Japanese, meanwhile, standing off and on. Then the *Mercury* proceeded under easy steam toward Chefoo. But at a few minutes past 7 a.m., she turned back again in the direction of Wei-hai-wei, and increased her speed, now standing closer in shore. By about 7.45 she had steamed to the vicinity of the Japanese ships and was nearing the western entrance to Wei-hai-wei, inshore of the squadron. Just then the Japanese were observed to stand off shore, but one division, led by Admiral Ito in the *Matsushima*, turned westward, and the *Mercury*, following suit, found herself so near the Admiral's ship that it would have been a

palpable discourtesy not to salute. She did so and the salute was returned. That was about 8 a.m. The *Mercury* now steered clear and by and by, at about 8.40 a.m. the third Japanese Division, being then 5 or 6 miles distant from the British man-of-war, began to exchange shots with the eastern batteries, and continued to do so for about half an hour, after which the *Mercury* proceeded to Chefoo. From these details, the absolute accuracy of which we again guarantee, it will be seen, first, that a torpedo attack, if contemplated, must have been abandoned in view of the absence of the enemy's fleet; secondly, that the *Mercury* never used her search-light at all; and thirdly, that the salute was fired at 8 o'clock on a midsummer morning. Thus there is not a particle of foundation for the singular story that has caused so much concern to so many Japanese. Whence it originated, how the materials were collected, we cannot conceive. But as several of the vernacular newspapers helped to circulate the falsehood, and avowedly attached credence to it, we trust that in the interests of truth they will reproduce this account of what actually occurred. Considering the thoroughly friendly relations that exist between the Japanese and British naval services, and considering that the *Mercury's* solitary act was one of courtesy toward a Japanese Admiral, nothing could be more regrettable than that umbrage should arise out of a statement not having the smallest shred of veracity.

ETHICS OF THE WAR.

(COMMUNICATED.)

It is too early yet to speculate about the probable ultimate effect of the war on Japan as a nation; nevertheless certain phenomena are even at the present moment worthy of notice; certain political and social phases directly attributable to Japan's successful struggle with a foe more than a dozen times her size. Prior to the outbreak of hostilities it was the cant of pessimists and terrorists that this country was on the eve of a great internal revolution. The repeated dissolutions of the Diet, the steady front presented by the Opposition, the dissatisfaction supposed to be felt on all sides—these and many other points were dwelt upon as indicating that Japan had attempted to make too rapid progress, and that her civilisation was only a very thin veneer after all. In this context, in particular, the war has been of incalculable benefit to Japan. It has shown that she is a homogeneous mass, not a heterogeneous conglomerate of rival factions. It has shown that Japan's civilization is capable of standing the most rigorous test, and coming out purer and better than the world had believed. It has shown that the Treaty Powers have for years superciliously been holding at arm's length not a parvenue nation, the servile imitator of Occidental customs, but an enlightened Power every whit as progressive as themselves and worthy to rank in the very forefront of civilisation at its highest and best. In the course of the war Japan has acted in accordance with the noblest dictates of humanitarianism; for seldom have such great victories been achieved with so little bloodshed, or barbarous foes been handled with such gentle hands. Japan's treatment of her Chinese captives, of the people she has subdued, and the Koreans she has had to deal with, has been such as demands the admiration of the world.

But more particularly within the borders of the Empire has the effect of the war been hitherto of unparalleled influence. The chivalrous spirit of past centuries, apparently dormant for two or more decades, has once again become pre-eminent, and is not, as of old, confined to the higher classes or to those who once had the sole right to carry trenchant blades. The barriers of caste have been burned away. The pariahs of yesterday are the lithe, quick, keen-eyed soldiers of to-day. It is the common soldier of lowest rank whose name is lauded for opening the Gemum Gate; the peasant son's who kept the trumpet to his lips till he fell dead on the field of honour. The laurels of the

war have hitherto almost without exception fallen to men of low social and military or naval rank. More than this, the whole country has thought and moved as one man. There has been no hesitation to sacrifice all, if need be, to the honour of the nation. Political differences have been forgotten or buried in enthusiastic patriotism. The one-time fervent sentiment of loyalty to a feudal lord has been supplanted by a deeper and nobler devotion to the Emperor. These are things of which Japan has surely a right to be proud. And with all the bustle and confusion of war there has been no disorganization or disturbance in the domestic administration. It would even seem that things have gone on somewhat more smoothly than heretofore; there has been less friction, more cordiality, a more honest interchange of sentiment. Japan's commerce has not suffered by the unusual strain: both imports and exports stand well above those of other years, and her merchants shown a keen eagerness to profit by the new fields laid open for commercial activity. Nor are the schools deserted. They are better filled this year than they have been for sometime. New text-books of vital importance have made their appearance; wholesale ameliorative alterations have taken place in the status of the Middle Schools, thereby ensuring a much better and more liberal course of education than has so far been obtainable. Education has become decentralized and popularized; technology and agriculture are henceforth to be more thoroughly and profitably taught; in a word, the popular curriculum has been made commensurate with the popular and national needs,—and all this despite the roar of cannon across the Yellow Sea and the fact that twenty thousand Japanese are steadily carrying the *mihata* on toward the walls of Port Arthur.

And yet, with all the victories hitherto achieved, the Japanese are far from being disposed to show great exultation. They have taken things quietly, as if—as is indeed the case—they knew what the result would be from the outset. They criticize, albeit with jubilant hearts, each telegram, and eagerly scan the columns of the foreign press with the desire to learn what Europe and America are saying about them and the deeds of their armies. The nation is apparently striving to show that both in war and peace its progress has been real and solid, and that it is no vain boast to say that Japan shall figure as the leading nation of the East and one of the world's Great Powers. And in all this, the war has done good, not harm, to the nation in whose midst we Occidentals are sojourning.

FACTIONS IN THE KOREAN COURT.

Faction strife in the Korean Court is the prime cause of all the evils now hampering the country's progress along the path of reform, writes the *Kokkai*. There are five factions in the Court, the Tai Wōn-kun's faction, the pro-Chinese faction, the Queen's faction, the Reform faction, and the Independent faction. The second and third are not very distinctly defined, and may be considered in practice as working with the first. Lately, another bone of contention has been super-added to accentuate the political confusion already existing in the field of politics. It is a question relating to the parentage of prominent members of the Government. This question has taken precedence of all others and reduced the number of factions to two, namely, the *Shoshitsu-ha*, or illegitimate faction and the *Chakushitsu-ha* or legitimist faction. The former is identical with the Reform party; the latter with the Tai Wōn-kun's, or conservative party. This trouble has its origin in the old-time Korean system of concubinage, a custom so extensively prevalent that it is common for a Korean, in the higher ranks, to keep several mistresses. Yet the distinction between legitimate and illegitimate children is theoretically very rigid, the latter being even despised much in the same way as the *Nta* used to be in Japan. The line of demarcation, however, does not continue to be marked in later years, for as the illegitimate

generally outnumber the legitimate children, the former frequently succeed in acquiring influence that completely overshadows the latter. That was the case in the Korean Court, till quite recently. The members of the Reform faction are almost all illegitimate children, but such was the power they once wielded that out of 20 Commissioners of Reform no less than 12 were furnished by them. Their watch-words were abolition of caste distinctions and preferment of officials by ability. With such vigour did they push their policy that those interested in upholding the old system became alarmed, and rallied together round the Tai Wōn-kun. Thus the Independents, the pro-Chinese, and the rest all combined and endeavoured to counteract the growing influence of the bastards. Powerful as were the bastards, this united opposition of the other factions was too strong for them. They essayed various devices to increase their strength and to destroy the coalition of their foes. Thus they entered into a secret alliance with the Queen, and sought to bring about an estrangement between the Tai Wōn-kun and Boku Yeiko. All their intrigues failed, however, and it results that the influence of the Reform, or Bastards, faction is now decidedly on the wane, while that of the faction with the Tai Wōn-kun at its head is daily growing. It was owing to this rivalry between the two great factions in the Korean Court that the work of reform undertaken by Mr. Otori met with so much obstruction, and the programme elaborated by him experienced such varying fortunes. The Reform faction is now in sad plight, and holds its position simply through the support of Japan. But the root of all the evil remains, and a Japanese Minister aspiring to reform the Korean Administration must take some decided measures to get rid of the origin of the trouble.

THE PRESIDENT OF THE SPECIE BANK ON A FOREIGN LOAN.

The following is the gist of a lecture delivered by Mr. Sonoda on a foreign loan at the meeting of the Tokyo Commercial and Industrial Society held on the 10th instant:—There are two points to be taken into consideration in raising a foreign loan, namely, the object for which the loan is raised and the time of raising it. When a loan is floated for the purpose of undertaking some productive enterprises, as the construction of railways or harbours, it is likely to be received with greater favour by capitalists than when the money is to be applied to unproductive works, as the purchase of men-of-war or the construction of forts. Apart from the consideration that a loan should be floated at a time when capital is seeking investment, there is another point to be taken into account in this connection, namely, that a loan should be floated before the imperative necessity for it becomes apparent. It need scarcely be observed that the floating of a foreign loan when a country is engaged in war, as Japan is, presents many disadvantages: aspects from a general point of view. But even here a great distinction has to be made when the country having recourse to a foreign loan has been victorious over its enemy, and may reasonably count on coming out of the struggle triumphant. That is Japan's case at present. In these considerations we find an explanation of the fact that the foreign loan which China, whose belligerent prospects are very gloomy, contemplates raising in London, is not well received. Another thing operating to the benefit of Japan, is that the total foreign indebtedness of the country at present does not amount to half a million pounds sterling, and the credit she enjoys among foreign capitalists is uncommonly good. That is because she has hitherto fulfilled all her obligations with faithful punctuality and has never given cause of complaint to her foreign creditors. These are some of the considerations making for Japan's advantage should she conclude to float a loan abroad. The next point to be examined is the rate of interest at which Japan might expect to raise a foreign loan now. The rate she had to pay

20 years ago was 7 per cent. per annum. But it is hardly necessary to say that she can now obtain far better terms, especially when it is remembered that she is to-day regarded by Western Powers as one of themselves. All things considered, she might be well satisfied with a rate of 4½ per cent., the same rate at which the Egyptian loan was raised. As to whether security should be given, Mr. Sonoda thinks that it would be better to give it, so as to relieve capitalists from any apprehension that might cause them to hesitate about investing their money, as many of them are ignorant of the real state of affairs in the East. Some persons may object to giving security on the ground that such a step would be dishonourable to the country, but Mr. Sonoda thinks it would be better for Japan to secure practical advantages rather than to be scrupulous or romantic about such matters. The loan that Japan floated 20 years ago was, if he remembered rightly, on the security of the Government's Revenue, or on the Custom duties. He next dwelt on the process of floating a loan abroad, and remarked that the place of floating it should not be settled beforehand but should be chosen with regard to the conditions most favourable to the borrower. He concluded by observing that the suggestions which Mr. Taguchi, editor of the *Keisai* and a member of the Diet, had made about correspondence between the Nippon Ginko and the Specie Bank, on one side, and the leading banks of Europe and America on the other, with the view of inducing the latter to give aid in case the former found themselves in need of it, did not appear practicable, for the present at all events.

THE PRIMARY CAUSE OF THE TONG-HAK AGITATION.

The primary cause of the Tong-hak agitation lies deeper than is generally supposed, observes the *Yiji Shimpō*. It originated with discontented officials in Sōul. Officials occupying important positions in the Central Government of Korea are generally provincials, only a few of them being citizens of Sōul. Of course there are differences in the degrees of respect extended to inhabitants of different localities. The people of Pyōng-an-do and Kwan-pai-do, for instance, are despised as north-eastern kuaves, whereas those from the three southern provinces, Chun-chou, Chol-la, and Kyōng-shan, are looked up to, and supply the largest number of influential officials, so that, the three southern provinces of Korea occupy a position analogous to that of Satsuma and Chōshū in Japan. The analogy extends further, for, like the men of Satsuma and Chōshū, the officials of the three Korean provinces preserve intimate relations with their fellow-provincials, and generally visit their native places twice a year, always, moreover, keeping up establishments there. This intercourse with their old friends is not confined to such visits, but is kept warmly up all the year round by correspondence and interchange of gifts. It is in the intimate relation between the majority of the officials in Sōul and the inhabitants of the three provinces, the seats of the Tong-hak insurrections, that the primary cause of the outbreak must be sought. The discontent of the officials against the selfish insolence of the Ming faction gradually spread to the provincials, and the latter's indignation growing more and more intense, finally broke out into open rebellion. But now that their avowed object is attained, the Ming faction, being expelled, and the Central Administration reformed, the question naturally arises, why do the Tong-haks still remain in a state of insurrection. The *Yiji* answers that they have conceived a fresh cause of discontent against the officials in the capital. What they now resent is the disappointment of the hopes they entertained of succeeding to the posts and emoluments of the Ming faction after its fall from power. The Japanese having stepped in and completely frustrated this selfish ambition, the umbrage felt by the disappointed office-seekers against the Japanese has spread to their pro-

vincials, so that the latter are betrayed into presenting a hostile front to the Japanese whom they regard as intruders. It has been suggested by some that just as the hostility of the northern Koreans has been entirely softened since they themselves witnessed the overwhelming strength with which the Japanese drove the Chinese beyond the frontier, so the southern agitators could be quickly quelled and placated by a little display of force. But the cases are not exactly parallel. It is impossible to restore order in the south so long as the officials in the Central Government are disaffected against the Japanese. Such officials should be dealt with first. The rest will follow easily.

SOCIETY FOR THE PROTECTION AND TRAINING OF SEAMEN.

The Society for the Protection and Training of Seamen dates from 1880 when it was organized by Admiral Baron Akamatsu (retired), Mr. Mayejima, then Vice-Minister of State for Communications, and Messrs. Iwasaki, Taka-hara, Shoda, and Sawa. The aim of the Society was to improve the conduct and status of seamen, to encourage them in the attainment of scientific and practical knowledge, to extend to them and their survivors protection and succour, and to act as a medium between them and their employers. Baron Akamatsu was appointed President, and Mr. Mayejima, Vice-President, and the Society was created by means of the donations of those interested in the scheme. Among the subscribers may be mentioned the crews of the Russian Oriental Squadron who, appreciating the importance of the undertaking, contributed a sum of 1,000 yen. The first office was established in Yokohama and a boarding-house for the convenience of seamen was opened at Shinagawa. Subsequently branch offices were established at Kobe, Hakodate, and Nagasaki. Mr. Iwasaki, then President of the Mitsubishi Steamship Company, afterwards amalgamated into the Nippon Yusen Kaisha, felt the necessity of educating navigators and engineers, and the result was the founding of the Mitsubishi Shosen Gakko in Yokohama. At the same time sailors were trained at the Shinagawa Boarding House. The School was afterwards transferred to the control of the Government and still turns out capable navigators and engineers every year. The Society was thus of the greatest benefit without seeking public notoriety, but at the outbreak of the present war its usefulness became conspicuous. A considerable number of foreign steamers having been either purchased or chartered by Japanese Companies, especially by the Yusen Kaisha, great difficulty was felt about necessary personnel. At this juncture they all had recourse to the Society, which promptly dispatched members to Shimonoseki, Ujina, Kure, and Saseloh who, after no small trouble, succeeded in enlisting the services of 1,000 sailors. Even with the aid of the Yusen Kaisha, the Society was barely able to do this, and it now finds it practically impossible to move any further as its funds are exhausted. For the first time, therefore, it has been obliged to solicit public support as the present is not a time that admits of its being without funds. An announcement has been issued over the signatures of Admiral Baron Akamatsu, the President, Mr. Mayejima, its Vice-President, and the six managers. It dwells on the paramount importance of the Society's work, gives a succinct account of what has already been done for the cause of the promotion of Japanese navigation and appeals to the public spirit of the people to extend their patronage to the work which the Society now finds itself incapable of undertaking unaided. In the 13 years during which it has existed the Society has educated 832 officers, has procured situations for 98,016 sailors, of whom 2,041 were trained under its care, and has extended succour to 1,720 suffering sailors, not to mention the relief which it has given to the survivors of deceased seamen besides other charitable acts. The capability of the officers and men furnished through the agency of the

Society was proved by the bravery and skill of those who manned the merchant-cruiser, *Saikyo*, in the naval battle of the Yellow Sea. Both officers and men were equal to the occasion, and their coolness and courage would do credit to the crew of any man-of-war. Mr. Shimizu, one of the officers of the ship, had the presence of mind to take photographs of the fight in the thick of the battle. When Mr. Mayejima met Count Saigo and Viscount Kabayama at Hiroshima, they spoke of the crew of the *Saikyo* in the highest terms. The crews of the other merchant vessels converted into cruisers are similarly efficient and well disciplined. The Society has more important work in view, for if the commissariat centres are to be removed, it considers that it ought to establish offices at the place at which the Japanese vessels are to call. An office of the kind is much needed at the mouth of the Tadong River, and at Port Arthur, Taku, and Shan-hai-kwan it is also considered advisable to establish offices. The Society has now 1,225 members, and its head is H.I.H. Prince Arisugawa. The Central Office is at Minami Kayebacho, Tokyo, and branch offices are to be found in Yokohama, Osaka, Kobe, Hakodate, and Nagasaki.

LOSS OF THE "MASAYOSHI-MARU."

(FROM A CORRESPONDENT.)

Talien, November 11th.

The chartered transport *Masayoshi No. 3*, of Kobe, formerly the Blue Funnel steamer *Neslor*, was burnt at her moorings off the temporary Japanese depot at Si-yuen-chwang, between Wi-ju and Port Arthur, on the night of the 9th inst. (Friday). She had on board some seven hundred coolies, two hundred soldiers, and a considerable cargo, including explosives of all kinds in large quantity. It was exceedingly fortunate that the soldiers were on board; otherwise the panic among the coolies must certainly have caused terrible loss of life. As it was, there were only five deaths from drowning and from falling into boats; but practically no goods could be saved except what each man carried on his back.

The fire broke out within a few minutes of 5.30 p.m., just as daylight was fading and the tide was turning. A lamp was upset among the straw in the stables at the bottom of the fore hold, where there were 32 horses and a large stock of fodder, etc. One account says that a horse broke loose and kicked the lamp over. Of course, it was lamentable that oil lamps should be allowed among stables, with so many coolies and such a cargo on board; but it is always easy to talk after the evil is done.

In a moment the whole place was in a blaze; sparks and smoke poured out through the open hatchway, drawn the more swiftly by the stiff north wind; and equally swift was the spread of panic along the tiers of bunks where coolies were stowed in hundreds. At once the fire-bell pealed out, though the shouts on all sides were warning enough; and soon, too, signals of distress were hoisted amid the column of smoke that nearly hid them. As the coolies scrambled out in swarms, the crew and soldiers hastened first with buckets, then with hose, while the officers had the well-nigh impossible task of asserting order and discipline. Ships' boats and sampans flocked around in dozens, the first to reach being from the *Sakura*, which lay nearest. The *Toyei*, having explosives on deck and below, tripped her anchor and sheered off, but not until she had taken 260 of the terrified coolies from the doomed ship; and Captain Kasuga, who only just then returned from the shore, worked as hard as he could as any. It was a terrible time, for none could tell how long the water would keep the magazine safe; the fire itself could not possibly be checked, for it had got among the light wood and masting of the berths. Had the wind carried the flames aft along the deck, every man would have been forced overboard—and then! Fortunately, however, the tide swung the ship across the wind just in time. Still, though the officers were straining every

effort, with the calmness of heroes, and the soldiers were as well under control as on the drill ground, the coolies were practically unmanageable, and many in their fright jumped over into the icy water.

At last all were got away—coolies first, soldiers next, and then the crew, captain, and military officers. Major Shimizu, of the Artillery, Captain Kasagawa, of the Engineers, and several lieutenants remained at their posts of duty to the end, superintending operations and expecting the magazine to blow up and send them into eternity. But as it happened there was plenty of time, for the copious supply of water had quite flooded the lower part of the fore hold.

When all had left, in boats crowded to twice their normal limit, and in some cases with the additional burden of coolies who had jumped into the water and hung on in desperation, cheered as best might be by their comrades who could do nothing else to help—finally, the intense heat evaporated all the water, and the explosions began. One brilliant glare shot skyward as if from a big kerosene tank; a fierce pyrotechnic exhibition soon afterwards came from cartridges and rockets; and last of all, about 10.30 p.m., the fire must have reached a large store of dynamite or torpedoes, for a magnificent column of fire rose into the clouds, illumining the very horizon like the sun itself, and a roar that shook the ships in the distance marked the end of the fire. The fore part of the ship went under the water, shattered but not completely torn off; the after part remained, saved by the engine-room bulk-head, and still holding to the anchor. The flames flickered about the bridge for hours after, but could not reach to the rest of the ship. In the morning, as the *Toyei* steamed away to Talien, we saw sampans and launches moving about what was left of the *Masayoshi*, of which not a vestige was visible forward of the bridge.

The passengers were all taken ashore by launches, which had also assisted in towing the loads away, while the first emergency was pressing.

"AN ANGLO-JAPANESE DICTIONARY OF PHRASE & FABLE."

Aids to the understanding of English and its idioms grow more and more numerous in Japan. We can recall the time when the labour of conveying to Japanese minds an intelligent perception of any English household phrase or aphorism was almost deterrent. Of course we do not suggest a difficulty arising from lack of brain fibre on the part of the Japanese. It was simply a question of totally divergent modes of thought. All the sources from which the European derives his associations and comparisons used to be strange to the Japanese, and it resulted that a phrase pregnant with point and significance to the Occidental mind, was not merely meaningless, but even horribly perplexing, to the Japanese. Things have materially changed in that respect during the past twenty years, but there remains, none the less, a great gulf fixed between the West and the Far East—a gulf into which the most earnest attempts to promote intimate social intercourse or to contrive perfectly free interchange of every-day ideas, drop almost without any perceptibly filling effect. It has been often noticed that association with the Japanese is like learning their language: up to a certain point everything goes swimmingly. "What an easy and charming language," the sanguine student exclaims; and, "what a pleasant and intelligent people!" the sociable sojourner. But soon each finds himself confronted by an unbridged chasm, not to be negotiated by lexicon, phrase-book, or *bonne volonté*. Watch your environment at a dinner-table where the races are mixed. You shall see the still zealous learner, to whom the opening of the sealed book is as yet a hopeful problem, air his little stock of newly acquired conventionalisms and, perhaps, if his ambition be large, essay some addition of carefully memorized literary conceits. You shall see also the courteous listener welcome

these attempts with polite interest, and join pleasantly in ranging over the narrow catalogue of topics that lie on the surface of all intercourse, lightly touchable without recourse to any depths of thought or intricacies of expression. But presently the effort on each side becomes painful, and in the end the dialogue shirks racial obstacles and drifts into the genial current of national homogeneity—Japanese and Japanese, Occidental and Occidental: the gulf yawns again, and those that would have bridged it wonder and are downcast. Some, after a few repetitions of such failures, conclude that the lines of cleavage are radical; that the structure of the Japanese reflective organs differs essentially from that of the European; that fate has willed it so, and that human attempts to reverse the decree are vain. But surely no such inference is necessary. Imagine the treasury of social converse in England, for example, deprived of all the funds that flow to it from historical sources, from the world of fashion, from the dramas and comedies of the stage, from the columns of the press, from the artist's studio and salon, from judicial proceedings and police happenings, from the athlete's arena, from the cricket field and the football green, from the turf, from the realm of sport, from the slums of scandal, from the polemics of parliament and politicians. How barren, stale, and unprofitable would be the meagre residuum! Yet such is precisely the process of elimination that centuries of mutual isolation have applied to the conversational topics of Europe and Japan. What is common is infinitesimally small; what is special, correspondingly large. Time, the omnipotent solvent of all problems, can alone bridge the chasm. A hundred, perhaps fifty, years hence, the streams of every-day thought in the West and the Far East will have flowed so much closer together that the now vast separation of their sources will cease to be perceptible. Dialogue will draw its references and materials from mutually intelligible origins, and social intercourse will circle round the same centres of interest. Meanwhile, we watch with sympathetic curiosity the evolution of this process. An appreciable step is the appearance of an "Anglo-Japanese Lexicon of Phrase and Fable," just published by the Sanseido; the Japanese compilers being Messrs. Y. Iwasaki, I. Tanahashi, S. Omori, and P. Akido, all University graduates, and the English compiler, Mr. F. W. Eastlake. To collect such phrases is no small labour. It appears to have been accomplished industriously and intelligently by the authors. To explain them so that their significance and genesis shall be appreciated by Japanese readers, is also a great labour. That, too, appears to have been successfully achieved. But to fit to each phrase and fable its Japanese representative is the greatest labour of all, demanding profound familiarity with both tongues and wide literary culture in each. There the lexicographers are not happy. Indeed, they have not, as a rule, attempted to push their effort to that point, though it is obvious that without such guidance the student can not hope to grasp the true spirit of the expressions under consideration. Opening the dictionary at random, we find that "Nambu-pamby" is explained as *yofu no kokoro ni atoru yoki shokumotsu*; which literally signifies, "good food for administering to infantile feelings," and to this is appended, in brackets, "*adayaka naru wasetsu*," or, "silly talk." No knotting of the damp towel or imbibing of strong coffee would enable a Japanese student to infer the colloquial uses of "namby-pamby" from that exegesis, though he might acquire a solemn notion of its significance. "A fool's bolt is soon shot,"—"gufin no yadane wa sumiyaka ni tsuku," or, the arrows of a simpleton are soon exhausted. Yes, but who ever heard such a phrase as "*gufin no yadane wa sumiyaka ni tsuku*" used by way of colloquial repartee in Japan? The sense is there, but the savour is wanting. "To put in one's oar"—"*tasuke wo atayeru*" (to give help); "*chiukoku wo atayeru*" (to give advice); "*aku wa yokoai yori kansho wo shite tasuke wo atayeri*"

aruiwa chiukoku wo nasu koto ni mochiyuru" (chiefly used in the sense of interfering to give help or advice). Here, too, we need no Philip to further expound the general sense, but is not it conceivable that the expression "to put in one's oar" might pass into recognised Japanese Parliamentary or pulpit eloquence were this lexicon the orator's only *vade mecum*? "Partington, Dame Partington and her mop."—"Tsuho ni hantai sen to suru hito ni taishite no dampan" (remonstrance used to a man who is about to oppose pursuit); "*Yekoku Devonshire Sidmouth no koya ni fu-seshi Partington to iyeru rofu sen happiyaku ni ju-yo nen juichi gwatsu aru hi bafu ni kararete iye ni uchi-kitaru geki-ro wo fubaku nite hitashi-toran to shi sen-sen owarite iye no foka ni made itarishi to iyeru hanashi ni motosuku*" (founded on the tale of an old woman named Partington, who, living in a cottage in Sidmouth, Devonshire, England, endeavoured, on a certain day in the month of November, 1824, to dry up with a linen mop waves of the sea driven against her house by a storm, by which waves she was gradually pursued even to the upper storey). Dear old Dame Partington! Who could have predicted that she would pass from Sydney Smith's humorous speech, now sixty-three years old, to the pages of an "Anglo-Japanese Lexicon of Phrase and Fable," and that she would be translated into such a grave historical personage in the passage? But we do not desire to be hypercritical. Thoroughly do we appreciate the honest toil expended upon this work and the services it must render to plodding students. Our only wish is that it could have been carried far enough to deal with the flesh and blood of the two languages, instead of articulating their skeletons only. Rome, however, was not built in a day.

THE EXTERMINATION OF GREAT GAME IN SOUTH AFRICA.

In the *Fortnightly Review* for October there is an article on this subject by Mr. H. A. Bryden. The introduction of firearms, especially of breech-loading firearms, and the rapid opening up of one great hunting ground after another, have wrought within the last sixty years such incredible havoc, that, he says, great game is rapidly disappearing from the surface of the earth. He begins his paper by descriptions of the abundance of game in the early days of the colonization of the country. The early Dutch settlers, he says, hardly knew what to do on account of the profusion of game. "The elands and koodoos broke into their gardens and vineyards, the elephants and rhinoceros made hay with their crops; the lions besieged them in their forts and dogged Governor Van Riebeeck in his garden. There is a pathetic yet ludicrous entry in the records of the Cape Commanders, bearing date the 23rd January, 1653. 'This night,' says the chronicle, 'it appeared as if the lions would take the fort by storm.' Coming to the accounts of hunters of the present century we find an almost incredible profusion of large game. Sir Andrew Smith, in his expedition in South Bechnanaland in 1835, counted in one day, not far from his waggons, more than one hundred rhinoceros. A year or two later, Captain Cornwallis Harris, in the present Transvaal country, found elephants in immense numbers. Not a single elephant now remains in this part of South Africa. "Rhinoceros were as common as pigs in a farm-yard, and were a perfect nuisance to the gunner. Here is a single instance: 'On our way from the waggons to a hill not half a mile distant, we counted,' says Harris in his book of travels, 'no less than twenty-two of the white species of rhinoceros, and were compelled in self defence to slaughter four.' Burchell's zebras and quaggas, brindled and white-tailed gnu, were found 'in immense herds' elands and hartebeest in 'vast herds'; springbok in 'countless herds'; blesbok in 'immense herds' other examples were almost equally abundant." Oswell, Vardon, Murray, and Gordon Cumming, and a host of minor hunters, attracted by the descriptions of

Harris's book, went to South Africa, and the work of extermination began in earnest. But it was chiefly carried out, not by these famous hunters, but by the settlers and the blacks—armed first with percussion-cap guns, and later with breechloaders—who made a trade of skin-hunting. The most rapid extermination has been in the last thirty years. "So lately as 1860 a drive of game was got up for the Duke of Edinburgh—then Prince Alfred—in the Orange Free State. It was computed that some 25,000 head of game were enclosed by natives and driven in. Thousands—some say six thousand—were shot, and several natives were trampled to death by the charge of a terrified herd of Burchell's zebras. To-day you may wander far afield over those very plains without seeing even a solitary head of game. Only a few springboks, blesboks, and one troop of black wildebeest (white-tailed gnu), preserved by Dutch farmers, remain in those once crowded wilds. Of the Transvaal the same story has to be told." We give one more quotation to show the extraordinary profusion of game only fifty years ago. "In those days the trek-bokken, or migration of the springboks, was common in the north of Cape Colony. Gordon Cumming witnessed one of these migrations. 'I beheld the plains,' he tells us, 'and even the hill-sides which stretched away on every side of me, thickly covered, not with herds, but with one vast mass of springboks; as far as the eye could strain the landscape was alive with them, until they softened down into a dim red mass of living creatures.' This 'trek-bokken' Cumming estimated at some hundreds of thousands. On speaking to an old Boer about it, the latter remarked that it was a very fair 'trek-bokken'; but, he added, 'you this morning beheld only one flat covered with springboks. I give you my word that I have ridden a long day's journey over a succession of flats covered with them as far as I could see, and as thick as sheep in a fold.' 'I have myself heard much the same account from old farmers, English and Dutch, of the Cape Colony.' Recently in Cape Colony Mr. Bryden found that the quagga had become quite extinct; the eland and the blesbok had disappeared; the lion and the rhinoceros had not been seen since the fifties; the gemsbok and the hartebeest found shelter in scant numbers in the desert fringing the Orange river. The elephant and the buffalo, thanks to the timely measures of the Cape Government in years gone by, had been preserved from utter extinction, but still the traveller might go a thousand miles or more up country without finding a single specimen. In remoter portions of the South African interior, though things are not yet as bad as this, yet, notwithstanding proclamations and attempted game laws, the great game is disappearing day by day and hour by hour, and will apparently soon be little more than a mere reminiscence. Since game laws cannot possibly be enforced over these vast tracts of country, is there any other way of preventing the complete extinction of the larger kinds of game? A proposal is on foot for the adoption of the plan that has already been tried in the United States for the preservation of the bison and other wild denizens of the American continent. "The idea, which is at present inchoate, is to secure if possible a grant of a tract of land—some 100,000 acres—in Mashonaland or the adjacent territories, fence it in, and form a park in which small herds of game may be enclosed. It would not be difficult to procure the young of many kinds of African game and rear them in such a park, and drafts could be sold off from time to time, to supply the collections of European and other countries." The scheme is feasible, and would undoubtedly preserve from extinction many of the different kinds of large game; but not all, for it would be impossible within a comparatively small closed area to reproduce with exactitude the conditions under which the struggle for existence was formerly carried on in the boundless wilds of South Africa, and a considerable proportion of the fauna would tend inevitably to disappear.

THE WAR LOAN.

The announcement of a second War Loan for an amount of 50 million yen was made in the *Official Gazette* of the 22nd inst. over the signature of the Minister of State for Finance. The denomination of the bonds is to be 100 yen, but 95 yen is fixed as the lowest price. The interest will be at the rate of 5 per cent. annually. Applications should be sent in between the 11th and 15th of December to the Nippon Ginko or to its branches or agents, and a deposit of 10 yen per bond is required. The results of the subscriptions and the amounts to be allotted to subscribers will be announced by the Nippon Ginko by the 25th of December. The deposit of 10 yen will be regarded as the first installment. Payments should be sent in according to the following method:—

1st installment ... to be paid by the 25th (deposit).
Dec., 1894 10 yen.
2nd installment...16th—31st Jan., 1895 ...10 yen.
3rd installment...16th—28th Feb., 1895 ...10 yen.
4th installment...16th—31st Mar., 1895 ...10 yen.
5th installment...16th—30th April, 1895...20 yen.
6th installment...16th—31st May, 1895 ...15 yen.
7th installment...16th—30th June, 1895 ...20 yen.

The *Fiji Shimpō* considers the floating of a loan of the greatest importance, not merely because a necessity exists to replenish the military chest, but also because the evil of redundant currency must be remedied. The floating of war loan, even though there be no pressing necessity for it, is considered the only method of relieving the surcharged money-market. The notes of the Nippon Ginko now in circulation aggregate about 13 million yen more than they did in the corresponding period of last year, to say nothing of the fact that a considerable sum of money, previously kept unused in the Treasury, must have been paid out to defray the expenses of the war. The result of this unnatural swelling of the currency has made itself felt in the economic world, for the recent rise in the market price of various commodities is no doubt due in a large measure to a superfluity of currency. The market, in short, presents an abnormal aspect, and things appear as though, in the midst of a tremendous national calamity, there was too much money in the country. The effect of such a state of affairs is to stimulate a speculative tendency among merchants, and ultimately the paper currency becoming depreciated, specie will flow out of the country. The decision of the Treasury to float a loan therefore deserves approval. There is one thing however, that must be regarded with disfavour, namely, the provision by which the lowest acceptable rates of subscription is put at 95 yen for a bond of 100 yen. The Treasury must have fixed this allowance of 5 yen on the ground that, in the present state of the public credit, it is impossible to maintain the face value of 100 yen. That is an ill-considered and altogether unnecessary caution, for the points should be fixed by the subscribers and not by the Treasury. Moreover what will the Treasury do if capitalists, anticipating that the loan to be raised hereafter will offer more profitable terms, refrain from investing their money at the proposed rate? Will the Treasury withdraw its announcement in that case and offer a better rate? The step taken in fixing a minimum limit must be considered altogether unnecessary, and even risky. It evinces a want of true business spirit on the part of the Treasury. The *Fiji* wishes to draw the attention of the Authorities, to another point, namely, the necessity of refraining from petty measures to induce capitalists to subscribe to the loan. The loan should be considered an affair of honour, and everybody that is in the least sensible of the dictates of national honour and glory will subscribe of his own accord. To use any artificial inducement in such a matter is entirely out of place.

The *Fiji* elsewhere explains why the Treasury has resolved to offer a premium of 5 yen. At first the Government thought that as the market was dull and as the result of the first loan had been so satisfactory, the present loan might be floated on the same terms as the last.

That view was subsequently modified, however, after conference with the leading bankers of Tokyo, and the loan was announced in the present form. On the evening of the 21st instant, the Premier invited Messrs. Shioda (Mitsubishi Bank), Nakakamigawa (Mitsui Bank), Yamamoto (Peers' Bank) Sonoda (Specie Bank), and Yasuda (Yasuda Bank) to his official residence and, in the presence of Mr. Watanabe, Minister of Finance, consulted them as had been done when the first loan was floated—with regard to the ideas they entertained on the subject of the second loan. Though differing as to details, they were unanimous in doubting whether it would be possible, supposing the subscription left entirely to the free choice of capitalists, to raise the required amount on the same conditions as before. They left the Premier's residence promising to give a definite opinion after further deliberation, and the five repaired to the residence of Mr. Kawada, President of the Nippon Ginko, who had been prevented by illness from attending the conference. Mr. Kawada had been of opinion, when the first loan was raised, that the interest should be fixed at 6 per cent. and that opinion was considered in the conference held at his house. An objection was advanced, however, that it would not be wise to disturb the current rate of interest, and so, by way of alternative, it was proposed that a premium of 5 yen should be offered, the lowest acceptable limit of subscription being fixed at 95 yen, which meant an increase of $\frac{1}{2}$ per cent. in interest. It was thought that on those terms the bankers of Tokyo would be ready to give what they had offered to subscribe on the occasion of the first loan, and that the peers, who had then held aloof, would now be induced to come forward and invest their money. That opinion was endorsed by the majority of the bankers, and a reply was given the Premier in that sense. The Treasury adopted the suggestion and thus a premium of 5 yen was offered.

We (*Japan Mail*) reproduce the *Fiji Shimpō's* remarks as to a redundant currency, but we do not by any means endorse them. In several financial articles published of late, the *Fiji* has written as though the notes put in circulation by the Nippon Ginko were fiat currency, whereas they are convertible. It is an axiom of political economy that no such phenomenon as a redundancy of convertible paper is possible. The thing is a palpable paradox. Convertible notes can not remain in circulation for an hour unless a use exists for them, and if a use exists they can not be redundant. Possibly we misunderstand the *Fiji*, but careful perusal of its articles suggests no other interpretation. As to its conclusion that a principal cause of the recent rise of prices is to be sought in a superfluity of circulating paper, how can that be if the paper is convertible at any moment? When articles are purchased with convertible paper the price paid for them is a silver price, and we do not suppose that the *Fiji* desires to assert a superfluity of silver in Japan. War prices are proverbially high. Why they are so has been fully explained by economists. We need not reproduce their exposition. The circulating medium has nothing to do with the question, unless fiat paper be the medium. The price of rice to-day is a silver price, not a paper price. If the *Fiji* asserted that the existence of a state of war, by crippling commercial and manufacturing enterprise, had thrown capital out of employment, and that a channel of investment in the shape of a war loan was consequently desirable, we could appreciate its contention though questioning its facts. If, on the other hand, it means to assert that the Bank of Japan has issued so many notes as to disturb that due ratio between their volume and the amount of the specie reserve, we must again join issue, inasmuch as an infallible evidence of any such excess would be immediately furnished by depreciation in the silver price of the notes. Altogether we are at a loss to follow the *Fiji*.

The flocks of sheep in Australia are growing lighter every year, owing to nature's method of meeting the conditions of climate.

FIRES IN YOKOHAMA.

The Oriental Hotel, Yokohama, was destroyed by fire on Monday night. The alarm was given at 11.45, and Supt. Morgin responded quickly to the summons. He took with him all the men of the Yokohama Fire Brigade, three stand pipes, and steam engine. Arriving at the Oriental Hotel he found the whole of the top storey ablaze and the fire rapidly spreading through the flooring to the rooms below. The Police Brigade also brought their steamer and hose-reels and lent effective aid. With incredible rapidity the flames spread to the downstairs rooms, and then it was seen that the firemen had best turn their attention to saving the property adjoining the principal portion of the Hotel—the Annex behind and the 88 Annex. Notwithstanding the great difficulty attending the task, the firemen achieved their object, and about 1 a.m. all danger was over, the fire having been confined to the one block of the principal building. The main body of the Fire Brigade knocked off about 3.30, leaving one stand-pipe and ten men, who worked on till about 6 a.m.

The origin of the fire is still wrapped in mystery. The occupant of Room No. 10, Mr. P. E. Webb, who had retired to rest, was awakened by a sound of crackling. Springing from his bed he searched his room but found no trace of fire anywhere, the dying embers in the grate excepted. He then went out into the passage and saw flames coming up under the flooring of the passage way. He at once aroused the proprietor and other inmates of the hotel. So rapidly did the fire spread that the guests had barely time to escape in the most scanty costumes, leaving most, if not all, of their movables and baggage behind. Great praise is due to the Y.F.B. for the excellent manner in which they carried out their work last night. To them is due the fact that only the Hotel proper is burned, all the adjoining buildings escaping unscathed. The proprietor of the Hotel, Mr. L. Muraour, is insured. The property belongs to Mr. Vivanti.

The second fire within the week occurred in the early hours of Saturday morning; No. 24 Bluff, a small wooden bungalow of very light construction, occupied by Mons. R. Garaud, being completely consumed, along with its contents. The alarm was given by the lookout man on the Fire Brigade Tower at 2.15 a.m., and Superintendent Morgin proceeded to the scene of the outbreak with twenty men, fire hooks, and the small steamer. As usual at a fire on the Bluff, great difficulty was experienced in getting water, the engine pumping at several wells but finding a very short supply everywhere. The Bluff Police Brigade rendered great assistance with their small engines, working from hydrants on Jizozaka, but nothing could save the doomed building. The Police Brigade left the scene about 4 a.m., the members of the Y.F.B. remaining for another two hours. The fire originated in the servants' quarters at the rear of the premises, and from what could be gathered it would appear that the conflagration was started wilfully by some persons unknown, for an unknown cause. The premises were insured.

THE "MOUNT LEBANON" ASHORE.

The British steamer *Mount Lebanon*, from Rangoon to Kobe and Yokohama with rice, went ashore on one of the new foris at the entrance to the Bay early on Thursday morning, owing to the entire absence of lights. Capt. Clarke, of the *Liddesdale*, passed the stranded vessel soon after daylight and reported the grounding to Capt. Efford, Lloyd's Surveyor, who then went down the Bay to render what assistance was possible.

Messrs. Samuel Samuel & Co., the vessel's agents, expect that the *Mount Lebanon* will float this afternoon.

Hassan Mohammed, the "King of Tramps," has entered into a contract with a Chicago athletic club to walk twenty-five thousand miles in one thousand days for a purse of five thousand pounds.

GREAT BRITAIN, CHINA, AND JAPAN.

AT the commencement of the present war, an impression prevailed among the Japanese that British sympathies were with China. It was not altogether a false impression. In recent times England has come to consider that a community of interests with regard to Central Asian affairs establishes a link between herself and the Middle Kingdom. Every intelligent Japanese understands the basis of that idea and needs no elaboration of it at our hands. But while frankly admitting that for Central-Asian purposes England and China were drawn together, emphatic note must be taken of the fact that their *rapprochement* was not coloured by the smallest sentiment of discrimination against Japan. There was no question whatever of Japan in the business. It might indeed be claimed that since the common object of Great Britain and China was to preserve the *status quo* in Asia, Japan should have desired the success of their policy. But we are dealing with facts, not inferences, and the fact is that whatever *entente* existed between Great Britain and China, Japan was never regarded by either as a foe to their common purpose. Nevertheless, when the Korean problem suddenly entered an acute phase, when it became evident that the Orient was threatened with a war involving indirect complications of a most serious character, Great Britain naturally wished, in the first place, to reconcile the contending empires, and hoped, in the second, that the somewhat tender equilibrium of China's domestic organization might not be exposed to the shock of defeats at Japan's hands. To that extent and to that extent only were the sympathies of English statesmen and English politicians enlisted on China's behalf. But beyond the responsible and thoughtful elements of a nation, there is always a rough and ready class with whom instinct does duty for reason and sentiment replaces logic. Such men, having grasped the outlines of a principle, fill in the details with passion and prejudice. By the impetus of their clumsy partisanship delicate international problems are pushed into the realm of racial antipathies, and violent recriminations are substituted for calm adjustments. Unfortunately, these persons made their voices conspicuously heard both on the Japanese and on the English side at the outset of the present war, and succeeded in persuading themselves and others that Great Britain's sympathies were entirely with China. How can such a theory be reconciled with any intelligent conception of British statesmanship? England has but one interest in the East. The inexorable law that pushes nations perpetually forward until the day of their decline finally dawns, has placed Russia and Great Britain in the Asian arena.

They can not choose but advance toward each other. All such expedients as the interposition of buffer States that ultimately accentuate the situation by the friction their semi-barbarism sets up, are ephemeral. Direct contact between the two Great Powers is inevitable. We believe and hope that it need not be collision. But an event fraught with such terrible uncertainties necessarily occupies a large space in the vista of British patriotism, and lies at the root of British policy in the Orient. The uniquely prudent methods of preparing for the momentous issue is to contrive beforehand such a disposition of forces as shall effectually guarantee the fate of the East against being finally submitted to the abutment of the sword. That is England's policy. To achieve that her statesmanship is solely directed. Assuredly, therefore, nothing could consist less with her interests and aims than to provoke Japan's enmity for the sake of preserving China's friendship. No Power in the world welcomes more heartily the development of Japan's strength and resources than England welcomes it. The tone of the leading organs of British public opinion during the past two months places that fact beyond the reach of doubt. But, on the other hand, England does not wish to see China weakened so seriously that the order now existing within her realm shall be disturbed, her power of cohesion paralysed, and her affairs reduced to a condition provoking foreign interference and inviting foreign aggression. Japan cannot wish that either. In common with England she must desire to avert complications the issue of which lies as far beyond her prescience as it defies her control. She is entitled to the full reward of her victories and to hearty recognition of the long course of self-discipline that prepared the way for them. Great Britain will never attempt to reduce the former or hesitate to accord the latter. But Great Britain's policy is to contrive that this war shall inaugurate an era of peace instead of precluding a period of fresh disorders and disturbances. That being Japan's policy also, the two Powers are in the same camp. Their mutual amity never was really in question.

THE "SYDNEY" INCIDENT.

THE *Sydney* incident may now be regarded as closed. France's action in the premises was not difficult to predict. Such a Power has duties to discharge toward the whole world as an exponent of international justice and an intelligent interpreter of international law. Ignorant folks may clamour and foolish agitators brawl, but the statesmen in Paris have other guides. They referred the question to the Law Officers of the Republic, and these had no difficulty in determining that Japan's action had been entirely within

her belligerent rights. It is an interesting decision in the sense that it establishes a precedent on the highest sanction. The principle involved, though never open to reasonable doubt, had not yet received the endorsement of international usage, no test case having previously occurred in practice. But the recognition now publicly accorded to it is final, and as such will find a place in text books on international law. There is, of course, no occasion to comment upon France's attitude, yet we may be permitted to say that she has added to her reputation by thus promptly and frankly extending to an Oriental State the benefit of international principles that still awaited the *cachet* of practical application.

It would, perhaps, be too much to expect that the conductors of the Yokohama and Kobe local press will experience, still less express, any shame or contrition for the inflammatory and unreasoning diatribes penned by them in connection with this affair. They have left nothing undone that lay within the compass of their petty power to mischievously excite public opinion and precipitate an international complication. It is difficult to conceive a more miserable and contemptible *métier* than that of the journalist who plays uniformly to a gallery of spurious patriotism, and instead of endeavouring to promote calm and logical public verdicts, appeals in every crisis to the passion, prejudice, and ignorance of his readers. However, when moral decency has disappeared, it can not be recalled by reproaches. We shall not waste words in such a hopeless cause. Only two points seem worth brief reference. One is the extraordinary difficulty apparently experienced in distinguishing the belligerent rights of a State from the special privileges granted by it to Foreign Powers under extraterritorial arrangements. Consular Jurisdiction is an exceptional system established to discharge certain judicial functions of which Japan has temporarily divested herself for the convenience of foreigners residing in her realm. Its sphere, being strictly limited to matters of civil and criminal law, cannot possibly have any extension to questions arising out of a state of war. It has been repeatedly alleged that the Japanese Government's proper procedure would have been to address themselves to Consular authority in order to procure the search of the *Sydney* and the arrest of three of her passengers. They might as well have addressed themselves to the Chaplain of Christ Church or the Captain of the Yokohama Fire Brigade. No Consul could have meddled with such an affair. To set out by appealing to a Consul would have been to renounce belligerent rights on Japan's part, and to act upon the appeal would have been to act without any legal authority on the Consul's part. We are nevertheless told that it would have been courte-

ous had the Consuls been approached by way of preliminary. Surely it were a strange display of courtesy to invite a Consul to perform an act for him totally illegal, and to convoke his authority at the outset with the intention of over-riding it publicly in the sequel.

The second point to which we feel constrained to allude is the persistent attempt made to set up a parallel between the cases of the *Chungking* and the *Sydney*. The argument, being evidently intended for the lowest orders of intelligence only, scarcely deserves serious notice. In the case of the *Chungking*, a band of undisciplined Chinese soldiers, acting in defiance of authority, riotously broke into a British steamer; raided the passengers' cabins; robbed them of money and jewelry; brutally ill-used helpless Japanese women, and tying them hand and foot, hauled them on shore and detained them for several hours, the whole savage procedure being avowedly instigated by a desire to avenge the sinking of the *Kowshing*. In the case of the *Sydney*, Japanese officials, acting in obedience to instructions from the EM-PEROR and his Cabinet, visited the ship, duly notified her master of their intention to search her for contraband of war, performed the search in an orderly and quiet manner, removed three passengers who were about to engage in destructive enterprises against Japanese life and property, conveyed them courteously to shore and lodged them in a comfortable foreign hotel, the whole procedure being avowedly undertaken in the exercise of a belligerent right which has since received the endorsement of the law officers of the French Republic. No commonly honest critic could pretend to draw a parallel between two cases so radically different. The mischief of the pretence lies in its corollary, namely, that Great Britain, in exacting full reparation for the outrage committed by the Chinese soldiers, took deliberate advantage of China's weakened and embarrassed condition, while France, with a corresponding outrage to resent, condoned it in deference to Japan's displays of military and naval vigour. Each of the two Great Western Powers is equally insulted by such a suggestion. To whatever degree of debility China may have been reduced, she cannot be permitted to insult the British flag with impunity. Her helplessness to resist Japan does not constitute the very smallest shadow of excuse for her refusal to redress a wrong committed against Great Britain. England's reputation fares well, forsooth, at the hands of her loyal subjects, the local journalists of the Far East. Her acts of fairness and magnanimity are interpreted as evidences of cowardice and decaying vigour; her assertions of right, as bullying intimidation of prostrate adversaries. And their slanders are all penned under the pretence of patriotism. "Patriotism," said SAMUEL JOHNSON, "is the last refuge of a scoundrel."

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.

WAR LOAN QUOTATIONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I observe that in your share and produce list the War Loan Bonds are quoted at 19.50. If you will kindly explain how this figure is intended to apply, you will greatly oblige at least one

INQUIRER.

Tokyo, November 20, 1894.

(The first two instalments—10 yen each—having been paid up, the Bonds have cost their original holders 20 yen, and are now selling, apparently, at 19.50. The third instalment of 10 yen is payable by the end of this month.—E.O. J.M.)

CHRISTMAS CARDS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have the honour to bring to your notice that we are instructed by the Director General of Posts and Telegraphs, Tokyo, that Christmas and New Year's Cards having the character of actual and personal correspondence, such as "For A, with Aunt B's love," &c., will be considered as letters, and returned to the sender when not fully prepaid.

Will you be good enough to lay this matter before the public in order to avoid inconvenience to both the sender and this office.

I am, Sir, yours faithfully,

T. UNAGAMI,
Director.

Post & Telegraph Office, Nov. 22nd, 1894.

THE LATE RACE MEETING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On looking through your report of the Yokohama Race Meeting, I was surprised to find there were only three members' races in the programme, and one of these was confined to those who had never ridden three winners. On looking over the list, I find no less than 14 members took part in various races, the majority of whom could, I fancy, weigh out at about 140lb. and some of them at considerably less.

Now surely, with the above number of riders, and 23 China ponies (the number which started), to enter, it would be possible to include more races of this class in the programme. The majority of those who attend the races would, I feel certain, prefer watching members' races to the Japan Griffins races (?) which, in the greater number of cases, are composed of ill-tempered, hard-mouthed, animals, with no inclination to race, and which are no pleasure to look at and less to ride.

The half-bred races, with such as Hayakaze, Sagies, and Traveller running, are always worth watching. If there are two or three members who are considered so much better jocks than the generality, then let the Committee establish a penalty for anyone with over a certain number of wins, and, in this way, encourage the less fortunate, and less experienced, to go in regularly for what is not only about the most enjoyable but most healthy form of exercise.

Another way for the Committee to encourage members riding would be to hold a monthly Gymkhana, on the lines adopted in Hongkong, and in all Indian stations, and in this way many would gain confidence, and find that their riding was benefited a great deal more than by any amount of hacking work.

Trusting to see more members' races and more riding members at next meeting,

I remain, Sir, yours faithfully,

SUNLIGHT.

Hyogo, November 20th, 1894.

THE QUESTION OF A FOREIGN LOAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If the lugubrious tone adopted by Mr. Sonoda in discoursing upon the prospects of a foreign loan is surprising to many foreigners,—as to which there can be no doubt,—what must its effect be upon his countrymen in general, who are certainly in no mood to take a dispirited view of their own affairs at the present moment. The whole nation is in a state of natural exultation over the splendid successes of the past three months; is conscious of having won the admira-

tion of the entire Western world; knows that its credit stands at the highest point; has heard of the spontaneous offers of leading European capitalists to supply as much money as it may want; and yet the President of one of its chief financial institutions can find nothing more hopeful to say than that "a foreign loan will not be very disadvantageous." . . . provided we raise it with due caution." This is the language of a banker who is supposed to be advocating the measure which he thus timidly discusses. His address is delivered with the express purpose of preparing the country for an application for funds from abroad, yet he spares no pains to convince the public that the loan "will naturally be extremely unpopular, and its raising . . . a difficult and costly task." If Mr. Sonoda were endeavouring to dissuade the Japanese people from entertaining the project, his course of demonstration might be more easily comprehended, but when his object is to encourage a belief in the expediency of seeking foreign aid, it is hard to see why he should encumber the plan with so many stifling layers of wet blankets. A general who starts upon a campaign at the head of a brave, spirited, and confident army does not begin by announcing to his troops that their enterprise "will not be very disadvantageous," provided it is conducted "with due caution." No Japanese general, at any rate, would so misconceive the nature of his duty. Even if he thought the outlook unpromising, he would never dream of going out of his way to declare it so. But in this anticipated campaign of finance, the sole discouraging voice is that of one of the principal Japanese officers. The leaders on the other side are outspoken in asserting that this country can obtain everything she desires, on exceptionally easy terms. That is the affirmed belief of Europe and America. Mr. Sonoda is the first to dwell upon "the disadvantage of the situation," and to lay stress upon the difficulty and costliness of the undertaking.

While the subject is in debate, I take the liberty to inquire why it is so hastily assumed that a foreign loan is indispensable, even if foreign money is desired by Japan. Experience has shown that enormous sums may be obtained by simpler means, and without the interposition of any external machinery whatever. My own country needed money badly enough, before the Southern war had progressed very far, and the air of Europe was full of admonitions that we could never get along without the benevolent co-operation of the fiscal magnates of England, France, and Germany. The United States, however, concluded to try it alone. Domestic bonds were issued for the vast amounts required, and European investors were quite as ready to purchase them as they would have been to purchase the securities of a special foreign loan. Why, then, should Japan resort to a cumbersome and expensive process, before giving the American example a trial? Of course every argument will be employed to persuade her that the old conservative way is the only way. A loan negotiated in Europe may be turned to profitable account by various interested parties, and for this reason Japan will be invited to listen to innumerable proofs that no other transaction can be to her benefit. If one half of the dire predictions with which the American Republic was threatened for its stubbornness in following the course it preferred had come to pass, the name of that country would now be a fading memory; but it rejected every proposal for outside loans,—and it still survives. Japan will perhaps be told that the confidence enjoyed by the American Union is not likely to be extended to a new member of the family of nations. If, however, Japan will take the trouble to turn back the pages of history, she will discover that confidence in the United States was precisely what the powers of Europe (Russia excepted) were labouring to destroy, thirty-five years ago. Almost the entire political world was against the Republic, but its bonds were nevertheless coveted and treasured. Japan has to-day the approval and favour of civilized mankind. No prejudice stands against the acceptance of her promises to pay her debts. Doubts and suspicions so assailed the United States that a dollar of specie could be brought only by two dollars and a half of the national currency, yet applicants for her war certificates were never lacking. For years the credit of Japan has not wavered, and no ground exists for asserting positively that her ordinary securities would fail to find a market. To say the least, the experiment is worth attempting. For some unexplained reason, the Government has abstained from announcing that its bonds are accessible to all comers, and the omission appears to have created an impression that they cannot be held by aliens. The *Japan Mail* is in a measure responsible for this supposition. Twice it has stated that the war bonds were exclusively for domestic sale, but on

each of these occasions I applied for direct information, and was assured, on the authority of the Finance Department, that no restriction was contemplated. Whether a regular war-loan would or would not be largely taken up abroad, as that of the United States was, is a question that can be settled only by a practical test. If an issue could be thus disposed of, many complicated formalities would be avoided, and much money saved. A certain degree of exertion might be necessary to explain the situation and its conditions to the European and American public, and to facilitate purchases in various parts of the world; but since the distributions were so easily effected at the time of the American civil war, it should not be too hurriedly taken for granted that the process could not now be repeated. To secure the desired end with the least cost, the least friction, and particularly the least possible degree of foreign manipulation, should be the endeavour of all patriotic and self-respecting Japanese financiers.

E. H. H.

Tokyo, November 21st, 1894.

ASIATIC SOCIETY OF JAPAN.

The annual meeting of the Asiatic Society was held at No. 17, Tsukiji, on Wednesday afternoon, Nov. 14th, at 4 p.m.

After the preliminary business of the meeting was settled, the Chairman, Rev. Dr. D. C. Greene, called upon the Rev. Arthur Lloyd to read his paper on the Development of Japanese Buddhism.

The writer of the paper began by explaining that as the entire paper was far too long to be read at a single meeting of the Society, and as mere extracts from the paper would give his hearers no connected idea of his meaning, he had written a résumé which he proceeded to read as follows:—

"In the introductory Chapter, I have pointed out that Buddhism rests on the Brahmanism of India quite as much as Christianity rests on the previous teachings of Judaism. I have also used the authority of Sir Monier Williams for the theory that as Brahmanism is divided into two—popular and philosophical—so Buddhism also has two great branches—one of which, the Hinayana or Lesser Vehicle, is based on the philosophical Hinduism as taught in philosophical systems such as the Vedānta, whilst the other—the theistic Buddhism of the Mahāyāna, or Greater Vehicle School, is based on the teachings of a more popular Hinduism, such as is found in the Great Hindoo work, Mahābhārata, Bhagavadgita, &c.

I have tried further to show that both these systems found their germ probably in the actual teachings of Sakya-muni himself,—that the earlier Buddhist books, those which are written in the Pali colloquial of the Kingdom of Magadha, represent the earlier teachings of the sage; but that when the teaching spread beyond the confines of the Kingdom of Magadha to the larger India outside, the change necessitated not only the adoption of a more universal language than the Pali, but also a wider and more comprehensive range of thought; and that therefore the Mahayana books are written in Sanskrit and embrace a far greater area than the others. They cannot, however, be considered as an illegitimate development, any more than the later writings of Plato can be considered an illegitimate development of the doctrines of Socrates.

In my second Chapter, I have given a short account of the life of Buddha and have shown that the teaching activity of Sakya-muni resolves itself into five distinct periods, and that not only the writings of the Buddhist Canon be arranged according to those periods, but that the periods of the development of the Buddhist Church have corresponded with these periods in the life of Shaka.

In Chapter III., I have summarized the development of Buddhist teaching in the different stages corresponding to the life of Shaka—and have traced in a few words the origin of the Mahayana school of Buddhism, through the labours of Nagarjuna, Aivaghoṣa, and Vasubandhu—men whose lives and works will, I hope, be much studied and explained by more competent Indian scholars; and have then spoken of the introduction of Buddhism into China at the commencement of our era.

Chapter IV. brings me to the first introduction of Buddhism into Japan, and to the foundation during the sixth, seventh, and eighth centuries of our era of the early sects established in the Empire. None of these sects is now in existence, but they must not therefore be considered to have failed in their object. The period in question was a period during which the broad foundations of the common Buddhism were being laid wide and deep. All that stock of the teachings and ideas which is held alike by all our modern Buddhist sects was introduced during this period, so that when the first of the now existing religious communities was

established by native priests, the labours of the foreign missionaries, Chinese, Korean, and Indian, had already prepared the soil thoroughly for the propagation of the native plant.

Chapter V.—The first of the sects to be established, was the now existing Tendai sect, introduced with modifications from China about the beginning of the ninth century by Dengyo Daishi. The system is mainly eclectic. The popular Buddhism of the time recognized many Buddhas, to whom it appealed mainly for temporal assistance; and based its belief on a Canon of Scripture which contains 1,662 books, and by books I do not mean volumes, for some of the Buddhist scriptures are said to contain 200 volumes. Out of this mass, Dengyo Daishi selected one scripture of especial merit—the Saddharma pūṇḍarīka, or Hokekyō—and directed the worship of his followers mainly if not entirely to the Tathagata of Original Enlightenment therein mentioned.

This attempt at concentration, together with the successful blending of Buddhism with the native Shinto, enabled Dengyo Daishi successfully to establish his sect in Japan.

Chapter VI.—Simultaneously with the establishment of the Tendai Sect, the celebrated Kobo Daishi introduced from China the Shingon or Mantra sect—a system of great mysticism, which it is very difficult adequately to explain. This system points the believer, not to Shaka nor to the Original Buddha mentioned in the Saddharma pūṇḍarīka scripture, but to a Buddha of the name of Vairocana—or Dainichi—who is supposed to have been incarnated again in the person of Kobo Daishi himself. The teachings of the Shingon sect are mainly based on three sūtras not much read by the other sects, and seem to be mixed with a good deal that is not purely Buddhist. While there is much in the Shingon sect that savours distinctly of Platonism, I have fancied from several indications, and especially from the peculiar use of some technical terms, such as the word *mudra*, "a seal," that there is a great deal of common ground between it and some of the forms of Gnosticism. It would be most interesting if this could be established. In the meantime, I am not in a position to dogmatize. The Shingon sect has not produced any great schism or sect. All the more modern sects have sprung from its rival the Tendai sect, and have originated in the great monastery of Hieizan near Kyoto.

Chapter VII.—Both the Tendai and the Shingon sect are known as belonging to the *fariki mon*, or gate of self-effort. They teach, that is, that a man's salvation depends on his own efforts.

But a Buddhist prophecy foretold that in the period of Mappō, or the "Latter Days of the Law," which should come 15 centuries after the death of Shaka, the increasing wickedness of the world should make salvation by one's own efforts well nigh impossible. Then should arise another teaching, the *tariki mon* or gate of salvation by the efforts of another—that is, men should be saved no longer by their own efforts, but by faith in the boundless merits of Amida Buddha.

This teaching was provided for Japan, by Hōnen Shōnin, the Japanese founder of the Jōdo, or "Pure Land" faith, and further developed by his great successor Shinran, the founder of the Shinshū, discussed in Chapter VIII. I have tried in this chapter to point out not only the difference between these two sects and their predecessors, but also between the two sects themselves. In the teaching of the former, we have faith in the vow of Amida coupled with the worship of other Buddhas beside; in the latter, we have Amida alone. In the former, authorities are practised, and a large amount of ritual observances; in the latter, nothing is of importance except the grateful remembrance of the mercy of Amida. In the former, Amida is said to come to meet the soul of the believer in the hour of death; in the latter, he comes at the moment when his mercy is invoked.

Chapter IX, my next chapter I have devoted to the consideration of the *via media* of Buddhism, the contemplative teaching of the Zen sects, and especially of the Soto-shū founded by Shōyō Taishi in A.D. 1223. As the *via media* of Buddhism, it has all the strength as well as all the weakness of such a system. It lacks enthusiasm and "go," and from its very character is not likely to be popular: at the same time it is very careful and sober in its teachings, and the Shinshūgi, a manual composed by Shōyō Taishi, of which I have given a complete translation, is in its way a model of what such a manual should be.

Chapter X.—Whilst the Jōdo sects were reforming in one direction, and the Zen teachings were trying to go back to the common ground of all Buddhism, and thus to establish a *via media* as a safe road in the midst of conflicting opinions, a new reformer appeared on the scene in the person of the great Nichiren, the most striking personage

in the ecclesiastical history of Japan. Of his personal history I shall speak later on in the course of this afternoon; of his doctrine, I must characterize it as a return to the doctrinal position of Dengyo Daishi and the Tendai sect. Like Dengyo, he asserted that the Hokekyō represents the highest form of Shaka's teaching, and is a sufficient, nay the one vehicle of salvation. Like Dengyo he pointed to a Buddha, not the historical Sakya-muni, but a Buddha of countless ages, who had lived long before the commencement of history and was indeed the lord of all men. But he differed from the Tendai sect because they had corrupted the pureness of Buddhism by admixtures from Shinto and other sources, and by the deification of Emperors and other personages. His system therefore is a purified Tendai, and as such his followers claim for it that it is the highest form of Japanese Buddhism—nay of universal Buddhism.

With Nichiren ends the history of the development of Japanese Buddhism. Not long after the great period of revival which saw such great teachers as Shinran, Shōyō Taishi, and Nichiren, Buddhism was engaged in a fierce conflict with Christianity, which served for the time to weld its dissipated forces into something like an organic whole. As we know, Buddhism triumphed for the nonce, but the victory was dearly bought. During the long and peaceful régime of the Tokugawa family, it was in a state of torpor, and has absolutely no history. No great controversy arose, and there was not even produced a book of first class merit. The advent of Christianity has now galvanized it into fresh life and vigour; it remains to be seen, and it is a question that we shall all watch with deep interest, what will be the future of this great religion."

After reading the above summary, the writer entertained the audience with extracts from a poem on the life of Nichiren, which proved to be of unusual interest. The selections given referred to the birth of Nichiren, the incidents connected with his conversion to a life of reform and his subsequent successes.

Upon the conclusion of the reading, the Chairman thanked the writer on behalf of the Society for his interesting contribution. In the study of Japanese religions, he remarked, we find a key to many of the characteristics of the Japanese nation. No other department of investigation throws so much light on certain obscure elements of Japanese life. Nor can the religious situation of the present time be understood unless we carefully study their past religious life.

The business of the annual meeting was next taken up. The Recording Secretary for Tokyo read the annual report of the Society as follows:—
"The work of the Society has been carried forward successfully, though without special incident, during the session just closing.

"At the last meeting of the previous session an amendment to the constitution was made, whereby the annual meeting was to take place in November instead of in June. On account of this alteration the present session has proved to be of unusual length. The number of general meetings held during the year have been eight: in October and November, 1893, and in January, February, April, June, October and November 1894. The February meeting was held in Yokohama. During the year there has been a satisfactory growth of the membership of the Society. Twelve ordinary and five life members were added to the roll.

"Through death and other causes the Society has suffered severely during the year. The death of H. E. Mr. Hugh Fraser deprived the Society of a valued member. The Society also regrets the loss of its honorary member, the distinguished philologist, Dr. William Dwight Whitney, of New Haven, U.S.A. In the death of Prof. W. S. Liscomb the Society has lost an esteemed member and councillor. The departure of Prof. Alexander Tison for America has deprived the Society of his highly appreciated services as Secretary. In the place of Dr. W. D. Whitney, Major John Wesley Powell, Director of the Ethnological Bureau of the Smithsonian Institute, has been elected honorary member of the Society.

"The finances of the Society show a prosperous condition of affairs, though there is danger that the balance in hand may be easily reduced in the future on account of the rule relating to the composition of members' dues. The present balance for the session shows an increase of over 500 yen above the balance of the last session. The Treasurer's Report has been kindly audited by Messrs. Trevithick and Duer. The Transactions of the Society continue to have an increasing sale.

"There were in all nine papers read during the session, the titles of which are given in the Appendix. This record is an excellent one when we remember how the Society has been handicapped by the departure of officers and members during

the year. Japan still offers many an unworked mine to the investigator, and it is to be hoped that the Society will show its usefulness in the future still more than in the past by its efforts to bring to light some of the hidden treasures."

The reading of this report was followed by the Treasurer's report for the Session, after which the Society proceeded to elect the Officers for the coming year. The following was the result of the election:—

President, Rev. Dr. D. C. Greene; Vice-Presidents, James Troup, Esq. and J. H. Longford, Esq.; Corresponding Secretary, Garrett Droppers, Esq.; Recording Secretaries, W. J. Shand, Esq. and Garrett Droppers, Esq.; Treasurer, Dr. J. N. Seymour; Librarian, Rev. W. J. White; Council:—B. H. Chamberlain, Esq., Dr. E. Divers, J. Milne, Esq., M. Wyckoff, Esq., W. B. Mason, Esq., R. Masujima, Esq., Clay MacCauley, Esq., A. Wood, Esq., Mons. Courant, and O. Keil Esq.

The meeting adjourned at 5.30 p.m.

YOKOHAMA GENERAL HOSPITAL.

The annual general meeting of the Yokohama General Hospital, was held on Thursday afternoon in Keil's building. There were present Messrs. J. Troup, J. H. Brooke, J. Rickett, A. O. Gay, A. J. Wilkin, and O. Keil, Secretary.

Mr. A. O. GAY, Chairman of the Hospital Committee, presided, and in opening the proceedings announced that the accounts presented covered a space of thirteen months. Attached to the accounts was a synopsis which should prove to interest. He then presented the following reports and accounts on behalf of the Committee:—

REPORT

The accounts of the Yokohama General Hospital for thirteen months to Sept. 30th are now submitted. When the last account was presented there was a debit balance of \$725, and there is now an amount at debit of \$27.83.

The Hospital received from a committee of the ladies of Yokohama a substantial contribution to its funds from the performance of "Living Chess" at the Public Gardens last June. This, with the subscriptions, enabled the Treasurer to cover all liabilities, except an amount still outstanding for repair of Disinfecting house, which was much damaged by the earthquake in June last.

An appeal will now be made for subscriptions to the fund necessary for the current financial year.

A room has been set apart at the General Wards for the King's Daughters Circle, under the charge of a committee of ladies, which it is believed will answer a certain requirement in the community.

The buildings at the Infectious Wards are all in good condition and ready to meet any emergency likely to occur from infectious diseases.

STATEMENT OF RECEIPTS AND DISBURSEMENTS FROM SEPTEMBER 1ST, 1893, TO SEPTEMBER 30TH, 1894.

RECEIPTS.—Sept. 30, 1894.

To Local Subscriptions	...	\$7,795.00
To Donation:—(Ladies Living Chess)	...	406.76
To Patients in Infectious Disease Ward	...	27.83
		\$8,229.59
To Balance overdrawn H. & S. Bank	...	27.83
		\$8,257.42

DISBURSEMENTS.—Sept. 30, 1894.

By Overdraft H. & S. Bank	...	\$798.51
By Patients in General Ward	...	336.00
By Funerals	...	45.00
By Interest on Overdraft in Bank	...	81.69
		\$1,261.20
INFECTIOUS DISEASE WARD.		
By Wages	...	350.90
By General Expenses	...	191.79
By Medicines	...	305.13
By Medical Attendance	...	85.00
By Furniture	...	127.13
By Repairs	...	105.20
By Fire Insurance	...	86.75
		\$1,151.80

A. S. GARFITT, }

Yokohama, October 25th, 1894.

SYNOPSIS OF YOKOHAMA GENERAL HOSPITAL ACCOUNT SEPTEMBER 1ST, 1893, TO SEPTEMBER 30TH, 1894.

General Wards:—		
Charity Patients	...	\$336.00
Burials	...	45.00
		\$381.00
Infectious Wards:—		
Wages and Expenses	...	\$510.50
General Expenses	...	191.79
Medicines	...	305.13
Medical attendance	...	85.00
		\$1,102.42
Less Received for Patients	...	725.34
Furniture and Repairs	...	127.13
Fire Insurance	...	86.75
		\$1,005.41
Overdraft at Bank September 1st, 1893,		
since paid	...	798.51
Interest	...	81.69
		\$880.20

From Subscriptions	...	\$7,795.00
From the Ladies for the Performance of Living Chess	...	406.76
Balance at Debit	...	27.83
		\$8,229.59

Yokohama, November 2nd, 1894.

STATEMENT OF PATIENTS ADMITTED IN GENERAL HOSPITAL FROM SEPTEMBER 1ST, 1893 TO SEPTEMBER 30TH, 1894.

	Remaining in Hospital Sept. 1st, 1893.	Admitted.	Died.	Discharged.	Remaining in Hospital Sept. 30th, 1894.	Days of Treatment.
General Ward	...	8	...	7	...	358
Infectious Disease Ward	219

All the admissions to the Infectious Ward were small-pox patients. There were no cases of cholera.

The CHAIRMAN, continuing, said the Committee recorded with regret the loss of one of its members, Mr. Ph. von Hemert, whose death occurred in August last. His place upon the Committee had been taken by Mr. Jules Colomb. No other alterations had been made in the constitution of the Committee during the year.

Mr. KEIL announced that by reason of the condition of his health he had been obliged to sever his connection with a dozen different public concerns, and on the advice of his doctor was obliged to devote himself solely to his legitimate business. For this reason he was obliged to tender his resignation of the position of Secretary of the Hospital Committee.

The CHAIRMAN said he was very sorry to lose Mr. Keil. His services had been inestimable. But as Mr. Keil had declared that it was inevitable that he should drop his public work, there was nothing for it but to accept his resignation. He did not know where they would be able to find a man to do the work half so well as Mr. Keil. The Hospital Committee as well as the whole community were greatly indebted to Mr. Keil for the work he had done for the institution during a long series of years.—(Hear, hear.) A glance at their balance sheet disclosed the fact that they would require about \$1,500 to carry on the work during the present year. A subscription list had been started, and he hoped that it would meet with a warm response.

Mr. J. H. BROOKE rose to move a hearty vote of thanks to Mr. Keil for his efficient services as Secretary to the Hospital Committee. He was sure that not the meeting alone but the general public regretted that Mr. Keil was compelled to relinquish the position he had so worthily filled for many years past.—(Hear, hear.)

Mr. RICKETT seconded the vote of thanks, and it was carried.

Mr. KEIL having returned thanks, drew attention to the work accomplished by the Yokohama Circle of the King's Daughters in providing a bed and properly equipped room in the hospital for the reception of female patients. Great praise was due to the young ladies—many of whom were quite small—for the way they had worked day after day, week after week, and month after month, until they had accomplished their worthy object. They had done in two years what the Hospital Committee had vainly attempted to accomplish during the past 20 years,—provided a private room entirely set apart for the reception of women. He thought that the room would be accepted with heartfelt thanks by the community from the young ladies who were banded together under the management of Mrs. Morris.—(Applause.)

Mr. TROUP then proposed, and Mr. WILKIN seconded, that the accounts be passed.

The proposition was declared carried *nem. con.*

Mr. TROUP said there was one thing he would like to ask a question about. It was in reference to the arrangement under which the Hospital was now worked. Was the arrangement with Dr. Mère, made some two years ago, to be regarded as being still in force?

The CHAIRMAN—The Committee send charity patients to the Hospital, for which they pay \$1 per day, receiving for that sum care and medicine for the patients so sent. That would explain the item in the accounts under that head.

Mr. TROUP—Is the agreement then made for a time?

The CHAIRMAN—Yes. It is renewed from time to time.

Mr. TROUP—Is it the same as that made two years ago?

The CHAIRMAN—The present agreement ends in 1895.

In answer to further questions put by Mr. TROUP and Mr. WILKIN, the CHAIRMAN said that when the Committee sent a charity patient to the Hospital, the Committee paid \$1 a day for medical care and medicine, but the patient might have Dr. Wheeler or Dr. Eldridge to attend him, if so desired. They were paid a regular fee for such attendance.

Mr. RICKETT—If a patient is in for some time then they would be paid by the month.

The CHAIRMAN—And their fees would be limited to \$50; it would not exceed that.

Mr. TROUP said he would like to ask one question, it was in reference to the accommodation for first-class patients. He had had many complaints made about the want of accommodation at the General Hospital, and he found that patients were being constantly sent to the Naval Hospitals. These hospitals were a great boon, but admission to them might become impossible at any moment. The reason given to him by people who went to the Naval Hospitals was that there was not sufficient accommodation for first-class patients provided in the General Hospital. Could this be remedied? The understanding upon which patients were admitted into the British Naval Hospital was that such taking-in of civil patients should not in any way be allowed to interfere with the work of any Civil Hospital in the place. As a matter of fact, first-class patients went by the General Civil Hospital to the Naval Hospitals, and the reason given him was this, that there was no accommodation at the General Hospital for first-class patients. Would it be too much to ask that the Committee should set aside a room or rooms in the General Hospital for the reception of first-class paying patients?

The CHAIRMAN said that there was accommodation in the General Hospital for first-class patients. Dr. Mère had always taken in first-class patients and there had been no alteration since the three classes were established—first-class, second-class, and charity patients.

The SECRETARY explained that the second-class patients and the charity patients had exactly the same class of accommodation; the Committee paid \$1 per day for the charity patients, while second-class patients who went in without the intervention of the Committee paid \$1.50 per day.

Mr. TROUP said he understood the arrangement in regard to the reception and accommodation of the charity patients, but how did the Committee arrange for first-class patients?

The CHAIRMAN—Dr. Mère has accommodation for 50 patients only; all the rest of the Hospital is reserved by the Committee, and we chose who we shall send. We make out an order which states whether the patient will pay the fees, or whether the Committee shall pay them, and Dr. Mère collects them accordingly.

Mr. TROUP—Then you have no power of control?

Mr. RICKETT—The members of the Hospital Committee can inspect the buildings and Hospital whenever they like.

Mr. TROUP said that the question was, whether the accommodation provided was sufficiently good?

The CHAIRMAN—Oh, yes, it is.

Mr. RICKETT remarked that the community did not support the General Hospital. Dr. Mère paid all the expenses and in return took the fees. The CHAIRMAN—The accommodation is as good as the buildings will allow. If it is poor, it was due to the age of the buildings.

Mr. RICKETT drew attention to the fact that at one time it was proposed that the Hospital should be given up because the community would not subscribe to its support, when Dr. Mère stepped in and took it over. Then they entered into an arrangement through which the committee obtained the right to send their charity patients there whose fees were paid by the community.

Mr. BROOKE understood that the British Naval Hospital was only open for the reception of officers and men of the Royal Navy, or members of the British Merchant Service.

Mr. RICKETT—Mr. Brewer, a civilian, was admitted there this year.

Mr. BROOKE—Yes, I thought at the time that that was a new departure.

Mr. TROUP—Yes, but that was not quite a new departure as I can explain. Some years ago there were some patients, British subjects—and one of them in particular—for whom no proper accommodation could be found in the General Hospital. They were accordingly sent to the German Naval Hospital. This was a great boon, greatly appreciated. It seemed a reflection, however—and now he was speaking from a national point of view—that there was no place to which a British patient, a first-class patient, could go to. And this raised a question which was submitted to the home authorities. As an outcome, an arrangement was made with the British Admiralty who granted leave, under certain conditions, for the admission of civil first-class patients to the British Naval Hospital. One of these conditions was that a certificate must be obtained from the Consul certifying that the reason for admitting a patient to the Naval Hospital was due to the lack of hospital accommodation for first-class patients. It was only in the case of such patients that proper accommodation was provided.

tion—that first-class patients would be admitted to the British Naval Hospital. Now complaints as to the lack of first-class hospital accommodation were constantly being received, and he put it as a question, whether something could not be done to provide first-class accommodation at the General Hospital, as a time might come when admission to the British Naval Hospital would be impracticable.

Mr. BROOKS remarked that when, some years ago, the British naval authorities were approached, the Committee were met with a distinct refusal by them to admit charity patients to the Royal Naval Hospital.

Mr. TROUP—Charity patients are not received now; it is only first class patients, and then only on the proviso I have mentioned.

Mr. BROOKS said that the German authorities had never raised the question and did not object to receiving civil patients. Patients could choose which hospital they preferred now; if they did not wish to go to the hospital under the management of Dr. Mécère, they could go to the German Hospital or to the British Naval Hospital. This was the first public intimation they had had, that the British Hospital was open to the reception of civil patients; at least it was the first time that he could remember that an announcement of the kind had been made. It had always seemed a pity that the British Naval Hospital, with its efficient staff and accommodation could not be utilized by other than naval and seafaring men. That was now obviated.

Mr. TROUP—But it may not always be so. Even at present patients can only be admitted when it is certified that there is no proper first-class accommodation elsewhere. Now the question I put is why cannot proper accommodation be provided at the General Hospital?

Mr. BROOKS said that he had never heard of any complaints of insufficiency of accommodation at the General Hospital.

The CHAIRMAN asked if Mr. Troup was satisfied that there was not sufficient accommodation at the General Hospital?

Mr. TROUP—It is constantly alleged to me that there is not. I mentioned the fact two years ago.

The CHAIRMAN reminded the meeting that since then they had acquired a proper infectious diseases ward.

Mr. TROUP—There can be no gain saying the fact that at this present time first-class patients avoid the General Hospital if they possibly can. They will not go there because they say that the accommodation and attendance is not good. I merely ask if it is not practicable to render the accommodation good?

Mr. BROOKS thought it strange that Mr. Troup should be the sole recipient of the complaints. He could not help thinking that those who laid the complaints were visitors who could not know sufficiently about the hospital, its accommodation and attendance.

Mr. TROUP—The complaints come from visitors and from residents.

A desultory conversation then ensued in which Mr. RICKETT explained the steps taken by himself and Mr. von Hemert to remedy complaints made two years ago; and Mr. TROUP gave the name of the patient whose case caused the question to be put before the Naval authorities at home as to the admission of civil patients into the British Naval Hospital.

Mr. KEIL—From August, 1884, till November, 1894—an interval of ten years—I have been on this Hospital Committee and never once did I have an application for admission to the Hospital save those of charity patients, therefore I do not think the Committee should be blamed in this matter. No doubt if an application of a first-class or second-class patient had been made to the Committee, the Committee would have seen that proper accommodation and attendance was provided for that patient. But no such application was ever made during the time I speak of.

Mr. TROUP said that he did not attach any blame to the Committee. He merely raised the question, whether, in view of the complaints made, first-class accommodation could be provided at the General Hospital. It would be a benefit to the institution to get first-class patients.

Mr. KEIL—The public in general do not seem to be aware that the General Hospital does not belong to Dr. Mécère but to Yokohama. Dr. Mécère has only a part of the hospital—but he pays the expenses, pays the ground rent,—and the rest is ours. Dr. Wheeler and Dr. Eldridge are verbally retained for us to attend to any patient who desires them. Besides, I may mention, that these two gentlemen do a lot of charitable work in the town, attending upon poor patients in their homes for nothing, and only charging us with the medicine, thus saving us a lot of expense. Both Dr. Wheeler, and Dr. Eldridge, I repeat, can be consulted by patients in the General Hospital.

but this knowledge does not appear to be generally known. This is the true facts of the case. Patients may enter the hospital and be under the care of Dr. Mécère, or they may have their own doctor at the hospital. We can send our own patients to the Hospital and they can call in their own doctor. I believe that this only wants to be known to clear away the general misconception regarding the hospital.

The CHAIRMAN—I think with Mr. Keil, that it is only ignorance that causes this prejudice against the General Hospital; while again prejudice arises because folk think that the establishment is old.

In the course of a general conversation, the members of the Committee bore testimony to the complete equipment of the hospital in many respects; the experience of many patients who had recovered health in the Hospital and who came from Shanghai and elsewhere here; while Mr. Troup repudiated any suggestion of casting a reflection upon Dr. Mécère whatever.

Mr. TROUP moved the re-election of the old Committee with the addition of Mr. Jules Colomb, vice Mr. von Hemert deceased.

Mr. RICKETT moved an amendment, adding Mr. Wilkin's name to the Committee vice Mr. Keil resigned. The amendment becoming the substantive motion was carried.

Mr. TROUP thought that it was high time that the younger men of the community came forward to relieve the older men of some portion of the burden of public work; sentiments which the Chairman and Mr. Wilkin echoed.

The meeting then dispersed.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, October 20th.
Prince Yamashina, accompanied by two of his suite, is now in this country on his way back to Japan.

The prize ivory carvings of the Japanese and the \$10,000 vase from the World's Fair exhibit have been secured for the museum which has been established in San Francisco as a memorial of the Midwinter Fair.

The following clipping, from the September *American Journal of Politics*, though not recent is yet interesting. It originally appeared in the *Congregationalist* of Boston:—

CITIZENSHIP REFUSED TO JAPAN.—The decision by Judge Colt of the United States Circuit Court that a native of Japan, for many years a resident in Boston, where he is successful in business and intends to remain as a merchant, cannot become a citizen of the United States because he is a Mongolian, is one that doubtless is as legal as it is deplorable and evil. We cannot help feeling that the judiciary of the United States might be about more creditable business than refusing citizenship to the fellow-countrymen of Neezima simply because they are not of the Caucasian or African stock. Yet so long as demagogues shape our national immigration and naturalization no other alternative is left to the courts. Possibly this verdict, like the Dred Scott decision, may prove to be a boomerang and hasten the day when the tests for residence and citizenship in this country shall be based on the intelligence—native or acquired, industry, and moral character of the individual, and not be settled by his place of birth or the merits of his race as a whole. That this decision has made the Japanese in this country righteously indignant is not strange. That it will not assuage the strained situation in Japan is also certain. It is gratifying to see the promptness and spirit which Congressman Everett of Massachusetts has shown in introducing a bill in the House which, if passed, will make the decision of Judge Colt void.

The news comes from Washington, that the United States has been invited by the great quadruple alliance, composed of Great Britain, France, Germany and Russia, to join it in a friendly intervention in the war between China and Japan. It is also said that, although the desirability of the restoration of peace is acknowledged, this country will cling to its time-honoured policy "to avoid any entangling alliances with foreign powers," and will continue to carry out its usual policy of attending to its own business.

It is reported that Brazilian importers will sue the U.S. Government for the total amount of the duties levied on their goods from August 27th (when the new tariff law went into effect) till January 1st, 1895. Inasmuch as the reciprocity treaty with Brazil required "at least three months' notice," and the period named about covers more than four months, the Brazilian case does not seem strong. It is, however, said to be a test of the right of Congress, to pass a law which violates a contract provision of a treaty.

Secretary Carlisle has issued a circular letter to Customs house officials to the effect, that all articles intended for the Atlanta (Ga.) Cotton States and International Exhibition are to be admitted free.

The fishing ship has been permanently "up" by the

ed" in the Field Columbian Museum. The celebrated explorer, Paul du Chailu, made the presentation speech on behalf of the Norwegian-Americans.

The first annual report of President Ayer of the Field Columbian Museum shows a remarkably successful year. The daily attendance has averaged more than 2,000, a figure which beats "the average at the great Kensington Museum, London, by 500, and at the Smithsonian Institute, Washington, by more than 1,200." The receipts for the year were \$1,303,277.97 and the disbursements were only \$515,768.67. Of this sum only \$5,010 were received from admission-fees; so that the attendance is shown to have been almost entirely on the free-days, Saturday and Sunday. Public interest seems to be increasing.

It now seems very probable that Mr. John Vance Cheney, public librarian of San Francisco, will be chosen to succeed Dr. Poole as the librarian of Newberry Library.

As the litigation involving John Cramer's will is now ended, the trustees will have nearly \$1,000,000 to distribute among various benevolent, religious, and educational institutions, and about \$2,000,000 for a free public library. The donor expressed in his will the following wishes:—"I desire the building to be tasteful, substantial, and fireproof, and that sufficient funds be reserved over and above the cost of its construction to provide, maintain, and support the library for all time. I desire the books and periodicals selected with a view to create and sustain a healthy moral and Christian sentiment in the community, and that all nastiness and immorality be excluded. I do not mean by this that there shall not be anything but hymn-books and sermons, but I mean that dirty French novels and all acceptional trash and works of questionable moral tone shall never be found in this library. I want its atmosphere that of Christian refinement, and its aim and object the building up of character, and I rest content that the friends I have named will carry out my wishes in these particulars."

The University of Pennsylvania has received a contribution of \$50,000 for some special object not yet announced.

It is still undecided what will be the fate of the Central Church, of which the late Prof. Swing was pastor. Some say that the organization will disband; others that it will affiliate with the People's Church under Rev. H. W. Thomas, D.D.; and still others think that Rev. Frank W. Gunsaulus, D.D., now pastor of the Plymouth Congregational Church, will be elected to the vacancy.

Rev. J. D. Davies, D.D., of Kyoto, was also among the speakers at the recent meeting of the American Board of Commissioners of Foreign Missions. At one of the sessions it was urged "that the prudential committee use all suitable influence to induce Rev. D. L. Moody to accept the unanimous invitation which comes from Japan to visit these churches and bring home to them in this critical stage of the missionary work the pure, simple, and practical gospel of our Lord and Saviour Jesus Christ."

The report of Health-Commissioner Reynolds of this city for the year just ending, shows that the death-rate was much less than usual, and that one-third of all the deaths from violence were the results of railroad accidents. The decrease in the death rate is attributed to the improved water supply and the work of milk-inspection. A greater reduction in the death rate is expected after the completion of the drainage canal.

Ohio militia in Washington, C.H., fired on a mob trying to storm a jail to lynch a negro, killed two men and wounded ten, of whom four may die.

Train-robbers have recently been successful in two instances. Near Sacramento on the 12th inst. over \$50,000 were secured; and the following night about \$150,000 were "bagged" in Virginia.

Ever since July 16 when a Grand Trunk express train was wrecked near Battle Creek, Mich., detectives have been hard at work, and have at last secured sufficient evidence to arrest four A.R.U. strikers.

There are two new bicycle records: Otto Zeigler of San Jose, Cal., has cut off the 1/4 from the mile record, and left it at 1.50; and Louis Gimm, of Cleveland, Ohio, has made 383 miles 1,490 yards in 24 hours.

There is really nothing much in the daily papers now-a-days except politics. The Republicans have a mass meeting to-night in this city with ex-Speaker Reed as the "big gun." Last Tuesday was the first registration day, when an increase of over 48,000 voters (of whom almost 10,000 were women) was recorded. The women will vote only for trustees of the University of Illinois.

I am reading and thoroughly enjoying Lafcadio Hearn's "Glimpses of Unfamiliar Japan." Some of the sketches have appeared in the *Mail*, others are to appear in the *Monthly*; but about

two-thirds are entirely new. They are all more than "glimpses;" they are searching examinations, microscopic investigations, careful studies, of the inner life and the ways of thinking of the Japanese. The two volumes abound in folk-lore, legends, superstitions, and charming descriptions; and do not fail on a single page to hold the attention of the reader. His well known sympathy with Japanese ideas and sensitiveness to Japanese influences have enabled him to get much deeper into the mysteries of Japanese life than even Sir Edwin Arnold or Percival Lowell has been able to penetrate. Mr. Hearn certainly has discovered and described many of "the hidden springs by which they [the Japanese] move." It is a great pity, however, that the value of the work is impaired by its one-sidedness and the bitter prejudices of the author against Christianity. He has pictured only the bright side of Japanese life.

R. G. Dun and Co's. report, out to-day, says:—"Cotton below 6 cents and wheat below 55 cents, each lower than ever since present classifications were known, export of gold instead of products at such prices in October, are the salient features in business this week. Distribution of goods to consumers goes on fairly, with gains at nearly all points in comparison with last year, but not yet at a rate to sustain the present volume of manufacturing production, so that prices weaken a little."

Ex-Pres. Reinhardt and other officials of the Atchison, Topeka, and Santa Fé Railway have been indicted by the federal grand jury for violation of the Inter-State Commerce Law in granting rebates on freight shipments. Nelson Morris, one of the "big four" packers of this city, is also indicted for accepting rebates on cattle shipments.

This morning's papers report another train robbery, by which a large sum of money was secured. It was accomplished in broad daylight near Abilene, Texas, by a gang of four, who did not even wear masks.

LETTER FROM AMERICA.

(FROM OUR CORRESPONDENT.)

Ithaca, N.Y., October 12th.

We who dwell 7,000 miles from Japan have sympathized of late with our friends beyond the Pacific. Indeed, we have sometimes hummed the tune, "Thou art so near, and yet so far;" for, while you are so near the seat of war you do not get the news as quickly as we do. On our breakfast table we have the telegraphic reports of the battles by sea and land which have happened on the other side of the globe. The enterprise of the news-gatherers is admirable, yet while there is very much to be desired, there is also much more to be thankful for. The fineness of detail in regard to the sinking of the *Kowshing*, the battles of Asan and Ping-yang, as well as the great naval victory off the mouth of the Yalu, spread before us within forty-eight hours of the events, is very gratifying. Nevertheless, there are some things in which the dweller in Japan or China possesses the advantage. The conflicting nature of the telegrams is distracting to the average reader. One who has lived long enough in the East to have at least an outline of correct knowledge can recognize at once the arant nonsense and crass stupidity so abundantly manifest in many of the reports. But the individual who still considers Japan simply in the light of a producer of fans and teapots, is woefully befuddled. Although at this writing we have been so well informed by telegraph, still it is a pleasant sensation to get a full mail of print, manuscript, and illustrations from Japan and thus clear up one's mind in detail and in general.

Fortunately for the enlightenment of those who will take the trouble to read, the autumn's harvest of good books is excellent. The publishers, all along the line of the Atlantic coast, of the Lakes, and of the Pacific, declare that despite the so-called "hard times," the book trade is good. People will have reading; the day has gone by, in the United States at least, when books are luxuries; they are now necessities, like shelter, food, tools, and raw material. The announcements by our chief book printers show an unusually wide range of both financial enterprise and of literary achievement. In regard to the Far East we have already several books on China actually out, in the press, or still in the process of ink and manuscript. On the Chinese side I have just looked over Arthur H. Smith's, "Chinese Characteristics," which, published first at Shanghai in 1890, was so well received. It comes forth now in a revised, illustrated, and attractive form, giving probably the best view of what is really China, and

any other volume. Our former Secretary of Legation in Peking, Chester H. Holcombe, is hard at work on what will probably prove a good book. Mrs. Bishop (née Miss Bird) and sometimes called irreverently "the Lyre Bird," is to enlighten us concerning that portion of Tibet which she saw. Miss Adele M. Field has written a charming and conscientiously accurate work entitled "A Corner of Cathay." Old editions of books, like those of the unmatched "Middie Kingdom" of Dr. Williams are being prepared for speedy publication. It may be said that in the United States, while the making of books on China there is not soon likely to be an end, the two portly volumes of S. Wells Williams hold their own as the standard of reference as well as of frequent reading.

On Japan we are also promised a mild deluge. Mr. Fink, who has written several books illustrating the general subject of aesthetics, has something in hand which I am inclined to think will be a pleasant surprise. Mr. Lafcadio Hearn's two volumes, robed in dark bluish grey and silver, form a wonderful storehouse of information and suggestion, especially about south-western Japan, and the old beliefs and traditions of this comparatively little Buddhaized part of the Empire. Captain G. K. Youngblood's little book "On Short Leave to Japan," was pleasant reading, albeit not very profound, though the last chapter gave one the freshest and latest views of the Japanese army.

Concerning Korea we are also to have more light. We are inclined to believe that if a certain firm of Boston publishers had foreseen the outbreak of this war, they would have accepted, instead of declining, a manuscript on Korea offered them by one who has known the country thoroughly by several years residence in Seoul. Speaking of Korea reminds us that the collection brought by the commissioners from Seoul to Chicago was broken up in this country, only a few pieces being taken back to Chōven. Part of the Chicago exhibit from Korea went to Professor Morse, and a considerable number of specimens to the National Museum in Washington, which latter repository has also recently secured about 150 articles from Mr. Hulburt and Dr. Allen. A valuable pamphlet illustrating the Bernadou, Allen, and Jouy Korean collections in the U.S. National Museum, was recently published by Mr. Walter Hough, of the Department of Ethnology. Many of your readers doubtless have met the late Mr. Pierre L. Jouy, the accomplished ornithologist, who travelled through Korea and Japan, bringing home handsome collections of pottery from the Peninsula and of birds from Korea and Japan. Mr. Jouy, who had married the daughter of the late Dr. Antisell, formerly of Hokkaido and Tokyo, followed his father-in-law in death a few months ago, having vainly attempted to be cured of a pulmonary disease by a residence in Arizona. I am informed by Mr. Hough that he proposes in collaboration with Mr. W. W. Rockhill, formerly of the United States legations in Peking and Seoul, an extensive work on Korea. Certainly they will have probably the largest and finest collection of Korean articles in the world, from which to make their illustrations. In the interim, while we are waiting for that unique and final book on Korea which somebody is yet to write, we are glad to have the Hon. G. Curzon's fresh work on Problems of the Far East. Those who have read it are delighted with the philosophical insight and close grasp of his subjects which this intelligent traveller, author, and statesman shows.

Let me not omit, in my summary, mention of the portly volume of Dr. Terrien De Lacouperie on "Western Origin of the Early Chinese Civilization" and also Prof. Douglas' "Social Life of the Chinese." Dr. Lacouperie no longer works as the lonely pioneer which he was twelve years ago; for now, Prof. Douglas, Rev. Mr. Ball, and other Chinese scholars, agree with him in his main thesis that China is a debtor to the ancient West. The items of civilization introduced from the Mesopotamian regions and from India, number, according to the author, about 370, including even the script which has been so wonderfully developed in the system of ideographs; or, as Prof. Chamberlain justly prefers, logograms.

Despite war's alarms, some of the former denizens in Japan who have returned home, are setting their faces again to what was once the Orient, but is for us the distant Occident. Rev. Edward Warren Clark has, before your reading of this missive, been among you. Our well-known correspondent of Harper's periodicals, Mr. Julian Ralph, has already sent his first letter from Japan, and we hope soon to have some of his brilliant sketches from China. For, if the victorious course of the Japanese armies is not checked there will be little need to go to Korea to see battles. Mr. Richard Harding Davis was also to have come to

the seat of war for *Scribner's Magazine*, and actually enjoyed a farewell dinner given by his friends as a *sayonara*; but after travelling a little way westward he concluded to live on Manhattan Island for a while yet. Mr. Davis' literary career is a very brilliant one; when he wrote his story of "Van Bibber," it was supposed that this name was an invention, like those curious verbal curiosities of Dickens; but he who is well informed in American genealogy knows that the Van Bibbers were of the first families of Maryland. The first ancestor in America was the naval director of Lord Baltimore's fleet; one of his descendants equipped a privateer and captured British vessels near St. Eustacius in the West Indies, where from the Dutch port, by Governor Johannes De Graeff, the American Stars and Stripes received its first foreign salute; succeeding members of the family have been men eminent in science and philanthropy.

It was suggestive, as we read over the list of imports to China by the last steamer sailing from San Francisco, to find that ginseng is still a notable article of import. It was American ginseng, first discovered by the Jesuit Lafitte in Canada and later in Vermont and Central New York, and, still later, all through the West, that formed the first staple of American commerce with China, and disturbed the Korean market. From a letter received from one of the officers in the Agricultural Bureau at Washington, I learn that a volume on the history of this plant and its economic value, cultivation, etc., is soon to be published.

Almost as a matter of course, the sympathies of our people in the far Eastern war are with Japan. During the last few months librarians have informed me that books on Japan, China, and Korea have lost their dust, and their pages are now well-thumbed. The newspapers were the first to begin the "rum," but the public soon trod on their heels. Necessity in some of the descriptions and editorials there are suggestions of mustiness. Some of the editorial eloquence has a curious air of obsolescence, while things that were true two hundred years ago jostle in the same paragraph—and often in the same sentence—with items that suggest carbon and yellow tissue paper, telegraphic clicks, and cylinder steam presses.

What is surprising is the wonderful outburst of writing in English by Japanese. Already I hear of lecturers whose vernacular is that of Nippon, while their speech is English,—though not always of the sort recognized by Addison or Lindley Murray. Yet the writing which one sees in the papers signed by unmistakable Japanese names is often remarkable for its accuracy. There is not much time lost apparently between the arrival in New York of the mails from Japan and the reproduction of pictures and texts illustrating the war. Far details of the situation in China, we have to depend upon the letters of missionaries and of Americans in the employ of the Chinese government.

We are also wondering whether we are not soon to have an influx of students from Korea. One of the Koreans, a very bright young fellow, is now studying at Roanoke College, Salem, Va. We have no Korean legation at present in Washington, though we hear that the Korean refugees of 1884 who have been employed for several years past in one of departments at Washington (and for whose support in the early days of their impecuniosity before employment was obtained, several of us once interested in Oriental affairs have contributed money as well as advice), have been called home. The opportunity has come, in the revolution of time, and they will probably have places in the new government of reformed Korea. Japanese students still attend our colleges and schools, though instead of being concentrated in a few places, as was first the unwise custom, they are now far apart and usually one in one place. There are also at least four Japanese girls in the American colleges; one at Radcliffe, another at Bryn Mawr, another at Wellesley, and a fourth still, we believe, at the Wilson College for women at Chambersburg, Pennsylvania.

Speaking of this Keystone State, reminds us that the the great "war governor," Andrew G. Curtin, whose welcome to the troops at Harrisburg in 1863, we remember so well, died and was buried day before yesterday. Those were the days when we wore the blue and carried the rifle for the cause of Union, and of freedom as against slavery; and, for that reason if for nothing else, we confess to a lively interest in the war in the East which, seen, from our point of view, is that of civilization against barbarism. Unless we greatly mistake, the battle of Ping-yang will be reckoned among the great decisive battles of the world. Now or never the people of Europe and America will learn the difference between the "Wojen" and the "Celestial Empire." Certainly the exhibitors at the World's Fair at Antwerp just closed understand it. We notice

that beside the eight awards given to China, there were twenty-two to Japan. At the Congressional Club in New York next Monday evening, besides your correspondent, whose topic is, "Korea, Her needs and Her Hopes," the Hon. Howard Martin, ex Secretary of Legation at Peking, will speak on China, and the Rev. John Tokio (not Tōkiō) Yokoi will represent Japan, and Her Cause. In closing, I am glad to announce the Mr. Fukuizawa, one of the great intellectual forces in the making of New Japan, is soon to receive literary treatment and illustration in one of Harpers' periodicals.—W.E.G.

CRICKET.

CRICKETERS V. BASEBALLERS.

The return match between the Cricket and Baseball players of the Y.C. and A.C. took place on Saturday. The day was rather chilly and sweaters were worn by most men engaged. The game, it must be acknowledged, was dull notwithstanding the altered conditions under which it was played, the novelty having evidently worn off. Courts, for the Baseball team, contributed a useful 24, which helped his side materially. The cricketers had matters all their own way, however, and won easily with some seventy odd runs to spare. Edwards' free hitting was the principal feature of the afternoon, his total of 36 being mainly composed of boundaries and three scores:—

BASEBALL TEAM.		CRICKETERS.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, 5, Bund, on Mondays and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

SOLUTION TO PROBLEM No. 149.

WHITE. 1—B to K B 8
2—Mates accordingly.
Correct solutions received from Shogi, Omega, Digamma, J.D., and Krug.
Correct solution of No. 148 also received from O. Krug.

PROBLEM No. 152. By J. H. CARTER.

White to play and mate in two moves.

PROBLEM No. 153.

[A living Chess problem arranged at the Leipzig Chess Congress and solved during a pantomime entitled "The Chess Player's Dream." It is

practically an end game, and therefore of no exceptional difficulty.]

White to play and mate in six moves.

YOKOHAMA CHESS CLUB.

By reason of the unfortunate fire at the Oriental Hotel on Monday, 19th instant, this Club has been obliged to seek fresh quarters. The regular meetings will in future be held at the Club Hotel every Monday and Thursday till further notice.

Last advices from New York report that Steinitz was doing a little practice by playing in the Master's Tournament there which began 20th October. Three rounds had been played when the mail left, the veteran winning each game so far. Meanwhile news comes from London (20th Oct.) that Lasker is seriously ill, and that his present engagements are in consequence cancelled. The Albin-Shawalter contest is adjourned (present score: Showalter 6, Albin 2) as both players are at work in the Tournament mentioned above.

CHESS IN TOKYO.

The following smart game was played in the Club Championship Tournament now in progress in the Tokyo Chess Club.

GAME No. 183. SCOTCH GAMBIT.

WHITE.	BLACK.
Mr. W.	Mr. K.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—P to Q 4	3—P takes P
4—Kt takes P	4—Kt to K 4 (a)
5—B to K 3	5—P to Q 3
6—P to K B 4	6—Kt to Kt 5
7—Q to Q 2	7—Kt to B 3
8—Kt to B 3	8—B to Q 2
9—Castles (Q R)	9—Kt takes B
10—Q takes Kt	10—Kt to Kt 5
11—Q to Kt 3	11—P in K B 3
12—P to K R 3	12—Kt to R 3
13—B to B 4	13—Q to K 2
14—B to Q 3	14—Castles (Q R)
15—Kt to Q 5	15—Q to B 2
16—B to B 4	16—Q to K 4
17—K R to K sq.	17—P to K Kt 3 (P)
18—Q to Q R 3	18—Kt to Kt sq.
19—R to Q 3!	19—Kt to B 4
20—Kt takes Kt	20—B takes Kt
21—Kt takes Q B P!	21—K takes Kt (!)
22—Q to R 5 (ch.)	22—P to Kt 3 (b)
23—Q takes P (ch.)	23—K to B 3
24—B to Q 5 (ch.)	24—K to Kt 4
25—P to R 4 ch. and mate in 2 moves (c).	

(a) An unusual move, and one, we think, which does not tend to the development of Black's game.
(b) If K moves, P takes B and White must win.
(c) White misses the best road here. Try 25—R to Kt 3 ch., K to B 4; 26—Q takes P mate. Or another way which is better than the text: 25—P to B 4 ch., K moves; 26—Q to R 3 mate.

YOKOHAMA CHESS CLUB CHAMPIONSHIP, 1895.
This contest has begun with ten entries, and the first round has been drawn as under. (Each heat to be three games up. Staunton rules. Round I. to be finished by 31st Dec.) :—

Heat 1.—Klingemann	versus	Solomon.
Heat 2.—Fox	versus	Komor.
Heat 3.—Tennant	versus	Davieson.
Heat 4.—Batavus	versus	Griffin.
Heat 5.—Mendelson	versus	Schiff.

GAME No. 184.

A lively skirmish between the two famous Russian Masters. Score and notes from the Hereford Times.

WHITE.	BLACK.
Tschigorin.	Alapin.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4

4—P to Q Kt 4	4—B takes P
5—P to B 3	5—B to R 4
6—Castles	6—P to Q 3 (a)
7—P to Q 4	7—B to Kt 5 (b)
8—Q to Kt 3 (c)	8—Q to Q 2
9—B takes P ch. (d)	9—Q takes B
10—Q takes P	10—K Kt to K 2
11—Q takes R ch.	11—B to B sq.
12—B to Kt 5 (e)	12—B to Kt 3
13—B takes Kt	13—Kt takes B
14—P takes P	14—Castles
15—P takes P	15—P takes P (f)
16—P to K 5	16—P to Q 4
17—Q to Kt 8	17—B to Kt 5
18—P to K 6 (g)	18—Q to Kt 3
19—Q to Kt 3	19—Kt to B 4 (h)
20—Kt to R 4 (i)	20—Kt takes Q
21—Kt takes Q	21—Kt to K 7 ch.
22—K to R sq.	22—P takes Kt
23—P to B 3	23—B takes K P
24—R to K sq.	24—Kt to Kt 6 ch. (j)
25—P takes Kt	25—K to B 2
26—Resigns (k).	

NOTES.

(a) The older move 6—Kt to B 3 is now generally preferred. Or, if Black wishes to have a theoretically won but practically lost game he may play Steinitz's move, 6—Q to B 3.
(b) 7—P takes P is usually adopted at this point. 7—B to Q 5, we believe, has the approval of Mr. Ranken. The text move is not in the books, and appears to be weak.
(c) For now White should have replied 8—Q to R 4.
(d) Of course, the Queen or a piece is lost if she ventures to take the Kt P.
(e) The interest of the game now centres in the battle for White's Queen. M. Tschigorin, though he succeeds in extricating her, gets a bad game in the process. 11—P to Q 5, Castles; 13—P takes Kt, B to K Kt 5, &c.
(f) If Black play 15—B to R 3, White obtains more than an equivalent in material for his Queen.
(g) If 16—Q to Q 6, the reply B takes Kt seems to win for Black.
(h) Conclusive.
(i) In reply to Q to B 4 Black plays Kt to Q 5 and wins.
(j) A pretty finale, which wins by force.
(k) For mate in two is inevitable.

PROBLEM COINCIDENCES.

TO THE CHIEF EDITOR OF THE "JAPAN MAIL."

SIR,—I notice in your issue of yesterday (Nov. 17th) an interesting clipping from the *Newcastle Weekly Chronicle* relating to a series of two-move problems, wherein there is a position concerning which the *Chronicle* says that it is ignorant to whom the invention is due. The "paternity" of this pretty problem ought not to be difficult to establish. In a book in my possession, the *Schachbuchlein*, or "Little Essay on Chess," translated into German from the English of Paul Morphy, and published in 1877, I find this same problem attributed to that great and elegant composer, S. Loyd. This ought to set all doubt as to its origin at rest.

Yours, etc.,
November 18th, 1894.

F.W.E.

(The paragraph in question was curs, and not "clipped" from the paper mentioned.—Chess Ed. 7.M.)

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 17.
Her Majesty's ship *Gibraltar* has started for the China Station.

It has been generally noticed in St. Petersburg that the Czar missed no opportunity of honouring the Prince of Wales.

[The *Gibraltar* (12), is a twin-screw cruiser of the first class 7,000 tons, and 20,000 indicated horsepower.—Ed. J.M.]

London, November 20.
The funeral of the late Emperor of Russia took place yesterday with great ceremony.

The marriage of the Czar will take place on Friday next.

The *Novosti* applauds Great Britain for seeking to terminate the Korean war before it becomes too late, and condemns the policy of Germany in declining to join with other Powers.

London, November 21.
Japan, while thanking the United States for its friendly offices, has replied that China must approach Japan directly on the subject of peace.

The *Times* says that at Odessa two transports that were filled with troops have been suddenly ordered to Vladivostok.

London, November 22.
The Japanese Government has intimated its willingness to accept the American Minister to Tokyo as the medium through whom Chinese proposals for peace may be made, and President Cleveland has instructed the American Ministers in Tokyo and Peking to act in accordance with this intimation.

[FROM JAPANESE PAPERS.]

Hiroshima, November 21.
The railway section between Aomori and this town was opened for traffic from yesterday.

The opening was enthusiastically celebrated by the residents.

Etajima, November 22.

H.I.H. the Crown Prince, who left Hiroshima at 8 o'clock, arrived here at 9.30 a.m. by the *Kure Maru*, and was warmly welcomed by the officers and students of the Naval College. After giving audience to some high officers, His Highness inspected the buildings, and afterwards watched various exercises gone through by the students. The Prince left at 1.30 p.m. for Itakushima.

Shanghai, November 22.

A Chinese ironclad, said to be the *Chen-puen*, has been wrecked at Wei-hai-wei.

Kyoto, November 23.

The Commander-in-Chief of the Russian Squadron in the Pacific arrived here last night, and is expected to stay for four or five days.

Hiroshima, November 23.

It has been learned on good authority that Count Yamagata, Commander-in-Chief of the First Army, who has been slightly indisposed since the 4th inst., is now enjoying good health.

The telegraph wire in Korea is interrupted to the north of An-ju.

The eastern side of Port Arthur is very hilly, and strongly fortified. The main force of the Japanese Army has therefore been directed towards the western side. It is said that there are six regiments of Chinese soldiers under good discipline.

The Chinese inhabitants of the districts occupied by the Japanese Army are becoming very familiar with the Armies and are willing to render service to the Japanese. They seem to understand the immunity attaching to the flag of the Red Cross Society, and persons of all classes are visiting the hospitals for medical assistance. The natives complain of the disorderly behaviour of the Chinese soldiers.

Shanghai, November 23.

The inhabitants of Moukden have fled in all directions expecting the attack of the Japanese Army.

Manchuria is now practically without any local Government. The Chinese soldiers, who have been defeated in various places, are behaving in a very riotous manner, and great trouble is experienced by the inhabitants.

The Japanese fleet has been bombarding Port Arthur since the 21st.

A Tientsin telegram reports that the Chinese soldiers at Port Arthur have driven back the Japanese troops three times.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From America	per P. M. Co.	Sunday, Nov. 25th.
From Canada	per C. P. R. Co.	Sunday, Nov. 25th.
From Europe	via

LATEST COMMERCIAL.

IMPORTS.

No good word as yet. Yarns and Grey Shirts are in the same position as last advised; Fancies unchanged. Woollens should be in some demand with the approach of winter, but the people seem to lack spending money for European manufactured goods.

COTTON PIECE GOODS.

	PER YARD.
Grey Shirts—8½ lb, 34 yds, 34 inches	\$2.25 to 2.75
Grey Shirts—9 lb, 34 yds, 45 inches	2.60 to 3.25
T. Cloth—7 lb, 24 yds, 34 inches	1.60 to 1.90
Indigo Shirts—12 yds, 44 inches	1.70 to 2.35
Prints—Assorted, 24 yds, 30 inches	1.75 to 3.75
Cotton—Italian and Sattin Black, 32 inches	0.16 to 0.21
Velvets—Black, 35 yds, 22 inches	6.85 to 9.05
Victoria Lawns, 12 yds, 12-3 inches	0.85 to 1.00
Turkey Reds—2.0 to 2.4 lb, 24/25 yds, 30 inches	1.55 to 1.65
Turkey Reds—2.8 to 3 lb, 24/25 yds, 30 inches	1.75 to 1.95
Turkey Reds—3.8 to 4 lb, 24/25 yds, 32 inches	2.20 to 2.50
Turkey Reds—4.8 to 5 lb, 24/25 yds, 32 inches	2.70 to 3.00

WOOLLENS.

METALS.

No great life in this market. The drop in exchange enhances lay-down cost; but buyers will not or cannot pay any advance in values here.

	PER PICUL.
Flat Bars, 4 inch	\$3.30 to 3.35
Flat Bars, 1 inch	3.40 to 3.45
Round and square up to 1 inch	3.30 to 3.45
Iron Plates, assorted	3.50 to 3.65
Sheet Iron	4.45 to 4.60
Galvanized Iron sheets	8.75 to 9.00
Wire Nails, assorted	5.60 to 5.90
Tin Plates, per box	6.50 to 6.75
Pig Iron, No. 3	1.60 to 1.85

KUROSHI.

Market firm. Holders are strong and with a falling exchange see no reason to reduce quotations. Buyers must come in sooner or later for Japan cannot do without Petroleum.

	PER PICUL.
Chester	\$1.75 to 1.77
Comet	1.72 to 1.75
Devoe	—
Russian Anchor	1.72 to 1.75
Russian Moon	1.70 to 1.72

SUGAR.

Brown—Of course there is always some kind of demand; but we do not hear of any particular life in this market. Steamers from the south bring fresh supplies, but Formosa kinds appears to be out of the running just now. White—No change to report.

	PER PICUL.
Brown Tahao	\$4.30 to 4.40
Brown Manila	5.20 to 5.35
Brown Daitong	3.20 to 3.30
Brown Canton	3.70 to 4.25
White Java and Penang	7.00 to 7.40
White Refined	7.00 to 9.50

EXPORTS.

RAW SILK.

A very moderate business at about the old prices. Export to date shows a large increase over that of last year at same time; and it looks as though consumers had provisioned themselves for some time to come. Quotations irregular in some cases but holders do their best to keep prices up, especially as exchange has been going in their favour.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dimerco, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold, and, as it goes direct into the hands of the Wholesale and Retail Buyers, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

November 3, 1894.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing operations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

ATKINSON'S WHITE ROSE

The original and only genuine. Renowned throughout the world as the most exquisite Perfume. Avoid Imitations.

ATKINSON'S
FRANGIPANEE | STEPHANOTIS
ESS. BOUQUET | JOCKEY CLUB

and other well known Perfumes are superior to all others for their strength and natural fragrance.

Of all Dealers.

J. & B. ATKINSON,

YOKOHAMA: SATURDAY, DEC. 1ST, 1894.

BIRTH.

At No. 3, U.S. Legation, Tokyo, on the 30th ult., the wife of Dr. W. N. WHITNEY of a daughter.

SUMMARY OF NEWS.

THE Tai Wōn-kun is reported to have retired into private life.

ST. ANDREW'S BALL took place in the Public Hall last evening, and passed off with great *éclat*.

It has been decided to close the Victoria Public School from the end of the present year.

It is stated that the Japanese Government has decided to establish a Consulate-General at Ninsen, Korea.

RINDERPEST is still very prevalent in some parts of Oita Prefecture, where it has been imported from Korea.

THURSDAY was Thanksgiving Day. It was generally observed by the American portion of the community.

THE Minister of Communications has issued a notification in the effect that telegraphic messages will be received on and after the 1st of December from the general public at the

Japanese Telegraph Offices in Sōul and Ninsen, Korea.

THE Choral Society's first concert of the season will be given at the Public Hall on Wednesday, December 12th.

ONLY \$24,500 being offered for the British ship *Drumellan* at Nagasaki last week, she was withdrawn.

It was expected that the telegraph line between Wi-ju and Talien would be completed before the close of last month.

THE concert given in Tokyo on Saturday evening in aid of the Red Cross Society's funds was an immense success.

THE Nippon Yusen Kaisha has contributed yen 60,000 to the funds of the Seamen's Aid Society. The sum will be paid in ten yearly installments.

MR. KATO, Chief of the Political Bureau in the Foreign Office, has been appointed Minister Resident to England in the room of Viscount Aoki.

H.I.H. PRINCE YAMASHIMA KIKUMARO, who lately proceeded to Hiroshima, will be appointed to a man-of-war, and will go forward to the seat of war.

THE recent fires in Hiroshima have induced the authorities to install the electric light in the Tokyo Arsenal and the barracks of the Imperial Body Guards.

THE CROWN PRINCE returned to Tokyo from Hiroshima on the 26th. He was loudly cheered by the populace as he drove through the capital to his Palace.

HIS MAJESTY THE EMPEROR as well as his Imperial Consort have sent messages of thanks to the Army and Navy engaged in the capture of Port Arthur.

Two members of the Japanese Intelligence Department, having been caught by the Chinese near Chin-chow, were put to the torture and then burnt to death.

THE taking of Port Arthur has been celebrated in patriotic fashion all over the country. School-boys have paraded in nearly every town and hamlet of the Empire.

It is stated that the Korean Government has intimated to Japan its desire of engaging Mr. Suyematsu, Chief of the Legislative Bureau, as an adviser to the Peninsular Government.

It is stated that the authorities propose to erect a grand triumphal gate in the neighbourhood of the Palace in Tokyo upon the return of H.I.H. the Emperor from Hiroshima.

MR. DETRING of the Chinese Customs visited Japan this week as an alleged Envoy of peace. He desired to have an interview with the Premier, but that was not conceded to him.

THE King's Daughters' entertainment at the Public Hall on Monday evening drew a crowded house. The musical drills of the young ladies drew forth rounds of enthusiastic applause.

A FOREIGN merchant of Yokohama was robbed of a valuable fitted travelling bag while on the railway between Kobe and Yokohama on Tuesday night, but the police quickly recovered it for him.

THE total value of policies issued by the Imperial Life Insurance Co., Tokyo, having reached ten millions yen the Company gave a banquet at the Koyo-kan, Shiba Park, on the 27th ult. to celebrate the event.

THE Yokohama visitors to the Tokyo Concert on Saturday night had an unpleasant wait of two hours just outside Tsurumi station owing

to the engine breaking down. They reached Yokohama about 4 a.m.

H.I.H. PRINCESS KOMATSU, who visited Hiroshima and Kure on a tour of inspection among the wounded soldiers, returned to Tokyo on the 27th ult. A visit to Sascho was on her original programme, but as the Princess was prevented from reaching there for some reason, she despatched Madame Ueyo Ikuko in her stead, in company with the Marchioness Nabeshima.

REUTER telegraphs:—M. Depuy, the French Premier, has stated that there is no question of the extension of France's colonial empire, but the campaign in Madagascar is for the due upholding of existing rights. The Committee of the French Chambers has passed the credits for carrying out the expedition to Madagascar. Immense havoc has been wrought by an earthquake in Sicily and Southern Italy. The greatest floods of the century have taken place in the valleys of the Thames and Ouse. Owing to the inundations Eton College has been closed. The remains of the late Czar were interred on the 19th Nov. in the Cathedral of St. Peter and St. Paul in the citadel at St. Petersburg. The ceremony was most imposing, and the streets, which were lined by troops, were crammed with onlookers. Amongst the mourners were included T.M. the Kings of Denmark, Greece, and Serbia, H.R.H. the Prince of Wales, H.R.H. the Duke of York, and others. The Emperor of Russia was married on the 26th Nov. The Czar in a manifesto remits arrears of taxes on Government Loans owed by the peasantry, and reduces the sentences of prisoners. Perhaps later on the Poles who were exiled for the rebellion of 1863 may be permitted to return. The Dutch troops have attacked a Balinese stronghold at Tjakranegara, and have captured two of the strongest positions, after a stubborn resistance.

A SLIGHT improvement has taken place in the Import trade, and if only a small increase in actual transactions has come about there is distinctly a better enquiry and an advance in values in certain directions. This remark does not apply to Yarus, however, for sales have only been effected at a reduction. There has been a fair amount of business in Shirtings at late rates, but Fancy Cottons remain dull. The Woollen trade is generally quiet, a few lots of Italian Cloth having been taken; while Blankets have been moved off in large quantities, and the small remaining stock is held for more money. The Metal trade has considerably improved, and Bar, Plate, and Sheet Iron have all fetched better prices than for some time past. Tin Plates have also risen in value, and are in demand at present rates. The Kerosene trade is healthy. Offers are made by dealers, but holders are firm and decline to "part" for the money held out. Stocks are ample—American 500,000 cases, and Russian about equal to 100,000 cases. Large sales of Sugar have been effected, holders taking less money for old stocks of Formosa and Manila Browns. On the other hand, new Daitong has gone up. Some large parcels of White have also been taken at a decline on late rates. There has not been much doing in Silk, and the large stock has been but slightly reduced. The transactions put through have been principally for America at somewhat better prices, but the demand from Europe has been small. Very little has been done in Waste, and scarcely any impression has been made on the 20,000 piculs in stock. The only thing to be said about Tea is that there is a small stock of leaf left of poor quality, and that the sales effected have been at late rates. Exchange has further declined, but has an upward tendency at the close.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Mr. Detring's visit to Kobe on a fruitless and unascertained errand, has elicited from the vernacular Press more comment than the event seems to have merited. We here reproduce the *Nichi Nichi's* sentiments as a fair example of what the others have said. "We are informed that Detring is come as a Chinese War Envoy, and that he bears a letter from Li Hung-chang to be personally delivered to Count Ito, the Premier. If his mission be what the Kobe telegram alleges, he had better repair to either Marshal Yamagata or Marshal Oyama. With what authority he is vested we find difficulty in ascertaining, but it appears to us beyond all question that he is not qualified to convey a message direct to His Majesty's Headquarters. The commanding officers of our Armies in China would by no means fail to receive with due honour a military envoy approaching them under a flag appropriate to his mission. Were he such a messenger, what should deter him from going to the Staff Offices of the Japanese forces abroad? If he were an Ambassador with full powers to negotiate terms of peace, he must have proper credentials from the Sovereign he serves, determining his official capacity and entitling him to be received by the Japanese Government. A letter from the Viceroy Li can not qualify him to meet Count Ito on business of such importance as he seems to profess. At this tide of affairs China cannot hope to bring the war to a conclusion by any means short of either surrendering to our Marshals in the field or sending to our Government a better qualified and more dignified envoy than a foreign employé. Diplomacy *à la Chinoise* at this juncture deserves at best to be laughed at."

Speaking of the War Loan, the *Hochi* regrets that the denominations of the bonds have not been made smaller. It sees in the issue of small loan bonds a suitable occasion for encouraging and confirming the habit of saving among the lower orders. No country can be permanently strong without having frugal and prudent lower classes. It is to be deeply lamented that the Government has missed such a good opportunity for giving the people a practical lesson in economy. The *Yiji* protests against papers that look for an index of Japanese patriotism in the success of the War Loan. It declares emphatically that money making is one thing and patriotism another, and that they have little to do with each other. The Independent journal has long cherished the theory that the terms on which a Government Loan is raised ought to be left to the subscribers to fix. Seeing the Government taking a path different from that advocated in its own columns, it says that a day may soon come when an appreciable dearth of capital will be felt in commercial circles.

A writer in the *Asahi* says that the inhabitants of the occupied territory in China must be led into the path of modern progress as soon as possible. He relates in what order things Western were introduced into Japan, doing much for her civilization, material as well as moral. He recommends that the Authorities hold nothing more important than to send to the conquered districts a number of doctors of the Chinese school and a few surgeons of the European. Such persons, he thinks, could not fail to be highly instrumental in civilizing the semi-barbarous folks in Manchuria. He also attaches great importance to inaugurating cheap and convenient means of communication, and he concludes by saying that a police force distinguished for mildness and toleration as much as for energy and uprightness, ought to be organized.

The *Nippon* urges the public to pay more attention to things other than war and diplomacy. It does not of course deny the import-

ance of warlike and diplomatic affairs just now, but it recalls the fact that the two branches of the public service about which folks are now intoxicated beyond all reason, do not affect more than a quarter of the National Revenue. Is it wise to forget three quarters for the sake of one quarter? The people are especially taken to task for being insensible to labour performed in their behalf; as when they look all but coldly upon the work of Mr. Maeda Masana who strives to promote Japan's agricultural interests, and that of Mr. Murata Tamotsu, whose name is perhaps better known to our readers as an able orator in the House of Peers than as a worthy worker in the sphere of industry, doing everything in his power to advance the fisheries of Japan. The *Nippon* appends a note in which the Members of Parliament are urged to recognise that now, when the Ministry seems to be creditably managing the empire's foreign affairs, they had better turn their energies to their more proper and no less important task of seeing that ordinary administrative matters are well cared for.

"History and reason point to the conclusion," writes the *Mainichi Shimbun*, which has been for a time playing the prophet as regards the prospects of the Chinese empire, "formulated in our previous issues, namely, that China will not share the fate of either Rome, Poland, or India." This argument of the Progressionist organ was reproduced in our columns last Saturday. But now the *Mainichi* takes off its vaticinating cap and puts on a veil of mystery: "Fate forever seals her book from the sight of men. What she may lead Japan to undertake toward China in the days to come, no one can tell. It was Fate more than anything else that made England the ruler of India. The same latent power led the three European States to divide among themselves the spoils of Poland. Rome fell never to rise again under the august command of Fate. Thus there is no telling how China will fare in the future. In that uncertainty, it is all important for Japan to be ever on the alert to turn any great change in China to the best account for herself, under the inviolable dictates of Fate."

The vernacular Press congratulates the nation upon the signal victory its soldiers won at Port Arthur and warmly thank the forces that gained it. The armies are urged to hasten toward the nation's and their own final object, the seizure of the Gates of Peking. Not a paper fails to observe that, at this stage of the war, China should not be allowed to negotiate, but must be forced to surrender.

Our readers know that the *Yiji* has been mentioning the two Provinces of Manchuria, Kirin, and Shing-king, as a proper territorial concession to be obtained from China in the sequel of the present war. Now we find that the Radical organ adds the Province of Heiluh-kiang. The reasons given for this supplementary proposal are these: Were the Amoor valley in Japan's hands, she could guard against any southern aggression by China. A railway running through Kirin and Shin-king and terminating at Talien would not fail to make the port of Talien a great mart of Asiatic commerce. The Manchurian Provinces might suffice to secure the independence of Korea, but for the permanent maintenance of peace in the whole East, Heiluh-kiang must be in Japan's hands. Without it, though possessing Manchuria, she would not appear either a formidable enemy or a valuable ally in the eyes of England or Russia. The *Niroku* advises the armies abroad to exercise the utmost caution in the occupation of the conquered districts and not to make too much haste toward the attack upon Peking, for it is not impossible that by the time they reach the capital, they will find it empty and the whole of China in a state of utter anarchy. Should that happen, Japan would have to encounter an enemy not Chinese and perhaps stronger.

EDITORIAL NOTES.

BLACKMAIL EXTRAORDINARY.

LAST year, relates a *Tokyo Ke Shimbunshi*, a young man came up from one of the southern provinces and matriculated at the Saisei Gaku-sha in Honjo District, a medical school where licentiate physicians are turned out by the score each semester. He attended the classes with commendable regularity for some nine or ten months, when his funds became exhausted and he found no means to keep up his studies; he had, moreover, formed an attachment for a young woman of more than dubious antecedents, and the two were at their wit's end to provide for their several wants. The young medico finally got a position as doctor's assistant with some third-rate physician; but even here the salary proved far too small to make ends meet. He resolved thenceforth to resort to illegitimate expedients. A few weeks ago he called at the office of a tolerably well-known physician, during the latter's absence. The doctor's *locum tenens* met him and was told that the visitor was suffering from great pain; could nothing be done to relieve him? Examination showed no special symptoms; the pulse was normal and the temperature was not high. Still the visitor complained of "that pain." The assistant finally told his puzzling patient to come again when the doctor was at home: he could prescribe nothing for him. No, that would not do: the patient was a working-man and would have to allow some certificate of his being actually ill or might not get the permission of his employer to come again. To writing such a document the assistant agreed, although he could not for the life of him diagnose the malady. No sooner had the certificate been handed over than the visitor sprang to his feet in admirably simulated rage. "I am a *soshi*," he declared; "one of a devoted band now in Tokyo to redress medical abuses. You and your master are well-known to us as quacks. Here I am perfectly well, and for the sake of a pitiful profit you have given me a certificate which is absolutely void of truth. 'Til well; you now know the men you have to deal with." This was fearful for the poor assistant; he was a poor man, he said, but would not the *soshi*-gentleman pardon his fault? If it came to the ears of his master he would inevitably forfeit his situation. With these words he pulled out fifty *sen* and tried to force this sum on his braggart accuser. Considerable bluster on the one part and servile prostrations on the other resulted in the intruder's agreeing to go and consult his comrades before taking any other step. He stepped out but almost immediately returned saying that they had agreed to "compound the felony" for the sum of two *yen*. This sum was at once paid out, and the successful blackmailer left triumphant. Incredible as it may seem, he played this same game thereafter many times in different parts of the metropolis, getting sums ranging from 3 to 15 *yen* with ease. Two days ago he was arrested at the instance of an irate doctor.

A DEAD DEMON.

ONE of the beliefs that appear to have been most firmly implanted in the minds of the Japanese of former days, was that of the actual existence of demons. This idea has not yet altogether died out. One meets with it even today in places far from the beaten track, particularly in mountain regions and in the extreme south and north of the Empire. And while it is evident that all this demon-lore is originally attributable, first, to the presence, in ancient days, of savage autochthones, who were gradually driven to the hills and mountains and there finally exterminated by the victorious people of Idzumo, the Japanese of to-day; and secondly to the one-time large numbers of banditti or robber-hordes, some members of which were as pitiless and cruel as the demons by which they came to be typified; still the horned and tusked devil of Mediæval Europe finds an exact counterpart in this country, so wholly similar externally—with the sole exception of the cloven hoof—that one wonders whether or not there may have been some connection between the two; whether

the Japanese demon as such may not be a peculiar local invention, or simply the outcome of Sino-Buddhistic teaching, combined with actual deeds of outlawry and bloodshed. The Japanese demon has, however, many distinct features of his own. In the first place he was—or is!—able to assume a pleasing form and thus lure unsuspecting people into his clutches. Witness a serial story of a most amusingly interesting nature recently been published in the *Yamato Shimbun*. Under the caption of *Bijin-ma*, "The Beautiful Demoness," the author tells how a female devil, of most amative proclivities and enchanting beauty, caused the death of a number of good-looking young men, but was finally unmasked and killed by a bold youth (for whom the diablesse had a regrettable penchant) in revenge for her having encompassed the death of his own father. For, strange to say, Japanese demons are as mortal as are ordinary men and women; they have supernatural powers and undoubtedly live double or treble the number of years vouchsafed to human beings; yet they, like Achilles, have their vulnerable parts. Sometimes it is a magic sword against which they are unable to stand, sometimes again it is some mysterious formula or mystic drug, but oftentimes it is simply the amount of virtue and good deeds amassed on the part of the conqueror that proves fatal to the wicked sprite. In this context, the vernacular press report the reappearance of an undoubted "curio," which is nothing more or less than the skeleton of an indisputable demon of the good old style. This object was first brought into notoriety now quite six years ago. It was carried privately to Tokyo and exhibited to a number of scholars, including some twenty or thirty of the leading medical practitioners. After some time it was advertised that it had become the property, for the sum of one thousand *yen*, of a speculative exhibitor. Six months later the great skeleton was withdrawn from public scrutiny, and it was not until a month ago that it was heard of again, this time in a city in the interior. A correspondent who had an opportunity of enjoying a private view, writes that the marvellous exhibit was astonishingly real in appearance and "true to nature." It was claimed that it had been discovered in a stone sarcophagus hidden in a mound in South Japan—locality not specified. It bore the distinct impression of being of old, if not ancient, make, so that the presumption lies close at hand that it had been manufactured expressly "to point a moral or adorn a tale." Parched and corrugated real skin covered at most demoniac and giant skull of real bones; huge and discoloured tusks protruded from the thin grinning lips: a strange ungainly shock of coarse hair covered the head. The arms were not less in accordance with the canons of Japanese demonology, being for all the world like the "Ogre's Arm" in the Kokubunsha's Fairy Tale Series. Some of the inspecting physicians confessed to being completely puzzled by the skull, which was too human to be bestial, and yet of too thick a texture to be of human origin. Barnum would have made a fortune out of this curio.

A SMART POLICE OFFICIAL.

AN exceedingly smart piece of police work has to be placed to the credit of the Inspector of Police resident at Atami. An American artist, who is touring around the world, is at present a resident at Higuchi's hotel. On Tuesday evening, having engaged the services of an *amma* to relieve a slight rheumatic attack, he retired early to his room, and while waiting for the masseur to put in an appearance fell off to sleep. He had left one door open, and the other merely latched, while a lamp was alight on the table. The gentleman slept on till 2 o'clock in the morning and upon awaking was surprised to find how time had flown. Before extinguishing the lamp, preparatory to going to sleep again, he felt for two pocket-books which contained some valuable documents and paper money. They were both missing, along with a gold watch, a family heir-loom. The pocket

books contained \$120 in U.S. gold-bills, 60 *yen* in 10-*yen* notes, 8 *yen* in 1-*yen* notes, a steamer-ticket, a railway ticket, and, most valuable of all, the traveller's letter-of-credit. All were gone. As soon as possible information was given to the police and the telegraph was put into operation, asking at the chief terminal points of the district whether any strangers or suspicious persons had been seen. News was soon flashed back to Atami that on that same Wednesday morning a strange Japanese had changed two 10-*yen* bills in an Odawara hotel. The Atami Police Inspector accordingly proceeded thither and the stranger was arrested. Upon his person was found the watch and the American gold dollar-notes, besides some Japanese currency bills. Confronted by the police, the thief confessed, and was then brought back to the little seaside village. He was quite a lad, and had had an accomplice, a far older man, who had taken to himself the principal portion of the Japanese *yen*-notes. He was subsequently arrested. The letter of credit and the tickets were found at a place where the thieves had thrown them. Both are concerned in another hotel robbery in Atami, and also in robberies in Kanagawa and Shizuoka kens. The manner in which the men were captured reflects the highest credit on the Inspector of Police concerned.

AN IMPORTANT LAWSUIT.

A LAWSUIT of considerable interest has just been before the Supreme Court. It originated in this way:—Five of the Tokyo rice dealers, with the intention of getting a certain quantity of rice conveyed to them from Kobe to Tokyo, entrusted the task to Mr. Hamanaka's steamer *Nikko Maru*. That was in January of 1893. Two of them had their consignment insured by the Tokyo Marine Insurance Company. Contrary to the original announcement, however, the ship called at various ports in Shikoku, after which she again called at Shimizu, Shizuoka Prefecture. Leaving that port she sailed for Tokyo, but struck on a sunken rock off the coast of Kurikawa, and was wrecked. The owners of the rice demanded an indemnity of about 3,100 *yen* from the ship-owner, on the ground that since the vessel had not proceeded direct to Tokyo as was originally announced, and since she met with the disaster by changing her course, Mr. Hamanaka was responsible for the loss suffered by the owners of the goods in connection with her wreck. The Insurance Company refused to make good the loss sustained by the owners of the goods, on the ground that as the ship had not sailed direct to Tokyo in accordance with the conditions of the contract, the Company was not responsible for the loss. Mr. Hamanaka, on his part, having declined to accede to the demand of the owners of the goods, was sued by them before the Osaka Local Court. They got a verdict, but when the defendant appealed to the Appeal Court of Osaka, the decision of the inferior tribunal was reversed and the plaintiffs lost their case. The Appeal Court based its judgment on the conditions printed on the back of the bill of lading, namely, that in case the goods were damaged or destroyed by collision, or by running aground, or by the sinking or injury of the steamer or of lighters, or by accident to her engine or boilers, or by fire or robbery or any such unavoidable calamity, the agent should not be held responsible. The respondents objected to this judgment, and contended that the conditions on the back of the Bill were intended to cover only really unavoidable, or natural calamities, and so forth, and had nothing to do with responsibility incidental to non-performance of duty, as in the case of the *Nikko Maru*. They further alleged that, with reference to damages accruing from neglect of duty on the part of a captain, the proprietor of the ship, unless there is some special legal limit, must to held responsible, as judicial decisions Nos. CCCLII, and CCCLXVI, of the Supreme Court show. The respondents therefore declared themselves dissatisfied with the judgment of the Higher Court of Osaka and appealed to the Supreme

Court. The *Jiji*, from which we take these particulars, says that usage is in favour of the appellants, for hitherto in cases of the kind the ship-owner has been in the habit of refunding any loss sustained by owners of goods, so that things went on very smoothly. Now for the first time such a question is made the subject of litigation. The sum about which the dispute arose is not large; but since the decision of the Supreme Court will constitute a legal precedent for future guidance, the public are watching the issue with great interest. Owners of goods hold that should the Court give a decision in favour of the respondents, the transportation of goods by sea will become an affair of considerable risk, while on the part of shipowners a similar opinion prevails with regard to their own interests. Messrs. Suzuki Jyubei, M.P., and Isobe Shiro represented the appellants, while for the respondents Messrs. Masujima and Yemura appeared. On the 22nd inst., the Supreme Court threw out the appeal, judgment being in favour of the owner of the vessel.

CARRIED AWAY BY A DOG.

THE newly-born infant of a householder in Ushigome District, Tokyo, disappeared a few days ago under very painful circumstances. The mother had been working in the garden and put her baby, well wrapped-up, on the verandah for a few moments, knowing that no harm could befall it. Suddenly some one called her and she re-entered the house. While there she heard the baby on the verandah give a faint cry, but deeming this of no special importance waited another minute or so before going back to her charge. But when she went to the verandah, to her astonishment the child was gone. Search was immediately and thoroughly instituted: the frantic parents ran everywhere and finally informed the police. In the course of their investigations they learned from some children playing in a street not far from the house, that they had seen a large dog running by with a bundle of what seemed to be clothing in its mouth. Further question elicited the horrible fact that the dog, half-starved and wholly savage, had undoubtedly run off with the child, concerning whose dreadful fate no doubt could longer be entertained.

A LOVER'S RUSE.

THE pretty seventeen-year-old daughter of a tolerably well-to-do merchant in Tokyo had formed, it seems, an attachment that failed to meet with parental satisfaction. The suitor was forbidden the house, and the love-lorn damsel left to cry her eyes out with unavailing tears; prayers and oft-repeated petitions met with no response: the young man was ineligible, *il n'avait pas un sou*. A few days ago, while things were still in this unsatisfactory state, a police constable came driving up in a *kuruma* to the door of the merchant's house. He entered and with scant courtesy informed the astonished mother that her daughter was suspected of having stolen some articles of clothing from a school that she had until recently attended. He must at once examine the young woman's belongings and she must follow him to the district office. After having ransacked several closets and boxes without finding any *corpora delicti*, he said that he would have to make a bundle of all the girl's belongings and carry them to the station. The young woman seemed in no wise downcast at this, despite the indignation and grief of her mother; she consented at once, and it being arranged that the mother should follow immediately, the constable and his fair prey drove off. Of course the reader can guess the sequel. The policeman was none other than the rejected suitor in disguise, and the fond couple had thus eloped under the very eyes of the mother. The district station indicated knew nothing of the pseudo-constable, nor have any traces of the fugitives been since discovered.

JAPANESE CENTENARIANS.

SOME interesting statistics are published by a metropolitan contemporary. To judge from them it would appear that instances of extreme old

age are by no means rare in Japan. According to statistics compiled by the Home Department at the end of 1893, the total population of this Empire amounted to 41,385,040, of whom 20,004,196 were males and 20,480,844 were females. Males are therefore very slightly more numerous than females, the ratio being as 42 to 41. The number of centenarians in this population is given by our contemporary as follow:—

Age.	Males.	Females.	Total.
100 years	22	50	72
101 years	14	26	40
102 years	3	12	15
103 years	2	18	20
104 years	3	8	11
105 years	1	2	3
106 years	1	6	7
107 years	0	1	1
108 years	1	0	1
109 years	0	1	1

Totals 46 124 170

These figures are interesting for several reasons. Only one person out of approximately every 232,000 inhabitants can hope to reach the age of one hundred; whereas only three in every million may attain their one hundred and second year. Women are shown to be far more prone to longevity than men, nearly three times as many females having touched the century. Moreover, it is noteworthy that while only ten males have reached the age of one hundred and two and above, no less than fifty females have attained this extreme limit. The centenarians are, we are told, almost without exception peasants or of peasant extraction. People live longer in the hills than in the lowlands, the freedom from malaria or miasmatic vapours probably more than acting as an offset to the exertion of mountain-climbing. The venerable old lady who has touched the flood-mark of one hundred and nine years is said to be in possession of all her faculties, can walk for quite a distance, and does coarse sewing without the aid of spectacles.

SLIGHT-OF-HAND SWINDLERS.

BELLACHINI, the conjurer's old trick of the "magic bottle,"—which poured out tea, coffee, or wine at the magician's will—has been turned to curious account in Tokyo, a number of people being victimised in consequence. Two men have been going the rounds of the suburbs and villas offering small tubes of the best *shoyu*—the favourite kind known as *hikoman*—for very low prices. While in their hands the tubs have invariably given out *shitaji* of the best; but subsequent investigation proved that the actual contents were nothing but a watery, tasteless fluid, of questionable antecedents. It is believed that the swindling operator either held a small bottle of the real *shoyu* concealed up his sleeve, or else that he had simply filled the spigot with the genuine article in the first instance, a slight pressure suffering to keep back the spurious fluid. At all events the legerdemain artist and his confederate have managed to sell several scores of tubs and have not yet been made answerable for their misdeeds.

ENGLAND AND AMERICA.

SOME very silly carping criticism of American manners and American institutions by a man named Harding-Berkely recently published in an American paper has called forth a large number of equally silly replies. We only allude to the matter here because Mr. Conan Doyle, who was at that time in New York, wrote a letter on the subject to the newspaper in question, some portions of which may be read with interest. After giving several historical instances of good feeling between Englishmen and Americans that, show that in spite of all the efforts of mischief makers on both sides, it has not been possible to weaken the ties of blood and language that bind the two countries together, he goes on to say:—

But the pity of it is that while the bulk of the people on our side, and if my American friends are correct, on your side also, share in these feelings, there still exists a carping, bitter-tongued minority who exaggerate every passing difference of opinion and nag at each other like so many quarrelling school girls. There is no depth of absurdity to which one of these people can descend without finding an imbecile to match him upon the other side. In the foolish

controversy which has run its course in these columns even the unfortunate children upon each side have had their little heads knocked together. The thing would be so ludicrous as to be harmless were it not that there may be people who from want of knowledge of British opinion might mistake the shrill voice of the scolder for that of the Nation. If there are any such, they may rest assured that Mr. Bryce is regarded as an authority in Great Britain and that Mr. Harding-Berkely is not.

It is quite true that there is a very vital and important movement which is destined, I believe, to assume very much larger proportions, now going on in Great Britain as to Anglo-American relations. It is, however, a very different one from any which appears in this correspondence. It lies in the thought that patriotism and loyalty are not geographical, but racial, questions, and that the centre of gravity of our whole race, whether we be British, Irish, South African, or Australians, has now definitely established itself upon this side of the Atlantic. In the practical recognition of that thought lies one of the most important keys to the future history of the world.

A REMARKABLE OPERATION.

EXHIBIT papers report the successful issue of a surgical operation of a somewhat remarkable nature: A resident of that prefecture had been for several weeks complaining of a strange pain in his right side, just at the back of and below the liver. The pain was accompanied with a growth of some indeterminate nature, which a number of physicians declared to be a hard tumor. The patient recently came up to Tokyo and applied to the Red Cross Hospital. Here the "tumor" was speedily diagnosed as some foreign body, and not a flesh growth at all. An operation was made and resulted in the discovery of a piece of bamboo, about one and a half inches long by one inch broad, firmly lodged in the muscular tissue. The bamboo had evidently been a long time *in situ* for it looked like a piece of amber when removed. Complete recovery followed the removal of the intruding body, and subsequent investigations proved that the man had, over eighteen years ago, fallen upon a low bamboo fence, several splinters of the broken wood entering his left side between the lower ribs. The bits of bamboo had, it was supposed, been entirely removed and the patient recovered. From that time until September of this year he did not experience the slightest inconvenience from the former wound; yet it is evident that the piece of the bamboo now cut out must have remained in his body during all that period, in which time it had gradually worked its way round from the left intercostal region to the right side.

TORCHLIGHT PROCESSION IN TOKYO.

ON Monday evening a torchlight procession in honour of the capture of Port Arthur was organized by the students of the Keiogijuku (Mr. Fukuzawa's College) in Tokyo. Fully 3,000 persons, students, teachers, and friends, took part in the demonstration, which was consequently a most imposing affair. Starting from the College in Mita, the procession proceeded to the Palace where three ringing cheers were given for the Emperor. Thence they marched to Nihon-bashi and down the main street of the city, of course stopping and cheering before the office of Mr. Fukuzawa's paper, the *Jiji Shimpō*. The apparently endless sea of lanterns, the transparencies and the tramp of the huge organized mass of lads and men combined to make a spectacle that must have stirred the pulses of many a citizen of the quiet metropolis. It was really the first sign that Tokyo has given of the war. Hitherto the everyday life of the big city had gone on as placidly and methodically as though no national question of any disquieting kind were on the tapis. But this army of cheering students winding through the streets like a huge flaming serpent roused Tokyo's perceptions to the realities of the time.

A CUP OF COLD WATER.

DERISIVE sketches significant of the downfall of China and the triumphant rise of Japan are now the order of the day in the columns of the metropolitan vernacular press. The *Yoroku Choho* published a few days ago an excellent series of drawings representing the growth of Young Japan. The first picture showed a foreigner teaching a lusty Japanese boy how to stand and walk; in the second the boy was evidently capable of independent exertion, the foreigner looking on with a severely critical eye; while in the third cut the boy had become much

taller and stronger, and was looking threateningly at the foreigner, who with obsequious mien was endeavouring to shake hands. Now the *Yamato Shimbun* comes out with another not-at-all-badly conceived sketch. The Chinese general who so speedily let Chiu-lien fall into the hands of the Japanese, is represented as surrounded with his household goods, being evidently engaged in moving. Before him bows another Chinaman, who holds in his uplifted hand an immense ladle of cold water. "This," runs the accompanying legend, "is a drink to reward the brave general for having so kindly run away." It must be remembered that water is supposed to wipe away shame (*haji wo susugu*), and it is evidently in this sense that the drink is proffered.

THE CHESS CHAMPIONSHIP.

STEINITZ' last letter to Lasker shows that the two champions have become a little bitter toward each other:—

New York, October 10, 1894.

Dear Sir,—Your letter dated the 26th ult. reached me yesterday, having been transmitted to me by your second, Mr. De Visser, who also announced to me his resignation of the post of honour which you had assigned to him. Considering that this gentleman under your instructions opened "the literary sham fight," as I called it, his retirement is significant enough and forms a sufficient answer to your final fling about "the newspaper fight" wherewith you endeavour to cover your own retreat from an untenable position. It is quite obvious that Mr. De Visser never intended to accept the post of an intermediary for the arrangement of a match which was to commence fifteen months after his acceptance of the office.

Nor did I intend, for my part, to enter negotiations for such a contest at such a remote date, and it is a mere pretentious quibble to try to fix the date absolutely for the beginning of the match twelve months or even six months ahead before all other conditions are settled. Though you may again call the matter "irrelevant," I beg to repeat that in reply to my challenge for a match to begin "in the early part of December at the latest," you fixed the date nearly, but clearly enough, for "the end of the year," 1894 (not 1895).

No doubt you could retain the champion title and prevent your ever being "beaten on the checkered board" if the precedent were to be established that the champion would, quite alone, choose his own time for playing again, and could, moreover, break a positive agreement for a match, first, on the plea of "a tour round the world" and, next, of "chess and other engagements," which it was his pleasure to enter into subsequently instead of making preparations to fulfil his previous promise. But the general public will probably allow that I, as well as my backer, may hold a different opinion on the subject, and I shall therefore take the fullest responsibility of reclaiming the champion title, which you have forfeited by your letter of June 22, after the expiration of the time of grace which I gave you for reconsideration.

In regard to new negotiations for another match, the precedent has already been established that such contests can be arranged by challenges addressed to both parties from a renowned club. My matches with Mr. Tschigorin were thus organized by the Havana Chess Club, and likewise my match with Mr. Gunsberg was in the same way arranged by the Manhattan Chess Club, of New York. A similar course will, no doubt, be taken at reasonable notice by some distinguished chess club whenever a clear prospect presents itself of organizing a meeting between us, and I, for my part, shall offer no objections to such an initiation of new negotiations, though I have the honour to subscribe myself in the mean while, yours very truly,

W. STEINITZ,
Chess Champion of the World.

"SOLD."

THE contents of the metropolitan *Ko Shimbun-shi* do not amount to much at present. The paper is generally made up of a *réchauffé* of war news, founded, in many cases, on what has already appeared in the more important journals, or else the actual correspondence of occasional contributors in Hiroshima or across the Sea of Japan. More striking is the sameness, the mutual resemblance of the contents, of this portion of the press. That is due to the large amount of information supplied, cut and dried and hardly ever re-written, by the various News Agencies, particularly by that most energetic and popular bureau the Naigwai Tsushin Sha. The third page is generally devoted entirely to the *chronique scandaleuse* of Tokyo, especially to the doings of popular *geisha*, their *amours*, and rub-bish of such kind. Some of this is irreproachable as to morals, yet just where the interest

comes in the uninitiated foreigner fails to grasp. As a specimen of this style of writing we give herewith a paragraph in kind. The other day an old woman knocked at the door of a *geisha* domicile in Karasumori Cho, Shiba District. On being asked what she wanted, she replied that she had come in search of one Miss Torako who used to live there. Being told that Torako had left Tokyo, the old woman appeared much downcast. She had been sent, she said, by her master, a rich gentleman residing in Tsukiji, to engage the services of one or two *geisha*, as the *danna sama* was going to entertain some friends. Knowing none but Miss Torako she had come to call her. "But wouldn't we do equally well?" inquired the two resident songstresses. "Your master probably wouldn't know the difference, and you shall have fifty *sen* if you consent." To this the old woman agreed, and received her *douceur*. There was a little flurry of preparation and then the trio set out, accompanied by the indispensable *hakoya*, or man-servant, who carries the *samisen* and the necessary changes of clothing. On passing in front of a neighbouring *shamoya*, or restaurant where the flesh of fowls is sold exclusively, the old woman professed great hunger. It made no difference, she remarked, even if they came twenty minutes late. Rather reluctantly the *geisha* consented to having a preliminary meal. After taking their places and eating a bit, the old woman said she had forgotten just one thing: she had been told to buy some cigars; would they wait for five minutes till she returned? Of course they would, though impatient at the renewed delay. Five, ten, fifteen minutes passed and no old woman reappeared. Presently the *hakoya* came up, in tears. He had been deceived, he wept, grossly deceived, while his back was turned the old woman had made off with the *samisen* and changes of clothing. Eager and prompt investigation both proving unavailing, the bereaved songstresses returned sadder and wiser to their own home. The aged swindler had got clear with fifty *sen* in cash, a good meal, two *samisen* with ivory plectra, two fine costumes of crape, two extra *obi* or girdles, and several ornamental hair-pins. That is the style of writing that is supposed to warm the cockles of the hearts of *Ko Shimbun-shi* readers. In the original version of course the names and addresses of the "sold" *geisha* are distinctly given, so that the attendant notoriety is a good thing for them in the long run.

THE LATE CZAR'S MALADY.

In an interview with a *Lokal Anzeiger* reporter on November 6th, Professor Leyden said, regarding the late Czar's illness:—"The post-mortem examination established the accuracy of our diagnosis, chronic nephritis, with commencing atrophy of the kidney, secondary enlargement of the heart and sporadic inflammation of the left lung. The stomach was intact. The stories ascribing the Czar's illness to poisoning are absolute fiction. I do not consider that Professor Zacharin is in any way to blame for the result. The Czar was perfectly cognisant of his true state, but he was a fatalist and he gave up too early. He performed his duties as ruler to the last moment. He died a hero. The Czarina is prostrated, but she is in no danger and will soon recover."

HAT MANUFACTURING IN TOKYO.

There is at present only one hat-manufacture in Japan, which is the Tokyo Hat Manufacturing Company. It has passed through many vicissitudes of fortune, though now in a flourishing condition. This Company was established by Marquis Hachisuka, Mr. Shibusawa, and about forty others on a capital of 100,000 *yen*, a foreign expert being engaged—though in what year that took place, the *Mainichi* from which we take these particulars, does not say. Years of failure reduced the capital to the sum of 5,000 *yen*. Most of the shareholders were disgusted with the concern and gladly parted with their rights for 36,000 *yen* to 16 of the shareholders who had hopes for the future of the Company. These hopes were realized, as with increased activity of business the capital was augmented to 72,000 *yen*. The success of the Company

since last year has been very marked, and now hats are turned out by it which cannot be distinguished from those imported. Of these hats 30 dozen can be manufactured daily. The Company generally disposes of its hats at the rate of 14 or 15 *yen* per dozen, and the Tokyo merchants retail them at about 14 *yen* a piece or 2 *yen* in the country. The factory employs in all 120 hands including men and women, the former being paid from 25 to 50 *sen* a day, and the latter from 6 to 25 *sen*. The work is divided into eight sections, which are further subdivided. Till four or five years ago, the importation of hats and caps amounted to about 100,000 dozens a year, but now that straw hats and other kinds are extensively produced in Japan, only about half the former amount are imported.

MANSLAUGHTER.

A most deplorable accident happened the other day in Kyobashi District, the victim being a mere boy of thirteen or fourteen years of age. A local dealer has a son who, though over ten years old, is weakly and not at all like other boys of his age. Always timid and averse to rough play, since the outbreak of the war his life has been almost unbearable; for when compelled to take part in the popular pastime of the moment, mimic warfare, the rôle of the beaten Chinaman was invariably assigned to him, and hard knocks and scornful epithets were his sole reward for acting his part with unconscious fidelity. For the last week or so he has not ventured to stir out of the house, knowing that if he did so he would at once be made the butt of boyish ridicule and rough treatment. Not knowing the real facts in the case, the parents attributed this to sheer laziness: so on the day in question when he was bid go and make some necessary purchases, the paternal ire was aroused by his reiterated refusals. Finally he mustered up courage to tell the true reason, whereupon the father said that he would walk behind him to see if anyone attacked him simply on account of his weakness and timidity. Somewhat unwillingly the boy consented to this and started out, the father following at a distance. Hardly had the lad reached the next street before he came upon a group of urchins playing noisily. "Oh, here comes that weak fellow (*yowa-mushi*)," exclaimed one; "let's all hit him and make him cry like he used to." So saying they all fell upon the boy and were proceeding to belabour him when the indignant father sprang into their midst. White with rage at the unprovoked assaults, he tried to seize the ringleader, but all managed to make good their escape with the exception of one lad of thirteen or thereabouts. Him the father seized, and after a furious shaking threw to the ground. The boy fell senseless, blood oozing from his mouth and ears. The man, astonished at this wholly unexpected result of his violence, immediately ran for medical assistance, but the boy died in a very short while. Distracted at what he had done, the unwitting murderer at once reported the occurrence at the nearest Police Station and gave himself up. The parents of the dead lad were extravagant in their expressions of grief, and said that were it not for the modern laws of Japan they would declare a vendetta against every relative of the murderer. The whole circumstance is most unfortunate and regrettable.

THE WAR CONTRIBUTION OF THE MITSUI FAMILY.

As we have already mentioned in these columns, the contribution which the great Mitsui family intends to present to the Government in connection with the present war is to take the form of an arsenal. The application formally submitted to the War Department has been sanctioned and Moji has been fixed as the locality for the arsenal's establishment. The contributors despatched Messrs. Ashonki, Head of the Public Works Department of the Mitsui Bussan Kaisha, and Hiraou, an expert employed by the Company, who, after having made investigations about the site of the building, decided on the ground at the foot of the Moji Fort now owned by the Government. This piece of land being,

however, too small for the purpose, about 600 *tsubo* are to be reclaimed from the sea. The buildings, which will be entirely of brick, will cover an area of 430 *tsubo*. All the materials for their construction are to be sent from the Kobe work-shops of the Firm, and the machines necessary for the fitting up of the arsenal are already in process of construction at the Engineering Works of the Company in Shiba, Tokyo, where they will be completed before long. The reclamation of the coast, says the *Yomiuri*, was to be commenced on or about the 26th inst. and will be finished in one month and a half or so.

A BRITISH TRAINING SHIP MISSING.

Much anxiety was felt on November 9th for the safety of the training ship *Calyppo* which, with the *Active*, *Ruby*, and *Volage*, was caught in a gale during a voyage to the Canary Islands. The *Calyppo* parted from her companions at the height of a storm on October 24th and has not been seen since. The *Active*, *Ruby*, and *Volage* arrived at Las Palmas, Canary Islands, on November 7th. The naval officials at Devonport try to reassure all inquiries by recalling the experience of the *Calyppo* two years ago. She then was missing for several days and came into port eventually under sail, with her engines disabled. The *Calyppo* is a steel and iron corvette of 16 guns, 2,700 tons displacement and 4,000 horse power, and was launched in 1883.

NAVAL NOTES.

ADMIRAL FREMANTLE, in the *Centurion*, accompanied by the *Mercury*, arrived at Chefoo on the 14th inst. The *Crescent* and *Severn* were also there, as well as the French flagship *Bayard* and *Inconstant*, the U.S.S. flagship *Baltimore*, H.I.G.M.S. *Alexandrine*, and H.I.R.M.S. *Kryster*. H.M.S. *Eolus* and *Porpoise* have been ordered to Chefoo, while the *Pigeon* has returned to Woosung, where she and the *Caroline* remain for the present. The *Leander* has gone north. The British gunboat *Redbreast* left Hongkong for Formosa on Saturday morning, Nov. 17th, and the cruiser *Edgar* left for Chefoo in the afternoon.

A SEALERS' PROCESSION.

ABOUT six o'clock on Thursday evening a procession of foreigners, mostly sealers who have elected to winter in Japan, started from Blood-town carrying a Japanese naval flag and an ensign of the Stars and Stripes. Two of the crowd endeavoured to produce some musical strains by the aid of a fiddle and an accordion, and their efforts towards festive mirth were ably seconded every now and again by lusty cheers from the whole procession. The noisy train meandered through the Settlement, along the Bund, and over the Bluff, finally losing itself in the mazy purlieus of Maganecho.

THE REPUBLICAN VICTORY.

THE Empire State (New York) has been swept by the greatest Republican tidal wave in its political history, the Hon. Levi P. Morton being elected Governor by a plurality very close to 150,000. The Congressional delegation has been changed from 19 Democrats and 15 Republicans to 29 Republicans and 5 Democrats. The State Assembly will stand 104 Republicans to 25 Democrats. The Republican gains have been greater in the Democratic strongholds in the cities than in the country districts, but in no country and in no town has Democracy held its own.

YAMAGATA EARTHQUAKE FUND.

The following are additional subscriptions to this fund:—

Bishop and Mrs. Bickersteth.....	\$15
W.G.S.	20
Mr. and Mrs. C. H. H. Wolf	5
Miss Oldham	1
Miss Dawbarn	20
A Friend	3

\$64

Further subscriptions may be sent to D. C. Greene, 22, Nakanochō, Ichigaya, Tokyo.

WAR NEWS.

MONDAY, NOVEMBER 26TH.

Port Arthur has fallen, but our information as to the particulars of its capture remains, as yet, meagre and unsatisfactory. It was taken on the 21st instant, but the news did not reach Tokyo until the 24th, and even then it came first from China in the shape of a telegram from Vice-Admiral the Honourable Sir E. R. Fremantle to Her Britannic Majesty's Representative in Tokyo. The telegram said simply that the place had been taken by storm on the evening of the 21st instant. Quickly following came telegrams from Shanghai, which reported that Port Arthur had been captured on the 21st after long and severe fighting; that the Japanese torpedo-boats had occupied the attention of the forts on the sea-side during the attack by the troops, and that the fleet had taken no other part in the affair. All these telegrams were delayed in transmission over the Chinese lines, which is not very surprising. But how did it happen that no news reached the Headquarters at Hiroshima until the 24th? Marshal Count Oyama did not despatch any message until noon, or perhaps afternoon, on the 22nd, as the report subsequently received from him shows. But from Port Arthur to the Tadong river is only 15 or 16 hours' steaming, and the Marshal's intelligence ought to have been in Hiroshima by the evening of the 23rd at latest. There was a clear day's delay, for which we are not yet in a position to account, and are driven to conclude that the overland line in Korea, by which the report would, under ordinary circumstances, be transmitted from the Tadong, is interrupted. An interruption had been reported between Wiju and the Tadong, but that should not have affected the transmission of messages to the south of the latter place.

The assault commenced at day-light on the 21st. Without a plan of the fortifications it is, of course, impossible to form a clear idea of what occurred. According to information published some time ago in the columns of *The Times*, there are 13 forts upon the sea front extending over a distance of four miles and distributed equally on either side of the port. These forts are protected in rear by hills of from 300 to 650 feet in height, and upon the hills batteries are disposed to guard the land approaches. That is about the extent of our present knowledge as to the defences of the place, and very meagre knowledge it is, we must confess. However, one thing is certain, namely, that 29 days elapsed between the landing of Japanese troops in the Liau-tung peninsula and the attack upon Port Arthur. In a month's time any General of the most ordinary capacity, supposing him to be supplied with men and materials, could organise a powerful defence even in a position where no preparations had previously been made with such an object. That was what Osman did at Plevna, with results that cost Russia many thousands of lives and nearly drew all Europe into war. The Chinese could have organized for the Japanese at Port Arthur such a reception as would have involved either long delay or terrible bloodshed. But after their failure to dispute the passage of the isthmus of Chin-chow, what could be expected of the Chinese in the way of strategical effort? Evidently nothing. However, at Port Arthur unless the many statements hitherto published be quite baseless, the Chinese had nothing to do save to man parapets already constructed for the purpose and shoot moderately straight with excellent weapons provided for them in abundance. On the other hand, the Japanese could not afford to treat the place with the respect extended by all cautious belligerents to a first-class fortress. Had they sat down before Port Arthur either to starve out the garrison, or to capture the fortress by the time-honoured method of sap and parallel, the delay would have given to China leisure to breathe and to Western Powers a plausible pretext for interference. It would also have spoiled the record of the war. Hitherto everything has progressed without serious check or pause. In certain situations the Japanese Generals have behaved

with deliberation that seemed almost leisurely. But any delay thus entailed seems to have been invariably due to their theoretical sense of strategical exigencies, not to actual contact with formidable resistance. Had the taking of Port Arthur proved such a difficult affair as to require a regular siege, involving employment for an army during weeks, perhaps months, and engrossing the Navy, whose services are required elsewhere, the world would soon have begun to talk about China's illimitable reserve of strength and Japan's inability to make any real impression on the Colossus. The fact is that China's military capacities have hitherto been instinctively divided by the public into two classes: her capacity to conduct a campaign beyond her own borders, as in Korea, or in a remote part of her realm, as in Manchuria, and her capacity to thrust back an invader from her capital and seat of Government. As to the former, no easy method of gauging her powers presented itself. Thirty-five years ago, even when a British military expedition had to retire from the Peiho river, nobody would have imagined that China could put into the field an army capable of opposing troops armed and drilled after Western models. Her braves might be formidable behind the parapets of fortresses, but fighting in the open, their antiquated tactics and obsolete weapons must entail defeat. Since that time, however, it was generally supposed that the mysterious, and to many persons ominous, process called "awakening of China" had taken place in the military sphere at all events. The great Viceroy Li was declared to be at the head of an army equipped and disciplined in a manner that left nothing to be desired, and even in far Manchuria tens of thousands of troops, drilled according to Occidental text-books and carrying magazine rifles, machine guns, and breech-loading field-pieces, were said to be available at a day's notice. Moreover, all the resources of modern fortification had been enlisted to confer impregnability on vital points, as Port Arthur, Taku, and Wei-hai-wei, and great sums had been spent to procure a Navy of first-class ships with skilled officers and trained crews. We have here a formidable list of resources. Looking it over again, however, a process of differentiation at once suggests itself. On the one side we have armies the fighting quality of which must always remain uncertain pending practical trial; on the other, ships and fortresses that constitute in themselves tremendous weapons of war, and demand for their utilization only small bodies of fairly trained, resolute men. It was with the former element that the Japanese had to do in the early stages of the war. As Sōng-hwan and Phōng-yang they encountered Chinese soldiers fighting in a foreign country under conditions that demanded good generalship and thorough organization; soldiers, too, that might be regarded, in a certain sense, as the fringe of the big empire's armies. That Japan beat these braves, and beat them with apparent ease, showed certainly that she could strike ugly blows at the limbs of the "Colossus," but did not at all show that she could reach his heart. To accomplish the latter feat she would have to force her way through obstacles like Port Arthur, Wei-hai-wei, Shan-hai-kwan, and the Pei-yang Squadron: obstacles that any Power must shrink from hurling against, even after the comrades of their defenders and wielders had failed signally on distant battle-fields. Hence it resulted that in the East, where these distinctions are more palpable than in Europe, Japan's successes in the Korean and Manchurian campaigns were not regarded as conclusive, and folks instinctively waited to see the results of her conflicts in China proper, above all, at places like Talien, Wei-hai-wei, and Port Arthur. It is true that to any careful observer the battle of Phōng-yang tells a story very different from the interpretation put upon it by the general public. The Chinese fought excellently at Phōng-yang. They did not abandon the position until fully forty per cent. of their number had been put *hors de combat*. The quality of their conqueror might be inferred without difficulty from that one affair. But, on the other hand, the naval battle of September

17th was not strikingly conclusive. If it left Japan victorious, it proved also that the Chinese could and would fight obstinately in good ships with good armaments. It seemed to indicate, in fact, that against China's final line of defences—her fortresses and her navies—Japan's prowess might be found inadequate. That was why the campaign in the Liau-tung peninsula was watched with such keen interest, and that was why the first symptoms of delay at the foot of the Port Arthur's parapets set men shaking their heads. But we now know that there was no delay exceeding the reasonable margin of incidents unforeseeable in planning great enterprises, and no delay whatever owing to the quality of the Chinese resistance. The Japanese Generals, instead of dragging their heavy artillery a hundred miles over a difficult country, waited until they could land it at Talien within easy reach of the object of assault. When their preparations were complete, three days sufficed to make them masters of the fortress. We say "three days," but that is a detail not yet assured. Apparently the bombardment began on the 19th inst. and continued through that day and the following. It ought to have been impossible to attempt the storming of such a place without previous bombardment. As to the actual services of the artillery, however, we await further information. What we know certainly is that the infantry attack commenced at dawn on the 21st. The plan seems to have been simple, as indeed all military operations depending chiefly on the courage and *elan* of the troops, must be. The First Division attacked from the west, the Mixed Division from the east, and the heavy artillery occupied a position in the centre. This arrangement was doubtless dictated by the fact that Port Arthur is approached by two roads, one along the east coast of the peninsula, the other along the west. The enemy is said to have made a stout resistance at first, but by half-past eight the first Division captured the fort on the extreme left of his line of defences. This fort is further described in the telegram as that on the west of the parade ground used by the cavalry and artillery of the garrison, but whether it belonged to the line of sea-forts or to works in rear of the position, we can not distinguish. Probably the latter, however, for the report says that the First Division, pursuing its advantage, pushed on to Port Arthur itself, reaching that place at 2 p.m., and storming the fort on Hwang-chin-shan (Golden Hill) by 4 p.m. The Mixed Division (*i.e.* the Division formed of troops from the First and Sixth Divisions) was meanwhile engaged on the enemy's right, and by half-past eleven it had captured the forts on the south-east side. The troops seem to have encamped upon the ground they had won, and on the following forenoon they took the remaining forts on the sea face, but whether the enemy had already evacuated them, or whether he fought for their possession, the telegram does not say. Marshal Oyama credits the Chinese with having resisted to the last, unless we read his report wrongly, but what kind of resistance it must have been may be inferred from the fact that the total loss on the Japanese side in killed and wounded is put at something over 200. In fact, so far as the victors' casualties were concerned, the affair was a mere skirmish. It is not yet officially stated how many of the Chinese were killed or wounded, but the vernacular press publishes telegrams putting the number at about 3,000. Field-Marshal Oyama estimates the total force of the Chinese at over 20,000, and we presume that he had some trustworthy basis of calculation. With these data before us, the affair must be regarded as one of the most extraordinary in the annals of war. A first-class fortress, splendidly armed and garrisoned by twenty thousand troops, is stormed and taken in a few hours by an inferior force, the loss of the assailants in killed and wounded not greatly exceeding 200. When the northern fort of the Taku defences was assaulted and captured by a combined force of French and English on the 21st of August, 1860, it was first cannonaded by a battery of 12-inch guns, 36 field guns, and a battery

of rockets. By this fire the principal magazine was blown up, an incident calculated to demoralize the stoutest troops. The fort was garrisoned by 500 Chinese and the attacking force numbered 2,900, namely, 2,500 English and 400 French. The attack was made from the rear, the work being comparatively weak on that face, yet the English, before they captured it had 22 killed and 179 wounded, and of the 500 Chinese only 100 escaped. That was a fair example of the kind of defence that could be made by Chinese soldiers 34 years ago against the best troops in the world, the superiority of numbers on the attacking side being nearly in the ratio of 6 to 1. Every one of the Port Arthur forts might have done at least equally well on the 21st instant. They were proportionately better armed, better disposed for defence, better fortified, and more numerously garrisoned. Yet the total loss inflicted by them on their assailants did not greatly exceed the loss suffered by the English in the capturing of a single fort guarded by 500 Chinese. How such an extraordinary discrepancy of results is to be accounted for, we can not tell. The Chinese appear to be totally demoralized. It is a pitiable spectacle. Individually they are fine fellows; stalwart, intelligent, and surely not lacking courage. But apparently they are degraded to the rank of worthless paltrons by the cowardice and incompetence of their officers and the corruption pervading the whole military system of China. The cruel lesson they are receiving may be for their nation's ultimate good, but it is difficult not to be moved to some sentiment of compassion by the spectacle of a great nation put to such signal shame.

So far as concerns official information of the land operations, the brief facts given above comprise all that we have received, except a vague statement that numbers of heavy guns and quantities of ammunition have been captured. Some additional items, however, are published by the vernacular press. Thus the *Kokumtu* alleges that the forts on the seaside gave up fighting after a time and were occupied with ease. It also says that about 6,000 Chinese surrendered, but that, with the exception of the officers, all will be released. The *Hochi* gives somewhat similar news. Its version is that the greater part of the Chinese surrendered; that their killed and wounded aggregated about 3,000, and that in the precipitance and disorder of their flight many of the fugitives wounded each other or were killed by the Japanese.

Several journals concur in alleging that a naval encounter took place, but there is great divergence of opinion as to the circumstances that led to it, one report saying that some Chinese war-vessels were endeavouring to save the Port Arthur fugitives when the Japanese ships surprised them; another that the Pei-yang Squadron came out of Wei-hai-wei to fight, and another that an encounter took place by chance. All agree, however, in alleging that a disaster overtook one or both of the Chinese iron-clads. Shanghai seems to be responsible for these stories. It sends a circumstantial tale that the *Chen-yuen* was captured near Wei-hai-wei, and towed to the Japanese naval base by a cruiser, which broke her propeller *en route*. But we believe all these rumours to be groundless, for an official telegram from Admiral Ito, despatched after the capture of Port Arthur says nothing whatever of a naval engagement. The Admiral's report is that the fleet took no part in the attack on the forts other than to make a demonstration in order to engage their attention; that the ships are now engaged raising the torpedoes sunk in the entrance to the port; that the docks and other works are fit for immediate use, and that the whole, together with the ships, will be handed over to the Naval Authorities. Had there been a fight of any kind at sea, it is not conceivable that the Admiral would have failed to report it, and we may therefore conclude that the rumours as to the capture of the *Chen-yuen*, and the sinking of both her and the *Ting-yuen* are altogether without foundation. It is curious that no information is furnished as to the Chinese vessels lying in Port Arthur at the time of its capture. That there were some

vessels is proved by Admiral Ito's incidental allusion to them. The *Kokkai* says that there were four war-ships, two of them in the docks undergoing repairs. We must await fuller information.

The *Kokkai* publishes a telegram to the effect that strenuous efforts are being made to guarantee Newchwang against an attack from the sea, strong heavily armed forts being built on each side of the river at its mouth. The telegram adds that as the town is protected in rear by a marsh, and as men-of-war can not get nearer than 13 miles, it would be a very difficult place to capture. We may mention that Newchwang, or Ying-tz' as it is more properly called, is situated on the Liao river at about 13 miles from its mouth. Off the mouth of the river there is a bar with an ordinary depth of 11 feet at high water. Once over the bar, however, there is a good harbour, the reach of the river along the town varying in depth from 4 to 7 fathoms, with a breadth of about half a mile.

With regard to the movements of the First Army, we are not in receipt of any information. The *Yomiuri* and the *Jiji* speak of Lien-shan-kwan as the farthest point reached by the advance guard, and the latter paper anticipates a fight at Mo-tien-ling in a few days. We do not clearly comprehend these statements, seeing that news of the advance guard having entered Lien-shan-kwan is several days old.

The *Yomiuri* says that the discipline and orderly conduct of the Japanese soldiers and the kind actions of the medical department are producing a marked effect upon the Chinese. The latter have learned to appreciate the true character of the Red Cross Association, and are largely availing themselves of its expert aid. They draw vivid contrasts between the behaviour of the Japanese and that of their own nation's soldiers, and readily lend every assistance to the invading army, being in that respect much more friendly than the Koreans.

Surgeon Kimura, who returned recently to Japan, being invalided home after the battle of Phyang-yang, has furnished to the Hiroshima correspondent of the *Asahi Shimbun* some interesting particulars about surgical operations in the field. It was during the Franco-Prussian War, he said, that the antiseptic method of surgical operations was first tried in the field. The same method was employed in Japan in the civil war of Satsuma, but it was then imperfectly understood, and the plan generally resorted to was amputations of the diseased part. Hence the number of soldiers deprived of limbs in that disastrous war was very great. Since then, however, surgery has undergone considerable development, and at present the surgeon's aim is to cure wounds without resorting to any crippling process. A proof of the improvement in this respect will be furnished, said Dr. Kimura, by the records of the present campaign, for it will be found that only in a very small proportion of cases has amputation been resorted to. The progress made by Japanese military surgery is due in great part, to Dr. Kikuchi, Surgeon-in-chief of the Second Army. In France line-bandages were invented some years ago and were received with great favour in the circle of military surgeons. Dr. Kikuchi, however, thinking that the system lacked simplicity, set himself to make experiments, and after several attempts succeeded in discovering that the ash obtained by burning straw is just as efficacious as lime and far more convenient. The discovery was highly appreciated by the competent Authorities and Dr. Kikuchi received, as reward, the title of *Igakuhakase*. Simple as the discovery seems, the benefits and convenience that it confers are immense. The material can be procured anywhere, and as it has to be burnt to ash, it need not be clean. Even the litter of the stable can be used for the purpose. The process is to wrap the ash in pieces of cotton-cloth and apply them to the wounded place. Any discharge from the wound is absorbed by this special kind of bandage, the bacilli are thus prevented from multiplying, and purulence is successfully combated. Surgeon Kimura tells a story of how, after the battle

of Phyang-yang, when about 300 Japanese wounded officers and soldiers were carried in for immediate medical attention, he extended his aid to a young Korean who had been hit on the right foot by a stray bullet. The youth raised piteous cries while under treatment, and when the ash bandage was applied to the wound after it had been dressed, he looked at it with a puzzled incredulous air. By and by the wound, which was about the size of a 2-sen coin, began to heal, and in a short while he was able to take a little exercise. One day, when the Surgeon visited the ward, the Korean could not be found. Nor did he return until the next morning, when it appeared that he had been limping round in search of a parcel of fried beans wherewith to testify his gratitude to his benefactor. Dr. Kimura concluded by saying that although he could not venture to declare exactly on his own authority how far the disinfectant process had been successful in the treatment of about 300 patients wounded in the battle of Phyang-yang, he was certain of its immense superiority to the one hitherto in vogue.

TUESDAY, NOVEMBER 27TH.

We shall probably have to wait some days before any detailed account of the operations at Port Arthur reach us. From a paragraph in the *Nippon* giving a statement of the killed and wounded at Tuchangtz we gather incidentally either that the fortifications in rear of Port Arthur were some ten miles distant from the sea forts, Tuchangtz being separated by that interval from the tidal basin, or that the Chinese attempted to oppose the Japanese advance at a point to the north of the main position. The struggle there must have been a tolerably sharp skirmish, for one officer and eleven men were killed, and two officers and thirty men wounded. The names of the officers are given, but we need not reproduce them. With regard to the part taken by the Navy in the assault, it appears that the ships did make some sort of demonstration to occupy the attention of the forts, but evidently nothing in the nature of a bombardment from the sea could have been attempted while the land assault was actually in progress. From the *Nippon* we learn that there were no Chinese men-of-war or transports in the tidal basin of Port Arthur, but that a number of small vessels for port service were captured. The *Jiji*, however, says that probably one Chinese ship was in the harbour, though no official intelligence of the fact has yet been received. The same journal publishes a telegram from Hiroshima dated 3 p.m. on the 24th instant saying that such of the enemy as escaped made their way westward by boats, the remainder being all either killed, wounded, or taken prisoners, but what ratio the "remainder" bears to the fugitives our contemporary does not say. The *Jiji* evidently thinks that Wei-hai-wei may be the next object of a military expedition, for it offers the information that the back-door of the fortress is practically undefended so that its capture would offer scarcely any of the difficulties that presented themselves at Port Arthur. The *Yomiuri*, which has hitherto been extraordinarily serious and accurate in its war news, appears to be drifting back into its old vein. It has a pretty story with an immense flaw in it. At the assault upon Chin-chow, we read, the garrison of Talien, desiring to assist their comrades in the beleaguered town, fired three or four shells from their biggest guns at the Japanese army. None of these shells exploded and on being picked up afterwards and examined, the cause of their quiescence was soon explained: their bursting charges consisted, not of gunpowder, but of black beans. That incident would deserve to go down into the pages of history, were Talien within anything like possible range of Chin-chow, but even 24-centimetre guns cannot talk intelligibly to an enemy 7 or 8 miles away. The vernacular papers mention two incidents that occurred at Chin-chow and Talien, as showing that some the Chinese soldiers are far more courageous than their general conduct in this war would imply. When Major Ito's battalion

was marching upon Chin-chow, it met on the road a Chinese trooper who, seeing the enemy, at once turned to fly. He was a skilled horseman, but being loaded with a heavy bundle, he was at last captured by the Japanese troopers. It turned out that he had been sent on an important mission, and in his bundle were found several documents written by Chinese officers of rank. An interpreter examined him and put several questions, but without making any reply he simply said that being a Chinese soldier he was prepared to be put to death. Three times he attempted to dash his brains out against the rocks by the road-side, but at last being asked by Major Ito whether his mother was living, the tears started to his eyes and he replied that he had a mother who would grieve deeply when the news of his death reached her, but since he had failed to discharge the duties required of him by his superiors, he had better die than face their reproaches. Major Ito praised him highly for his fearless spirit, and told him that the Japanese would never put an unresisting prisoner to death. The man remained long incredulous, and did not seem to have any expectation of life until he had been for some time in the Japanese camp. Another incident that occurred at Talien on the 7th instant was of a more desperate description. As the correspondents of the *Mainichi* and the *Yiji* were on their way from Talien to Chin-chow, they passed three Japanese soldiers leading a Chinese prisoner. After the correspondents had walked a little distance, they were hailed from behind by the prisoner, and they waited for the party to come up. The prisoner then began to say something to the *Mainichi's* correspondent in a quick excited tone, but as the correspondent could not distinguish the words, he went close to the man, whereupon the latter, suddenly smashing his handcuffs, sprang forward and drew a sword that the correspondent was carrying. Seeing this, one of the guards seized the right wrist of the prisoner and the two, grappling, fell on the ground. Fortunately the *Yiji's* correspondent had a pistol, and despite the danger of wounding the Japanese soldier, as the two rolled now to one side, now to the other, he managed to lodge a bullet in the Chinaman's body. Still the man struggled desperately, and it was not till the second guard used his rifle that he loosened his grip and fell dead. The soldier who had been seized by the Chinaman received slight wounds from the sword and the bullets. Such is the tale. We need scarcely point out that if three men found it necessary to have recourse to pistols and rifles under such circumstances, they must have been singularly devoid of strength and address.

The corps of Engineers seem to have played an important part in the battle of Chin-chow. It was chiefly through the instrumentality of a company of engineers that the place was captured, for the enemy fled before the main body of the infantry could take any part in the fight. When Lieut.-General Yamaji issued orders for a general assault by the Army, a company of engineers received instructions to blow open the gates. The men, led by Lieutenant Yanome, at once proceeded to the Northern Gate of the castle, which they found to be more than 30 feet high, strengthened with thick plates of iron. Moreover, the garrison fired at the assailants from loop-holes in the Gate, so that it became a desperate task to approach the place and arrange the necessary contrivance for blowing in the gate. Nevertheless, Ensign Kono led a party close under the wall and laid a box of gun-cotton against the Gate, which was shattered by the explosion. Through the breach thus made the Company of Engineers rushed in and blew open the second Gate in the same manner. The name of a private of Engineers, Onoguchi Tokuji, is specially mentioned in connection with this exploit. It was he that undertook the perilous duty of placing the gun cotton against the gate, despite bullets aimed at him from within. One ball hit him in the arm but he persevered with his task, placed the cotton *in situ*, and had only retreated a few steps when the explosion shattered

the gate to fragments. The garrison appear to have been demoralized by this performance.

There is no intelligence about the movements of the 1st Army. We still hear of Major-General Tachimi being at Lien-shan-kwan where he has been for a great many days. But it is to be noted that nothing has reached Tokyo officially for some time with regard to Marshal Yamagata's doings. Generally a suspension of the advance guard's progress may be taken to mean that a point of resistance is in sight, and that a massing of troops is found necessary. An army marching forward is divided into a number of bodies, each of which preserves its distance from the one in front, and each has its own organization of transport and commissariat, as well as its means of communication with the front and the rear. So long as no resistance is encountered the whole progress in this order is like a big caterpillar. But when any obstacle has to be overcome, the sections of the extended body must be drawn together for a united effort and that operation means, of course, that the general progress is temporarily suspended. We expect that something of the kind is now taking place in Manchuria: in other words that the Chinese have in Mo-tien-ling a force sufficient to threaten more or less formidable resistance. Had Mo-tien-ling been passed without hindrance, it is very unlikely that Yamagata would have failed to telegraph the fact to Head-quarters. The *Yomiuri Shimbun* indeed alleges that the enemy has evacuated Mo-tien-ling and that even Lao-yang is without a garrison, General Sung having passed right through to Moukden, but we cannot accept the *Yomiuri's* statement as conclusive.

WEDNESDAY, NOVEMBER 28TH.

The movements of the First Army are still perplexing. Quite a week ago two or three vernacular journals said that its advance guard was at Lien-shan-kwan. Then the *Yomiuri Shimbun* indicated a point twenty-six miles farther on. And now we have the *Kokkas* publishing a telegram to the effect that Lien-shan-kwan was occupied on the 12th instant. It will be remembered that Marshal Yamagata, telegraphing on the 13th instant from Chiu-lien, said that the advance guard had reached Lien-shan-kwan and since Lien-shan-kwan is 89 miles from Chiu-lien, and no telegraph was supposed to connect the two places, we assumed that the advance guard had reached the former place on the 11th, the interval between that day and the 13th being occupied in transmitting the news to Chiu-lien. Very likely that hypothesis was correct. The advance guard did reach Lien-shan-kwan on the 11th, but did not enter the place until the 12th, driving before it, as we now learn from the *Kokkas*, a force of 500 Chinese troopers who retired without offering any resistance. The Japanese *videites* then pushed on to Mo-tien-ling, 13 miles further, where it had long been rumoured that a considerable force of the enemy was massed. They observed about 3,000 Chinese infantry whom they supposed to be the advance guard of Sung's main army stationed in Lao-yang with its reserves in Moukden. In the sequel of this reconnaissance another battalion was to be sent forward on the 13th inst. to reinforce the advance guard, and a fight was shortly expected. It was also ascertained that the enemy had a force of some 1,500 men in Sai-ma-tsu on the east of Moukden. That is all intelligible enough, but what puzzles us is the absence of news as to the subsequent proceedings of the army. Lao-yang is about 50 miles from Lien-shan-kwan and a further stretch of some 47 miles takes the traveller to Moukden. If the advance guard was at Lien-shan-kwan 15 days ago, it ought to have passed Lao-yang long since and to be now within three or four days march of Moukden. Yet instead of hearing anything in that sense, we are treated to a repetition of the intelligence telegraphed by Marshal Yamagata on the 13th inst. from Chiu-lien and published in these columns on the morning of the 16th. How to fill up the hiatus we do not know. The total absence of official information is not to be interpreted at random.

The sensation of the moment is the arrival at

Kobe of a Chinese steamer (called either the *Chao-chang* or *Chiang-yu*, we cannot tell which, if either) flying the German flag and having on board 41 or 42 first-class passengers, of whom 11 or 12 are said to be Europeans and all the rest Chinese, including 3 officials of high rank. The steamer came direct from Tientsin. She carries no cargo and is believed to have been despatched on a special mission. Mr. Detring was on board. He landed on arrival and went to a foreign hotel, but his Chinese fellow passengers naturally remained on board. The *Nichi Nichi Shimbun* says that Mr. Detring comes in the capacity of an envoy to discuss terms of peace; that he carries an autograph letter from the Viceroy Li; that he desires to be publicly received by the Minister-President of State and that he has conveyed an intimation in that sense to the Governor of Hyogo. The intelligence invites much comment, but the faintest prospect of peace is too precious to be lightly discussed.

We begin to understand, or to think that we understand, how it happened that the defence of Port Arthur wore the aspect of a fiasco. The evidently cautious tactics pursued by the Japanese Army between Chin-chow and the southern fortress prepared the public to learn that formidable obstacles awaited the troops at Port Arthur. This impression gained strength when it was rumoured that there had actually been a proposal to rush the place on the heels of the fugitives from Talien and Chin-chow, but that Lieut.-General Yamaji had shaken his head, and said "Wait"—Yamaji who is supposed to be the Japanese Army's representative of stern determination and sagacious daring. "Evidently," folks said, Yamaji looks forward to a big "fight," while in Port Arthur itself, as we have seen from correspondence published in a Shanghai paper, it was supposed that the favourable opportunity had been lost by the Japanese and that the fortress would never be taken. But Yamaji had his programme. He was not going to impose upon the troops the task of dragging a siege train over a hundred miles of difficult roads. He knew that when Talien was taken, he should have stone jetties, lifting cranes, and all the necessary appliances for landing heavy guns, and that his siege train would then be within easy reach of Port Arthur. That siege train is the key to the riddle: the Chinese defences were to be battered into an approachable condition before the troops were launched against them. The siege train consisted of 30 12-centimetre guns and 6 field mortars. To these Yamaji added 64 rifled and mountain guns, and from dawn to dusk on the 20th instant these hundred pieces, rained, from skillfully chosen positions, a storm of shot and shell against the Chinese intrenchments. That was what grim old Yamaji had waited for. When darkness fell the back-door of Port Arthur was so battered that the men behind it had lost heart. They fought, indeed, when the Japanese columns advanced to the assault the following morning, but it was the half-hearted fight of demoralized men. Yamaji's programme had been based on the first principles of modern strategy: make the fullest possible use of all your engines of war before you risk the lives of your soldiers.

We suspect that the full tale of Japanese losses at Port Arthur has not yet been told. The "over two hundred" of Marshal Oyama's telegram already threatens to swell to 400. When Phyang-yang fell the petty total of casualties at first reported gradually grew to over 600. Perhaps the experience is to be repeated now. It is impossible for a commanding officer to make an accurate statement on such a subject at once.

The *Kokkas* insists that a naval engagement took place after the fall of Port Arthur. Its account is that some Chinese men-of-war, detailed to assist in the defence of the place, had taken a number of the fugitive defenders on board and were attempting to escape, when a Japanese squadron discovered them. A fight ensued in which one or two of the enemy's vessels were sunk, the Japanese ships also receiving injuries, but not of a crippling character. We can not credit this report in the absence

of all official intelligence. The *Kokkai* explains, we should add, that as the greater part of the Chinese ships fled at once to Wei-hai-wei, the battle was not on an extended scale.

The *Nichi Nichi Shimbun* says that a portion of the Japanese fleet accompanied by torpedo-boats, proceeded to Wei-hai-wei on the 15th instant, and sent two or three scouting vessels to look into the harbour. Two transports, three gun-boats, the two iron-clads, and 11 other men-of-war were seen inside at anchor. The Japanese ships steamed backwards and forwards, on the 16th instant, six times before the entrance, but the Chinese vessels took no notice whatever. The manoeuvre was repeated on the 17th equally ineffectually. On the 18th the fleet returned to its temporary base, leaving two or three vessels to watch Wei-hai-wei. One of the enemy's torpedo-boats was observed to make as though she would approach, but she abandoned the idea. At the tail of this telegram is the appropriate item of intelligence that when the Japanese ships returned to their base, a British man-of-war steamed in, and sent a sheep as a present to the flag-ship.

The *Nichi Nichi Shimbun* publishes a telegram from Hiroshima, dated 11.40 a.m. on the 26th instant, to the effect that a force of Kirin troops have made their appearance on the right flank of the First Japanese Army, and that a fight is spoken of in Hiroshima as likely to occur any day.

The Tai Wön-kun (thinks that his age dictates the advisability of leaving the Government's ranks and retiring into private life. If that be true—and we have only the authority of the *Yomiuri Shimbun*—most people will conclude that the infirmities of age have probably come on the Tai Wön-kun with greatly increased rapidity since Count Inouye's arrival in Seoul.

The Korean Government is said to have made formal application to Japan for the services of Mr. Suyematsu Kencho, Chief of the Legislative Bureau, in the capacity of Adviser to the Administration.

The operation of lifting torpedoes in Port Arthur is a business of no light character, so thickly strewed is the place with those weapons of defence. A telegram from Hiroshima, published by the *Fiji Shimpō*, says that the Japanese fleet had not been able to enter on the 24th.

According to a telegram published by the *Nichi Nichi*, the guns taken at Port Arthur aggregated 66 namely, 48 of 12-centimetre and upwards, and 18 of 8-centimetre and 4-centimetre. There were no men-of-war in the tidal basin, but only a number of lighters and tugs.

The Emperor's Message to the Second Army after the taking of Port Arthur was as follows:—

Soldiers—You have taken by storm Port Arthur, the gate of the Gulf of Pechili, a stronghold in which the enemy trusted. We strongly applaud your exploit. The cold of winter is approaching and a far-off work lies still before you. Be careful of yourselves and zealous.

His Majesty's Message to the Navy was:—

Sailors—Bravely and loyally surmounting all difficulties, you have consummated the landing of the Second Army, and have taken Talien and Port Arthur. We strongly applaud your exploit. The time of intense cold is approaching. Be careful of yourselves, and complete the task awaiting you.

The Empress also has caused to be conveyed to the Army and Navy a warm expression of her satisfaction and approval.

THURSDAY, NOVEMBER 29TH.

An English critic whose habit it is to write of the war in a solemn vein said recently that if things went on much longer as they had hitherto been doing the unfortunate Chinese officials would lose all their clothes. At that time the Viceroy Li was said to have been stripped of his Yellow Jacket and his Peacock Plume. Now, according to a Shanghai telegram, he has lost everything else that remained to him of honorary vestment or titular dignity except the Viceroyalty of Chili. Such for him has been the immediate sequel of Port Arthur's capture. Another report from the same highly apocryphal source says that as soon as the old statesman learned the events of the 21st and 22nd instant he followed Lord Bateman's example and "ship-

ped himself aboard of a ship, some foreign country for to see." If that be so His Excellency's envoys now at Kobe have been cut off from their basis of supply and are in a rather forlorn condition. But it is not so. Shanghai has been trying to pull off Li's "clothes" ever since the war began, but we do not believe that even with the help of the Port Arthur poltroons the stripping process is a bit more advanced in reality than it was three months ago.

Marshal Yamagata's campaign in Manchuria promises to be presently less barren of incidents than it has been since the taking of Feng-hwan and Sui-yen. Bodies of Chinese troops are turning up here and there as though they were curious to obtain practical evidence of the manner in which Japanese armies win victories. Yamagata will not balk their desire. He, too, will be glad of some occupation to keep his men's blood circulating. A telegram from Hiroshima, dated 5.35 p.m. on the 27th instant, says that the enemy's forces in Mo-tien-ling have been attacked, but curiously enough, the result of the fight is not clearly stated. It appears to be taken for granted that the Chinese were beaten. The Japanese loss is put at 40 killed and wounded; the enemy's is not estimated. Other places are mentioned by the *Yomiuri Shimbun* as being held by Chinese troops, and it is added that attacks had been organized for the 26th and 28th instant. We need not quote the names of the places in question, as they do not appear upon any map accessible to the public.

The *Nichi Nichi Shimbun* is inclined to think that the Chinese man-of-war *Lai-yuen* has gone to the bottom. It appears that she has not lately been seen anywhere, and credence is consequently beginning to be attached to a rumour, circulated some time ago, that, shortly after the battle in the Yellow Sea on the 17th of September, a vessel resembling her was observed in a sinking condition near Wei-hai-wei. Evidence so negative, however, is very inconclusive. We remember how the *Yoshino Kan's* failure to come within the vista of Yokohama newsmongers was industriously construed as indicating her destruction by the Chinese fleet months ago.

The Peiyang Squadron, or at least a portion of it—consisting of the two ironclads, four other vessels, and a number of torpedo-boats—is said to be blockaded by the Japanese fleet in Wei-hai-wei. That is the last throw. If the redoubtable Ting and his vessels are shut into a harbour where they can not possibly perform any warlike service, they may as well be laid up at once. But it is not so easy to blockade a harbour protected by forts that can compel a hostile Squadron to keep at a respectful distance.

The *Nichi Nichi* says that there is talk, apparently trustworthy, of a Chinese man-of-war having been captured in Port Arthur. Her name, however, is not yet known. That is hard to credit. Surely Marshal Oyama or Admiral Ito would not have failed to mention such an important fact.

FRIDAY, NOVEMBER 30TH.

The fight reported to have taken place on the 25th instant at Tsao-ho-ken between the right wing of Marshal Yamagata's Army and a body of 1,500 Kirin troops from Kwan-tien, shows that the Manchurian forces are hovering on Yamagata's flank. These 1,500 men were, in the first place, reported to have appeared in Saimatsui, a small town about 25 miles eastward of Lien-shan-kwan, to which point upon the Mukden road Yamagata's advance guard had marched by the 12th instant. From Saimatsui the Kirin soldiers pushed on to Tsao-ho-ken, and were there met by the Japanese, the enemy being completely routed and driven back toward Mo-tien-ling. It is alleged, according to the *Fiji Shimpō*, that there are 20,000 troops in Kwan-tien, but the estimate is probably exaggerated. They are under the command of a General said to have acquired considerable military renown in the Ili campaign some years ago.

The rumour that placards favourable to the Japanese are posted at various places in Tientsin is repeated in a telegram from Hiroshima

published by the *Fiji Shimpō*. The placards, it is alleged, say that the Japanese troops do not molest peaceful citizens, but come only to overthrow the corrupt Government and succour the suffering people.

According to a Russian authority quoted by the *Official Gazette*, there are six forts at Shan-hai-kwan, mounting over 50 guns. The equipment is not so perfect as that at Port Arthur, but to attack the forts from the sea side would be a difficult matter. The *Kokkai* has a note on the subject. It says that the fortifications at Shan-hai-kwan were fully completed several days ago, and that about 70,000 men are said to be collected there. But the number is doubtless smaller in reality.

The *Kokkai* thinks that detachments from both the First Army and the Second are advancing upon Newchwang, where some 10,000 Chinese soldiers are in garrison.

In the *Shogyo Shimpō* we find a telegram said to have been despatched from Sascho at 11 p.m. on the 27th instant. The information it contains came from the *Saikyo Maru*, which entered that port at 3 p.m. the same day. It is to the effect that two small vessels of war were captured by the Japanese in Port Arthur.

If we may credit a telegram published by the *Yomiuri Shimbun*, the Peiyang Squadron is somewhat scattered, some of the vessels being in Wei-hai-wei and some at the mouth of the Peiho. The *Lai-yuen* has not yet been seen by any of the scouting ships. A letter sent from Chin-chow under date of the 17th instant, to the *Nichi Nichi*, contains the following:—The siege guns arrived at Talien on the 16th inst. and were landed at once. The 1st Division and the Mixed Brigade under Major-General Hasegawa started for Port Arthur on the 18th instant, it being arranged that the assault should be delivered on the 21st instant. It has been ascertained that the Commandant of Port Arthur went to Chefoo and was absent from his post at the time of the attack. The Commandant of Chin-chow, on his part, proceeded to Port Arthur while the Japanese were actually approaching the stronghold entrusted to his care, on the pretext that he had important business requiring consultation with his colleagues at Port Arthur. The departure of the Commandant of Port Arthur may have been due to a similar cause. Chinese Generals are fertile in devices to get away from their posts at seasons of danger. The citizens of Chin-chow are coming back gradually to their homes. Those who returned early opened shops and began to sell wines, tobacco, and sugar to the Japanese. Subsequently shops for the sale of confectionery and vegetables were opened. The merchants repose implicit confidence in Japanese silver, and even paper notes are not now refused. With the disappearance of fears about their safety the characteristic business shrewdness and cupidity of the Chinese have begun to show themselves. The price of articles of diet has risen by leaps and bounds. At first a fowl could be had for 5 *sen*, but subsequently it rose to 10 and 20 *sen*, and now it commands 30 *sen*. On the morning of the day when this letter was written, the correspondent bought 40 eggs for 10 *sen*, but in the afternoon of the same day the price was double. The correspondent is of opinion that the Chinese are a people easy to subjugate, but difficult to govern. The Japanese soldiers and coolies are thoroughly orderly owing to the rigid discipline maintained. In this connection the correspondent bitterly regrets that some of the newspaper correspondents should have proved themselves so devoid of good sense as to disregard the strict injunctions issued by the Commander of troops. Four of the correspondents with the First Army were arrested on the charge of having obtained money by force and were brought before the Commandant of Gendarmerie. The writer is ignorant of the precise nature of their offence, but learns that they will be merely ordered to return home without being subjected to any other punishment. One of them is said to be the *Chuo's* correspondent; another, that of the *Fiji*. The total number of Japanese at Chin-chow is more than 40,000, but

provisions are so abundant that the correspondent thinks it would be possible to stand a siege for years if by any extraordinary chance such a necessity should arise. A military band arrived at Chin-chow on the 16th instant, and its music is much enjoyed.

SATURDAY, DECEMBER 1ST.

Particulars of the attack on Port Arthur are now published by the vernacular press from the pens of war correspondents with the Second Army. From the various accounts, especially that of the *Kokkai*, we compile the following:—On the 17th of November, the Second Army, dividing into two bodies, advanced in the direction of Port Arthur. The Right Wing, consisting of a battalion of independent cavalry, the infantry of the First Division and of the 13th Mixed Brigade, together with a battery of siege guns, set out from Chin-chow, and marched *via* Sanshilipao and Shwang-tai-ken. The Left Wing, consisting of the 14th Regiment of Infantry, a troop of Cavalry, half a brigade of mountain Artillery, a company of Engineers and half a company of the Sanitary Corps, under the command of Lieut.-Colonel Masumitsu, advanced against the north-east of Port Arthur *via* Tsantszling. The cavalry battalion, which worked independently, throwing out videttes to ascertain the enemy's dispositions, reached Suchiatun at 10 a.m. on the 16th ultimo, and came into collision with a force of the enemy's Cavalry and Infantry, numbering several thousands, that had advanced from the direction of Shui-sh'ying. A fierce combat ensued. The Chinese, being rapidly re-inforced from the rear, surrounded the comparatively petty body of Japanese cavalry, and the latter, completely out-numbered, with difficulty cut a path through the foe and retreated in the direction of Shwang-tai-ken. A company of the infantry battalion forming the Japanese advance guard happened to be about a mile and a half in rear of the cavalry at this time. Desiring to cover the troopers' retreat, the soldiers opened a heavy fire upon the Chinese, but the latter, numbering, as they did over three thousand, attacked the company from all sides and threatened to overwhelm it. Thereupon Captain Asakawa, at the head of only 24 troopers, charged furiously into the thick of the Chinese cavalry. So deftly did the Japanese use their swords that the ground was quickly strewn with dead or wounded Chinese, and the remnant of the latter soon took to flight. In this skirmish the Japanese had five troopers and one officer (Captain Asakawa) wounded; and the infantry, one officer (Lieut. Nakamitsu) and 12 men killed, and 29 wounded. The battalion of cavalry and the company of infantry retreated to an elevated position on the south of Shwang-tai-ken, pursued by the Chinese. Meanwhile, the remainder of the battalion of infantry that formed the advance guard, hearing this firing, advanced rapidly, and deploying in the neighbourhood of the fight, attacked the enemy. A battery of four mountain guns that the latter had posted on a plateau about 2,000 metres to the south of the scene of the contest, was attacked vigorously by the Japanese, and though supported by a force of some 3,000 infantry, the guns had to finally be withdrawn. The mountain battery accompanying the advance guard did not reach the scene until after the enemy had retired, and as it was now dusk, the Japanese troops who had gone in pursuit, were recalled, and the advance guard fell back to a suitable camping ground. The Chinese behaved in this conflict with their usual brutality, beheading the corpses of the Japanese, cutting off their hands, ripping open their stomachs, and tearing out their livers. The mutilated remains presented a revolting spectacle. The fury of the Japanese troops at the sight was deep, and both officers and men swore to take vengeance for their unhappy comrades. On the 20th, the various corps forming the Army advanced to the neighbourhood of the place to be attacked. Dawn of the 21st being the time fixed for the assault, Marshal Oyama assembled all the staff officers on the preceding afternoon and explained to them the plan of operations for the morrow.

Shortly afterwards a movement was observed in the enemy's forts, and presently a force of about 4,000 men, advancing from various directions, combined to attack the position held by the Second Regiment of Infantry at Shihtsutsz. Lieut.-General Yamaji, divining this intention, had made full dispositions, and the enemy, attacking from three sides, were received with such a heavy fire of artillery that they soon retired, leaving a number of killed. The Japanese casualties were only two wounded, but owing to the lateness of the hour no pursuit was attempted. On the 21st, the artillery having been placed in position during the night, the attack commenced. The First Division advanced against the Itzshan forts; the Mixed Brigade against those of Rhlungshan; the cavalry protected the right wing of the First Division; the supplementary troops of the left wing made a feigned attack against the north of Port Arthur, and the siege guns were posted to the north of Shui-sh'ying, the artillery of the First Division being placed farther west. There were no roads in the district from which the attack was delivered, and the labour of dragging the artillery up the heavy inclines being very great, the Engineers and the Second Infantry Regiment assisted. Major-General Nishii, with a force of artillery, cavalry, infantry, and engineers, marched round westward, so as to assault the Itzshan forts from the north-west, and Lieut.-General Yamaji followed with the rest of the troops on that wing. Just before dawn a tremendous cannonade was opened from the field guns and siege pieces, to rouse the enemy from his slumbers, and soon afterwards the infantry led by Major-General Nishii suddenly made their appearance under the parapet of the most westerly of the Itzshan forts. The threatened fort now received a hail of shot and shell from over 40 guns, while the rest of the artillery devoted its fire to the three other forts on that face. The enemy, nothing daunted by this furious attack, fought stubbornly, replying to the Japanese fire not only with the guns of the Itzshan forts, but also with the heavy pieces mounted in the sea forts. The Japanese gunnery, however, was far superior to that of the enemy. Every shot took effect, and in a very short time the most westerly fort was so battered that the infantry stormed it without much difficulty. The three other Itzshan forts met with a similar fate, and by a little after 8 a.m. the four forts on this face were in the hands of the Japanese, the Chinese escaping in the direction of Yaluistai. Meanwhile, the Japanese fleet, moving over to the west of the promontory, brought the enemy's northward line of retreat under its guns, and the fugitives were consequently driven to take refuge at Laotieshan near the extremity of the peninsula. The artillery now advancing, took up a favourable position within easy range of the Sungshushan forts, and commenced the second attack. The soldiers garrisoning these forts had prepared for flight so soon as they saw the fate that overtook the Itzshan fortifications. A few well directed shells settled their business, and without awaiting the infantry attack, they fled, pell-mell. Meanwhile, the troops on the left wing had been conducting their operations vigorously. The Mixed Brigade had no field guns, and there was no possibility of using siege guns successfully. Employing mountain pieces only, it was found difficult to make any great impression on the enemy's parapets. But the troops that had captured the Itzshan forts, now joined vehemently in the assault of the Rhlungshan position, advancing from the rear, and the enemy, attacked thus from two directions, abandoned the works. It was now noon. All the forts forming the land defences of the place had fallen, and it was resolved to proceed with the assault of the forts on the sea front in the afternoon. Among these the most important was that on the Hwang-chin hill. This fort alone had taken a really active and effective part in the defence, directing its fire at long ranges not only against the assailants of the Itzshan, Sung-shushan, and Rhlungshan parapets, but also against the positions assumed by the Japanese field and mountain guns. It was,

in fact, the key of the position, for its heavy guns could be trained in every direction, and it was approachable from every side. The Japanese General resolved, therefore, that the assault on the sea-front forts must commence with Hwangchui-shan, and the Second Regiment was ordered to attack it in conjunction with the whole of the field artillery. The regiment at once advanced, making its way through the town of Port Arthur, and killing a number of Chinese soldiers *en route*. At 5 o'clock the fort was taken, and it was decided to postpone the assault of the forts lying westward until the next day. But during the night, their defenders fled, and when the Japanese attacking columns moved forward next morning, not a foe was to be seen. Thus the whole of the forts, over 20 in number, on the land and sea sides, fell into the possession of the Japanese. The victors' casualties are not yet clearly known, but they appear to be about 180 to 190 killed and wounded. The enemy certainly lost 2,500 or 2,600 in killed alone. In Port Arthur were taken two small steamers, a sailing ship (foreign rig), a junk, a dredger, a partially constructed iron ship, several hundreds of tons of steel rails, 30 fish torpedoes, about 60 large guns, and a great quantity of small arms.

The Chinese appear to have made an attempt that argues more enterprise and generalship than the history of the present war would have led us to expect. On the 21st ultimo, knowing that the Japanese Army had marched to the attack of Port Arthur, a force, said to have numbered about 2,000, moved out of Fu-chow to attack Chin-chow. Fu-chow is an important town in the Liau-tung peninsula, 52 miles north of Chin-chow by road, and Chin-chow, as our readers will remember, is a fortified town 40 miles north of Port Arthur. It was a clever and bold idea on the part of the Chinese to strike at Chin-chow while the main part of the Japanese were absent at Port Arthur. But the soldiers left to guard Chin-chow were not found napping. They drove back their assailants without difficulty. There must have been a pretty sharp fight, however, for the Japanese had 60 killed and wounded. This information does not come officially: we take it from the *Fomiori Shimbun*. In the *Kokkai* also we find a paragraph on the same subject. It says that, when news was received at Port Arthur that several thousands of Chinese had moved against Chin-chow, Major-General Nogi marched rapidly north with a battalion of the 15th Regiment to succour the garrison. At Ma-kwo-ling he met 400 men, fugitives from the Fu-chow troops that had attacked Chin-chow. A fight ensued, and only 38 of the enemy escaped, all the rest being cut down. We find a perplexing feature in this account—which, it should be remarked, is not official. Ma-kwo-ling lies between Chin-chow and Port Arthur, at a distance of 8 miles to the south of the former place. But Fu-chow is to the north of Chin-chow. How did it happen that troops advancing from the north to the attack of Chin-chow, fled southward on being repulsed; fled, that is to say, in the direction where they knew that the bulk of the Japanese Army lay? Nevertheless there is collateral testimony to the general truth of the story of an engagement in which the Chinese suffered heavily. A telegram from Shanghai, published by the *Shogyo Shimpō*, says that the Japanese, to avenge the inhuman treatment extended by the Chinese to their prisoners, gave no quarter to the troops that marched from Fu-chow to re-capture Chin-chow, but cut down the greater part of them.

Since writing the above, we learn that there is official confirmation of the battle at Chin-chow ending in the total defeat of the Fu-chow troops, and that the march of Major-General Nogi with a battalion of reinforcements is also authentic, as well as the fight with fugitive Chinese at Ma-kwo-ling. But this last incident bears a different and perfectly explicable complexion in the official account. The 400 Chinese encountered and virtually annihilated at Ma-kwo-ling are there said to have been fugitives from Port Arthur. Ma-kwo-ling is the point at which

the two roads from Port Arthur meet. Across the narrow Chin-chow isthmus the road is a single line, but from Ma-kow-ling it divides, one branch passing down the east, the other down the west, coast of the peninsula. Four hundred men, flying from Port Arthur, seem to have taken the west-coast road, and to have entered Ma-kow-ling just as Nogi's battalion, marching by the east-coast road, emerged at the same point. A collision ensued, the Chinese fighting, as they imagined, for their last chance of escape, and the result was heavy slaughter.

From Shanghai telegrams are being circulated broadcast to the effect that the Japanese troops exhibited a merciless disposition at Port Arthur, and that the killing of Chinese took place on an unnecessary scale. We think it very probable. Soldiers are human beings after all. When they learn that two of their countrymen have had their bones crushed and been roasted alive by the Chinese; when they see the awfully mutilated remains of their comrades killed or wounded in battle, small wonder if they set their teeth when next they meet the foe and kill as long as muscle and they hold out. We know what our own troops did in India. The Japanese, indeed, are so keenly watched and criticized that they must be denied, as far as possible, the luxury of revenge, but Mulvaney's story of the men that had "seen their dead" applies to Japanese as well as to British soldiers. Which of us could hold his hand under the circumstances?

According to the *Official Gazette*, 29 men and an officer have died of wounds received in the naval battle in the Yellow Sea on the 17th of September. The total Japanese loss now stands at 109 seamen, warrant officers, &c., and it would appear that 11 officers must be added to this figure, making an aggregate of 120. But we find an element of uncertainty. The figures originally reported by Admiral Ito were 10 officers and 69 men killed and 169 wounded, whereas the *Official Gazette* now gives 80 as the number killed, exclusive of officers, and 30 (including 1 officer) as the number that have died of their wounds. Apparently the final account stands at 11 officers and 109 men killed or died of wounds, and 139 officers and men wounded but since recovered.

KOREAN NEWS.

From a letter that the *Mainichi's* Söul correspondent writes, under date of the 22nd instant, we take the following:—Since Count Inouye's assumption of the duties of his office, he has taken considerable pains to reconcile the various hostile factions in the Korean Court. His labours have not been in vain. An Keiju and Cho Guigen, two of the most influential members of the faction bitterly antagonistic to the Tai Wön-kun and his followers, visited the aged statesman in his private residence a few days ago, and apologized for what they had done. As the Tai Wön-kun had already been softened toward them by the strong remonstrances of Count Inouye, he received the two graciously, and thus apparent tranquillity has come over the horizon of Korean politics. The Tai Wön-kun is moreover to retire from the field of active administration, chiefly because his ideas are found inconsistent with the policy of Japan, to say nothing of his past actions, which were entirely hostile to Japan's interests. It has therefore been decided that the aged statesman shall resign the regency. On the 18th instant the Ministers of the Korean Cabinet met and deliberated on State affairs. Count Inouye did not appear, but Messrs. Okamoto Ryunosuke and Hozumi Torakuro were present, the latter in the capacity of representative of the Japanese in Söul interested in Korean reforms. They made appropriate speeches about the resignation of the Tai Wön-kun and the restoration of the King to real power. On the 20th instant, another conclave was held in the Palace, when all the dignitaries of the Korean Court with the Tai Wön-kun at their head, were present, as also was the Japanese Ambassador. It is understood that the

Tai Wön-kun formally announced his resignation on that occasion.

Kwang-ju was the scene of an unusual commotion lately. Tens of thousands of the populace rose and besieged the citadel where some 700 officials were quartered. It was not a violent attack, but rather a kind of investment, for the folks that flocked round the castle cut off the supply of daily necessities, seeking to coerce the inmates by that expedient. The officials were curiously passive, for though driven to the verge of starvation, they took no active measure but simply waited for the mob to disperse. In accordance with a request from the Korean Court, an Ensign of the Japanese garrison in Söul was instructed on the 11th instant to start for the place, accompanied by 20 soldiers, 4 constables, and 2 interpreters. This party quickly dispersed the mob and carried off two of the ringleaders. The rising was not of a wanton character. It was entirely due, as was made clear at the examination of the ring-leaders, to the intolerable exactions practised by the local officials for several years. One of the two men taken in custody to Söul had vainly tried to get the grievance redressed, petitioning the Central Authorities every year during the past decade. The people therefore resolved to resort to desperate measures. The man in question is the most popular person in the whole district, and when he was carried away by the Japanese soldiers, the people bade him farewell with tears, fully believing that he would be put to death. So he probably would have been, had he fallen into the hands of the Korean soldiers. But as it was, when he had stated the causes of the trouble to the Authorities in Söul, he was acquitted, and the Governor of the district was deprived of his office, with the further prospect of having to answer judicially for his conduct.

CHINA NEWS.

It is reported from Tientsin that the Taku forts have saluted the British flag on the *Chung-king* with 21 guns by way of apology for the outrage committed by Chinese soldiers against that vessel. The accounts seem to indicate that Great Britain's demands did not extend beyond this salute, but if that be the case we fail to understand why such a trifling act of reparation should have been delayed for three months.

The *Pekin and Tientsin Times* contains the following:—

The Imperial audience granted to the French and Russian Ministers took place on Monday, the 12th, at the Imperial Palace. The Ministers, who were accompanied by all the Ministers at present in Peking, entered by the eastern door or T'oung-an-men, where two secretaries of the Tsung-li Yamen received them and conducted them to a large hall in the centre of two pavilions where the principal Ministers of State were assembled. Thence they were taken along a raised causeway, each Minister conducted by a prince, to the throne room or hall, where the Emperor was seated on a throne placed on a dais raised five steps above the floor. Before the Emperor was placed a table covered with yellow cloth. The hall was draped with rose silk hangings relieved with yellow cords and decorated with large chafing dishes and incense burners in cloisonné work. The speech of each Minister, after being read by him, was translated into Chinese by an interpreter; then Prince Kung ascended to the foot of the imperial throne and kneeling, translated it to the Emperor in the Manchu tongue. At the back of the imperial throne was hung a large silk curtain decorated with peacock's feathers, behind which the Empress Dowager was placed so as to be able to see and hear what took place without being seen. The Emperor is pale, with pleasant features and eyes of sparkling brilliancy. Behind the hall of audience were placed a body of troops. Everything was in perfect order and spotlessly clean. The reception took place in the midst of the most profound silence which added to the grandeur and solemnity of the ceremony.

It seems that the fall of Port Arthur was anticipated in Tientsin so soon as Talien came into Japanese possession, for we read that the Chinese troops in the former fortress were rumoured to have fallen into a state of demoralization, discipline being entirely relaxed.

China is evidently concentrating all her energies on the defence of Shanhai-kwan. General von Hanneken has gone thither, to inspect the troops and direct the fortifications.

The *Shanghai Mercury* of the 20th instant writes:—

From private advices from Nanking, we learn that Chang Chih-tung, immediately on assuming charge at Nanking, ordered the larger vessels of the Nanyang Squadron to prepare to leave for the North on short notice. Many of the officers and crew are demurring, on the typical Chinese grounds that they were engaged by the Viceroy of the Liang Kiang, and that they did not see the reason why they should fight the battles of the Viceroy of Pechili. The vessels designated are expecting to leave during next week—if they cannot find some excuse to remain.

The fiction that General von Hanneken was summoned to Peking by the Emperor is again exploded. The Tientsin correspondent of the *Shanghai Mercury* repeats what we stated a fortnight ago, namely, that the General—or "Major" as he then was—went to the capital to see Prince Kung, and that there never was any idea of an audience. It seems, however, that a grand scheme is mooted for the formation of a Chinese "Imperial Army," but that it will not be carried out until after the present war is over.

With the events of the past few days on record, the following cutting from the *Shanghai Mercury* of the 14th instant is very interesting:—

We have received the following from Port Arthur:—

On the 5th inst, about 3 o'clock in the afternoon, a great deal of firing was heard by those on the ships in the harbour, from the Chinese forts, the whole of the forts seaward firing incessantly. It was feared that the Japanese were attacking the forts by land and sea in strong force, but it was soon discovered that the forts were firing on six Japanese torpedo-boats. The firing continued for about an hour, when one of the torpedo-boats appeared to be hit by a shot from the fort. The Chinese declared they hit it. The other boats surrounded the damaged one and withdrew, and the firing then ceased. Thus ended the onslaught on Port Arthur, the Japanese boats not firing a shot! It is thought that the boats came to reconnoitre and see where the remnant of the Chinese fleet was, or probably to distract attention from land movements going on at Ta-lien-wan. When the firing commenced the Chinese torpedo-boats went out, but did not attack the enemy. Two days later the Chinese fleet, composed of six men-of-war which had gone through the Yalu fight, left for Taku under the command of Admiral Ting for orders. The *Li Yuen*, the vessel that was partially burnt, remaining, her repairs not having yet been completed, although the workmen are busily engaged in effecting alterations.

The Chinese naval officers, with whom I have frequently come in contact, exhibited great enthusiasm, and were eager to meet the enemy. They appeared to be of opinion that, having gone through the Yalu fight, they were equal to engage in another battle. They appeared brave enough on that point.

So far not one ship of the Southern Squadron has joined the Northern Squadron since the ships that came through the Yalu fight had entered Port Arthur. People were wondering where the Southern Squadron was.

A number of shopkeepers and residents have left Port Arthur, with the Taotai, but on the whole things go on much as usual in spite of the close proximity of the Japanese. On the 5th instant, the whole of the Europeans in Port Arthur were ordered to leave, and many left for Chefoo in the *Kwangchi*. The red cross flag was run up, and there was placed on board the patients from the hospitals—and the Europeans—and these were conveyed to Chefoo, as another attack was anticipated.

I think it is simply impossible for the Japanese to take Port Arthur, so impregnable and well-defended is it. About eighty miles from Port Arthur on the land side—the only approach to it by land—is a narrow pass in the hills, which 100 men could hold against an army. As for landing at Pigeon Bay at this time of the year that is out of the question.

There are thousands of infantry with cavalry here. The infantry are all armed with German repeating rifles and short bayonets, and the cavalry are likewise well armed. These troops are drilled continually every day in the European fashion. They are entirely under native officers. There are plenty of provisions and any amount of ammunition.

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

DELIBERATIONS OF THE CENTRAL POLITICAL ASSOCIATION.

Delegates of the members of the House of Representatives identified with the various wings of the Strict Foreign Policy Party, met, at 1 p.m. on the 28th instant, in the hall of the Central Political Association to deliberate about the arrival of a Chinese envoy suing for peace. Messrs. Ooka, Motoda, Kawashima, Kudo, Suzuki, Ozaki, Suyehiro, and other leading politicians were present. The drift of the discussion was as follows, according to the *Kokkai*.

It was unanimously resolved that in case the envoy were not duly accredited to sue for peace, he should be driven out of the country. But as to the question of how he should be met, supposing him to be duly accredited, opinions were divided. One section observed that as he had arrived in Japan ignorant of the fall of Port Arthur and there was therefore no reason to suppose that he brought satisfactory condition to offer to Japan, he should be sent away even though he were an accredited envoy, on the ground that it is still premature to open negotiations. Another section held that there was no reason to refuse to see him should he be a duly accredited envoy, since there would always be time to send him away should the terms of peace proposed by him be found unsatisfactory. The latter opinion, however, is said to have been supported by only a few members. Another point of dispute was that, supposing him to be a duly accredited envoy, it was wrong for him to appeal directly to the Head-quarters. He should rather carry his proposals to the Generals of the army in the field. That theory was contradicted by some members, who held that an appeal for peace might be presented in either way. Finally the following decision was arrived at:—That to guarantee the permanent tranquillity of the Orient, negotiations for peace must not yet be opened, and that to have this resolution fully adhered to, a representative should be sent to Hiroshima from each section of the Party.

The Constitutional Reform Party, on the evening of the same day, convoked its members staying in the capital, and discussed the same subject. The meeting was adjourned before any conclusion had been arrived at, the idea being that there would be time to consider the matter after the views entertained by the other sections of *Taigai Koku* had been consulted. Some of the opinions enunciated however, are reported as follow:—Was it not improper on the part of Governor Sufu to have acted as the medium for conveying a private letter from the enemy's envoy to the Premier, without having previously obtained permission from Head-quarters?

Should that envoy not be fully accredited by China, but be simply the bearer of a private letter from Li Hung-chang, he ought unquestionably to be driven out of the country.

Should he be really a duly accredited envoy of China come to sue for peace, he ought to have come in a ship flying a white flag. But as he came under the protection of the flag of a neutral Power, and has thus neglected the formalities proper to be observed by an envoy of the kind, it would be derogatory to the dignity of the country to receive him. Hence, even though he were a duly accredited envoy, he should be sent back on that ground.

In case peace be sued for, the application should be made, not to the Foreign Office, but to the military authorities. But whether by military authorities should to understand the Generals of the expeditionary army or the Head-quarters at Hiroshima, unanimity of opinion could not be obtained.

If the envoy be a private one sent to the Premier the latter should not decide whether to see him or not without seeking directions from Head-quarters, since it is not proper for a Minister of the Crown on his own responsibility to receive a private envoy from the enemy.

MR. ITO MIYOJI.

(FROM OUR CORRESPONDENT.)

INTERVIEW WITH MR. ITO MIYOJI, SECRETARY
GENERAL OF THE IMPERIAL CABINET, AND
MEMBER OF THE HOUSE OF PEERS.

Hiroshima, November 18th, 1894.

[Scene—Typical Japanese house on river-side in centre of large town.]

Big, well-built man, perhaps 40; very fine features indeed; nose rather aquiline, clear-cut; mouth very expressive, both when speaking and when silent; eyes particularly handsome, not merely from Japanese point of view; forehead large, broad, good shape; manner charming, impressive and earnest, with ready change to fun. Fluent and easy English. Mr. Ito first explained the Premier's position, and duties. In an Empire with a larger population than France, newly supplied with Governmental machinery of the most perfect modern model, the dimensions of the Secretary's duties in peaceful times may be imagined; but when, in addition, they are complicated by the "trial trip" of an army liable to muster 500,000 trained fighting men—then the Cabinet has quite an unprecedented weight of responsibility, and its Secretary-General's comprehensive task appears almost overwhelming.

In his office there are numerous sections, and five sub-secretaries, besides the Premier's two private secretaries. What is called the "high police" department also comes directly under the Cabinet, while the general detail of police work is under the Home Secretary—the German system of classification being followed in this as in the army and navy. At present, Hiroshima is the seat of government, though Tokyo remains the head-quarters for certain purposes; and as these two places are five or six hundred miles apart, the telegraph wires are kept busy day and night. Mr. Ito Miyoji is usually at work two or three hours after midnight, in marked contrast to the very early hours of all Japanese. Parliament has just concluded its special session; owing to the enthusiastic unanimity prevailing there was no discussion at all. But the regular session falls due shortly, and all the inconvenience of the Cabinet's absence at a remote provincial town will have to be experienced. It has been suggested, however, to appoint a stage-manager and have all the parts carefully written out and apportioned, to simplify matters; for the machine works as harmoniously as a well-rehearsed play, and the suggestion of comedy is almost too strong for the Japanese, who with all their matter-of-fact sturdiness of character love a joke as much as any people on earth. Perhaps they might use statues and phonographs, to save members of Parliament the trouble of leaving Tokyo.

Meantime, the Secretary of the Cabinet has to continue doing his share of the task of government, which is carried on by "Imperial Ordinances," similar to the British "Orders in Council," with the force of Acts of Parliament, while there is no session. The system is derived in part from that of Germany, which is best adapted for introducing into a country ready made; the better British Constitution could only be developed in centuries. Similarly the system of land tenure in Japan is left in an elastic state, to be moulded by time; there are very few large estates, and the land is pretty evenly divided among the people, who pay a small ground-rent. Thus the feudal system has quietly disappeared without leaving any such legacies as the land questions in England and Ireland. All modifications of the law depend on the reports laid before the Cabinet through its Secretary-General from time to time, and so he has to be well posted to preserve continuity of policy in a country just emerged from chrysalis stage. One exceedingly important matter is the treatment of the huge tracts of mountain waste, which were formerly covered with trees but have been denuded in many places, with serious results to the climate of the country. While the people were preoccupied with the overthrow of the Shogunate and the Satsuma reactionists, the

feudal laws were forgotten and timber was being destroyed by the peasantry at a ruinous rate; the results are visible even now, especially in the wild country about Hiroshima, where the bare mountains show plainly the signs of constant detrition, which makes the hillsides and fertile ravines absolutely untenable. The Government has set about steadily replanting, and rigidly restricting future damage by drastic forest laws; and the benefit may be seen on every well-clad hill where good crops are grown on tiny terraced plots up every sheltered gully to an extent that is simply marvellous. Mr. Ito Miyoji strongly urges the development of the tea trade to its utmost. At present Japan puts very little tea on the English market, having more success in Russia, America, and Australia. Interest of course helps Indian tea in England; but if Japanese growers study the requirements of this market, it appears likely that they can produce a better article at a cheaper rate. Once that is begun, vast tracts can be turned into tea gardens, bringing considerable profit to the growers.

But all this has no direct bearing on the war, Mr. Ito, though very interesting and valuable information. Would you like to say anything about the war?—Well, of course I know a good deal about it. I have to be with His Majesty and the Cabinet wherever they go. I hope to meet you in Tientsin with our army before very long.—(Laughing.)

Why not in Peking?—The palaces there would be pleasant quarters.—Well, we shall see; perhaps. But what can I tell you about the war?

First, about your own duties in connection with it especially.—I have to do the same with regard to the war that I do in other matters; to make reports to the Cabinet; to propose the subjects for consideration; and many other things.

Then you are just the man to tell me every thing.—Ah, if I would.—(Laughing.)

Have you seen what most of the newspapers outside of Japan have been saying, about Japan being a rather poor country, unable to stand a long war without danger of exhaustion?—Oh yes,—(laughing),—let them think so. "Go abroad to get news of home."

You might tell me a good deal about how matters really stand.—We have raised large loans without the least difficulty; these hardly caused any tightness in the money market, and Government bonds are still at about a per cent. premium; early this year, when there was a "boom" on the exchange, they were at 8½ prem. There was then abnormal activity in the promotion of new railways and other ventures, now quite checked, but all the regular business is going on as well as ever, or rather better, for Japan is almost entirely self-supplying, and so all the extra expense on account of the war is only extra circulation of our own money among ourselves. The only thing of any importance that we cannot get or make in Japan is the heaviest work for the Navy, 65-ton guns, and the bigger parts of big ships; but we have enough in stock at the Arsenal for all possible needs.

Imported from England?—Yes, but before the war.—(Laughing.) Personally I am not in favour of "protecting" trade; I mean by tariffs. I believe in free trade, getting the best and cheapest market wherever it may be, and helping to make our own the best and cheapest in every way possible. Protection does not do that; I think it is a mistake, though many Japanese would like a protectionist tariff. Still, the country is so self-supporting that a war is really no drain on its resources at all, comparatively speaking. The ordinary manufactures are now being stimulated; and we can make machinery enough to utilise this advantage. Usually our exports are at any rate not appreciably below imports; I forget how they stand at the moment. We have not even lost the Chinese trade entirely, for it is being carried on by English firms now. That is where you English profit by this war; you generally are on the spot to make a profit.—(Laughing.) The Chinese in Japan, judging others by themselves,

dare, not stay, though the Government took a great deal of trouble to ensure good treatment for them. Many went back to China, and their business has been taken over by British merchants. British steamers are getting much better business too, through the war. Chinese merchant ships are all being kept in port or used by the Navy, and Japanese merchant ships, about 130 I think, are turned into transports. There was a great outcry in Japan to make coal contraband, to prevent the Chinese getting any; but I did not believe in that a bit. It would only have made China develop her own coal; there were several good places now in use. Besides, we want the Chinese to get all the coal they need, and then come out to sea!—(Laughing.)

You should send them a few shiploads as a present.—Yes, on condition that they would come out and fight; we only wish they would! Don't imagine I say this because they were defeated at the Yalu; I said it from the very first. That was why the Japanese fleet went to Wei-hai-wei, to find the Chinese fleet, not to attack the land. Ha ha! They called it an attack on the land batteries, and said we were defeated! That is how they tell lies. The Japanese Government is very anxious indeed to have foreign war correspondents here, to contradict these false reports; you will find everything done for you that can be done, and no expense will be spared.

I must say I have been exceedingly well treated. People outside, the Chinese for instance, would at once call it bribery.—But so many war correspondents could not all be accused. Their newspapers are known and respected, and they have to act up to that. So have the men. The Chinese spread false reports about the *Kowshing*; they accused the Japanese of shooting men in the water, and all sorts of barbarities, like savages, and it did a great wrong; it set the English and other foreigners against us. If there had been some newspaper correspondents on the *Naniwa-kun*, it would have been different; impartial men to speak the truth. It is a great expense to newspapers in Europe to send men out here, and for the sake of truth and for our own reputation we would be glad to help them as much as ever they will let us. That is the wish of His Majesty and all the Government and people.

In Europe they will be glad to hear this, I am sure, for it shows the excellent character of the Japanese. But these false reports of the Chinese are only of the same sort as those in Hongkong during the plague this year, when the Chinese told horrible tales about the foreigners who were saving their lives. The Chinese character ought to be well enough known.—Oh, I should tell you that one of my duties is to be Prosecutor General in the Prize Court established under International Law, but we have no prizes yet, and somebody complains that I am not doing my duty.—(Laughing.) There is an Ordinary Court and a High Court for prizes taken, and mine is the High Court.

When Chefoo and Taku and Tientsin are captured, you will have some ships taken.—I hope so; people are complaining! But of course the great thing is to strike a decisive blow, not to bother about trifles such as injuring China's trade or blockading or looking after contraband. There is some agitation to stop the Chinese using Shanghai for war purposes, as we promised to consider it neutral. They use it as an arsenal and recruiting centre, and to get Europeans into their service. But I don't think it matters at all. They had Europeans on their ships at the Yalu. They import arms and ammunition (we make all our own), but all that they do with their things is to let us capture them—so much the better for us. It is specially convenient for us, that way; transport in Korea is an immense trouble, but we get food, and arms, and money, ready waiting for us. They are very kind! We have captured a lot of gold and silver; I don't know why they had it in the field. For rewards, I have heard, for bravery and Japanese heads. Their soldiers have to be paid on the spot.—Yes, our army found some Japanese heads among the Chinese spots

about 15 or 20 I think, of men who were on outpost duty and so on, and could not be recovered in time. Some Korean heads too. But there will be no more of that, with the First Army at any rate, for the Chinese in that part seem thoroughly panic-stricken now. We expected great resistance at Ku-ren-jo (Chiu-lien-cheng), it was exceedingly strong in fortifications and natural position, but they hardly waited for the Japanese to attack. They have seen too much of the Japanese swordsmanship; you know it is famous. The present army sword is now being made very much like the old style, but the old ones are the best steel. Most of the wounds found on the Chinese are sword slashes; nothing can stand them.

You will carefully avoid saying much about the immediate future?—Well, I can say this in confidence that we have been busy lately making special arrangements to maintain order in North China, under some sort of provisional Government, and to protect European lives and property in the treaty ports, missionary out-stations away inland, when the Chinese Government ceases to rule that part.—(Laughing immensely.) Of course that means a very great deal.

The Europeans are preparing to clear out; many of them are already gone. Would it not be better to make a public announcement at once?—You can publish it and say I said so. Really, it is a tremendous undertaking when you think of all that it means. The Japanese Government sees that grave disorder, anarchy, is threatening in Chefoo, Taku, Tientsin, and Newchwang; so Japan undertakes to maintain order and protect all the inhabitants. This place (Hiroshima) is only a temporary seat of Government; when I said I might see you in Tientsin perhaps, I was not joking. The Houses of Parliament here were built in ten days! We were told it was impossible, but we did it. The lazy Koreans were surprised when our army came to an impassable river, a very wide river, and put a bridge across in 30 minutes. You might not believe it, but it is true. We are arranging to send over with the Second Army a large staff of Civil Service men who speak European languages and understand work that would be beyond the scope of military men. Some of the Foreign Office men are gone already. I am exceedingly sorry for His Majesty having to put up with so much inconvenience and discomfort here. Of course we try all we can, but it is not permanent. There was no fitting place for His Majesty's birthday festivities, on the 3rd November, but we did our very best. One point I would like you to mention; that is, the change in British feeling and policy towards Japan during the last five years or so. It is a great change, very valuable, and we warmly appreciate it, more than I can express. Never mind what selfish or silly people may say. I know there are some local English newspapers that try to stir up anti-Japanese feeling, but they are nothing. I am quite sure of what I say, that in recent years England has developed a strong sympathy towards Japan, and we are grateful indeed. We appreciate it truly. In time of peace, England would be the best friend Japan could wish to get. In time of war the alliance would be most powerful; the British fleet and the Japanese army could control the East. England needs some land force here; look what trouble you had even as near home as the Sudan. But with the Japanese away—Do you know what force we can put, if needed, in the field?

Foreign military experts say you are already doing your utmost—with two Army Corps?—We have six without touching the Reserves. The stories about the second Reserves having been called out are false. It should be made known what we really can do; we have been too long misunderstood. Under our system, the whole nation will be, if needed, an huge army in a few more years. We have not the least wish to conquer anybody.—(laughing)—but we will not be despised and duped by China at any rate.

There is a good deal of military enthusiasm in Japan just now, but the people are well enough known — peace-loving generally, and

too matter-of-fact to do anything wildly.—Yes. I was going on to say we need a stronger navy. There has been a lot of talk in Parliament about making it much more powerful. I am satisfied that England is now our firm friend and sees the real benefit on both sides.

You think the revision of the treaty is a proof?—Well, that is one. Of course, to some extent the foreign residents in the treaty ports are against it on account of their own interests, irrespective of the general good. But their newspapers are not reasonable, and we simply take no notice, for they do no harm, they have no effect.

CONCERT IN TOKYO.

Nothing could have been more successful than the concert given in Tokyo on the 24th ultimo, in aid of the Red Cross Society of Japan. Despite most inclement weather, the large hall of the Ueno Academy of Music was filled to overflowing by an appreciative audience of foreigners and Japanese, who repeatedly showed their delight at the excellence of the performance by loud and long sustained bursts of applause. Her Imperial Highness Princess Kanin honoured the concert by her presence, and the front rows were occupied by the members of the Foreign Corps Diplomatic and many distinguished Japanese. Yokohama also was largely represented, the long journey and the rain seeming to have exercised no deterrent effect. Without referring to each item of the programme in detail, we may say that the rendering of "Tardi si fa" by Miss Bloxham and Mr. Braccialini was admirable; that Miss Bloxham's singing of "Orphée avec son Liute" enchanted her audience, and that Miss Koda's violin solo, "Scène de Ballet" was not only perfect in execution but also full of genuine artistic feeling. This young lady promises to attain a high reputation. It is most pleasant to see, too, that the Musical Academy continues to prosper under purely Japanese control. The instrumental and vocal performances of the pupils showed that the true spirit of music continues to direct their labours. It need scarcely be said that the piece of the evening, the First Act of Faust, was looked forward to with the utmost expectations. They were not disappointed. Mr. Braccialini's beautiful tenor, at once powerful and sweet, and Count Condenshove's mellow bass belong to an order of voices rarely heard among amateurs. The acting, too, of both gentlemen was really first rate. Mr. Braccialini's rendering of the conflict of emotions that precedes Faust's surrender to Satan, and Count Condenshove's general conception of *Mephistopheles*, as well as his by-play, were masterpieces that would have earned high applause on any stage. Immense difficulties had to be grappled with in preparing this first representation of the kind that has ever been put upon the stage in Japan, and had it not been for the untiring energy and patience of Mr. Braccialini, supplemented by the talent of Professor Eckert who arranged the difficult music of Faust for the Orchestra of the Imperial Court and trained the pupils of the Academy to sing the chorus, which they did thoroughly well, the task must have been abandoned as hopeless. To both of these gentlemen, and to Madame Sannomiya who, according to her invariable wont where charity is concerned, spared no pains to secure a favourable result, the gratitude of the public is due. We must not forget, too, the charming young lady who played the rôle of *Marguerite*, presenting an image lovely enough to have turned the heads of a dozen Fausts. The universal feeling as the curtain fell was one of regret that the delightful performance had been so short, and of hope that the labour of organizing it might not deter another effort in the same line. An incident that rendered the evening specially memorable was the announcement of the taking of Port Arthur. Official news, received just before the concert commenced, was given out, after the first piece, by Mr. Braccialini in French and Mr. Ito Yukichi in Japanese, eliciting from the audience a burst of cheering that had a genuine national ring.

THE PRESIDENT OF THE UNITED STATES AND JAPAN.

Reuter has been giving us lately some information which, though interesting, is neither quite trustworthy nor quite correct. He told us, in the first place, that the President of the United States had tendered his good offices as mediator between Japan and China; that Japan, while duly expressing her appreciation of the sentiment dictating the offer, had declined it, declaring the necessity of China's suing direct; finally, that the Japanese Government having intimated its willingness to accept the American Representative in Tokyo as the medium through whom China's proposals for peace might be made, the President had ordered the United States Ministers in Peking and Tokyo to act in accordance with that intimation. It is palpable that all these statements can not be true, except on the supposition that Japan performed a complete *volte-face* between the times of conveying her refusal and making the alleged intimation. She can not have declared, on one day, that China must sue direct, and, on the next, that the American Minister might be made the medium of communication. It is, of course, very possible and not at all improbable that President Cleveland might have been unwilling to join a combination of Powers whose overwhelming strength in union, if it did not wear a semblance of menace, would at any rate invest their suggestions with the character of dictates. It is very possible and not at all improbable that President Cleveland, while refusing to work with any such combination, might nevertheless offer to mediate, out of a friendly desire to save Japan from the embarrassment of having to face a combination of Powers, and out of a sincere wish to restore peace. But if the offer were made, it was probably withdrawn on discovering that a combination of Powers need not be anticipated, and it would certainly have elicited from Japan just such an answer as Reuter attributes to her. After that answer it would have been evidently out of the question that she should intimate her willingness to have China's proposals conveyed through the United States Representatives in Tokyo. Whence Reuter's agents obtained such a manifestly inconsistent story we cannot guess, but we take upon ourselves to contradict most emphatically the last item about the United States Ministers in Tokyo and Peking.

MR. DETRING INTERVIEWED.

A representative of the *Kokkai* interviewed Mr. Detring in Kobe on the afternoon of the 27th inst. The following account of the interview is published:—

May I ask on what business you have come to Japan?—I have come as an envoy to bring about the restoration of peace to the Orient.

Are you acting under instructions from the Peking Court or from the Viceroy Li?—Under instructions from the Peking Court. (Mr. Detring added that his mission was due to the joint desire of the Court and of the Viceroy.)

The War is now at its height and you have suddenly come at this juncture as an envoy. But is not China making preparations for war as vigorously as at first?—China does not desire to fight with Japan, but is simply anxious to restore peace to the Orient.

Where do you intend to go?—Yesterday I met Governor Sinfu after I had left the steamer, and asked to have the views of the Headquarters consulted through him. I intend to take the ship round to Ujina when I receive a reply.

Have you any documents that prove you to be an envoy?—Yes. I have a letter.

Is it a letter from the Emperor from the Government in Peking?—I can not answer that.

May I ask to be briefly informed of the contents of the letter?—I can not give you any information. You must apply for that to the Government of your own country.

LETTER FROM HIROSHIMA.

(FROM OUR CORRESPONDENT.)

Hiroshima, November 23rd, 1894.

Count Ito has just arrived here from the capital, to which urgent official business called him about a fortnight ago. The sudden journey undertaken by the Premier gave rise to various surmises and rumours, both here and in the metropolis. It was conjectured by some that his return to the capital was necessitated by the proposal of certain foreign Powers to mediate between Japan and China; while, in the opinion of others, the cause was to be sought in his desire to consult his colleagues about the measures to be submitted to the Diet in the coming session. Yet another supposition was that his object was to effect an understanding with the various political parties as to the basis of peace with China. I am not at liberty to divulge the true nature of the business that engaged the Count's attention during his brief stay in Tokyo, but I may safely state that it had nothing to do with mediation. Even supposing that a certain Western country should undertake to convey to Japan the terms upon which China is desirous of terminating the war, it is not conceivable that this Empire would consent to talk of peace except at a meeting of plenipotentiaries duly appointed by the two countries.

The question as to the conditions of peace is now a principal topic of conversation and discussion. Not that the Japanese are particularly desirous of a speedy termination of hostilities, or that proposals for peace have been made by China. But the problem has occupied the attention of the nation from the very beginning of the present war. One of the first papers to discuss the subject was the *Kokumin Shimbun*, which, among other things, suggested that an indemnity of \$500,000,000 in gold should be demanded, and that the money thus realized should be used for introducing a gold standard into Japan. That view has not obtained any considerable support from other journals. Apart from a large money indemnity, China will have to surrender a portion of her territories. Some persons suggest the cession of Formosa; some, of the three Provinces, Kirin, Shinking, and Chili, and a few others advocate the absorption of the better half of the Chinese Empire. Various are the opinions of the Japanese on the subject, most persons seem agreed in thinking that the possession by Japan of Formosa and the Liautung peninsula is imperatively necessary for the maintenance of permanent peace in the East. The events of the war may necessitate the cession of even more land than the above, but in all probability the Japanese demands will not be more moderate than the basis just mentioned.

Viscount Torio, who returned from Korea a few days ago, is still staying here. He is now conversing with Count Ito. He seems to be in excellent spirits.

His Imperial Highness the Crown Prince left here this morning. During his short stay he was very busy visiting hospitals, inspecting barracks, and so forth. He evinced the most lively interest in everything he witnessed here, but especially in the military hospitals, where he gave presents to the officers and men under treatment.

Their Imperial Highnesses Princesses Komatsu and Kitashirakawa will leave here for the capital to-morrow. They paid particular attention to the Red Cross Hospital. In their latest visit to the hospital, they assisted the nurses in dressing the wounds of some patients. They are always accompanied by Marchioness Nabeshima, Countess Saigo, and Countess Oyama.

The troops are still staying here. The streets are full of them, but not a single instance of disorderly conduct has yet been reported. The soldiers from the north-eastern provinces are indeed noted for particular amenability to discipline. The same characteristic is exhibited by the coolies too. The latter must number several thousands, and under ordinary circumstances, their presence in the city would be felt in various disagreeable ways. But such is the strictness of the control exercised over them

by the military authorities that they have thus far given no just cause of complaint to the quiet inhabitants of this place. The only thing advanced against them is that their dialect is at times a little difficult to understand. I am informed that among the coolies now staying here there are not a few young men of respectable antecedents whose eagerness to see real fighting has induced them to follow the army in any capacity. I recently saw a large number of coolies exercising at fencing. Several were apparently very skilful in the use of the sword.

I have lately had several occasions to talk with the officers in command of the troops now quartered here. They are all enthusiastic to go to the front. Nothing gives them more uneasiness than the thought that the war may be brought to a close before they have an opportunity of meeting the enemy. I understand that they have made thorough preparations for operations during the winter months.

INSTRUCTIONS WITH REGARD TO PASSPORTS.

The *Asahi* says that Viscount Mutsu, Minister of State for Foreign Affairs, has issued the following instructions to the Chief of the Metropolitan Police with regard to passports granted to subjects or citizens of Treaty Powers desirous of travelling in the interior. In case a subject or citizen of a Treaty Power resident in this Empire applies, through the Minister or a Consul of his country, for a passport to travel in the interior, to the Foreign Department or to the Governor of the locality in which a treaty port is situated, he is entitled to receive, as already intimated in the letters forwarded on the 4th and 27th Sept. of the current year, a passport enabling him to travel in the interior for the period of one year. It is now further decided that, in case an *employé* of the Government or of a Japanese private individual, desires to travel in the interior on his own account, he need not obtain the endorsement of the Minister or Consul of his country, but shall be entitled to receive a passport so soon as his official chief, in case he is Government *employé*, applies on his behalf directly to the Foreign Department, or so soon as his employer, in case he is in private service, applies to the Governor of a locality in which a treaty port is situated, or to the Foreign Department, through the medium of the Governor of the locality where such foreigner is living. Since passports are to be issued in future, as above indicated, by the Governors of localities where treaty ports are situated, as well as by the Foreign Department, it becomes a matter of importance to exercise hereafter prompter control in the case of foreigners perpetrating offences in the interior. Not only should any act committed by a foreign traveller in contravention of the directions written on the back of the passport, be promptly dealt with by the Chief of Police, but also the particulars of the affair should be reported to the Foreign Minister. When the offence perpetrated is considered to be of a grave character, the Chief of Police should at once send a communication to the Governors of treaty ports for purposes of reference.

With regard to passports required when a Government *employé* is to be sent to the interior on his employer's business, the application should be sent to the Foreign Office as heretofore, but in the case of a private *employé* such application should be sent in through the medium of the local Governor.

A person who has totally lost the sense of hearing in one ear, although he may imagine that the defect is of little consequence, cannot locate the direction of a sound to save his life, even when the centre of disturbance is quite near him.

The Government of Saxony has adopted a novel method securing the payment of taxes. The names of persons who did not pay their taxes last year are printed and hung up in all the restaurants and inns. The proprietors dare not serve those mentioned on the lists with food or drink under penalty of losing their licenses.

MR. TAGUCHI ON FOREIGN AND DOMESTIC LOANS.

Mr. Taguchi, M.P., Editor of the *Keisai Zasshi*, is one of those who hold that Japan need not, at this juncture, have recourse to a foreign loan, and that her people can well afford to furnish the war expenses up to a certain point. At the last meeting of the Tokyo Industrial and Commercial Society, held in the Imperial Hotel on the 10th inst., Messrs Sonoda, President of the Specie Bank, and Taguchi were asked to state their views on the financial problem of the day, namely, the floating of a war loan, the former as an advocate of a foreign, and the latter, of a domestic loan. We have already epitomised Mr. Sonoda's speech in these columns and shall now do the same with that of the eminent economist. Mr. Taguchi bases his theory on two points, firstly, the difficulty of procuring foreign capital at an interest under 5 per cent., and secondly, the condition of the Japanese money market, which he considers capable of standing a good deal. He arrives at the first conclusion on consideration of the fact that even Indian Bonds bear an interest of 3 per cent. in London. Therefore, any bonds that Japan might float would have to offer over 5 per cent. interest. Add to this the various charges which the Japanese Government would have to disburse to brokers and so forth, and any loan raised in a foreign market must prove costly to Japan. In order to explain his second theory, Mr. Taguchi refers to the financial history of the country as far back as 1877, when civil war broke out in Kyushu and deranged the national finances for years after. The Government strove strenuously to remedy this evil, and in 1886 paper money at last rose to par. Though the Japanese monetary system then became firmly established, it has passed through more than one vicissitude. The recent depreciation of silver affected the market. Its present inactivity is ascribable to that cause. But Japan is not a loser by this change. On the contrary, the depreciation of silver was followed by an increase in her exports, and in 1891 and 1892 her export trade was so active that about 25 million *yen* came into the country in those two years. One of the consequences of the importation of so much money into the country was a gradual divergence in the rates of interest in the capital and in the provinces, the former falling considerably below the latter. In the second half of 1893 the depreciation of silver became still more marked owing to financial changes in America and India, and the import of the white metal into this country was still further encouraged. Money must, under such circumstances, have become considerably cheaper. Mr. Taguchi could not give any precise information on that point, but he said that as the Pension Bonds which, a dozen years or so ago averaged 60 or 70 *yen* in price, were subsequently raised to about 100 *yen* by the Redemption Loan, and as the Bonds of 290 million *yen* held by the Government at that time were only worth 200 million *yen* if each Bond was calculated as 70 *yen*, capitalists gained a clear profit of about 100 million *yen* on that transaction alone. The profit that accrued to the country from the appreciation of the value of land was even more considerable. The registered price of all the taxable land is about 1,500 million *yen*, but while eight or nine years ago the actual price was only one-half of that, its present value is twice or at least one and a half times the registered value. In other words, Japanese agriculturists are the gainers by about 1,400 million *yen*. Mr. Taguchi therefore concludes that no particular harm would be done to the market if 100 million *yen* or so were to be withdrawn from it. That it would be affected to a certain extent admits of no denial, and the point on which bankers and financiers deliberate with the greatest care is how low the Bonds may with impunity be suffered to fall in price. Mr. Taguchi thinks that even if the 100 *yen* Redemption Loan Bonds were to fall to 95 *yen*, no special harm would be done. Of course, it is of great importance that Japan should take measures to minimize any evil that

might ensue from the withdrawal of a large sum from the market, and Mr. Taguchi has two suggestions to offer on that point. The first is the opening of relations by the Bank of Japan and the Specie Bank with leading foreign banks, in order to enable the country to avail itself of the use of cheap foreign capital. He thinks that with the credit enjoyed by the Government and the two Banks abroad, it would not be difficult to open such relations. Another plan is to abolish export duties in order to encourage the export trade of the country. With regard to the idea that the indemnity which Japan is to exact from China ought to be applied to the payment of the expenses incurred by this country in connection with the war, Mr. Taguchi's opinion differs widely. He says that although China taken as a whole is rich, it is almost impossible for the Chinese Government to pay a large indemnity to any foreign country with the present organization of its system. Japan should therefore be content with the cession of Chinese territory and should endeavour to compensate her losses by opening up the resources of the land thus obtained from China.

JAPANESE ADMINISTRATION IN THE ENEMY'S TERRITORY.

According to the reports of the war-correspondents of the native papers, the Administration Office established at An-tung appears to have a great deal of work to do. Besides Mr. Komura, *Chargé d'Affaires*, who is the head of the Office, there are three interpreters and six constables. The interpreters are at their desks from morning to night drawing up notifications for the people and hearing their grievances. The latter are mostly in connection with disputes or robbery. Mr. Komura is said to have told the correspondent of the *Hochi* that the inhabitants of the region where An-tung is situated are quite different from the indolent Koreans in their diligence in obtaining a livelihood, and that they are endowed with a self-denying and patient spirit. The Chinese Government having been indifferent as to the manner in which these people were ruled, Mr. Komura was resolved to extend to them beneficial administration. He said that on the first day of the opening of the Office, namely, on the 1st of November, 20 persons underwent registration, while next day 100 natives applied for the same process. They were all of the lower classes, the upper ones having sought refuge in remote places. By this time a considerable number of persons must have been registered. The Office of Pacification in Feng-hwang is similarly busy. As has been already stated in these columns, influential natives were appointed managers of the Office with several Japanese interpreters as advisers. Three Chinese merchants of local importance, Ngō, Li, and Liu, enjoy that honour. In less than a week's time after the Office was established, people flocked to it to state their complaints, and the number of persons brought to it under custody on charges of robbery does not fall short of 50 or 60 every day. The grievances submitted to the managers are chiefly traceable to the violence perpetrated by the Chinese soldiers, thefts by the natives themselves, injuries by the conflagrations caused by the Chinese troops as they fled northward, and the occupation of houses by Japanese soldiers. It is not an easy task to trace all the complaints to their real cause, as the complainants are not very scrupulous in their explanations, but usually ascribe their losses to the agency of the Japanese as a certain way to ensure redress.

To reach the North Pole, an architect, Mr. Hauin, has proposed to the Geographical Society of Paris the construction of wooden huts one or two days' journey apart. He considers Greenland the most favourable locality for an experiment of this kind. Each of the huts would become in its turn a base of supplies for the construction of the next. As the distance to be covered is about 900 miles, a score of huts would be necessary to establish a route to the Pole.

TRAIN-ROBBERY ON THE TOKAIDO LINE.

Another smart piece of police-work has to be recorded. A well-known foreign merchant of Yokohama was robbed of a valuable travelling bag and its contents while journeying by rail from Kobe to Yokohama this week. He left Kobe by the noon train on Tuesday, entering a first-class carriage in which a well-dressed elderly Japanese gentleman was sitting. Between Sannomiya and Osaka various people got in and out, and at Kyoto the foreigner was joined by another Yokohama resident. The bag was then safe among other packages belonging to both travellers. At Hōdogaya, just as daylight was breaking, the bag was discovered to be missing. There were several Japanese travelling in the carriage at the time and when they awoke all displayed lively concern on account of their own scattered possessions. The silver-fitted bag of the foreigner was alone missing, however. It contained three valuable diamond studs, a silver chronometer watch, a Russia leather pocket-book, several share certificates and receipted bills, besides other important documents. In the opinion of the travellers the bag must have been stolen after the train left Hikone and before reaching Suzukawa. Information was given to the police at Yokohama upon the train's arrival on Wednesday, and on Thursday afternoon they had the pleasure of restoring the stolen bag, minus only the silver watch, and this also they hope to recover. The quick recovery of the bag is deserving of all praise. Travellers by night on the through trains should take this case as a warning to confide their valuable luggage to the care of the guard.

BASBALL.

UNFORTUNATE ACCIDENT ON THE FIELD.

A team comprising members of the Cricket Club and a smart Japanese catcher met a nine composed of baseball players from various trans-Pacific schooners now in Yokohama on Wednesday afternoon, and a very interesting game resulted. Soon after play began an unfortunate accident happened to Mr. E. W. Tilden, White was batting at the time and struck at the ball. The ball glanced off the bat to the right and struck Tilden with much force upon the nose. Blood flowed profusely for a time. Dr. Stokes immediately took measures to staunch the outflow, and when Dr. Eldridge appeared upon the scene a few minutes later the unlucky player was helped off to the Pavilion. The wound he has received is particularly awkward and it is feared that the bones of the nose are broken in addition to the cartilages being split. A substitute was found to take the vacant place and the game proceeded, the Yokohama team winning a seven innings' game by four runs. The afternoon was warm and bright, with a little more glare than players quite relished. The following were the scores:—

Every one of the English Royal Princes wears a facsimile of his bride's wedding-ring.

A comparison of the gold and silver production twenty years ago with that of 1893 shows that the value of the gold produced in the world last year exceeded that of 1873 by nearly twelve million pounds, while the production of silver has increased in the like period by twenty-five million two hundred thousand pounds.

FIELD-MARSHAL OYAMA'S REQUISITION REGULATIONS.

FIELD-MARSHAL OYAMA, shortly after the debarkation of the Second Army in the Liau-tung peninsula, issued a body of regulations on the subject of Requisitions. We have already alluded briefly to the incident, but it deserves more extended reference. The Regulations do not, of course, touch transactions undertaken by mutual consent. Their purpose is simply to prevent abuses of the authority naturally possessed by invaders in a temporarily conquered territory. The general principle underlying them is that the peaceful inhabitants of an enemy's country must not be required to discharge any services other than those essential to the maintenance of the invading army or the promotion of its military capacity, and that all services rendered by the people under such Requisitions must be duly recompensed. This principle is translated into detailed instructions. It is provided, for example, that proper prices must be paid for any articles obtained by Requisition for the uses of the troops, the currency of the invaded country being employed as far as possible for the purpose, and Requisition Notes being substituted for coin when the latter is not immediately procurable. Further, due consideration must be given to the relative competence of the persons from whom articles are requisitioned, and it is laid down that the native fiscal officials shall, as far as possible, be employed for all purposes connected with the enforcement of Requisitions. We need not further analyse the regulations. They are so brief that our readers can acquire a knowledge of their provisions by a moment's perusal. The interesting feature of the affair is that it furnishes additional proof of Japan's resolve to conduct this war in accordance with the most civilized modern principles. In old times the idea of each belligerent was to inflict a maximum of indiscriminate injury upon the other. No distinction of military and civil was acknowledged. An invasion was a savage foray, far more terrible for the peaceful inhabitants of the invaded territory than for the soldiers engaged in its defence. History seems to indicate that the first departure from these barbarous methods was inaugurated in the treatment extended by Christians to Christians, though certainly no improvement was discernible in connection with the French invasions of Italy at the close of the fifteenth century, still less in the Thirty Years' War, or in the earlier campaigns of LOUIS XIV. To MARLBOROUGH and VILLARS is ascribed the honour of having introduced the more civilized principle that while a belligerent might levy contributions on the districts occupied by him, such contributions must be limited to amounts determined by commissioners of the two hostile parties. Yet

it was not until the eighteenth century that practical recognition was given to the method of providing for an army's subsistence by means of magazines and provision trains, and even on as recent an occasion as Great Britain's war of the American Revolution, it was declared right to demand provisions and raise contributions, and to enforce them, if necessary, by the sword; to ravage a territory when no other way existed of bringing an enemy to an engagement or to terms; and to treat all the inhabitants of the enemy's country as rebels. BONAPARTE'S methods were emphatically retrogressive. His rule was to make war pay for war, and his requisitions levied upon invaded countries were enormous. WELLINGTON, on the contrary, avoided such practices, and in response to some expression of impatience from the British Ministry, replied that requisitions, which needed terror and the bayonet for their enforcement, were unsuited to the temper and habits of the British soldier, and were more likely to injure than to benefit those resorting to them. It may fairly be claimed, we think, that the two great English captains, MARLBOROUGH and WELLINGTON, are distinguished in the pages of history as the chief exponents of civilized principles in belligerent practice. Above all, WELLINGTON'S procedure presaged the ethics now enunciated by international jurists, namely, that private persons remaining quiet and taking no part in the conflict, are to be unmolested; that their property is to remain uninjured, and that, although it may be requisitioned should the wants of the invading army dictate such a course, a fair price, assessed by authorized persons, must be paid for it. These are the principles that Marshal OYAMA has obeyed in drafting his regulations, and that Marshal YAMAGATA has steadily enforced in his Korean and Manchurian campaign. Their adoption is honourable to Japan, especially when we remember that she is fighting against a nation which acknowledges no rules of war; sanctions the murder and mutilation of prisoners; makes no provision for the treatment of an enemy's wounded, and exerts no resolute effort to restrain its troops from pillage and incendiarism even within its own territories. It should also be noted that the Japanese troops have successfully supported the severest test of discipline. Even under WELLINGTON'S command it was deemed impossible to curb the ferocity of soldiers after the storm of a town, and history has to record the frightful license practised at Ciudad Rodrigo, Badajoz, and St. Sebastian. There has been nothing of the kind in this campaign. It is true that policy would have counselled humanity so long as the Japanese were within Korean territory, but after they passed into Manchuria, and when they landed in the Liau-tung peninsula, no consideration of that

kind existed. In no instance, however, do we hear of any outrages committed by the soldiers. All these things, taken in conjunction with their treatment of the wounded Chinese, make up a record that does the country more honour than even its military and naval triumphs.

SURRENDER IN EMBRYO.

THE Japanese press has a great deal to say about the arrival of Messrs. DETRING and MICHIE in Kobe. Did we translate one of the articles appearing in the leading Tokyo journals on the 28th inst. our readers would learn the gist of them all. For they are virtually unanimous. But we need not translate. It will be sufficient to say that, if the press truly represents national sentiment, China, by this latest attempt, has postponed instead of accelerated the advent of peace. When the steamer carrying Messrs. DETRING and MICHIE entered Kobe harbour rumour said that among her passengers were three Chinese officials of high rank. The presence of such men would at least have imparted to the mission a hybrid character and saved it from the imputation of being totally un-Chinese. But it now appears that no such functionaries exist outside the imagination of newspaper reporters. The most important Chinese on board are members of the crew. It amounts then to this—in the eyes of the vernacular press at any rate—that China has sent two obliging foreigners on a kind of tour of enquiry. "China" we write, but is it China? Apparently not. Apparently it is the Viceroy Li. The Viceroy Li is a great Chinese satrap. Speaking boldly, it may be said that there is no man in the wide Chinese realm with whom Japan would more gladly confer on any subject demanding liberal and sagacious judgment. But for the purposes of a war waged on behalf of Korean independence no Chinese statesman is so ill-qualified as Li Chun-tang to play the part of a self-appointed negotiator. Under the vicious system that Japan has set herself to correct by force of arms, failing peaceful methods, Korea was an appanage of the province of Chili and the Viceroy Li was its virtual king. To his hands China entrusted the sole management of Korean affairs, and in accordance with his unchallenged dictates was exercised the perpetual interference that disfigured the Middle Kingdom's dealings with the peninsula. That the Viceroy Li, discredited by the taint of that obnoxious era, should take upon himself the task of closing the present war savours of reversion to the very conditions that Japan desires to abolish for ever. For the rest, who is the Viceroy Li? It is not against him that Japan has been fighting. It is against China. If indeed the EMPEROR of China has appointed the Viceroy Li plenipotentiary ambassador to sue for peace, and if

the Viceroy in that capacity has despatched two foreign friends to make preparations for his advent or even to convey to the Japanese Government an intimation that he desires to come, the affair becomes partially intelligible. But even then, what on earth is Mr. DETRING doing in Kobe? Why on earth has he presented his credentials, or whatever other document he carries, to the Governor of Hyogo? His method of procedure is inconsistent with the rôle of an ambassadorial forerunner and in any other capacity except that of a purely private individual, his coming to Japan is inconsistent with reason. That is what the Japanese journals are saying. Some of them say too that this is merely another of China's devious devices to avoid the exigencies of the situation. She is badly beaten, and she shrinks from getting any further blows, but instead of holding up her hands to pray forbearance, she thrusts forward a Commissioner of Customs to make vicarious supplication for her. More than once Japan has declined offers of mediation from great Powers. Is it likely that she will be better content with a foreign employé of the Chinese Government? There is no answer to such arguments so far as we can see. If the vernacular press is indignant, if it declares that China is playing with Japan, and that since she has not yet learned the lesson of defeat, the task of teaching her must be continued more resolutely than ever, we cannot wonder. The pity of it is that such men as Messrs. DETRING and MICHIE should be connected with such a fiasco. These are men who have never made a mistake in China's cause. Sagacious, clear-headed, and far-seeing, they have always been among her best friends, not in the sense of mere advocacy, but in that of helping her to rightly interpret her true interests. We cannot believe that the story is all told here. But neither may we attempt to conjecture any corollary. Frankly speaking, we know nothing more than the columns of our vernacular contemporaries have told us, but as this event is evidently designed to point to peace, it ought to be tenderly treated by every public writer. We venture therefore to suggest to the Tokyo journals that until they know more they had better speak less.

ONCE MORE THE "KOWSHING."

OF the three English newspapers published in Hongkong, two, the *Hongkong Daily Press* and the *China Mail*, have sympathised with Japan in many instances during the present war, and in all cases have shown a manifest desire to bring to their judgment of her quarrel with China the justice and fairness generally characteristic of the better class of English journals. In a recent issue the former newspaper re-opened the *Kowshing* ques-

tion, re-affirming its original verdict that the Japanese acted within their rights when they sunk the ship, and finding confirmation of that view in the despatches laid by Count ITO before the Imperial Diet in its recent session. One of those despatches—addressed by the Japanese Representative in Peking to the Tsung-li Yamén, under date of July 14th—declared that, in view of the course pursued by China, "the Imperial Japanese Government found themselves relieved of all responsibility for any eventuality that might in future arise out of the situation." The *Hongkong Daily Press*, regarding that despatch as "about as plain a warning as the terms of diplomatic politeness would permit," concludes that the sinking of the *Kowshing*, ten days later, can not be condemned on the ground that a state of war did not exist. That is certainly a view deserving full consideration. We see, however, that the *Kobe Herald*, traverses it very strongly, and even goes so far as to "animadvert on the strangely shallow and unfair attitude some of the journals published in the East have adopted since the outbreak of the war." Whether the arguments advanced by the *Hongkong Daily Press* deserve to be called "strangely shallow and unfair," it does not rest with us to determine. But we observe that neither our colonial contemporary nor its Kobe critic takes note of a most important fact, namely, that the *Kowshing* affair occurred several days after the Japanese Government had emphatically warned China that the despatch of any more Chinese troops to Korea would be regarded as a belligerent act. The sending of the *Kowshing* with 1,200 soldiers in the face of that solemn warning, was nothing short of a deliberate act of war on China's part, and if Japan, under such circumstances, was not justified in opposing the landing of the troops by every means in her power, the plainest declarations addressed by one Empire to another must be regarded as trivial and meaningless. We are not now referring to the procedure of the Japanese war-ship after she had reduced the *Kowshing* to a sinking condition. That is purely a question of humanity, having nothing whatever to do with the right of attacking the ship, which right alone we are here considering. In reply to the conclusive fact that Japan had announced her intention of regarding the further despatch of Chinese troops as an act of war, it has been urged that China was conventionally entitled to send troops, and that Japan, as a party to the convention, had no right whatever to interfere. But no convention over-rides all circumstances. So soon as reasonable doubt could no longer be entertained that the purpose of every Chinese soldier sent to Korea was to offer armed resistance to Japan in the peninsula, the Tientsin Convention ceased to have the smallest value

as binding Japan not to oppose the sending of such troops. That is a self-evident proposition. The facts stand thus:—China, having declared that an essential preliminary to any peaceful settlement was the withdrawal of Japan's troops, proceeded to send more troops of her own; China, having herself officially asserted that her original purpose in sending troops had ceased to exist, nevertheless continued to send troops; China, having been solemnly warned that if she sent any more troops, the act must be considered a declaration of War, deliberately sent more troops. Would any Power in the world have tamely permitted such doings, unless, indeed, it desired to become a laughing-stock among the nations? Whether Japan was right or whether Japan was wrong in her original undertaking to solve the Korean problem, is not the question. The question is whether, things having reached the stage here indicated, she was entitled to stop the landing of reinforcements for the Chinese Army in Korea. If she was not entitled, then the law of self-preservation may be ruled out of national codes. But apparently even those that condemn her do not deny her right. The *Kobe Herald*, for example, says:—"Under such circumstances it is unreasonable to assert that the *Naniwa Kan* should have confined herself to the act of compelling the *Kowshing* to return to Taku? * * * Common humanity might have been expected to dictate to the *Naniwa's* commander the propriety of sending the steamer back to her port of departure." It seems therefore that Japan was within her right in forcibly opposing the transport of Chinese troops. She might have compelled the *Kowshing* to return to China. She might, in short, have committed an unequivocal act of war—for what could be more conclusive than to intercept China's transports and deprive them of the right to navigate the high seas?—but she was not justified in using weapons of war. Humanity required that her warlike act should be performed without any recourse to warlike methods. Surely there is here a curious confusion between the dictates of humanity and the common customs of war. Surely, further, a very novel and unprecedented kind of procedure is dictated to Japan when she is told that, if she finds upon the sea a transport full of troops destined presently to fight against her own soldiers, she must contrive to send the ship and its living freight back again without hurting either the one or the other. Perhaps the world will ultimately come to conduct its combats in that limp fashion. But the time is not yet. What we would ask critics like the *Kobe Herald* to consider is this:—Suppose that now, when a state of war unquestionably exists, a Japanese cruiser were to encounter a ship carrying Chinese soldiers, what should the cruiser do? Should she send the transport and

the troops quietly back to China? We presume not. She should of course take the vessel and the men prisoners. But suppose that the troops mutinied, refused to surrender, and took the management of the transport into their own hands, what then? Would the cruiser be justified in using her guns? Of course she would. Why then did the *Naniwa's* use of her guns against the *Kowshing* constitute "a wholly unjustifiable act, an outrage and a blot on Japan's escutcheon?" If the critics agree to assert that a transport carrying troops ought never, under any circumstances, to be fired on by an enemy's man-of-war, then their position will be at least intelligible. But if they decline, as of course they must, to enunciate any such preposterous doctrine, then their condemnation of the *Kowshing* incident must rest upon the non-existence of a state of war, in which not the dictates of humanity but the cold tenets of international law are concerned. China had officially declared that her sole purpose in sending troops originally to Korea was to quell the Tong-hak insurrection. She had also officially declared that the Tong-hak insurrection no longer existed. She had also been officially warned that if, under the circumstances, she sent any more troops, Japan would accept the act as a declaration of hostility. Yet she sent troops. She sent them for the unmistakable purpose of fighting Japan, and of course a Japanese man-of-war, meeting them *en route*, regarded them and treated them as enemies.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

A CAUTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a short article in a recent edition of the *Mail*, entitled "An Impudent Charlatan," I find a statement that is liable to lead to wrong conclusions. The point you mention, as to the ignorance of a certain New York doctor, may be all very true, and I suppose it is or you would not have published it. But one case does not prove "the absence of any efficient and generally applicable system of medical registration in the United States of America," and I think that the statement is misleading. If an incident of the kind you mention occurred in New York State, it by no means follows that it might or would occur in others. It is true that we have no national law upon the subject, but that shows no carelessness in regard to it; as our Federal Government is only one of enumerated powers, and many important legislative rights were reserved by the States. As a matter of fact, the vast majority of the individual States not only have efficient and applicable systems of registration, but many of them have most rigid qualifications necessary to registration. In my own state, Virginia, no man is permitted to practise medicine until he presents a diploma from a regularly appointed State examining board composed of some of the most prominent physicians in the State. The examination is rigid, and no man can possibly avoid it if he practises medicine within State limits. No diplomas are accepted as evidence of qualification. Graduates of our best schools, like the University of Pennsylvania, with its seven years course, must pass that examination before they can be registered. Men possessing diplomas even from the great German Universities, that lead the world in medical science, must comply with this law. While the regula-

tions in most of the States are less rigid than this they are sufficiently rigid in ordinary cases to keep incompetent persons from practising medicine.

Yours respectfully,
Saga, November 20th, 1894.

THE "SYDNEY" ADVENTURERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In making allusion to the two adventurers who were taken from the *Sydney* by order of the Japanese government, the *Mail* has always designated them as "American citizens." As late as November 14th the *Mail*, in an Editorial article, speaks of "The two American citizens." Now as one of these two adventurers is not an American citizen at all, but a British subject, acknowledged to be one both by the Japanese government and the government of Great Britain, I think it hardly fair to accredit these two men to citizenship in the United States. The *Mail* can hardly excuse the mistake on the ground of ignorance, since I was told on excellent authority, open to any one, that one of these two men was a British subject, two days before the last editorial article appeared in the *Mail*.

It is indeed of little essential importance where these men claim citizenship. Adventurers exist in every country, ready to sell their services to a good bidder, but neither America nor any other country wishes to have a larger number of this kind of citizen inflicted upon it than is strictly necessary. In Japan, especially, there is some sensitiveness on these unessential points at this time of war. In this case, moreover the mistake of the *Mail* was flagrant, since not only was one of these men a British subject, but the other has spent probably three-fourths of his life as a subject of Great Britain.

AMERICAN.

[So far as we know, the men claimed American citizenship throughout. We are quite willing to regard them both as British subjects if to attribute them to the United States hurts any susceptibilities.—*En. T.M.*]

FIELD-MARSHAL OYAMA'S RECENT NOTIFICATION.

The Commander of the Second Army has issued the following general order with reference to Requisitions in the enemy's territories:—

Art. I.—Except in cases duly provided for in Field-Commissariat Regulations, a Requisition must not be enforced for the convenience of either a combatant or non-combatant attached to the Army. Provided that the procuring of an article by mutual consent shall not fall under this restriction.

Art. II.—The enforcement of a Requisition shall be limited to objects essential for the subsistence or lodgment of the troops, or to the discharge of fatigue duties, works of transport and organization of services for the transmission of messages. Should it be deemed necessary to requisition anything not here enumerated, the sanction of the Commander-in-chief must be obtained.

Art. III.—Requisitions of money should be limited to cases where, in consequence of the scarcity of objects to be requisitioned in a given district, it becomes necessary to procure them in some other district, or to cases where, owing to special conditions, the process of procuring articles by Requisition is considered impossible of speedy execution without paying ready money. In every case where a pecuniary requisition is to be carried out, the approval of the Commander-in-chief should be first obtained.

Art. IV.—The foregoing provisions shall not apply to cases where, with the view of procuring funds necessary for the discharge of administrative functions in a place occupied by the Army, a tax has to be levied, or where penalties have to be imposed upon people of the country for infractions of rules and ordinances proclaimed in the district.

Art. V.—No objection exists to the employment of inhabitants of the enemy's territories for purposes of transportation, or of construction of buildings, or of discharge of the functions of guides or other business; but they shall not be employed for works directly connected with warfare.

Art. VI.—When a Requisition is enforced, the cost, or charges, pertaining thereto should be paid, as far as possible in the currency of the land, at a rate deemed appropriate, though not necessarily so large as to obtain consent of the owners of the requisitioned articles. In case of a deficiency of local currency, the payment may be made with Japanese coins at the rate of 1.40 yen of silver to one taël of Chinese money.

Art. VII.—In case it is not possible to effect

payment at once, a Requisition Note of prescribed form should be issued. On such Requisition Note the official title and name of the commanding officer by whose orders the Requisition is made, must be inscribed and his stamp affixed; further, the kinds and quantities of requisitioned articles, their prices reckoned in local currency, the date and other details shall be clearly specified.

Art. VIII.—Copies of the Requisition Notes above mentioned shall be forwarded to the Commander-in-chief.

Art. IX.—When the inhabitants of the enemy's territories are required to supply articles in accordance with a Requisition, their respective competence to do so shall be duly considered. Moreover, native tax-collectors, regularly appointed to that post, should be employed as far as possible in enforcing requisitions.

Art. X.—In cases where persons that have supplied articles according to Requisition flee away, so that the payment of monies due to them under Requisition Notes is not possible, an announcement to that effect shall be placarded in suitable places, declaring that the said monies shall be handed to persons duly authorized to receive them and applying through competent local officers.

ENGLISH NEWS.

Members of Parliament, those at least with any powers of oratory, are worked harder during the recess than when parliament is sitting. It must be exceedingly difficult to find something fresh to say to each successive audience, when you have to address four or five a week on the political question of the hour. But they manage to do it somehow, and most of the speeches, especially those of Mr. Courtney and Mr. Chamberlain, are interesting. The Opposition is much more active than the Ministerialists, we suppose because it is usually easier to attack than to defend.

Speaking on the October 5th at Hassenford, in the Bodmin division of Cornwall, Mr. Courtney predicted that the Home Rule agitation would pass away under the just and impartial government of a united parliament. He made an amusing, if somewhat involved, application of the story about Solomon and the child claimed by two mothers. The main point was, of course, that the Gladstonian party was the false mother that was quite willing that the child should be divided into two parts. Mr. Courtney called Lord Rosebery an opportunist Premier, a bad name that is likely to stick.

Mr. Shaw Lefevre, speaking at a Gladstonian demonstration held on October 8th, at Louth, in Lincolnshire, said that he did not think a general election could now be very long postponed. Looking to the fact that in the previous administration the Liberals were constantly attacking their opponents for having kept Parliament together for five or six years, they would hardly be consistent if they did not maintain the principle that the duration of Parliament should not, at most, exceed four years so that it would be in touch with the constituencies. They must look forward, then, before much more than a year had passed, to an appeal to the country.

The question whether they should try to gain their ends by a union with the Liberal party, or by constituting themselves a separate entity in the next Parliament, is one that is dividing the Labour Party. Mr. Keir Hardie and Mr. Tom Mann hold the latter view, and have already constituted an "Independent Labour Party," to which allusion has more than once been made in these columns. In 1890, Mr. John Burns held the same view, but since then he has changed his mind, and in a speech made in Battersea on October 7th, he sharply criticised the tactics of the Independent Labour Party. Though his general views are socialistic, he is in favour of proceeding on trade union lines, and of making use of the existing party machinery. In other respects his speech, which was, on the whole, able and temperate, was chiefly a review of the proceedings of the recent Trades Union Congress at Norwich. He favourably criticized the composition and most of the decisions of that body, but said that there were two of its resolutions of which he was less in favour. As to the resolution relating to alien immigration, he could not understand how the Congress could declare for international action in social, economic, and political matters, and then turn round and show an insular intolerance and bigotry in relation to foreign workmen. The men who supported this resolution, in narrow, bigoted speeches, must choose the horse on which they were going to ride; for their speeches were incompatible with socialism, national or international. As to the prison-labour resolution, he would rather see the working classes enduring the honest competition of men

reclaimed from vice and crime, than see those men thrust back beyond reclamation. He knew the moral anguish and physical torture suffered in prisons for want of rational employment. After a certain date there should be certain specified trades in which prison labour should be allowed to engage, and if long enough notice were given, the competition need not be much feared. As a whole the Congress was more business-like than in former years. It secured a fusion of the old and the new unionism; an eight hours' day in all trades was finally settled; socialism was reaffirmed; the relations between coöperation and trade unionism were greatly improved; and the policy of the strike was considerably discounted.

On October 11th, Mr. Chamberlain delivered his annual address to his constituents in West Birmingham. He dealt mainly with social questions, foremost among which he placed social reform. He condemned the Local Veto Bill, and urged that the only safe way of solving the problem would be to take the control of the liquor trade into public hands with fair compensation to the publicans. He also advocated measures for improving the homes of the working classes, State loans to enable working men to own their own houses, old age pensions to deserving persons, and the establishment of courts of arbitration to deal with labour disputes.

On October 17th, in an address to his constituents at Bradford, Mr. Shaw Lefevre lustily blew the Ministerial trumpet. He said that the Government was now more firmly established in the confidence of its supporters than ever. He attributed that, first, to the steadfast manner in which members had stuck to their work and, secondly, to the great loyalty of the Liberal members in the House of Commons, and to the successful administration in the Departments. Again, also, the factious conduct of the Opposition had contributed to make the Government popular. As to the Liberal Unionists, with the exception of Mr. Chamberlain, they seemed to have become more devoted and strong Tories. Like mummies, they had lost their vitality many years ago, and were not to be expected again to germinate into Liberals. Mr. Chamberlain seemed to be possessed of the greatest agility. He would occasionally appear for a moment upon the house-tops of Socialism, but as a rule he was to be found in the back area of the Tories. With regard to the House of Lords, there had arisen a sense of humiliation, and a determination that an end should be put to its régime of obstruction. The result of the work of the Lords had been injurious to the interests of the country. The fact was that the House of Lords had long ceased to be an independent branch of the Legislature. It was a branch of the Tory caucus, and completely at the command of the Tory leader. What was to be done was to secure for legislation the same immunity from interference by the House of Lords as was the case in respect to finance and administration. His opinion was that the Government's duty during what remained to it of political life was to endeavour to carry out the promises made at the general election, to carry out the other parts of the Newcastle programme, and send them up to the House of Lords. If they accepted them, so much the better for the Liberals, and if not, so much the worse for the Lords.

On Sunday, October 7th, the third anniversary of Mr. Parnell's death was celebrated by a procession of his sympathisers through the streets of Dublin to Glasnevin cemetery. From all parts of Ireland contingents with hands arrived in special trains, and the procession when organized was of enormous proportions. Many floral tributes, some of great size, and designed in the shape of a harp or of a huge cross, were sent by Parnellite Associations, and these, with numerous wreaths, were conveyed on cars to the cemetery. No speeches were made, the men who composed the procession simply filling past the grave and then dispersing.

The thirty-fourth Church Congress was opened at Exeter on October 9th. The Bishop of Exeter, as President, delivered his inaugural address, reviewing the principal subjects that would be brought under the consideration of the meeting. He strongly advocated an increase of the episcopate, the efficient discharge of clerical duty, and the compulsory retirement of the superannuated and disabled clergy, and insisted on the necessity of religious teaching as a part of elementary education.

A terrible accident occurred on October 9th, at a level crossing near Canterbury. A waggon full of hop-pickers, about twenty in all, was crossing the line. It was one of those crossings at which no railway servant is kept, and wayfarers have to open and shut the gates for themselves. There was a dense mist, and therefore the driver of the waggon failed to see an approaching goods train until it was almost upon the cart. The cart was of

course dashed to pieces by the collision, and seven persons, including the driver of the vehicle, were killed, and eight others more or less seriously injured. At an inquest the jury returned a verdict to the effect that the deaths were purely accidental, and that no blame could be attached to the servants of the company. None to the servants of the company, certainly; but what about the company itself, which maintains these level crossings unguarded, to save the expense of paying a man to open and shut the gates?

An extraordinary accident occurred on October 11th, in Cawsand Bay, near Plymouth. The Bay is frequently used for the practice of the torpedo boats attached to H.M.S. *Defiance*, the torpedo training-ship. On this occasion a torpedo boat was practising with a 14 feet Whitehead torpedo. The motive power of Whitehead torpedoes is compressed air, contained in strong steel chambers, and the direction of the torpedo after it has been discharged is governed by an insulated electric wire. About noon a torpedo was discharged, and obeyed its steering gear until within about a dozen yards from the shore, when it came to a sudden stop. Almost immediately afterwards it resumed its course with redoubled speed, and the steering apparatus apparently becoming deranged, the torpedo dashed with great force upon the rocks, about 300 yards from Cawsand village. It ran up the outlying rocks, and seemed to make a spring into the air. The torpedo was not loaded with gun-cotton, as it would be in active warfare, but apparently an unloaded Whitehead is a sufficiently formidable engine of destruction, for as it fell upon the rocks a tremendous explosion, resembling the firing of the largest artillery, was heard. The air chamber of the torpedo was shattered into innumerable fragments, which were hurled to a great height and to long distances, some large pieces being found 400 yards away. There were a good many fishermen and others on the shore, including several children just dismissed from school, and several of them had very narrow escapes. Everywhere within 200 or 300 yards the fragments of the torpedo were scattered, one of them weighing 14lb. Fortunately, however, no one was injured, and the only serious consequence was the destruction of the torpedo itself. This is no trifle, for a Whitehead torpedo costs about £500.

News of the Jackson-Harmsworth Polar Expedition has been obtained from the Captain of the *Betsy*, a whaler sloop recently returned from her summer voyage to the Barents Sea. Returning west towards the end of August he met with a vessel in latitude 75° 45' N., and longitude 44° E., steaming in the direction of Franz Josef Land. The ice was brashy and rotten, and the vessel was steaming up a lead of which no termination northward was visible. The captain of the *Betsy*, though unable to distinguish the name of the ship, describes her accurately, and there is no reason to doubt that his report relates to the *Windward*.

A letter has been addressed to the Foreign Secretary by the Manchester Chamber of Commerce, urging that the existing uncertainty as to the future policy of Her Majesty's Government with reference to British East Africa is seriously threatening the prospects of British trade in that part of the world, and expressing an earnest hope that measures may promptly be taken to further the construction of a railway from Mombasa to the interior. Lord Kimberley has promised that the representations of the Chamber shall receive attention.

In a most extraordinary manner the regimental colours of the Second Battalion of the 24th Regiment, now the South Wales Borderers, which were lost on 22nd, January, 1879, when the 24th Regiment was surprised by the Zulus in the camp of Isandhlwana and nearly annihilated, have recently been recovered. A few days ago the flag was discovered in the possession of a French gentleman, the Baron St. George. Unaware of the interest attaching to it, he invited Lord Dillon, who happened to be in the French capital and who is a connoisseur in historical and artistic matters, to inspect it; Colonel Talbot, English military attaché also interested himself in its identity. Both these gentlemen, on arriving in London, took immediate steps to ascertain the history of the flag, in which they were assisted by Major Holden, of the Royal United Service Institution. Major Holden, from its description, pronounced it to be the missing regimental colours of the 2nd Battalion of the 24th Regiment, lost at Isandhlwana. Baron St. George has courteously handed the colours over to Colonel Talbot, and a relic, of interest not only to the Regiment, but to the whole country, has thus been restored. How the flag was preserved and found its way to Paris is a mystery of which it is not easy to find a solution.

The Tientsin Correspondent of *The Times*, who

was in Japan shortly after the outbreak of the war and then returned to China, wrote thus to that paper from Tientsin on August 27th. "Coming fresh from Japan, I am astounded at the aspect of China. The Celestial Empire in war time contrasts so completely with that of its hostile neighbour that one might imagine oneself in another planet. The silent, concentrated energy of the one country is like that of a great ocean steamship; imperceptible to the passengers, and the confused bustle of the other is like a colony of perturbed ants."

The following is an interesting example of the news with which the Chinese authorities are supplied. It is part of a statement made "by a prominent member of the Chinese Legation in London" to a press representative, on Oct. 13th. "The Japanese headquarters are at Ping-yang, which is a long way from the frontier of Korea, and I do not know that Japan has an outpost nearer to the Chinese frontier than Ping-yang. They have not at hand any available force that could with the smallest chance of success attack the large Chinese forces which are stationed on the northern bank of the Yalu River. The battle of Ping-yang was fought more than a month ago, and yet the Japanese have not made any material advance since." Yet at this very time, the First Army was resting on the southern bank of the Yalu river, and a week later the river was crossed and the Chinese were driven away in a disorderly rout.

The Central News gives the following extract from a letter received in London from a prominent British resident in Japan:—"We hear very little war news that is true, but I think all the foreigners here hope that the Japanese will get thoroughly beaten. I hope the war will soon be over either way. Our best servants have been called to the front, and had to leave at twelve hours' notice. Everything is very dear, both Japanese and European food being about double the former price. It is a shame to have revised the treaty in this secret way. It has been a very unpleasant surprise to everyone here. It seems that England gains nothing and yet sacrifices all the British people here. Of course the Japanese are well pleased, but the only change it has made so far is an anti-English feeling. The Japanese seem to think they have forced the revision upon England, and now can do anything else they wish. They even threaten us that the next 'crusade' shall be against England, as we need to be taught how to behave. They declare that if they get to Peking they intend to go on and take Hongkong. And this is the people to whom we have been sold! Fortunately, Fremantle, the British admiral, is a good man, and won't stand any nonsense, even from these so-called 'English of the East.'"

If this ill-tempered individual, whose judgment on such a question as that of a great war is determined by trifling domestic inconvenience, and whose powers of mendacity are hardly eclipsed by his scurrility, were indeed a typical Englishman, he might rest assured that the Japanese would regard it as a doubtful compliment to be called the "English of the East." Fortunately, in the East, as elsewhere, the majority of Englishmen are of a different type from this "prominent British resident in Japan."

HONGKONG NEWS.

Le Courrier d'Haiphong states that, if asked by China and Japan, "Lord Cleveland will be named as arbitrator!"

Mr. F. H. May's plesantry at Tytam, Hongkong, has not proved a success so far; more than half the birds have disappeared, and very few are to be seen on the peninsula. Two or three brace have been bagged.

This is how a Lahore baboo applied for leave to attend his mother's funeral:—"By the vicissitude of time my mother yesterday went to eternity, and as a rule, have to attend her funeral ceremonies."

Mr. Maurice William Ernest de Bunsen, the newly-appointed British *Chargé d'Affaires* for Siam arrived at Bangkok on the 6th inst. On reaching Bangkok the French Legation saluted him by dipping their flag, to which the *Rattler* replied. A similar greeting had been given at the British Legation.

The *Daily Press* is glad to hear that Mr. H. E. Allen, of the Hongkong Dispensary, has nearly recovered from the plague, and although still in hospital, is able to get about a little. He has had a most protracted and severe illness, and for a long time was almost despaired of.

Colonel N. P. Jensen, of the Danish army, who was asked some time ago on behalf of the King of Siam whether he would be willing to go to Siam and undertake the complete reorganisation of the Siamese army, has now, it is said, decided to accept the offer. He will leave Denmark for

Siam in January next. Colonel Jensen will take with him, among others, his son, who is a lieutenant in the Danish artillery.

A large new passenger steamer for the Peninsular and Oriental Steam Navigation Company was successfully launched from the yard of Messrs. Caird and Co., of Greenock, on 13th October. This steamer, which is named the *Simla*, is intended for their India, China, and Australia mail services. She has a gross register tonnage of nearly 6,000 tons, and besides having accommodation for 145 saloon passengers, has a large cargo capacity. She is expected to have a high rate of speed.

The *Siam Free Press* says.—Commander Cotesworth of H.M.S. *Rattler* has, a rather exciting adventure on the evening of Oct. 26th, when returning on board in the ship's dinghy. He had got alongside after three separate attempts at boarding the vessel against a tremendous ebb tide, when the boat capsized, throwing into the water the quartermaster. Fortunately Commander Cotesworth seized the man as he rose, and dragged him on the gangway. The force of the tide may be judged from the fact that the quartermaster appeared, like Brian O'Lyinn, without his breeches, that necessary garment having been carried away by the rushing waters.

The new P. and O. steamer *Caledonia* has made a record run from England to Bombay, and has more than justified the high opinion formed of her in England. She left London on the 4th October and arrived in Bombay on the 26th, thus making the trip within the twenty-two days, in spite of the loss of thirteen hours. The *Caledonia* steamed easily in the first stage of the trip, and the thirteen hours were lost on this side of B. Indis. The mails and passengers leaving London on the evening of the 12th October have done the trip in thirteen days and seven hours! The *Caledonia* has thus established a clear record.

The Italian cruiser *Unbria* arrived at Colombo on the 8th instant, in charge of Captain Bertolini, from Spezza. She is a steel cruiser launched in 1891, and has 262 men on board. Her dimensions are:—Length, 263 feet; breadth, 39.5 feet; and depth, 15 feet. Her registered tonnage is 2,400 tons, while her coal capacity is 450 tons. Her indicated horse-power is 6,500, and she has on board 4 6-inch quick-firing guns, 6 4½-inch quick-firing guns; 1 3-inch gun; 8 6 pounders, 8 machine guns, and 2 torpedo launching tubes. She was to leave Colombo on the 10th instant for China.

On the 15th instant a party consisting of 14 or 15 young sporting "blobs" from Macao went over to Chin-san, a neighbouring village, for snipe shooting and met with a rather unpleasant adventure on their return which may cause some trouble between the Portuguese and Chinese authorities. On their return about 6 p.m. the natives of Chin-san mistook them for a party of Japanese and began pelting them in Chinese fashion with mud and stones. One of the shooting party very imprudently opened fire upon the natives, upon which the ever ready cry of "ta" was raised. About two hundred natives responded, and the "sports" seeing the turn of affairs hurriedly stepped into the craft when one of them was knocked overboard by a brick hurled at him by the enemy. On this the whole party opened fire with No. 8 shot, and before half a dozen rounds were fired the natives took to their heels and contented themselves with abusive language from a safe distance. The "sports" returned to Macao about 8 p.m., and immediately reported the matter to the Portuguese authorities.

The French cruiser *Isly* (Captain-Lieut. Rivet) arrived at Singapore on the 15th inst, from Brest which port she left on the 9th ultimo. Her registered tonnage is 4,380, and her gross tonnage 4,200. Her length is 554 ft., her breadth 42'6 ft., and her depth 19'2 ft. In the matter of guns she is well equipped, for she carries four 6½ in. 5-ton guns; six 5½ in. 3-ton guns; six quick-firing guns; and 6 machine guns; besides which she also carries four torpedo tubes. Her indicated horse-power is 8,000, while she is capable of accomplishing a speed of 18 knots per hour. She possesses a coal capacity of 880 tons. She is taking a supply of war materials for the ships of the French squadron in the Far East.

All the Far Eastern friends of Captain Angus MacLeod, formerly of H.M.S. *Pallas*, will be glad to know, says the *Singapore Free Press* that in a very short time that popular officer will be once more in this part of the world. In a private note Capt. MacLeod mentions that he has been offered and has accepted the command of H.M.S. *Gibraltar*, first-class cruiser, for temporary service (including relief crew work) upon the China Station. He dates from Southsea, 18th Oct., and says:—"We commission in a few days' time and will probably not be long running out." This

appointment will no doubt be extremely satisfactory to Capt. MacLeod as, apart from the pleasant and congenial nature of the special service, there has been so very brief an interval of half-pay since the paying of the *Pallas* on the 6th Sept. There is a certain fitness of things in Capt. MacLeod's return to his old station so quickly, while his interest and experience in all Eastern questions is fresh. The public of this Colony will remember that during the critical time in Siamese affairs in the summer of 1893, Captain MacLeod as senior Naval officer at Singapore had a heavy responsibility placed upon him in watching British interests in the Gulf of Siam.

His Majesty the King of Siam has at last been able to make a public appearance after his long and serious illness. The other day he drove out in his carriage and visited various Wats accompanied by the Crown Prince, and a large suite of Princes and nobles. There was a large gathering of Europeans and natives present who were all well pleased to see His Majesty's health so far restored.

THE "KING'S DAUGHTERS" CONCERT.

Once again the community is indebted to the young ladies of the Yokohama Circle of the King's Daughters and their friends for a most pleasant entertainment. Organised on November 25th, 1891, with a membership of ten, the Circle has gradually widened till now forty-two are on the rolls, of whom twenty-seven are active. As its membership increased the object set before the Circle at its inception gradually approached realisation, and now, at the close of the third year of its existence, a bed has been established at the Yokohama General Hospital thoroughly equipped and set apart for women or children. This bed will be maintained by the Circle in perpetuity. In an interesting synopsis printed with Monday evening's programme we gather some information as to the means employed to achieve this successful result. A Bazaar was held at Kiel's building on the 18th and 19th April, 1892; a Benefit was tendered by "Sequah" on the 26th September, 1892; a Kirmis was given at the Public Hall on the 14th December, 1892; a high tea and musical matinee was given at the Public Hall on October 7th, 1893; and a garden party was given in the Bluff Gardens on July 23rd, 1894. In each and all of these affairs the members worked most energetically and thoroughly deserved the success which attended their efforts. Monday evening's performance was a fitting culmination to the series of public entertainments we have just briefly recapitulated, and Mrs. Theodore Morris, the President, may be justly proud of her band of gentle maidens and the outcome of their philanthropic work. Most of the songs given in the course of the evening, dealing as they did with floral subjects, were illustrated with living flower screens, the centre of each flower being formed by the face of one of the King's Daughters. In this way the snow-drop, primrose, rose, pansy, marguerite, forget-me-not, sunflower, and a garden of flowers were pleasingly portrayed. It would be an invidious task to attempt a selection of the prettiest picture presented—all were so daintily charming. If we had any preference, however, we think that our choice would fall upon the "garden of flowers" which formed the background to the violin trio of the Misses Page. The melodious cadences of Lange's "Blumenlied"—exquisitely rendered by the gifted sisters—gained by association with the fresh young faces blooming behind the violinists. Before passing further we wish to congratulate Miss Thomas upon a most successful debut upon our local concert platform. We hope to have the pleasure of hearing her again in the near future.

Each portion of the programme on Monday evening concluded with a musical drill by members of the Circle. The first was called a "fantastic flower march" and was presented by twelve young ladies: Miss Hattie Thorn, Miss Ada Sale (Red); Miss Katie Page, Miss Addie Page (White); Miss Muriel Thomas, Miss Marion Sale (Blue); Miss Bella Goldard, Miss Lily Bourne, (Pink); Miss Maud Watson, Miss Annie Moss, (Yellow); Miss Nelly Rickett and Miss Edie Watson (Green). They were dressed in Kate Greenaway dresses, and each bore a staff adorned with flowers, while every head was garlanded in white flowers. The march—in the course of which the Maypole was plaited—was gone through with faultless precision, and so delighted the large audience that it had to be repeated. A "Flag Troop Drill" concluded the entertainment. In this piece twenty-one took part. They were, Miss

Hattie Thorn, Standard Bearer; Miss May Merriman, Miss Bessie Burns, Left Sentinels; Miss Francis Cameron, Miss Elsie Bennett, Right Sentinels; Troop—First File: Miss Ada Sale, Miss Katie Page, Miss Muriel Thomas, Miss Bella Goldard, Miss Nelly Rickett, Miss Edie Watson, Miss Mabel Moulton, Miss Jennie Loomis, Second File: Miss Marion Sale, Miss Addie Page, Miss Lily Bourne, Miss Maud Watson, Miss Pauline Brittan, Miss Annie Moss, Miss Lillian Sale, Miss Jennie Manley. The little troop were habited in red skirts with short dark blue Zouave jackets and patrol caps of the most natty shape. They bore banners on which was blazoned a silver Maltese Cross. As in the former drill, so in this, the movements were executed with great exactness and the picturesque groupings of the various figures evoked loud applause betokening hearty appreciation. Mrs. Manley, we may observe, played the marches, Mr. Beart manipulating the side drum. As the curtain rang down a loud demand was raised for Mrs. Morris, which was only appeased when that lady came on to the platform to bow her thanks. The accompaniments to the songs were played by Miss Amy Mendelson and Miss Laura Smith. The Town Band, which was in attendance, played during the intervals between the numbers. The following was the programme:—

PART I.

- 1.—Piano Duet, "Tarentelle".....RAFF.
Mrs. McNeill and Miss POOLE.
- 2.—Vocal Solo, "Voices of the Woods,"
RUBINSTEIN-WATSON.
Miss WEBB.
- 3.—Vocal Duet, "Pansy Song".....PINSUTI.
Mrs. WALTER and Mr. WALFORD.
- 4.—Vocal Solo, "Just like love is yonder rose,"
OLD ENG. SONG.
Miss THOMAS.

- 5.—Vocal Solo, "The Worker".....GOUNOD.
Mrs. WALTER.
- 6.—Fantastic Flower March, by TWELVE YOUNG LADIES.

PART II.

- 1.—Vocal Duet, "Autumn".....MENDELSSOHN.
Mrs. CAMPBELL and Miss RICE.
- 2.—Violin Trio, "Blumenlied".....LANGE.
Misses PAGE.
- 3.—Vocal Solo, "Marguerite".....
Miss RICE.
- 4.—Vocal Solo, "The Forget-me-not," VON SUPPH.
Mr. GOLDMAN.
- 5.—Vocal Duet, "The Sunflower"PINSUTI.
Mrs. WALTER and Mr. WALFORD.
- 6.—The Flag Troop Drill, by TWENTY-ONE YOUNG LADIES.

FOOTBALL.

OPENING OF THE SEASON.

The football season in Yokohama was inaugurated on Saturday afternoon, a very good game being played by sides captained respectively by Messrs. Pearson and Hall. The day was dull, and towards the close a slight drizzle set in. Notwithstanding, a very fair number of spectators were on the field, including, we were glad to see, several ladies. Much better form was shown than could reasonably have been expected in the first encounter of the autumn, while another bright augury for a successful season was the appearance among the teams of some new faces. Brackenbury, Forman, and Moss should prove acquisitions so soon as they get accustomed to the ground and local players. The last named is smart and very unselfish, passing freely yet with judicious discrimination. It was observed that Pearson's side showed much better passing than their opponents, and to this is due their victory—four goals to three—for the sides otherwise were very evenly balanced. Goals were kicked by Alcock, Mair, MacNeill, Campbell, Cabeldin, and P. Morris. Kenny did some smart work in goal. The following were the sides:—

MR. PEARSON'S TEAM.		MR. HALL'S TEAM.	
Mr. G. Brass	Backs	Mr. F. J. Hall	Backs
Mr. H. B. Pearson		Mr. H. Pinchney	
Mr. E. E. Campbell	Half-Backs	Mr. W. Y. Showler	Half-Backs
Mr. W. Moss		Mr. J. Brackenbury	
Mr. D. McNeill	Centre	Mr. P. Morris	Centre
Mr. G. Alcock		Mr. W. Cabeldin	
Mr. W. Young	Forwards Left	Mr. C. B. Forman	Forwards Left
Mr. H. R. Mair		Mr. E. Libaud	
Mr. H. Cornes	Right	Mr. G. Hickman	Right
Mr. F. E. White		Mr. W. J. Kenny	
	Goal		Goal

REVIEWS.

The Water Supply of Towns and the Construction of Waterworks, a Practical Treatise for the Use of Engineers and Students of Engineering. By W. K. BURTON, Assoc. Member Inst. C.E., Professor of Engineering in the Imperial University, Tokyo, Japan; Consulting Engineer to the Tokyo Waters, Engineer to the Sanitary Bureau, Home Department, Japan; to which is appended *A Paper on the Effects of Earthquakes on Waterworks*, by Professor JOHN MILNE, F.R.S. 1894. CROSBY, LOCKWOOD & SON, London.

It is impossible in the columns of this journal adequately to review so technical a work as Professor Burton's recently published volume on the Water Supply of Towns and the Construction of Waterworks, but, considering the importance of the book, we feel that it is necessary for us to give our readers some idea of its scope and aim. The volume is based on Professor Burton's own experience in the branch of Engineering of which it treats; frequent reference is of course made to the work of others in connexion with the same subject, and a praiseworthy feature in the book is the care and accuracy with which sources of extraneous information have been acknowledged. The author hopes that the work may prove useful as a reference to his brother engineers; but the requirements of students of engineering have been more especially considered; and in foot notes, for the sake of Japanese Students, matters have been inserted that have a special bearing on water supply and waterworks in Japan.

The introductory chapter deals shortly with the history of this branch of engineering, and its influence on the growth of towns. For instance it mentions how "the congeries of villages that now form London were at first isolated from one another, each being built over a patch of water-bearing gravel, and how the filling up of the interstices between them became possible only when some more general supply of water than that from wells in the gravel was provided." It would perhaps be unfair to expect from a specialist on water supply a regretful reference to the fact that the growth of the abominable poly-storeyed buildings that disfigure our large towns and shut the sunlight and fresh air out of their streets, has been rendered possible only by the development of modern methods of water supply under high pressure. Throughout the work, however, wherever opportunity is given, Mr. Burton enforces the doctrine that in considering water supply questions of private profit must be subordinated to those of municipal or collective advantage. Thus, in this introductory chapter he writes: "There should, in fact, in connexion with water supply, be much less consideration than there is of pounds, shillings, and pence, except in the matter of prevention of waste of water. The question should not be, 'How cheaply can we get a supply of water?' but, 'What is the very best supply of water that we can get at any price that it is practicable for us to pay?'"

The second chapter discusses the different qualities of water, how to take samples for examination, the self-purification of natural streams, common impurities in water, and degrees of purity. Mr. Burton advocates the saving of labour to the engineer by leaving the actual examination of water to the chemical and the bacteriological expert, and gives a well-founded caution against trusting too implicitly to the negative result of a chemical analysis. Because a water is free from signs of contamination at the time of examination, it does not follow that it is not open to contamination, and its freedom from this risk must be determined by other than chemical considerations. Amongst the dangerous qualities of water, the writer mentions water from paddy fields. We introduce this statement in order to ask whether English readers of the book are likely to know what a "paddy field" is. In England, where rice is not grown, there is no word for growing or unhulled rice, and we ourselves had never heard the word paddy before we came to the East. We were familiar with the fact that growing rice stands in water, and could have formed a fairly correct mental representation of a "rice field," but a "paddy field" would have been a mental blank. We should have sought instruction from an Irishman.

The third chapter deals with the quantity of water to be provided per head of the population. The writer suggests four cubic feet per head per day as an ample mean supply, but states that in America, where reckless waste of water seems to be even commoner than in England, at least double this quantity has to be provided. Chapter IV. tells us how to ascertain whether a proposed source of supply is sufficient. Chapter V. how to

estimate the storage capacity to be provided. Chapter VI. deals with the two different kinds of waterworks, gravitation works, and pumping works respectively; chapter VII. with impounding reservoirs; Chapter VIII. treats of earthwork dams; Chapter IX. of masonry dams; Chapter X. describes the purification of water by settlement and sand filtration, and by other means; and also discusses the methods of removing hardness from water; Chapter XI. describes the construction of settling reservoirs; Chapter XII. the process of sand filtration, and the cleaning of filter beds; Chapter XIII. treats more at length of other methods of purifying and softening water; Chapter XIV. of service reservoirs, water towers, and stand-pipes; Chapter XV. of the connexion of settling reservoirs, filter beds, and service reservoirs; Chapter XVI. of pumping machinery; Chapter XVII. of the flow of water in conduits and of pipes and open channels for the conveyance of water.

Chapter XVIII. deals with distribution systems, a matter which, as Mr. Burton rightly insists, is of the very first importance, especially in regard to the function of the extinction of fire. Intermittent service, he says in this connexion, may be looked on now as altogether a thing of the past. It ought to be, certainly, but the millennium has not yet come, even in the matter of water supply. Still, the constant supply system has been enormously expanded within recent years, and it is to be hoped, as Mr. Burton says, that before long no other will be permitted. We fully endorse his remarks on the abomination of cisterns, and we are from personal experience familiar with the astounding fact that "from what can only be called a sort of inveterate conservatism, it is quite common, in England at any rate, to find that, even where the constant service system has been introduced, the evil cistern-system is still retained." And our experience in sanitary inspection has made us familiar with horrors of the kind that Mr. Burton describes in a note. "If the writer could describe what he has seen," he says, "whilst making inspections of houses in London, he is pretty sure that no cistern would be allowed any more in any house in a civilized country." Dead rats are a trifle. He remembers once inspecting a house in which the cistern supplying drinking water was found to be situated under the floor of an attic used as a bedroom. This was in the house of a famous London physician! It was not at all uncommon to find cisterns in such positions that, on the washing water must inevitably enter them." When such are the joys of civilization, one cannot help regretting that one is not a prehistoric man.

In Chapter XIX. is considered the subject of special provision for the extinction of fires. Chapter XX. is an exhaustive discussion of the subject of pipes. Chapter XXI. deals with the subject of water waste prevention. On the whole, Mr. Burton is in favour of the sale of water by meter, notwithstanding the serious objection that has been urged that it would lead to parsimony in the use of water, and hence to insanitary conditions. To this it is replied that experience shows that, as a matter of fact, no such stinting takes place; and it is suggested as a compromise that for a reasonable mean daily supply the rate charged should be exceedingly low, while a high rate should be charged for all water supplied in excess of this requirement. It is certain that with a constant supply some method is needed to prevent the appalling waste of water that would otherwise go on unchecked. Some householders leave taps running from sheer carelessness; others, in winter in cold climates, to keep the water from freezing in the pipes; and yet others, from the extraordinary delusion that a running half-inch tap is a fine sanitary method of flushing a six inch drain. If such persons had to pay for their carelessness or their mistakes, they would not allow sufficient water to supply, say, a thousand persons to run to waste every day.

The last chapter deals with various appliances used in connexion with water works—sluice valves, air valves, safety valves, stand posts, drinking fountains, and apparatus for boring and tapping pipes containing water under pressure. We are somewhat surprised at the omission of a chapter on taps, ball valves, and syphon flushes, for the subject is one of equal importance and difficulty; but we suppose the reason is that a description of these apparatus would lead to the examination of the claims of competing firms of manufacturers, and it would be difficult for such a chapter to avoid partaking of the nature of a gratuitous advertisement. We are glad to note that in a casual reference to the flushing of closets, Mr. Burton protests against the tyranny of the two gallon flush. Two gallons may be enough (even with the most improved appliances it is often not enough) to flush the closet, but this small quantity of water is not sufficient to fulfil the very purpose of the flush, which is to clear out

the house drain right down to the sewer, however far off that may be.

Want of space forbids more than passing reference to the valuable "Considerations concerning the probable effects of earthquakes on waterworks, and the special precautions to be taken in earthquake countries," by Professor Milne, and to the interesting notes and criticisms, chiefly on chemical topics, contributed by Professor Divers. These are printed as appendices. In conclusion, we wish to express our admiration of the manner in which the book has been produced. It is a handsome volume in large, clear type, and contains over two hundred and fifty admirably printed figures, plates, and diagrams. Its style is lucid, and in spite of the dryness of the subject, the book is throughout interesting reading. It is in every way a credit to its author, and we congratulate him on its production.

Glimpse of Unfamiliar Japan, Two Vols., by LAFRADIO HEARN. 1894: HOUGHTON, MIFFLIN & Co., Boston and New York.

A WRITER in these columns said recently, speaking of Mr. Hearn's book, "It is a great pity that the value of the work is impaired by its one-sidedness and the bitter prejudices of the author against Christianity. He has pictured only the bright side of Japanese life." There is some justice in this criticism, for it is true that Mr. Hearn looks at Japan through rosier-tinted spectacles than it is given to most of us to wear, but as for "the bitter prejudices against Christianity," we have sought for them with care, and our search has been utterly vain. The critic probably referred to the following pregnant passage in Mr. Hearn's preface:—"That the critical spirit of modernized Japan is now indirectly aiding rather than opposing the efforts of foreign bigotry to destroy the simple, happy beliefs of the people, and substitute those cruel superstitions which the West has long intellectually outgrown—the fancies of an unforgiving God and an everlasting hell—is surely to be regretted. More than a hundred and sixty years ago Kaempfer wrote of the Japanese: 'In the practice of virtue, in purity of life and outward devotion, they far out-do the Christians.' And except where native morals have suffered by foreign contamination, as in the open ports, these words are true of the Japanese to-day. My own conviction, and that of many impartial and more experienced observers of Japanese life, is that Japan has nothing whatever to gain by conversion to Christianity, either morally or otherwise, but very much to lose." And a few, a very few, references in the body of the book again manifest the writer's strong disapproval of missionary enterprise in Japan. But what right does that give the above-quoted critic to accuse Mr. Hearn of prejudice in the matter. Does he think it impossible for a man impartially to examine such a question as this, and to arrive at conclusions that differ from his own? There is ample evidence in the book that Mr. Hearn's views in this matter are the result of careful observation and unbiassed consideration. Many may dissent from the conclusion at which he arrives, but the charge of prejudice assuredly lies against him who refuses to allow that all questions of this character, even the merits of Christianity, lie open to discussion.

It is true that Mr. Hearn looks chiefly at the sunny side of Japanese life; he even goes so far as to say that the darker side is brightness compared with the darker side of Western existence, but this is a matter of temperament, not of prejudice. There are three moods in which the aspects of an alien civilization may be contemplated. The first is that of the scientific investigator, the man who, like Thomas Gradgrind, says, "Now, what I want is facts." "What do these people make and how do they make it, and what profit do they get by making it?" This and similar tangible characteristics of the people form the material of which he is in search. The second mood is less amiable. It resembles that of the collier long ago depicted by John Leech. He is walking with a fellow workman, when a man with an unfamiliar face and dressed in unfamiliar clothing appears upon the scene. "Oo's that, Bill?" says our collier to his mate. "A stranger," replies the other. "Well, 'eave 'arf a brick at 'im then." This is the attitude of many of us towards the foreigner; it has, we regret to say, been generally considered by other nations to be especially characteristic of the unregenerate Briton. We are unfamiliar with the foreigner's dress, his manners, his mode of thought. Allow natural dislike to anything that is unfamiliar, anything that it would trouble our poor weak brains to try to understand, anything that gives us what was so aptly called by Bagehot "the agony of a new idea," is aroused, and we stoop instinctively for a brickbat. So inveterate is this propensity in a few unfortunately constituted individuals, that,

difficult as it may be to credit the fact, persons have been known to live for ten, twenty, or thirty years in a foreign country without from first to last making the smallest effort to understand and sympathise with the genius of those among whom their lot was cast. To the very end their attitude remained one of misunderstanding and unreasoning dislike. The third mood, and it is one that is above all needed by the foreigner who would know Japan, is essentially the mood in which we contemplate a work of art, a mood as remote from that of the ignorant and hostile critic as it is from that of the purely scientific investigator. Just as in contemplating a picture we strive, however inadequately, to feel as the painter felt when he was transferring it from his imagination to the canvas; just as in reading a poem we endeavour, however imperfectly, to rise to a spiritual union with the poet; just as in listening to an orator we allow all the springs of our being to be dominated by the magic of the sound, so he that would know a nation like the Japanese must for the nonce forget his own individuality, must divest himself of all his fixed and national modes of thought, and must, by the exercise of a rare sympathy, imbue himself with the national characteristics, identify himself with the thoughts and interests, of those whom he wishes to understand. That is what Mr. Hearn has endeavoured to do, and, combining with the temperament of the artist a mind singularly free from prejudices and preconceptions, his strong powers of sympathy have enabled him to do it with almost unparalleled success.

For what Mr. Mitford wrote more than twenty years ago, in the introduction to his "Tales of Old Japan" (the passage is quoted by Mr. Hearn in his preface), remains almost as true to-day as it was when it was first penned: "The books which have been written of late years about Japan have either been compiled from official records, or have contained the sketchy impressions of passing travellers. Of the inner life of the Japanese the world at large knows but little: their religion, their superstitions, their ways of thought, the hidden springs by which they move,—all these are as yet mysteries." Since Mr. Mitford's day we have had much profound and useful scientific investigation, we have had a host of books containing the "sketchy impressions of passing travellers," we have had a considerable quantity of ignorant abuse; but of serious attempts to present to the foreign reader the hidden currents of Japanese life there have been but few, and certainly none more earnest and successful than "Glimpses of Unfamiliar Japan." We commend it to visitors to Japan who are anxious in a short stay to learn as much as possible of the spirit of the people; we commend it to those at home who, unable to come to Japan, wish to know something more about the Japanese than they can learn from the impressionist works of the tourist; and, lastly, we think that there are few residents that will not find much to interest them in its pages. To residents especially we commend the profoundly philosophical chapter on "The Japanese Smile."

We had intended to quote several passages, but this review has already grown to such a length that our selections must be brief. We should like to quote entire the chapter on *Shinju*, that most pathetic of Japanese customs, the double suicide of hopeless love. Our readers may remember a touching story of this kind, "The Red Bridal," contributed by Mr. Hearn to the *Atlantic Monthly*, and reproduced in these columns a few months ago. The idea is not altogether unknown in the West; Edgar Poe makes it the subject of one of his weird stories—"The Assigination;" but in Japan this is one of the commonest motives for suicide. Mr. Hearn tells us that these cases are common because the lovers believe that by dying together they will find themselves at once reunited in another world, notwithstanding the fact that according to Buddhist canons self-destruction is a deadly sin. But this sweet, sad thought, "Since we cannot live together, let us die together," makes its strong appeal to those also who think that death is death indeed.

One strange legend of Izumo we must allow ourselves to quote before we conclude, a beautiful illustration of the Buddhist belief in transmigration of the soul:—

"Once there lived in the Izumo village called *Mochidano-ura* a peasant who was so poor that he was afraid to have children. And each time that his wife bore him a child he cast it into the river, and pretended that it had been born dead. Sometimes it was a son, sometimes a daughter; but always the infant was thrown into the river at night. Six were murdered thus.

"But, as the years passed, the peasant found himself more prosperous. He had been able to purchase land and to lay by money. And at last his wife bore him a seventh child—a boy.

"Then the man said: 'Now we can support a child, and we shall need a son to aid us when we are old. And this boy is beautiful. So we will bring him up.'

"And the infant thrived; and each day the hard peasant wondered more at his own heart—for each day he knew that he loved his son more.

"One summer's night he walked out into his garden, carrying his child in his arms. The little one was five months old.

"And the night was so beautiful, with its great moon, that the peasant cried out—

"*Da! kon ya medasurashi e yo da!* [Ah! to-night truly a wondrously beautiful night is!]

"Then the infant, looking up into his face, and speaking the speech of a man, said—

"Why, father! the last time you threw me away the night was just like this, and the moon looked just the same, did it not?"

"And thereafter the child remained as other children of the same age, and spoke no word.

"The peasant became a monk."

A DAY'S EXCURSION.

If in search of an interesting excursion in the suburbs of Kyoto, one would do well to spend a bright day in mid-November when all nature is pervaded with the mellowing influences of dying foliage, in a trip by *kyurama* to the town of Yawata. Proceeding through the heart of the city, we pass the extensive grounds of *Honkoku-ji*, Nichiren's first monastery and now one of the greatest of the *Hokkei* sect, then along the magnificent property of the *Nishi Hongan-ji*, a powerful and wealthy centre of the *Shin* sect, whose theological seminary is seen on the left in passing down *Omiya-dori*.

At the south-western outskirts of the city we come to the spacious site of *Tofu*, an important temple of the *Shingon* sect, with a *go-in no to*, the only fine pagoda in Kyoto and the one so conspicuous, on the right, from the train approaching the station from the south. The canon saint is the celebrated *Kōbō Daishi*, who, Enoch-like, was translated into *nehan* or nirvana at Mount Koya, the *hongan* of the sect.

From this point the road leads at once into the country, crossing the *Kamogawa* and extending along its eastern bank, affording a varied scene of beauty; the eastern and western mountains veiled in soft blue light, furnish a fitting frame for the picture of a broad expanse of golden fields of rice, dotted here and there by villages, with the *Ujigawa* from Lake Biwa, winding through the plain. The western mountains shut in closer to the *Kamogawa*, whose waters are repeatedly in view, while our course follows the dyke, lined in stretches by lofty deciduous trees, and traverses several villages before reaching the old castle town of Yodo, where the broad, dark green current of the *Ujigawa* is spanned by a fine bridge; thence it leads through the town, along the dyke, until it turns abruptly across the fields in the direction of a small range of hills rising from the plain and running a short distance westward to the river; soon we cross the wide, sandy reach of the *Kisogawa's* shallow bed and our destination is at hand.

In this ride we have been in the region of several large rivers all combining in the immediate neighbourhood of Yodo to form the great *Osaka* river, which, in the average and constant volume of water debouched into *Osaka Bay*, is probably not exceeded by any river in the empire. The *ochi-ai* or confluence of the *Kamo* and *Katsura* rivers is seen at a village above Yodo, that of the resultant river with the *Uji* is noticed just below the *Yodo-bashi*, and not far down stream the *Kiso* swells the broad, deep current which sweeps onward to *Osaka*.

The route has taken us through *Toba-mura*, of historic interest, ancient and modern. In a native guide book at hand, is found a harrowing scene of the battle of *Toba* with accompanying description of the struggle there at the Restoration in 1868. But of more interest is the tale of ancient days. Here stands the *Koi-suka*, a monument at the grave of *Kesa Gozen*, the faithful and beautiful young wife of *Minamoto-no-Watanabe*, whom he betrothed at the age of fourteen; for her *Endo Morito*, enamoured of her surpassing beauty, had conceived a burning passion. Her wedded life went on happily until her seventeenth year, when *Endo* could endure no longer, and went to *Kesa's* home. Now her father's name was *Koromogawa*, and he had died in her infancy, leaving his wife to manage the household affairs, and rear the children. Accordingly *Endo* presented himself to the mother, with sword in hand, avowing she was his enemy and that he had come to kill her; in surprise the mother begged him to defer his due deed and vouchsafe an explanation of his accusation; and this he did, saying he had long passionately loved

her daughter, but she had given her to another, and now he was bent on murder unless she gave *Kesa* to him. In sore perplexity the mother invited *Endo* to meet her daughter that evening. At the meeting *Endo* asked *Kesa* to come to him; she replied in feigned and conditional compliance, "if you want me, you must kill my husband," and then and there the plot was laid for the deed that very midnight. *Kesa* proposed to return to her husband's house and arrange that *Endo* might kill him in his sleep; she would wash his hair before he retired—men wore their hair long then—and by the moist hair the murderer would recognize his victim; so she wetted her own hair and retired to the fatal bed near the door, where, as she anticipated, she became the victim of *Endo's* sword. The following day the deed with its author became known, but *Minamoto* refrained from wreaking vengeance on the destroyer of his home and happiness; however, he mourned exceedingly the loss of his beautiful young wife, took the tonsure, and retired to monastic life.

Endo repenting bitterly of his foul deed, retired to *Kishu*, where at *Nachi-no-taki* his spent his days in *gyo*, doing penance for his sins; he likewise assumed the tonsure and entered a monastery under the title of *Monkaku-shōnin*. Such is the story of the *Koi-suka* or "Monument to Love."

En passant it may be observed that *Nachi* is the highest fall in Japan, compassing a distance of eight hundred feet, and said to be visible from steamers bound from *Kobe* to *Yokohama*.

At *Yawata* we dismount at the massive granite *torii* of *Hachiman-gu*, a *Shinto* temple on the summit of the hill, with two beautiful approaches up the hillside, meeting on a plateau, where a magnificent sight presents itself to the east across the golden plain of waving rice, flecked ever and anon with water shimmering in the sun, to the blue mountains beyond. By one approach we pass the *Iwashimizu*, or roofed "Well of the Pure Rock Water," with a shrine beside it, much visited by zealous devotees. Above the plateau we mount a short flight of steps to the spacious, picturesque temple enclosure; near the entrance stand two tall *tsubaki*—one, a red, the other, a white, camelia, whose blossoms make the trees a scene of beauty and whose petals strew the earth; maples, too, with their delicate leaves in gorgeous tints, and cherries, whose scarlet leaves almost rival the former, are seen here and there; nor must giant cryptomerias be overlooked, especially one which might pass for the parent of them all. A large flock of doves, the favourite bird of *Ōjima-ten-no*, were sporting about, inviting the visitor to throw them rice and thus increase the priestly revenue.

The temple is a large one, surrounded by a railled *engawa*, with an *uguisu bori* or "nightingale-floor," which emits a musical sound to the tread. We presented ourselves at the office where priests were entertaining guests on the *tsutsumi* and where an aged *kannushi* presided at the sale-stand, on which were *kakemono*, *mamori*, *o-fuda*, *semmas*, and arrows minus the barbs. For a trifle we purchase a specimen of each article, and seek for information about them and the temple. Of the articles on sale there are different grades according to the length of one's purse, so that the poorest pilgrim need not depart without securing his charm or memento. The *kakemono* contains simply the large black ideographs on white for "Hachiman-gu," the *Shinto* god of war which is the canonical name of the apotheosized Emperor *Ōjima-no-sama* who reigned A.D. 270-310 and was son of the renowned warrior Empress *Jingo Kōgo*, of Korean invasion fame. The prominence of doves at shrines dedicated to his worship is shown, among other things, by the fact that the first ideograph on the *kakemono*—that familiar one for the numeral *hachi*—is formed in imitation of the bodies of two doves facing each other in such an attitude as to resemble the Chinese character.

The *o-fuda* are sold as the representatives of the *kami* or god of the shrine, and are placed in private shrines or on the *kami-dana* in the house, where worship may be rendered in lieu of going to the temple. The *joto o-fuda* is a box made of the *kiri* tree some 4' x 2' x 3' in dimensions, all sealed up, containing some substance unknown to the writer. On the upper side in black characters are the words: "Ōtoko Yama Hachiman-gu," or the Shrine of *Hachiman* at Mount *Otoko*, with a red *hoshi dama* and temple seal stamped over the characters.

The *mamori* are talismans sold to be worn on the person to afford protection or relief from loss, danger, pain, sickness, and the myriad ills of life; one was a charm for general purposes, consisting of a small packet of paper folded and tightly stuck, some two inches long by half an inch in width, enclosing some secret substance; on the back and face are ideographs and seals similar to those described above. Another *mamori* was similar, but

larger and somewhat different characters referring to its virtue to afford easy partition.

A small conical paper bag, pressed flat, contains a few grains of rice which have been offered in worship; this *sammas*, the aged priest informs us, may be eaten when you are sick and "drinking" medicine, to give it efficacy.

The arrow is the symbol of Hachiman, the god of war.

After our purchases, the white robed *kannushi* escorted us through the interior court entered by a large gate on the east, where the first object to which attention was called was the golden gutter, one end of which is visible on the east and the other on the west; made of gold, this costly trough is eighty feet long, three feet wide and over an inch in thickness; it is open to the incredulous to reserve judgment about its extending the entire width of the building, but such was the declaration. On the west side is seen a small apartment with an altar and *gohai*; here is worshipped Takenouchi-tokune, the famous prime-minister under Jingū Kōgo, and whose likeness we see on a recent issue of *yen satsu*—an old man with flowing white beard and wearing a cap. At the front we find three chapels dedicated to individual *Kami* and shut off from the court by a screen fence of closed lattice and open carved work. The carving is most varied and merits the closest attention; the pine, peony; fruit; the rabbit, turtle, mantis, crested wood-pecker, storks, ducks, doves; fishes; sun and moon; and on the panels before the central shrine, a pair of angels, are among the objects represented; on the gables of the colonnade between the office and these chapels, are carved *hōō* (phoenixes) on one side, and *kufuku* (peacocks) on the other.

Within the screen, *koma inu*, or stone dogs, guard the front of the chapels, of which the central one is naturally dedicated to *Ojin*-ten-no, now worshipped as the god Hachiman; that on the left, to *Hime O Kamé*, the god whom *Ojin* was wont to worship. The capitals of the pillars here have numerous carved doves, as well as gilded crests of *mitsu domoye* and *tachibana* arranged alternately; at the intersection of the timbers these are also found; many of the tiles are copper, and the cylindrical ones are capped with gilded discs bearing alternately these crests. On the gables of the colonnade are found the golden imperial crests, public and private, of the present day. In the midst of the pure white sand of the court on either side of the colonnade, stands a *tachibana*—a favourite Shinto shrub and one whose twigs are of frequent use as offerings set out in vases at the shrines.

Without, in the outer court, a series of subordinate shrines surround the main one, some of which, according to custom, are representatives of famous shrines elsewhere; for instance, one was entitled *Kibune-jinsha*, the name of an ancient and popular *miya* situated in a lonely valley at the base of Mt. Kurama, some seven miles north-west of Kyoto. In this way worshippers at the main shrine may adore the *kami* of other famous shrines at one and the same time, without journeying to the seat of these divinities; thus the subordinate shrines serve as advertisements and to deepen and extend popular reverence for the various deities.

Having done our sight-seeing on the outward trip, we make our way home directly, enjoying the landscape under the evening sun, and the wealth of red and golden tints in the sun-set sky viewed through the classic pines, as we ride past the Niijo Castle to our destination. SIGMA.

Frogs and toads are said to be of inestimable service to farmers and gardeners; each creature is estimated to devour every season fifty-seven times its own weight in insects.

A Reuter telegram from Calais says that an adventurous voyage across the Channel was made by Mr. Sayce, formerly an officer in the Army, who succeeded in effecting the passage last year in a small, curiously shaped boat of his own invention. He made the crossing recently in a canvas boat designed by himself, the buoyancy of the craft depending upon air bags. The chief object of the voyage was to test the relative merits of his boat and a model invented by a Dover gentleman. Both gentlemen, in their respective craft, left Dover at 9 o'clock in the morning, and Mr. Sayce arrived at Calais at a quarter past 7 in the evening, having thus taken 10½ hours in crossing the Straits. The other gentleman was compelled to abandon the attempt when five miles distant from the French coast. He was taken in tow by a passing vessel. Mr. Sayce appeared much fatigued. His boat had two oars and a small sail.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, November 2nd.

The November magazines are rich in articles treating of the Oriental war or of the nations concerned in it. Rev. W. E. Griffis, D.D., has an illustrated sketch of "American Relations with the Far East" in the *New England Magazine*; Kunia Oishi, Ph.D., tells "The Causes of the War in the East" in the *Arena*; the Japanese Minister discusses "The War in the Orient" in the *North American Review*, and in the same magazine, the Hon. H. A. Herbert, Secretary of the Navy, discusses "The Fight off the Yalu River"; while in the *Forum*, Col. T. H. Dodge, the military scholar and critic, treats of "The Eastern War and After: A Military Study." In the *Engineering Magazine*, J. Castile Hopkins writes on "The Land of the Mikado:—Its Marvellous Industrial Development"; in *Outing*, Henry T. Finck tells what he knows of "The Ainos of Japan" (illustrated); and Frank G. Carpenter describes "The Queen of Korea" (with illustrations), in *Demorest's Magazine*.

Washington, October 28st. Within the last few days heavy orders from Japan have been placed in New York for canvas duck, suitable for army tents and sails, and for leather and manufactured boots, suitable for military use. The orders have not come from the Japanese Government direct, but from merchants at Yokohama, who have taken contracts for army supplies. These orders are among the first, showing an increased demand for military and domestic goods such as usually follow a foreign war.

While your correspondent was out recently on a tour in Western Ohio in connection with the Missionary Extension movement of the Young People's Society of Christian Endeavour, he spent a very pleasant Sunday in Springfield, Ohio. That is the old home of Rev. Mr. Albrecht, of the Donshishu, Kyoto; and his old friends there, especially those in the First Congregational Church, are proud to have a "representative" in Japan. Miss Bing, of Nagasaki, has also been speaking in M. E. Churches in Western Ohio.

A "chrysanthemum show" opens to-morrow in Battery D, in this city, and continues through the 11th inst. There will be various competitions in several "classes"; and concerts (sacred music on Sundays) will add interest to the exhibition. There is, however, no mention made of attempted competition with Dangozaka.

Rev. A. P. Happer, D.D., LL.D., for forty-four years a missionary in Canton, China, died on October 27, at his home in Wooster, Ohio, after a brief illness.

Recent news from Hawaii states that the Royalists were planning for an outbreak on election day (Oct. 29); but it is not yet known how the day passed. Every nominee for Senator or Representative had been pledged to an annexation plank. An Englishman, Stanford Fleming, has been in Hawaii in the interests of a British cable company that proposes to lay a cable to Australia, and has been trying, but thus far in vain, to get some concessions from the Republic.

The following also may be of interest in Japan:

San Francisco, Cal., October 27. Advice from Honolulu says the orchards and fields of Hawaii are being devastated by an insect about the size of a ladybug. The natives believe it to be an involuntary importation from Japan and so call it the Japanese bug. The insect attacks the leaves, eating all the soft parts and leaving the fibre untouched. Shrubs and trees quickly die under the ravages from myriads of the destructive insect. The bug mysteriously disappears during the day, working only at night. The Hawaiians have so far been unable to procure an antidote for the pest.

Colonel Cienfuegos, the San Salvadorean refugee, has been released from confinement, and thus escapes extradition.

Honoré Mercier, ex-Premier of Canada, died in Montreal on the 30th ult.

Germany has retaliated upon this country for the abrogation of the reciprocity treaty by placing an embargo upon our beef. Fear of Texas fever is the reason assigned; but the officials of the Department of Agriculture say that the fever is not communicated by diseased cattle, is climatic, and peculiar to Texas. The embargo went into effect on Oct. 28. Acting Secretary Dabney, of the Department of Agriculture, has entered a vigorous protest, which, he hopes, will be successful in raising the embargo.

The political campaign is growing hotter as it nears a close. President Cleveland continues to maintain absolute silence with reference to the New York State election; but his intimate friends there are, most of them, working actively against Hill, who seems doomed to defeat. The disclosures of the Lexow investigation into the Tammany methods of corruption are very damaging to the Democracy of New York.

In this city the principal sensation thus far in the campaign has been the attempt of Mayor Hopkins to indict John R. Tanner, Chairman of the Republican State Central Committee, for libel on account of statements printed in a campaign circular.

The total registration in Chicago is 313,676, besides more than 30,000 are women. The total registration in New York City is only 308,401. Hence, by the usual standard of reckoning, Chicago, with an excess of more than 5,000 voters, must have an excess of more than 25,000 in population over New York City. *Quod erat demonstrandum!*

The Fine Arts Building at the World's Fair is being thoroughly treated inside and out with fire-proofing material, which, while not perfectly sure, will at least make combustion slow. Other improvements are to be made; so that it seems quite likely that Jackson Park will be the permanent site of the Field Columbian Museum.

On the 31st ult. the Chicago Academy of sciences formally opened a new building in Lincoln Park.

The following clipping shows one way in which Halloween was celebrated at Evanston, near Chicago, and also contains a reference to a gentleman who will be recognized as having been an active base-ball player in the Tokyo nine:—

Some students, out for a lark on Halloween, scattered broadcast throughout Evanston dodgers in red ink in mock advertisement of a free football game on University day between Northwestern and Lake Forest Universities. The circular was as follows:—

FROM! FROM! FROM!
Presy Henry Wade's Faculty
Vs.
Lake Forest
UNIVERSITY DAY,
Athletic Field.
No Player Will Be Allowed to
Play Without a Cap and Gown.

After due deliberation I have decided that Professors Sheppard, Connoick, and Young shall play on the bench as a punishment for supporting athletics heretofore, and that the features of the game shall be touchdowns by White and the slugging of Coe (professor of philosophy).

All students of Evanston departments shall be exempt from our game, excepting the Anti-Cribber's Association, which shall be justified in climbing over the horse gate under the guidance of Mr. and Mrs. "B.M." Fahs.

P.S.—All but the captain shall remove their hats at the training table.

Coulter, Referee. Wignom, Umpire.
Rogers, Capt. and Coach. Merrick, Timekeeper.

There is a reference to the recent discussions at the university concerning the cap and gowns, "Fahs" refers to one of the leaders in the anti-cribbing movement now at its height. "Conter, referee," means President J. M. Coulter, of Lake Forest University. "Rogers, captain and coach," is President Henry Wade Rogers, of Northwestern University. "Wignom, umpire," is Professor J. H. Wignom, of the law school, who started the whole discussion in favour of a free football game for university day; "Merrick, timekeeper," is George P. Merrick, President of the Chicago Alumni Association, upon whom President Rogers called time in the midst of his address on university day. In every line is a reference to some recent exciting event at the university.

The Inter-Seminary Missionary Alliance is meeting in its fifteenth annual session at Springfield, O. There are present 70 delegates who represent 35 theological seminaries of America.

The trustees of the Central Church of this city have decided to continue the organization; and will have various temporary supplies until a worthy successor of Prof. Swing is found. The same trustees, together with the members of Prof. Swing's family, have approved the plan for a memorial chapel at the University of Chicago.

Mrs. Mary A. Woodbridge, general corresponding secretary of the International Woman's Christian Temperance Union, died recently in this city.

The new president of the Lake Shore and Michigan Southern Railway Company is D. W. Caldwell, also president of the "Nickel Plate."

John S. Johnson, the famous cyclist, has made a mile in 1.35½, and has thus beaten by ½ of a second Salvador's record of 1.35½ for a running horse!

There have recently been so many train robberies in the Indian Territory, that the U.S. Government has been asked to assist the police in protecting citizens and railroads. Two of the men who robbed an express car at Aqua Creek in Virginia have been caught, and part of the booty has been recovered. Seven of Cook's gang have also been captured in the Indian Territory.

Recent casualties have been disastrous prairie fires in the sand-hill district of Nebraska, and the destruction of a boarding-house by dynamite, in the night, near Wilkesbarre, Pa.; three were killed and many seriously wounded.

A general snow-storm raged in the North-west on the 29th ult.; now there is milder weather with rain.

The official statistics of this city show that there has been an increase in the number of factory employers at work; that all but twelve manufacturing concerns are being operated; and that, in short, business is being resumed along all industrial lines. Even real estate is "picking up" a little.

The Pullman Palace Car Company, in spite of the strike, has been able to declare recently another quarterly dividend on its stock.

THE VICTORIA PUBLIC SCHOOL.

THE INSTITUTION TO BE CLOSED.

A meeting was held in Keil's Building on Friday afternoon in accordance with the terms of the following notice, which appeared in the public prints during the last ten days:—"A meeting of Founders and Subscribers will be held on Friday next, at 5 p.m. (by kind permission) in Keil's Buildings, to decide what steps shall be taken at the close of the present year, when the existing arrangements terminate. It will be for the meeting to decide whether fresh arrangements shall be made, or the School be then closed." There were present Messrs. J. Traup, in the Chair, C. D. Moss, E. S. Booth, P. E. F. Stone, M. Russell, J. E. Beale, F. G. Woodruff, A. J. Wilkin, Hon. Sec., A. T. Watson, J. Stewart, R. N. St. John, James Walter, and E. Flint Kilby.

The CHAIRMAN first read the notice calling the meeting. Continuing, he said that as the meeting was aware, it had been the ordinary custom of the Committee of the Victoria Public School at the close of the year to make arrangements beforehand for the year ensuing, and then to meet in the month of January to elect a new Committee. But the affairs of the school were now in such a position that the Committee did not feel justified in making any arrangement for the year to come, and it was owing to that circumstance that the meeting was called. A statement had been drawn up which stated the position in which the Committee found itself, and he thought he could not do better than ask Mr. Wilkin, their honorary secretary, to read that statement.

Mr. WILKIN then read the following statement:

The position of the School, financially, was so fully set forth and discussed, at the Annual Meeting held on the 29th January last, that it is not necessary now to do more than refer to what passed on that occasion.

It will be remembered that the Committee then asked for an amount of \$500 or \$600; this being the deficit which was inevitable upon the lowest possible scale of expenditure for the current year, and it may be said in passing that a sum of \$722 in all was subsequently subscribed by friends.

At that time it was expected that Mr. Fardel would retire at Easter and that Mr. Fenton would take his place, and the object which the Committee were keeping before them was to endeavour to arrange for an efficient carrying on of the School with reduced assistance.

Things, however, so came about that Mr. Fenton desired to resign his position and go home, which he did, and Mr. Fardel made a proposition for re-engagement under altered conditions.

And it was finally arranged that Mr. Fardel should carry on the School for the rest of this year, receiving all the fees and providing his own assistance (such assistance, however, to be subject to the approval of the Committee): the Committee undertaking to pay the Rent. The ultimate outcome of this was an agreement made by Mr. Fardel with Miss Aebersold to join her School to the Victoria School, Miss Aebersold taking charge of certain departments.

Since Easter, the School has been worked on these lines.

As already stated, however, these arrangements terminate at Christmas, and indeed Mr. Fardel has found them financially so unsatisfactory that he could not continue them.

It is therefore for those interested in the School to decide what shall be done, and as the financial side of the matter is an important one, it may be useful to have before us the figures for the last 3 years:—

For the year 1892, the Fees were	...	\$ 3,496.00
The Expenditure—Salaries, & masters	...	\$3,740.00
Rent	...	840.00
Sundries	...	98.18
Deficit	...	\$4,058.18
	...	562.18
	...	\$4,058.18
For 1893, Fees	...	\$3,740.00
Expenditure—Salaries, & masters	...	\$3,740.00
Rent	...	840.00
Repairs and sundries	...	622.58
Deficit	...	\$4,462.58
	...	1,669.63
	...	\$4,402.68

For 1894, the fees will amount to about \$2,800. (and it must be remembered that this is inclusive of the additional pupils from Miss Aebersold's School):—

Rent for the year will be	...	\$ 840
Sundries, say	...	200
	...	\$1,040

So that leaves about \$1,760, which would be equivalent to about \$140 per month. And that represents all that would have been available for the payment of Masters' Salaries, had not the income been supplemented by subscriptions.

The conclusion of the matter then, as the result of several years' experience, is that the income of the School has proved altogether inadequate to provide the necessary assistance for efficient teaching. As has been often before pointed out, the circumstances are

which a School is worked in a place like this differ essentially from those of a larger one, inasmuch as 30 or 40 boys of sundry grades, and of various ages, require a disproportionately large teaching staff.

Having thus indicated the position, the Committee have now to leave to the subscribers to say what course they desire to adopt.

It may be well to add before concluding that the Committee felt constrained to allow Mr. Fardel to retire from the Head Mastership in October. The financial position in which he found himself by reason of the insufficient income from the School was very unsatisfactory, and he had the offer of a sufficiently desirable appointment at a distance.

The Committee therefore, yielded to his application on condition of his arranging to supply his place till Christmas.

Mr. WILKIN added that there was a probability of the ground upon which the School stood being sold in the near future.

The CHAIRMAN—The statement just read shows that during the years 1892 and 1893 we had to fall back upon the outside subscriptions of the community to carry on the work of the School. It would be again necessary to provide outside help if the School is carried on—that is if it is to be carried on—next year. But the Committee did not feel justified in going to the community again for help, and it had called the present meeting so that those interested in the School should be able to vote upon the matter. The Committee, he added, did not feel justified in carrying on the School under the present arrangements, and it also did not like to appeal again to the public before hearing what the public had to say on the matter. They were there that afternoon to answer any questions which any person present would like to have answered, and to receive any proposition that might be made regarding the continuance or closing of the School.

Mr. A. T. WATSON asked what was the Committee's opinion regarding the School; whether they thought it possible to carry it on further, or whether they advocated closing it. He should like to hear their ideas on the subject. It would be useless to go further without having the Committee's ideas.

The CHAIRMAN—I may say that I am personally aware of the feeling entertained by every member of the Committee, and I can say that the Committee do not feel that they can undertake to go to the community again for subscriptions as they have done in previous years: without outside support it will be impossible to carry on the School.

Mr. WILKIN—It is not only the financial position that we have to consider, we might worry along from year to year as we are doing now if we were encouraged otherwise. But as it is, the attendance at the School decreases, children are sent away to Tokyo or to other schools, and thus our attendance steadily decreases. The probability is that our attendance, small as it is this year, will be much smaller than it is now in the coming year. That is a distinctly discouraging feature.

Mr. WATSON here raised the question, whether it would not be possible for the meeting, considering the paucity of its numbers, to resolve itself into a committee and so discuss the matter in camera. He thought that it would be awkward to carry on the discussion if all their remarks were reported by the members of the Press who were sitting at the table. For himself he felt that he could speak more freely if the reporters were asked not to take any notes of the discussion. If the meeting was held in private, clearer ideas might be enunciated and the position more thoroughly discussed.

The CHAIRMAN asked if the questions which the last speaker proposed to discuss had anything to do with the prosperity of the School, or were they of a personal character. It would be rather difficult to close a public meeting to reporters unless something very pressing could be urged in support of the proposition.

Mr. WATSON urged that things might crop up in the course of the discussion which it might not be desirable to send forth to the public.

The CHAIRMAN said the meeting was ostensibly a gathering of founders and subscribers of the Victoria Public School, and it lay with them to say whether the meeting should be public or not. He did not feel competent, as Chairman of the meeting, to close the meeting to the reporters. Of course if the founders and subscribers of the School agreed that it was desirable that the meeting should be private, then he would carry out its decision.

Mr. WATSON declining to put his suggestion into a formal proposition and no person in the room rising to do so for him, the matter dropped.

Mr. JAMES WALTER observed that the statement read to the meeting showed the School to be in a very bad and hopeless condition. As one

of the original founders, he was of opinion that the sooner they closed it the better. He proposed that the Victoria Public School be closed.

Mr. RUSSELL inquired whether some arrangement could not be made to pass the School on to some one who would carry on the School in its old name, so that the name should not die out.

Mr. STONE—That is a question for the Trustees. The CHAIRMAN—Perhaps Mr. Russell does not refer to the property.

Mr. RUSSELL—No, I merely mean that it would be well if somebody would take on the School and run it privately without taking on the present liabilities. I am certainly in favour of keeping the name from disappearing from among us.

Mr. St. JOHN asked if the Committee had made any suggestion as to the best course to pursue.

The CHAIRMAN—It has made no suggestion beyond what Mr. Wilkin and myself have said—that it would be impossible to carry on the School without outside help, and the Committee do not feel justified in appealing for that help. In regard to handing over the School to a private person, the Chairman thought that that would not be in harmony with the School's constitution, nor yet with the intentions of the founders. The only alternative, if outside help were not forthcoming, was to close the School. If the School was handed over to private hands it would at once destroy the character it had always had, and which its founders had intended it should have, that of being a public school.

Mr. WATSON thought it a pity that a school founded to commemorate the Jubilee of Her Majesty the Queen should be allowed to be closed in this ignominious fashion. As a Britisher, he felt it very keenly. He thought that some scheme might be arranged that would not encroach very much upon the pockets of the community and yet would be sufficient to keep open the Victoria Public School. He fancied that a gentleman, a scholar and B.A. of Cambridge, would be willing to take over the School if a sufficient sum per month was guaranteed him. Suppose he was guaranteed \$100 a month if the School fees amounted to \$250; if the fees amounted to more than that sum then the less would be required of the guarantor. If the sum of the guarantee was divided up among the British community he fancied that they would find it a very light, in fact infinitesimal, sum per month. They paid 50 cents a month for lighting the streets of the Settlement, surely they would not grumble at contributing 50 cents a month towards the support of the Victoria Public School. It would be a pity to close the School after the years that it had been open, and he trusted that a way out of the difficulty would be found.

Mr. WALTER reminded the last speaker that some members of the community had not only contributed 50 cents a month, but from \$4 to \$5 too in support of the Victoria Public School. It was hopeless to carry it on under the present circumstances, and he saw very little good in trying to keep it open. The chances were less in its favour than ever now that a new School had been started which had already taken away a lot of their pupils.

The CHAIRMAN said he would like to hear the opinion of another founder of the School, who had not been among them for several years, but who doubtless had something to say on the subject.

Mr. FLINT KILBY, in response, said that he had very little to say. The root of the difficulty lay in the hopelessness of attempting to mix European and Eurasian children at school. There could be no doubt that that was the root of their present difficulty. Another point he had found in the course of his travels at home was that very few public schools pay. In England such was the state of the law that one had not only to send his own children to school, but had also to contribute to the rates to send other people's children to school. It was very unfortunate no doubt, but where there were two classes of children such as he had mentioned, there was always that difficulty of getting them to mix, blacking in the way of success. The feeling seemed as if it would never die out—this feeling against the mixing of Eurasian children with the children of Europeans. That was the difficulty that had to be faced. There were people who ought to have helped them by sending their children to the School, but who did not do so solely on account of this feeling. And with regard to the other point—the school could not continue to run unless there was some systematic means of guaranteeing outside support. In England the old foundation schools had lands and endowments bringing in money apart from the fees. Then the new Board Schools had powers of rating. In his own parish his contribution towards the support of the education of other people's children was something like \$50 a year; and this he had

to pay whether he liked it or not. Unless they could enforce subscriptions to support them, it would be impossible to carry on the Victoria School. It was a very open question, of course, when they came under the Japanese jurisdiction, whether this support would not be forthcoming.—(Laughter.) But at present they could not enforce anything of the kind. In regard to the closing of the School, he would be guided entirely by the Committee.

The CHAIRMAN again reiterated the opinions of the Committee and asked any one of them present to put him right if he had misinterpreted them.

Mr. STONE pointed out that the Committee could not carry on the School without a yearly guarantee of \$2,000. As one of the Committee who had had the unpleasant task of calling on residents and almost winning money from them in support of the School, he declined to go to the community for support again.

The CHAIRMAN—There is another practical point. It is in regard to the question of a teacher. We were obliged to let Mr. Fardel go because under the arrangement by which he took the fees, he had not enough to live on after paying for assistance. The matter being as it was, the Committee had not tried to obtain another teacher, but perhaps if the guarantee was forthcoming a teacher might be found. There was nothing definite before the meeting. Mr. Walter's proposition had not found a seconder as yet, and therefore could not be put before the meeting as a definite resolution. They need not be precipitate about the matter, however. Probably an adjourned meeting might be thought possible.

Mr. JAMES WALTER said his motion would be seconded by Mr. DODDS and several others who would vote for the closing of the School.

Mr. WALTER then went out and returned with Messrs. W. B. Walter, N. P. Kingdon, J. H. Brooke, W. J. S. Shand, A. B. Walford, Alan Owston, James Dodds, and H. C. Litchfield.

Mr. WATSON remarked that during the last few minutes some gentlemen had come to the meeting who did not know what had taken place. He proposed that a *résumé* of what had occurred should be laid before them. It was hardly fair for them to vote on a proposition of which they did not know.

The CHAIRMAN pointed out that at the moment there was no proposition before them. They could not go back and have what had passed read over to them. But there were the printed statements which had been circulated, and these they could read for themselves. Shortly, the Committee had found in the working of the School a shortage which had to be made up by public subscriptions, and such subscriptions had been obtained from the public. They could not do likewise for another year, and they knew of no other arrangement by which they could obtain such subscriptions. Another matter was the decrease in the total number of pupils, notwithstanding the accession of Miss Aebelsold's pupils. The Committee had not felt justified in making arrangements, or even proposing any arrangements, before calling the special meeting in regard to the School.

Mr. W. B. WALTER remarked that when the Victoria Public School was started it met a great want. But since the Tokyo School had come into existence the number of pupils became reduced and it was found the School could not pay, consequently he would suggest that it be closed up at the end of the year unless people would be willing to pay for it. As the community showed no willingness to subscribe, he proposed that the Victoria Public School be closed at the end of the current year.

Mr. JAMES WALTER seconded.

The CHAIRMAN intimated that the proposition was practically what Mr. James Walter had put forward.

Mr. W. B. WALTER remarked in that case he would second Mr. James Walter's motion.

Mr. WATSON said that as one of the original proposers of the school, he did not like to see it die without a fight for it. The reason why so many went to the Tokyo school was because they could get a better education at a far less price. As the school was started to celebrate a certain event, it was hard that it should be allowed to die. He would propose as an amendment that efforts should be made to carry on the school.

There being no seconder to the amendment, the original motion was put to the meeting, seven voting, in its favour and one (Mr. Watson) against. The motion was therefore carried.

The CHAIRMAN indicated that this motion implied a further motion: How was the school to be closed? He should like it to go on authority. Was it to be left to the discretion of the committee? Mr. WATSON thought it should.

The CHAIRMAN was of the opinion that it should be so. That the Committee should be authorised to do so. That it should realise the assets and report to a future meeting. He would point out that the buildings belonged to them. The sale of these would leave a balance in hand—not large it was true—but they desired to have the necessary authority to do so. There was also the sentimental point in the matter—a true sentiment which all no doubt shared, that it was painful the school should be closed. There were other mementoes that remained. Although their school was defunct, Her Majesty herself remained, the memory of whose glorious reign would ever remain with them and through subsequent ages. He regretted that a public school did not exist, as it was a great want. But as remarked by Mr. Kilby, it was useless to go on unless they had the means to carry it on, by enforced and not voluntary contributions in the nature of an assessment. The time might come when such an institution could exist in Yokohama. The Committee would like some authoritative power relative to the disposal of Her Majesty's portrait adorning the wall of the school, which he proposed should be kept in trust for the British community.

Mr. KILBY proposed "that the Committee be empowered to close the school and realise the assets in such way as they may deem best, and that the portrait of Her Majesty be handed over to the care of Her Britannic Majesty's Consul for the time being, and that the Committee report the result of the closing of the school to the annual meeting."

Mr. ST. JOHN seconded.

Mr. WILKIN suggested that before the motion was put to the meeting, it should be borne in mind the service that had been rendered by Mr. Fardel. That some small part of the assets should be handed Mr. Fardel for his loss—pecuniary loss—when he took over the school; and if there was any balance, something permanent in the nature of a monument should be erected in memory of the Jubilee of Her Majesty.

Mr. MOSS asked whether it would not be better to postpone this.

Mr. WILKIN thought it best it should be discussed.

Mr. MOSS suggested that it stand over to the annual meeting.

The CHAIRMAN remarked that he only threw it out as a suggestion that should come up.

The motion was then put to the meeting and passed unanimously.

Mr. WATSON proposed a vote of thanks to the Chairman, the Secretary, and Committee, after which the meeting dispersed.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

SOLUTION TO PROBLEM No. 150.

- | | |
|-------------------|--------------------------------|
| WHITE. | BLACK. |
| 1—Q to K4 | 1—Q x Q |

Correct solution of No. 149 also received from W.H.S.

PROBLEM No. 154.

By K. MUSIL.

White to play and mate in three moves.

STEINITZ-LASKER CHESS MATCH.

The games in this noted match for the championship of the world having been printed in pamphlet form for the benefit of the local clubs, copies may be procured by others on application to the Chess Editor and enclosing ten cents in stamps.

A conspicuous example of the endurance of brain in contradistinction to physical powers is shown in the following list of chess champions for 114 years:—

- 1780.—Philidor, unbeaten.
- 1800.—Deschapelles, unbeaten.
- 1834.—La Bourdonnais, unbeaten.
- 1843.—Staunton, lost to Anderssen in 1851.
- 1851.—Anderssen, lost to Steinitz in 1866.
- 1853.—Morphy, unbeaten.
- 1866.—Steinitz, lost to Lasker in 1894.
- 1894.—Lasker, present champion.

Eight champions only in more than a century! In any branch of athletics the figures would more than likely be reversed, and read 114 champions in 8 years!

A CHESS PRODIGY.

A reporter on the staff of the *Woman's Signal* recounts a conversation with Miss Lilian Baird, the infant prodigy of the chess world, and a portrait of the young lady adorns the front page of the magazine. Miss Baird began to play chess when she was four years old, but she gravely informs her interviewer that she did not compose a problem till she was eight! A year later our little friend had occasion to indite the following letter, which tells its own tale:—

"My dear Mr. Editor,—When you see Mr. Dunipace again, will you please tell him that I do not think I like his 'sceptical' remarks about my age. Mother says I was born on October 19th, 1881, so, you see, I am really only nine. I composed the problem all alone, mother pointed out a few 'cooks' and 'duals,' but I got rid of the stupid things all myself.—Your little friend,

LILY BAIRD."

Miss Baird, who is now of the mature age of 13, has produced a large number of problems, many of which have been published in the most popular chess columns of England and America. She appears to inherit her mother's ability for the game, and, like Mrs. Baird, she displays considerable skill in the arts of drawing and poetry.

END-GAME No. 14.

The following brilliant finish—from the *Schachzeitung*—occurred in a game played recently at the Café de la Regence, in Paris:—

BLACK—(AMATEUR).

WHITE—(JANOWSKI).

The continuation was:—

- | | |
|--------------|----------------------|
| WHITE. | BLACK. |
| 1—..... | 1—P to R5 |
| 2—Kt takes Q | 2—Kt to Kt 6 ch. |
| 3—P takes Kt | 3—P takes P dis. ch. |

- BLACK.
Tarrasch.
- 1-P to K 4
2-Kt to Q B 3
3-P to Q R 3 (a)
4-Kt to B 3
5-B to B 4
6-P to Q Kt 4
7-P to Q 3
8-P to R 3
9-Q takes B
10-Kt to K 2
11-Kt takes Kt
12-R to Q Kt sq.
13-P to R R 4
14-R to R 3
15-R to Kt 3
16-Q to Kt 4
17-R to B 3
18-B to Kt 3 (d)
19-Q to B 5
20-P takes P

Position after Black's 20th move:—

BLACK.

- WHITE.
Berger.
- 21-P to K Kt 3 (e)
22-P to K 5
23-Q takes P ch.
24-Kt to B 3
25-Q to K 4
26-Q takes R
27-Q to B 5
28-Q to B 4
- BLACK.
Tarrasch.
- 21-Q to R 3
22-P takes K P
23-K to B sq.
24-R to B 4
25-R takes B (f)
26-B to Kt 2
27-Q to Kt 3
28-Q to Q B 3 (g)

White resigns.

NOTES FROM THE "MORNING POST."

- (a) It is somewhat instructive after the many attempts that have lately been made to find a satisfactory defence to see a master like Tarrasch falling back upon an old-fashioned move like this.
- (b) To prevent the Kt from being pinned and also perhaps with a view to subsequently playing P to B 4.
- (c) This is not very useful, and it gives Black time to commence a very dangerous counter attack.
- (d) If P takes P, P takes P, and if then B takes P, Kt to B 3.
- (e) White's position is awkward here, for if P takes P, B takes P, and at least wins a pawn, or if Kt to B 3, B to Kt 3 would be very destructive.
- (f) A very effective sacrifice, which White apparently did not contemplate.
- (g) There is now no means of saving the Kt, for if K to Kt 3, Black drives away the Queen by P to Kt 4 next move.

GAME No. 186.

Played in the seventh round.

FRENCH DEFENCE.

- WHITE.
Janowski.
- 1-P to K 4
2-P to Q 4
3-Kt to Q B 3

25-P takes P dis. ch.
26-Q to Kt 2
27-R takes P
28-Q to K 2
29-Resigns.

REMARKS FROM THE "STANDARD."

3.....P takes P, and the subsequent development avoids complications. The variation has been played by Lasker.
10....P to B 4 is inferior. Up to this move Black's game is all right.
13.....Q to K 5 is a subtle move; it threatens 14-B takes Kt, B takes B; 15-Kt takes B, Q or K takes Bt; 16-B to Kt 5, &c.
18.....K takes B would have been better. He then only lost a pawn, and might have made a better fight than with the text move.
25.....R to B 3 is again inferior. It would have been better to retire Kt to K 5. After the text move the game is over, and M. Janowski finishes it in his usual elegant style.

[SPECIAL TELEGRAM TO "JAPAN MAIL."]

Nagasaki, November 24.

At the auction held here to-day of the ship *Drumeltan*, no sale was effected, the highest bid being the offer of Japanese of \$24,500.

[SPECIAL TELEGRAM.]

London, November 28.

All the English papers speak of the capture of Port Arthur as an event of the utmost importance and a brilliant feat of arms. *The Times* of November the 26th says:—"If Japan maintains that Chinese arrogance has not yet been beaten down, no Western countries can dispute her superior knowledge, except China herself, and China can prove that she understands the situation only by frankly suing to Japan for peace. In the absence of such a move on the part of China, we cannot perceive that the fall of Port Arthur constitutes either another reason or a new opportunity for the departure of neutral Powers from the attitude they have hitherto maintained. The editor of *The Times* is further alleged to have expressed the opinion that English policy hereafter will be to strengthen Japan's hand, and consequently that Great Britain will not object to the occupation of Formosa by Japan. *The Standard* says:—"The dictates of patriotism as well as common sense justify the Chinese Government in making anything short of ruinous concessions to Japan, and the occasion is one calling for a frank offer of the fullest possible terms."

London, November 23rd.

The Chinese ironclad *Chen-yuen* has been stranded while entering Wei-hai-wei. The accident is said to have taken place through her trying to avoid the torpedoes which are laid down at the entrance to the harbour. The Commander of the ship, Commodore Lin Tai-tsun, is said to have committed suicide.—*N. C. Daily News*.

McDougall, Dr. J. W. Noble, Mr. Vicente E. Braga, Miss Maria T. Braga, Mr. J. A. Burrets, Mr. A. J. da S. Souza, and Miss M. A. Greene in cabin.

LATEST COMMERCIAL.

IMPORTS.

A little more life in one or two departments, but the sales made are at ruinous prices. Yarn—Holders have given way, and some business has been done at quotations. Shirtings—A fair enquiry at last rates. Fancies—Nothing done since a sale of Prints a week ago, tone dull. Woollens—A few sales of Italian Cloth at unchanged values; Blankets have moved in quantity so that the small remaining stock is held firm and at a smart advance in prices.

COTTON PICK GOODS.

	PER POUND.
Grey Shirtings—8½ lb, 38 yds, 35 inches	\$2.25 to 2.75
Grey Shirtings—8½ lb, 38 yds, 45 inches	2.50 to 3.25
P. Cloth—7 lb, 24 yds, 32 inches	1.60 to 1.90
Indigo Shirtings—12 yds, 44 inches	1.70 to 2.35
Prints—Assorted, 24 yds, 30 inches	1.75 to 3.75
Cotton—Italian and Sateen Black, 32 inches	PER YARD.
	0.16 to 0.21

MARKETS.

Market stronger; and sales are made of Bars, Plate, and Sheet at better figures than for some time past. Tin Plates are also up, and in demand at the advance. Other sorts unchanged but firm.

Flat Bars, 4 inch	PER POUND.
Flat Bars, 4 inch	\$3.40 to 3.50
Round and square up to 4 inch	3.50 to 3.60
Iron Plates, assorted	3.40 to 3.60
Sheet Iron	3.60 to 3.75
Galvanized iron sheets	4.70 to 4.90
Wire Nails, assorted	8.75 to 9.00
Tin Plate, per box	5.60 to 5.90
Pig Iron, No. 3	7.00 to 7.25
	1.60 to 1.65

KIROSENE.

A moderate amount of sales have been made at quotations. Dealers try for lower prices, but holders are firm, especially with the present course of exchange. Present stock is in round numbers 600,000 cases, of which five-sixths is American and one-sixth Russian.

Chester	\$1.75 to 1.77
Comet	1.72 to 1.75
Devoe	—
Russian Anchor	1.74 to 1.75
Russian Moon	1.70 to 1.72

SUGAR.

The approach of new crop has caused holders to effect a clearance of old stock at a reduction. Browns—The old Formosa has been pretty well cleared off at an average of \$44. Old Manila has also been sold to a small extent at a smart reduction in price. On the other hand, New Dai tong has advanced to the neighbourhood of \$33. White—A smart reduction here has also led to the sale of about 50,000 piculs, leaving a moderate stock on hand.

Brown Taken	PER POUND.
Brown Manila	\$4.20 to 4.30
Brown Daitong (New)	4.90 to 5.00
Brown Canton	3.45 to 3.50
White Java and Penang	3.70 to 4.25
White Refined	6.60 to 6.70
	6.25 to 6.75

EXPORTS.

RAW SILK.

A fair demand for the United States at slightly higher prices, to compensate for the drop in exchange. Very little enquiry for European sorts, and values for these are not strong. In spite of the large export in date the total stock in Yokohama is nearly 17,000 piculs.

QUOTATIONS.—(NEW SILK.)

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinera, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.
"MONEY" is the Journal for Investors, Speculators and Business men.
"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business matters.
"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes direct into the hands of the Wholesale and Retail Buyers, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

November 3, 1894.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Courte, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1894.

January 13th, 1894.

SUMMARY OF NEWS.

A CONFERENCE of sericulturists is being held in Tokyo.

THE survey of the proposed Korean railway is proceeding apace.

THE Tong-haks are still causing a good deal of trouble in Korea.

COUNT SAKAI has contributed ten thousand yen to the War Department.

THE negotiations between the commissioners of France and Japan for the revision of the

Treaty have made remarkable progress. Mr. Sone, Japanese Minister to France, hopes to have the revised Treaty signed by January next.

RUMOUR says that Viscount Torio will shortly take a seat in the Cabinet.

A MILITARY telegraph wire is being conducted between Taitien and Port Arthur.

FOURTEEN houses were burnt at Hiranuma Yokohama on Tuesday morning.

TWENTY houses were destroyed by fire at Shinmachi, Akasaka, Tokyo, on the 5th inst.

THE Detring Mission has failed. Prince Kung is said to have issued the order for its recall.

THE members of the Matsudaira family have contributed fifty thousand yen to the War Department.

SOME amateur theatricals will be given in the Public Hall, Yokohama, on Saturday evening, December 15.

IT is estimated that the Tokyo and Yokohama Banks will alone subscribe yen 30,000,000 of the Second War Loan.

THE total amount of public subscriptions received by the Naval Department reached yen 441,990 on the 4th inst.

LI HUNG-CHANG has been deprived of all his titles and dignities, but has been allowed to remain in his position.

FIELD-MARSHAL YAMAGATA has been ordered by the Emperor to return from Manchuria by reason of his failing health.

THE great war rejoicings in Tokyo take place to-morrow at Ueno. The railway companies will reduce fares for the occasion.

THE proposal made by the Yokohama Town Assembly to tax Chinese residents in the port has been submitted to the Home Minister.

ANOTHER baseball match has been played between the Y.C. & A.C. and the Sealer's Club, the latter winning on this occasion by two runs.

THE latest dispatch from Korea announces that Mr. Boku Yei-ko is expected to occupy a seat in the Peninsular Government in no distant date.

A TRIAL run was made on the Aomori-Hiromaye railway line on 29th ult. with satisfactory results, and the section was opened for traffic on the 1st inst.

THE repairs to the Yokohama Water-works have been completed, resulting in an increase of the daily average quantity by one hundred thousand gallons.

MR. SONODA, Superintendent-General of the Metropolitan Police, leaves the capital to-day for Hiroshima, where he intends to stay for about a week.

THE reception accorded to Mr. Otori, ex-Minister to Korea, by the town of Yokohama was successfully carried out on Sunday despite the rainy weather.

THE D.D.R. steamer *Irene* has been considerably damaged while in Yokohama harbour by a fire which originated in the fore-hold among some saltpetre.

THE total number of persons attacked by dysentery throughout the country up to the 30th of November last was 150,141, of whom 35,700 succumbed to the malady.

A SPECIAL meeting of the Yokohama Literary Society was held on Friday, and an interesting

lecture on "Men and manners in the Sunset Land"—Morocco—was delivered by Mr. J. E. Budgett Meakin.

MR. BOISSONADE will receive some handsome mementoes of his distinguished labours in Japan from Japanese officials ere he leaves the country in January next.

THE torpedoes at the entrance to Nagasaki Harbour have been removed, and ships are now allowed to enter or leave the harbour without calling upon the naval pilot.

OVER four hundred military and naval officials have had decorations of the Order of the Mirror, ranging between the Second and Eighth Class, conferred on them by H.I.M. Emperor.

REUTER telegraphs:—The Prince of Wales and the Duke of York have left St. Petersburg, parting from the Czar with the warmest farewell. The *Figaro* eulogises the Prince of Wales for his sympathy for the death of the Czar, and says that his stay at St. Petersburg has largely helped to restore cordial relations between Great Britain and Russia. The *Figaro* urges the policy of forming a new triple alliance. The Emperor of Germany, in opening the Reichstag, expressed confidence in upholding European peace. M. Hanotaux, in asking the Chamber of Deputies for a special credit for Madagascar, said that France would be unfettered in her operations, and that no Power was likely to interfere. The peaceful situation in Europe permitted of the expedition being safely undertaken at the present time with result of eventually making Madagascar a prosperous French colony. It was estimated that a force of 15,000 men would be sufficient, and the amount of the credit for which the Government now asked was sixty-five million francs. A *Standard* telegram from Moscow states that an Anglo-Russian *modus vivendi* for the settlement of the Pamirs question has been arrived at based on the recognition by Russia of the Murgabi Akau as the limit of the British sphere of action. Great Britain, on the other hand, recognizes the Panjah Sarhak as the limit of the Russian sphere. The Afghans withdraw from Shignan and Russian, and the Russians retire beyond the Marghabis.

THE Import trade seems drifting into stagnation again, in fact in some lines it may be said to be already there. This is so in reference to Yarns, while only a feeble enquiry has been made for Shirtings, and Fancy Cottons are in still worse plight. In Woollens there is nothing doing, bar Blankets, which are still in great request. There is not much change in the Metal trade, and still a fair enquiry for certain kinds of Iron, but Metals are generally well held. Buyers are not inclined to take much Kerosene, and holders are strong, but the attitude of buyers and sellers is largely influenced by exchange, as there does not appear to be over-much Oil in the interior. In the Sugar market there have been further sales, and the old stock of Formosa has been nearly cleared off. White sorts have been in good demand, and, if no actual increase in quotations has been made, prices are much firmer. In the principal Export there has been a large business at advanced prices, the stock of Silk being considerably reduced through the extent of the transactions. Waste Silk has not been active, though there have been some purchases, but prices are unchanged and the stock is still very heavy. For the time of year there has been a fair business done in the Foreign goods, buyers selecting the best lots of leaf

URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Dropping into a vein that it knows how to exploit skilfully when occasion offers, the *Nichi Nichi Shimbun* becomes satirical. In a leader headed "The Peace Terms," it throws supercilious discredit upon the conditions proposed by some of the party organs. The gist of its essay is as follows:—That the party organs should declare their views with respect to territorial concessions on China's part is all very well. But their demands should be on a larger scale than any they have thus far preferred. The day is yet far distant when party politicians can hope to find themselves holders of portfolios. The bolder their attitude toward China, the better will the Government be satisfied. Who can picture the embarrassment that Ministers of State would feel, did the course of events induce them to advance demands greater than any suggested by the irresponsible statesmen, whose so-called strong policy toward foreign countries is so well-known, both at home and abroad, as to have become almost a synonym for their party name? The *Nichi Nichi* recommends the Opposition papers not to indicate their demands in terms of China's territorial divisions, but to adopt wider limits of latitude and longitude, or rivers, and mountains, and so forth. To illustrate this point, reference is made to an English politician who is said to have examined twenty or thirty different maps of Siam, before he spoke against the claim raised by France in the sequel of the Franco-Siamese affair. The *Nichi Nichi* rounds off its sneer by observing that common prudence forbids it to announce its own views on such a subject until the war has reached something like a climax.

Korea, writes the *Kokumin*, is undoubtedly a thousand years behind Japan. The oppression of her aristocracy, the exactions of her officials, the moral apathy of her people, and the miserable pittance of power possessed by the Central Government, are national features to find which in Japanese history one has to go as far back as the time of the Emperor Kwaminu. Under such circumstances, Count Inouye will be unable to accomplish any results proportionate to his labours if he fails to have the police system re-organized to a standard fully up to its importance, and to contrive that young and energetic Japanese statesmen be placed in every important post of the new administration.

The *Kokkai* gives many historical facts to prove that a winter campaign is not impossible in North China, and urges the Japanese forces abroad to make all haste toward their final object of attack, Peking. To go into winter quarters in the now occupied territory will be a grave strategical blunder, into which the Marshals of the two Japanese Armies, at all events, are not likely to fall. Rotten China is, she may have vitality enough left to pull herself together, while the Japanese soldiers are hiding from Jack Frost in the Shinkin province and the Lian-tung peninsula. The three remaining winter months might suffice for her to collect such a numerous force as would prove a new source of trouble and sacrifice to Japan?

The *Shin-Choya* congratulates Japan upon possessing such officers and soldiers as the victors of Port Arthur. When detailed accounts of the fall of the Sebastopol of the East reach Europe, they will tend to raise Japan's status still higher in Western eyes. We are also promised that the walls of Peking will before long echo the stout steps of Japanese soldiers, and that the glory of the children of the Rising Sun will attain its zenith in the capital of the Taisho Sovereigns.

If the *Daily News* is truly the mouth-piece of the present English Ministry, says the *Yomiuri*, it seems likely that the British Government has determined that the Japan-China war must be terminated by British intervention. The

Progressionists organ, however, judges the London journal's words to be a mere menace, not more significant than the famous speech made by the bold but crafty Palmerston in the House of Commons, when the Schleswig-Holstein affair was on the tapis. It has cost England no small sacrifice to help Turkey against Russia. Is Great Britain so ambitious or inquisitive as to undertake the protection of another Turkey, farther away from home, far greater in size, and having two Russias in its vicinity?

"Port Arthur is already in our hands. The days of Peking are numbered. Now is just the time to occupy Formosa. Taiwan must be taken even before Peking for it is a fair object of permanent annexation." So writes the *Mainichi Shimbun*. The *Jiyu*, however, is opposed to such a programme. It asserts that all available military strength should be directed to the capture of Peking, for, that accomplished, Formosa can be taken, if desired, not by force of arms but by the stern logic of facts achieved. The previous occupation of the island is not essential to its annexation.

Several months hence, writes the *Kokkai*, we shall see the present war brought to a termination very honorable to Japan. Triumphant arches and other monuments will then be raised in various parts of the empire. It is high time for Japanese men of art to set about preparing designs for these trophies. The majestic arches and imposing statues in European Capitals and towns are referred to as examples.

There are signs that no very keen insight into Korean politics is needed to detect, writes the *Shin-Choya*, of the Tai Wön-kun's entering into a sort of conspiracy with the fallen members of the Ming family. Such a conspiracy once formed could not fail to prove formidable to the Korean statesmen in office, and, what is for worse, to the independence of the Peninsular Kingdom. It must therefore be nipped in the bud. But the task is evidently too great for either the Korean King or any Korean statesmen to accomplish. Count Inouye is called upon to achieve it. The measure of success achieved by the great Count in this arduous task, which he certainly has courage enough to essay, will determine the whole future of the Peninsula. His is a position pregnant with good and evil eventualities.

Mr. Ozaki Yukio, M.P., has been, for a few days past, writing in the *Hochi Shimbun* what he thinks about China's future. We reproduce his concluding remarks only. China lacks all the qualifications for national integrity and independence, nor does she appear likely to develop any of them in the near future. It is lucky for her that the Powers of Europe have hitherto remained ignorant of this significant fact. But now they are learning it from Japan. China, who has owed her national existence thus far merely to the mistaken idea that Western Powers entertained of her strength, cannot hope to escape an ignominious death now that those ideas have been finally dispelled. Internal commotions and foreign invasions will ere long destroy the colossal Kingdom.

The *Jiji* devotes a leader to the new treaty between the United States of America and Japan, which is now generally known to have been signed by the plenipotentiaries of the two States in Washington, on the 22nd of November. Presuming the revised treaty to be in conformity with the goodwill always shown by the Great Republic toward Japan since the days of Commodore Perry, our contemporary says everything that a paper of its standing should not fail to say upon receipt of such intelligence. The tariff and labour questions are touched upon, and the remarkable change in the sentiments of the lower orders of America shown in the recent elections receives considerable attention. In conclusion, the *Japanese Times* tells its countrymen to rest assured that in the new treaty with America, they will find themselves placed on an equal footing with any European nation.

EDITORIAL NOTES.

THE TORCHLIGHT PROCESSION OF THE KEIO-GIJYU.

A STUDENT of Mr. Fukuzawa's school, the Keio-gijyuku, sends us the following description of the Torchlight Procession, which we publish *verbatim*:—"It was intended from beforehand to hold the great ceremony of a Torchlight Procession by the Keio-gijyuku so soon as the expected possession (taking) of Ryojinko (Port Arthur) was announced. Ryojun was seized by our admirable Second Army on the 22nd of this month and the report reached Tokyo on the 24th. But that day and to-morrow-day were rainy, so the ceremony was observed on the 26th. The weather was fine, and as we all had hoped every one was ready before the summoned-period of five o'clock and a half in the afternoon. When we departed at six no one was late. In the first part of the procession came the children's (*Pōchi-sha*); then those who took part in the Athletic Sports; then the students of the University division; the fourth was the Common School; the Fifth the Commercial School; and sixth came a large number of former graduates of the Keio-gijyuku, headed by Mr. Fukuzawa and Mr. Obata. Soon after a band of music followed, and numerous flags and lanterns were carried here and there. Each line was composed of three men (they marched three abreast), and each had a *Kantero*-lamp, while all sang the *gunka* (martial ode) composed by Mr. Obata. Our number was about two thousand, so the light of our *Kantero*-lamps presented a continuous glow for about five *chō*, while the onlookers on both sides of the streets made artificial mountains. In front of the Niju-bashi (the bridge leading to the gateway of the Imperial Palace) we stopped. Mr. Obata, our Principal, then marched to the fore and called on us to raise the shout of *Ban-sai!* for the Emperor and Empress, then for our country, and finally for the Navy and Army. All followed this order, the music playing loudly during the time. Passing over the Wadagura-bashi and Gofuku-bashi we came to the Odori (main thoroughfare) of Nihonbashi District, whence we marched on through Ginza and returned to our school at nine-half o'clock. We were well treated everywhere. The Mitsui Bank and the Surugaya in Nihonbashi gave tea and cakes to all, as did the *Fugetado* in Kyo-bashi. On our return we called *Bun-sai!* for Mr. Fukuzawa, and then for our Keio-gijyuku, and we all joyfully drank wine and ate *sushi*, the gifts of Mr. Fukuzawa. At last there remains nothing but to say proudly that there was no disorder and every one kept to his place during the hours of the procession."

THE GOVERNMENT AND THE EARTHQUAKE DISTRICT.

MR. TOGARI, a delegate of the Yamagata people in connection with earthquake affairs, waited on the Home Minister on the 28th instant in company with Messrs. Shigeno and Yamashita, members of Parliament for certain districts of Yamagata. The delegate, after stating the particulars of the disasters entailed by the recent earthquake, said a sum of more than 700,000 *yen*, or twice the amount of the yearly local taxes of the Prefecture, is wanted to effect the necessary repairs, and that as it is beyond the power of the locality to accomplish the work with its own resources alone, the Government should extend some aid. Viscount Nomura replied that the Government had been fully apprised of the gravity of the disaster, having received reports compiled by a councillor of the Home Department specially despatched for the purpose and having also obtained minute accounts from the local Governor. Under the circumstances the Minister was sorry to be constrained to say that, in consequence of the enormous drain upon the Treasury's funds entailed by the war, money could not be diverted to any other purpose. Akita and Shimane had suffered considerably this year from disastrous inundations, and appeals for aid had already been submitted to the Central Government from those districts.

But the latter had decided not to extend any aid. The Viscount therefore told the three gentlemen that they should persuade the people by whom they were sent to contrive suitable measures so as to undertake the business with their own resources. The delegates left the Department with the intention of submitting the case once more after deliberation by the Local Assembly whose session opens in a few weeks.

HOW A DEBT WAS PAID.

A PROVINCIAL journal reports a curious instance relating to the manner in which a debt was paid. A peasant had borrowed the sum of fifteen yen only on the security of a small house owned by him. The term for the repayment of the loan having come and gone and the usurer seeing no immediate probability of getting his money back, the creditor was driven to the verge of distraction. He alleged in self-defence that he was unable to properly feed his family, owing to the hard times, and that it would not be until early next summer that his scanty acres would yield enough to pay the loan and its accrued interest. Nothing would satisfy the creditor but that he should give up the house—in which, by the bye, the peasant and his family were living. "The house is mine," declared the usurer, "and if you do not turn out I am at liberty to burn it over your heads." This drove the peasant to desperation. The next day he appeared before the door of his oppressor with a cart containing seven large bags of ashes. He had taken the liberty, he said, to burn the house down himself, as it appeared immaterial to his creditor whether it was burned or not; here were the ashes; he hoped he would be satisfied with them and give him a receipt in full. Shocked and taken off his guard, relates the journal in question, the usurer actually consented to this; and so that debt was paid.

BIMYOSAI.

THE vernacular papers deplore a sad backsliding on the part of him who is probably the most popular novelist in Japan: Yamada Bimiyosai, better known by his pseudonym alone. His works are not only numerous but noted for their purity of style, while it is everywhere conceded that, as a novelist, he has the greatest creative genius. It seems that he has been going downhill for some time. He was dismissed last year from the Kinkodo Publishing Firm, at present in bankruptcy, on account of alleged irregularities; and now he has been arrested on the charge of having defrauded a lady friend out of some four or five hundred yen, by forged bank-receipts. The announcement of his latest misdeed has caused very great surprise; for while the erratic tendencies of his later works had prepared the public for dissipated habits on his part, no discredit whatever had been cast on his honesty. Whether the charge brought against him or is true not, his fame is irretrievably gone. Bimiyosai is still a comparatively young man, and ought to have a long and honoured life before him.

THE ISSUE OF WAR NOTES.

SOME time ago, says the *Fiji*, a rumour was circulated that it is extremely inconvenient to pay in silver for articles and labour requisitioned in the enemy's territory, and as, moreover, the exodus of so much silver from the country affects the market in no small degree, special war notes would be issued for use in the districts occupied by the Japanese Army. The Nippon Ginko, being particularly anxious to have the notes issued, submitted a representation on the subject to the Treasury. The matter having been deliberated in the Cabinet Council and approved, the notes are now in process of manufacture in the Printing Bureau. They are to be used by the expeditionary army in the enemy's territory for the payment of labour and necessary articles for the troops, and will have the full value of corresponding silver coins. On the termination of the war the notes will be redeemed with Japanese silver yen. They will be denominated as Chinese Taels, and will be mostly equivalent to one Tael of 100 yen in silver. In shape they will resemble the

Japanese notes and the characters on them will be entirely Chinese. As it is not possible to predict with any certainty the kind of reception which these notes will meet from the natives, the Treasury cannot determine the number of notes to be issued, but judging from the confidence thus far enjoyed by the Army, the amount may be considerable. In that case some trouble may be experienced in redeeming the notes, but as an indemnity will be exacted from China when the war is brought to a close, the Japanese Government may leave the work of redemption to China. The *Shogyo* offers the following information about the issue of war notes. It states that they will be issued by the Government to the value of 30 million yen. These notes will, it is needless to say, form a portion of the 150 million Yen War Loan. The *Shogyo* says that the Government has hitherto been subjected to considerable trouble and no small loss by having to purchase Chinese silver and to transport it to the places where the expeditionary armies have been encamped. It also states that the notes are to be redeemed in Taels and that the redemption will either be effected out of the indemnity which Japan will demand from China, or that the latter country will be forced to undertake it. Our commercial contemporary considers that the issue of notes of this kind, amounting to 30 million yen, will relieve any tightness from which the money market of this country may at present be suffering. But how it is to do that when the notes are intended for circulation in China, we do not perceive.

A MIRACULOUS GROWTH.

A METROPOLITAN contemporary—it is hardly necessary to state to what category it belongs—tells a truly marvellous story concerning a pot of flowers owned by a gentleman of floricultural proclivities. The original contents of the pot consisted of a tiny pine, a bamboo, and a dwarf-plum, the whole constituting the trio, beloved of Japanese rhymers, sentimentalists, and flower-artists, known as *sho-chiku-bai*. Some weeks ago the bamboo, which had been stunted in its growth, gave evidence of renewed activity; the stem grew thicker and irregular in shape; strange leaves were put forth; and finally the familiar red berries of the favourite *naruten* (*Nandina domestica*) made their appearance. In some occult manner this wonder is made to symbolize the past and future victories of Japan. It may be so; but as the story stands it looks like an effort to bamboozle the unsuspicious reader.

ENGLISH TRANSLATIONS AND TEXT-BOOKS.

THESE probably never has been a period in the recent history of Japan in which English and American literature was more appreciated than at present. The text-books of the schools are, in this direction, undergoing a great and wholly beneficial change. Longmans' and the National Readers, Swinton's, the Union series, the Royal Star, and half a score of other reading-books that have for over a decade been preëminently taught, are now less highly prized and used at best only in the lower forms. Even Macaulay's Essays, excellent though they be, do not command the attention that they once did. The two essays that are still taught widely are those on Lord Clive and Warren Hastings, while the brilliant critiques of Lord Bacon, Milton, and the Comic Dramatists are now entirely out of vogue. In place of these and similar time-honoured text-books we meet with a gratifying desire to be *au fait* with modern English literature. Peter Parley is, one rejoices to say, now almost shelved; and surely there is reason to relegate so mischievously incorrect a historian to the lumber-room. On the other hand, with probably the sole exception of Goldsmith's "Vicar of Wakefield," excellently annotated for the use of Japanese students, one finds less classical works much appreciated. Among others may be noted a fine little book on General Gordon, his life and work; a sketch of Henry M. Stanley's life, with a brief summary of the contents of his most famous books of travel; an English translation of a well-known French work, under the style of "An Attic Philosopher in Paris;" and of Dumas' "Monte Christo," particularly

the great chapters on the hero's escape from the Chateau d'If; two or three stories by Bret Harte; and others of like nature. Among the most recently compiled readers we note a fine edition of Thackeray's "English Humourists of the Eighteenth Century;" Macaulay's essay on Gladstone's "Church and State," and his brilliantly humorous critique of Robert Montgomery—the wit of which must lose much of its flavour when rendered into Japanese; and Leigh Hunt's laughable sketch "Jack Abbott's Breakfast." On the whole, the change is now distinctly for the better.

As to the matter of translations, it is gratifying to note that the rage for "detective" stories, of the "Old Sleuth" pattern, is on the decrease. Detective serials are now being published in one or two journals of lesser note, but they are the pick of the lot and without the highly impossible features so characteristic of the proverbial "penny dreadful." It is strange, to say the least, that despite the hitherto excessive fondness for such tales, Conan Doyle's masterpieces are yet unfamiliar to the Japanese public. We believe that the reason for this is a very prosaic one; cheap editions of the old-style detective narratives may be had by the score, but the "Adventures of Sherlock Holmes" is decidedly high-priced and thus beyond the means of the average writer in the Japanese equivalent of Grub Street. Among quite recent translations we note with pleasure an excellent rendering of Mrs. Hemans' "Casabianca;" several longer poems by Bryant, especially an attempt at the "Thanatopsis"—not very successful; bits of Cowper; and an extract from Goldsmith's "Deserted Village," this last being well done. The best translators in this field are Messrs. Wadagaki and Sasaki, the former of whom is particularly well-known for his adaptations as well as skilful Japanese versions, the range of his poetic talent covering a wide field. "Don Quixote," as japonized by Mr. Matsui Masaharu, has now gone into a third edition, and has an increasing circle of admirers.

Among aides to the study of the English language we must not forget to mention Mr. Saito's really admirable "Conversation-Grammar" and Mr. Suganuma's "Simplified Grammar." The first named has already found favourable mention in these columns; and it is sufficient to say that Mr. Suganuma's work, though wholly different in conception and style from that of the earlier author, is a very creditable performance and calculated to fulfil its purpose with success.

COOLIES FOR THE SEAT OF WAR.

THE Hibiya Parade Ground presented an animated appearance on Thursday noon, the 29th ultimo. Out of several thousand applicants, one thousand two hundred coolies were to be selected, all of whom are to leave at once for the seat of war, to act as transport corps to the Second Army. A correspondent who was present at the scene writes that the men appeared one and all to be unusually sturdy and well-built; broad-shouldered and seemingly capable of great exertion. Stress was laid on the moral character of the applicants; no one was chosen who could not show a clean record, even a short term of minor confinement being definitely inadmissible. Those selected were allowed to clothe themselves at once in the warm clean suits provided for them, with thick felt hats and socks of *momp*. Despite the large gathering there was absolute order and no one appeared impatient at the length of time he had to wait. The chosen men were evidently elated at their good fortune, and objects of envy to their less lucky fellows.

THE ALLEGED SOJOURN OF CHRIST IN INDIA.

PROFESSOR MAX MÜLLER writes on this subject in the October number of the *Nineteenth Century*. His object is to criticise a recently published book, "*La Vie Inconnue de Jésus-Christ*," by a Russian named Nicolas Notovich. It appears that M. Notovich, being firmly convinced, first, that Christ spent many years in

India, and secondly, that some record of this stay must remain, went to the East to look for documents bearing on the subject. Naturally his search was most likely to be successful in Tibet, or on the Tibetan frontier of India, not in India itself, whence the Buddhists, whose faith was supreme there at the time of Christ, have long since been expelled. Expecting to find that of which he was in search in the great Buddhist monastery of Himis, near Leh, in Ladakh on the Tibetan frontier, he tried to gain admission to the monastery, but, unable to do so by ordinary means, he fell down outside the monastery and broke his leg. The charitable monks took him in and nursed him. He was rewarded for his pains, for the monastery contained what he sought, the account of Christ's sojourn in India; and though he did not bring away the original, he publishes seventy pages of a French translation of it in his book.

His discovery, thinks M. Notovitch, clears up many difficulties. Many resemblances between Buddhism and Christianity have been pointed out of late, until it has become difficult to deny that Buddhistic influence may be traced in Christian teaching. But it has been difficult to explain through what channel the influence ran. If Christ dwelt in India and studied Buddhism there, all difficulty vanishes. It is admitted that there is a gap in the Gospel narrative of Christ, that we know nothing of what happened to him, say from his fifteenth to his twenty-ninth year. During that very time the new life found in Tibet asserts that Christ was in India, that he studied Sanskrit and Pali, that he read the Vedas and the Buddhist Canon, and then returned through Persia to Palestine to preach the Gospel. Some Jewish merchants who had witnessed the ministration of Christ in Palestine came to India immediately after the Crucifixion. They met there persons who had known Jesus in his student days, and together they composed a life in the Pali language. The original Pali text is now at Lassa, and Tibetan translations, one of which was that seen by Mr. Notovitch are to be found in various Tibetan monasteries. "There is a certain plausibility about all this," says Professor Max Müller; but he goes on, with that pitiless satirical skill in which he excels, to dissect the story, and to show that it is "strange if true, but not true." Accepting for the nonce Notovitch's statements as made in good faith, he shows how the various inherent improbabilities that gather round the new Life of Christ sum up to make its historical verity an impossibility. If M. Notovitch really was at Himis and really did hear this story from the Buddhist monks, the reverend fathers were making fun of him, as Indian pundits have been known to do before now with European travellers. It is distressing to think of poor M. Notovitch breaking his leg in his zeal for knowledge, only to be deceived for his pains, but certainly, as Professor Max Müller says, "it is pleasanter to believe that Buddhist monks can at times be wags than that M. Notovitch is a rogue." Unfortunately, however, satisfactory as it would be to have a life of Christ, written, as *La Vie inconnue de Jésus-Christ* professes to have been written, by an independent eye-witness who had seen and heard Christ during the three years of his active life, and who had witnessed the Crucifixion and whatever happened afterwards, there are other difficulties against the acceptance of the story than mere inherent improbabilities. For there can be no doubt whatever that M. Notovitch is a rogue. The Moravian missionaries in Tibet have written to say that he was never nursed in the monastery of Himis. English officers who lately passed through Leh and made careful inquiries on the spot, declare that no Russian gentleman of the name of Notovitch ever passed through Leh, and that no traveller with a broken leg was ever nursed in the monastery of Himis. And finally, while Professor Max Müller was writing his article he received from an English lady a letter dated Leh, Ladakh, June 29th. She writes: "Yesterday we were at the great Himis monastery, the largest Buddhist monastery up here—800 Lamas. Did you hear of a Russian who could

not gain admittance to the monastery in any way, but at last broke his leg outside and was taken in? His object was to copy a Buddhist Life of Christ which is there. He says he got it, and has since published it in French. There is not a single word of truth in the whole story! There has been no Russian there. No one has been taken into the Seminary for the past fifty years with a broken leg! There is no Life of Christ there at all! It is dawning on me that people who in England profess to have been living in Buddhist monasteries in Tibet and to have learned there the mysteries of Esoteric Buddhism are frauds. The monasteries, one and all, are the most filthy places. The Lamas are the dirtiest of a very dirty race. They are fearfully ignorant, and idolaters *pur et simple*—no, neither pure nor simple. I have asked many travellers whom I have met, and they all tell the same story. They acknowledge that perhaps at the famous Lama University at Lassa it may be better, but no Englishman is allowed there."

A NARROW SQUEAKE.

THE details that have so far appeared in the columns of the vernacular press concerning the taking of Port Arthur, are still meagre. It will doubtless take some time before we learn the whole story; but in the meantime special and other correspondents are sending in interesting bits of news, some of which must be taken with an admitt'd dose of *granum salis*. The *Yomiuri* tells how a private of infantry under Lieut. Colonel Sato had a very escape. In crossing a ford he and his comrades had been exposed to a sharp fusillade from the Chinese, with the result that this one man only was wounded in the leg. His comrades, rushing on were soon lost to sight. On their return they searched everywhere for the wounded man, but no trace of him could be found except some large clots of blood in a clump of grass near the riverside. The search was given up the next day, and the private marked as one of the "missing." Two days later, on passing a deserted Chinese farmhouse, a body of men belonging to the same regiment noticed a hand waving from an upper window. They entered and found the missing soldier, exhausted from loss of blood and hunger. It had been, he stated, with the greatest difficulty that he had eluded the prying eyes of Chinese stragglers. On the night of the day of the fight he had painfully crawled within a quarter of a mile of the farm-house, but suspecting the presence of enemies had hesitated to enter in his wounded condition. The cold had stopped the hæmorrhage, and the next day he had slowly gone on to the house, as it appeared quite deserted. There he had lain expecting inevitable death from starvation, when the welcome sound of the regimental bugle had recalled his senses and nerved him to a last effort.

A JAPANESE "MOTHER OF THE GRACCHI."

How deep and profound is the sense of patriotic devotion to their country in the hearts of the Japanese in this present struggle, is well testified in a story which we take from the columns of a Tokyo contemporary. An elderly widow, residing in Yamaguchi Prefecture, was, before the war broke out, the happy mother of two manly sons. The elder, aged twenty-eight, was pursuing his studies in America; the other re-enlisted immediately after the first hostilities were interchanged and left for Korea with his regiment. While there he sickened and died, shortly after the memorable battle of Phýng-yang, in which he is said to have played a conspicuous part. So soon as the news of his death reached the mother she telegraphed in haste for her remaining son to return to Japan. She had still one son left to fight for Japan, and he should at once take the place of him who had fallen before the enemy was wholly vanquished. The eldest son is now on his way back to Japan.

PRINCELY MUNIFICENCE.

PRINCE MORI, at one-time the most wealthy and powerful of the *daimyos*, and autocrat of that part of Japan now known as Yamaguchi Prefecture, has made arrangements to celebrate the

victories of the armies of Japan in a manner worthy of his great name. The total number of soldiers afield who are natives of Yamaguchi Prefecture, is a little over six thousand. To the families or nearest relatives of these men Prince Mori gives a feast; but as these good people are scattered throughout many scores of towns and villages, and as it would be impossible, for obvious reasons, to bring all together at one time in one place, placards have been conspicuously posted in all towns and villages concerned setting forth the Prince's intentions, and bidding each to be at a certain place on a certain date, to receive the princely bounty. The whole Prefecture is thus divided up into some 22 separate districts, in each of which one day will be devoted to carrying out the kindly and patriotic programme. The great feast began on the 1st instant and will continue until the 12th inclusive. But more than this, Prince Mori has publicly made the following pledge:—"To the next of kin of those who fall in the war he has promised to make cash payments in accordance with the accompanying schedule:—

The next of kin of general officers will receive	yen 100
The next of kin of major and above will receive	yen 75
The next of kin of ensigns and above will receive	yen 50
The next of kin of non-commissioned officers will receive	yen 30
The next of kin of rank and file will receive	yen 10

A large sum has already been paid out in this manner, for the men of Yamaguchi have been in the thick of most of the recent important engagements. It goes without saying that this most generous conduct is warmly applauded by the vernacular press.

EARLY TRAINING.

WHILE driving the other day through Ai-oi-cho, Azabu District, says a Tokyo journal, the Russian Minister noticed a Japanese woman of the lower class walking with her four or five year-old child. The little fellow stumbled over a stone and fell, cutting his forehead. The mother at once raised the child and both began kicking at and stamping upon the offending stone. The Russian Minister was surprised at this and asked his secretary, who was in the same carriage, why the woman had acted as she did. He was told that this was a common enough custom in Japan, children being taught to take vengeance at once upon any inanimate object that is the cause of injury to them. On this Minister clapped his hands. In Europe, exclaimed he, it would have been the mother's part to distract the child's attention and keep it from yielding to tears; but in Japan the idea was to punish the offender, albeit a stone, and hence insensible of maltreatment. So trained the Japanese might well hope for success in competing with an adversary many times their size. We wonder whether the genial Russian Representative will find this tale as novel as we do.

INTREPID RECONNOITRING PARTY.

WHEN the van of the Second Army was to march upon Chin-chow, Ensign Ozaki was ordered to reconnoitre the defences of the stronghold from Mount Takô-shang which stands close by. A sergeant and eight troopers accompanied him. The mountain is entirely devoid of vegetation and very rugged with protruding rocks, but the Ensign and the sergeant, nothing daunted, undertook the steep ascent leaving the troopers at the foot. About an hour and a half after the two had started the men, who were awaiting their return, saw at a distance 300 of the enemy coming towards them from the south-west. Flight was impossible, so the eight Japanese resolved to make a desperate charge at the enemy. When the latter were within shooting distance, therefore, they were met with deadly volleys of well-aimed shots which continued for about half an hour. By that time the powder was all spent as the eight men only had 40 rounds each, so they rushed at the enemy and with drawn sabres cut through their ranks. In the evening six of them reached the place where the van was encamped and the remaining two followed a few hours later. It appears that one of the troopers fell from his horse at the onset, seeing which one of his comrades went to his rescue and after securing

the horse that had run away, the two returned to the camp unmolested by the enemy. Major Ito, the commander of the van, entertained great fears as to the safety of the two officers who had ascended the mountain, and despatched the eight troopers with a party of artillery to search for them. In the dead of night the Ensign came back after having thoroughly reconnoitred the interior of the stronghold of Chin-chow. He had become separated from the sergeant on the mountain and the two had lost each other's tracks. A few hours later the sergeant also returned to the great joy of the Major and his troops.

YOKOHAMA LITERARY SOCIETY.

AT the regular meeting on Friday evening the chief item in the programme was a valuable paper by Professor Terry on "Money." The learned Professor is a past master of the subject and gave a highly finished argument in which he completely demolished the fallacy that Money *per se* is Wealth; and further showed up the folly of those who claim that national prosperity can be secured by the Government increasing the amount of coin, token, or fiat currency. On the motion of the President a hearty vote of thanks was accorded Professor Terry for his lecture. Another special feature of the evening was a short address from Rev. Dr. Greene, who first arrived in this country on November 30th, 1869—just 25 years ago. The worthy Doctor contrasted the state of the people then and now: and showed with warmth the real progress made in many ways by the Japanese nation during the past quarter of a century. Altogether the address was a most interesting reminiscence from an eye-witness. We understand the Society is arranging for a special lecture next Friday, 17 Dec., on "Morocco, its people and customs." Full particulars will be duly announced. The following was last night's programme:—

Duo	Misses Moulton and Griffin.	Patronise (Schubert).
Song	"Childhood's home" (Cotter).	Miss Webb.
Paper	Professor Terry.	"Money."
P. E. solo	Miss Sale.	"Au matin" (Godard).
Reading	Mr. Booth.	"Concerning Suicide."
Song	Mr. Unite.	"The Monarch of the Storm."
Address	Rev. Dr. Greene.	"Twenty-five years in Japan."
P. E. Duo	Misses Griffin and Moulton.	Patronise (Schubert).

AN AGED BRIDE.

AFTER twenty-five years of age it is quite uncommon for a Japanese woman to be sought out as a bride; by far the greater number celebrate their espousals before obtaining their legal majority. And so it comes that a Tokushima contemporary narrates as quite a marvel the fact that an old lady of sixty-five recently pledged her troth to a bridegroom of sixty-three. Neither, it is alleged, had ever had any experience of the connubial slip-nose before; and the sole reason for their marrying was that both were rich and desired to join their property and thus mutually increase their wealth. "They intend," says our Tokushima informant with just a bit of sarcasm, "probably to adopt a son; it is in the nature of things that they can hardly expect Heaven to bless their young affections with offspring."

PLAYING A MAN WITH A SALMON ROD.

A NOVEL bit of sport, which proved very attractive and amusing, was arranged by Mr. William Hearder, at the aquatic sports in connection with the Lifeboat Saturday demonstration at Plymouth on September 22nd. Dr. William Square, who is an expert salmon fisherman, was armed with a 9ft. East India cane rod and a medium salmon line, terminated with a swivel hook. He was seated in a punt, as in lake fishing. Mr. Samuel J. Kitt, a crack swimmer, made a dive for the swivel hook, and attached it to a ring fastened to a harness, which passed around the body and over the shoulder. The idea was to see if he could break the line. He did his best, but the fisherman reeled him up once or twice pretty close to the boat, then

with a rush he would take out some 40 or 50 yards of line, but the strain of the rod would compel him to turn. Once he got foul of a mooring buoy, and it was thought that he would break away, but by skilful management of the punt Dr. Square got him well in hand. Just, however, as he was getting him close to the boat he made a great rush, and got round the bow of a steamer; he was quickly followed by the fisherman, and after twenty-five minutes' thorough good sport he was brought alongside the boat, and great amusement was created as the doctor with a shepherd's crook, which looked very much like a gaff, hauled the swimmer into the boat. The match was witnessed by some 10,000 to 15,000 people, and the excitement was intense. This experiment, says the Editor of the *Field*, from which we take the above, has been tried before, and always with the result that the man was compelled in the end to succumb.

SHANGHAI KNOWLEDGE.

THE leading Shanghai Journal's knowledge of the progress of the war fills us with profound admiration. It believes that "no fewer than 20,000 invalids have been brought back to Japan from Korea since the war began." The responsibility for that absurd story rests with an exceedingly silly Yokohama critic, who arrived at his estimate thus:—On the 8th of November the 58th batch of invalids from the army in Korea arrived at Ujima. It consisted of 324 non-commissioned officers and privates. Now 324 multiplied by 58 is equal to 18,792. Therefore there must have been no fewer than 20,000 invalids, since the commencement. Was ever such childishness seen in a newspaper before? Twenty thousand invalids in four months from an army that numbered only 5,000 originally! And the method of calculation! Then the Shanghai Journal declares that Japan has found it "necessary to call out her last batch of reserves who only came of age this year." Is not that delightful! Men already in the reserves before they are 21! Next, the *North China Daily News*, writing, he it observed, on November 24th, says:—"Fenghwan-chen, at any rate, had not up to the latest advices been taken." Yet Fenghwan-chen was in the possession of the Japanese on October 29th. It certainly would be too much to expect that our contemporary should understand Yamagata's operations to clear his flank, and we are not surprised, therefore, to find that it interprets the taking of Sui-yen as a proof that the First Army is "moving westward instead of north-westward."

NAVAL NEWS.

H.M.S. *Archer* and *Peacock* are expected to arrive at Hongkong early in December for the purpose of recommissioning. Lieut. Liscombe, R.N., late First Lieutenant of the *Himalaya*, is in charge on board the *Yumna*, which arrived in Hongkong on November 27th, as transport officer. Mr. Washington, Naval Cadet, joins the *Edgar*, and the six blue-jackets who arrived by the *Yumna* were men who had been left behind by the *Æolus*, *Edgar*, and *Spartan* when they left the Mediterranean station for China. The *Yumna* lost two boats in the Bay of Biscay. She will coal at once and prepare as soon as possible to ship stores that are ordered home. The Italian cruiser *Umbria* arrived at Hongkong on Nov. 25th, under the command of Captain Bertolini, from Spezia. She will be followed by the *Piemonte*, the *Cristoforo Colombo*, with the Duke d'Abruzzi on board, and probably by the second-class cruiser *Fieramosca*. While the *Swift* was returning to Singapore the other day from a short cruise, the French cruiser *Isly* came up close behind her, and then ran past exchanging the usual ensign salutes. The *Isly's* name was covered up, but her identity was unmistakable. Like many of these French war-ships she stands high in the water and makes a big target in proportion to the metal she carries. H.M.S. *Alacrity* left Shanghai on November 30th to meet the *Empress of Japan* at Woosung, which was expected early next morning. Sir Charles and Lady Fremantle, and Miss Fremantle are passengers from Japan, and they will pro-

ceed at once in the *Alacrity* to the Chusan Archipelago there to meet the Vice-Admiral, and it is probable that afterwards the *Alacrity* will bring the Vice-Admiral with his brother and family to Shanghai. The *Porpoise* arrived from Chefoo, and the *Redpole* went to sea for a short cruise on November 30th. The *Pigmy* left on November 29th for Hankow to relieve the *Peacock*. H.M.S. *Severn* is outside Woosung. H.M.S. *Edgar* has been ordered home, and the *Crescent* is to leave for Australia. The *Gibraltar* will be detained in Hongkong for further orders and will not join the fleet in the north.

UNBENDING PATRIOTISM.

THE arrival of Mr. Detring was received with a burst of disapproval. No satisfaction whatever was popularly expressed with the manner in which China had sent her commissioner to arrange terms of peace; "it is a piece of insolence, like all the rest," was the general sentiment. The *Nippon* in its extra gave vent to this opinion in a double-distilled form. Our contemporary expressed, in the vernacular equivalent of the largest capitals, its dissatisfaction with the whole concern. The Chinese had no right to send any one to sue for terms to Japan; what they must do is to humbly approach Count Oyama, or Marshal Yamagata, their actual vanquishers, and plead through them to be heard. Additional umbrage was taken at the fact that a German should be sent as Chief Commissioner. "Let Li come himself or send one of the Dukes or Princes, if send to Japan they must," said another sturdily patriotic sheet; "we want no foreign go-betweens."

MR. L. HARLOW.

ONE of the oldest Chief Engineers in the service of the Nippon Yusen Kaisha, Mr. L. Harlow, has resigned his position on account of ill health. In connection with the event, the Directors have addressed to him a highly complimentary letter, indicating their strong sense of his exemplary and efficient conduct during nineteen years' employment, and have accompanied the letter with a cheque for \$1,041. The fact deserves to be noted, as contradicting the statements freely circulated of late with reference to absence of sympathy between Japanese employers and their foreign employés.

THE RESULT OF THE UYENO CONCERT.

We learn that the financial result of the concert recently given at Uyeno was as follows:—

Gross Receipts	\$1,713.50
Expenses	298.70
Net Receipts	\$1,414.80

This sum, upon the magnitude of which the organizers of the concert and those that so kindly lent their vocal and instrumental aid are to be highly congratulated, has been handed over by M. Braccialini to the Committee of the Red Cross Hospital.

THE FRENCH CRUISER.

THE French cruiser *Duguay Trouin*, from the North Pacific station, arrived at Yokohama on Tuesday afternoon and saluted the port. Built in 1877, she steams 15.9 knots with an indicated h.p. of 3,740, and carries 700 tons of coal. Her tonnage is 3,661, and her armament consists of 5 16-c.m., 5 14-c.m., 3 ton, 4 47-m.m. quick-firing, and 5m. guns and two torpedo tubes.

EARTHQUAKE IN TOKYO AND YOKOHAMA.

AT 8.35 p.m. on the 30th ultimo, Tokyo was visited by a severe shock of earthquake, only a little less violent than the disastrous shake of June 20th. Reports of damage have not yet reached us. No damage is reported in Yokohama from last night's earthquake.

ANOTHER CHINESE TREATY PORT.

THE *Shogyo Shimo* publishes a telegram from Shanghai to the effect that the Chinese Government, for the purpose of conciliating foreign opinion, seems likely to open another port in the neighbourhood of Nankin.

WAR NEWS.

MONDAY, DECEMBER 3RD.

The Rev. John Ross, one of the best and most favourably known missionaries in the East, has just arrived at Shanghai from Mukden and has furnished some interesting information to the Press of the Settlement. We gather from his account that the Chinese have made up their minds as to the impossibility of fighting successfully against the Japanese. He speaks of the battle of Chiulien as a terrible affair, in which the Chinese found themselves utterly unable to stand against the troops. In Mukden he alleges that there is a garrison, but with regard to the city itself, he appears to think that it would not be worth capturing. Like some others, he has evidently misinterpreted the significance of Marshal Yamagata's flank operations, imagining that the movement *via* An-tung and Takushan to Sui-yen and Hai-chien was a south-westerly advance of the whole army instead of being merely an incidental operation dictated by strategical considerations.

Details of the attempt made by the Chinese on the 21st ult. to recover Chin-chow are now given by the vernacular press. It appears that the Chinese troops stationed in Fu-chow, one of the principal towns of the Liao-tung peninsula, 52 miles north of Chin-chow, awoke too late to the advisability of reinforcing the garrison at the latter place before the Japanese assault. Fu-chow is situated on the west coast of the peninsula and was not therefore included in the field of early operations, since the Japanese landed on the east coast and without making any special incursions inland marched direct against Chin-chow. The debarkation having commenced on the 24th of October and the attack on Chin-chow having taken place on the 6th of November, any available Chinese troops quartered in the eastern section of the peninsula should have had ample time to march to the assistance of the Chin-chow garrison. But the only attempt in that sense seems to have been made by 2,000 of the troops in Fu-chow, and they started so late on their errand of reinforcement that news of the fall of Chin-chow reached them *en route*, and they turned back *re infecta*. Learning, however, that the Japanese were to march in full force against Port Arthur about the 20th of November, the Chin-chow commandant conceived the project of attempting to recover Chin-chow from the comparatively feeble guard to whose protection it had doubtless been entrusted. Accordingly he set out at the head of about 3,000 Infantry and 200 Cavalry, hoping to surprise the place. His advance was discovered, however, by Japanese scouts on the 19th of November at a distance of 26 miles north of Chin-chow, and although he took the precaution of cutting the Japanese telegraph as soon as possible, communication still remained intact between the next commissariat station and Chin-chow *via* Talien. Thus all chance of surprising the garrison was lost. On the 20th, the Japanese in Chin-chow sent out a portion of their force to oppose the enemy's progress, but no encounter took place, and on the 21st at 11 a.m. the Chinese advanced to the attack of the place. It is not stated how many soldiers General Kawaji had left in Chin-chow, but we read that they saw themselves overwhelmingly outnumbered and had recourse to the expedient of arming the artizans and coolies attached to the Army with some of the rifles that had been captured in the town, field-pieces found there being also run out and trained against the troops of their former owners. From ships lying in Talien further assistance was obtained in the shape of 200 Marines. These arrangements made, the garrison divided into two, one-half remaining within the walls and the other undertaking the defence outside. The fight began at noon and lasted until 3.15 p.m., by which time the Chinese were completely routed and fled, leaving 300 of their number upon the field. The Japanese casualties totalled 60, of whom 5 were killed. Meanwhile, news of these events having been sent to Port Arthur, Major-General Nogi set out from that place on the

morning of the 22nd at the head of two battalions to reinforce the Chin-chow garrison. On the march he met or came up with several parties of Chinese fugitives from Port Arthur, numbers of whom seem to have been killed by his troops, the Chinese apparently making no attempt to surrender. The relieving troops must have marched with great rapidity, for the advance guard under Major Awaya covered the whole distance (40 miles) between Port Arthur and Chin-chow in one day. A little to the south of Chin-chow Awaya's troops met another body of Chinese—what they were doing there we are not told—and killed 200 of them. The remainder, 238 in number, hoisted a white flag and surrendered. It is said that this was the first example of a white flag being honestly used by the Chinese. They have often displayed white flags before, but invariably as a *ruse de guerre*. The *Kokkai* says that after his arrival at Chin-chow, Major-General Nogi marched at once against Fu-chow, but that the Chinese garrison in that place aggregating 800 men made no defence whatever and fled *ple-melle* in the direction of Newchwang. This striking but not altogether novel display of pusillanimity is attributed to the sanguinary lesson learned by the Chinese at Port Arthur.

The *Nichi Nichi Shimbun's* correspondent writing from the *Tatatsiho Kan* gives a detailed account of the naval operations in connection with the attack on Port Arthur. On the night of the 20th of November the Japanese fleet consisting of 17 or 18 ships and 12 or 13 torpedo-boats, left the temporary anchorage and steamed to a post in front of Port Arthur. At 6 the following morning, the *Akagi*, *Chokai*, *Oshima*, and *Maya*, four gunboats belonging to the Fourth Flying Squadron, advanced to the east of the fortress and opened fire. The forts replied with their heavy ordnance. The first shell passed over the *Oshima*, the second fell between her and one of her consorts, and the third struck the sea astern. At this stage it was observed that the gunners in the forts were training their pieces to the rear being evidently more concerned about the land than about the sea attack. At about 10 a.m. a steamer was observed in the south, and the First Flying Squadron proceeded in her direction. Seeing the Japanese ships approaching, the steamer changed her course, and running up the English ensign headed at full speed toward Chin wan. Despite her British flag, however, the steamer was observed to have the ideographs "Golden Dragon" painted on her stern. The Second Flying Squadron and some torpedo-boats therefore followed to the entrance of the Bay and three or four torpedo-boats, steaming in, approached her from both sides. Thereupon the steamer steered for the flag-ship *Matsushima* and the latter lowered a boat to board her. Just then H.B.M.S. *Alacrity* came up and, passing between the Japanese ships and the shore, signalled "I wish to communicate personally." She lowered a boat and sent an officer on board the flag-ship, who explained that the doubtful-looking steamer was alright, and she was therefore allowed to proceed on her way. The *Chiyoda* now steamed into Chin Bay and fired several shells at the forts there, but they made no reply. A squadron of cavalry numbering 50 or 60 were now observed on the southern shore of the bay and recognized to be Japanese troopers who were taking part in the attack on the west of the enemy's position. At 1 p.m. the Fleet, rounding Lao-tse-shan promontory, steamed towards Port Arthur. The ships of the Fourth Squadron that had been bombarding the eastern forts since the morning, ceased firing in the afternoon shortly before the assault of those forts by the land forces. The western forts, however, still remained in the possession of the enemy and were keeping up a brisk cannonade. Against these the fleet was about to direct its fire when it observed an English man-of-war, with all her colours flying, steaming along right under the forts. The Chinese gunners evidently mistook this craft for a Japanese. They opened fire on her with their 24-centimetre guns. The first shell passed close over

her and dropped far beyond, whereupon she at once changed her course, but the Chinamen nevertheless sent a second shell after her which dropped astern. This ship was the *Alacrity*. The Japanese vessels now took up a position, the *Isukushima* coming directly in front. The correspondent from whom we quote, says that when the forts opened fire the officers of the *Isukushima* shouted jests to one another and seemed highly tickled at the bad gunnery of the Chinese. In fact so miserable was the practice from the forts that not one of the Japanese ships was touched. It was now evident that the operations on shore had been successful, and at 3.30 the *Yayeyama* brought intelligence that all the forts on the east had been taken. The fire of big guns and rifles had been incessant since the morning, showing the fierce character of the engagement. On the 22nd the cold was intense and a gale blowing from the north. The ships, foreseeing this, started at an early hour to return to their temporary anchorage. Steaming against the wind the thermometer registered 22nd° F. at 9 a.m. and the decks were covered with ice. On the 23rd, the weather having moderated, the ships returned to Port Arthur and found that the fortress was entirely in Japanese possession, the ensign of the Rising Sun floating over all the forts. Measures were then taken to raise the torpedoes sunk at the entrance to the harbour. Two incidents not mentioned in the above correspondence and possibly apocryphal are given by the *Chu-o Shimbun* and the *Kokumin Shimbun*. The first is that on the 21st ult. nine Japanese torpedo-boats attacked two Chinese torpedo-boats, sunk one of them and driving the other ashore, destroyed her. The second item is that the Chinese Generals in command at Port Arthur have been taken prisoners. The *Kokumin's* story alleges that these valiant officers got on board a junk the night before the attack and had themselves towed out to sea by a small steamer. Getting outside, however, they were observed and chased by a Japanese torpedo-boat, whereupon they turned, ran the junk ashore and fled in the darkness only to fall into the hands of the Japanese soldiers.

The Head-quarters of the Second Army are to be at Chin-chow whither the Army was to return in triumph from Port Arthur on the 1st instant. It is stated that Major-General Nogi will be Commandant of the place.

According to the *Kokkai* the half-constructed vessel captured by the Japanese in the dock at Port Arthur is a torpedo-boat.

The Tai Wōn-kun, it is said, has resigned all his public positions and entrusted the carrying out of Korean reforms entirely to Count Luoye. This bit of intelligence that has an ironical sound.

H.I.H. Prince Yamashina has started for the Liao-tung Peninsula on a tour of military inspection.

TUESDAY, DECEMBER 4TH.

For the present, and probably for some time to come, we cannot look for much important intelligence from the seat of war. Meanwhile, stray items of news relating to recent operations reach us through the columns of the vernacular press. The *Hochi Shimbun* tells a story of the devoted bravery shown by a trooper named Hashimoto in the fight at Port Arthur. It will be remembered that a company of infantry, detached from the advance guard, having become involved with a greatly superior force of the enemy during the march against the eastern forts, Captain Asakawa at the head of a squadron of cavalry, made a gallant and dashy charge that enabled the infantry to reach a position of comparative security. Captain Asakawa had his hand pierced by a bayonet and his horse was killed under him. Seven or eight of the enemy attacked him while thus disabled, and he must have been despatched but for Hashimoto, who, although struck by a bullet in the stomach, thrust his horse among the Chinese, scattered them for the moment, and getting the Captain to mount the horse, ran by its side himself to Swang-tai-ken whither the injured officer retired. Hashimoto died that night.

In the same paper we find this paragraph:—"The van of the Mixed Brigade advancing with hot zeal entered Port Arthur (the town) *en route* to attack the Golden Hill Fort. The troops had to cross an interval of about 5 miles exposed to the full fire of the enemy. They rushed the whole distance without a pause, and without the least concern for the shells flying over them. As they approached the Fort, three mines were sprung in their immediate vicinity, but they never showed a sign of wavering, and in a few minutes the Fort was in their possession."

From Korea comes news of further operations against the Tong-hak rebels. We need not enter into details. It matters little to our readers to learn what commissariat station was the object of the insurgents' attack; what Captain or Lieutenant, and what force of gendarmes or soldiers attacked the rioters at what place, and how many of the latter were killed, wounded or taken prisoners. The main and chiefly interesting point is that Count Inouye is adopting really vigorous and drastic measures to quell these troublesome insurgents. He will of course succeed. Meanwhile, it is curious to note the extraordinary arithmetical discrepancy always existing between the force of the Japanese and that of their opponents. Half a company of Japanese soldiers or gendarmes suffices to route a couple of thousand Tong-haks. The Japanese apparently suffer from the same moral deficiency as the British: they never know when they ought to be beaten.

After several of the forts on the land side of Port Arthur had fallen into the hands of the Japanese, it was necessary that tidings of the fact should be conveyed to the naval squadrons to prevent them from firing on their friends. Captain Nezu of the Army and Lieutenant Iida of the Navy having been entrusted with this duty, proceeded to the coast, accompanied by a trooper. Arrived at the shore, they signalled to some of the Japanese war-ships, not far off, but to no purpose. They therefore determined to push out to sea in a boat found in the vicinity, and after some difficulty they succeeded in hiring one native fisherman. Seeing that the *Tsukushi Kan* in the van of the squadrons was firing at a fort situated on the coast, the messengers urged their boatman on, making signals to the ships all the while. These signals were at last perceived by the *Chokai*, which lowered a boat, and the three Japanese were enabled to fulfil their important duty. They then returned to the shore, and were on their journey back to the camp, when they perceived at a distance some 200 Chinese fugitives hastening towards the place where they were standing. They concealed themselves and eluded discovery, but thinking it dangerous to proceed any further by road, made their way back to the spot where they had hired the fisherman. Promising him a large sum of money, they induced him to again row them in the direction of the Japanese ships. The latter however, steamed away before they could be sighted. Night had by this time fallen, and the wind was blowing so strongly that a voyage in such a small craft was far from safe. The boat was therefore rowed to the nearest coast, and the three men again started on their journey. At last, at about 11 p.m., they arrived in a state of great exhaustion at a house where they induced a member of the family to act as a guide, and on the morning of the 23rd ult. they reached Port Arthur, after having met three more batches of Chinese fugitives. At one time *en route* they were perceived at a distance by Japanese troops who, taking the three for Chinamen, levelled their rifles. At this the trooper mounted upon an elevation and unbuttoning his overcoat showed his Japanese uniform. His comrades recognized it, and the three men were welcomed back by the Commander of the troops which had been sent out to intercept Chinese fugitives.

Very few tales of individual heroism have as yet been reported, but we are given the following account of the 3rd Company of the 2nd Regiment. When the Company was led under the walls of one of the forts, it was of course

necessary that a breastwork should be thrown up with the greatest possible speed. The men, therefore, in spite of the great cold, stripped themselves of their upper garments, and used them to carry earth. A breastwork of large dimensions was constructed in an incredibly short space of time, and the work of firing upon the fort was immediately commenced. The conduct of the soldiers upon this occasion is deserving of the highest praise.

An Englishman and a German were captured in the town of Port Arthur on the 22nd ult. The former is said to be a war-correspondent of Reuter's and the latter his interpreter. The names of the two men not having been communicated by either their Consuls or their Minister to the Japanese, as is usually the case with war-correspondents, an English officer in the Army was asked whether he would give a guarantee on behalf of the would-be correspondent. This the officer refused to do, but promised to ask the British Consul in Chefoo for a certificate, pending the arrival of which the two foreigners were placed under the custody of the Japanese troops.

An amusing incident occurred when the conquering army entered the town of Port Arthur on the 22nd ult. A stage stood in one of the streets, and on it some 40 Chinamen began to perform to enlist the sympathy of the Japanese and to show that they were not soldiers but simply actors prevented from leaving the place. They laughed and talked, but now and then the state of fear and sorrow in which they really were made itself only too evident to the spectators.

On the afternoon of the 23rd ult., an entertainment was held in the open space near the dock. All the Japanese officers and the press representatives both native and foreign, aggregating about 600, gathered round the tables upon which Chinese liquor, tinned meats, dried cuttle fish and pork were set before them, these being the only delicacies available, at a feast in celebration of the capture of one of the strongest fortresses in the world. The officers shook hands cordially and congratulated each other on their mutual safety. The band was kept playing, and at the instance of the Field-Marshal, three lusty cheers were given for the Emperor. In the course of the entertainment, an officer proposed that Count Oyama should be shouldered in triumph, and the Marshal's portly form was hoisted several times into the air amid the cheers of all present. Lieut.-General Yamaji, and Major-Generals Hasegawa and Nishi went through the same ceremony.

It is said that the Chinese in their flight from Port Arthur committed such outrages in the villages along the road that the natives secretly petitioned the Japanese to destroy them. Many a time the Japanese troops fell upon the Chinese raiding the dwellings of their own countrymen and shot them down, to the great joy of the villagers. A correspondent of a vernacular paper considers this a sign of the downfall of the present Chinese dynasty.

WEDNESDAY, DECEMBER 5TH.

Marshal Yamagata is now on his way back from Manchuria. It is said that he is suffering from abscess of the liver, and that Dr. Hashimoto received express orders from the Emperor to proceed to Chiu-lien and attend the sufferer. Mr. Shirane was subsequently despatched, bearing an autograph letter of commendation from the Sovereign, and Mr. Nakamura has been sent on a similar mission. Lieut.-General Nozu is promoted to be Field-Marshal, and succeeds to the command of the First Army, and is replaced in the command of the Fifth Division by Lieut.-General Oku.

The *Hochi* says that two vessels in process of building were captured by the Japanese in the docks at Port Arthur. It adds that 450 fish-torpedoes were among the spoils.

The same journal tells us that Chinese hand-carts are now used for the commissariat service between Takn-shan and Sui-yen, and that fully 500 *koku* of rice are sent forward daily. That must mean that a winter supply is being laid in, for there are only two battalions, so far as we know, in Sui-yen.

According to accounts obtained from the people of Manchuria, says the *Nichi Nichi Shimbun*, General Iko Tang-o is at the head of about 1,000 troops, in the neighbourhood of Yang-pien-man.

Captain Miura, formerly harbour-master at Sasaho, and recently commander of the *Yamashiro Maru*, has been appointed harbour-master at Port Arthur.

The thermometer at Feng-hwan, according to the military reports, falls 5° below zero at night, and there is already over 2 inches of ice.

The principal ships of the Peiyang Squadron are said to be still safely ensconced in Wei-hai-wei, where they are watched by Japanese war-vessels.

It is generally alleged, says the *Yiji Shimpō*, that the Chinese soldiers are much finer men, physically speaking, than the Japanese. But that is only conjecture. Orders were recently given to the military surgeons in charge of various divisions to examine and report upon the question. The fullest report is that sent in by Surgeon-Major Taniguchi, of the Third Division. It is true that his measurements and calculations, being based upon experiments with only 70 Chinese prisoners, can not be regarded as conclusive. But they prove, so far as they go, that although individual Chinamen may be found bigger and finer than individual Japanese, the average is in favour of the Japanese in several points. The *Yiji* attributes this to the fact that great care is exercised in enlisting soldiers for the Japanese Army, whereas in China anyone that comes along is taken. Here are some of the figures:—

AVERAGES TAKEN FROM 77 CHINESE AND 14,218 JAPANESE.	
Chinese.	Japanese.
Age.....29½	21½
Height.....5 ft. 5 inches.	5 ft. 4.4 inches.
Weight.....146 <i>kwan</i> .	162.24 <i>kwan</i> .

Expansion of Chest on respiration.....2.21 inches.	2.32 inches.
Capacity of Lungs.....3,129 cubic cent.	3,631 cubic cent.
Lifting strength 31 kil.	41 kil.

An officer of the Second Army told a war-correspondent of a Tokyo paper that owing to the extraordinary exertions the troops had to make from the 19th of November, they were worn out by the time they encamped in the vicinity of Port Arthur on the eve of the assault upon that stronghold. To add to their hardships, a storm set in with most piercing cold. Both officers and soldiers passed the night in embracing each other to keep up the calorific. Next day, after the fighting was all over and Port Arthur had been captured exhaustion and reaction told so strongly that few of the soldiers could keep themselves erect without considerable exertion. As an extreme instance of prostration, the case may be mentioned of one soldier, who, while encamped in Port Arthur next day, was so worn out as to remain unconscious even when the fire by which he lay asleep burned him severely. He was placed under medical treatment, but eventually succumbed. That the victories won by the Japanese over their antagonists were not due solely to the latter's pusillanimity but chiefly to the former's intrepidity was attested by a foreign war correspondent who witnessed the various struggles on the 21st. Seeing the desperate assault made by Major-General Hasegawa's Mixed Brigade when, without the aid of any really effective artillery, it attempted to take by storm the Fort on Rh-lung-shan, the correspondent was heard to exclaim that in no part of the world could one witness a more gallant enterprise in the face of such obstacles. He condemned such a method of fighting as involving terrible bloodshed, but his praises were loud of the fearless bravery displayed by the soldiers who loyally rushed on to the charge at the first word of command from their officers. It was indeed a bold task that the Mixed Brigade had undertaken, for the siege guns could not render any help owing to the distance, and the field-guns had no time to come to their assistance. The Major-General nevertheless gave the order to "rush" the

place. The troops under his command were from the Kumamoto Division consisting of the flower of the Japanese Army, the men being recruited from the warrior districts of Kyushiu. Hasegawa knew how to appeal to the hearts of his troops. "Lads of Kyushiu," he cried, "Charge!" He told his fellow-officers after the Fort was taken, that he had been prepared to see half of his troops killed. A report submitted by Vice-Admiral Count Kawamura, who returned lately from a tour of military inspection, bears witness to the truth of the foregoing account as to the distinguished services of the Mixed Brigade in the battle of Port Arthur. The report speaks as follows, according to the *Hochi*:—"At the capture of Port Arthur the part taken by Major-General Hasegawa's Brigade was most conspicuous. The storming of the Fort on Ri-hung-shan was a glorious sight. The Japanese naval squadrons and the war ships of other countries were watching in breathless suspense the progress of the fight, and when at last the Fort fell into the hands of the courageous Kyushiu soldiers, loud cheers were raised from both the Japanese and the foreign men-of-war."

THURSDAY, DECEMBER 6TH.

It is plain that the Chinese have had their first semblance of success since the commencement of this war. Without a map far more accurate than any existing outside the office of the Japanese Head Quarters Staff it is almost impossible to convey to our readers an intelligible idea of the military operations that have taken place in Manchuria since the 12th of November when, as will be remembered by those that have followed our war record, the Japanese troops entered Lien-shan-kwan, 52 miles north of Feng-hwang. At the cost, however, of words, the greater part of which would be needless were a map available, we shall endeavour to make the position clear. The main road from Chiu-lien to Mukden passes through Feng-hwang and strikes the Mukden-Newchwang road at Lao-yang, 130 miles beyond the Yalu. Between Lao-yang and Mukden the road lies over comparatively level ground, but between the former town and Chiu-lien it traverses a region of more or less precipitous mountains, and at Mo-tien-ling, 100 miles north of Chiu-lien, it climbs over a gorge so steep and narrow that 50 resolute men could easily hold it against an army advancing from the south. The ideographs *Mo Tien Ling* signify heaven-touching-pass, and the name is said to be well chosen. From the day when Yamagata's Army scattered Sung's forces at Hu-shan and entered Chiu-lien in safety, it was well understood that Mo-tien-ling would be the crucial point of the advance. Chiu-lien was occupied on October 26th, and three days later the advance guard reached Feng-hwang—37 miles further on—to find that Sung had burned the grain granaries and retreated with a part of his forces northwards, the rest flying westward to Sui-yen, whence they were subsequently driven still further west and north to Haichien by Oseko's force marching from Taku-shan. Three days, as we have said, sufficed to carry the advance guard over the interval of 37 miles between Chiu-lien and Feng-hwang, but 15 days were needed to negotiate the next 52 miles between the latter place and Lien-shan-kwan. A telegram from Yamagata informed us that Lien-shan had been entered on the 12th of November. Thenceforth until today we have remained in practical ignorance of what was going on among the Manchurian mountains, and it is only now that the facts begin to present themselves clearly to our view. We have hitherto been speaking of the main road from Korea to Mukden *via* Wi-ju and Chiu-lien. But it must be understood that in the mountainous region eastward of this road several minor routes, circuitous and more or less arduous, pass northward, some tapping the region eastward of Mukden, some leading to Mukden itself, and one winding among the mountains beyond Mo-tien-ling. A traveller by this last road can escape the heaven-touching-pass and at the cost of a long circuit reach the main road to Mukden either at a point 10 miles

south of Lao-yang or at a point 3 miles to the north of the latter place. Possibly it did not enter the original programme of the Japanese Generals to make any use of this last-named route, but they did so ultimately and to that fact is chiefly attributable the delay that has taken place in the northward march. Mo-tien-ling is about 11 miles beyond Lien-shan-kwan. On the 15th of November a Japanese scouting party, probably not exceeding half a Company, attempted to force the pass. The attempt seems to have been in the nature of a reconnaissance to feel the enemy's strength rather than a resolute effort to effect a passage, for the Japanese retired after a brief skirmish with a loss of only 1 killed and 3 wounded. It was at this point that recourse was had to the alternative mountain route described above. Reinforcements having been obtained from the rear, the Japanese separated into two divisions, one posting itself at a place called Tsaho-ken, 12 miles south of Lien-shan-kwan, the other and larger body under Major-General Tachimi striking eastward along the mountain route. The purpose of the former division was of course to prevent any southward advance of the enemy from Mo-tien-ling to cut the communications of Tachimi's battalion. We lately heard of this division, when with a loss of 40 killed and wounded it beat back a large body of Sung's braves whose trifling success at the heaven-touching-pass had emboldened them to push back toward Feng-hwang. When the news of that skirmish reached us we did not know that it had occurred in the sequel of the Mo-tien ling affair, but the fact is now plain. Meanwhile, Tachimi's was pushing steadily along the mountain road. He probably commenced this difficult undertaking about the 20th of November, and 10 days later we find him at Tsichia-pao, a little town among the mountains 19 miles north-east of the Mo-tien pass as the crow flies. To reach this place Tachimi must have marched some 83 miles from the point at which he left the main road. There he encountered a numerous body of the enemy whom after a sharp struggle he drove back, the Chinese leaving 25 dead upon the field and abandoning a quantity of small-arms and ammunition. In this affair Tachimi lost only 2 killed and 4 wounded. The enemy fled in a northerly direction, and it is now believed that Tachimi's battalion has turned the flank of the Mo-tien position and struck the main road again, but whether to the north or to the south of Lao-yang we have no means of judging. It should be added that forces of Manchu regulars having made their appearance in the mountains eastward of the Feng-hwang-Lien-shan road, General Nozu detached troops from Feng-hwang to attack them. This operation led to a skirmish on the 20th of November at a place called Tapia-ken, where a Japanese scouting party was driven back with a loss not yet numerically stated, and a subsequent engagement at Saima-tsi in which the Chinese were completely defeated. The above two successes, namely, that at Tapia-ken on the 20th of November and that at Mo-tien-ling on the 15th, insignificant as they were, are, we believe, the only two victories standing to Chinese credit in this war. As for General Tachimi's march to the east and north of Mo-tien, it will probably have to be placed among the most remarkable episodes of the Manchurian campaign. In the first place it involved an immense *détour*. Had the heaven-touching-pass been accessible, the advance guard need only have traversed a distance of 40 miles to reach Lao-yang. Tachimi's battalion, marching by the mountain road, had to travel 120 miles to get to the same place. Those 15 days among the mountains above the 41st parallel of latitude at the close of November must have been something to try the endurance of the most robust troops. It is plain that the defensive capacities of the celebrated pass have not been overrated. Had there been any possibility of forcing it without immense loss, the alternative of turning its flank at such a sacrifice of time and such a cost of hardship would never have been adopted. This march of General Tachimi's leads us to think that after all the occupation of Mukden has been determined

upon by the Commander-in-Chief of the First Army. We fail to appreciate the strategical importance of such an enterprise, but as a military feat it will deserve, if accomplished successfully, to rank very high. Certainly with a battalion of troops pushed as far as Lao-yang or into the mountains immediately eastward of that place, Mukden is the only intelligible objective point.

The *Yomiuri* thinks that the line of telegraph between Taku-shan in Manchuria and Chin-chow in the Lian-tung peninsula will be completed by the 10th instant.

According to the *Kokkai*, the number of siege guns employed by the Japanese in the attack on Port Arthur was 44. They were landed at Talien on the 18th instant, and were carried forward without rest, day and night, 70 coolies being allotted to each gun. Considering the force of coolies attached to the Army, there was doubtless no difficulty in assigning three or four thousand for such a duty.

The *Kokkai* predicts that when Port Arthur receives the regular organization of an admiralty station, as will presently be the case, an Imperial Prince will be appointed to the chief office.

A telegram from Chefoo, published by the *Jiji Shimpō*, says that expert examination of the iron-clad *Chen-yeun* shows very extensive injury to her bottom, and that the possibility of repairing her at Wei-hai-wai is exceedingly doubtful.

Various engagements with the Tong-haks are reported from Korea. The most important took place on the 28th and 29th ultimo, when a great force—the *Nichi Nichi Shimbun* says thirty or forty thousand—of the rebels fought with about a thousand Japanese and Korean soldiers. Some thousands (we quote verbatim so far as figures go) of the Tong-haks were killed or wounded, their two leaders being among the former. This affair is reported to have ended the rebellion in that part of the peninsula. These same rebels had engaged the Japanese on the 21st and 22nd of November, and had been defeated with heavy loss.

The *Kokkai* has a strange story of the Queen of Korea's fainting in the presence of the King while Count Inouye was unfolding to the latter the iniquities of the Tai Wön-kun. Our contemporary says that Count Inouye had to support Her Majesty to the adjoining chamber.

FRIDAY, DECEMBER 7TH.

A telegram published by the *Kokkai* reports that bands of Chinese soldiers, flying from Port Arthur, have been passing Chin-chow since the 21st instant, and making for Fu-chow, where a big battle will probably be fought in a few days.

The Chinese Government evidently anticipates an attack either upon Wei-hai-wei or Nankin, for considerable re-inforcements are being despatched to each place.

The *Kokkai* says that the Japanese naval base will be transferred to Port Arthur; that the place will become a head-quarters of Marines, and that Vice-Admiral Kabayama will be appointed Port Admiral, being at the same time raised in rank from Vice-Admiral to Admiral of the Fleet. The same journal predicts that Marshal Yamagata will be given the command of the next expeditionary force against China.

The various arrangements necessary for the occupation of Port Arthur having now been fairly inaugurated, says the *Jiji Shimpō*, the Head-quarters have been transferred from that place to Chin-chow. Our contemporary quotes various regulations issued by Marshal Yamagata with reference to the military control of the districts and the care of the fortress. These, however, have no special interest for our readers. We learn incidentally that the number of heavy guns mounted on the sea front is 57, and the number of smaller pieces mounted in the batteries for the defence of the land approaches is 163.

According to a report said to have been furnished by an officer of the *Fushino Kan* and published by the *Kokkai*, there were found at Port Arthur a number of shields, gun-carriages, and other articles battered and pierced by

shells. These had belonged to the *Chi-yuen*, *Lai-yuen*, *Ting-yuen*, and *Chen-yuen*, and it is consequently inferred that the four vessels left the port in haste, without waiting for their repairs to be completed, on hearing of the landing of the Japanese Army.

The Korean Government, says the *Fiji Shimpō*, despite its promises to abide by the instructions of Count Inouye, has already transgressed them in several points, and has secretly sent envoys to encourage the Tong-hak rebellious. The Count accordingly gave notice, on the 4th inst. that he withdrew his previous instructions and should recall the Japanese troops. This intimation threw the Government into a state of great alarm, and led to the resignation of the Home Minister.

At Chin-chow the Japanese are said to have found in the castle a big mirror—presumably of polished steel—measuring 6 feet by 3. It is to be sent to Hiroshima and placed in the Emperor's room.

OBITUARY.

MR. SAWAI REN, Chief of the Tokyo and Yokohama Telephone Exchange, died a few days ago at the early age of thirty. He was a native of Okayama and showed signs of uncommon ability when still a boy. He was only 21 when he graduated in the Course of Physics at the Tokyo University. In the spring of 1887, he started for America to continue there his studies in electrical engineering. At that time Mr. Shibusawa and others conceived the idea of establishing a telephone company, and offered to subscribe to Mr. Sawai's expenses in America if, on his return, he would undertake the superintendence of the would-be Company. He travelled through all the important parts of America where electrical engineering was in vogue, and carefully inspected the actual conditions of that new development of practical science. In a short time his ability attracted the attention of American experts, and he was even fortunate enough to be taken notice of by the great electrician, Mr. Edison. By him Mr. Sawai was appointed an assistant of his laboratory in Orangetown, New Jersey. When the Japanese Government decided not to sanction a private telephone company but to establish one as an official concern, Mr. Sawai was furnished with a sum of 1,200 yen a year by the Communications Department as a fund for prosecuting investigations in the telephone business. In December of 1888, after having concluded his inspection of electrical engineering works in America, Mr. Sawai crossed the Atlantic, and reached Paris in June of the next year. The intervening time was spent in England, also in investigations. The last International Exhibition in Paris took place during his stay there, and he was entrusted by Mr. Edison with the work of arranging and superintending, in coöperation with others, a large number of machines sent to the Exhibition by the great inventor. Mr. Sawai next travelled through Belgium, Holland, Germany, and Italy, returning home in the latter part of 1889. Shortly afterwards he was appointed Chief of the Tokyo and Yokohama Telephone Exchange Office, and at the same time lecturer in the College of Engineering of the Imperial University. Not long since he contracted a disease which grew worse and worse, and at last developed into consumption. He passed away on the 28th ult.

Another scientist succumbed to an attack of the same malady on the 1st instant in the person of Prof. Harada of the Imperial University. He also was a native of Okayama, being the eldest son of Major-General Harada (retired), a member of the House of Peers. He was born in 1860. When only 12 years of age he entered the School for Foreign Languages in Tokyo, and studied French for over two years. He was then sent by his father to Germany, where he remained from 1874 to 1884, at first entering one of the high schools in Prussia, the Heidelberg University, and afterwards that of München, and devoting himself to the study of geology and mineralogy. After

having graduated from the latter University, he travelled through Austria for the purpose of observing the geological formation of that country. On his return to Japan he was appointed assistant secretary of the Department of Agriculture and Commerce, and the next year he was also made lecturer in the College of Science of the Imperial University. Three years later, when only 26, he was promoted to the Vice-Directorship of the Geological Bureau in the same Department, and was made at the same time a Professor of the College of Science. In 1891, he undertook a tour of scientific inspection through Europe and America, partly for the benefit of his health, which had not been good for several years, symptoms of consumption having shown themselves. He was placed under the care of Dr. Koch for about a year, but to no good effect. The disease developed and carried him off at the age of thirty-four.

A GREAT MEETING OF AGRICULTURISTS.

Mr. Mayeda is ubiquitous. He strove energetically to improve the quality of Japanese tea and placed the tea-growers under one central Guild. This important Japanese industry is therefore on the road to improvement. He next collected the coal-owners of Kyushu and organized them, started the Five-Staples Association, established the Match Guild, and has now turned his attention to the development of agriculture. As a first step towards the last end, he convened a grand meeting of Japanese agriculturists at the Yayoi-kan, in Shiba Park, Tokyo, for three days commencing on the 1st instant. One or two representatives were sent from every district in the Empire, with the result that over 500 noted agriculturists were assembled in the spacious hall. On the first day of the meeting, addresses and speeches were delivered by Mr. Mayeda, Prince Kitashirakawa, President of the Imperial Society of Agriculturists, Viscount Enomoto, Minister of Agriculture and Commerce, and many others. A list of subjects to be deliberated at the meeting was previously forwarded to the local branch societies and the following decisions were given:—

- 1.—What is the first thing to be undertaken for the benefit of national agriculture?
The most important point is to settle the system and process of organizing agricultural guilds.
- 2.—What should first be done agriculturally for each locality?
That must be specially determined by each locality.
- 3.—What safeguards should be established against the sale or mortgage of land?
A mode of mutual help should be provided by founding a farmers' guild in each town or village.
- 4.—As to the methods of establishing agricultural banks and agricultural insurance companies:
These methods should first be investigated by the Japanese Agricultural Society and also by individuals interested in those matters, and afterwards the processes considered best should be adopted and submitted to the Authorities.
- 5.—As to the manner of redeeming debts incurred by farmers:
Certain provisions should be made and enforced with that special object in view by the agriculturists' guild in the town or village.
- 6.—How to utilize in the most profitable way money saved by farmers:
In every district a special office should be established to deal with the savings of farmers, and each local guild of agriculturists should arrange certain methods for the utilization of such savings.
- 7.—How to bring about exchange of seeds:
For this purpose the Postal Regulations should be revised so that the Central Agriculturists' Society and its local offices shall be licensed to remit seeds within a certain limit either free or at the lowest possible charge.
- 8.—As to modes of facilitating the purchase of fertilizers by farmers:
On the one hand inspection of fertilizers should be carried on with great strictness and the charges of transportation should be reduced as much as possible; on the other hand, a local guild should devise measures for the purchase of fertilizers by companies.
- 9.—As to modes of increasing fertilizers:
The fish guano industry of Hokkaido should be

still further developed and pastures should be improved.

10.—How to induce farmers at large to keep horses and cattle:
In each district an establishment where horses and cattle may be purchased should be initiated and a system should also be arranged by which each farmer can borrow money necessary for the purchase of horses or cattle.

11.—How to simplify all matters of a public nature with which farmers are connected so that their time may not be wasted:
Such public business required of farmers as the payment of land taxes and so forth should be disposed of by their representatives.

12.—How to prevent the importation of cotton in future:
Measures should be devised for procuring aid for carrying on experiments in connection with the improvement of Japanese cotton farming.

13.—How to prevent the importation of sugar and beans in the future:
Sugar growing should be encouraged in Loochoo, Oshima, and other southern districts, while for the production of beans Japanese farmers should be induced to settle in Korea and China and there carry on the cultivation of that product.

14.—How to increase the number of lacquer trees in this country:
A local farmers' guild should encourage the planting of those trees in places where the soil is suited for their growth.

Nine more questions were answered, but we think those given above sufficient for our readers.

LETTERS FROM HIROSHIMA.

(FROM OUR SPECIAL CORRESPONDENT.)

Hiroshima, November 29th, 1894.

I have just returned from a flying trip to Kobe, leaving by the 10.40 a.m. train yesterday and coming back at 10.30 p.m. to-day. There was nothing particularly worthy of notice during the journey, except that at several stations on the line we observed large crowds of country folk enthusiastically cheering their friends or relatives going to the army in compliance with an order of mobilization issued on the evening of the 27th instant throughout the localities where the 4th Army Division (Osaka), is quartered. The approaches to the stations were adorned with a profuse display of national flags. From the car window I saw in several places a number of horses being led along, each with a small pennon on its back signifying that it was for the use of the Army. The 4th Division and the Imperial Guards have not yet taken part in the present campaign either in Korea or China. The greater part of the 6th Division at Kumamoto is still awaiting orders. The 2nd Division now quartered here have not yet left. It will thus be seen that the Japanese forces now fighting in China can be very easily doubled or trebled without weakening any of the defensive points at home.

In the same train with me was Mr. Ito Miyoji, Secretary General of the Cabinet, who was proceeding to Kobe by order of the Premier to deliver instructions to Governor Sufu of Hyogo as to the answer to be given to Mr. Detring, who had applied through the latter for a personal interview with Count Ito. A conference between the Secretary General, the Governor, and Mr. Kato, the new Minister to England, immediately upon the arrival at Kobe of the last named official, led to a meeting between the Governor and Mr. Detring at the former's official residence. As to the nature of the instructions brought by Mr. Ito from his chief, the public is of course uninformed. But it may be stated that from the answer given him through the Governor of Hyogo, Mr. Detring was to understand that the desired interview with the Premier could not be granted, as he had not come in the capacity of a properly authorized envoy from the Chinese Emperor. In consequence of this communication, Mr. Detring left Kobe at 6 a.m. on the 29th by the same ship in which he had come. Li Hung-chang's letter to Count Ito which Mr. Detring brought with him, had been posted to the addressee shortly before the arrival at Kobe of the Secretary General of the Cabinet. It China means business, she must send an envoy with full powers to treat

with Japan as to the conditions of peace. My stay at Kobe was so short and my time so fully occupied that I could not get out of my hotel. I was informed by the people there that the principal tea-houses in the place had for the past few days been wholly taken up by parties in commemoration of the Japanese victories at Port Arthur. The inhabitants as usual show the most lively interest in the progress of their country's arms abroad.

I am informed that most of the newspaper correspondents, Japanese as well as foreign, who accompanied the Second Army, have returned here. Among foreign correspondents just arrived from Port Arthur may be mentioned Mr. Cowen, of *The Times*, and Mr. de Guerville, of the *New York Herald*. I understand that a Renter's agent has also arrived here from Port Arthur. Perhaps they think that no great battle will take place for some time to come, or perhaps they intend to accompany another expedition from here.

Two camels taken at Port Arthur arrived here to-day and were driven to the Headquarters for the inspection of His Majesty the Emperor. Camels are entire strangers in this country, and the sight of them naturally attracted the attention of a large and wondering crowd along the route taken by the animals. Another hawk caught on board the war-vessel *Takachisho* at Taliennan, exactly in the same manner as the one obtained off the Yalu, has also been brought here.

Hiroshima, December 2nd.

Yesterday a garden party was held in the Park adjacent to the Prefectural Government buildings, by the principal inhabitants of the town and the officials staying here. The fête began a little past three in the afternoon, but I was unable to go there until about half-past five, when the company, eight hundred in number, were enjoying a collation set out on rows of tables in the open air. A select party including His Imperial Highness Prince Arisugawa, Their Excellencies Count Ito and Viscount Hijikata, and several distinguished military officers were seated round a table in one of the *asumaya*. Scarcely had I managed to wedge myself into the merriest part of the crowd when Governor Nabeshima, standing close to me, asked for a hearing, and after speaking a few words of congratulation upon the capture of Port Arthur, called for three cheers for the Emperor, the Empire, and the Army and the Navy, which were enthusiastically given. Meanwhile, fireworks were cracking here and there in the park, and the Naval Band was playing by the side of the lake in front of the *asumaya* containing the above mentioned select party. The park is not large, being only about 300 yards by 200. Nearly one half of the space is taken up by a lake with plenty of the tiny islands and picturesque inlets and promontories that are never absent from such sheets of water in a Japanese garden. A small piece of level ground just inside the entrance, with a few plum trees of fantastic shapes, and two or three *asumaya*, and a delightful walk around the pond under tall and majestic pines and through shrubberies, complete the whole scenery. Besides the miniature landscape in the park itself, you can enjoy a series of fine vistas on the river flowing along one side of the place, while sitting in any of the *asumaya* you command over the pond and beyond it a splendid view of blue mountains on the islands in the Bay of Hiroshima. Altogether, the park would be a delicious spot to take a walk in. Soon after my arrival it became dark, and the place was illuminated by paper lanterns and torches. Taking a walk around the pond, we came upon a shed fitted up for buck-wheat restaurants (*sobaya*) with a sign signifying "Victory Buckwheat." A large number of military officers and civilians were assembled here heartily relishing the dishes, served by waiters dressed in Chinese costumes with pig-tails. One of them, a big man, was nicknamed Li Hung-chang and was most in demand. A short distance beyond we came to another restaurant, with a sign meaning "Triumphal *shiruko*"—*shiruko* is a kind of bean-soup con-

taining plenty of sugar, eaten with small pieces of cake. Here were also a contingent of "Chinese" waiters. On the opposite side of the pond were two other restaurants on a similar plan.

At dusk four camels were brought into the park. They had recently been brought here from Port Arthur. (In my last letter I mentioned two, but the number has since been increased.) Their appearance was the signal for loud clappings of hands and shouts of triumph. Most of the people had probably never seen living camels before, and they naturally evinced considerable curiosity. Several of them got upon the backs of their new friends and cruised about among the crowds. One of the animals soon got tired of the promenade, and lay down on the ground, whereat its rider, a member of the Prefectural Assembly, waxed very wrath at the indolence of his steed, and tried hard to get it on its feet again. His attempts seemed destined to prove futile, when suddenly the poor beast got up and passed under a large plum tree brushing its unwelcome burden against the branches and finally bringing him down to the ground in a decidedly awkward manner, to the intense enjoyment of the bystanders.

Mr. Thomas Cowan, war correspondent of *The Times*, was the only foreigner in the party. He paid a heavy penalty for the fame of his paper, for he was literally besieged by local politicians, *literati*, and what not, asking for his acquaintance and an exchange of cards. Most of these persons had never read the leading London journal in the original, but from the translations that appear in the local press from time to time, they knew the present favourable attitude of that paper towards Japan, and meant to express their sense of gratitude to its representative. Mr. Cowan good-naturedly drank a few cups of Japanese *saké* with his new acquaintances.

THE "NIROKU" ON THE ALLEGED MISSION OF MR. SHIRANE.

The *Niroku* has a strange tale about the departure of Mr. Shirane, Chief of the Imperial Treasury, for the north of China. According to that newspaper, Mr. Shirane is said to have told a friend at the Shinbashi terminus, when he was about to start for Hiroshima, that the object of his mission to Manchuria was to enquire after the health of Field-Marshal Yamagata, who was somewhat indisposed. The *Niroku* does not believe this pretext, as the Marshal having now quite recovered his health, there is no necessity for the Government to despatch anyone on that account. The facts that the order for Mr. Shirane to proceed to where the Field-Marshal is quartered was the result of a conference held at the Premier's residence when the Count was back in Tokyo for a few days, and that a steamer was specially assigned to take him from Ujina to An-tung with all possible speed, show that his mission is not of a merely complimentary character. It is evident that he is the bearer of an important message to the Field-Marshal of the 1st Army. Now while the Japanese Fleet won a signal victory in the battle of the Yellow Sea, and the 2nd Army under Field-Marshal Oyama was brilliantly successful in the capture of Port Arthur, the 1st Army has achieved no exploit that can bear comparison with the above two feats, since it has been under the generalship of Field-Marshal Yamagata, the fall of Phöng-yang having taken place before he had assumed command. The capture of Chiu-lien and Feng-hwan were comparatively easy. It is conceivable therefore that the Field-Marshal may be impatient to march upon and take Moukden as soon as possible. The Cabinet, however, is not in any special hurry about capturing that northern stronghold, not being averse to accepting any overture for peace should China make any. This is strongly opposed by the military circle, and the Cabinet is specially apprehensive that the opposition of the officers in the 1st Army will be very strong. For that reason Mr. Shirane, one of Field-Marshal Yamagata's

most intimate friends, has been despatched to Manchuria.

The *Niroku* paid dearly for the above story. The Press Censors considered it prejudicial to the maintenance of public peace and suspended the paper on the 30th ult.

The *Kokkai* has another view to propound. It agrees with the *Niroku* that no sufficient reason exists for sending a special envoy to enquire after Marshal Yamagata's health, but its interpretation of Mr. Shirane's mission is that he goes to invite Marshal Yamagata's return to Japan. It is a sacrilege, according to our contemporary, that a General of Marshal Yamagata's calibre should be wasted upon a foe so contemptible as the Chinese when his services could be much better utilized as military councillor to his Sovereign in Hiroshima. Therefore the Marshal's return to Hiroshima is desired. But as he vowed when he started that he should never come back to Japan until he had marched his troops through the gates of Peking, it may be a little difficult to induce him to abandon that intention with only one great battle (Chiu-lien) to his credit. The *Kokkai* adds that as China is not unlikely to sue for peace in the immediate future the advice of a statesman and soldier like Yamagata would be invaluable in discussing the terms.

"THE TIMES" ON THE REVISED TREATY.

Discussing the Revised Treaty between Great Britain and Japan, *The Times* says:—"It has long been apparent that the great change effected by this treaty had become inevitable, indeed, several years ago we ourselves advocated the settlement of our commercial relations with Japan upon the principles of equality and reciprocity now adopted. The treaties now superseded were, no doubt, very well suited to the conditions in which they had their origin, but these conditions, thanks to the extraordinary rapidity with which Japan has imbibed Western ideas, have entirely passed away. It could not be expected that she would submit indefinitely to arrangements suited to irresponsible personal Governments. The augury of success for the new system is to be found in the thorough-going adoption by Japan of Western ideas in their most liberal form. There are no traces in the new treaty of a grudging or illiberal spirit; on the contrary, the frank equality of treatment accorded to British subjects and to natives outruns the policy of some Western nations accustomed to regard themselves as in the van of progress. It is, perhaps, not to be expected that our countrymen in the Far East will all at once display perfect confidence in the new safeguards for their interests. They may regret the special immunities they have hitherto enjoyed, and some may possibly refuse to see any compensation in an enlarged freedom of trade, which will expose them to keener competition from their own race. But they have several years in which to accustom themselves to the new order of things and to prepare to take advantage of the greater scope it affords for enterprise. If Japanese codes are still imperfectly applied by Courts not yet fully organized, we may look forward with some confidence to considerable advance in the course of the next five years. But it is obvious that, so long as foreigners have an effective guarantee of equal treatment which is secured to British subjects by this treaty, the precise degree of Western development reached by the code is a matter of secondary importance. Strangers cannot expect better treatment than natives, nor would Japan listen to dictation in her municipal affairs. The danger to be guarded against is exceptionally bad treatment of foreigners, and this danger is as fully provided against in the new treaty as anything can be by international agreement."

THE PEACE PROBLEM.

According to the *Kokumin*, the leading members of the Constitutional Reform Party held a deliberative meeting on the 28th ult. and decided that no overtures for peace on China's part should be entertained, unless they are in the sense of complete surrender. Before agreeing to an armistice preparatory to negotiations for peace, China, as security of *bona fides*, must be required to surrender the Taku forts and all her war-vessels. The following is said to be the resolution formulated by the members with regard to the peace problem:—

The march of the Imperial forces must not be stopped unless China knees direct for peace in the sense of surrender.

In order to quell the contumacious spirit of China and to guarantee the permanent tranquillity of Eastern Asia, China must be compelled to cede territories of strategic importance in the north and south; that is to say, Shin-king and Formosa. She must also be required to pay an indemnity sufficient to compensate the expenses incurred by Japan directly or indirectly in the prosecution of the war. In case China can not pay such indemnity at once, one division of the Japanese Army and one squadron of the Navy must be stationed at places of importance along the Gulf of Pechili pending the complete payment of the indemnity, and the cost of this military and naval occupation must be borne by China.

There are four opinions, writes the *Kokkai*, as to the conditions on which Japan should make peace with China when the latter sues. The first, advocated by a section of Progressionists, is to the effect that as there is no hope of Japan's being able to rouse China from her conservative lethargy, and induce her to develop capacity for strong independence, it is not in Japan's interests to make the attempt. She must, therefore, overthrow her adversary completely, and finally eliminate all germs of future evil by placing the 400 millions of China's inhabitants under Japanese sway.

The second view points to the partition of China, much after the manner in which Poland ceased to possess national integrity. This opinion is identical with the first, in so far as concerns the belief that China has no capacity for preserving her own independence and is bound to be absorbed by other Powers sooner or later. Japan should therefore join the aggressive league and obtain a solid slice for herself. A portion of the Radical Party incline to this theory.

The third opinion is that China should be required to cede the two provinces of Shing-king and Kirin, so that Japan may command her neighbour's eastern overland exits. Moreover, as security for the indemnity that China must pay in addition to the surrender of the above territories, the temporary occupation of Formosa should be demanded. The advocates of this view hold, however, that all matters relating to southern China had better be left to diplomacy and kept outside the sphere of military operations. This opinion appears to be supported by the majority of the Radicals.

The fourth and last opinion is somewhat analogous to the third. It holds that Shing-king in the north and Formosa in the south should be taken from China, and that the latter should first be obtained by force of arms. This view finds favour among the members of the Central Political Association.

The *Kokkai* then proceeds to comment upon the above opinions. It discards the first and second as simply academical talk, entirely out of touch with the needs of the time, and declares that its own views on this grave problem have much in common with the other two, especially the fourth. Nevertheless, it condemns the third as defective in policy, and the fourth as wanting in strategy. To demand the surrender of Formosa as security after it had been occupied by the Japanese forces, says the *Kokkai*, would be far easier than to make the same demand while the island remained an uninhabited part of Chinese territory. In that respect the policy of the third view is defective. The strategical fault of the

fourth is that so long as the remnant of China's Northern Fleet is still afloat, Japan's forces can not be divided for the purpose of attacking Formosa. Any military attempt against that island should be deferred until the command of the Gulf of Pechili has fallen entirely into the hands of Japan.

Our contemporary justly regrets that this vital problem is not unlikely to become a party question. Anything of that kind is to be strongly deprecated, for the question possesses such paramount national importance that it should be discussed with absolute freedom from passion and prejudice and kept quite outside the realm of petty bickering and party battles. The *Kokkai* advises the Radicals and the members of the Central Political Association to be frank with each other, and to arrive at some cordial understanding as to details, seeing that the views are virtually one in respect of essentials.

The *Kokumin* has a very stalwart article on the same subject. It declares that nothing short of the coming of the Emperor of China in person to make formal act of surrender to the Emperor of Japan, should induce this empire to conclude peace. If the Viceroy Li desires peace, let him urge his Emperor to take that step. If Western Powers desire peace, let them urge the Emperor of China to take that step. Napoleon the Third did it. His example is precisely in point. In no other direction can the interference of Foreign States be justifiable. The settlement of terms lies between the victor and the vanquished only. But China must openly declare herself vanquished. She ought not to doubt the fact for a moment. Nobody can doubt it. Her soldiers and her statesmen alike lack the all-essential element of patience. Their code is life first, money second, country no-where. With such men to defend and direct it no State can hope for independence. Even the Viceroy Li himself, did he not take thought before all things for his wealth when danger threatened? Was not his first care to transfer his property to his son Li Ching-fang, and send him out of the way with it? He has not one ten-millionth part of the patriotism of characters like Thiers, Gambetta, and Victor Hugo. If the Emperor of China can not govern his dominions, can not develop the capacity of independence among his subjects, Japan will undertake the task for him. It is not a question merely of a handful of indemnity money or a plot of land. It is a question of the Orient's stability. Japan will not hesitate if destiny directs. She will invade China from end to end, fighting not merely with the material weapons of rifle and cannon, but also with the moral arms of benevolence, justice, civilization, and enlightenment, until the blessings of prosperity and good Government are secured to the 400 million inhabitants of China.

THE "KOWSHING" AFFAIR.

It is very confidently asserted, we observe, in some quarters, that the British Government's deliberations on the *Kowshing* affair have resulted in a verdict unfavourable to Japan, and that an indemnity will have to be paid by this country. Critics who prophesied from the first that such would be the outcome of the affair, and who declared that no justification whatever existed for the *Naniwa's* action, are naturally pleased by this news. But their satisfaction is premature. No such decision has been formulated by the British Government up to date. From the very first the Japanese Government is understood to have declared its willingness to make full reparation should international jurists condemn the *Naniwa's* proceeding. International jurists, however, are still debating the question. It promises to go down to posterity as a *cause célèbre*. Up to the present opinions seem to be pretty evenly divided, but it must be confessed that in one respect the advantage is wholly on the side of those condemning Japan: they have enjoyed a complete monopoly of invective and bad language. Those that uphold the *Naniwa* in so far as her

right to sink the *Kowshing* is concerned have confined themselves to a quiet discussion of principles, whereas their opponents have had free recourse to personalities and general abuse. That in itself should suffice to determine on which side the right lies. For our own part we can conceive no proposition more inconsistent with the first duty of a State, namely, the preservation of its own safety, than to allege that it has not the right to intercept troops about to be used against itself in warlike operations. So plain is that proposition that even the *Naniwa's* most hostile critics admit it. She was entitled, they say, to send the *Kowshing* back to Taku, but she was not entitled to sink her. They are careful, however, to avoid explaining what course should have been adopted in the event of the *Kowshing's* refusing to be dictated to, or how the honour of the British flag would have been saved by forcibly interfering with a British ship's right of free navigation. But the thing has nearly passed into ancient history.

THE WAR REJOICINGS IN TOKYO.

Sunday next promises to be a great day in Tokyo. The arrangements for a grand demonstration to celebrate the victories won by the Japanese arms have now been almost completed, and the success of the affair is secured, so far, at any rate, as dimensions go. The proceedings will commence with a general parade in the Hibiya Square between 9 and 10 a.m. Participation is to be open to all, without distinction of nationality. A huge procession will then be formed to proceed to Ueno, passing through the Sakurada Gate and emerging from the Wadakura. Three cheers for the Emperor and Empress are to be given opposite the Palace. Arriving at Ueno the procession will wend its way to the Grand Stand by the Shinobazu lake, where the ceremony of saluting and cheering the portraits of the Emperor and Empress will take place. There will then be a *tiffin à la Japonaise*, of which all holders of tickets will be entitled to partake. It will be an *al-fresco* affair, each person being supplied with a box of edibles, a pair of chopsticks, and a bottle of *sake*, the cost of the whole to be 50 *sen*. We should have noted that before *tiffin* addresses will be delivered from the Grand Stand by the Governor of Tokyo, by Marquis Hachisuka, President of the House of Peers, by Mr. Kusumoto, President of the House of Representatives, and by Mr. Sonoda Kokichi on behalf of the citizens of Tokyo. Thereafter various displays will be organized; the *pièce de résistance*, a big sham fight between Chinese and Japanese, the combatants being skilled fencers from all quarters of the city. Probably the prettiest part of the performance will be in the evening, when fireworks on an extensive scale will be sent up, and the Shinobazu lake will become the scene of a mimic sea-fight, prominent incidents of which will be the burning and blowing up of a Chinese ship and the destruction of another by a real torpedo. The whole thing will be unique, and we strongly recommend our readers not to lose the chance of seeing it.

ROBBERY UNDER ARMS.

Hongkong is suffering from an epidemic of lawlessness among its Chinese population. Only the other day we chronicled an armed attack on a shop in a prominent quarter of the Colony. Now comes news of another armed attack by a body of six men who burst into a tobacco and general export hong in Wing Lok street. There were thirteen men in the shop and upon being threatened with revolvers, etc., they submitted to be bound. This done, a search of their persons was made to obtain the keys of the safe and money drawers. While this was proceeding the cook, who had been out, returned, and finding the hong door closed, and having in mind what had so recently occurred at a neighbouring shop, surmised what was the matter and went

for the police. The guardians of the peace were soon on the spot and proceeded to burst in the door, whereupon the robbers opened fire and one of the shots struck a coolie who was passing in the street in the head. This man died in the hospital. A Sikh constable was shot in the breast, near the heart, and in two places on the right arm; and one of the robbers was shot in the buttock by one of his own comrades. The Sikh constable lies in a precarious state. The robber gang consisted of six men, three of whom got away by the back of the house, but the other three, among whom is the one wounded, were arrested. Subsequently another man supposed to belong to the gang was arrested, and a revolver was found on his person. The men who succeeded in effecting their escape carried away with them a sum of about \$600, which they took from the drawers; the safe was not touched, as the key could not be found before the thieves were disturbed.

EXHIBITION IN THE PHILIPPINES.

There is to be a "Regional Exhibition" in the Philippine Islands from the 23rd of next January. The prospectus announces the fact to the world in a pretty little pamphlet, gaily bound, handsomely printed and containing all the information needed by would-be exhibitors. The exhibition was to have taken place from November 30th, but has been postponed until January 23rd, chiefly, so far as we can perceive, because the necessary preparations could not have been completed by the former date. The pamphlet begins with the following, which we quote for the sake of its style as well as its purport:—

ADVERTISEMENT.

The opening of the first "Regional Exhibition" which is to take place in these Islands, has been proposed to be inaugurated on 11 M. the King Alfonso XIII. saint's day on the 23rd of January, 1895.

The Philippine producers, hitherto and in different epochs, have been highly represented at the universal Exhibitions of Philadelphia, Paris, Vienna, Barcelona, and Amsterdam, and lastly in Madrid as a preparation for the future ones which may be celebrated in this Archipelago.

The "Comision Directiva" considers themselves highly honoured in addressing to the inhabitants of the China and Japan Empires, as well as to the Portuguese, English, French, and Dutch colonies, to inform them in case they should favour the Exhibition by their presences, and with the products of their industry, shall be welcomed and considered as national exhibitors.

Manila, 31st of August, 1894.

"LA COMISION DIRECTIVA."

It appears that the date originally fixed for the Exhibition was chosen by way of commemorating the victory gained by the Spanish arms over the pirate Li Ma-hung in 1574, but the postponement now announced renders available a day of more appropriate character. The event should greatly interest the many Japanese who think that they perceive a considerable opening for Japan's trade in the region of the South Seas. The classification of articles receivable covers a wide field and includes many products and manufactures in which Japan could make a striking figure. As to the question of duties, we again quote verbatim:—

THE THIRD DISPOSITION OF THE CUSTOM HOUSE TARIFF OF PHILIPPINE ISLANDS.

Approved by Royal Decree of 7th January 1891.

THE MERCHANDISE, FREE OF DUTIES, ARE SUBJECTED TO THE FORMALITIES WHICH ARE TERMINATED BY THE RULES OF THE CUSTOM HOUSE.

4th.—The foreign merchandise that is destined to the Philippine Exposition.

ARTICLE 58 OF THE CUSTOM HOUSE REGULATIONS APPROVED BY THE SAME DECREE.

The objects from foreign countries, that are remitted for the Philippine Exhibitions, shall be cleared through the Custom House, subject to the following rules:—

1st.—The Exhibitors or owners of merchandise destined to the Exhibitions, should apply to the President of the official corporation who is directing, or to his respective representative that are duly authorized, giving them the necessary information as to the present at the Custom House the import note of declaration, and to present an obligation binding

themselves for the responsibility of the duties, in case that the merchandise should not be exported in the space of three months after the Exhibition is closed.

2nd.—The merchandise referred to in above clause, can be exported through the Same Custom House, or through another, in this latter case, the Collector shall request, from the one who has given entrance, an exact copy of the import note of declaration to compare with the objects presented for export.

3rd.—When the Exhibitions are not celebrated neither by the Government nor Official Corporation, the "Intendencia General de Hacienda" shall indicate to the Custom House the clearance of merchandise; and for the responsibility of the duties, which must be guaranteed by two merchants, at the place where it is imported, to the Satisfaction of the Collector.

THE STEAMER "IRENE" ON FIRE.

The D.D.R. steamer *Irene*, Captain R. Schneider, which came into port on the 29th ult., has been on fire since between eight and nine o'clock on Sunday morning. The fire was caused by some explosions among several tons of saltpetre stowed away in the fore-hold. The stevedore's men were working cargo through this hatch and had barely time to escape. As soon as possible the hatches were battened down, and water was freely pumped on to the burning material. Fire parties put off from H.M.S. *Plover* and H.I.R.M.S. *Rynda* to assist in staying the conflagration, but their efforts unfortunately did not meet with the success expected. Volumes of suffocating smoke poured up from the burning hold, making the work of the firemen additionally hazardous. The substantial iron hatch-combings bent and twisted under the action of the heat, but the fire was confined to the fore-hold, the bulkheads holding well. At six o'clock this morning pumping operations were still proceeding. It is expected that the *Irene* will require a whole new bow after the fire is extinguished. We understand that a large quantity of coke is on board the vessel, but no anxiety is now entertained as to its safety, the fire having been kept within its original limits. A pretty little yacht brought out for Prince Yamashina had fortunately been discharged the day before the fire. The vessel's agents here are Messrs. Simon, Evers & Co.

The fire on board this steamer has been extinguished, the forehold being full of water, and the cargo that was there has been entirely consumed. It is impossible at present to estimate the damage done to the vessel, which is much down by the head and on the ground. When a thorough survey can be held it is probable that damage of an extensive character not now visible will be discovered, and the opinion has been expressed that, in insurance parlance, the vessel is a constructive total loss.

THE VICTORIA PUBLIC SCHOOL.

It is said to be a dispensation of nature that the demise of people particularly loved is preceded by long illness. The bereaved are thus gradually reconciled to the loss that impends. Such has been the case with the Victoria School. It has been sick for so many years that its death comes rather as a relief than as a shock, and the affectionate regard entertained by the British community for their memento of Her Gracious Majesty's jubilee is not too painfully outraged by the event. We do not know that there is much more to be said upon the subject. Let us bury the *Sasco* without requiem or epitaph.

THE VICEROY LI.

We learn with sincere pleasure that the Viceroy Li is still acting with Prince Kung, the decree depriving him of his rank and titles having been suspended by order of his Emperor. His disappearance from the scene, though only temporarily, would be a calamity to the East.

In speaking of the fact that raw sugar is principally used by consumers in India, and that the low price of refined has not affected the consumption of raw, a London exchange says:—"The raw sugar used in India, after making correction for the burden to freight, comes to 2,600,000 tons, or say, 28 pounds per head of population.

THE TAKING OF PORT ARTHUR.

(COMMUNICATED.)

I was fortunate enough this afternoon to hear from an eye-witness a full account of the fall of Port Arthur. My informant, the representative of an American newspaper, was at P'yōng-yang immediately after the fall of the city, and it was from a letter from him that I derived some of the details I previously communicated to you. Subsequently he went to join the Second Army in the Liau-tung peninsula, and was one of the five or six independent witnesses present at the fall of Port Arthur. To his kindness I am indebted for the account I am about to give you.

To throw some light on an unfortunate occurrence that has marred the Japanese record in the war, I must first mention that after the taking of Chin-chow the Japanese soldiers learned from the Chinese inhabitants of that city that three Japanese spies caught in the neighbourhood had been burned alive by the Chinese soldiers. And another spy, who was missing for some time, returned to state that he had escaped at the last moment from a similar awful fate. Whether these stories were true or not, they were believed by the Japanese, who were thus given that thirst for vengeance, which is easy to rouse but hard to subdue. Subsequently, on the march to Port Arthur, another incident occurred to fan the fires of wrath. The advance-guard found the bodies of three Japanese soldiers who had been killed in a skirmish between outposts on the previous day. My informant saw the bodies himself, and they were mutilated in a manner too horrible to describe in these columns. And now the Japanese officers made a great mistake. Instead of burying the bodies quietly and saying nothing about the matter, the advance guard laid them out on a platform beside the road so that the whole army might see them as it marched past. No doubt the thirst for revenge will make men fight like devils, but it will do more, it will make them act like devils when all need for actual fighting is over. And this, as I shall unfortunately have to tell, is what happened in the case of the Japanese soldiers, or more accurately speaking, the coolies attached to the Army.

On the evening of Nov. 13th, the advance-guard reached the neighbourhood of Port Arthur, and encamped in the villages just outside the range of hills surrounding the fortifications. The maps possessed by the Japanese were somewhat defective, so that the advance-guard of two thousand men found itself unexpectedly near the enemy, and of course intended to await the arrival of the main body before making the assault. The Japanese counted on the usual inactivity of the Chinese, and believed that these latter would quietly wait behind their fortifications until they were attacked. On this occasion, however, the Chinese proved more venturesome. At about eleven on the morning of the 20th, while the Japanese staff, accompanied by most of the foreign correspondents and the military attachés, were surveying the harbour from a hill, one of the Chinese forts opened fire on them. There were sixty or seventy men on the hill, forming a fair target for shell at a range of about 1,500 yards, and most of those on the hill beat a retreat. A few men, among whom was my informant, remained; and, lying down, no longer attracting attention from the fort, they were able without danger to watch what followed to great advantage. About six thousand Chinese soldiers came out of the town, and divided into three bodies, one coming up the main road, one passing to the right of the hills and a third to the left. This last body was the largest. This sally seemed to be made with considerable firmness, and it appeared as if they must easily sweep away the small Japanese advance-guard. The Japanese had only a few mountain guns with them, but forming quickly on the hills to the right and the left of the village of Suishie, they fired on the Chinese right and centre. What fire there was from the Chinese forts was quite ineffective, the projectiles passing for the most

Original from

part over the heads of the Japanese soldiers. A few well directed discharges from the Japanese were sufficient to discomfit the Chinamen, who turned and retired, and two or three shrapnell, the like of which they had evidently never seen before, bursting over their heads, made them flee as if the devil were behind them. The Chinese left, which was the largest body, quite strong enough if brave and properly led to turn the Japanese flank and drive their enemy under the guns of the Chinese forts, on perceiving the discomfiture of their comrades, did not wait for their own turn when the Japanese attention should be disengaged, but retreated incontinently along the road by which they had come. This ended the first day's fighting, and the arrival of the main body in the evening put an end to all further anxiety as to the safety of the advance-guard.

On the 21st, at seven in the morning, the attack began in earnest. My informant, in company with one of the foreign military attachés, was posted on one of the hills in the east of Suishiei, and had a splendid view of the whole engagement. Early in the day the Japanese fleet appeared outside the harbour, and cruised up and down at a considerable distance from the shore, firing now and again at the forts on the sea-front but taking little part in the actual attack. This was begun by General Yamaji's brigade, on the Japanese right. In the centre, where the staff was stationed, was the siege train, which had been expected to do great things, and to wait for which the attack had been delayed for several days. As a matter of fact, however, it proved almost useless, because, so it is said, the different grades of ammunition for the mortars had been lost by the burning of a transport, and the charges they had sent the shells to too long a range, over the forts into the sea. Whatever the reason was, the shells were of little use, and the mountain guns and the field-piece with shrapnell did almost all the effective work that was done by the Japanese artillery. The lines of advance of Yamaji's brigade were against the west of the Chinese position. The troops moved forward in three bodies, supported by batteries of mountain artillery. To the discharges from the mountain guns the Chinese fort replied by a furious but quite ineffective fire, whilst now, and throughout the attack, the precision of the Japanese artillery was magnificent. The Chinese soldiers were for the most part driven from their guns by shrapnell, and after about an hour the Japanese made a steady charge and entered the fort from the back, having moved round its flanks. It is significant of the utter lack of organization on the part of the Chinese that no attempt was made by the nearest forts to assist in the defence of the position under attack; and that the whole line of eastern forts, some of which might have been firing at General Hasegawa's brigade as it was preparing for the attack, while others might have been attempting to dismount the guns of the siege battery then in process of being placed in position, remained silent until an attack was actually made upon themselves.

The most westerly fort having been captured at about eight o'clock, its guns were turned on the next fort on the east, and the attack on this last named fort was made by another portion of Yamaji's brigade. A battery was also fixed near this second fort, and after about an hour's firing a charge was made, and the fort was likewise carried by assault. Meanwhile, General Hasegawa's brigade, containing about five thousand men and constituting the Japanese left, was engaged in the attack upon the eastern forts. It had been intended that this attack should be to a large extent a feint, and that the real strength of the attack should lie with the centre, after the walls of the forts had been breached by the mortars of the siege train; but the siege guns being ineffective, and Hasegawa's men being quite competent to manage the affair without further assistance, his brigade carried all the forts that remained. They were stormed and entered from the rear, but in what precise order I am not able to inform you. Like the other forts, these also spent a large quantity of powder and shot, but the Chinese garrisons

was hopelessly ineffective, and their rifle practice not less so; as will be apparent from the fact that this whole line of outworks, the only posts that were defended, fell into the hands of the Japanese with a loss of forty men only actually killed on the field of battle. It was soon after noon by the time this had been accomplished; and no further defence was attempted. What fighting followed was mere carnage. A large body of the Chinese garrison tried to escape along the coast to the westward, and these men were attacked and cut down by the men of Yamaji's brigade advancing along the line. The Chinese officers abandoning their men to their fate, got on board two small steamers that remained in the harbour and put out to sea. Being pursued by Japanese torpedo-boats, they steamed westward along the coast as far as they could, and then landed and escaped into the mountains. The Japanese soon learned that the forts on the sea-front had been abandoned, and several divisions entered the town.

And now comes the part that I would gladly omit, or rather that I wish had never happened. There is no doubt that there was a massacre in the town that evening. The Japanese soldiers say in excuse that those they killed were men who endeavoured to resist their entry, but this excuse is invalid, for the bodies that were lying about the next day in the streets of the town were slashed to pieces with sword cuts, whereas men killed in the endeavour to resist the regular entry of soldiers would have shown chiefly rifle or bayonet wounds. Other atrocities also seem to have been committed, but I hesitate to speak of them with assurance, pending the receipt of fuller evidence. There is every reason to think that the chief and worst part of the cruelty was perpetrated by the coolies attached to the Army. These coolies, under less strict discipline than the soldiers, and probably fired by drink, doubtless indulged in retaliation in kind on the unfortunate Chinamen.

Apart from the horror that such things should occur anywhere and under the circumstances, it is a matter for bitter regret that the brilliant Japanese success at Port Arthur should have been marred by this stain. With the possible exception of certain occurrences in connection with the sinking of the *Kowshing*, the Japanese have hitherto conducted the war in as humane a manner as anything so essentially barbarous as war can possibly be conducted. It may be said that this is the first time foreign witnesses have been present, and that we do not know but that similar incidents may have occurred earlier in the campaign; but this is untrue, for there were independent witnesses at Pihong-yang shortly after the battle, and they were informed by the Chinese prisoners that the conduct of the Japanese had been marvellously merciful; and foreign witnesses have been present throughout the campaign in the Liau-tung peninsula. It may be said—*it has already been said*—that the Japanese veneer of civilization is very thin and that these occurrences are a proof how very little is required to rub it off; but, this is a hasty accusation, for it must be remembered that it is notoriously difficult to prevent the commission of such atrocities by soldiers elated by the successful issue of a siege, more especially when the sight of the mutilated bodies of their comrades has aroused in them a thirst for revenge; and it must be remembered also that even as late as the earlier years of the present century but little was done by the leaders of Western Civilization to restrain soldiers from the massacre and pillage that were regarded as the natural sequel to the storm of a city. But the fact remains that such barbarities are, happily, utterly foreign to the spirit of the age, and the question remains whether the officers of the Japanese army are in this matter free from blame—whether their own sense of the refinements of civilization is sufficiently keen to lead them to shoot without a moment's hesitation any of their own men whom they find engaged in killing or torturing a defenceless enemy. I can not answer that question with an unqualified affirmative. Some of the senior officers seem to have been more or less

callous. But the senior staff, at all events, were deeply distressed at what had occurred, which was, of course, in direct defiance of the Field-Marshal's published regulations; and one of the chiefs of the Medical Staff also expressed his sorrow at the occurrence. At the head-quarters of the Government at Hiroshima also, I know that the massacre which took place after the fall of Port Arthur has been a cause of deep regret; and it is to be hoped that a searching investigation will be ordered. There abides none the less a stain that nothing can wash away; and it only remains to hope that it will prove an isolated occurrence. Horrible as it is it still might be possible to make too much of it; and I have no doubt that the hostile critics of Japan will not be slow to avail themselves of the opportunity. For my part, it is because I wish well to Japan, and because I have a sincere belief that her civilization is more than a veneer, that it is, like all true civilization, an earnest strife for the suppression of all that is evil and the development of all that is good in human nature, that I have dwelt at such length on this temporary outburst at Port Arthur of one of the blackest passions to which humanity is subject, one which in old Japan was inculcated as a sacred duty, revenge.

CHINESE NEWS.

For good solid ignorance of things connected with the War, Tientsin "takes the cake." Witness the following extracts from the *Tientsin and Peking Times* of November 25th (*i.e.* 4 days after the taking of Port Arthur):—

They have made good their positions once taken up; they have never been seriously defeated on land; and they have not been so far beaten at sea as to have lost the power of naval attack. They were checked and heavily damaged in the encounter off the *Yalu*, the one redeeming action of the Chinese in this war up to this. Their evident plans were frustrated by that battle, and it has taken them a good deal of valuable time to repair, if they have yet repaired, that defeat. But the Chinese seem strangely apathetic. Their men-of-war that bore the brunt of that action have been refitted for service for several weeks, yet they took no part in preventing the landing at Talien-wan, of which, if we may believe current accounts, the Japanese only possessed themselves after some very hard fighting. No use seems to have been made of the natural features of the country between that place and Port Arthur, which we are told are such that they would enable a small force to keep an army at bay. The Japanese have been allowed without molestation to drag all their siege material over hill and dale at the rate of four miles a day and quietly to lay it down before the garrison which it is their object to reduce to submission or to destroy. The Port itself, if not destroyed by the Chinese, no longer affords a refuge for the fleet, which if it went forth to encounter the enemy has now no place to go to for refitting. Left to itself, as it seems likely now to be, entirely cut off from supplies, its surrender cannot but be a mere question of time. No force can be sent to its relief, for it is cut off from help both by land and sea.

With reference to the *Chen-yuen* accident, we find the following in our Tientsin contemporary:—

We give under the head of "the War" the different rumours or unauthenticated statements that reach us, the accuracy of which we have no means of proving. We have fortunately received authentic information as to the accident which happened to the iron-clad *Chen-yuen*, and which differs materially from the other accounts. It seems that the last time the Chinese fleet went into Wei-hai-wei, it was dead low water spring tide and the *Chen-yuen* grounded on a place she had passed over safely many times before, at the entrance to the harbour. The ship has a double bottom; the outer one only was damaged. Temporary appliances were immediately had recourse to, to prevent as far as possible the further inflow of water through the holes made in the outer bottom, which was further strengthened from within. The flooded sections were being pumped out, and it was expected that as soon as they were clear of water she would float on her inner bottom. The necessary repairs to the outer bottom of the ship can, it is stated, be effected from inside and she can be made fit to go to sea after a very brief delay. Our informant

says nothing about the suicide of the captain, but as the foregoing particulars left Wei-hai-wei on the 14th that may have happened since, and we have reason to believe it is unfortunately true.

The *China Gazette*, speaking of the fall of Port Arthur, says:—

The most strenuous efforts have been made by the Chinese officials to conceal the fact that the great stronghold has passed out of their hands, and is now a *de facto* Japanese naval yard. Telegraphic notices have been sent broadcast all over the empire by the officials saying that a wicked report had been set on foot by the enemy that they had captured Port Arthur, but it was utterly untrue, the place being garrisoned by 30,000 brave Chinese soldiers who would never give it up to the Japanese. Official telegrams to this effect were published to day in all the native papers, and thousands of Chinese will thereby be kept in blissful ignorance of the terrible position in which China stands to-day. Ostentatious, most of the Chinese prefer not to believe the unpleasant truth and rather listen to the barefaced mendacity of their wretched rulers. But the stupidity of the latter gentry, who have brought the country to its present desperate plight, is only emphasised by this false manoeuvre.

Is it indeed a false manoeuvre? The most terrible foe that China has to fear now is rebellion. Who shall venture to blame her rulers if they employ even deception to save the country from such a calamity? We should like to hear the opinion of divines on this subject—may a government circulate false reports to prevent a rebellion that would deluge the land in blood?

The *China Gazette* says that one of the largest cruisers of the Peiyang Squadron broke her propeller in a fruitless attempt to tow the *Chen-yuen* off the rocks, and that the iron-clad and the cruiser are lying disabled near Wei-hai-wei.

Here is a significant and decidedly apocryphal paragraph from the *China Gazette*:—

We learn that a circular has been received within the last few days from Sir Robert Hart, Inspector-General of the Imperial Maritime Customs, by the members of the in-door staff of the Customs, the effect of which has been almost that of a bombshell in the camp. The circular certainly points to the great uncertainty of the future of that great service, owing to the terrible blows which China has received in the past few weeks, and which have shaken her to her very foundations. Hitherto the retiring allowance to the members of the in-door staff has been paid in gold, at the rate of six shillings and eight pence to the Haikwan tael, the members of the out-door staff being only paid in silver at the rate of the day. The circular goes on to say that owing to the grave uncertainty of China's position, and the Inspector-General having a certain amount of funds in hand at the moment, enough to meet the demands of the retiring allowance of the entire in-door service, it has been decided to pay off this allowance at once, but in silver, instead of gold, the Haikwan tael to be taken at three and four pence exchange, instead of the rate of the day. It is needless to dilate upon the significance of this communication or its effect upon the gentlemen to whom it is addressed. Nor can it be said to add to the security upon which the recent ten million taels loan was negotiated in London through the Hongkong and Shanghai Bank.

Concerning the *Chen-yuen*, this is what the *North China Daily News* has to say:—

It was declared that the rock upon which the *Chen-yuen* ran was a well-known one, and it was even hinted the affair was not entirely accidental. About 70 ft. of the bottom had been ripped open, but the ship being provided with a double bottom, there was no immediate danger. Messrs. Pain Wilson were at Wei-hai-wei as divers, and Mr. Roberts was about to be engaged. According to another version the ironclad crossed from Port Arthur to Wei-hai-wei on the 14th instant. Captain Yang was on the bridge the whole run, on the look out for the enemy's torpedo boats. Being very tired he turned in after Wei-hai-wei was sighted, leaving Commodore Lin to take the ship in. The passage is at present very narrow, and at a critical part of it, when the ship had very little "way," the tide took her head and brought her broadside on to a rock; one or more of her compartments filled, but she was safely beached hard by. The incident assumes a more serious character from the fact that there is no dock at Wei-hai-wei. Commodore Lin apparently found the responsibility too great for himself, for on the 17th he committed suicide. Captain McClure is now on the spot and measures have been taken to remedy as far as possible the accident.

The Newchwang correspondent of the *North China Daily News*, writing on Nov. 21st, says that all the cargo boats had been seized by the authorities for the purpose of building a bridge for the Mongol army of 10,000 to 15,000 men, who were then crossing the river 15 miles higher up.

The *Petrel* and the *Firebrand* are "docked" in Newchwang for the winter, and the foreign community feels reassured against perils from lawless Chinese soldiers.

Our readers of course remember the attempt made by a force of Chinese moving from Fu-chow to re-capture Chin-chow (or Kin-chow as some call it). They will therefore be in a position to appreciate the following paragraph from the Newchwang correspondence of a Shanghai contemporary:—

General Sung with a large portion of his army left the Mo-tien-ling pass, and proceeding south, reached Kaichow, due south of this port, ten days ago, and from there advanced to Fu-chow which is between Kaichow and Kinchow, at present in possession of the Japanese. There will soon be a great victory on one or the other side. The army from Chin-tien-cheng will follow after Sung's and attack him in the rear, or the army investing Port Arthur, or rather the Kinchow portion of it, may be caught in a trap. Meanwhile, troops are pouring in here, and are at once sent on to Kaichow and Fu-chow.

There was a report in Shanghai on the 29th ult. that General Wei Jukwei, the commander of the Sheng division, was not executed at Shau-hai-kwan, after all, but that he is now on his way, under escort, from that place to Peking to undergo a regular trial before the Board of Punishments.

By a decree dated the 12th November, Wang Chih-tsun, Provincial Treasurer of Hupeh, has been appointed special Ambassador to Russia "to convey the Emperor of China's condolences on the death of the late Czar and to congratulate the new Czar upon his accession to the Throne."

"Daybreak," in a recent issue of the *N.C. Daily News*, says in reference to the Shanghai Paper Chase:—"Those who do not ride have little opportunity of seeing for themselves what pretty bits of scenery there are to be found in the country; cusses that would make any Royal Academician long for his oils; and on a bright sunny day on a long ride it seems sacrilege to speak of Shanghai as a mud flat, for sunset and gold, Nature's livery at this time of the year, is beyond description; even a drive on the Road is well repaid, for each day brings its changes in the foliage, from pale yellow to deep crimson, changes that preach the approach of winter."

The Chinese have been leaving Newchwang in large numbers of late, and according to the *Chefoo Express* twenty steamers arrived at that port from the 1st to the 21st of November carrying upwards of 11,414 native passengers. Many people have also arrived at Chefoo from Newchwang in junks.

The Shanghai morning journal gives as a current report that Nanking is at last to be thrown open to foreign trade, and that the recent visit there of Mr. Moorhead, Commissioner of Customs, Hankow, was for the purpose of arranging the preliminaries with the Viceroy Chang Chih-tung. It is also reported that another port is to be opened in Hainan, or on the mainland near it.

Another *Kolaoi Hui* insurrection is reported to have occurred on the northern borders of Kuangtung, and is spreading rapidly into the neighbouring province of Kiangsi. A thousand disciplined and foreign-armed troops have accordingly been sent south from Nanchangfu, the capital city of Kiangsi, to co-operate with the Kuangtung troops. The rising is reported to be of some dimensions.

The *Chefoo* correspondent of the *Shanghai Mercury* gives the following as the "latest blunder,"—a telegram purporting to come *via* Hongkong:—"Honest at Last.—The British Government has purchased from China the Island of Formosa, price arranged, £150,000,000 sterling."

The *China Gazette* learns that the news of the taking of Port Arthur was not known in Tientsin until the evening of the 24th, but even then it was kept very quiet. In Chefoo, however, the news spread rapidly once the run-away officers and soldiers from the captured fortress began to arrive. The news created consternation, and the officials ran wildly about from one place to another, not knowing which way to turn. Terror lest they should be overruled by their own soldiers from Wei-hai-wei seemed to be the chief effect of the news upon the official, while mandarin and merchants both dreaded that the soldiers might at any moment appear to loot the place.

HONGKONG NEWS.

The latest addition to Hongkong journalism is *The Book Plate*, the Journal of the "Odd Volumes." It is to be exclusively the journal of the Society and in no sense a newspaper, and will be published if possible fortnightly.

A great fire occurred at Bangkok on the night of the 9th ult. in which 107 houses were reduced to ashes.

The steamer *Radnorshire*, which recently arrived in Hongkong, brought out from England a large consignment of war material for the Ordnance Store Department. The *Monmouthshire*, the next steamer of the Shire line to come out from England, will have a much larger consignment of powder, etc., for the navy and army.

A home paper says:—"The new *Orustes*, of Holt's Blue-funnel line, recently launched and intended for the China line, has, instead of masts and rigging, been fitted with two stayed uprights, which serve as supports for her twenty-six derricks; added to these she has an exceptionally long funnel, and her general appearance is therefore strange and different entirely from the ordinary type of vessel. What she loses in looks, however, she probably gains in working efficiency."

There have been signs of uneasiness lately on the Afghan frontier, says an Exchange, and the most recent Indian papers to hand state that the Russians, under Colonel Yanoff, have returned to Mughlani. It is now quite certain that some fighting took place between the Afghans and Russians, but now that the latter have returned, it may be concluded that Roshan is still a disputed territory, and that the Russians have no intention of occupying it for the present at least. From a telegram published in our (*Japan Mail's*) columns on Thursday we learn that a *modus vivendi* has been arrived at between England and Russia in regard to the Pamirs, and the limits of "influence" of either Power have now being stated.

The *Northern Territory Times* hears that the question of establishing defences at Port Darwin is under consideration. New South Wales and Queensland had agreed to bear their proportion of the cost of the Port Darwin defences on the basis of population. Victoria had expressed her disposal to concur. Western Australia was disposed to consider the matter in concert with the other colonies. Further negotiations were proceeding with Victoria and Western Australia.

The *Daily Press* learns that telegrams have been passing between the Governor of Hongkong and the Secretary of State with reference to an amount to be entered in the estimates on account of exchange compensation, and that Lord Ripon has declined to reconsider his decision. It is reported that this will effect a saving of \$40,000 as compared with the amount that would have had to be provided for had the officials' request for payment while on leave at the rate of 4s. to the dollar, instead of 3s., been acceded to, but this must be a mistake, as a calculation based on the average number of officials on leave at any one time will readily show. The difference, in fact, can hardly amount to \$20,000. Another feature in connection with the estimates that has transpired is that the Opium Farm has been let for \$40,000 more than the price expected from the original tenders. There is to be no spirit farm, tobacco tax, shipping tax, or increase in the house tax, so it is said, a small tax on kerosene being found sufficient to make the revenue meet the expenditure.

Owing to the recent armed outrages in Hongkong by Chinese, the police night regulations have been again enacted in regard to lights and night passes. This is said to have had a salutary effect.

YOKOHAMA CHIHO SAIBANSHO.

Before Judge AKIYAMA, President of the Court.

TUESDAY, December 4th.

A. M. APCAR v. A. PHILIPPE.

This case was brought by Mr. A. M. Apar against Mr. A. Philippe some time ago and demanded payment of a debt, amounting to yen 196.40, with interest to the amount of yen 14.27. Mr. Kobayashi Beika represented the plaintiff, Mr. Kondo Tsuney defended. The hearing took place on the 15th of November last, the defendant refusing to acknowledge the debt. Judgment, which was to have been given on the 1st inst., was deferred until to day, when the Court decided the case in favour of the plaintiff, and ordered defendants to pay the amount demanded with costs.

THE DETRING MISSION.

THE DETRING mission has returned to China without attempting to complete the purpose of its coming. This apparently curious ending is not attributable, we think, to any obstacles put in Mr. DETRING'S path by responsible Japanese officials. Whatever might be the proposals he was entrusted to tender, there could not have been any reasonable objections on the part of Japan to hear what he had to say. He made, as it seems to us, a mistake in publicly seeking an interview with the Minister President, if indeed he did prefer such a request. There has been a great deal of strange talk in the circles of party politics as to the source to which Mr. DETRING should have addressed himself, the dominant opinion among the "Strong Foreign Policy" partisans being, apparently, that he should have applied, in the first instance, to the Commander-in-Chief of one of the armies in the field. We are at a loss to understand that contention. The commander of a Japanese army has nothing whatever to do with questions of peace or war. His business is merely to conduct a campaign in accordance with a general plan conveyed to him from Headquarters. By the explicit provisions of the Constitution the right of declaring war and concluding peace is vested solely in the EMPEROR. It is, therefore, to the head of HIS MAJESTY'S Cabinet that a foreign envoy should address himself when his object is to discuss matters relating to the conclusion of peace. So far as that is concerned, Mr. DETRING'S course would have been unexceptionable, supposing him to be invested with plenipotentiary functions. But it is inconceivable that he can have been entrusted with any such functions. If China sent one of her foreign employés to the Japanese Government to discuss terms of peace between the two empires, she offered Japan a gross insult. We know well what an able man Mr. DETRING is, and how thoroughly worthy to be entrusted with any duty however onerous. But there are certain forms to be complied with between Sovereign States, and such a flagrant disregard of those forms as would be involved in the despatch of a foreign Commissioner of Customs to act as intermediary between the two empires, does not fall within the range of any reasonable flight of imagination. Even assuming, though we have no right to assume anything of the kind, that China were disposed to commit such a blunder, Mr. DETRING is not the man to be a party to it. We conclude, therefore, that he did not come in a plenipotentiary capacity, and in that case it would certainly have been wiser for him to inaugurate his mission in a less pretentious manner than by seeking an interview with Count TO.

There are various rumours as to the cause of his sudden return—the *Li-yu* steamed out of Kobe on the 29th ult.—but none appears satisfactory. All agree that he was recalled by telegram from China, and the general idea is that as Port Arthur had not fallen before he left Tientsin, the Chinese Government's instructions to him became inapplicable to the situation succeeding the capture of the fortress. But that idea involves two scarcely tenable hypotheses. The first is that such an obviously probable contingency as the fall of Port Arthur was omitted from the calculations of Mr. DETRING'S instructors; or that if unconsidered by them, it escaped Mr. DETRING himself. We can be tolerably certain that before leaving Tientsin he ascertained exactly what modifications his procedure should undergo in the event of Port Arthur's having ceased to be in Chinese possession by the time of his arrival in Japan. The second untenable hypothesis is that any military incident could affect Mr. DETRING'S consultative action. He can not have been entrusted with the task of making a settlement. The limit of his functions must have been to ascertain Japan's views, and in that sense the discharge of his office could not have been hindered by the fall of Port Arthur or any belligerent occurrence. But there is another view worth considering. The fall of Port Arthur may have materially impaired the authority of Mr. DETRING'S Chief, the Viceroy LI. It may have brought to the old Statesman's enemies in Peking an access of strength such as to enable them to compass his downfall and persuade the EMPEROR to eliminate him altogether from the conduct of the War or the control of its consequences. In that case, Mr. DETRING'S credentials possibly became valueless, or, at any rate, the *raison d'être* of his connection with the negotiations ceased to exist. We are merely conjecturing, and most sincerely do we hope that our conjectures may prove baseless, for if the Viceroy LI and such men as Messrs. DETRING and MICHIE cease to be available in this crisis, the best interests of the Orient must suffer seriously. We cannot but recall the words that we wrote in these columns on July 26th, five days before the declaration of war:—

One of the things that chiefly trouble thinking men in connection with the present crisis is its possible effect upon the reputation of the Viceroy LI. He is preëminently the Chinaman to whose initiative, always exercised with admirable prudence, the world attributes whatever progressive steps China has taken during the past twenty years. That he should retain his influence unimpaired and continue to apply it in the right direction are consummations to be devoutly desired in the interests of civilization. Now unfortunately, it is to the Viceroy LI that the management of China's relations with Korea has been entrusted ever since they included any elements of international complication. So autocratic has the Viceroy's power been in this respect that in China he is not uncommonly spoken of as the ruling king of Korea. To his account, therefore, will be placed the entire responsibility of any serious trouble in the peninsula. In China statesmen are judged uniquely by results. If they fail, they fall. No allowance

is made for the circumstances with which they may have had to deal. Inability to shape circumstances to their own ends is accounted incapacity to govern. The Viceroy's management of Korean affairs invites strong criticism from a Western point of view. But when we remember what a huge mass of prejudice and conservatism he has to move in order to admit a ray of really progressive civilization into any sphere of his administration, we find a thousand extenuations of the apparently invertebrate and shuffling policy pursued by him in the peninsula. At any rate he is the mainspring of Chinese progress, and were his influence eliminated the slowly-moving machine would be brought altogether to rest. Yet this is precisely the man whom the irony of fate condemns to stand in apparent opposition to Japan's progressive programme in Korea. The issue of this crisis may involve his downfall; that is to say, may involve the downfall of the one Chinese statesman honestly desirous of promoting in his own country the very reforms that Japan has now undertaken to promote in Korea.

MR. MICHIE'S PROTEST.

THE purport of Mr. A. MICHIE'S letter, which will be found in our correspondence column, appears to be simply this, that in a crisis like the present the influence of every newspaper should be thrown in with the cause of peace, and that the *Japan Mail*, by quoting in leader type and indirectly endorsing the bitter criticisms of the vernacular press, is not playing the part of a humane journal. A publicist of Mr. MICHIE'S insight will certainly not deny that in order to compose any quarrel satisfactorily, nothing is more essential than to fully understand the mood of each combatant. Therefore the usefulness of accurately rendering for public inspection the sentiments of the vernacular press, which must be assumed to reflect, in part at any rate, the mind of the Japanese nation, admits no question. That was the object contemplated by us in writing the article condemned by Mr. MICHIE, and it is by no means just to infer that by bestowing the distinction of leader type on the utterances of our Japanese contemporaries we intended to "hold them up to admiration." Very far indeed was such an intention from our purpose in writing, and still farther are we from "claiming infallibility" for the vernacular press. We endorse Mr. MICHIE'S verdict that the development of journalism in Japan is creditable, nay even "admirable" as he puts it, but that its writings are frequently traversed by us in the strongest terms, Mr. MICHIE, who pays us the compliment of being one of our readers, will readily admit. In this particular case, however, we cannot greatly wonder at the tone of exasperation pervading the columns of the Tokyo journals. That the conception of the DETRING mission was excellent in some respects, and that it deserved the support of all peace-loving men, is certain. But it erred in method. From the moment that communication was opened with the Governor of Hyogo the mission assumed an official character and became of necessity a failure. How that accident happened—for we can call it nothing else—must remain for the present in the unwritten pages of the history.

We do not even pretend to say who was responsible, but we do say that there is not the slightest ground for the suspicion inspiring all the acerbity of the Japanese press; the suspicion, namely, that the Chinese Government ever contemplated, still less perpetrated, the discourtesy of sending a foreigner in the capacity of an envoy to discuss terms of peace. Every negotiation involving great issues must be prefaced by arrangements of a private or semi-official character. The DETRING mission belonged to the category of such arrangements. Its object was, as we understand, merely to acquire information about Japan's views in order that China might be in a position afterwards to send an envoy intelligently instructed. Under that aspect, the mission presents no feature at which Japanese journalists are entitled to gird, but on the other hand, no one can deny that its character, owing to the mistake mentioned above, was open to great misapprehension.

Mr. MICHIE hints that unless peace be now restored, terrible disasters may ensue; that, in short, if China's dynasty be weakened beyond capacity to control the heterogeneous elements over which it rules, the world may be condemned to witness a repetition of the horrors of forty years ago. Against such a calamity Japan, above all other nations outside China, is bound to strive. China's disintegration would mean the letting loose of waters that might ultimately swamp Japan herself. Every Japanese should remember that this strife is not without an internecine element, and that, not the independent existence of China alone is at stake, but perhaps the independent existence of the whole Orient. Conquest has its perils as well as its profits, its responsibilities as well as its rewards. To what point is Japan prepared to push her advantage? Is she ready to involve her neighbour in scathing troubles, and to deprive herself of any trustworthy *vis-à-vis* when the day to talk peace comes?

IS THIS THE TIME?

IT is alleged that the telegram from Prince KUNG recalling Mr. DETRING was due to the Government of the United States having consented to undertake the functions with which Mr. DETRING had been charged; and further, that the consent of the United States Government was based on the Treaty of 1858 between China and America, wherein it is stipulated that "if any other nation should act unjustly or oppressively" (toward China), "the United States will exert their good offices, on being informed of the case, to bring about an amicable arrangement of the question, thus showing their friendly feelings. We do not know how much reliance may be placed on either state-

ment, but being sincerely desirous of seeing peace restored, we should regret to find America playing any such part. There is only one way of putting an end to the war, and that is, that China should send to Japan a plenipotentiary ambassador authorized to make terms, and that she should give substantial guarantees of her determination to abide by the arrangement he effects. Every effort to shirk that inevitable *dénouement* can only postpone a settlement, and postponement means not only continued military operations, but also the rapid growth of Japanese ambition. The more Japan wins, the more she will be entitled to ask for, and the more China loses, the less will she be qualified to withhold. We are quite persuaded that the present mood of Japan's statesmen is not illiberal or exacting. If China can only reconcile herself to take a determined step, the situation can be saved. But if she palters much longer, the Japanese Government will have to obey a pressure already beginning to grow ominously heavy. The sweets of victory come to Japan seasoned so highly that they may easily disorder her digestion. It is not alone that she has beaten her colossal neighbour. That in itself would be no small triumph. But it is supplemented by the incomparably greater satisfaction of seeing that she has won the world's respect. Let us not pause to moralize on the singular ethical parody that not until Japan proved her capacity to commit deeds of violence and bloodshed, did the civilized Occident begin to welcome her within the pale of Christendom. It is enough that she has been welcomed. The telegraph tells us that the capture of Port Arthur has created a profound impression throughout Europe; and that the Japanese victories have evoked universal admiration; that Japan's right to the title of a Great Power is acknowledged, and that her fleet and army are held of equal rank with any in military science. Who can doubt what that means to a proud, ambitious, and ardently patriotic people like the Japanese? But, on the other hand, who can tell how far the fumes of such incense may intoxicate Japan? The cardinal mistake we venture to think, made by those that undertook the task of mediation before this war broke out, was that, underestimating Japan's strength and misinterpreting her resolution, they exerted pressure on her alone, as though no concession were needed on China's part nor any satisfaction due to Japan. A cognate mistake will be committed now by any Power attempting to save China from the plain dictates of the situation. She must sue direct. The more she shirks that humiliation, the harder will it prove in the end. And it is inevitable. We are not inspired by the least feeling of unfriendliness to China. We hold that her conservation, for the present at any rate, is essential, and what we write is dictated chiefly by that con-

THE WAR.

WITH the taking of Port Arthur, the War between China and Japan may be said to have entered its third and, let us hope, its final stage. The fight has hitherto been a succession of triumphs for the Japanese, each victory seeming to satisfy the ultimate purpose of the operation it crowned. Sōng-hwan broke up the Chinese camp where the Middle Kingdom had posted its first troops of occupation. Phōng-yang established Japan's military superiority and virtually gave to her the control of the peninsula. Hu-shan and Chiu-lien swept back China's frontier forces and effectually secured to Japan the results of her campaign in Korea. Feng-hwan, Sui-yen and Mo-tien-ling established the fact that China's strength in Manchuria was no longer capable of anything more than skirmishes. Hai-yung crippled the Chinese Navy and virtually eliminated it from the field of future operation. Port Arthur placed Japan in the principal stronghold of China's second line of defences, deprived the Chinese of their only dockyard in the north, and conferred on the victors the command of the entrance to the Gulf of Pechili. In every case the ends attained appear to have been in themselves sufficiently complete to be final. But an analysis stopping there would be, in our opinion, very superficial. If we consider the thoroughness and prevision of each separate operation undertaken by Japan, it is impossible to avoid the conclusion that the planners and organizers of such efforts were not without a general programme toward the consummation of which every step was designed to contribute. What objects—we have to ask ourselves first—what objects did Japan presumably contemplate at the outset of the war? Her proximate purpose is plain enough: it was to expel every Chinese soldier from Korea, thus demonstrating to the world, as well as to China herself, the Middle Kingdom's incompetence to give practical expression to the suzerain claims advanced by it, or to extend to its vassal State any efficient measure of protection against foreign aggression. But Japanese statesmanship must have looked much farther than that. It must have aimed at placing the relations of the two empires on such a basis as should secure permanent peace to the Orient. All operations undertaken in pursuit of the first object ought therefore to have been subordinated to the achievement of the second, and that, we think, is precisely what has taken place. In attempting, however, to interpret the Japanese plan, we encounter one element of uncertainty, namely, the discretionary power vested in the Generals. It is well known that the Japanese Government does not hamper its military captains with hard and fast orders. After the fulfillment of the initial task appointed to each, he is free to undertake what further operations

military exigencies seem, in his opinion, to dictate, and military opportunities to invite. Thus, while the general public has hitherto supposed that Marshal YAMAGATA would go to Mukden, the Marshal himself is most unlikely to have had instructions in that sense. There has been too much talk about Mukden from the very outset. In the midst of profound secrecy as to the movements of her troops, their numbers, and all other minor details of the campaign, Japan is imagined to have taken the whole world into her confidence in a matter of paramount importance, the ultimate-destination of her First Army. There is inconsistency in such a hypothesis. The Mukden announcement, it appears to us, had a purpose to serve but it was not the capture of Mukden, a place of no strategical moment whatever, and from other points of view not at all worth the pain of marching an army thither in mid-winter. YAMAGATA may take Mukden, but his proceedings do not suggest that he has any such intention. He has not moved out of Chiu-lien since its occupation, and everything appears to point to the latter's becoming the winter quarters of his army. Our own interpretation—conjectural of course—of his instructions is that he was required, first, to drive every Chinese soldier out of Korea; secondly, to crush all potentiality of Chinese menace on the northern frontier of the peninsula; and thirdly, to conduct such a campaign in Manchuria as might attract China's attention to that region, and thus divert her strength from the vital parts of her defensive organization, the Liau-tung peninsula and the Gulf of Pechili. Those objects accomplished, he would be free to move on Mukden if he pleased, and the movement, should he undertake it, would receive full support from Japan. On the supposition that Mukden was to be his first objective, it seemed natural to infer a subsequent grand westerly movement by the First and Second Armies in combination, YAMAGATA working along the main road from Mukden to China proper, and OYAMA marching from the Liau-tung peninsula *via* Newchwang and the coast, the two forces uniting somewhere north of Chin-chow (not Chin-chow in the Liau-tung peninsula) and proceeding together to the attack of Shan-hai-kwan where the road turns westward to Peking. But that programme evidently becomes untenable if YAMAGATA does not go to Mukden. What then is the real plan? It would not be proper to attempt any prediction, but this much we may conclude, namely, that the strokes Japan is delivering with her various armies are correlated, and that their ultimate purpose is to bring China into a mood consistent with the arrangement of really permanent terms of peace. There has been so much deliberation, such a timing of mutual movements, that the permeation of the whole programme by a single purpose can not be doubted. We are now entering the third and probably final phase.

MATERIALS FOR MODERN HISTORY.

WE can not but admire the *North China Daily News'* thick and thin advocacy of China's cause throughout the present war. Any English newspaper in Japan venturing to assume a similar attitude toward this empire would be immediately assailed with all the polite epithets that abound in the vocabulary of the anti-Japanese critics—hireling, renegade, mean, fulsome, grovelling, together with many other substantives and adjectives accepted in the Far East as proper aids to stalwart journalism. However, to be treated with brutal intolerance does not necessarily make men intolerant. We shall not imitate the example followed occasionally by even the leading journal of Shanghai, but will give it full credit for sincerity and independence in all that it writes about the war, admitting frankly that a friendly attitude toward the country within whose territory it is published becomes a foreign newspaper far more than an unfriendly. Thus much premised, we invite attention to some of the statements contained in our contemporary's leading article of November 24th. "Japan," it writes, "has had the immense advantage of having sprung the war on China when the latter was entirely unprepared; she has put it forward that she was forced into war by the unwillingness of China to join her in reforming Korea; but there can be very little doubt that the attacks on the *Tsi-yuen* and on the *Kowshing* on the 25th of July were deliberately made to prevent the negotiations for peace, which were going on at the time, coming to a successful issue." If China's advocates and apologists think that they serve her cause by continuing to put forward the wretched plea of unpreparedness, that is their business. Such was not their language, however, before the war. Then they were wont to speak with admiration of China's great military preparations; of the Viceroy Li's numerous, thoroughly drilled, and admirably equipped army; of the Peiyang Squadron composed of ironclads and cruisers of the most modern type, carrying a splendid armament and having a *personnel* of officers and men worthy to handle such vessels; of the impregnable fortresses at Taku, Wei-bai-wei, Port Arthur, and Talien; of the well trained and well armed forces even in far Manchuria, and so forth, the general impression conveyed being that of a great Power that none might venture to attack. If they have now changed their tone completely; if they choose to solicit the world's pity for poor big China because she was taken unawares by wicked little Japan; because her unreadiness was so complete that, with nearly four months' warning, she could not throw an efficient garrison into her principal stronghold, the constant rendezvous of her fleet; and be-

cause her troops, whenever she does succeed in placing them in the field, fight miserably and do nothing thoroughly, except to murder the wounded and savagely mutilate the dead—if, we say, China's advocates make such an appeal *ad misericordiam* on her behalf, neither their strait nor her plight is to be envied. As for the *North China Daily News*, what chiefly surprises us is its forgetfulness. Has not the editor a file of his own journal besides him for purposes of reference? If so, we beg to recall to him his leading article of July 28th, in which he said:—"There is no doubt that the Chinese have been marching large masses of men along the great highway through Manchuria towards Korea, and that they have already reached the Korean gate, and are, it is believed, nearing Söul." We also beg to refer him to the following news published in his columns on August 3rd:—

A correspondent writing from Taku on the 21st July says that the following ships, with troops as noted, were then ready, and it was arranged that they were all to leave together at 5 p.m.:

<i>Poochi</i>	560 men.
<i>Kwangchi</i>	400 "
<i>Hsinfung</i>	1,000 "
<i>Fungshan</i>	800 "
<i>Toonan</i>	1,000 "
<i>Feiching</i>	700 "
<i>Irene</i>	1,200 "
<i>Kowshing</i>	1,200 "
<i>Hagan</i>	1,000 "
<i>Chintung</i>	800 "

As to the destination of this army of 8,660 men, we read in the same issue of the same journal that they were to go chiefly to the Yalu river and partly to the southwest coast of Korea to re-inforce the troops at A-san. It thus appears that by July 22nd China had sent nearly 9,000 reinforcements from Taku by sea to Korea, and had "marched large masses of troops along the great highway through Manchuria towards Korea." Yet the very journal that published these items of information now asks us to believe that, on July 25th, China had no idea of war; that Japan's action on July 25th was "deliberately taken to prevent the negotiations for peace, which were going on at the time, coming to a successful issue," and that it was "entirely unexpected by the Viceroy Li, for, on the 26th of July, he telegraphed to Shanghai that the prospects of peace were more favourable." Surely such pleas are farcical. How can a Power that has already despatched 9,000 troops over-sea and marched large masses overland, be thrown into a state of surprise and taken unawares because the State against which these military operations are directed has recourse to belligerent acts? We say nothing of the tacit assumption that the Japanese ships fired first, neither do we insist upon the point that the Chinese Government had been emphatically warned of the construction that would be put on the sending of any more troops to A-san. We restrict ourselves solely to the facts published by the *North China Daily News* itself, namely, that the Chinese had no suspicion of the probability

of war with Japan even after they had transported and marched to Korea armies openly destined to fight Japan. That, we repeat, is one of the most farcical pleas ever gravely advanced. It will also be observed that the paragraph quoted above from our contemporary's article of November 24th, distinctly implies that Japan's offer to coöperate with China in reforming the Korean administration was a mere sham, and that the Japanese Government was resolved to precipitate war under all circumstances. We doubt whether a single intelligent man believes that. The despatches that passed between China and Japan in the period preceding the war have been published and are accessible to all. They place absolutely beyond doubt the fact that had China agreed to Japan's proposal for coöperation, the latter Power would not have had the flimsiest shadow of an excuse for going to war. The whole question turned upon the reception given to that proposal. We are dealing now not with opinions or inferences but with officially recorded facts. It will suffice to quote one despatch, the last of the series published :—

Japanese Legation, Peking, the 14th day, the 7th month, the 27th year of Meiji.

MESSIEURS LE PRINCE ET LES MINISTRES.—Having communicated to H.I.J.M.'s Minister for Foreign Affairs on the same day, the particulars of the statement made by Your Highness and Excellencies in my interview with you at the Tsung-li Yamén on the 9th day, the 7th month, the 27th year of Meiji, I have the honour to inform you that I am just in receipt of a telegram from the Minister to the following effect :—

The disturbances which are of frequent occurrence in Korea have their source in the derangement of internal administration of that country. Consequently, the Imperial Government believe it best to encourage the Korean Government to eradicate the cause of disturbance by introducing internal administrative reforms, and the Imperial Government considered that for the purpose of enabling Korea to accomplish the desired reforms, nothing would be better than the conjoint assistance of the Governments of Japan and China which have in common a vital interest in that country. Accordingly the Imperial Government proposed to the Imperial Chinese Government that such assistance be given to Korea, but to their surprise, the Imperial Chinese Government definitely rejected the proposal of Japan and limited themselves solely to a request for the withdrawal of the Japanese troops from Korea. Recently Her Britannic Majesty's Minister at Peking, animated by friendship and goodwill towards Japan and China, tendered his good offices and endeavoured to reconcile the differences existing between the two countries, but the Imperial Chinese Government still continued solely to insist upon the retirement of the Japanese forces and manifested no disposition to acquiesce in the view of the Imperial Japanese Government. The only conclusion deducible from these circumstances is that the Chinese Government are disposed to precipitate complications; and in this juncture the Imperial Japanese Government find themselves relieved of all responsibility for any eventuality that may, in future, arise out of the situation.

In enclosing herewith the translation of the above telegram, I avail myself, &c., &c., &c.

(Signed),

KOMURA,

H.I.J.M.'s Chargé d'Affaires.

His Highness and Their Excellencies of the Tsung-li Yamén.

The above despatch, accessible to all the world and actually in the possession of the *North-China Daily News*, disposes conclusively of the pretence that Japan's proposal for coöperation was a blind, and that she meant to fight whatever happened. It also demonstrates the absurdity of pretending that on July 26th the Viceroy

Li can have believed in a prospect of peace, unless, indeed, he relied on some conciliatory project secretly entertained by his Government but never communicated either to Japan or to the Representative of Great Britain, who had endeavoured to mediate. At any moment up to the latter days of July, China could have averted war by agreeing to coöperate with Japan for the reform of the Korean Administration. That and that uniquely was the sum of what Japan asked. Instead of doing so, however, China limited herself to requiring that the Japanese troops should be withdrawn from Korea—a demand that she had no shadow of right to prefer—and further, according to her apologist, the *North-China Daily News*, she showed her pacific intentions and her faith in the maintenance of peace, by sending 9,000 troops over-sea and marching large masses of troops overland to Korea. Why did she do that? Against whom were those armies intended to fight? And then, forsooth, it is claimed that poor good-humoured China was taken utterly by surprise because the Japanese intercepted some of those troops, and that she really was not prepared at all for war though she had been moving armies in anticipation of it. But her apologists are persistent. Perhaps they may succeed in perverting history.

ON THE RELATIONS BETWEEN THE MOON AND THE CAT.

SOME years ago Dr. HYDE CLARKE, the well-known philologist, contributed an interesting essay to the Society of Biblical Archaeology on the subject of the relations between PASHT, the Moon-goddess, and the Cat, in Egypt. With regard to the strange veneration shown to the cat by the Ancient Egyptians, the learned author proceeded to show that the practice was not confined to Egypt alone. On examining the words for cat and moon, chiefly in the languages of the Indian region, and of Western and Central Africa, it is found that the words conform, not merely casually but as a general law. All the chief forms for cat are used for moon. In the languages of the Indian region the word for moon is differentiated by the prefix *la*, and that for cat by *mu* or *ma*. The latter form is also found in Africa. But the most curious circumstance is that the common phonetic name for cat, *mew-mew* or *miau-miau*, is also applied to the names of the sun and moon, especially to that of the latter. There is also, the world over, a remarkable similarity between the names of the cat in various regions, and every indication points to the fact that the cat must have been known to and named by man at least as early as the origin of language. On the other hand, it is evident that to some peoples the cat was for a long time quite unknown.

The weasel was domesticated among the Greeks and it is a question whether the early inhabitants of the Peninsula knew anything of the cat as a domestic animal. Among the Hebrews there is almost an absence of reference to the cat. Dr. DRACH believes that the animal is named *Katoola* in the Bible, but that is a moot point. It is, however, certainly mentioned in the Talmudic legends, where we find it assigned to the fifth step of King SOLOMON'S throne.

According to PLUTARCH, there is good reason for the similarity in the nomenclature of cat and moon. He says that a cat placed in a lustrum denoted the moon, illustrating the mutual symbology. This, he continues, is "because the pupils of a cat's eyes dilate and decrease with the moon." But the reason most probably depends on quite a different phenomenon of periodicity corresponding to the month. There is still a third possible cause of the association, which is the fact that the cat's eyes glisten at night or in the dark. And in this connection it should be observed that the name of the sun in the Malayan and North American languages is the *day-eye* or *sky-eye*, and that of the moon the *night-eye*.

What Dr. CLARKE alleges as to the languages of the Indian region, Western Asia, and Western and Central Africa, may be perfectly correct, and his deductions sound. In his "Table of Words," illustrating the parallelism of names for cat, sun, and moon in a large number of Asiatic and African countries, the learned author is in several instances distinctly at fault. One finds, for example, *bsuke* given as the Japanese name for moon, evidently mistaken for *tsuki*, and this mutilated word is further compared with the Manchu *kesike*. So far as the researches of sinologues have gone, there appears to be absolutely no connection between the names for cat, and those for sun and moon, in Eastern Asia. We meet, however, with another phenomenon of equal interest. It is evident that in very ancient times the inhabitants of Eastern Asia did speak or think of the moon as the night-eye and the sun as the day-eye. The most archaic forms of the Chinese ideographs are proof of this, and even in their present developed form there is a great similarity (目 eye, 月 moon, and 日 sun or day). In Egyptian mythology the sun and moon are treated as the two eyes of HORUS, the sun being the right eye and the moon the left. This relationship is also prehistoric. In Archaic China this had something to do with the dual explanation of natural phenomena, the sun being made male and the moon female. It is only in Japan that we read of a sun-goddess, all other Eastern Asiatic countries speaking of a solar god only. In the Akkad language of Babylonia there were two words for eye, *Li* and *Lim*; and it is to this union of the male and female

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

elements, and not to a union of two coequal parts, that the chief origin of the Akkad form for eye is to be attributed. In the *Kojiki* we find that the children of one of the mythical personages, or rather demi-gods, were named *hi-ko* and *hime*, or male and female fire. These words still exist in the sense of Prince and Princess. In Korea from ancient times the names of the sun and moon have been very similar (*oru* and *iru*, or *ol* and *il*), and we find them occasionally confounded. It is also worthy of note that both sun and moon have been worshipped in the Peninsula as the types of the male and female elements of nature. In Japan the earliest traceable name for sun is simply *hi*, which is "fire." Japanese philologists derived this from the last syllable of the word *kushibi*, which means "miracle," "wonder," *kushi* being the equivalent of the better-known *fushi-gi*. *Tsuki*, moon, on the other hand, has an archaic form *tsuku*, and both come, according to the same commentators, from the word *tsugé*, "next," so that the sense is that the moon is next to the sun in intensity of light. There is no evidence whatever of sun and moon having ever been confounded in Japan. The sun is *par excellence* the national deity.

Turning to the cat, it appears evident that this animal was not known to the Japanese in very early times. It is elsewhere distinctly stated that the cat was imported from Korea and the name (*neko*) is supposed to be of Korean origin. This theory is further supported by the fact that the cat was anciently spoken of as *te-gai no tora*, or the "hand-fed (domesticated) tiger," which shows that there was no proper Japanese term for the animal. The Indian mythology supposes that there is a hare in the moon, while some Himalayan tribes speak of this as being a cat. The hare in the moon, compounding an elixir of immortality by means of a huge mortar and pestle, is a well-known figure in Japan. This does not, however, appear to have been the original explanation of the strange markings visible on the surface with the naked eye. These were formerly, and still are in some parts, explained as the *Katsura-otoko*, the "man with the Katsura tree," very much like the old Saxon idea of the man in the moon with his bush, lanthorn, and dog. With regard to the nomenclature of the cat, it appears to be entirely onomatopoeic in Eastern Asiatic countries, and here there are strange parallels to be found to the languages of very distant peoples. The fundamental Chinese form is *mau*, exactly that of Ancient Egypt. The *Kan-on* or Chinese pronunciation of the ideograph in both Japan and Korea is *men* or *myo*. Compare with these the following forms:—

Bagba (Africa) *mus* meaning "moon"
 Papiah (Africa) *mus* meaning "moon"
 Mbanba (Africa) *mus* meaning "sun"
 Karen (India) *mu* meaning "sun"

The common way to call a Japanese cat to one is to say *buchi*, *buchi*, in a wheedling tone. Now this word *buchi* really means "piebald," or "spotted black and white," but as applied to all cats in general compare it with our English *pussy*, the German *mis*, and

Santali (India) *pusi*.
 Nali (Africa) *mpus*.
 Hidatsa (North America) *pustke*.
 Boko (Africa) *musu*.
 Ngola (Africa) *mbeshe*, or *mbesi*.

Finally, the childish name for cat in Japan is *nyanya*, also an evident onomatopoe. This is exactly the *miaun* of Amoy, and more than probably related to the Korean *hoyangyi*. Compare with these the following names for cat in other lands:—

Mano (Africa) *nyama*.
 Onogun (Africa) *nyami*.
 Bagba (Africa) *nyawo*.
 Youngtu (India) *nyen*.
 Augami (India) *nunno*.
 Kabunga (Africa) *nyankumo*.
 Bambara (Africa) *nyankuma*.

The connection between this onomatopoe and the names of the moon and sun is evident from the following words:—

Bamoni (Africa) *nyam*, meaning "sun."
 Thibetan *nam* or *nyome*, meaning "sun."
 Baghrmi (Africa) *naña*, meaning "sun."
 Kum (Africa) *naa* or *nanua*, meaning "moon."
 Vagu (India) *numa* or *nava*, meaning "moon."

These are more than mere verbal coincidences. It seems thoroughly established that the names of cat, sun, and moon very probably had an intimate connection in Western Asiatic and African lands; but they certainly have not in Japan, Korea, and China. Yet there is a distinct philological connection between the different names of cat in Japan and China and those of either cat, or moon, or sun, in very widely separated lands.

A word in conclusion with regard to the derivation of the Japanese *hi*, which means either "sun" or "fire." Despite the opinions of Japanese philologists, one feels tempted to compare the Korean *hai*, with the sense of "sun." This is a very ancient word, as is also the Korean name for "moon," either *taru*, or *tal*. There appears to be no similar expression in any Eastern Asiatic language, though one might compare with this the Japanese *teru*, in the sense of "to shine," which has, strange to say, a resemblance to a Semitic root. The words *ol* and *il*, given above, or *oru* and *iru*, are not true Korean expressions, being only the local pronunciation of the Chinese ideographs.

THE CONDUCT OF THE JAPANESE TROOPS AND COOLIES AT PORT ARTHUR.

IT appears undeniable that for the first time in the history of this war the Japanese have exhibited a mood of sanguinary ferocity. According to the testimony of eye-witnesses, whose credibility cannot be doubted, numbers of persons were killed in the town of Port Arthur under circum-

stances entirely foreign to the methods hitherto pursued by Japanese armies. The one excuse to be made for this most unhappy departure from excellent military canons, is to be found in the fact that the Japanese soldiers had been gradually shocked and infuriated beyond endurance by the savage brutality of the Chinese. Japan set out to conduct the war in strict conformity with the highest dictates of morality. She enjoined her soldiers to abstain from all violence or rapacity toward the peaceful inhabitants of the invaded districts; she made arrangements to treat the wounded of her enemy exactly as she treated her own wounded; she paid for everything she took in the territory of the foe; she issued strict regulations to control the use of requisitions; in short, she neglected nothing that could demonstrate her rigid adherence to the best codes of civilized usage. But all this was thrown away on the Chinese. They never wavered in their obedience to the bloodiest traditions of mediæval barbarism. They horribly mutilated the corpses of the dead, ruthlessly murdered the wounded, robbed, outraged, and burned wherever they went, and committed other atrocities of the most heinous character. So long as it remained uncertain whether the perpetrators of these savageries were not limited to the levies of rude Tartars that swelled the ranks of Japan's opponents in Korea and Manchuria, there existed some ground to exonerate the Chinese regulars. But the campaign in the Liau-tung peninsula furnished new evidence. At Chin-chow, in the headquarters of the beaten garrison, there were found documents proving that two Japanese scouts, made prisoners by the Chinese, had been subjected to the torture of bone-crushing and then roasted to death over slow fires. With this appalling information fresh in their memories the Japanese advanced to the attack of Port Arthur. On the march a squadron of videttes became entangled with 2,000 of the enemy, and was succoured by a body of 50 infantry soldiers, forming an advance guard. Driven back to a position of vantage by opponents constantly reinforced, this handful of Japanese left several of their number dead or wounded upon the ground of the first encounter. When they subsequently recovered that ground, they found there only horribly mutilated corpses, heads and limbs chopped off, bodies slashed open, livers torn out, and hideous evidences of other atrocities too revolting to describe. Then they knew that no degrees of inhumanity existed in the Chinese Army; that all were alike barbarous, and that the earless and noseless heads of their comrades, strung together like onions at Phyöng-yang, had been a faithful earnest of the enemy's universal method. It is recorded that during the Indian Mutiny a distinguished British officer urged the pass-

ing of a law to authorize slaying alive, impalement, or burning of the murderers of the women and children in Delhi, and that a leading English paper emphatically declared that ALVA'S methods with the people of the Netherlands were the only measures proper for England's soldiers to adopt toward the rebels in India. In truth there are times when the elementary passions of men's primitive condition surge over and obliterate the restraints of civilized culture. Something of that kind happened at Port Arthur. Had the sanguinary results of the skirmish described above been witnessed only by the troops that took part in it, the final issue would doubtless have been different. But, whether by accident or design, some of the mutilated bodies of the Japanese soldiers were set up within a few yards of the road, so that they were viewed by all the troops subsequently passing. Attached to each Japanese battalion there is a band of coolies who perform transport duties. It is related that many of these men left their work of hauling or carrying, went aside to examine the disfigured corpses and came back with faces distorted by passion. These coolies all carry swords. It has been found expedient to arm them as a means of diminishing the escort work of the troops. The town of Port Arthur was occupied toward sunset. During the night that followed, the coolies, probably assisted by some of the soldiers, wreaked terrible vengeance upon the Chinese, not confining their violence to combatant enemies but slaying even fugitives and sometimes peaceable citizens. Robbery was also perpetrated on a considerable scale, and for a time the unhappy town seems to have been delivered over to something very like sacking. That the coolies were chiefly responsible for these atrocities is established by the fact that nearly all the dead bodies bore marks of sword-cuts. It is known that during the night many of the coolies obtained access to virtually unlimited supplies of Chinese *samsu*, a liquor whose intoxicating effect upon the Japanese often resembles madness. Already infuriated by a passion for vengeance and now deprived of reason by the fumes of alcohol, these coolies and the soldiers, whether many or few, that participated in their crime, inflicted lasting injury on their country's reputation. It is something to know that order was restored in the morning, and that thenceforth the kind treatment enjoined by Japanese military regulations was extended to all the inhabitants of the place. It is also something to remember how different had been the conduct of the troops at Chin-chow, a few days previously, when the taking of the town, far from bringing ruin and death to the people, inaugurated a season of charitable succor. The ferocity shown at Port Arthur was evidently due to the brutal cruelty previously exhibited by the Chinese themselves. But the delirium of vengeance, whatever its exciting cause, always disgraces humanity.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.

NEWSPAPER CRITICISMS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In reference to your article on "Once more the *Kowshing*," which appeared in your columns of the 27th ult., I beg you to permit me to offer the following remarks.

The *Kobe Herald*, I understand, calls the *Hong-kong Daily Press* "strangely shallow and unfair," but it strikes me that this epithet is more applicable to the argument of the *Kobe Herald* itself. The latter paper speaks of common humanity, stating that "common humanity might have been expected to dictate to the *Naniwa's* commander the propriety of sending the steamer back to her port of departure." Well! If the Editor of that paper speaks of humanity at all, why does he not condemn from the same point of view the agent of the *Kowshing* for his action, and argue that common humanity might have been expected to dictate to him the propriety of not undertaking such a task at all. Woolsey says, in his "Study of International Law," that "the conveyance of troops for a belligerent has been long regarded as highly criminal." Now at the time of the sinking of the *Kowshing* no war had been declared openly it is true. But the whole world knew that events had reached a crisis in which an act of actual hostility might be committed at any moment. If so, is it not highly criminal, from a humane point of view, to convey troops for one of the two disputing parties simply because no war has been openly declared as yet? I venture to conclude that the views of the *Kobe Herald* are "strangely shallow and unfair."

I am, Sir, yours truly,
December 1st, 1894.

ANAMUS.

THE STRANDING OF THE "MOUNT LEBANON."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of the 23rd ultimo you stated that the steamer *Mount Lebanon*, while entering the Bay of Tokyo, ran on to one of the Forts now under construction owing to the entire absence of lights; while according to the *Japan Gazette* of the same date, the reason assigned for the accident by the master of said vessel is the removal of the Gas Buoy from the new Fort to some half-a-mile distant, and the discontinuance of the red sector shown formerly from the Kanonsaki Lighthouse, both said to have been done without notice to that effect having been given. The above, together with the statements in a letter which appeared in the *Japan Herald* of the 26th instant, over the signature of Messrs. Samuel, Samuel & Co., agents for captain and owners of the steamer *Mount Lebanon*, make it appear as if the Lighthouse Department had neglected its duty in not keeping the lights burning, and in not giving due notice of changes of Buoys and Lights. Such is however not the case.

Notification No. 168 of Department of Communications, published in your paper of last August, notified mariners that the Uraga Channel Lighted Buoy (above called Gas Buoy) would be shifted 94 cables S. 10° W. from its then position, on August 22nd, 1894, and

Notification No. 177 of the same Department, published by you on the 5th of September, 1894, notified the establishment of a Fixed White Staff Light at the West side of the Fort No. 2 on Futsu Spit, and discontinuance of the Red Ray, covering Futsu spit and the said Fort No. 2, exhibited from Kanonsaki Lighthouse.

What has been stated in the newspapers about a mast and yard on Fort No. 3 (whereon the *Mount Lebanon* stranded) and no light being shown therefrom, is very apt to mislead shipmasters, and the opinion of the public. No publication has thus far been issued notifying the existence of any light on Fort No. 3, and such being the case, the Captain of the *Mount Lebanon* could surely not expect to find a light exhibited thereon. Whether Fort No. 3 should be better marked is a question into which I do not feel inclined to enter at present, nor do I care to assume that the splendid Light on Kanonsaki and the Staff Light on Fort No. 2, together with the Lighted Buoy Southward of Fort No. 3, are insufficient guides to enable shipmasters to clear the latter Fort.

Departing slightly from the above subject, it seems to me that one thing is certain, namely: That it behoves agents of vessels to acquaint their captains of whatever changes that have been made in Buoys, Beacons, and Lights at any place for

which they may be bound. I am of opinion that if the master of the *Mount Lebanon* had been informed while at Kobe by his agents, Messrs. Samuel, Samuel & Co., that the Buoy near Fort No. 3 had been shifted, that the Red Ray from the Kanonsaki Lighthouse had been discontinued, and that a White Staff Light had been established at the West side of Fort No. 2, then the accident would not have occurred. The master of the said *Mount Lebanon* will no doubt be of the same opinion.

Another fact in connection with this stranding may be mentioned, namely, that it occurred within pilotage waters. Would it not be far better if captains of vessels, strangers to the Bay of Tokyo, availed themselves of qualified pilots? Why do agents of vessels not recommend their captains to do so? Surely, Owners, Masters, and Agents of vessels frequenting Japanese waters need not be informed that the Japanese Government has gone to considerable trouble and expense in establishing a staff of qualified pilots for all places frequented by Foreign vessels, and for the sole purpose of protecting the lives of Foreigners and Foreign-owned property, for Japanese vessels do not require a pilot, their captains being all well acquainted with the dangers about their coast.

Nor need it be pointed out to Owners, Masters, and Agents of vessels that the pilot licenses are only granted to men who after very strict examination have proved themselves fully qualified to take charge of vessels in places where, from local causes, navigation is attended with more than common difficulty. The few casualties met with by vessels while under charge of these men is quite sufficient to show them to be able men, and the expediency for engaging them where ever obtainable.

Captain of vessels should, however, only engage properly licensed pilots, and not employ men whose knowledge of the coast has not been thoroughly tested.

I am, Sir, yours faithfully,
Yokohama, November 30th, 1894.

O. SEWA.

"SURRENDER IN EMBRYO."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—No prudent man of the post-diluvian dispensation would assume the task of correcting the current "errors of the press;" and it is for no such quixotic purpose that I venture to refer to a leading article in the *Japan Mail* of November 29th headed "Surrender in Embryo," but because it appears to me, in the present excited condition of the public mind, to have remediable mischief in it. The article is made up of a series of shifting hypotheses on which are based comments scarcely calculated to moderate the "indignation of the vernacular press" which is held up to admiration. No doubt there is in the Japanese press much to admire, its mere existence is admirable, but it would require a strong partisan to claim for it infallibility.

What the native press is so justly indignant at is that China should have affronted Japan by sending a mission of peace not in any of the ways prescribed, hypothetically, by the various journalists. This of course is not the real ground of the indignation, for, if it were, indignation would be quite out of place. The *Mail*, however, going somewhat in advance of the native press, and in advance even of its own more accurate knowledge, refers to the mission of "Messrs. Michie and Detring" in a way to darken counsel. While speaking in terms of quite undeserved commendation of one at least of the individuals named, yet as regards the mission the *Mail* adopts undiluted the bitterness of the native press. Of course there never was, I might almost say never could be, any mission such as that described by the native papers and the *Japan Mail*. Mr. Detring undoubtedly had a mission of some significance about which he made no mystery whatever, but to assume it was from the Viceroy Li Hung-chang is a gratuitous and under the actual circumstances a preposterous assumption. These somewhat crude conceptions, not perhaps unworthy of the native press are surely not worthy of the endorsement of the *Japan Mail*. (I do not overlook that the last sentence of the article unsays all that precedes, but these slight qualifying phrases generally elude the naked vision of the public.) Might it not rather have been expected of so responsible a journal that it would think twice before giving the permanent embodiment of its leading columns to these crude conceptions, and thus launching a new cluster of fictions to circle round the world and back again?

Of the mission which has caused so much editorial ebullition it is not my business to speak. Whether it succeeded or failed is not a matter of consequence any way. There are failures

which look like successes and successes which look like failures; and it is my personal belief that the mission in question fulfilled its purpose, but I do not know, and it does not signify what I think.

Since my individual movements seem to stir such terrible emotions in the Japanese mind—the Governor here has stated officially that here in the foreign settlement of Kobe I require police protection—I will, if you will pardon the egotism, make a clean breast of it. Like many other people, I like coming to Japan, and I have not missed an opportunity for the last thirty years or so of gratifying that harmless desire. An offer of a passage hither in a fast steamer, which was to cover the distance from Tientsin to Kobe in four days, would have been, under all circumstances, a strong temptation, but when the voyage was to be made in the company of a man for whose character I have a growing esteem, and to whom my society, I was sure, was not disagreeable; when to crown all the trip promised to give me, as it has done, a quite new insight into "things Japanese," the inducement was irresistible. It has proved to be the most interesting visit I have ever paid to Japan, and my chief regret is that the lateness of the season compels me to abridge it. I feel ashamed to intrude on your readers such trumpery personal matters, but will such a simple explanation satisfy the vernacular press? I know not.

Behind all this seemingly trivial effervescence, however, there lie some grave considerations, and there are times when sarcasm is out of place. It is comparatively easy in a leather chair in a nicely warmed room, with a tempting white sheet in front of one, to wax virtuous in reviling the Chinese. It is a game in which I have on occasion taken a hand, and I know how simple it is and how cheap.

But I sometimes wonder if those who halloo the Japanese to war against the most absolutely peaceable people on the face of the earth, whose chief crime indeed in the eyes of the world is that they are so peaceful, quite realize the full consequence involved in the enterprise. I am—I do not say even, unfortunately—old enough to have lived through a considerable part of the Taeping rebellion. The scenes have not faded from my memory; I hope I may never see any more such. But whatever may happen, I would, as a matter of personal preference, rather go down with the last forlorn hope of the peace-makers than contribute a feather's weight to the impetus of calamities which may befall an unoffending people, who have the same right to live their own lives in their own way as any of the other sons of Adam.

Yours faithfully,

A. MICHIE.

Kobe, December 1st.

CHRISTIANITY IN THE AMERICAN COLLEGES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In view of Dr. Watanabe's unfounded statement made before the Buddhist Young Men's Association, as reported in the *Japan Mail* of November 24th, to the effect that "Christianity as such is now openly professed" in America "only by ignorant men and women," the following facts, gathered from personal observation and accurate reports, may be of interest:—

Mr. L. D. Wishard, formerly College Secretary of the International Committee of Young Men's Christian Associations (New York City), writing from Japan in 1889 said: "Shameful misrepresentations have been made by sceptical men from the West concerning the place which Christianity holds among the educated. Having had opportunity to know the facts in this matter after eleven years' close contact with American colleges, I was able to state that a majority of the graduates of those colleges are members of evangelical churches, and that a very small percentage of students are unbelievers in the fundamental facts of Christianity." In August of last year the following still stronger statement was made in Chicago with the endorsement of the above mentioned International Committee:—"The most significant fact in the history of the Christian Church during the last quarter of the century is the revival of vital piety in the universities and colleges of America. This revival has not been spasmodic and emotional, but has grown steadily and healthfully, taking hold of the personal lives and moulding the characters of the students until it has wrought a revolution in the sentiment and life of the great student body. This body of seventy thousand men comprises the pick and flower of American young manhood. To-day at least fifty-five per cent. of them are professed followers of Jesus Christ, while ninety per cent. are, by inheritance and sympathy, Christians. The proportion of avowed Christians among the students is ten times as great as that among the whole body of young Americans."

The following figures, taken from the Year Books of the Young Men's Christian Associations for the last six years, will show the steady and rapid growth of Christian sentiment among the colleges of America:—

No. of Associations	1888.	1890.	1892.	1894.
in colleges	273	302	400	444
No. of members	14,872	18,742	24,819	25,105
No. of members of evangelical churches in college	12,370	19,286	28,378	31,658

(In 1885 institutions only; a gain of over 250 per cent.)

Amount spent for current expenses.....\$10,000 — — \$45,000

This growth has been as marked in the larger institutions as in the smaller, and in many cases more so. At Cornell University, a State institution, there were in 1888 only 450 evangelical Christian students among 1,022, or 44 per cent; a few years before the number had been far smaller; but in 1884 the proportion was 925 among 1,345 students, or nearly 50 per cent. At Princeton College in 1888 the number of members of evangelical churches was 300 out of 603 students; in 1884 there were 750 out of 1,080. At Harvard University in 1884 there were 1,200 evangelical Christian students among 3,156; at Yale in 1890, the only year for which figures are at hand, the proportion was 886 among 1,477 students, or nearly 60 per cent. In some of the smaller denominational colleges the proportion is of course much larger, sometimes, as in Syracuse University in 1889, ninety per cent. or more. The members of evangelical churches among the professors and instructors in the above institutions would probably be about the same; a census made at Cornell five years ago showed over 60 per cent. of the instructing body to be evangelical Christian men.

But these are only statistics, the dry bones of the matter. There is also an earnest Christian spirit and life in the American colleges. Never have the students given so much attention to building up their own spiritual lives by Bible study, striving to keep pace in their knowledge of the Bible with their growth in knowledge of the sciences and other branches. Never have such earnest efforts been put forth to guard the faith of new men on coming to college, and to welcome all in the spirit of Christ by helping them wherever possible in practical ways. Never have the minds of educated young men and women been so drawn out to other fields and hearts so filled with enthusiasm to carry the gospel of Christ to foreign lands as at present; for during the last eight years over three thousand students have pledged themselves to foreign missionary work, and over six hundred have recently left America for foreign fields. "Christianity as such," namely evangelical Christianity, never was so strong among the educated classes in America as at present; and never were the prospects of its steady growth brighter.

I remain, very respectfully yours,

R. S. MILLER,

Asst. Sec. for Japan.

Kanda, Tokyo, December 3rd, 1894.

IMPERIAL ORDINANCE.

THE ORDER OF THE GOLDEN HAWK.

We hereby give Our Sanction to the present Ordinance establishing the Order of the Golden Hawk, with which is associated a Distinguished Service medal, and order the same to be promulgated.

[His Imperial Majesty's Sign-manual.]

(Great Seal.)

(Signed.) Count ITO HIROBUMI,

Minister President of State.

Dated November 25th, 1894.

IMPERIAL ORDINANCE No. CXCH.

REGULATIONS GOVERNING THE ORDER OF THE GOLDEN HAWK.

Art. I.—Medals of the Order of the Golden Hawk will be conferred, in accordance with these regulations, on persons who have performed distinguished military services.

Art. II.—Medals will first be granted to Generals and Admirals in the third grade, promotion from which rank will be gradual and in accordance with distinguished services subsequently rendered. In cases where the Emperor specially confers the medal for a particular achievement, the foregoing provision need not be adhered to.

Art. III.—Medals will first be granted to Majors or Colonels, or Commanders or Captains in the fourth grade; Ensigns or Sub-lieutenants or Lieutenants in the fifth grade; the former to be

gradually promoted according to the distinguished services subsequently rendered to the second grade, and the latter to the third grade.

Art. IV.—Medals will first be granted to non-commissioned officers treated as commissioned officers, to non-commissioned officers and privates in the seventh grade, and non-commissioned officers will be promoted gradually to the fifth grade according to the distinguished services subsequently rendered; and privates to the sixth grade.

Art. V.—Cadets will be treated in regard to the granting of medals of the Order of the Golden Hawk in the same way as officers of the rank of ensign in the Army or sub-lieutenants in the Navy.

Art. VI.—Medals of the Order of the Golden Hawk will be granted to non-combatants on the Army and Navy civil establishments holding rank equivalent to military or naval commissioned or non-commissioned officers.

Art. VII.—In the case of persons whose distinguished services in the field or in the discharge of a special mission are deemed worthy of special recognition, the provisions of Arts. II. to IV. in relation to the grade of the first grant of the medal need not apply, but a higher grade than there specified may be given.

Art. VIII.—In special cases the Commander-in-Chief of the Troops engaged in war, or the Commander-in-Chief of the Fleet, have the right to confer upon the field of battle medals of the Order of the Golden Hawk of the fifth grade.

Art. IX.—Detailed Rules governing the granting of medals of the Order of the Golden Hawk will be hereafter drawn up.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, November 10.

Lascadio Hearn has some interesting extracts "From My Japanese Diary" in the November *Atlantic Monthly*.

Houghton, Mifflin and Co. announce a book on "Occult Japan," by Percival Lowell.

It is believed in Washington that a certain James Wasson, who is reported to have killed his Mexican wife and himself at Jalapa, is James R. Wasson, who married the daughter of U.S. Minister Bingham, and was once a professor of engineering in the University of Tokyo.

U.S. Consul Stephen at Annaberg, Germany, reports one curious result of the war in the East, as follows:—"The straw plaiting industry, with its seat in Dresden, Saxony, is beginning to feel the effects of the war in Eastern Asia. The straw hat manufacturers usually draw their material, put up into straw braids, from China and Japan. The blockading of the ports from which these braids were exported has caused a scarcity and higher prices of the raw material. Manufacturers are beginning to look for other sources from which to supply their demands, and expect to be on the spring market—having nothing better—with home products." Whereupon the Chicago *Inter-Ocean* gives this advice, "Save your old straw hats."

It is again reported from Valparaiso, Chile, that the Chinese are negotiating with the Chilean Government for the purchase of the war-ship *Esmeralda* for \$200,000, and, perhaps, of the *Almirante Lynch*, and the *Almirante Condell* also for another £100,000.

The Japanese resident in this city duly celebrated their Emperor's Birthday, and were disappointed only because they did not receive news that the Japanese army had occupied Mukden.

The "chrysanthemum show" in this city is very interesting and popular. There is a newspaper story that on November 3 a number of Japanese, visiting the exhibition, "went into ecstasies over a new dull yellow blossom as big as a dinner plate" until they learned that it was a Chinese variety!

From "chrysanthemums" to "civil service reform" may seem a big jump, but it is at least only a slight move in alphabetical order. President Cleveland has recently issued several orders extending the application of the civil service rules. These, for instance, now cover all Customs employees "not serving merely as workmen or labourers," all clerks in the offices of post-office inspectors; messengers, assistant messengers, and watchmen in all departments. The civil service rules are also extended to all Customs districts in which there are as many as twenty employees; to about 1,500 more post offices; and to additional positions in the Agricultural Department and in the Indian School Service.

General O. O. Howard, the famous Christian soldier, "the Havelock of the Union army," an able general, has been put, by virtue of his age and service, on the retired list.

Dr. Talmage has again resigned his pastorate of the Brooklyn Tabernacle, and will become an evangelist. His resignation has been accepted.

Mdme. Sorabji-Cavalier, of Ceylon, has been speaking in Chicago in testimony of the noble work done by the Salvation Army in India.

This letter is being written at Battle Creek, Mich., where the Seventh Day Adventists are very strong, and where, as it is a Saturday, bells are ringing for church services. This is also the location of an excellent Sanatorium.

The following clever advertisement is issued by the Lake Shore and Michigan Southern Railway, and circulated in Chicago and the West:—"The Lake Shore limited taken regularly on your Eastern trips will prevent that tired feeling so often experienced by travellers. Leaves Chicago V. XXX p.m., arrives New York VI. XXX p.m. Can be taken without shaking."

Attorney-General Olney has published an opinion, that organization is the working men's only safeguard, and that, under certain conditions, strikes are legal. The following is the summary of his opinion:—

In short, the question being whether business policy requires the Court to approve the rule that a member of the Brotherhood of Railway Trainmen is *ipso facto* ineligible as an employee of the receivers of the Reading Railroad and an officer of the Court, the conclusive considerations may be summed up as follows:

1. The rule is of doubtful value as a preventive of strikes, because it leaves employees at rest upon impulse and from passion, and freed from the restraints of the Brotherhood regulations.
2. The rule is of doubtful value when the Court is the real employer, both from the reluctance of the employed to defy the Court's authority and from the power of the latter to speedily and summarily vindicate it.
3. The rule is of positively injurious tendency in the disaffection and discontent engendered among employees by the denial to them of rights enjoyed by citizens generally and deemed necessary for their security and comfort.
4. The repudiation of the rule, on the other hand, has the positive merit (a) of tending to secure for the service the good will of employees, and thus promoting its efficiency; (b) of recognizing the real conditions of the capital and labour problem, and the fact that labour both has the right to organize and is organized; (c) of illustrating the working under the most favourable auspices of the principle of arbitration as the means of adjusting the differences between capital and labour; (d) of demonstrating that there is not one law for one class of the community and another for another, but the same for all, and of thus tending to preserve for the law and for the judiciary by which it is administered that general respect and confidence which have always been a marked characteristic as well as excellence of our institutions.

RICHARD OLNEY.

Big-Gen. A. McD. McCook becomes Major-General in place of Howard, retired, and Col. Jas. W. Forsyth is promoted to succeed McCook.

At the Methodist Episcopal Missionary Conference now in session in Brooklyn, Rev. H. Olm Cady, of the Chinese Mission, and Rev. M. S. Vail, of Tokyo, have been among the speakers.

R. G. Dun and Co.'s report published to-day says:—"Business has been good the greater part of the past week and the elections are expected to give it a sharp stimulus. Whether men are right or wrong in expecting better things, the fact that they expect them does tend to make things better." And Bradstreet's report says that there is an increase in "the confidence of many merchants and manufacturers in a prospect for an increased rate of improvement in general trade in the near future."

All this week we have been treated to cold and stormy weather, which began on Monday and is only abating a little to-day. There are, perhaps, two inches of snow on the ground, except in the roads, where there are several inches of mud!

But the greatest blizzard of the week was in the political world. Many prominent Democrats, and hundreds of ordinary ones, are missing, buried under a fearful avalanche. A few Democrats barely escaped with their lives, but are feeling rather lonesome. In Michigan, for instance, "Donovan, of Bay City" has suddenly become famous as the only Democratic member in the next State Legislature! A land slide was expected, but not one so extensive and disastrous to the Democrats. Even at this date it is impossible to estimate exactly the damage; but it is possible to make some general statements and to give round numbers.

In the first place, the Republicans carried several Southern States, so that the "Solid South" is at last badly broken. From New England there will be only one Democratic Congressman, Fitzgerald, of classic Boston; and in Massachusetts the majority of Grenhaige (Rep.) for Governor is about 50,000 or 60,000. In New York State David B. Hill is beaten by Morton by about 150,000; and the latter now becomes a prominent candidate for the Presidency. In New York City the Tammany tiger is buried under 50,000 or so in the municipal election, and loses almost all its Congressmen. New Jersey gives about 50,000 Republican majority, and will elect a Republican Senator in place of McPherson (Dem.). The Republican plurality in Pennsylvania is roaming around 200,000; in Ohio and Illinois around 130,000; in Michigan around 100,000; in Iowa around 80,000; and in other states the figures are smaller but big enough to astonish the De-

mocrats. The latter are also surprised at the loss of Missouri, West Virginia, North Carolina, Delaware, and perhaps Tennessee, and at the tremendous reduction of their usually immense majority in Texas. California is very close, with the chances, according to this morning's dispatches in favour of the Republican candidate for Governor; and the Republicans have elected the remainder of this ticket and have a majority in the State Legislature. South Carolina was carried by the Tillman Democrats.

The greatest interest centres, of course, in the composition of the next Congress. The Chairman of the Republican Congressional Committee, in an estimate on the House of Representatives, claimed 183 "sure" Republicans, and 218 "probable"; but the election gives over 250! The latest estimate since election figures out 259 Republicans, 95 Democrats, and 11 Populists. Both the Republicans and the Populists gain Congressmen from the South; while the Populists lose in the West. The only Southern States to send solid Democratic delegations to the House of Representatives are Mississippi, Florida, and perhaps South Carolina. The Republicans will have solid delegations from such large States as Indiana, Michigan, and perhaps Iowa, and will have a majority in the delegations of more than half of the States; so that, if in 1896 no Presidential candidate gets a majority of the electors, the Republican candidate will be elected by the House of Representatives. Coxey, the famous "Commonweal" leader, was among the unfortunates in Ohio.

One of the new Congressmen from Cincinnati is Chas. P. Taft, who is, I believe, a cousin of Rev. G. W. Taft, of Tokyo. Hugh S. Dinsmore, formerly U.S. Minister to Korea, has been re-elected in Arkansas. Among the prominent Democrats who are "missing" or "dead," we find Wilson, of West Virginia; Springer, of Illinois; Holman, Bynum, and Cooper, of Indiana; Hatch, Dockery, and Bland of Missouri; Sickles, Cummings, Tracey, and Bunke Cochran, of New York; Outwaite and Tom Johnson, of Ohio. The Populists have lost Lefe Pence, of Colorado, and Jerry Simpson, of Kansas.

The complexion of the next Senate is as yet a matter of conjecture. The Republicans will gain one Senator each in New Jersey, West Virginia, Washington, Wyoming, Montana, and, perhaps, Kansas, North Carolina, and Tennessee. If they get all of these, they will have a bare majority; but the chances are against them. And, as there will be two new Senators from Utah, it is an impossibility at present to figure closely on the Senate.

The "moral" of the election is that a party should live up to its promises. The result is not so much a gain to the Republicans as loss to the Democrats. If the figures are closely examined and compared with those of 1892, it will be seen that generally the Republicans and Prohibitionists polled about the same vote, with here and there a slight increase; that the Populists made large gains, and that the Democratic vote fell off tremendously. On election day I happened to be in Paw Paw, Mich., and was informed that 700 Democrats in that township did not vote. I must in fact, confess, that I was not very much disappointed myself at losing my vote by absence from Chicago; for I could not see that there was much choice in this campaign. One thing is certain that the election is not a protest against tariff reform but a rebuke of the Gorman-Brice element in the Democratic party for mutilating the Wilson Bill. The "stay at home" Democrats have defeated their own party; it remains to be seen what they will do in 1896. From this year's election no safe prophecy can be made.

LETTER FROM PHILADELPHIA.

(FROM OUR OWN CORRESPONDENT.)

November 5th, 1894.

The Chinese-Japanese War is attracting a very great deal of attention through all the Eastern United States. A recent journey from the edge of New England down into Maryland brought this most forcefully to my notice. The papers were full of it, and whenever it slipped out, in being presented to some new acquaintance, that I had once lived in Japan, instantly the subject of the War came up. It is a fact that the average American has an excellent idea of the War and its occasion. If we are prejudiced at all it is in favour of Japan, but I believe that we are, in this instance, unbiassed. Our papers, in all their editorials, show the most earnest sympathy for Japan. Excepting for an article printed from some London journal every now and then, all the expressions are favourable to Japan. For fairness' sake

the other side is stated, with baldest frankness, in these reprints. It is exceedingly rarely that one strikes, either in personal conversation or in reading, a man who feels that Japan is in an unrighteous cause. The idea that there is a "Jingo" spirit in Japan, or that Japan is aiming to become the leading power in Asia simply, or that the War is simply a diversion from an otherwise civil contest, has been thoroughly dispelled from American minds.

One of the best contributions to the War literature is in the *North American Review* for November. His Excellency, the Japanese Minister to Washington, S. Kurino, presents a most lucid statement of the War. It is wonderful for its frankness and for its fairness to the Chinese. Undoubtedly it cannot fail to have more weight than if it came from an ordinary individual: his position as Minister will lend force to the statements. Still that is not at all unfortunate.

Americans seem to see in the War, not simply a contest as to whether Korea shall maintain reforms of government, but a tourney between the champions of progress and of the *vis inertia* which resists all progress. It occurs to us that Japan has been trained for the past forty years for such a time as this. Among the Christian weekly newspapers of the greatest strength, it is almost invariably regarded that Japan has been raised up for the deliverance of Asia from the anti-civilization, anti-foreign, anti-Christian influence of China. I do not think that any class Americans are lacking in the fullest sympathy with Japan in the present struggle, but the Christian people, so largely interested in Asia because of missionary effort, are most earnest in expressing that sympathy. We are all eagerly hoping that Japan will secure her victories that China, and the world, will be the more inclined to accept civilization. The marked contrast, mentioned in the great dailies of the very day on which I am writing this letter, between the atrocities of the Chinese soldiery upon their own countrypeople, and the gentleness of the Japanese Army, and such like happenings, will do far more than to evoke favourable sentiment for Japan: it will pave the way for the incoming of the power that made Japan gentle.

I am writing on the day after the great elections. It has been a most wonderful election. Of the results in general your readers are already informed. The Republican party is everywhere most splendidly victorious. The battle has been both political and moral. It is strikingly significant. In Pennsylvania, which gives, according to Democratic estimates, a majority of 200,000 to the Republican candidate for Governor, General Hastings, the conflict was purely political. The Democratic candidate, Colonel Slinger, is a man of honour and of intelligence. Personalities did not in the least enter into the contest, it was fought wholly on grounds of political economy. So almost all over the country. The business depression was, rightly or wrongly, laid at the doors of the Democratic party, and the election is a protest against radical changes which that party made in the matter of the tariff. Congress will certainly be strongly Republican, the House of Representatives having a majority of, at the very least, 66 Republicans. This means, after two years shall have passed, a reversion of the Democratic policy looking towards free trade and the reestablishment of a protective policy.

But the campaign in New York, city and state, has been of yet greater interest. Undoubtedly the victory of morality is due, in the greatest degree, to a Presbyterian minister, Dr. Parkhurst. A little while aback and nobody gave Dr. Parkhurst the least aid. He lacked even the sympathy of a great many Christian ministers. He was deemed a crank, and was pitilessly assailed in the press. As time went on it was found that he knew right well what he was about. He had "sized up the situation" very exactly, and the corruption in the police administration of New York City proved to be far worse than Dr. Parkhurst had ever charged. Though dealing with an evil most subtly obscured, with most unreliable witnesses, with the shrewdest of politicians, and with legal powers arrayed against him, Dr. Parkhurst triumphed most gloriously in having the corruption uncovered. He was not to be turned, by any sort of temptation, from the end he had in view at the outset, of so showing up the City administration that the citizens would grow sick of it and "turn it down" at the election. Tammany is down, and not for the time being only. The American conscience is aroused. The whole of the New York election augurs well for morals in government. Senator Hill, candidate for Governor of the State, received a tremendous defeat also. He was first and last for self and self, a politician of the worst sort, and he has, in his own State and by those upon whom he most relied, been set aside.

Original from

It means a cleanliness in politics that we have not had for many years.

I have just come from Philadelphia's great Chrysanthemum Show. It is a splendid exhibition. There are innumerable varieties and of great size and beauty. The show is held in the great Academy of Music. The Chrysanthemum Show is always popular in Philadelphia. Many wealthy citizens take especial delight in encouraging their gardeners in growing these beauties. The whole Academy is decorated with Japanese flags and lanterns, and has for the orchestra an imitation of a Japanese temple made of branches of autumn leaves mixed with laurel. Just another bit of evidence is this that Japan is in the good graces of Americans.

ST. ANDREW'S BALL.

Though

Fair frae th' land o' th' hill an' th' heather,
Fair frae th' burnie that rows in th' glen,

the Scotmen resident in Yokohama keep loyally green in this land of their exile the "pious memory" of their patron Saint; and once again the anniversary of his day has been observed by a big Ball at the Public Hall. As in previous years, the hospitality of the Yokohama St. Andrew's Society was extended this autumn with no stinting hand, and the Ball of Friday night will linger long in the recollection of all who attended it as one of the pleasantest of any of these welcome public functions. The arrangements of the Hall were much the same as last year. A ladies' entrance was erected at the side leading off from the portico to the dressing-rooms at the back of the stage, and the whole of these apartments were reserved for the accommodation of the lady guests. The gentlemen's cloak-room, smoking and refreshment rooms were upstairs, while the lesser Hall was used as the supper-room, the Band being stationed in the vestibule. The dancing *sabot* was decorated principally with feathery bamboos, which were hung with coloured lanterns—red, on red and white being the principal colours—and silver and gold globes. Two well-grown Scotch first stood in the top corners of the Hall—sturdy reminders of "Caledonia stern and wild"—and these were lit up with tiny electric lights and interspersed with lanterns and gold and silver balls, the whole effect being very pleasing. At each side of the stage—turned for the nonce into a *bon-doir* hung with pale pink plum and darker cherry blossoms—were two flowering trees representative of Japan, the cherry and the plum. Over the proscenium hung the Lion shield of Scotland and the peaceful Cross of St. Andrew, done in chrysanthemums, while the motto of the Society, "For and lang Syne," was suspended in flower scroll-work beneath. On the wall immediately opposite was stretched the Royal arms of Scotland most correctly emblazoned, rampant lion, prancing unicorn, independent thistle, bellicose motto, crest and all. Here and there upon the walls were suspended smaller shields displaying the armorial bearings of the Committee and members of the Society, the red Scots lion surmounting several of them. Bunting of various nations, arranged in national harmonies, trophies of arms, pot and and foliage plants added to the general charming effect, reflecting great credit upon Mr. and Mrs. Hutchison and the Decoration Committee. Dancing commenced shortly after half-past nine and was kept up with vigour until the early hours of the morning, the following, which does not include the many "extras," being the Programme:—

DANCES.

- 1.—Waltz "Estudiantina."
- 2.—Highland Schottische "What's a the Steer."
- 3.—Waltz "Santiago."
- 4.—Caledonians "New Caledonians."
- 5.—Waltz "Thine Alone."
- 6.—Highland Schottische "Keel Row."
- 7.—Lancers "Mikado."
- 8.—Waltz "Morgenblätter."
- 9.—Reel "Carmen."
- 10.—Waltz "La Fille de Madame Angot."
- 11.—Waltz "Cotch Air."
- 12.—Caledonians "My Queen."
- 13.—Waltz "Patience."
- 14.—Reel "Patience."
- 15.—Lancers "Wein Weib und Gesang."
- 16.—Dancing in the Barn "Swinging."
- 17.—Waltz "Amourette."
- 18.—Waltz "Auld Lang Syne."
- 19.—Polka "Auld Lang Syne."
- 20.—Waltz and Galop "Auld Lang Syne."

The attendance was much larger than last year and the first square dances were rather crushed, but the best good humour prevailed and little inconvenience was felt. There was a large contingent of Tokyo visitors and many naval officers, whose uniforms added an additional brightness to the scene. Many very pretty and handsome costumes were worn, while a good deal of heather was also to be seen. Of course the big earth

quake shock that passed under Yokohama about twenty minutes to nine o'clock p.m., formed a staple topic for a good part of the evening. The Yokohama Town Band was in attendance and played capitally. The floor was excellent. Supper was supplied by the Club Hotel, Limited, Messrs. Gordon and Co., providing the wines and liquors. The Japanese Gardeners' Association supplied the floral decorations.

The Stewards for the evening were Messrs. J. D. Hutchison, President; J. A. Fraser, Vice-President; J. Archer, R. W. Borthwick, M. Brown, Jun., R. Home Cook, E. Courts, K. F. Crawford, F. F. Cruickshank, James Dodds, J. Johnstone, D. McLaren, M. T. B. Macpherson, C. McNeil, G. Philip, W. Ross, Jas. Stewart, James Troup, and C. W. Ure, Secretary.

FROM MY JAPANESE DIARY.

July 25.—Three extraordinary visits have been made to my house this week.

The first was that of the professional well cleaners. For once every year all wells must be emptied and cleaned, lest the God of Wells—Suijin-Sama—be wroth. On this occasion I learned some things relating to Japanese wells and the tutelary deity of them, who has two names, being also called Mizuhonome-no-mikoto.

Suijin-Sama protects all wells, keeping their water sweet and cool, provided that house-owners observe his laws of cleanliness, which are rigid. To those who break them sickness comes, and death. Rarely the god manifests himself, taking the form of a serpent. I have never seen any temple dedicated to him. But once each month a Shintō priest visits the homes of pious families having wells, and he repeats certain ancient prayers to the Well-God, and plants *nobori*—little paper flags, which are symbols—at the edge of the well. After the well has been cleaned, also, this is done. Then the first bucket of the new water must be drawn up by a man; for if a woman first draw water, the well will always thereafter remain muddy.

The god has little servants to help him in his work. These are the small fishes the Japanese call *funa*.¹ One or two *funa* are kept in every well, to clear the water of larvae. When a well is cleared, great care is taken of the little fish. It was on the occasion of the coming of the well-cleaners that I first learned of the existence of a pair of *funa* in my own well. They were placed in a tub of cool water while the well was refilling, and thereafter were replunged into their solitude.

The water of my well is clear and ice-cold. But now I can never drink of it without a thought of those small white lives circling always in darkness, startled through untold years by the descent of plunging buckets.

The second curious visit was that of the district firemen, in full costume, with their hand-engines. According to ancient custom, they make a round of all their district once a year during the dry spell, and throw water over the hot roofs, and receive some small perquisite from each wealthy householder. There is a belief that when it has not rained for a long time roofs may be ignited by the mere heat of the sun. The firemen played with their hose upon my roofs, trees, and garden, producing considerable refreshment, and in return I bestowed on them wherewith to buy *sake*.

The third visit was that of a deputation of children asking for some help to celebrate fittingly the festival of Jizō, who has a shrine on the other side of the street, exactly opposite my house. I was very glad to contribute to their fund, for I love the gentle god, and I knew the festival would be delightful. Early next morning, I saw that the shrine had already been decked with flowers and votive lanterns. A new bib had been put about Jizō's neck, and a Buddhist repast set before him. Later on, carpenters constructed a dancing-platform in the temple court for the children to dance upon, and before sundown the toy-sellers had erected and stocked a small street of booths inside the precincts. After dark I went out into a great glory of lantern fires to see the children dance, and I found, perched before my gate, an enormous dragon-fly more than three feet long. It was a token of the children's gratitude for the little help I had given them,—a *kasari*, a decoration. I was startled for the moment by the realism of the thing, but upon close examination I discovered that the body was a pine branch wrapped with coloured paper, the four wings were four fire-shovels, and the gleaming head was a little teapot. The whole was lighted by a candle so placed as to make extraordinary shadows, which formed part of the design. It was a wonderful instance of art sense working without a

¹ A sort of small silver carp.

speck of artistic material, yet it was all the labour of a poor little child only eight years old!

II.

July 30.—The next house to mine, on the south side, a low, dingy structure, is that of a dyer. You can always tell where a Japanese dyer is by the long pieces of silk or cotton stretched between bamboo poles before his door to dry in the sun,—broad bands of rich azure, of purple, of rose, pale blue, gray. Yesterday my neighbour coaxed me to pay the family a visit, and, after having been led through the front part of their little dwelling, I was surprised to find myself looking from a rear veranda at a garden worthy of some old Kyoto palace. There was a dainty landscape in miniature, and a pond of clear water peopled by gold-fish having wonderfully compound tails.

When I had enjoyed this spectacle awhile, the dyer led me to a small room fitted up as a Buddhist chapel. Though everything had had to be made on a reduced scale, I did not remember to have seen a more artistic display in any temple. He told me it had cost him about fifteen hundred *yen*. I could not understand how that sum could have sufficed. There were three elaborately carved altars, a triple blaze of gold lacquer work; a number of charming Buddhist images, many exquisite vessels, an ebony reading-desk, a *mokugyo*, two fine bells,—in short, all the paraphernalia of a temple in miniature. My host had studied at a Buddhist temple in his youth, and knew the *sutras*, of which he had all that are used by the Jōdo sect. He told me that he could celebrate any of the ordinary services. Daily, at a fixed hour, the whole family assembled in the chapel for prayers, and he generally read the *Kyō* for them. But on extraordinary occasions a Buddhist priest from the neighbouring temple would come to officiate.

He told me a queer story about robbers. Dyers are peculiarly liable to be visited by robbers; partly by reason of the value of the silks entrusted to them, and also because the business is known to be lucrative. One evening the family were robbed. The master was out of the city; his old mother, his wife, and a female servant were the only persons in the house at the time. Three men having their faces masked and carrying long swords, entered the door. One asked the servant whether any of the apprentices were still in the building, and she, hoping to frighten the invaders away, answered that the young men were all still at work. But the robbers were not disturbed by this assurance. One posted himself at the entrance, the other two strode into the sleeping-apartment. The women started up in alarm, and the wife asked, "Why do you wish to kill us?" He who seemed to be the leader answered, "We do not wish to kill you; we want money only. But if we do not get it, then it will be this," striking his sword into the matting. The old mother said, "Be so kind as not to frighten my daughter-in-law, and I will give you whatever money there is in the house. But you ought to know there cannot be much, as my son has gone to Kyōto." She handed them the money drawer and her own purse. There were just twenty-seven *yen* and eighty-four *sen*. The head robber counted it, and said, quite gently, "We do not want to frighten you. We know you are a very devout believer in Buddhism, and we think you would not tell a lie. Is this all?" "Yes, it is all," she answered. "I am, as you say, a believer in the teaching of the Buddha, and if you come to rob me now, I believe it is only because I myself, in some former life, once robbed you. This is my punishment for that fault, and so, instead of wishing to deceive you, I feel grateful at this opportunity to atone for the wrong which I did to you in my previous state of existence." The robber laughed, and said, "You are a good old woman, and we believe you. If you were poor, we would not rob you at all. Now we only want a couple of *kimono* and this," laying his hand on a very fine silk overdress. The old woman replied, "All my son's *kimono* I can give you, but I beg you will not take that, for it does not belong to my son, and was confided to us only for dyeing. What is ours I can give, but I cannot give what belongs to another." "That is quite right," approved the robber, "and we shall not take it."

After receiving a few robes, the robbers said good-night, very politely, but ordered the women not to look after them. The old servant was still near the door. As the chief robber passed her, he said, "You told us a lie,—so take this," and struck her senseless. None of the robbers were ever caught.

III.

August 29.—When a body has been burned, according to the funeral rites of certain Buddhist

¹ A hollow wooden block shaped like a fish, which is struck in offering before Buddha.

sects, search is made among the ashes for a little bone called the *Hotoke-San*, or "Lord Buddha," popularly supposed to be a little bone of the throat. What bone it really is I do not know, never having had a chance to examine such a relic.

According to the shape of this little bone when found after the burning, the future condition of the dead may be predicted. Should the next state to which the soul is destined be one of happiness, the bone will have the form of a small image of Buddha. But if the next birth is to be unhappy, then the bone will have either an ugly shape, or no shape at all.

A little boy, the son of a neighbouring tobacco-nist, died the night before last, and to-day the corpse was burned. The little bone left over from the burning was discovered to have the form of three Buddhas,—*San-Tai*,—which may have afforded some spiritual consolation to the bereaved parents.⁵

IV.

September 13.—The old man who used to supply me with pipe-stems died yesterday. (A Japanese pipe, you must know, consists of three pieces, usually,—a metal bowl large enough to hold a pea, a metal mouthpiece, and a bamboo stem which is renewed at regular intervals.) He used to stain his pipestems very prettily: some looked like porcupine quills, and some like cylinders of snakeskin. He lived in a queer narrow little street at the verge of the city. I know the street, because in it there is a famous statue of Jizō called *Shiroko-Jizō*,—"White-Child-Jizō,"—which I once went to see. They whitened its face, like the face of a dancing-girl, for some reason which I have never been able to find out.

The old man had a daughter, O Masu, about whom a story is told. O Masu is still alive. She has been a happy wife for many years; but she is dumb. Long ago, an angry mob sacked and destroyed the dwelling and the storehouses of a rice speculator in the city. His money, including a quantity of gold coin (*koban*), was scattered through the street. The rioters—rude, honest peasants—did not want it: they wished to destroy, not to steal. But O Masu's father, the same evening, picked up a *koban* from the mud, and took it home. Later on a neighbour denounced him, and secured his arrest. The judge before whom he was summoned tried to obtain certain evidence by cross-questioning O Masu, then a girl of fifteen. She felt that if she continued to answer she would be made, in spite of herself, to give testimony unfavourable to her father; that she was in the presence of a trained inquisitor, capable, without effort, of forcing her to acknowledge everything she knew. She ceased to speak, and a stream of blood gushed from her mouth. She had silenced herself forever by simply biting off her tongue. A merchant who admired the act demanded her in marriage, and supported her father in his old age.

V.

October 10.—There is said to be one day—only one—in the life of a child during which it can remember and speak of its former birth.

On the very day that it becomes exactly two years old, the child is taken by its mother into the most quiet part of the house, and is placed in a *mi*, or rice-winning basket. The child sits down in the *mi*. Then the mother says, calling the child by name, "*Omas no sensō wa, nande adakana?—iute gōran.*" Then the child always answers in one word. For some mysterious reason, no more lengthy reply is ever given. Often the answer is so enigmatic that some priest or fortune-teller must be asked to interpret it. For instance, yesterday, the little son of a coppersmith living near us answered only *Ume* to the magical question. Now *ume* might mean a plum-flower, a plum, or a girl's name, "Flower-of-the-Plum." Could it mean that the boy remembered having been a girl? Or that he had been a plum-tree? "Souls of men do not enter plum-trees," said a neighbour. A fortune teller this morning declared, on being questioned about the riddle, that the boy had probably been a scholar, poet, or statesman, because the plum-tree is the symbol of Tenjin, patron of scholars, statesmen, and men of letters.

VI.

November 17.—An astonishing book might be written about those things in Japanese life which no foreigner can understand. Such a book should include the study of certain rare but very terrible results of anger.

As a national rule, the Japanese seldom allow themselves to show anger. Even among the common classes, any serious menace is apt to take the form of a smiling assurance that your favour shall

be remembered, and that its recipient is grateful. (Do not suppose, however, that this is ironical, in our sense of the word; it is only euphemistic, ugly things not being called by their real names.) But this smiling assurance may possibly mean death. When vengeance comes, it comes unexpectedly. Neither distance nor time, within the empire, can offer any obstacles to the avenger who can walk fifty miles a day, whose whole baggage can be tied up in a very small towel, and whose patience is almost infinite. He may choose a knife, but is much more likely to use a sword,—a Japanese sword. This, in Japanese hands, is the deadliest of weapons, and the killing of ten or twelve persons by one angry man may occupy less than a minute. It does not often happen that the murderer thinks of trying to escape. Ancient custom requires that, having taken another life, he should take his own; wherefore to fall into the hands of the police would be to disgrace his name. He has made his preparations beforehand, written his letters, arranged for his funeral, perhaps—as in one appalling instance last year—even chiseled his own tombstone. Having fully accomplished his revenge, he kills himself.

There has just occurred, not far from the city, at the village called Sugikami-mura, one of those tragedies which are difficult to understand. The chief actors were, Nanimatsu Ichiro, a young shop-keeper; his wife, O Noto, twenty years of age, to whom he had been married only a year; O Noto's maternal uncle, one Sugimoto Kasaku, a man of violent temper, who had once been in prison. The tragedy was in four acts.

ACT I. *Scene: Interior of public bath-house. Sagimoto Kasaku in the bath. Enter Nanimatsu Ichiro, who strips, gets into the smoking water without noticing his relative, and cries out,—*

"*Aa!* as if one should be in Jigoku so hot this water is!"

(The word "Jigoku" signifies the Buddhist hell, but, in common parlance, it also signifies a prison, this time an unfortunate coincidence.) Kasaku (terribly angry):—"A raw baby, you, to seek a hard quarrel! What do you not like?" Ichiro (surprised and alarmed, but rallying angrily against the tone of Kasaku):—"Nay! What? That I said need not by you be explained. Though I said the water was hot, you help to make it hotter was not asked."

Kasaku (now dangerous):—"Though, for my own fault, not once, but twice in the hell of prison I had been, what should there be wonderful in it? Either an idiot child or a low scoundrel you must be!"

(Each eyes the other for a spring, but each hesitates, although things no Japanese should suffer himself to say have been said. They are evenly matched, the old and the young.)

Kasaku (growing cooler as Ichiro becomes angrier):—"A child, a raw child, to quarrel with me! What should a baby do with a wife? Your wife is my blood, mine,—the blood of the man from hell! Give her back to my house."

Ichiro (desperately, now fully assured Kasaku is physically the better man):—"Return my wife! You say to return her? Right quickly shall she be returned,—at once!"

So far everything is clear enough. Then Ichiro hurries home, caresses his wife, assures her of his love, tells her all, and sends her, not to Kasaku's house, but to that of her brother. Two days later, a little after dark, O Noto is called to the door by her husband, and the two disappear in the night.

ACT II. *Night scene. House of Kasaku closed: light appears through chinks of sliding shutters. Shadow of a woman approaches. Sound of knocking. Shutters slide back.*

Wife of Kasaku (recognizing O Noto):—"Aa! Aa! Joyful it is to see you! Deign to enter, and some honourable tea to take."

O Noto (speaking very sweetly):—"Thanks indeed. But where is Kasaku San?"

Wife of Kasaku:—"To the other village he has gone, but must soon return. Deign to come in and wait for him."

O Noto (still more sweetly):—"Very great thanks. A little, and I come. But first I must tell my brother."

(Bows, and slips off into the darkness, and becomes a shadow again, which joins another shadow. The two shadows remain motionless.)

ACT III. *Scene:—Bank of a river at night; fringed by pines. Silhouette of the house of Kasaku far away. O Noto and Ichiro under the trees; Ichiro with a lantern. Both have white towels tightly bound round their heads; their robes are girded well up and their sleeves caught back with fusaki cords, to leave the arms free. Each carries a long sword.*

It is the hour, as the Japanese must expressively say, "when the sound of the river is loudest." There is no other sound, but a long occasional humming of wind in the needles of the pines; for

it is late autumn, and the frogs are silent. The two shadows do not speak, and the sound of the river grows louder.

Suddenly there is the noise of a plash far off,—somebody crossing the shallow stream; then an echo of wooden sandals, irregular, staggering, the footsteps of a drunkard, coming nearer and nearer. The drunkard lifts up his voice; it is Kasaku's voice. He sings,

"*Suita okataji yururute;
Ya-ten-ton!*"

—a song of love and wine.

Immediately the two shadows start toward the singer at a run; a noiseless flitting, for their feet are shod with *waraji*. Kasaku still sings. Suddenly a loose stone turns under his feet; he twists his ankle, and utters a growl of anger. Almost in the same instant a lantern is held close to his face. Perhaps for thirty seconds it remains there. No one speaks. The yellow light shows three strangely inexpressive masks rather than visages. Kasaku sobers at once, recognizing the faces, remembering the incident of the bath-house, and seeing the swords. But he is not afraid, and presently bursts into a mocking laugh.

"Hé! hé! The Ichirō pair! And so you take me, too for a baby? What are you doing with such things in your hands? Let me show you how to use them."

But Ichirō, who has dropped the lantern, suddenly delivers, with the full swing of a both hands, a sword-slash that nearly severs Kasaku's right arm from the shoulder; and as the victim staggers, the sword of the woman cleaves through his left shoulder. He falls with one fearful cry, "*Hito-goroshi!*" which means "murder." But he does not cry again. For ten whole minutes the swords are busy with him. The lantern, still glowing, lights the ghastliness. Two belated pedestrians approach, hear, see, drop their wooden sandals from their feet, and flee back into the darkness without a word. Ichirō and O Noto sit down by the lantern to take breath, for the work was hard.

The son of Kasaku, a boy of fourteen, comes running to find his father. He had heard the song, then the cry, but, though so young, he is not afraid. The two suffer him to approach. As he nears O Noto, the woman seizes him, flings him down, twists his slender arms under her knees, and clutches the sword. But Ichirō, still panting, cries, "No! no! Not the boy! He did us no wrong!" O Noto releases him. He is too stupefied to move. She slaps his face tentily, crying, "Go!" He runs, not daring to shriek.

Ichirō and O Noto leave the chooped mass, walk to the house of Kasaku, and call loudly. There is no reply; only the pathetic, crouching silence of women and children waiting death. But they are bidden not to fear. Then Ichirō cries,—

"Honorable funeral prepare! Kasaku, by my hand, is now dead!"

"And by mine!" shrills O Noto.

Then the footsteps recede.

ACT IV. *Scene: Interior of Ichiro's house. Three persons kneeling in the guest room: Ichiro, his wife, and an aged woman, who is weeping.*

Ichiro:—"And now, mother, to leave you alone in this world, though you have no other son, is indeed an evil thing. I can only pray your forgiveness. But my uncle will always care for you, and to his house you must go at once, since it is time we two should die. No common, vulgar death shall we have, but an elegant, splendid death,—*Rippana!* And you must not see it. Now go."

She passes away, with a wail. The doors are solidly barred behind her. All is ready.

O Noto thrusts the point of the sword into her throat. But she still struggles. With a last kind word Ichirō ends her pain by a stroke that severs the head.

And then?

Then he takes his writing-box, prepares the inkstone, grinds some ink, chooses a good brush, and, on carefully selected paper, composes five poems, of which this is the last:—

"*Meido yori
Yu dampo ga
Aru naraba,
Hayaku an chaku
Moshi okuren!*"

Then he cuts his own throat perfectly well.

Now, it was clearly shown, during the official investigation of these facts, that Ichirō and his wife had been universally liked, and had been from their childhood noted for amiability.

The scientific problem of the origin of the Japanese has never yet been solved. But sometimes it seems to me that those who argue in favour of

* The meaning is, "Give to the beloved one a little more (wine)." The *Ya-ton-ton* is only a burden without exact meaning, like our own "With a hey! and a ho!" etc.)

† The meaning is about as follows: "If from the Meido it be possible to send letters or telegrams, I shall write and forward them as speedily as I can."

a partly Malay origin has some psychological evidence in their favour. Under the submissive sweetness of the gentlest Japanese woman—a sweetness of which the Occidental can scarcely form any idea—there exist possibilities of hardness absolutely inconceivable without ocular evidence. A thousand times she can forgive, can sacrifice herself in a thousand ways unutterably touching; but let one particular soul-nerve be stung, and fire shall forgive sooner than she. Then there may suddenly appear in that frail-seeming woman an incredible courage, appalling, measured, tireless purpose of honest vengeance. Under all the amazing self-control and patience of the man there exists an admantine something very dangerous to reach. Touch it wantonly, and there can be no pardon. But resentment is not likely to be excited by any mere hazard. Motives are keenly judged. Any error can be forgiven; deliberate malice, never.

In the house of any rich family the guest is likely to be shown some of the heirlooms. Among these are almost sure to be certain articles belonging to those elaborate tea ceremonies peculiar to Japan. A pretty little box, perhaps, will be set before you. Opening it, you see only a beautiful silk bag, closed with a silk running-cord decked with tiny tassels. Very soft and choice the silk is, and elaborately figured. What marvel can be hidden under such a covering? You open the bag, and see within another bag, of a different quality of silk, but very fine. Open that, and lo, a third, which contains a fourth, which contains a fifth, which contains a sixth, which contains a seventh bag, which contains the strangest, roughest, hardest vessel of Chinese clay that you ever beheld. Yet it is not only curious, but precious; it may be more than a thousand years old.

Even this have centuries of the highest social culture wrapped the Japanese character about with many priceless soft coverings of courtesy, of delicacy, of patience, of sweetness, of moral sentiment. But underneath these charming multiple coverings there remains the primitive clay, hard as iron, kneaded perhaps with all the mettle of the Mongol and all the dangerous suppleness of the Malay.

VII.

December 28.—Beyond the high fence inclosing my garden in the rear rise the thatched roofs of some very small houses occupied by families of the poorest class. From one of these little dwellings there continually issues a sound of groaning—the deep groaning of a man in pain. I have heard it for more than a week, both night and day, but latterly the sounds have been growing longer and louder, as if every breath were an agony. "Somebody there is very sick," says Manyemon, my old interpreter, with an expression of extreme sympathy.

The sounds have begun to make me nervous. I reply, rather brutally, "I think it would be better for all concerned if that somebody were dead."

Manyemon make three times a quick, sudden gesture with both hands, as if to throw off the influence of my wicked words, mutters a little Buddhist prayer, and leaves me with a look of reproach. Then, conscience stricken, I send a servant to inquire if the sick person has a doctor, and whether any aid can be given. Presently the servant returns with the information that a doctor is regularly attending the sufferer, and that nothing else can be done.

I notice, however, that, in spite of his cobwebby gestures, Manyemon's patient nerves have also become affected by those sounds. He has even confessed that he wants to stay in the little front room, near the street, so as to be away from them as far as possible. I can neither write nor read. My study being in the extreme rear, the groaning is there almost as audible as if the sick man were in the room itself. There is always in such utterances of suffering a certain ghastly timbre by which the intensity of the suffering can be estimated; and I keep asking myself, How can it be possible for the human being making those sounds by which I am tortured, to endure much longer?

It is positive relief, later in the morning, to hear the moaning drowned by the beating of a little Buddhist drum in the sick man's room, and the chanting of the *Namu myō hō renge kyō* by a multitude of voices. Evidently there is a gathering of priests and relatives in the house. "Somebody is going to die," Manyemon says. And he also repeats the holy words of praise to the Lotus of the Good Law.

The chanting and the tapping of the drum continue for several hours. As they cease, the groaning is heard again. Every breath a groan! Toward evening it grows worse—horrible. Then it suddenly stops. There is a dead silence of minutes. And then we hear a passionate burst of weeping,—the weeping of a woman,—and voices calling a name, "Ah! somebody is dead!" Manyemon says.

We hold council. Manyemon has found out that the people are miserably poor; and I, because my conscience smites me, propose to send them the amount of the funeral expenses, a very small sum. Manyemon thinks I wish to do this out of pure benevolence, and says pretty things. We send the servant with a kind message, and instructions to learn, if possible, the history of the dead man. I cannot help suspecting some sort of tragedy, and a Japanese tragedy is generally interesting.

December 29.—As I had surmised, the story of the dead man was worth learning. The family consisted of four,—the father and mother, both very old and feeble, and two sons. It was the eldest son, a man of thirty-four, who had died. He had been sick for seven years. The younger brother, a *kurumaya*, had been the sole support of the whole family. He had no vehicle of his own, but hired one, paying five *sen* a day for the use of it. Though strong and a swift runner, he could earn little; there is in these days too much competition for the business to be profitable. It taxed all his powers to support his parents and his ailing brother; nor could he have done it without unflinching self-denial. He never indulged himself even to the extent of a cup of *sake*; he remained unmarried; he lived only for his filial and fraternal duty.

This was the story of the dead brother: When about twenty-five years of age, and following the occupation of a fish-seller, he had fallen in love with a pretty servant at an inn. The girl returned his affection. The pledged themselves to each other. But difficulties arose in the way of their marriage. The girl was pretty enough to have attracted the attention of a man of some wealth, who demanded her hand in the customary way. She disliked him; but the conditions he was able to offer decided her parents in his favour. Despairing of union, the two lovers resolved to perform *foshi*. Somewhere or other they met at night, renewed their pledge in wine, and bade farewell to the world. The young man then killed his sweetheart with one blow of a sword, and immediately afterward cut his own throat with the same weapon. But people rushed into the room before he had expired, took away the sword, sent for the police, and summoned a military surgeon from the garrison. The would-be suicide was removed to the hospital, skillfully nursed back to health, and after some months of convalescence was put on trial for murder.

What sentence was passed could not fully learn. In those days, Japanese judges used a good deal of personal discretion when dealing with emotional crime; and their exercise of pity had not yet been restricted by codes framed upon Western models. Perhaps in this case they thought that to have survived a *foshi* was in itself a severe punishment. Public opinion is less merciful, in such instances, than law. After a certain term of imprisonment the miserable man was allowed to return to his family, but was placed under perpetual police surveillance. The people shrank from him. He made the mistake of living on. Only his parents and brother remained to him. And soon he became a victim of unspeakable physical suffering; yet he clung to life.

The old wound in his throat, although treated at the time as skillfully as circumstances permitted, began to cause terrible pain. After its apparent healing, some slow cancerous growth began to spread from it, reaching into the breathing passages above and below where the sword-blade had passed. The surgeon's knife, the torture of the cauterizer, could only delay the end. But the man lingered through seven years of continually increasing agony. There are dark beliefs about the results of betraying the dead,—of breaking the mutual promise to travel together to the *Mido*. Men said that the hand of the murdered girl always reopened the wound,—and by night all that the surgeon could accomplish by day. For at night the pain invariably increased, becoming most terrible at the precise hour of the attempted *shinju*.

Meanwhile, through abstinence and extraordinary self-denial, the family found means to pay for medicines, for attendance, and for more nourishing food than they themselves ever indulged in. They prolonged by all possible means the life that was their shame, their poverty, their burden. And now that death has taken away that burden, they weep!

Perhaps all of us learn to love that which we train ourselves to make sacrifices for, whatever pain it may cause. Indeed, the question might be asked whether we do not love most that which causes us most pain.—LUCASIO HEARN in the *Atlantic Monthly*.

A medical writer classes indolence as a disease, which is almost always an indication of diabetes and albuminuria, and is frequent in dyspepsia and indigestion.

White announces mate in five moves. (f)
Position.

BLACK—(OWEN).

WHITE—(BARBIER).

NOTES BY L. VAN VLIET.

- (a) Better would be P to K 3 at once, as on account of the move made by White, Black could now advantageously continue with P to K 3 and B to K 3.
- (b) The best way of developing the King's Knight when playing against the Queen's P. Flanchetto, as it enables the first player to maintain the centre after Kt to B 3.
- (c) This is a serious mistake, which we would scarcely expect from so experienced a player as Mr. Owen. He wins a piece, but loses the game thereby; much better to have taken the Knight with his Bishop.
- (d) He has now nothing better. White threatened to mate in four moves, beginning with B takes B ch.
- (e) The only move to avoid an immediate mate.
- (f) 25—Q takes Kt ch.; K to R 4; 26—R to K R sq. B to K R 6; 27—P to Kt 4 ch.; B takes P; 28—K to Kt 3 dis. ch., etc.

| 22—Q takes R (e) | 22—B takes Q |
| 23—K takes B | 23—R to K sq. ch. |
| 24—K to Q sq. | 24—Q to B 7 |

White resigned.

NOTES.

- (a) This and White's next move together form a rather hazardous experiment; 4—P to Q 3 is the recognized continuation.
- (b) White already has a difficult game owing to his neglect to advance the Q P at the right moment. If 12—P to Q 3 Black probably replies with P takes P, 23—Q takes P, Q to Kt 3, &c.
- (c) It seems preferable to take the B P, followed by Q to R 5 ch., but this might lead to an exchange of Queens.
- (d) Here, we think, White should simplify matters by 14—Kt takes B, Kt takes Kt, 15—B takes Kt, P takes B, 16—Castles, for he can afford to allow the discovered check.
- (e) If 22—K to Kt 2, then Q takes Q ch.; 23—K takes Q, ■ takes K. Black winds up the attack in excellent style.

GAME No. 189.

A beautiful game played in the contest for the Staats Zeitung Silver Rook at the Buffalo Congress of the New York State Chess Association.

INDIAN OPENING.

BLACK—(A. ALBIN).

WHITE—(J. W. SHOWALTER).

WHITE.

16—K Kt takes P

BLACK.

15—P takes B

16—Resigns. (a)

NOTE.

(a) If 16—Q to Kt 3 the probable continuation is 17—Kt takes P ch.; K to Q 4; 18—P to K 5; Q to B 4; 19—P to K 6 ch.; K to B 5; 20—Q takes Q, R takes Q; 21—Kt to Q 8 ch.; K to Q 4; 22—Kt takes P mate.

LATEST TELEGRAMS.

[RUETER "SPECIAL" TO "JAPAN MAIL."]

London, December 2.

The Prince of Wales and the Duke of York have left St. Petersburg, parting from the Czar with the warmest farewell.

The *Figaro* eulogises the Prince of Wales for his sympathy for the death of the Czar, and says that his stay at St. Petersburg has largely helped to restore cordial relations between Great Britain and Russia. The *Figaro* urges the policy of forming a new triple alliance.

London, December 5.

The Emperor of Germany, in opening the Reichstag, expressed confidence in upholding European peace.

London, December 6.

Three Russian war-vessels have been ordered to China.

The French Senate has passed the Madagascar credits.

(FROM JAPANESE PAPERS.)

Shanghai, December 7.

Admiral Fremantle, Commander-in-Chief of the British Squadron in the East, has arrived here.

The British Squadron is now lying off Chefoo.

Hiroshima, December 7.

Stephen Hart, the man who was arrested in Port Arthur, has been permitted by the Authorities to stay at Hattori's house in this town as the correspondent of the Reuter Telegram Co. The man states that he paid one hundred dollars as passage on a small Chinese vessel, and reached Port Arthur on the 19th ult. He adds that the Taotai of that Port escaped on the morning of the 21st accompanied by two steamers, but as the Japanese torpedo-boats followed them, one of the Taotai's vessels ran on to a shoal. Nothing has since been heard of the Taotai. His family escaped by a foreign vessel a few days before the outbreak of war.

Shimonoseki, December 7.

On the 24th ult. while about one thousand Chinese defeated soldiers were hiding at a distance of over two ri north of Port Arthur, two or three British steamers approached to rescue them. Upon this being discovered by the Japanese cavalry, the matter was reported to Headquarters. Soldiers were accordingly dispatched to attack the Chinese. Four hundred were killed, but the remainder escaped.

During the night of the 27th ult., a Chinese transport, loaded with arms and provisions, sought shelter at Port Arthur from a storm that was then raging. She entered the port in ignorance of its capture. The Japanese boarded the transport and have since detained her.

Osaka, December 7.

During the fight of the 18th ult. on the road between Chin-chow and Port Arthur, one Japanese horse-soldier was taken prisoner by the Chinese and conveyed to their barracks, where they nailed him to the wall. They then partook of a banquet in front of him.

REPORTS.

The British steamer *Belgic*, Captain Walker, reports:—Left San Francisco on the 15th November and arrived at Yokohama the 4th December at 7.25 a.m. Passage, 17 days 21 hours 27 minutes.

LATEST COMMERCIAL.

IMPORTS.

Stagnation seems once more to rule in Yarns, even at the reduced quotations of last week. Grey Shirtings also give a very feeble market. Fancies nothing doing worth mentioning. Woollens—Blankets are still wanted at good prices, but all else is dull, Italian Cloth especially being neglected.

COTTON PICK GOODS.

	PER POUND.
Grey Shirtings—8½, 38½ yds, 30 inches	\$2.25 to 2.75
Grey Shirtings—9½, 38½ yds, 35 inches	2.50 to 3.25
P. Cloth—7½, 21 yds, 32 inches	1.60 to 1.90
Indigo Shirtings—12 yds, 44 inches	1.70 to 2.35
Prints—Assorted, 21 yds, 30 inches	1.75 to 3.75
Cotton—Italian and Sateen Black, 31 inches	0.16 to 0.21
Velvets—Black, 35 yds, 22 inches	6.75 to 9.00
Victoria Lawns, 12 yds, 12½ inches	0.85 to 1.00
Turkey Reds—2.0 to 2.4½, 24½ yds, 30 inches	1.55 to 1.65
Turkey Reds—2.8 to 3½, 24½ yds, 30 inches	1.75 to 1.95
Turkey Reds—3.8 to 4½, 24½ yds, 32 inches	2.20 to 2.50
Turkey Reds—4.8 to 5½, 24½ yds, 31 inches	2.50 to 3.00

WOOLLEN.

	PER YARD.
Flannel—No. 2, 1/18 deniers	\$0.27 to 0.45
Italian Cloth, 30 yards, 32 inches	0.30 to 0.35
Medium	0.27 to 0.30
Italian Cloth, 30 yards, 32 inches	0.24 to 0.25
Common	0.15 to 0.22
Mousseline de Laine—Cape, 21 yards, 31 inches	0.15 to 0.22
Cloth—Pilot, 51 to 56 inches	0.15 to 0.50
Cloth—President, 51 to 56 inches	0.60 to 0.65
Cloth—Union, 51 to 56 inches	0.40 to 0.70
Blankets—Scarlet and Green, 3 to 5½, per lb	0.50 to 0.60

COTTON YARNS.

	PER POUND.
No. 16/24, Ordinary	\$33.50 to 33.75
No. 16/24, Good to Best	34.00 to 34.50
No. 16/24, Reverse	—
No. 18/32, Ordinary	—
No. 18/32, Medium	36.00 to 36.50
No. 18/32, Good to Best	37.00 to 37.50
No. 38/52, Medium to Best	41.00 to 42.10
No. 38, Two-fold	38.00 to 39.00
No. 32, Two-fold	42.00 to 44.00
No. 208, Bombay	—
No. 162, Bombay	—

METALS.

No particular change. There is a little more enquiry for some kinds of iron, but holders are firm as to price and buyers do not like to pay up for the lower exchange.

	PER POUND.
Flat Bars, 4 inch	\$3.40 to 3.50
Flat Bars, 4 inch	3.50 to 3.60
Round and square up to 4 inch	3.40 to 3.60
Iron Plates, assorted	3.60 to 3.75
Sheet Iron	4.70 to 4.90
Galvanized iron sheets	8.75 to 9.00
Wire Nails, assorted	5.60 to 5.90
Pin Plates, per box	7.00 to 7.25
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

No change. Buyers hold off and are clearing old purchases without making fresh bargains. Holders are strong in their ideas and are likely to be so with silver at 28 pence the ounce.

	PER POUND.
Chester	\$1.75 to 1.77
Comet	1.74 to 1.75
Devoe	—
Russian Anchor	1.74 to 1.75
Russian Moon	1.70 to 1.74

SUGAR.

Browns—Further sales at late rates. The old stock of Formosa is now reduced to 3,000 piculs. White—Good demand and prices are a little firmer than they were a week ago.

	PER POUND.
Brown Takao	\$4.20 to 4.30
Brown Manila	4.90 to 5.00
Brown Datong (New)	3.45 to 3.50
Brown Canton	3.70 to 4.25
White Java and Penang	6.60 to 6.70
White Refined	6.15 to 6.75

EXPORTS.

RAW SILK.

A good demand and large business at an advance in price; but exchange has receded again, and the lay down cost is not enhanced. Stock down to about 15,000 piculs.

QUOTATIONS.—(NEW SILK.)

THE GREATEST WONDERS OF MODERN TIME.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

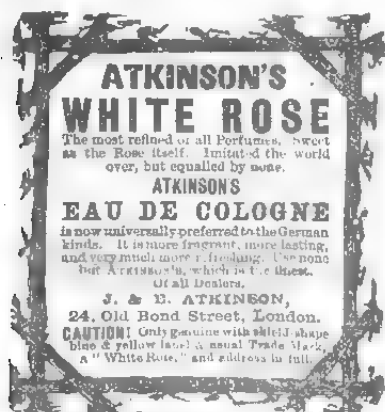

SIR SAMUEL HARRIS, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcers, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Courtes, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a ton, spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1895.

January 13th, 1894.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DEC. 15TH, 1894.

BIRTH.

At No. 255, Bluff, the wife of S. DEBRABANT, of a son.
On December 10th, the wife of J. N. SYMOUR, of a son.

DEATH.

On the 8th inst., at 2 a.m., after a brief illness, NOBUKITSU KOIZUMI, Manager of the Yokohama Specie Bank.

At the Yokohama General Hospital, on the 10th inst., at 4 p.m., FREDERICK CROOK of Bristol, formerly in the employ of Messrs. Martin & Co. He leaves a widow and three destitute children.

On December 14th, at 7 p.m., at Yokohama, Mr. LOUIS BARRIS, Secrétaire Archiviste du Consulate de France. The Funeral will take place to-morrow (Sunday) morning, leaving the French Consulate at 8.45. Friends are requested to accept this intimation.

SUMMARY OF NEWS.

THERE has been no war news of importance during the week.

THE Race Ball given on Thursday evening in the Public Hall was a great success.

AFTER waiting for trial for two years, the German Carstens has been sentenced to five years' imprisonment.

to seven years' imprisonment for the murder in Yokohama of the Englishman Beatty.

POLITICIANS are displaying great activity in view of the near approach of the session of the Diet.

THE amateur theatricals in Tokyo, given at the Imperial Hotel on Tuesday and Wednesday, were a great success.

HEAVY GALES swept over Japan during Saturday, Sunday, and Monday, doing considerable damage in some places.

ONLY forty-four applicants were successful at the first examination of candidates for Judges and Public Procurators this year.

NEARLY one hundred houses were destroyed by fire in Onoyecho, Yokohama, during the early hours of Thursday morning.

THE war rejoicings in Tokyo on Sunday attracted a vast concourse of people, and passed off successfully, but not without casualties.

THE balloon ascent and parachute descent in Yokohama on Saturday afternoon was a fiasco, the balloon bursting ere it had risen 120 feet.

MR. KOIZUMI NOBUKITSU, Manager of the Yokohama Specie Bank died last week. His remains were interred at Kuboyama Cemetery on Monday.

COMMANDERS SAKURAI KIKONJO, Kamimura Hikonojo, Ijuin Goro, and Dewa Shigetou, of the Navy, have been promoted to the rank of Captain.

THE Hawaiian Minister in Tokyo and Mrs. Irwin, who lately contributed yen 600 to the Red Cross Society of Japan, have been made special members.

THE first snow-fall in Yokohama this year occurred on the night of the 9th inst. The fall took place about ten o'clock and continued for a very short interval of time.

AFTER the lapse of a couple of years, the Yokohama Athletic Autumn Sports were revived to-day and attracted a goodly number of spectators. The fields were very good.

LIEUTENANT-GENERAL OKU, newly appointed Commander-in-Chief of the Fifth Army Division, left Ujina on the 10th inst. to join the First Japanese Army in China.

THE Yokohama Literary Society's meeting on Friday was enlivened by a clever essay by Mr. W. F. Page on "Newspaper Advertisements, Quaint, Humorous, and Curious."

A. R. LAMB, a wine-merchant's clerk, charged with embezzlement in Yokohama, pleaded guilty in H.B.M. Court on Monday, and was sentenced to four calendar months' imprisonment.

THE Yokohama Guild of Tea Merchants have presented a gold cup to Mr. Otani Kahei in recognition of services rendered by him in the improvement of the tea industry.

SERENOR V. E. BRAGA, Portuguese Vice-Consul at Kobe, has resigned, and the business of the Portuguese Vice-Consulate will temporarily be transacted by M. P. de Lucy Fossarieu, French Vice-Consul at Kobe.

MR. KATO, the newly appointed Minister to England, had a pleasant farewell dinner tendered him on the 10th inst. at the Koyokan, Tokyo, by a large number of distinguished persons, including Ministers of State, Vice-Ministers, and officials of various Departments, and

bers and officials of the Diet, influential residents, and distinguished bankers.

THE Department of Communications has resolved to receive postal money orders in the districts occupied by the Japanese Army. It also proposes to carry small parcels between Japan and the seat of war.

A NUMBER of Judges and Public Procurators of the Yokohama Saibansho and barristers of the Yokohama Bar held a banquet on the 6th inst. at the Chitose-ro to celebrate the victories of the Japanese Army and Navy.

MR. KOBAYASHI UMESHIRO, proprietor and chief editor of the *Boyei Shimbun*, Yokohama, has resigned to fill a position in the office of the Mitsui Bank, Tokyo. Mr. Kawakami Eijiro has become proprietor, and Mr. Ishii Kojiro chief editor of the paper.

THE Osaka Mint struck coins to the following amount during November last:—5 yen gold pieces, yen 115,000; one yen silver pieces, yen 350,000, 20-sen silver pieces; 84,000; 10 sen silver pieces, yen 276,000; and 5 sen nickel coins, yen 295,185.85.

MR. E. BUDGETT MAKIN, late of Morocco, who is visiting Japan as a member of the National Press Syndicate, has given a lecture on "Men and manners in the Sunset Land," before the Literary Society, preached in the Union Church, Yokohama, and lectured on "How the Moors live," at the Seamen's Mission.

REUTERS telegraphs:—A Russian Loan has been placed on the London market and the fact is regarded as an evidence of more satisfactory relations. The departure of the French troops is timed for them to reach Madagascar in April, when they will at once start for the Capital, Antananarivo, returning to the coast in October. The situation in Waziristan is disquieting, as large numbers are joining the tribesmen. More troops have been sent, and others have been warned to hold themselves in readiness. Yokohama despatches state that, if the war is concluded now, Japan is willing to accept an indemnity of four hundred million yen, together with the cession of the territory now occupied by the Japanese, otherwise Japan demands far larger concessions, and will grant no armistice unless China sues for peace and makes over Peking and other pledges to Japan. A message from President Cleveland praises the progress of Japan, and her laudable desire to complete domestic autonomy, giving Japan a full equality in the family of nations.

THERE is little to be said about the Import trade, Textiles being in a state of stagnation, the only exceptions to which are certain kinds of cloth for Army use and Blankets, and for the right article a good demand is maintained. Nothing done in the Metal market but to supply absolute necessities, and these are not on a large scale at present. Only sufficient Kerosene is taken to fill immediate wants, but prices are well maintained. In the Sugar trade, values continue to be well maintained, though there is not a great deal moving. In the principal Export, there has been a good current business at full rates, and though not quotably higher at the moment, prices may be said to be rather in sellers' favour. A little more has been done in Waste Silk at late rates, but the stock is still heavy. There is very little to be said about Tea, further than that decent parcels of leaf are very difficult to find, though if these were obtainable it looks as if buyers might be found. Exchange has partially recovered, and rates close firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The conduct of a section of the Japanese troops and coolies at Port Arthur, which has furnished to certain local foreign journals an opportunity to air their accustomed animosity against the Japanese, is vindicated by not a few of the vernacular newspapers. "The fortifications of Port Arthur," writes the *Yiyo*, "cost China, as every one knows, more than a quarter of a century of time and 200,000,000 taels to build. Our army needed only a day and a half to capture that tremendous stronghold! Little reflection is necessary to conjecture how fierce must have been the battle. We are not surprised to hear that foreigners witnessing the memorable exploit were surprised at the skill and valour shown by our soldiers, and declared that the Japanese Army is something really formidable. Lately, however, we find among foreigners men who say that the Japanese soldiers showed themselves at Port Arthur no less cruel and barbarous than the now almost proverbially brutal Chinese, and that the honour of the Japanese Army cannot be redeemed unless His Majesty's Government holds the officers answerable for the murder of women and non-combatants by the troops under their command. This opinion, if sincere, must be ascribed to ignorance of the circumstances under which Port Arthur was taken. But in truth we are rather inclined to doubt the sincerity of the contention, and to conclude, rather, that those advancing it are merely prompted by an invidious desire to detract from the glory of the Japanese Army. Port Arthur, as a matter of fact, had this peculiarity that the preparations for its defence involved the whole population. Fugitives from the forts found ready refuge in the houses of the town, whose masters and their grown sons, though in appearance mere townsmen, were soldiers to all intents and purposes. Nay more, the refugees could easily procure garments to throw over their uniforms, thus instantly and completely transforming themselves into seemingly peaceful citizens. Under these circumstances, wholesale slaughter was necessarily the order of the day. As to the few women and non-fighting men killed, it must suffice to say that they fell victims to the confusion of the moment and the darkness, not to the alleged cruelty of the Japanese soldiers. Were officers liable to be punished for such casualties, no officers could ever be guiltless after a battle fought with any degree of violence. Let it be stated once and for all that the Japanese soldiers have been and are under excellent discipline, and therefore never have been or will be guilty of any wantonness or cruelty." The *Nichi Nichi* holds up to high ridicule foreigners that censure the victors of Port Arthur for alleged cruelty. It calls them mere imitators of Herbert Spencer, who lost his head through amazement at the immense number of killed and wounded in Napoleon's battles and madly declaimed against the great European Conqueror. War is by nature cruel. "Circumstances must be left to determine the number of lives lost. Every unprejudiced reader of the official and therefore most trustworthy reports of the capture of the Chinese Sebastopol, will find enough to account for the number of Chinese lives that fell forfeit to the strength and courage of the Japanese troops, not to any questionable conduct on their part. The Second Army will be ill pleased with some Japanese organs of public opinion that have attempted to extenuate its conduct by citing examples of European brutality and lawlessness in African and Asian campaigns. Marshal Oyama, who has already earned a reputation by paying admirable respect to the most civilized usages of warfare, will soon establish his fame and find himself respected by the world, not merely as a follower of the acknowledged systems, but also as the framer of a new Code of International Law." Other journals that have touched upon the same subject, say in substance that foreign critics had better look at the soldiers of the States to which they belong, as reflected in the mirror of Modern

History, instead of crying out to their own disadvantage against the brave and well-disciplined conquerors of Port Arthur.

The *Shogyo Shimpō*, heading one of its leading articles "Financial and Economical Policy after the War," writes to the following effect: The unfavourable influence exercised upon commercial and industrial circles through the raising of the War Loans, cannot be permanent. Some economists overestimate that influence, and urge the Government to counteract it by redeeming all the War Loans immediately after the conclusion of the War. Such an opinion is not only impractical but also contrary to the plain dictates of national economy. How great must be the disturbance in the money market were such a blunder committed? The merest tyro in finance can find no difficulty in answering that question. The redemption of the Loans must be gradual and steady, by means of a fund accruing from increased customs duties and other taxes. An indemnity, however large, should such be obtained from China, must be spent on the improvement and development of the military and naval systems. The people of Great Japan must prove themselves great enough to pay the tax of her greatness.

The *Yiji* believes that the dynasty now upon the throne of China is inevitably destined to die, if not in the sequel of the present war, then in consequence of a combined attempt by the greater European States to partition the Middle Kingdom, for that event, the Tokyo journal does not doubt, will speedily follow the cessation of the present trouble. The lesson plainly taught by such an easily discernible tendency is that Japan, if she hopes to obtain a position in the hierarchy of the world's Great Powers, must not fail to take steps, even while the war is in progress, to enlarge her belligerent capacity. The peace of the East seems very likely to continue disturbed for years to come, and Japan is most favourably situated to emerge from the impending storm stronger, richer, and more respectable. The children of this Rising Sun should not miss such an opportunity. Let not the flattering victories they are now gaining over the doomed Celestials captivate them and make them relax their endeavour to shine as the leaders of the Orient. Three days after the publication of this impassioned article by the *Yiji*, the *Niroku* followed in nearly the same strain, but with even more rhetoric.

A contributor, under the pseudonym of "Haseenshi," writes in the *Asahi* that he deems the present a proper occasion for reminding the rising generation of the evils of early marriage. Now that the war invites young men to Korea and to China with fair promises of obtaining glory and fortune, many a noble youth has to lament his inability to accept the invitation, merely because he has at home one or more mouths to feed beside his own. Under the old regimen there were potent reasons in favour of early marriages, but young men now-a-days would best consult their interests if they never allowed themselves to be prevailed upon by parents or relations, or by their own weakness, to contract an early marriage. "Juvenile husbands and unruly fathers do not deserve Japan's future greatness," concludes the essayist.

Who has resolution, asks the *Kokumin*, to become master of the situation? Europe is ambitious, but the interests of her States are too widely different for combined action of any strength. Lord Rosebery says England is on the best terms with Russia, but facts show that the two Powers are ever ready to fight. France's aggressive policy in Madagascar bespeaks interests at least as widely at variance with those of England as are the latter's with Russia's. Germany striving to increase her commerce in the East, is an open rival of England. Neither combined Europe nor any one of its States, can hope to obtain supremacy in the Orient. What country can reasonably hope and is firmly re-

solved to turn the confused state of Eastern Asia to its advantage?

The *Nippon* in its leading columns publishes an essay from one of its occasional correspondents. The essayist, who writes under the nom-de-plume of "Gaisei," urges the Diet not to forget to present a Representation to the Government, next session, stating in precise terms the principles upon which it thinks the Government should terminate the war. The details of the arrangement must be left for the Authorities to determine, but the Diet should indicate the principle. To say nothing of the independence of Korea, the essayist thinks that the vastly more important problem of the maintenance of permanent peace in the East should be the basis upon which to found the terms. Japan must not dream of sheathing the sword, until she sees that problem solved to her full satisfaction.

Referring to an American naval officer of high rank, who is believed to have said that Japan should not be allowed to carry her aims in the present war to the length she has in contemplation, since that would mean leading China into the path of progress and civilization, the *Mainichi* says that the officer, who is respected as quite an authority upon matters Oriental, would find his opinion supported at least by foreign merchants residing in the East. That alone should suffice to convict him of error. In Europe there are many men that aim at taking advantage of others' ignorance. Therefore interference by Western Powers should be avoided by China more than by Japan. Lord Rosebery had best dismiss his idea of interference as quickly as possible. His honoured name may otherwise be sullied. It goes with out saying that he does not like to be taken to task, especially by Orientals, as an enemy of progress and enlightenment.

The *Shin Choya* remarks that the care of the conquered territory must not be left in the hands of the Army, and the officials of the Provisional Governments. Capitalists, traders, artisans, scientists, educationalists, farmers, and what not, are warmly called upon to go over to Northern China at the first opportunity and render service to their beloved country in her attempt to civilize her new subjects, who are little better than barbarians and therefore need many guides other than the Government Authorities, if they are to be speedily led into the paths of a new progressive life.

Now that the victories gained by His Majesty's Army and Navy abroad, writes the *Yomiuri*, have made the so-called Great Powers understand that Japan is a country not to be slighted, the Japanese ought not to neglect anything tending to their country's further growth in power and respectability. A strong foreign policy must be advocated by the statesmen out of office and acted upon by those in power. The Land of the Rising Sun should not be content with anything short of the glory and grandeur of that symbol itself.

The *Kokkai*, together with some other Metropolitan papers of independent tendencies, says that the Diet, in its coming session, should not be blinded to its normal functions by the glare of the War. No half-heartedness should be displayed toward matters relating to interests other than warlike. A cowardly pact with the Government should not be tolerated. Fight the Government, if necessary, even as bravely as the Japanese forces fight the Chinese. A State can only be strong when its constituent elements are strong in the assertion of their rights and unremitting in the fulfilment of their duties.

J. E. Winner, who years ago and merely as a diversion, wrote the words and music of "Little Brown Jug," took the precaution to copyright the production, which sold up in the hundred thousands and realised a tidy sum for its author. Mr. Winner's brother, "Sep," is the composer of "The Mocking Bird," which made for him a small fortune. Curiously, the author of the "Jug," one of the most popular of drinking songs, always has been a total abstainer.

EDITORIAL NOTES.

FINALE.

It has come at last. Animate and inanimate nature in Japan has already repeatedly shown sympathy with the present struggle, and in a thousand mute ways endeavoured to congratulate the victorious armies and presage a continuation of success. The denizens of the heavens above and the earth beneath have, as we have laboured to show in a dozen paragraphs, proffered their sagacious testimony. We had supposed that the lists were closed when, as noted in a recent issue, a bamboo became metamorphosed into a mandarin. But it appears that there was one field left unexploited—the waters under the earth—and this hiatus has now been filled up in a most satisfactory and indisputable manner. In Nittamura, Tazuki-gori, Kanagawa Prefecture—it is always best to err on the side of accuracy: details are a warrant of authenticity—there resides a dealer in *amago*, that kind of doughy rice-cake so affected by the lower classes. Towards the end of last month, while washing his pestle in a tub of almost boiling water, he heard several strange splashes, evidently proceeding from the tub and not of his own making. Investigation showed that there was a huge *koi*, or carp, in the receptacle, and it was patent that the good-natured creature had submitted for nearly an hour to the parboiling process without giving up the ghost. Here was a miracle indeed, the carp had evidently been brought up out of the well—for this fish is frequently kept in wells—so that so much could be accounted for. But how had the devoted fish managed to live for nearly sixty minutes in such fearfully hot water? The *koi*, be it remembered, is a lucky fish in Japan, and connected with festive occasions. That very evening (this should be read slowly and with emphasis) the news reached the village of the capture of Port Arthur. Carping critics can find no possible fault with the logical deduction that the enthusiastic fish had thus, in its mute way, tried to foretell the good tidings. One might also add that the very position it chose was significant of the Chinese having got into hot water.

READY FOR DUTY.

ELSEWHERE we find related a story that is not without its merit, as indicating the spirit of the women of Japan. A merchant residing in Ushigome District, Tokyo, has an only daughter who, last year, was about to be given in marriage to an eligible suitor. The young lady prayed, however, that she might, before becoming a wife, be taught some useful occupation by which, in case sorrow should befall her, she could always earn her own living. Somewhat surprised at this request, for the young lady had been brought up in comparative luxury, the parents rather unwillingly consented. The daughter thereupon began attending classes connected with the Hongo Hospital, and graduated as an adept nurse in the beginning of this summer. As soon as war was declared with China she announced to the Red Cross Society her willingness to serve as a nurse either at home or in the field. That she had done this she kept secret from her parents. During her temporary absence from home, the other day, the parents were astonished at receiving a rather peremptory telegram, addressed to their daughter, to repair at once to Headquarters in Hiroshima. On the young lady's return they asked her, somewhat indignantly, what the meaning of so strange an order might be, whereupon she told them the whole story, and begged that they would not put any obstacle in the way of her immediate departure for Hiroshima; she had long been expecting the call and was ready for duty. It redounds greatly to the credit of the parents, remarks a Tokyo contemporary, that they assented to this. Preparations were hastily made and the young lady, accustomed hitherto to a life of ease and elegance, left the next morning for the hospitals of South Japan. "This then," says the *Yomiuri Shimbum*, "is a type of the spirit of the women

of Japan. They are ready for duty; ready to give up all, if need be, for their country's sake. It is not wonderful therefore that the Chinese should fly before our arms; that the intrepid bravery of twenty-four troopers should hold the savage fury of three thousand of the enemy in check."

HOSOKA "THE DEMON."

THE *Yomiuri Shimbum* is extravagant in its praise of a certain Mr. Hosoya, who by his patriotic activity is alleged to have earned the admiring sobriquet of "the Demon." He is a *samurai*, otherwise *shinoku*, of Sendai, and from his earliest years has been renowned not only for his love of war but also for his remarkable feats of arms. When the War of the Restoration broke out, he was still a mere lad, yet at the head of a host of volunteers, hastily assembled, he managed to perform prodigies of valour, which were repeated in the South-western Rebellion, nearly a dozen years later. At present, being personally unable to proceed to China—he is nearly sixty years old—he is doing his utmost to collect coolies from the interior and northern provinces; men of exceptional strength and unimpeachable character. He has already been instrumental in bringing together several thousand first-class men, and it is alleged that the Government is by no means insensible to his services. With all Mr. Hosoya's extreme bellicose proclivities he is depicted as a mild-looking, low-voiced, white-haired gentleman, whom one would never suspect of being a fire-eater.

BALLOON ASCENT.

LÉON SAGEHOMME's balloon ascent and parachute descent duly took place on Saturday afternoon, but was not the success that was expected. The balloon was filled on a vacant plot of ground near the Creek side, not far from the Iron Works, and at the time announced for starting, 2 p.m., very few people had paid for admission. Two hours later, when a few more had joined the paying audience, preparations were made to inflate the balloon with hot air generated by an underground furnace fed with faggots drenched in petroleum and methylated spirit. The balloon was quite new and was made of calico, and as the performer had not had sufficient time to properly prepare it, the consequence was that a good deal of leakage resulted. At last Sagehomme gave the signal to let go, and the liberated balloon shot up into the air. At this time it was noticed that a rent had developed in the balloon and fears were entertained for the performer's safety, but he liberated his parachute and fell, dropping into a tree by the side of the Creek. With the exception of a few scratches, the performer was not injured. A subscription was made on the ground.

MR. BOISSONADE'S DEPARTURE.

MR. BOISSONADE, who is to return home in January next, has been connected with the Japanese Government for about twenty years, and during that period of time has rendered inestimable services to this country. With the view of presenting a suitable memorial to the learned lawyer, more than 40 distinguished men, both Government *employés* and others, have forwarded circulars to the officials in the Justice Department and to outsiders directly or indirectly indebted to him. They are asked to contribute a sum of from 50 *sen* to 5 *yen* each toward the fund for the purchase of the memorial. The prospectus runs as follows:—Mr. Boissonade is now about to return home after 20 years' residence in this country. The services he has rendered to Japan during that long period as Legal Adviser of the Government, as instructor of law, and especially as framer of the Imperial Codes, must be patent to all. Now that he is about to leave them, those that enjoy his special friendship cannot suffer him to go without manifesting their regard for him in some suitable manner. Mr. Boissonade was first engaged in this country in 1875. The next year a law school was founded, and he was asked to give instruction to its students. The school turned out more than twenty *bakase* and *shakushi*. Subsequently he gave instruction on

his special subjects in the Law College under the direct control of the Justice Department, in the University, and in several private law institutions where the number of students who enjoyed his kind and erudite tuition must be counted by thousands. It is no exaggeration to say that every one of the barristers engaged in or out of Government offices has derived more or less benefit from his knowledge. The advance of law in Japan is greatly due to him. Mr. Boissonade accompanied the late Okubo Toshimichi as legal adviser in the expedition sent by Japan to Formosa in 1874, and for his services on that occasion was decorated with the 2nd Class Order of the Rising Sun. The Criminal Code and Code of Criminal Procedure which were put into operation in 1882 were framed by Mr. Boissonade and have been highly spoken of in Europe and America. In 1879 he commenced the codification of the Civil Code which was published in 1890. The trouble that he took over this work was immense, and the result was a model of legislation. Mr. Boissonade's departure will not only be regretted by us, but he himself will, we think, find it hard to tear himself away from the country where he has spent so many years and so much energy. We, the projectors of the scheme, have decided to present him with a suitable gift which will serve as a memento to him of his residence here as well as a manifesto of our regard for him and our regret at his departure.

PORT ARTHUR ITEMS.

IN the first assault on one of the seaward forts of Port Arthur, Major Hanaoka was mortally wounded. He refused at first to believe that his wound was fatal and repeatedly attempted to struggle to his feet, some of his men rendering every assistance in their power. Several of them begged him to permit them to convey him to the rear, that he might receive prompt medical assistance, but this the major would not consent to. "Go on," he replied, with all the strength he could muster; "storm the fort and never mind me." Yet as two or three lingered by his side and asked if he had no last message to send home; "Tell them," he said, "that I fell conquering." And had he no word to leave for their regiment? "Yes," he murmured, "I ask my soldiers to keep on conquering!" These were his last words.

On the 20th ultimo the correspondent of a certain foreign newspaper was conversing with Lieut.-General Yamaji. "When do you expect to take Port Arthur?" asked the foreigner, "Oh, to-morrow," replied Yamaji, nonchalantly, as if it were a mere nothing. His interrogator gave a dubious smile but forbore to say what he thought. The next evening, after the capture was complete and assured, they met again. "Well," said Yamaji, "you see I was right; here we are." This time the correspondent again failed to reply, but from a very different motive.

Among the Chinese soldiers that made their escape from Port Arthur was one whose feelings received such a shock that he resolved to relinquish all hope of martial glory and become a priest. He soon procured the necessary garments from a neighbouring temple and then proceeded to part with his queue. In doing this either haste or a trembling hand resulted in a bungled job, the stump of the queue being still distinctly visible. Fate would have it that this was his undoing. He was later on caught among a mob of Chinese soldiers and shot while attempting to fly.

In a village near Port Arthur there stands a little Taoist temple, timeworn and much battered. After the Port had fallen, a troop of Japanese foot soldiers marched past the temple, and heard as they passed the loud howling of a dog. They stopped and reconnoitred the premises. In an inner room they found the body of the attendant priest, who had been shot probably by some Chinese free-booters for the sake of the trumpery temple utensils, none of which could be found. The dog, gaunt with hunger,

was keeping watch over the body of his master, but offers of food soon enticed the starving creature away. He has since then been adopted by the regiment and received the name of *Shin*, or "Fidelity." The dog is described as a huge, wolfish animal, but very good tempered. His photograph has since been taken and sent to Japan.

AN ALUMINIUM TORPEDO-BOAT.

An aluminium torpedo-boat has recently been constructed by Messrs. Yarrow and Co. to the order of the French Government. The material of which the hull is made is not, of course, pure aluminium, but an alloy of 94 per cent. of aluminium with 6 per cent. of copper. The boat is of the second class, 60 feet long and 9 ft. 3 in. wide. At the trial trip she attained a speed of over 20½ knots, the maximum speed of the ordinary steel torpedo-boats of this class in the British Navy being about 17 knots. The greater speed is not the sole advantage attained by the use of aluminium and the consequent greater lightness of the hull structure. There is also greater ease in lifting, greater buoyancy, and a most noteworthy freedom from vibration. It is stated that when the boat was running at full speed it was possible to write with ease in the after cabin, a thing difficult to do under like circumstances in the ordinary steel torpedo-boat. Notwithstanding the recent great reduction in the cost of aluminium, the question of price is one that continues to bar the way to its extensive use for ship-building purposes. The hull even of a little boat like this cost nearly twice as much as it would have cost had it been built of steel; and the difference in cost would be far more noticeable in vessels of larger size.

PRIVATIONS IN THE SECOND ARMY.

FROM a letter sent by the *Nichi Nichi's* war-correspondent with the Second Army, we take the following account:—"The hardships to which the soldiers and coolies in the Second Army have been subjected, in consequence of the scarcity of water and fuel, since they landed on the Liautung peninsula on the 24th Oct., are indescribable. The Peninsula is thinly inhabited and woods and rivers are very scarce. Wells are found here and there, but only two or three to a hamlet consisting of fifty houses or so. These privations were not so keenly felt at first, as the Army had Chin-chow and Port Arthur to attack and take possession of. But when the first was taken on November 6th, followed by the taking of Talien next day, and when the last stronghold, Port Arthur, fell on the 21st November, that is about a month after the landing, the soldiers and coolies began to feel the privations with redoubled keenness. And well they might, for the passage of more than 30,000 men through thinly populated districts exhausted the supply of meat and all natural products. Further, the few streams that were of invaluable service a few weeks since have now been frozen over and no water can be obtained from them. It is now even impossible to get enough water for cooking, and the horses are in a miserable condition owing to an insufficient supply. Even were it possible to get water for cooking, there is no fuel for the purpose. Frequently soldiers are obliged to use their wooden utensils as fuel, but only to suffer great inconveniences next day for want of those utensils. Fireless and waterless and not adequately protected from cold, many of the coolies are said to be on the verge of being frozen to death. Indeed another Tokyo paper gives a telegraphic message from Hiroshima that at present (10th inst.) thermometer is about 14° below zero, and that 12 coolies of the Tanaka Gumi were frozen to death on the 28th and 29th ult. This is no exaggeration, as attested by the postscript written by an army censor after having read through the letter before the correspondent was allowed to send it to Tokyo. The correspondent describes the hardship undergone by the Army, writes the army censor, but the gallant soldiers are far from being affected by any such discomfort. On the contrary, as the season has become colder and the want of comfort become greater, officers and soldiers have grown more and more elated in spirit.

declaring that they who are to trample China under foot can not afford to be affected by any such slight inconveniences. The *Nichi Nichi's* correspondent next writes about the Chinese inhabitants of Chin-chow, and is highly indignant at their insatiable avarice and their insensibility to the benevolence extended to them by the Japanese Army. He says that the Chinese have become completely changed and the prominent characteristics peculiar to Chinamen are brought once again to the surface. For instance, they do not readily comply with the request of the Japanese officers or soldiers, when the latter wish to buy something from them; they are frequently arrogant; raise the price of their goods unreasonably high; and threaten honest soldiers that they will lodge complaints against them before the Administration Office. What gives the Japanese the greatest chagrin is the fact that while enjoying the protection of the Japanese Administration they refuse to receive nickel and copper coins in exchange for their commodities. In short, observes the correspondent, the Chinamen are like petted children and are wilful, and unfaithful, and disrespectful to the Japanese. It seems as if the subjugated people were enjoying the exercise of full rights, while the conquerors have none.

NO HURRY WHATEVER.

THE *Kaika Shimbu*, once the *Kaishin Shimbu*, has the following story to tell of the captain of the *Chiyoda Kan*, who is reported as being of cool intrepidity in action. Shortly before the engagement off the Yalu River he was seated in his cabin playing *Go* with one of his officers. Just then an officer of the watch hastily entered and, saluting, announced that a strange vessel had been sighted probably belonging to the Chinese. "All right," replied the captain, and went on undisturbed with his game. But hardly had the first messenger left the cabin when a second came, stating that there was evidently more than one strange ship not many miles away and that an action might be expected. "All right," again returned the imperturbable captain, "tell me if you sight any others." With these words he sank again into contemplation of the *Go*-board. Then a third officer entered breathless, announcing that five or six Chinese men-of-war were actually in sight. "Ah," said the captain, rising with a sigh and reluctantly putting away the *Go*-board; "be so good as to beat to quarters."

THE EARTHQUAKE IN MEXICO CITY ON THE 2ND OF NOVEMBER.

MR. CARDEN, H.B.M.'s Consul in Mexico city, writes:—"We had a very heavy earthquake on Friday, the 2nd of November, which did a great deal of damage and killed about 15 people. If it had lasted a few seconds more I am sure it would have wrecked half the city. It began from N. to S., then changed to E. to W., and finally to N.E. to S.W. the last shocks being the heaviest. I was in the Jockey Club, and at once got under the arch in the large drawing-room where I timed it with my watch in my hand. It lasted 48 seconds. During the last few shocks it seemed as if the corner of the house dipped down so far that it could not right itself. Through the window I could see right up San Francisco Street and the houses and lamp posts seemed to be all moving different ways—altogether it was very unpleasant. Almost every house, the Jockey Club, the Consulate, the Legation, the Hotel Iturbide, the Palace, Cathedral, &c., &c., are all cracked more or less. Fortunately the houses in Mexico city have no chimneys, otherwise the loss of life would have been far greater."

STORIES FROM PORT ARTHUR.

FOR the following items, for whose authenticity we cannot vouch, we are indebted to the *Tokyo Asahi*, *Yoroku Choho*, *Miyako Shimbu*, and one or two other metropolitan journals.—One of the lieutenants who took part in the capture of Port Arthur is spoken of as a very mirror of courtesy. After the fortress had fallen this officer went to and spoke with every soldier in the regiment which had been exposed to a

fierce fire during the early part of the day. To each one he addressed the same complimentary phrase: *O kage sama de rippa ni kachimashita*, or "Thanks to you we have won a splendid victory." The soldiers were much pleased with this well-earned compliment, and many replied that they hoped to do much better in their next brush with the Chinese.

On marching through the almost deserted streets of Port Arthur just after its capture, some scouts came upon a Chinaman standing in front of a candle-store. He was unarmed and clothed in the greasy habit of the trade, yet bore himself so maladroily that the soldiers' suspicion was aroused. On being asked who he was, he stammered out that he was a maker of candles. "Go and fetch us some," was the next command; "candles are the very thing we're looking for." The man entered, under guard of course, the shop, and began looking for candles in all sorts of unlikely places, thus betraying his total lack of knowledge of the house and its resources. This was enough; he was arrested and marched off as a prisoner. Subsequently the candle maker turned out to be a Chinese officer of rank who had neglected to make his escape in time and had chosen this disguise in order to avoid capture.

Marching through another street of the town a band of soldiers heard pitiful cries for help, and forcing their way into the house whence the screams came, found a young and pretty Chinawoman being cruelly maltreated by a Chinese "brave," a little girl of thirteen standing by helpless. The Chinaman was at once cut down, and the panting damsel soon told her story. She was a Tientsin *geisha*—probably rather one of the fraternity known as *ham sui mui* in Hongkong—who had come to Port Arthur in company with one of the Chinese Generals, in order to amuse his idle hours and watch the final overthrow of the Japanese. Things not going exactly as had been expected, the Chinese General had been one of the first to be called elsewhere on urgent business. The *geisha* and her little attendant had been left alone for more than thirty hours, with nothing to eat and expecting every moment to be their last. It redounds to the honour of the Japanese soldiers that the two females were at once conducted to a place of safety and finally left in charge of a Chinese prisoner of rank who was known to them and in whom they imposed confidence.

YETE IN HONOUR OF THE RECENT VICTORIES.

IT is quite evident that the people of Tokyo are going to make the fête of the 9th of this month, in celebration of the victories achieved by the Army and Navy, one memorable in the annals of the city. Preparations are being made on a truly gigantic scale, and despite the tightness of the money-market subscriptions are flowing in from all sides. It is supposed that more than one-half the population of the metropolis will take active part in the celebration and that no less than half-a-million people will wend their way to Ueno, which will be the centre of attraction. The trains from the country are already bringing in visitors and would be celebrants by the hundred, and all tends to show that there will be a concourse of merry-makers and enthusiastic patriots not much smaller than that of February 11th, 1889, when the Constitution was announced and given to the people. The firemen of several urban districts recently paraded a number of the large thoroughfares, singing the time-honoured song of their Guild, the *Kiyari*. They are to turn out again on the 9th instant, and with the aid of ladders and the other instruments of their calling go through various performances similar to those of the *desome* fête. Nor are the Phrynes and Aspasias of Shimbashi and the vicinity to be idle. Some will assume martial garb and march through the streets drawing huge wains filled with oranges, which fruit is to be used as a sort of playful ammunition wherewith to bombard the crowds of sightseers. Others

again are going to dress up as Chinamen and be led thus through the streets by certain of their fraternity impersonating various military and naval leaders. Triumphant arches are to be erected in several places, notably one of huge dimensions in the avenue approaching the Park, the Ueno Hirokoji. Most of the local schools will observe the following day as a holiday.

SOME DETAILS OF THE GREAT FETE.

FOR the last two or three days a portion of the vernacular metropolitan press has been devoted to the publication of details concerning the doings and happenings on the date of the great celebration. From half a dozen sources we glean the following data:—On the tramway between Shimbashi and Ueno fares were reduced for the day, with the consequence that no less than 66,047 people rode on the cars, the total amount paid by them being over eighteen hundred yen. On the race-course and in the Park were next day picked up no less than three cartfuls of odd *geta* or wooden clogs, which proves that at least two thousand people must have travelled homewards minus one shoe or barefoot. Seventeen *kurumas* were broken to pieces in the crush; ten fights were of such a serious nature that the police were forced to interfere. On the previous day no less than five hundred one-time convicted pickpockets or else such as were strongly suspected to belong to the light-fingered fraternity, were kept under lock and key or else strictly forbidden to leave their dwellings. Despite all this, fully seventy thieves were arrested in the Park and its vicinity *flagrante delicto*. One gold watch was reported missing, and nine silver ones. A farmer who had come up to Tokyo expressly to take part in the fete, was given a taste of metropolitan life on reaching Shimbashi, where he was skilfully relieved of a bundle of notes of 130 yen. No less than fifty four persons were either pushed, thrown, or fell into the big pond. One policeman who went to the rescue of several inebriates who had fallen in, was seized by so many hands that he lost both his cap and sabre, and barely managed to get out uninjured. Twenty-four people were more or less hurt, and an old man so roughly handled that his arms were broken and he is not expected to recover. The ground was simply strewn with battered and shapeless hats, bundles of various description, broken hairpins, garments of all kinds including three *hakama*, and innumerable lunch-boxes. A body of soldiers quartered in a tea-house near the Ekoin got permission to go and pick up the empty bottles: those memorable pint bottles filled with the seductive and speedily intoxicant Masamune brew. They gathered no less than twenty thousand of these bottles, which they sold on the spot for two hundred yen, or at the rate of one *sen* for each. A good many people looked rather enviously on at the gatherers while they were at work, "and we," says the *Yamato Shimbun*, "made inquiry as to who they might be. They turned out to be the people that had drunk the contents on the previous day."

Four children were separated from their parents and of these two are still unclaimed. One little creature was in imminent danger of being hurled from one of the smaller bridges leading to the race-course and would infallibly have fallen in the moat. A policeman tried to get to her rescue but the crowd was surging and away on a violently that all passage to the spot was impossible. Just at the critical moment a drunken cavalry-man drew his sabre and threatened to "cut down the whole crowd." *Savez qui peut* was the cry, and the dense mass of human beings gave back, letting the little one regain her footing on the bridge. One woman was so crushed that a premature childbirth ensued, barely sufficient time being obtained to convey her to a quiet spot in the Park. Despite their rough handling, mother and child are both doing well.

THE HUMOURS OF RAILWAY LIFE.

THE railway porter—we refer to the English variety of the species, for of his manners in other lands we are not so well informed—is an

authority on his own account in the matter of the pronunciation of the names of railway stations. Sometimes he appears as an advocate of phonetic spelling, and sternly refuses to pronounce a name in any other manner than that in which it is written. It is through his instrumentality that the old pronunciation of Carshalton (a small town to the south of London, until recently always pronounced, and in the last century sometimes spelt, Case-horton), has almost entirely disappeared. The railway porter calls it K'shalton and his will is law. At other times, however, he strikes out in favour of the pronunciation of the local vernacular, and perhaps in time succeeds in getting the spelling modified to suit his tastes. Those who have been in the habit of approaching London by the London, Chatham, and Dover Railway will remember that all the porters at Battersea Park Station inform passengers that they have arrived at Betsy Park. Some of these little peculiarities are apt to offend punctilious railway managers. It is recorded of one manager, who was somewhat of a precisian, that when travelling by his own line and passing through a station named Tyldesley Banks, he was shocked to hear a porter calling out Tyldesley Banks in the broadest vernacular. Summoning the man, he promptly gave him a lesson in pronunciation, and on his return in the evening was gratified to find his pupil pronouncing Tyldesley Banks with the utmost correctness. Just, however, as the train was starting from the station, a voice exclaimed "Lord, there's our Sam!" and a bevy of pitmen, in whose ears the unfamiliar sound had struck no answering note, tumbled pell-mell out of an adjoining third-class carriage.

The literature of railway accidents is not free from gleams of humour. It is recorded that a lady was travelling between Brockfield and Stamford on her first journey by rail. An accident occurred, and the carriage in which she was seated was pitched down an embankment. Crawling from beneath the wreckage, she asked a fellow-passenger, "Is this Stamford?" "No, madam," replied the man, who was pinned down by a piece of timber, "this is not Stamford; it is a catastrophe!" "Oh," cried the lady, "then I hadn't oughter got off here!" This anecdote seems to be first cousin to that of the old Scotchwoman who was likewise making her first railway journey when an accident occurred. As soon as she was able to regain her footing and her tongue, she turned indignantly to the guard, who was travelling in the same wrecked carriage, and said, "And do they aye whumle us out like that?"

CHRYSANTHEMUMS.

THE vernacular press reports that the fields around Chin-chow have until quite recently been pied with wild chrysanthemums of a novel sort, the ground-work (petals) being a rich purple, with crimson-tipped stamens. A number of these plants having been carefully potted by some surgeons attached to the staff of the Second Army, they were forwarded to Surgeon-General Ishiguro, who was delighted with the gift. The recipient recently selected a group of the best of these plants and presented them to H.M. the Empress, who was pleased to express satisfaction with the gift. Now that chrysanthemums have been found in such profusion in the Liao-tung Peninsula, slyly observes a contemporary, it is proof positive that the soil is destined to become Japanese property. The Imperial seal is already on the hand.

CHINESE SOLDIERS ON THE JAPANESE ARMY.

THE *Asahi Shimbun* has to tell of a narrative related by a certain Chinaman in one of the conquered towns, to a correspondent. His house had, it appears, been requisitioned for a troops of Chinese soldiers just after the fall of Chin-chow, among them being several fugitives from Pyongyang. They affirmed, with sundry expletives, that it was worse than useless to attempt to stand against the Japanese soldiers; they had seen bullets rain down from the skies, so it was evident that the Japanese were in league with supernatural powers. Besides, the

Japanese did not fear death, and only a fool would talk like that. Moreover, he who fights with a fool is a fool himself, so they deemed it inconsistent with reason to combat with such hare-brained idiots. It was patent that the skill possessed by the Japanese in the use of the bayonet was also not of this earth. None but demons or those possessed of demoniac skill could give such thrusts, make such lurches, and have such a quick "recovery." The fact that the majority of the Japanese seemed bomb-proof was also commented on in the same strain. One related how he had fired point-blank at a Japanese trooper only a few yards distant. His enemy had merely given a pitying smile and then slashed out with his sword, resulting in an ugly wound on the part of the thunder-struck Celestial. It was finally agreed that the Japanese wereimps and the sons ofimps, and that they (the consulting soldiers) should give them a wide berth in future.

A NOVAL DRAGON-FLY.

THE *Yomiuri* recently published a very suggestive poem and a woodcut that were not without merit. Over a sketch-map of the Liao-tung Peninsula, with Mukden at the north and Peking looming in the west, with a bit of the Great Wall, hovered a huge dragon-fly—the symbol of Japan—the body being composed of a sabre and the head of binoculars. The insect was depicted as heading direct for the Northern Capital. The sketch was accompanied by an old and well-known poem, the text being slightly altered to suit the occasion:—

*Tombo tobi
Kyo wa doko made
Ita yara?*

"Oh flying Dragon-fly, how far hast thou gone to-day, I wonder?"

BOOKS FOR CHRISTMAS.

WE have received from Messrs. Kelly & Walsh two pretty little volumes of the same type as the well-known *Japanese Fairy Tale Series*, printed on crepe paper by Mr. T. Hasegawa of Tokyo. They are translations from the Chinese: one a metrical translation, by Mrs. Archibald Little, of a Chinese nursery classic, "The Rat's Plaint;" the other a prose version, by Mrs. Archibald Little, of a Chinese legend, "The Fairy Foxes." The Rat's Plaint (*Lao Shu Kao Chuang*), was made before the Court of Pluto. He had been foully done to death the night before by a black cat, and pleaded for justice. Pluto at once sends his myrmidons to the upper regions of the earth to arrest the black cat; after a long and weary search they find the accused, and, deaf to all remonstrances, hale her before the throne of the King. Pluto at once passes sentence, but the cat pleads to be heard in self defence. Her plea consists of a counter-accusation of wickedness against the whole rat-family:—

Look how they roam about in troops! as an army they set out.
And not content with petty thefts, they make a perfect rout.
Tramp! tramp! they trot in single file; along the beam they run.
The mothers bring their basket; the girl rats aid the fun;
Then down they sit on rafter high and chaunt a merry lay:
Just like a new fledged graduate cunning o'er his prize essay:
Then all at once they scurry off—a good for nothing lot—
Into the Temple shrine close by, where wanton deeds they plot.
They gnaw the wood from Buddha's face, the paint from off his thumb.
And sacrilegious teeth insert in Joss-stick and in drum.
Then off they rush to the Common School, where the boys their looks rectify,
And there the sacred Classic tomes remorselessly they bite.

And so on through a long catalogue of crimes for many of which the innocent cat is accustomed to be blamed and punished. The defence was effective, the rat was sentenced to two months in a wooden cage, while the virtuous cat was ordered to spend her life in punishing the sins of the rats on earth. The incidents of the rat's plea, the arrest of the cat, and the cat's defence, lend themselves, as may be imagined, to spirited pictorial representation, which is most tastefully executed.—"The Fairy Foxes" did all the extraordinary things that foxes are in the

habit of doing in China, and used to do in Japan until the exorcising spirit of Western Civilization took possession of the land. In this volume we should have been glad to have a larger number of illustrations. Still, even with the few that it has, this little book, and still more "The Rat's Plaint," will be greatly appreciated in the nursery.

To older residents, those at least who are not already familiar with the "Lays of Far Cathay," we may recommend a reprint of the best of these, with some additions, recently published under the title of "Lays and Relays." These verses will be read with interest and amusement by all dwellers in the Far East.

LIEUT.-COLONEL FUKUSHIMA.

A NUMBER of War Correspondents speak in high terms of the linguistic ability of Lieut.-Colonel Fukushima, who is with the Second Army in Manchuria. He is, it will be remembered, the hero of the ride across Asia, and in the course of his travels through Southern Siberia and Manchuria he appears to have become an adept in the patois—a mixture of pure Manchu and the Northern Chihli Chinese—current in the Liau-tung Peninsula and its vicinity. This dialect is so distinct and so peculiar, writes the correspondent of a Tokyo contemporary, besides being widely spread, that it almost deserves the name of a separate language. But more than this, Lieut.-Colonel Fukushima is held to be the best Manchu scholar in the Army. Upon him devolves the interpreting on all occasions of importance, and he is invariably successful in making himself thoroughly understood. Among the recent captures made is that of a Chinese telegraph operator. This man professes a sincere admiration for the gallant Colonel, and has revealed to him several secrets of the highest importance concerning the disposition of the enemy in the immediate future. His disclosures having already been found correct in one or two instances, it is believed that what he says is true. This is by no means an isolated instance, for "Fukushima's *bonhomme*" is proverbial among the Manchus and Chinese, who readily make him their confidante and appeal for his intercession in all their real or supposed grievances.

YOKOHAMA LITERARY SOCIETY.

THE usual fortnightly meeting of the Yokohama Literary Society was held on Friday evening, and owing to entertainments proceeding at other places in the Settlement and on the Bluff, attracted but a small attendance. After a pianoforte duet by Miss Vincent and Miss Griffin, Mr. W. F. Page read a pleasingly discursive paper on "Newspaper advertisements, Quaint, Humorous, and Curious." Having alluded to the paucity of advertisements in the first newspaper broad-sheets of James the First's reign, the paper traced the increasing growth of advertisers and pointed out some salient characteristics appertaining to the earliest announcements of this character. Passing from the pugilistic and quack medicine advertisements of the eighteenth century, the essay drew attention to the growth of the "agony column" and the "matrimonial" advertisement in the Victorian era, especially in these latter days. The humours of badly punctuated or awkwardly phrased advertisements formed the closing portion of the essay, and drew forth much laughter from the audience as instance after instance was adduced of the "proof reader's" insensibility to humour in passing many manifest absurdities. After the interval, Mrs. Hubbard gave an original recitation, which the President and the audience too, hoped did not portend this clever lady's withdrawal from the public platform whereon she has done so much to enliven social life in our Far Eastern settlement. Two songs by Mrs. Herb, who was in splendid voice, a reading by Mr. Sale, and a pianoforte solo by Mr. N. Sargent brought the proceedings to a close.

A YOUNG HERCULES.

In several Tokyo journals do we find laudatory paragraphs relating to the extraordinary powers

and remarkable strength of a certain lad of only thirteen years of age, who is said to be an adept in *jujutsu* and several other athletic exercises. The other evening this boy strolled towards Kyobashi to attend the bi-monthly fête of the local *Yiosama*, on which occasion there is always a large concourse of sightseers in attendance. While walking about at his ease he was accosted by three young men, who informed him that they had something particular to tell him: would he walk on a little to where they might talk undisturbed? To this arrangement the boy, nothing loath, gave a ready assent; but hardly had they got out of sight of the crowd and in a lonely sidestrete before the trio seized the lad with the intention of robbing him of his silk coat and girdle. They had, however, reckoned without their host. In an instant the tables were turned, two of the robbers were thrown, one of them being knocked senseless, while the third, seeing the discomfiture of his comrades, made off as fast as his legs would carry him. The story sounds somewhat apocryphal; but we are quite willing to concede that the hero may be a pocket Hercules. It would be well for the youth of Japan if there were more such lusty champions.

A FALSE RING.

A FEW mornings ago the inhabitants of the Shinagawa quarter of the metropolis were startled by the quick ringing of the firebells, the rapidly repeated strokes being significant of a fire close at hand. People rushed out of their houses everywhere and there was a general cry of "Where is the fire?" But no definite reply being made, and the bells still keeping up their brazen clamour the conclusion was soon arrived at that a general alarm was being rung, a sort of tocsin in order only on occasions of imminent peril. Hundreds rushed to the bayward thoroughfares and began eagerly scanning the horizon for any sign of the approach of a hostile fleet. Everything remaining quiet, a strict investigation was made, a cruel practical joke being suspected. The reason of all the confusion was finally shown to be a most trivial one. An early funeral having passed into one of the local temples the priest had begun striking the temple-bell which is, curiously enough, exactly similar in tone to a fire-bell. This had aroused the fire-men, with the above result. It is hardly necessary to add that the offending bell will be mute in future.

ILLUSTRATION OF THE NAVAL BATTLE OF HAI-YANG.

MR. OGAWA's name on the title page of a book is a sufficient guarantee of the excellence of its plates, and those who buy "The Japan-China War—The Naval Battle of Hai-yang," published by Messrs. Kelly & Walsh, will not be disappointed. The letter press of the volume is by Mr. Inouye Jukichi, who gives us an interesting account of the battle, derived both from Japanese and from Chinese sources. The photographs of the action, unfortunately, were taken from too great a distance to be of much interest; but there is an extremely spirited representation of the engagement reproduced from a drawing by Mr. Sakuma Bungo. Some of the plates show admirably the terrific destructive effects of the shells that struck the vessels.

THE NISHIGORI CASE.

JUDGMENT in the case connected with Nishigori Gosei, Yamaguchi Jun, formerly a Judge, and Goto Shimpei, the late Chief of the Sanitary Bureau, was given in the Tokyo Court of Appeal yesterday. Yamaguchi was sentenced to hard labour for five years and fined fifty yen and Nishigori to four years' hard labour with a fine of forty yen, both being convicted of false accusation. Goto was found not guilty.

METALS.

MESSRS. S. W. ROYSE & Co.'s report for October 27th, says:—Business in Pig Iron has been disappointing during this month; demand has only been quite moderate, and prices have fallen slowly but steadily. They have been nominally slightly better during the last few days, and the Glasgow market is moderately

firm; at Middlesbrough, however, the market is very quiet, and little business is being done. With the end of the shipping season at hand, and trade so dull, consumers are naturally content with covering only their immediate requirements in the expectation of lower prices ere long. The Manufactured Iron trade in the Midlands is fairly good, and prices steady. Copper has receded gradually during the month, but is now improving somewhat. Tin also has fallen steadily, the total drop during the month being about £3 per ton, but this metal also is now rather firmer. Spelter has given way slightly, and Lead is dull and rather lower in price.

WASTE AND WANT.

"THE Chinese are the worst marksmen in the world and the most careless," growled a wounded non-commissioned officer, now in hospital at Hiroshima to a Tokyo press correspondent the other day. "Why, they would shoot at a fly on a wall at any distance! Just before we took Port Arthur I walked up a little knoll to have a good look at the distant line of forts. I was out of range and the Chinese could barely see me with a good field-glass. Would you believe it? In less than as many minutes three cannon were fired at me, and the balls struck the knoll about a thousand yards from where I stood. Never were such improvident cannoniers. To waste three big balls and a lot of powder on a solitary man they had no possible chance of hitting! But that's like the Chinese; great noise and nothing to show for it."

THE CARSTENS CASE.

SENTENCE was delivered by the Altona Criminal Court on the 24th October in the case of the German sailor named Carstens, who, as our readers will remember, shot and killed an Englishman named Beattie at Yokohama in 1892, jealousy being the motive for the crime. The prisoner was first tried by the Japanese Court, but eventually was claimed by the German authorities and handed over by the Japanese. For the past two years he has been in prison at Altona awaiting trial. The jury found the prisoner guilty of manslaughter, and he was accordingly sentenced to seven years' imprisonment.

THE U.S. TEA IMPORT AND BRITISH BOTTOMS.

THE New York *Marine Journal* says:—Five steamships, all British, have arrived at this port this season so far, direct from China and Japan with cargoes of tea. They are the *Glenogle*, August 1st; the *Monmouthshire*, August 27th; the *Benmohr*, September 19th; the *Pyrrhus*, October 7th, and the *Ping Suey*, October 13th, bringing altogether some 300,000 packages. This used to be a trade for our clipper sailing ship, but it comes no more even under our own flag. Six other steamers, likewise all British, are also on the way to arrive:—The *Port Adelaide*, *Lennox*, *Macduff*, *Energia*, *Glenesh*, and *Strathleven*.

A BANGUINARY FLAG.

WE find related in the *Miyako Shimbun* that when one of the last forts along the ridge at Port Arthur was taken by the Japanese troops, the victors suddenly found that they were without a flag to hoist in sign of their triumphant possession of the place. A quick-witted man helped them out of their difficulty. Tearing a white under-garment from the body of a dead enemy, he dipped it into the blood of another fallen foe and roughly painted on the shirt a huge red circle. This flag was then hoisted in triumph and served its purpose well.

THE "CHUYETSU MARU."

THE *Chuyetsu Maru*, of the Nippon Yusen Kaisha, had a very rough voyage from the north. She left Oginohama on the 9th inst. at 8 p.m. with a cargo of rice and beans, and when off Inuboyesaki at 7 o'clock the following morning a heavy gale broke over her. One of her boats was lost, and several of her plates to the extent one *ken* by three *shaku*, were bent on the starboard side of the stem. She reached Yokohama on the 12th inst.

WAR NEWS.

SATURDAY, DECEMBER 8TH.

"On the afternoon of November 21st," writes the *Nichi Nichi Shimbun*, "when our troops of the Second Regiment were advancing to the attack of the Hwangchin-shan (Golden Hill) Fort, they had to feel their way in the first place through the town of Port Arthur. Seeing the houses shut, they proceeded without any special precaution, when suddenly rifles were thrust through a fence and the soldiers were fired upon. Entering the house, they found seven or eight Chinese soldiers. Warned by this experience they searched each house as they went along, and discovered more than thirty fugitive soldiers, whom they cut down and threw into the street. Further examination revealed other concealed braves, and finally the fugitives, driven from their retreats, jumped into the sea and attempted to escape by swimming. Numbers of them were shot by our troops. The corpses lay in all parts of Port Arthur. Sometimes bodies and heads were separate, sometimes skulls were cleft; sometimes brains, eyes or bowels were protruding; sometimes limbs were lopped off. It was an appalling sight. The truth is that the troops were much excited at the time. It is said that they unhesitatingly cut down every one that offered any opposition, however slight, and that the military authorities wrote over the doors of the houses 'the people of this residence must not be killed.'"

The *Hochi Shimbun* gives a slightly different version of the above. It alludes to the terrible atrocities perpetrated by the Chinese on the Japanese killed and wounded, and says that despite such provocation the Japanese soldiers, as a rule, behaved with the greatest clemency, never failing to carry the wounded Chinese to the nearest field hospital, where they were well cared for. But among the Japanese there were some upon whom the sight of their mutilated comrades produced a maddening effect, and these, when the enemy came in sight, raised the cry of "No quarter," themselves setting the example of indiscriminate slaughter. So furious did the troops become when thus incited, that the officers were obliged to have recourse to the device of passing on the bosoms of the inhabitants of Port Arthur a label with the words "This person must not be killed," for which protection the unfortunate people expressed their gratitude with tears.

The *Kokkai* alleges that some of the fugitives from Port Arthur fared grievously at the hands of their own people. About 200 of them effected their escape to Shan-hai-kwan, but were immediately seized by order of the Generals there. The officers and non-commissioned officers were executed on the spot, and their corpses thrown by the way-side and the privates were carried to a dungeon and tortured so terribly that their screams could be heard at places far outside the gates. The story seems to us scarcely credible.

In the same newspaper we read of a wealthy Chinese citizen of Fu-chow who is said to be very anxious to become a Japanese subject, and to that end has presented to the Headquarters of the Second Army, 500 Taels in gold, 500 Taels in silver, 200 *koku* of millet and 2,000 bags of rice.

In the *Hochi* we read that the head of Lieut. Nakaman, who fell, after a gallant fight, in one of the skirmishes on the way to Port Arthur, was found set up in an alcove in the latter place.

According to the *Nichi Nichi Shimbun*, a line of steamers is to be established at once between Ninsen and the Chin-chow peninsula. The first steamer of the service, the *Higo Maru*, was to leave Kobe on the 8th instant for Ninsen, to be followed by the *Suruga Maru* on the 17th or 18th instant from Yokohama. Our contemporary adds that there are now collected in Ninsen quantities of stores awaiting transport to the army and its following in the Liau-tung peninsula.

It is stated by the vernacular press that the number of the garrison in Port Arthur was 14,100, and that some 400 were taken prisoners.

The fugitives from the place added to the troops already in Fu-chow probably bring the garrison of the latter to 4,000.

A telegram from Hiroshima, published by the *Pomouri*, says that the *Hiyai Kan* has brought into Port Arthur a Chinese steamer of a thousand tons called the *Chao-ti-chu*.

The *Kokkai* alleges that there are not more than 20,000 troops guarding Shan-hai-kwan, and that the forts there are, for the most part, made of wood painted to look like brick.

A telegram from Hiroshima published by the *Kokkai* says that the torpedo-boat *Kotaka* and two others were watching Wei-hai-wei on the night of the first, when one of the enemy's vessels followed by a torpedo-boat came out. The *Kotaka* and her consorts gave chase, whereupon the ship made her way back into the bay but the torpedo-boats, in its haste to escape, ran on rock.

The *Niroku's* war-correspondent gives the following particulars of the capture of Siu-yen:—

The capture of Siu-yen by Major-General Oseko's column resembles in many respects that of Feng-hwan. As in the case of Feng-hwan, the Chinese retreated from Siu-yen without offering any resistance worthy of the name, and left the place in the hands of the Japanese. The Japanese appear to have marched upon the mountain fastness from two directions, namely, from Taku-shan (south-east) and Feng-hwan (north-east). On the 16th of November, skirmishes occurred twice between reconnoitring parties of the two armies. On the 17th, the enemy took up a position on an elevated place about a mile south of Siu-yen and fired several shots from field guns at the advancing column. At first they seemed determined to make a resolute resistance. Indeed, they advanced within from 1,000 to 600 metres of the Japanese, their force being fully 2,000. The Japanese awaited their approach, but when they had advanced thus far, they stopped and opened fire, the Japanese of course replying. This lasted for about two hours. The van of the Japanese, which had been detached to cut off the enemy's retreat, now reached a place about 1,500 metres in his rear. Apprised of this manoeuvre, the Chinese fell into confusion, and showed signs of retreating, still they held their ground for a time. At half-past four in the afternoon, only a short interval of daylight remaining, it was decided to deliver the assault the next morning. At 6.30 a.m. on the following day, the Japanese began to move toward the enemy on the hill. The latter did not await the attack, but fled at once. At the same time the noise of cannon was heard from the direction of Sui-yen, and it appeared that the division from Feng-hwan had come into action. When the Japanese advanced to an elevation not far from Sui-yen—the enemy was seen retreating in good order westward, cavalry in the van and rear, and the commissariat in the centre. The Japanese entered Sui-yen at half-past 8 in the evening of the 18th, without having had so much as one man killed or wounded. The enemy's casualties were unknown, but must have been trifling. Nine guns and a quantity of small arms were left behind. The number of the Chinese was estimated as about 4,000, under the two Generals Seh (not the one that fought the battle of Sōng-hwan) and Fang, who had been second in command of the troops under General Tsao, killed in the battle of Phyang-yang. Fang must be an officer of Tsao's type, for the troops garrisoned in Sui-yen are said to have been very orderly, well disciplined, and kept under rigid control. They were not allowed to perpetrate any of the acts of lawless rapacity that the other Chinese troops freely indulged in when passing through or quartered in the villages of their own countrymen. When the Japanese entered Sui-yen the heads of two Chinese soldiers were found exposed at the entrance of the city. They had belonged to men executed for outraging women in the town. Before the enemy evacuated the town, they had intended to set it on fire, but were prevented from doing so by the hot

pursuit of the Japanese. It contains about 2,500 houses, and is very wealthy, five or six of the inhabitants being reputed to possess fortunes, of over 10,000,000 taels each. Precious stones and silk obtained from the wild silk-worm, being the principal products of the place. On the 21st, the Brigade returned to Taku-shan, leaving a garrison to defend Sui-yen.

MONDAY, DECEMBER 10TH.

The *Kokkai* circulates an extraordinary story to the effect that about a thousand soldiers who had escaped from Port Arthur to a place 5 miles north of that fortress, were on the point of being taken off by two or three British men-of-war on the 24th ultimo, when some Japanese videttes, observing what was in progress, carried information to a Division of the Army, and a regiment being immediately sent to attack the fugitives, 400 of them were killed, the rest effecting their escape. Does the *Kokkai* seriously pretend to attach credit to the phantasy that British men-of-war would engage in such an operation?

According to the same journal, a Chinese transport laden with arms and provisions, and having on board the Captain of the *Chen-yuen*, put into Port Arthur on the 27th ultimo under stress of weather, and was seized by the Japanese. We find the story somewhat apocryphal. The transport must have come from Taku, which is only 180 miles from Port Arthur. Even assuming—which is most improbable—that she had been two days out, and that she left Taku as far back as the 25th, is it conceivable that her people were ignorant of the fall of Port Arthur on the 21st?

The inhabitants of Chin-chow are said to have resumed their ordinary occupations and to be living quietly and contentedly. Over some of the shops, the signboards bear the inscription, "So and So, Chin-chow, in the new dominions of Japan." Since the 25th ultimo the citizens have begun to hold regular markets under permission from the Executive. Prices are reported to be very high. That is conceivable enough, seeing that several thousands have been added to the ordinary number of customers.

We have explained in previous issues that troops marching from China proper in the direction of the Japanese positions along the Yalu and to the north of that river, would pass through Hai-cheng if they took the inland route. The two most important towns on the road between Newchwang and Mukden are Hai-cheng and Lao-yang, the former being 32 miles to the north of Newchwang, and the latter lying at the point where the Fenghwan-Mukden and Newchwang-Mukden roads intersect. A branch road leads east and south from Hai-cheng, and passing through Chomu-cheng (17 miles distant from Hai-cheng), goes on to Suiyen and Takushan. It will be remembered that Major-General Oseko dislodged a force of 4,000 Chinese from Suiyen on the 18th of November, and that they fell back in good order toward Chomu-cheng. Our readers may also remember that, according to correspondence from Newchwang, an army of Mongols, numbering some 10,000, crossed the Liao 7 miles above Newchwang, about the 20th of November, and moved eastward with the intention of attacking the Japanese positions. The bulk of these Mongols, together with the force dislodged by Oseko from Suiyen, and the troops that retreated westward from Feng-hwan, are now distributed between Chomu-cheng, Hai-cheng, and Hai-ping, the last being a fortified town on the coast road from Newchwang to the Liautung peninsula. To state the case with less geographical details, from ten to fifteen thousand Mongols and Chinese are posted so as either to menace the positions of the Japanese First Army, or to oppose the advance of the latter against Newchwang whether by the coast or inland routes. It is expected that Oseko's battalions will soon attack the enemy at Chomu-cheng, and if we are right in assuming that a portion of the Mongol forces are in that town, it will be very interesting to see whether they make a better stand than the Tartars and Chinese have done. Considerable reinforcements are said to have

been sent to Wei-hai-wei by the advice of General von Hanneken. As to the question whether the Pei-yang Squadron is lying in Wei-hai-wei, or whether it has eluded the Japanese and steamed farther south, there is difficulty in determining. A letter said to have been received from an officer on board the *Chen-yuen*, as she lay on the rocks at the entrance to the harbour, mentions that no other Chinese men-of-war were there. On the other hand, the vernacular press seems absolutely confident that Admiral Ting and his ships are anchored under the guns of the forts. The *Kokkai*, indeed, goes so far as to say that the Japanese squadrons having failed to entice the Chinese from their position of safety, have laid torpedoes so as to blockade the port. That must have been a difficult operation, unless it was achieved at night. During the Franco-Chinese war Admiral Courbet made more than one attempt to get within range of the North China Fleet, but the ships always managed to elude him by dodging behind the islands. It is plain that if Ting has escaped from Wei-hai-wei, and if he has no mind to fight, he can easily hide his ships in the Yangtze.

The *Kokkai* says that new guns of the best and most modern type have been mounted in the Taku forts, and that the command-in-chief of all the armies defending Peking is still vested in the Viceroy Li. Those armies, according to a statement said to have been made by the Viceroy to the Emperor, consist of 250,000 men at Shan-hai-kwan, under General Piu An; 100,000 under General Su Yung-i at Hwangho; 50,000 at Taku under General Hanneken, and a force, the strength of which is not stated, under the Viceroy himself at Tientsin. The maritime approaches to Shan-hai-kwan and the mouth of the Peiho are also protected by torpedoes. Finally, there is a Tartar Army at Peking under Li Tsui-wang. If the Viceroy Li made such a report, he stands committed to the allegation that more than half a million of troops are under arms in Peking and on the approaches to it. That is scarcely credible.

We read in the *Kokkai* that a strong army is posted in the neighbourhood of Chefoo and Wei-hai-wei, and that a system of coast-guards has been organized, with orders to light bonfires at the first sign of a hostile fleet's approach.

The *Nichi Nichi* publishes a statement said to have been made by Mr. Hart, Reuter's agent, who was found by the Japanese in Port Arthur and is now staying in Hiroshima—apparently under detention—that on the morning of the 21st of November, Kung, the Taotai of Port Arthur, embarked from that place in two small steamers, but that being pursued by a Japanese torpedo-boat, one of the steamers ran aground, and nothing is known as to what became of Kung. The Taotai had sent his wife and family away some days previously in a foreign steamer.

A Chinese steamer flying the flag of the Red Cross and having on board an Englishman, an American and a Dane, arrived at Port Arthur on the 28th ultimo, and her captain made application to have the wounded Chinese handed over to his care. Marshal Oyama of course declined to permit anything of the kind, the wounded Chinese being prisoners of war. The ship was ordered to leave the port at once, which she did on the 30th ultimo.

The *Kokkai* alleges that the Chinese, having captured a Japanese trooper in the fight on the 18th of November, took him to Port Arthur, and nailed him to the wall of a house by driving spikes through his sides, after which they had a carouse in front of him. It is a horrible story, but if the burning alive of Japanese scouts at Chin-chow be true, we do not see why the nailing incident also should be incredible.

The districts westward of Chiu-lien along the Yalu are said to be perfectly reconciled to Japanese occupation. No less than 120 hamlets—according to the *Nippon*—have made formal act of submission, and their inhabitants show the utmost readiness to supply the wants of the Japanese troops.

The *Kokkai*—which certainly is entitled to claim preëminence for the copiousness of its war news—tells a story of Marshal Oyama's

compassion. On the 27th ultimo, during a storm of rain and wind, the Marshal saw 30 Chinese prisoners huddling under the eaves of a house. He immediately caused his horse to be removed from its stable and had the prisoners housed there. At the risk of being thought sceptical, we should like to ask how it happened that in a place of the size of Port Arthur a house was not available for the Chinese prisoners.

The same paper gives a detailed list of the guns mounted at Shan-hai-kwan. They are 6 21-cent. Krupp guns; 13 15-cent. ditto; 7 12-cent. ditto; 16 8-cent. ditto; 6 Gatlings; and 2 Nordenfelts. As for the troops stationed to defend the place, it is not possible to speak definitely, their number being constantly in process of augmentation.

The Chinese evidently apprehend an incursion of Japanese ships into the Yangtze, for they are despatching reinforcements of troops to guard the lower reaches of the river.

Three hundred Chinese soldiers are said to have surrendered themselves at Port Arthur after the bulk of the Japanese Army had returned to Chin-chow.

It is said that there now more than 5,000 men in garrison at Fu-chow, the majority of them being fugitives from Port Arthur.

New fortifications, says the *Yomiuri Shimbun*, have been erected at the rear of Wei-hai-wei, and a large force under General Shang Tsi is stationed there.

TUESDAY, DECEMBER 11TH.

The *Hochi* says that various bodies despatched from the First Army are now marching upon different places, but that the Head-quarters of the Army are still in An-tung. For instance, the column despatched against Hai-cheng is to reach that stronghold on the 12th instant, and the assault is to be delivered on that day or the day following. The same authority states that a detachment of the First Army has already left Tso-yuen and has marched toward Bo-cheng-tsz, neither of which places can be identified on the map. It is believed that some 9,000 Chinese are defending Bo-cheng-tsz, and that this place will be attacked very shortly. The *Hochi* adds that it obtained this information from a trustworthy quarter.

The Head-quarters of the Second Army, says the same authority, have been removed to Chin-chow, the Army having transferred the control of Port Arthur to the Navy. A column under the command of a Major-General has already left Chin-chow to attack Fu-chow.

The *Nichi Nichi*'s correspondent telegraphs from Hiroshima concerning the casualties of the Chinese in the battle of Port Arthur and the subsequent skirmishes that took place in and around Chin-chow. On the 21st about 1,000 were killed in the assault on Port Arthur and 63 were taken prisoners. In the battle fought on the same day at Chin-chow 503 were killed, of whom 39 were officers and the rest soldiers. Between the 21st and 24th, 280 were killed, either in Port Arthur or in Chin-chow, and 300 were taken prisoners. The total of the Chinese killed in these fights aggregates therefore 2,146. The killed, however, include only those who corpses have been discovered and buried by the Japanese and are exclusive of those who plunged into the sea when pursued by the enemy and were either shot or drowned. A certain colonel is of opinion that the Chinese killed in that manner must have exceeded 1,500.

The latest information about the number of the Chinese that defended Port Arthur is that furnished by the *Nichi Nichi*'s Hiroshima correspondent, who telegraphs that the total strength of the garrison was 14,800, an estimate greater by 700 than that given by the vernacular press a few days ago. The Chinese Northern Fleet is still believed to be sheltered under the forts of Wei-hai-wei. The *Yiji* says that a few days ago the whole of the Fleet, with the single exception of the *Chen-yuen*, was believed to have secretly left Wei-hai-wei, but the subsequent reconnoitre conducted by a Japanese vessel has disproved that statement, the Fleet having been discovered to be in that harbour as before. The apparent apathy of the Fleet is ascribed, according to the *Yomiuri*, by

the majority of the officers in the Head-quarters at Hiroshima to the desertion of seamen and the consequent difficulty of manning the ships. The *Mainichi* gives another version of the damage lately suffered by the *Chen-yuen* at the entrance to Wei-hai-wei. It says that she struck by mistake a torpedo which was laid at the mouth for the protection of the harbour.

The *Kokumin* says that the Chinese Government, apprehending a descent upon Formosa by the Japanese, has issued orders to the Commanding officer of the Southern Fleet now in the Yang-tsz-kiang to despatch several men-of-war for the defence of that island. The *Yomiuri* writes that the Engineering Corps now sent to Chiao-chow Gulf, the inlet just at the back of Wei-hai-wei, from the south, are destined for Taku and Tientsin. Three Norwegian steamers and one steamer of another nationality are carrying them, flying a white flag. The *Kokumin* has a curious story to tell. It says that a Chinese officer of the rank of captain taken prisoner in the battle of Port Arthur and now under medical treatment in the Second Army's camp, has declared to Major Kamio that even if his Government should promise to pay him the monthly salary of 200 taels, he would not fight any more against the Japanese. He has gone a step further and asked the Major that should he recover he might be permitted to join the Japanese Army to fight against his own country.

An extra of the *Yiji* issued last evening gives the following telegraphic message from Hiroshima. Major Oseko, a staff officer with Major-General Tachimi's column, has sent the following message:—

Shortly after 9 a.m. of the 10th instant this column encountered the enemy at Kin-kwa-ho tsz, which is situated about 7 miles north of Szech-li-tien. The enemy's position was stormed; the enemy were divided into two bodies by the second assault, and were completely routed. The greater part retreated towards Tsao-ho. The Japanese gave chase till a few minutes past 5 p.m., and occupied Tsz-yen-ho-ken. Other fights will shortly take place. According to the prisoners, the enemy numbered from 3,000 to 4,000, infantry and cavalry included, and were commanded by General I. The troops defending Mo-tien-ling did not take part in this encounter. The casualties on both sides are not yet precisely known, but the killed and wounded on the Japanese side are estimated at about 30, and those on the other side at about 100. Ten prisoners were taken. About 50 stand of small arms and two banners were captured. The enemy apparently had two quick firing guns. The spirits of the Japanese troops are excellent.

Such is the official report of the engagement. It is, as hitherto, somewhat difficult to follow clearly the movements of the troops in Manchuria. According to our last information, after a skirmish at the Pass of Mo-tien-ling, the advance guard had fallen back to Tsao-ho-ken, 23 miles south of Mo-tien-ling and about 40 miles north of Feng-hwan. It was from this point that Major-General Tachimi struck off with his brigade into the mountains eastward of the main road, to turn the flank of the Mo-tien-ling position; and we last heard of him near Lao-yang, between Mo-tien-ling and Moukden. Another large body of troops was posted at Tsao-ho-ken, to keep open communications with Tachimi and to check any southward advance of the Chinese from Mo-tien-ling. But Kin-kwa-ho tsz, where the fight took place on the 10th inst., is on the main road about 12 miles south of Tsao-ho-ken, and we are informed that most of the Chinese retreated towards this latter place. It is evident then they must have been attacked from the southward, and probable that there were no Japanese troops remaining at Tsao-ho-ken. The Japanese had probably retired from that position southwards towards Feng-hwan and then made a sudden return northwards. But where did these three or four thousand Chinamen come from? We are definitely told they were not the defenders of Mo-tien-ling. It seems probable, therefore, that they must have come by some by road through the mountains to oc-

stony road on which they walked pained their bare feet, but this was only for a short while, for soon the soles, as well as other parts of their bodies, became insensible, and they simply walked on mechanically. More than 20 of their fellows were frozen to death during this terrible journey. The fault was with the contractors of coolies. These ten men had been assured by the contractor, through whom they enlisted as coolies from Tokyo, that they would be supplied with garments to keep themselves warm, when they reached their destination. But the contractor never gave them any clothing. A doctor in the Hospital told the *Mainichi's* representative that cases of frost bite are very rare among the soldiers, because they are better protected against the cold. If these statements are true the Government will do well to direct its attention to the matter, and to take precautions to prevent for the future any such rascality on the part of the coolie contractors.

The same authority says that 2,000 troops have since been despatched from Fu-chow to Formosa, and that at the same time all the male inhabitants of the island are being trained for service. It appears, also according to the *Kokumin*, that the Commander of the Southern Fleet is not willing to obey the orders issued to him by the Court of Peking. He was ordered a few days ago to come up north and in concert with the remnant of the Pei-yang Fleet to defend the coasts of the Gulf of Pechili. On one pretext or another, he postpones his departure, but the real reason is that he is in awe of the Japanese Fleet. Several vernacular papers say, on the authority of the Tokyo News Agency, that a detachment of the First Army is to reach Si-mu-cheng, situated about midway between Sui-yuen and Hai-cheng, on the 12th or 13th instant. The place is believed to be defended by about 8,000 soldiers. The *Nichi Nichi* publishes a telegram from Shanghai under date of 7 p.m. of the 10th inst., to the effect that 16 Japanese war-vessels are cruising to and fro between Chefoo and Shan-hai-kwan, probably with the intention of landing troops at the latter place, Japanese troops are also expected to land at a place some 12 miles south-east of Chefoo. Chinese soldiers are about to be despatched to defend the place. The same paper's Hiroshima correspondent has interviewed Mr. Stephen Hart. Among other things he told the interviewer that the rumour that Li was deprived of his official dignities may be true, and that he should not be surprised to hear next that on the news of the subsequent disasters of the Chinese having reached Tientsin the people rose up and killed Li. According to his estimate, the number of troops stationed in the principal northern places of China is as follows. Tientsin and Taku, 16,000; Shan-hai-kwan, 7,000; Tang-chow, 2,000; Chefoo, 2,000; Wei-hai-wei, 5,000; Peking 5,000, in all 37,000, or about a fifth of a recently published Chinese estimate.

General Sung-ching, Commander of Port Arthur, who was defeated at Chiu-lien and Feng-lian by the Japanese, seems, according to a telegram from the *Asahi's* Hiroshima correspondent, not to have fled to Mukden, as has hitherto been believed, but to have gone southwards, probably intending to return to Port Arthur. Lieut.-Colonel Oki, now in Hu-lan-tien, heard from a trustworthy native, that the Chinese who attacked Chin-chow on the 21st ult. numbered 6,000 and were commanded by Sung. The *Yiji* issued an extra last evening which contained the following news telegraphed by its Hiroshima correspondent:—

Fuchow, which was supposed to be defended by 4,000 to 5,000 Chinese, was captured by a detachment of the 2nd Army on the 5th instant, without any resistance. Before the detachment reached the place the enemy is said to have fled toward Niewchwang.

The vernacular press gives particulars of the alleged capture of a Chinese transport in Port Arthur on the 27th ult. The story was obtained from the crew of the *Shin-shiu Maru*, a transport on Government service that reached Moji from Talien on the 6th instant. The story is to the effect that on the 27th a heavy gale set in early in the morning and grew fiercer as the evening fell. So furious was the storm that all the Japanese men-of-war and transports in the Port were obliged to leave their moorings and to seek the most sheltered places in the harbour. At midnight, a steamer was heard to enter the harbour, but as she had no mast-head light her position could not be localized. Next morning, as soon as the day dawned, and the wind subsided, the newcomer was discovered, to the surprise of the Japanese, to be a China transport about the size of the *Saikyo*. A Japanese war-vessel at once approached the vessel, and sent a number of men and officers on board. The captain of one of the vessels of the Chinese Northern Fleet was found on the vessel, and a large quantity of arms and provisions. The transport must have entered Port Arthur owing to stress of weather, not knowing that she was sailing into a port now in the enemy's hands. This account is very circumstantial, but it is difficult to accept in the absence of confirmatory evidence. Ten coolies are now in the Hiroshima Barrack Hospital, suffering from the effects of severe frost-bite. The account which one of the men gave to the representative of the *Mainichi* is painful reading: most of the men were frost-bitten while they going from Port Arthur to Chin-chow. When we are told that their only clothing in the bitterly cold weather was a coat of aware, for the trunk, and a pair of drawers for the lower limbs, and that even those garments were threadbare, and further that their feet were absolutely bare, we can imagine the severity of their sufferings. And yet they were obliged to move on, for if they stopped to rest even for a few minutes, they ran the risk of being frozen to death. At first the rough and

FRIDAY, DECEMBER 14TH.

Major-General Inouye, Chief of the Staff of the 2nd Army, wires as follows about the number of the killed and captured of the Chinese in the battle of Port Arthur and the skirmishes fought in and around Chin-chow. The total number of Chinese killed in Port Arthur and neighbourhood numbered about 2,500 and in Chin-chow and neighbourhood about 2,000, in all, 4,500. The Chinese that are receiving medical treatment in the Hospital attached to the 2nd Army are 40. Prisoners taken are 355, of whom about 200 will probably be sent to Japan.

An official report despatched by Field-Marshal Oyama under date of 9 p.m. of the 10th instant confirms the news given by the *Asahi* about General Sung-ching and his abortive attempt to attack Chin-chow while the main body of the Japanese Army was engaged in the assault on Port Arthur. The report states that, from what Lieut.-General Oki heard from a trustworthy native, it was Sung that attacked Chin-chow on the 21st ult. at the head of 6,000 men. When the attack had been repulsed and Sung had been obliged to retreat as far as Sz-shi-li-pao, he met the Chinese Generals that had fled from Port Arthur, namely Hwang, Chiang, and Su. Sung retreated northward with about 4,000 to 5,000 troops, pretending that he would go back to Shan-hai-kwan. But in reality he is still in Kai-ping with more than 10,000 troops. A reconnoitring detachment despatched to Fu-chow entered that stronghold on the evening of the 5th instant, without any resistance. Fu-chow is situated at 39° 45' north latitude and 121° 35' east of Greenwich. The town is of an oblong form, with walls about 30 feet high and is furnished with towers at its four corners. It measures 24 *ch* in circumference, and has three gates, opening towards the north, east, and south. The population is about 25,000. It is less wealthy than Kai-ping; but still it is a thriving centre of trade. On the coast some 17 miles away, there is a coal bed, from which coal is brought to the town by the river Fu-chow.

The *Fiji* Hiroshima correspondent telegraphs the substance of a letter that has reached Headquarters from a certain man in China. From the account given in the *Fiji*, the *Shin-bun*, the steamer that brought Mr. Dettling

Kobe a few days ago, is lying off the harbour of Taku, waiting for Viceroy Li and Taotai Sheng, believed to be intending to fly somewhere in that vessel. Hanneken has returned from Shan-hai-kwan, where he inspected thoroughly the forts and defences of the place. He is said to have declared that the forts are inadequate for the defence of the place and that the Japanese would easily effect a landing. The provisions, arms, and ammunition at Shan-hai-kwan will fall into the hands of the Japanese. In another part the message says that Li is about to retire to Pao-t'ing, where he will meet with Liu K'un-yi, to transfer the Viceroyship to him. Hanneken will go with Li to be introduced to Liu. The *Nippon* says that when the news of the disasters sustained by the Chinese Army at Chiu-lien and Feng-hwan reached Peking, the Court decided to order the troops stationed in the Amoor district to defend the frontier to hasten southward and to arrest the advance of the Japanese Army. The frontier troops number some 15,000 men and were all trained under the direct control of Li Hung-chang. Li was therefore instructed to convey the above order to the troops. The whole affair was conducted in the most secret way. Fortunately for Japan the matter reached the ears of one friendly to Japanese and the information was at once conveyed to the Japanese Authorities, and was by them transmitted to the First Army. Tachimi's advance guard then resolved to anticipate the manoeuvre of the Amoor troops, and on the 30th ult., a collision took place between the two at Tsi-chia-pao. After a hard fight, the enemy was driven back in the direction of Pau-ch'i-hu, about 30 miles north of Lien-shan-kwan, as the crow flies. The arms left behind in the field by the enemy were all of the newest type, and the soldiers proved better fighters than any Chinese troops previously encountered. Mr. Gamo, M.P., from Kagoshima prefecture, and two other members of Parliament also from the same district, have returned home, after a visit to the Liau-tung peninsula, where they witnessed the fall of Port Arthur.

The vernacular press publishes Mr. Gamo's account of what he had seen. Among other things he said that the natives of Chin-chow and the surrounding district are becoming more and more friendly to the Japanese. Many of the inhabitants of the district are in their hearts faithful to the Ming dynasty, and secretly disaffected to the Manchurian régime. They therefore rejoice at the Japanese success, which, they hope, will be a prelude to the restoration of the Ming dynasty. It is said that when the Second Army landed at Pi-tsz-wo, a literatus of the district named Chin met by some chance Mr. Tei, of an interpreter of the Army. Chin wondered at the name of Mr. Tei, which is evidently of Chinese origin, and asked him for the explanation. Then he knew that Mr. Tei was the descendant of that great Tei who loyally upheld the fallen cause of the Ming Dynasty and occupied and for years successfully defended Formosa against the attack of the Manchurian army. The literatus was exceedingly glad to meet with the descendant of such an illustrious family, he himself being of Ming extraction, and lost no time in carrying on the news to the local grandees of the same origin. Many of them came to see Mr. Tei, who explained to them the causes of the present war and exhorted them to try to give assistance to the Japanese against the common enemy, the Court of Peking.

The wealthy inhabitants of the family name Liau are especially zealous in befriending the Japanese Army. One family of this name has presented to the army an accurate map of Chin-chow, 500 taels, 50 horses, and 12 head of cattle. The representatives of 60 villages in the vicinity of Chin-chow have also presented 70 sheep.

The *Kokumin's* Hiroshima correspondent telegraphs that after the Japanese troops had occupied Fu-chow they at once began to push on northwards; that the garrison of about 10,000 men in Kai-ping under Sung is suffering considerably for want of food, and is also short

of ammunition; that the garrison of Hai-cheng now amounts to above 20,000, having been joined by the fugitives from Sui-yen and elsewhere; and that the people are flying to sequestered places to avoid the devastation and other atrocities of the Chinese troops.

THE "JIJI" AND THE PEACE PROBLEM.

For the first time the *Jiji* gives us its opinion as to the terms that should be exacted from China on the latter's suing for peace. It considers the recognition of the independence of Korea, the payment of an indemnity, and the cession of territory the conditions that Japan should demand. The first two conditions need no explanation, but the third requires some deliberation. Public opinion seems to favour demanding the cession of the north-eastern part of China as well as Formosa, the former being necessary to Japan in order to insure the independence of Korea, and the latter being equally essential for the security of Japan's national defences. The archipelago of Loochoo is part of the Japanese dominions, considered from every point of view. And yet, strange to say, China seems to be discontented with the arrangement by which the feudal system which prevailed in Loochoo was abolished and the islands were re-organized into one local system. More than once the Middle Kingdom privately attempted to instigate the islanders to rise against their legitimate ruler, and to declare themselves Chinese subjects. She proposed to Japan a few years ago that the archipelago should be halved between the two countries. Although this demand was of course rejected by Japan, China continues to include the Loochoo Islands in her dominions in the annual Government reports. It is evident, therefore, that, were Formosa left to her as a base of operations, she would, when she has time to attend to such matters, gratify her long-cherished wish to annex the islands. The cession of Formosa is of paramount importance to Japan.

THE COMING SESSION OF THE DIET.

Some are of opinion, says the *Hochi*, that as the Government will probably introduce only bills connected with the Budget and with pressing military and naval affairs, and as the members will also abstain from bringing forward any bills except those of immediate importance, the usual period allotted for an ordinary session of the Diet, that is to say, 90 days, may perhaps be cut short by the Diet itself or by the Government. A member of the House of Representatives protests against a notion, likely to be entertained by a section of the public that because the 8th session will most likely be short, its importance will be so much the less. He anticipates that the Budget and the Army and Navy Extension Bills likely to be introduced by the Government in the coming session, will not only be framed in view of the present war, but also in view of complications in which the country may be involved with European Powers even before the termination of the war. The Diet will of course be obliged to consent to such bills, and the Government will be equally bound not to have recourse to any such drastic measure as dissolution. The coming session is of the gravest importance. All party prejudices will be laid aside, and the basis on which Japan is to be established as one of the first Powers of the world, deliberated and determined. The Government, on the one hand, will revise the official organization so as to retrench expenses to the utmost extent, while the Diet, on the other, will endeavour to arrange an important financial policy with the people's burdens minimized. Consequently, though the number of bills discussed may not be great, the period of 90 days may prove too short for the work of the coming session.

TOKYO EN FÊTE.

Under leaden skies through which the sun only rarely peeped, and even then in a bewildered, half-hearted way, as if he too were puzzled by the tumult and uproar in the streets, Tokyo celebrated on Sunday the second of her great days in modern times. The eleventh of February is a date to be marked with a white stone in the city annals, for then was the Imperial Constitution promulgated and in a manner befitting so great an occasion; the ninth of December will also be memorable for an unanimous outburst of patriotic enthusiasm as Tokyo has ever seen: a celebration calculated to inspire the people to do their utmost, commemorating, as it did, the line of victories achieved in the war with China—victories that have at once placed Japan high in western estimation and shown that she is what of old she claimed to be, a great Power in the Far East. It had been more than hinted in the provincial cities and towns that the capital was slow to bestir itself. In nearly every one of the larger centres the people had turned out to a man in order to give public expression to their elation over the triumph of Japan's arms. But when Tokyo really does celebrate, the thing is done with a will and on a scale eclipsing all possible rivals. It is impossible to give absolutely correct figures, but an idea of the vastness of Sunday's concourse can be gained from the fact that no less than seventy-five thousand tickets of the first-class—at 50 *sen*—were sold, and over one hundred thousand tickets of the second class, at 10 *sen*. That gives a respectable sum total of celebrants, but further it was evident that ticket-holders represented only a fraction of the people that wended their way to Ueno. "Not less than four hundred thousand in Ueno Park and the vicinity," was the repeated statement of those charged with the management of the ceremonies. To their indefatigable and patriotic energy the success of the day is to be attributed. Foremost among them should be mentioned Mr. Miura Yasu, Governor of Tokyo, who since the middle of last month has been tireless in promoting the cause of the fête. Mr. Miura is a popular man in the best sense of the word. He left no stone unturned to make the celebration not only pleasant to all but worthy of its *raison d'être*. Owing to his representations, most of the railways entering the capital or joining lines leading thither, published a reduced scale of charges, third-class passengers being carried to and from Tokyo for the three days ending on Sunday at a reduction of fifty per cent. in the case of the Japan Railway and Ryomo Railway Companies, all the rest charging two-thirds of the usual rates. For this reason a vast number of people took the opportunity to visit the capital. From Saturday morning the trains arriving at Shimbashi and Ueno were crowded to their utmost capacity, and that despite the fact that extra trains were run, most of them, especially those coming from the northern prefectures, consisting of more than twenty carriages, drawn by two engines. Every available room in the vicinity of Ueno Park was taken up long before Saturday evening; the hotels and inns everywhere displayed placards announcing that no more accommodation was to be had, while even private dwellings and small restaurants were for the nonce turned into hostels. The houses surrounding the Race-course in particular were crowded with sightseers. All the balconies and upper rooms were rented to pleasure-parties and celebrants, while in many places along the course stands had been erected wherein from twenty to fifty people were seated, discussing Japanese viands and beverages with beaming countenances and watching with eager interest the vast army of human beings that surrounded Shinobazu pond and made the slopes of the Park look as if the cherry-trees had burst into premature bloom. The great majority of the foreign residents, together with a crowd of children of all nationalities, assembled in the garden of Dr. E. Baelz's residence, which overlooks the Race-course and Shinobazu lake. There most

efficient and hospitable preparations had been made for their accommodation by the eminent and popular physician, and from the midst of illuminations that added materially to the general brilliancy of the scene, they were enabled to view the whole display in comfort and undisturbed by contact with the immense crowd surging below.

It was undoubtedly due to the enormous concourse of celebrating participants that the programme as originally laid down was not strictly adhered to. The original intention had been that a "gathering of all nationalities" on the Hibiya Parade-ground should take place about 7 a.m. and a procession should then be formed to start off through the city before eight. But even before dawn the great Parade-ground presented a lively appearance, throngs of enthusiasts assembling at a very early hour. Thenceforth crowds kept pouring in from every converging street, and when the great mass of people fairly started it was already long after the appointed hour. It was proposed that the paraders should walk three abreast, and at first some semblance of regularity was kept up. But constant additions soon rendered that impossible. On towards Megane Bashi, where the crowd of sightseers was thickest, the procession degenerated into a mere scramble, people pressing forward regardless of time and space. Some idea of the magnitude of the marching multitude may be gathered from the fact that long after the van had reached Uenyo the rear guard was still forming on the Hibiya Parade, four miles distant. Guilds of all sorts, schools, workmen, the employes of scores of mercantile companies, people of high and low degree, marched with the procession, to the music of a number of bands, both regimental and impromptu, the blowing of a thousand trumpets and conchs, the din of drums of all sizes, continual cheering not only from among the paraders but also from the vast crowds of sightseers that lined the route of march. Banners and standards of all descriptions, displaying innumerable varieties of fanciful inscriptions, naval and military flays, transparencies, *dashi*, carriages filled with celebrants in gala costume, riotously rejoicing school-boys, grave members of the City Council or Chamber of Commerce, deputies from the interior, vans carrying symbolical groups, poles surmounted with *papier maché* and wicker-work "decapitated Chinamen,"—these and a thousand other things, both novel and amusing, were to be seen in the procession. The line of march was through the southern exit of the Hibiya Parade past the Houses of Parliament—which were greeted with prolonged cheers—then turning to the right past the Foreign Department, and on through the historic Sakurada Gate to the great opening opposite the Nijū Bashi leading to the Palace Gate. It was feared that the crowding at the Sakurada Gate would possibly be attended with mishaps similar to those that marred the great fête of February 11th, half a dozen years ago, but a strong force of constabulary kept the people in order and the gate was passed in safety. Arrived in front of the Palace, the cheering was in one long continuous outburst, for here were portraits exhibited of Their Imperial Majesties, who have come to be regarded by their subjects as the central figures in the war. Balloons with streamers of flags were here sent aloft, to the accompaniment of a roar of *Bansai!* deafening in its intensity. Thence the procession passed through the Wadokura Gate, where another serious crush ensued, on to the Tokiwa Bashi and along the canal to Nihon Bashi, through the Tori to Megane Bashi and along the line of the tramway to Uenyo. It was impossible to break through the line at any one point along the route, the crowd of sightseers effectually blocking the way. The only manner in which outsiders could reach Uenyo was by taking a circuitous route through Kan'da and Hongo, or else eastwards skirting the Sumida River and thence through Shitaya and Asakusa. In order to avoid confusion it was arranged that the people of each urban district should march in the subjoined order, each district being distinguishable by huge banners bearing its name and the inevitable patriotic inscription:

Yotsuya; (2) Asakusa; (3) Kyobashi; (4) Kan'da; (5) Nihonbashi; (6) Akasaka; (7) Honjo; (8) Hongo; (9) Fukagawa; (10) Shiba; (11); Koishikawa; (12) Shitaya; (13) Kojimachi; (14) Ushigome; (15) Azabu. The districts making the finest display were unquestionably Nihonbashi and Kyobashi, followed closely by Kan'da and Asakusa in the order named. As the people marched they sang an ode written for the occasion by Mr. Fukuchi, unquestionably one of the most gifted and versatile poets of modern Japan. The ode had been admirably set to music, and everyone in the parade was supplied with a printed slip containing the text of the three verses, of which the following is a translation.

1st Verse: "Flag of the Morning Sun! Flag of the Morning Sun! Across the rolling waves of the ocean to a far distant land have gone the splendour and brilliance, the strength of our land. Confronted by the Imperial Intelligence of our Great Lord, by the invincible hosts of our warriors, who can hope to conquer?"

Refrain: *Teikoku Bansai! Ban-ban-sai!*

2nd Verse: Flag of the Morning Sun! Flag of the Morning Sun! By thy favour we have multiplied the glory of our land; we have pressed forward with speed! The strongholds of the enemy have fallen continuously; the ships of the enemy have been ground to powder. The war has been victory upon victory (this is a particularly striking line in the original, the alliteration being very musical *kachini kataru kachi-ikusa*).

Refrain: *Teikoku Bansai! Ban-ban-sai!*

3rd Verse: Flag of the Morning Sun! Flag of the Morning Sun! To our Sunland (*hi no moto* in the original) there is no parallel in the world. We have but one spirit of loyalty. Even to boys and maidens, if for Thy (the Emperor's) sake, we are ready to die; for the sake of our country, we grudge not our bodies. Oh Mountain Cherry, send out thy perfume in the morning sun!

Refrain: *Teikoku Bansai! Ban-ban-sai!*

It can be imagined what effect such words, set to a stirring if minor melody, were calculated to make upon the hearts of the celebrants.

Midway in the Uenyo Avenue stood a vast arch under which the parade had to pass. The trophy was composed principally of the Imperial flower, the chrysanthemum, yellow blossoms on a green ground forming the ideograph *Waga Kai-Riku Kyo Gun, Ban Bansai!* "Myriads of years may our Army and Navy flourish!" and *Teikoku Bansai*, "May the Empire live forever!" Farther on, just at the point where the park proper is entered, stood a really artistic and most excellent life-size Gemum Gate, the scene of Harada's famous exploit at the assault on Phyōng-yang. Kawakami's troupe were to have given here a representation of the storming of the gate; but according to the express wish of the Prince Imperial, who exhibited the utmost interest in the success of the celebration, the troupe gave elsewhere, on the compound facing the Educational Museum, a series of battle-scenes. A great many people did not know of this until too late, and considerable disappointment was expressed, but those who were fortunate enough to witness the acting of Kawakami and his men enjoyed a rare sight. Divided into Chinese and Japanese soldiers they gave a most realistic and spirited representation of incidents in several of the recent battles. H.I.H. the Prince Imperial expressed great satisfaction with the exertions of the actors, and the onlooking crowd roared out their plaudits and cheered on the combatants with wild enthusiasm.

A thorough description of the scenes and sights in Uenyo would be almost impossible. The concourse of people was so enormous, the difficulty in getting from one place to another so great, that while looking at one scene a score of others were necessarily missed. We can only make brief reference to the most striking. Near the *Kurō-mon*, or historic "Black Gate," where the partisans of the Shogun made a last stand in the pre-*Meiji* days, was a huge board covered with flags and articles of clothing

taken from the Chinese. Particularly noticeable were the standards of the defeated Generals who fought at Phyōng-yang. Among the surcoats were one or two with gold embroidery on the sleeves; the names of Korean *geisha* that had made the garments for their Chinese admirers. "We didn't have anything to say to those *geisha* in Sōul," remarked an officer of high rank, lately returned from Korea, "we did not care to employ the discarded light-o'-loves of the *tonpi-kan!*" Across the road and past the bazaar was a great open air altar, piled with votive offerings. This was dedicated to the souls of those that had fallen in battle, and relays of priests of high rank kept up ceaseless prayers before the shrine till nightfall. Immediately before the shrine was a long table whereon everyone that desired might light bundles of incense-sticks. This part of the Park was thronged the whole time, and it was touching to see men and women, in tears for loved ones who had died a hero's death, bow mutely before the shrine and offer up their meed of incense and voiceless prayers. Towards noon a body of priests, of the Jodo sect, repaired to this spot and celebrated a solemn requiem mass. Nearly three hundred priests participated in the ceremony. West of the bazaar were the tents and enclosure of the Red Cross, and several people were brought during the course of the day into the accident ward. It was a most excellent idea to have a lazaret so near at hand. The centre of attraction, however, was unquestionably the Race-course and the Grand Stand. A few minutes before eleven, a burst of cheering echoing far and wide proclaimed the advent of H.I.H. the Prince Imperial and suite, followed by a number of dignitaries as well as the boys of the Nobles' School. The celebrants of the different urban districts had by this time surrounded Shinobazu in picturesque groups, but now all the vast concourse pressed forward to the Grand Stand. Five speakers were announced: Mr. Miura, Mayor of Tokyo; Mr. Sonoda of the Specie Bank; Mr. Kusumoto, President of the Lower House; Mr. Oku Saburobei, of the Tokyo Chamber of Commerce; and Mr. Snyehiro. All these gentlemen mounted the rostrum in turn, and read their addresses, the crowd responding to every "point" with deafening cheers, hats tossed in air and loud clapping. Mr. Sonoda's and Mr. Kusumoto's addresses appeared most to take the fancy of the crowd; but unhappily and inevitably the great majority of the people failed to hear more than fragmentary sentences, although it was evident that the speakers were exerting themselves to the utmost. That was immediately attributable to the unwarranted intrusion of bodies of celebrants, representing various companies, schools, athletic associations, and the like, their progress always accompanied by solos on drums of a deafening magnitude. The conclusion of the speeches was the signal for lunch, and some one hundred and fifty thousand people were promptly served each with two boxes, one containing eatables such as *kuchitori*, *renkon*, *matsudake*, sweetened omelette, and a bit of fish, while the other held boiled rice. To this was added a pint bottle of *sake* of a famous brew, unfortunately only too potent in its effects. This *al fresco* luncheon with entrance to the vicinity of the Grand Stand and a very pretty silver-plated badge bearing the words *Shukusho Dai Kwai*, "Great Assemblage for Celebration of Victories," were paid for by a 50-sen ticket. Among other badges worn by those present were noticeable a rosette formed of a white chrysanthemum and two tiny Japanese flags; a red chrysanthemum with green leaves—very pretty and tasteful; while some wore imitation "stove-pipe hats" made of cardboard and adorned with two flags in colours, the national flag and the Imperial Standard. Bunting and many-coloured lanterns were everywhere visible: indeed the whole city, not Uenyo Park alone, was a mass of flags and lanterns, the scene after nightfall in the larger thoroughfares being one of exceptional beauty. Hawkers were everywhere in the Park and on the race-course,

selling what they were pleased to call *bundori-mono* or "spoils," consisting of paper or rice-dough "Chinese heads," attached to poles surmounted by the national flag.

The day fireworks were not much to boast of. Paper balloons of large size were sent up every now and then, most of them supplied with long streamers representing either Japanese or Chinese flags. But as night fell the event of the day came off. On the placid, lotus-covered waters of the little lake had floated all day long three vessels, representing a torpedo-boat and the giants of the Chinese fleet, the *Ting-yuen*, and another. The mimic naval battle resulting in the total destruction of the Chinese fleet and the blowing up of the *Ting-yuen* was fought with wondrous realism, the countless thousands of sightseers wildly cheering all the time. A number of foreigners were present at this moment among the crowd, although hardly a European face had been seen during the early part of the day. From four o'clock onwards it became evident that most of the ticket-holders had not stinted themselves in the matter of *sake*, yet the crowd was essentially good-natured in its cups. Some few accidents and brawls were recorded, though the day passed without any seriously untoward incident to mar it. The Park was at its best despite the leafless trees. One hundred coolies had been working on it for two days to get everything in order. Many merchants in Nihombashi and other districts had made contributions of various kinds: tubs of wine, scores of workmen, thousands of boxes of matches, a large quantity of sheeting, and innumerable flags. With the one exception of the difficulty of getting from one spot to another, the great fête was a triumphant success, and reflects the utmost credit on those that managed it. The day will not soon be forgotten in Tokyo; and in future centuries the geologist may exhume in wonder countless strata of broken bottles and wine-cups on what was once the site of Shinobazu lake and Uyeno Park.

THE COOLIES IN THE SECOND ARMY.

A word of praise is due to the part played by the coolies in the Second Army, writes a war-correspondent of the *Fiji*, especially as any merit achieved by a coolie is not often publicly recognized. For about a month between the time of the landing of the troops and the capture of Port Arthur, the coolies were obliged to encamp in the open air and to take what rest they could on the frost-covered ground, with a piercing wind blowing on them and with only one blanket wrapped round them. The road over which they dragged the waggons laden with war material was so rough and hilly that in many places even four men could not move a wagon. The most tremendous labour was required of the men employed in the cooking department. They could not retire to rest till 2 a.m., and were obliged to rise an hour later and march in the rear of the Army. It is small cause for wonder that they now and then fell drowsy while dragging the waggons, but such was the martial ardour with which they were imbued that when the sound of cannon was heard in the distance it seemed as though new life had been put into them, and their pace was quickened wonderfully. Many of these men are well-to-do, and have turned coolies either for love of adventure or from their desire to contribute to the success of their country's arms. The labours required of them and the hardships they undergo are not of a smaller degree than those to which the soldiers are subjected. The coolie inspectors too are all excellent men, some of them being retired officers. A Captain of the Commissariat declares that, judging from the method of managing the men under their control, these inspectors are fully entitled to rank as officers.

REPRESENTATION TO THE KING OF KOREA.

On the 20th and 21st ult. the Japanese Minister waited on the King of Korea and submitted a representation bearing on the reform programme of the country. The representation was approved by the King. According to the *Sōul* correspondent of the *Fiji*, it ran as follows: 1.—The Administrative power should centre in the hands of one man. The Sovereign of a monarchy should superintend personally the enactment and the enforcement of the laws of the realm, for otherwise the different authorities would issue conflicting orders, and civil and military functionaries would be at a loss how to shape their course in the discharge of their duties. They would not attend to their duties faithfully, a grave evil in the Government of any country. In Korea, however, there were in effect several sovereigns; but it was evident that neither the *Tai Wōn-kun* nor the Queen was justified in meddling with the administration of the country or the disposal of its offices.

2.—A Sovereign has the right to superintend the administration of the country and is at the same time bound to obey the laws of the country. Moreover, in forming his judgment concerning Administrative matters, he should ask the advice of the Cabinet Ministers, and should not appoint Government Officials merely according to his own arbitrary will.

3.—Court affairs should be distinctly separated from the general administration of the country.

In Korea, Court affairs and State affairs having hitherto been mixed up, the lives and the property of the people were at the mercy of the Court, and its officials freely meddled with affairs of State. This is a grave evil, and the two must in future be distinctly separated, one under the management of the Chief of the Household affairs, and the other under that of the Prime Minister.

4.—The Court should be systematically organized. The stability of the Court and that of the realm are inseparable and complementary. It is of urgent importance, therefore, to place the organization of the Court on a firm and solid basis.

5.—The functions and competence of the Cabinet and the various Departments of State should be determined, and laws should be enacted for that purpose.

6.—Taxes should be unified by the Finance Department and no taxes besides those regularly imposed upon the people according to a certain fixed system should be collected.

Hitherto in Korea there have been eight or nine taxation offices, with the Court at the head, all being independent in their accounts. There was another mode of imposition by issuing a special kind of order. The expenses of the Court and those required for the administration of the country were confused, and any unification of the national finance was out of the question. This must be reformed and all the matters relating to revenue and expenditure of the country must be placed under the management of the Finance Department. It is moreover said that besides paying multifarious taxes people are not unfrequently subjected to illegal exactions by officials, on pain of imprisonment or other punishment. Under such circumstances, it is impossible for the people to pursue their avocations in peace. A regular system of taxation must be established to pave the way towards the prosperity of the country.

7.—The expenses of the Court and of the various Departments of State should be carefully scheduled, so that the revenue and the expenditure may be properly balanced, and the expenses retrenched as much as possible.

8.—A military system should be established. The military authority of a country should be vested in the Sovereign, and it should not be distributed in the hands of several persons as it is now in Korea. The efficacious defence of a country is essential for its stability, and in Korea a force sufficient to put down a civil war should be created, by retrenching the national expenses in other directions to the utmost extent.

establish the military defence on a sound basis, measures should be taken to train officers, and those only who possess military knowledge and experience should be appointed. When the Army has been created and placed on a sound footing, the next thing to be done in a similar direction will be the creation of a Navy; but not till the army is well equipped.

9.—Useless ceremonial and extravagant display should be done away with.

It is a standing fault in Korea, from the Court down to the lowest officials, to indulge in unnecessary display and in useless ceremonial. This is a very condemnable practice, tending among other evils to luxury and waste of money. The Court should retrench its expenses and should furnish an example of frugality.

10.—A Criminal Code should be enacted.

As it is extremely difficult to enact a satisfactory Civil Code in any short space of time, the Criminal Code should first be drafted, based on the codes of other countries and on the usages of Korea itself. The Code thus enacted must be the sole guide for the punishment of offenders. Independence of judges being essential for the impartiality of justice, they should be strictly kept apart from executive officials when competent persons have been obtained to fill those posts.

11.—The police authority should be unified. Police form an indispensable part in the mechanism of a country, for executive and judicial purposes, and particularly for the security of life and property. To be efficacious, the Police administration should be unified, and consequently the establishment of two different police services, as is the case in Korea, must be condemned.

12.—The discipline of Government functionaries should be rigidly enforced.

A Government official should be incorruptible in the discharge of his functions, for bribery is a source of administrative disorder. To attain this end, every official should be given a certain fixed remuneration and any such practice as that in vogue in Korea of selling Government offices to the highest bidder must be abolished. The re-organization of the local government appointments is of equal moment with the reform of taxation.

13. The authority of Local officials should be limited by statute and the power centralized.

At present the judicial and military authority of each district is vested in its Governor, an evil traceable to the system of selling offices. This is mainly the reason why local Governors are so exacting in Korea. The power of the local Governors should therefore be strictly limited, and they should be placed under the direct control of the Home and Finance Departments.

14. Appointment or dismissal of Government officials should be arranged according to a fixed system, so that they may not be moved by the arbitrary will of influential personages.

15.—Government officials should not grasp eagerly at power, nor should they exhibit mutual jealousy and suspicion; political vengeance should not be permitted. Such things are potent causes of national disorder.

A spirit of uprightness and impartiality should be inculcated for the management of state affairs.

16.—No Special necessity is felt at present for a Public Works Department, and so matters relating to public works should be included in the province of the Department of Agriculture and Commerce or some other Department.

17.—The Central Reform Office should be re-organized so as to limit its power in some degree. It should not be invested with legislative powers.

18.—Experienced Councillors should be employed in every Department, to regulate business.

19.—Promising youths should be sent to study in Japan.

20.—The unification of the national policy is requisite, in order to establish the independence of the country on a sound basis and effectively to reform home affairs. When established, an oath for its maintenance should be sworn by the Ancestors of the Korean Dynasty, and it should then be proclaimed to the nation.

KOREAN NEWS.

The decision arrived at by the Reform Office, that the old system of paying taxes in kind should be abolished and that they should hereafter be paid in money, was subsequently considered by the majority of the Korean statesmen as a too drastic change, difficult to put into practice. Lately, however, this scruple was removed, and it has been resolved to enforce the reform despite all obstacles. In pursuance of that resolve, the two officials hitherto charged with the duty of superintending the transport of tax-rice have been relieved of their office. The payment of taxes in kind has always been a most fruitful source of administrative vice in Korea, and the successful accomplishment of the above reform would go far to adjust the finances of the country.

A Japanese school and an English school were opened on the 1st of November, in accordance with the reform programme of the Korean Court. In each school there are about 40 students pursuing the courses in the respective foreign languages. Another school for teaching Chinese was to be established, but owing to the lack of a proper teacher it has not yet been opened.

When the new Japanese Ambassador invited the Tai Wōn-kun to the Legation and showed him the letters which he, the Tai Wōn-kun, had secretly sent to the Chinese Generals in Phŏng-yang before they were dislodged from that stronghold, the aged statesman could not find a word of excuse. That was quite natural, for the letters were of a serious character. They promised the Generals that on the approach of their troops to Sōul, he would instigate the Tong-haks to rise and attack the Japanese from their rear. It was most fortunate that the letters were found among the documents that the Japanese seized in the Chinese camps in Phŏng-yang. In the presence of such incontestable proofs that the aged Regent had acted falsely to the interests of Japan and sought to betray her, the Tai Wōn-kun apologised heartily, and declared by way of showing his repentance that he should not take any further part in the active politics of the country. To a question from the Japanese Ambassador whether he would pledge his honour not to interfere any longer in administrative affairs, either covertly or overtly, he replied dejectedly in the affirmative. He further asked the Ambassador to employ all his ability for the reform of Korea, which would in future be entirely under his management. He also asked pardon for his favourite grandson who had taken a prominent part in the same intrigue against Japan, and begged Count Inouye to extend his special favour to the young man and instruct him as though he were his own grandson. Next day the grandson called on the Count and apologised sincerely for what he had done. In the course of a conversation that followed the Count advised him to quit the corrupting atmosphere of Korea for a time and improve his mind by studying abroad, for the future benefit of himself and of the country. The young man promised, and it is on that account that he is to be relieved of the important office of commander of the King's Body Guard. It is said that he may come to Japan in the capacity of Korean Minister and stay here for a long while, to benefit by the enlightening influence of the country. The obstacles that lay in the path of Korean reform having been removed in that way, the Japanese Minister next turned attention, with all his wonted vigour and thoroughness, to the reform programme. The principal points were drawn up, and when, in an interview with the King on the 20th and 21st ult., the draft was submitted for the perusal of His Majesty, he declared a few days after that he was satisfied with the scheme. The *Yiji's* Sōul correspondent says that the points enumerated by the Count are believed to be twenty. Some of them are these:—To manifest in some suitable manner that Korea has disclaimed the alleged suzerainty of China; to place the basis of the independence of Korea on a firm footing; to contrive the personal administration of the

country by the King; to fix the competence of the various Government offices and their officials; to retrench superfluous expenses; to reduce the finances to a uniform system; to set up a distinct line of demarcation between the Court and the Executive; to codify the laws; to abolish unnecessary offices; to define the competence of the Reform Office; to engage Councillors; to despatch promising men for purposes of study in foreign countries; to perfect the Police system; to establish a suitable civil service; to determine the national policy of the country, and to proclaim it throughout the Kingdom. Another difficulty at present looming on the horizon of Korean politics is the insatiable ambition of the Queen to interfere in State affairs. Obligated to curb her ambition while her inveterate enemy the Tai Wōn-kun was at the head of the administration, she is now secretly watching an opportunity to regain her former position, and such an opportunity has presented itself in the gradual wane of the old statesman's power and his ultimate retirement. Thereupon her Majesty issued to the various members of the Ming family still in power instructions to court the support of the Japanese Minister. This was, however, precisely one of the evils that the Minister had determined to eradicate. The Queen's procedure made him all the more anxious to provide some effective safeguard against such intriguing. Next in order of importance to placing an impassable barrier between the Court and the Administration, he held the business of finding a competent person to discharge the function of superintending the Court. After mature consideration, he concluded that the only person weighty enough to successfully undertake that duty was the Tai Wōn-kun. Of course there was a measure of danger in placing him in such a position. It is like counteracting a poison with a poison. Count Inouye visited the Court, met the Minister of the Household who some time previously had desired to resign his office, and remonstrated with him in the sense that he, being a prominent Korean, should not be unmindful of the duties his country required of him at this most critical period of its history, while the Count himself, though only an alien, was so earnestly working to secure the independence of Korea, simply in obedience to the benevolent and magnanimous will of the Emperor and the chivalrous sentiment of the Japanese people. Convinced of the error into which he had fallen, the Korean statesman announced his resolution to remain in office, and take his part in the grand task of renovating the country. He and the Count then endeavoured to induce the Tai Wōn-kun to undertake this non-political duty of superintending the Court, and it is said that they have every prospect of success.

The military telegraph between Sōul and Fusan was to undertake the transmission of private messages under certain conditions from the 1st instant. Mr. Takahisa, Superintendent of the Japanese Police on duty in Sōul, has been appointed adviser to the Police force of Korea. The King has bestowed a sum of 10,000 *ryo* upon the people inhabiting the northern part of Chūng-chhōng-do, where the Tong-haks have played great havoc.

ARMY MEAT CONTRACTORS.

Many of the contractors for supplying meat to the Army are now in great tribulation, write vernacular papers, because the Department of War has decided to suspend the purchase of canned meat for two weeks. The accountants of the Department are much incensed against the contractors, the meat supplied by them having not unfrequently been found unfit for food. Complaints in that sense led to rigorous inspection and the summary rejection of all the meat thought suspicious. The avaricious contractors were not to be thus balked of their gains. When the cases of meat supplied by one of them were rejected, the very same cases would next day be sent up in the name of another contractor; or the meat would be re-canned. In fact, all kinds of devices were employed to impose upon the military account-

ants. It having been found difficult to discover all the knavish tricks resorted to by dishonest contractors, the accountants summoned them one day, and having earnestly appealed to their patriotism and loyalty, warned them against any repetition of such villainy.

The suspension has effected the price of beef which rose considerably for some weeks past. It is believed that many of the dishonest contractors who undertook the business without capital will be ruined by this stroke. The above caution given by the accountants was efficacious for a short while only. Things soon reverted to their evil state. The contractors have some slight excuse to urge. They are required to send in a certain quantity of canned meat in a comparatively short space of time, and as they are fined 10 per cent. of the price whenever they pass the prescribed date, they naturally become hasty in their methods of preparation, and the result is imperfectly cooked meat. The accountants have resolved to suspend the purchase for two weeks and to inspect the canning establishments thoroughly, inasmuch as meat sufficient to support the Army till next spring has already been purchased. The suspension has created a panic among the contractors, for while, on the one hand, live cattle sent to them from the northern districts, are arriving in Tokyo every day, on the other the cans manufactured before they received notice of the suspension will represent so much capital lying idle.

SUBSCRIPTIONS TO THE SECOND WAR LOAN.

We learn from the vernacular press that at a meeting held on the 3rd inst. at the Clearing-house, Sakamoto-cho, Nihonbashi, by the bankers of Tokyo and Yokohama, the following announcement was obtained as to the amounts which they intend to subscribe to the Second War Loan:—

	Yen.
Peers' Bank	10,000,000
Mitsubishi Bank and Firm ..	3,500,000
Mitsui Bank	3,000,000
Specie Bank	2,000,000
3rd National Bank and Yasuda Bank	1,500,000
1st National Bank and Mr. Shibasawa	1,100,000
74th National Bank	150,000
100th National Bank	100,000
Shinano Bank	100,000

Other subscriptions were also promised bringing the total amount announced on that day up to yen 21,960,000. About a dozen banks had not yet settled upon their subscriptions, but judging from the amounts contributed by them to the First War Loan, a sum of about three million yen may be expected from them. There are, moreover, many private banks in Tokyo and Yokohama not yet incorporated into the Bankers' Union, so that it is confidently predicted that a sum of 30 million yen will be furnished by bankers alone. The other subscribers in Tokyo are as follow:—

	Yen.
The Imperial Household	5,000,000
The Nippon Ginko	20,000,000
The Nippon Yusen Kaisha	300,000
The Nippon Tetsudo Kaisha	300,000

The two totals aggregate 60 million yen, thus exceeding by 10 millions the amount to be raised for the present Loan.

The *Shogyo* enjoins the peers and capitalists of Tokyo who withheld their subscriptions from the First Loan to come forward now and invest their money in War Bonds. Our contemporary then proceeds to enumerate the names of peers and wealthy citizens who, according to its estimate, are capable of subscribing over 10,000 yen each. The names of 50 peers and 55 citizens are given. They abstained from contributing to the First Loan on the consideration that another Loan would be floated later on, and that they had better therefore reserve their money for use on a future occasion. The *Shogyo* considers the present a good opportunity for them to contribute towards supplying the Government's needs, especially as the terms now offered are so favourable.

Original from

KOREAN SLAVES AND EUNUCHS.

We take the following account of some interesting Korean customs from the *Yiji*. There is in Korea a class of hereditary slaves owned by rich families. In addition to being employed in menial offices, these slaves have no right to own property. Formerly, their lives even were at the mercy of their owners, and though that abuse has now been abolished, they are still freely sold or hired just as beasts of burden are in other countries. About eight years ago, when Mr. Inouye Kakugoro, a prominent member of the House of Representatives, was in the employment of the Korean Government and edited the *Court Gazette*, he with the coöperation of the German Consul at the time, brought influence to bear for abolishing the system of slavery. The Government, obliged to concede a little, issued a proclamation that in future the status of slaves should not be hereditary but must be confined to one generation. Like other official edicts in Korea, this proclamation served no particular purpose; the old system remained as prevalent as before. The origin of slavery dates far back in Korea. When the present dynasty was founded, about five centuries ago, already a considerable number of slaves were owned in the country, and some of them are said to have rendered distinguished services in establishing the dynasty. A slight improvement has of late been effected in this custom. Its effect will be to diminish the number of hereditary slaves. Formerly a child either of whose parents was a slave, belonged to the category of the degraded class. But, in recent years, if one of the parents belongs to the better order, the child receives the higher status, provided that it be a male; a girl whose mother is a slave is doomed to slavery whatever her father be. The only modes by which a slave can emerge from bondage are by emancipation at the order of the Government, or by being ransomed by others. Slaves are subdivided into official slaves and private slaves; the former, owned by the Government, are employed in various menial occupations, the most common being that of carriers. Official servants and guards of the tombs of the King's ancestors are chosen from among these carriers. The King frequently bestows slaves on officers of distinguished verity, and local Governors not infrequently sell official slaves to the people. Official singers, a kind of Japanese *geisha*, are also selected from the daughters of the carriers. Those singers may be ransomed by their patrons, but the money goes to the Treasury. In Korea, if any member of a family commits a grave offence, the whole family is not infrequently reduced to slavery. The latest instance was that of the wife and daughter of the infortunate Kim Ok-kyūn. A woman convicted of adultery is commonly reduced to slavery. Private slaves owned by men of wealth are far more numerous than official slaves. Eight or nine years ago the price of a slave ranged from 100 to 300 *ryo* in Korean coin. A young girl commanded the highest price. Formerly a person of rank guilty of illicit intercourse with a slave was degraded, but this usage has since been abolished. Prince Wi-hwa's mother, who is one of the Court ladies, came from among the official slaves. In the Court of Sōul there are eunuchs, who live in special quarters of the city. They are all made eunuchs by their parents, with the view of having them employed in the Court. At present the number of eunuchs is between twenty and thirty thousand, and the majority are either attached to the Court or on service in temples. The Court eunuchs are of various ranks, which are in some cases hereditary. Eunuchs enjoying hereditary rank adopt young eunuchs and thus transmit their offices from one generation to another. Many of them have wives for the purpose of rearing adopted sons. They are very influential in the Court. The real power there may be said to be virtually shared between the Queen's relatives and the eunuchs. By way of illustrating this, it may be mentioned that among the three candidates usually submitted for the King's choice when there is question of nominating a local Governor,

the candidate recommended by the eunuchs is sure to be selected. One of the reforms that Kim Ok-kyūn intended to carry out should be get into power was the abolition of the system of eunuchs.

EXTENSIVE FIRE IN YOKOHAMA.

A very destructive fire broke out at 1.35 o'clock on Thursday morning at No. 4, Onoye-cho, Ichhome, an unoccupied house in the middle of a block almost opposite the Electric Light-works and the scene of the late fire. A heavy gale was blowing at the time and the flames quickly spread in all directions. The Police Brigades were soon at the scene of disaster and were speedily followed by Supt. Morgan of the Yokohama Fire Brigade with all his men, three hose-reels, and stand pipes. Fortunately there was a full head of water on, else the fire would have got beyond all control and swept the whole quarter clear. Within an hour and a half, however, the efforts of the firemen, together with a decided lull in the wind, which veered a little to the westward, began to tell, and about three o'clock all anxiety as to a further spread was allayed, and at 3.45 a.m., the Yokohama Brigade returned to the station. Needless to say the excitement in the neighbourhood of the conflagration was intense, an enormous crowd of sightseers, native and foreign, gathering very quickly, while the usual scenes of frantic dunder-headedness on the part of the occupants of the burning houses were to be noticed on every hand. No one was injured, however. The damage caused by the fire is very extensive: 69 houses have been completely destroyed, and four damaged, while the greater portion of the immense buildings of the Yokohama Market are an utter wreck. The cause of the fire is unknown, but there is very good reason to suppose that it is the work of tramps who had taken refuge for the night in the empty house.

AMATEUR THEATRICALS IN TOKYO.

The success attending upon the Amateur Theatricals given at the Imperial Hotel on Tuesday night, in aid of the Red Cross Hospital, should be very gratifying to promoters, players, and audience alike. The large dining room was used as the auditorium, and at the far end the stage was erected. Very little decoration was attempted, but over the stage hung the Japanese and Red Cross flags. The performance opened with a Duet (Overture de "Ruy Blas"), Mendelssohn, by Mrs. Pownall and Miss Divers. It was given with exquisite grace. This was followed by the Comedietta "Uncle's Will." To La Baronne d'Anethan and Monsieur Vieugné fell the burden of the piece, the former impersonating *Florence Marigold* and the latter *Mr. Cashmore*. The by-play of the two performers was exceedingly humorous. As *Mr. Barker*, who was desirous of using the fortune destined for the other two, on condition of their not marrying, for an asylum for insane dogs, Mr. Herod decidedly scored. During the interval Monsieur Braccialini sang "Libro Santo" (Pinsuti), in which his fine clear tenor showed to great effect, and the audience would not let the singer go until he had given an encore. The Farce "My Lord in Livery," in the second half, went capitally from start to finish. It is a succession of contretemps and misunderstandings, due to the blundering of an old butler who has been let into the secret of a bet, mistaking the Footman for *Lord Thirlmere*, who had wagered a friend that he would, inside half-an-hour, obtain from his friend's fiancée a certain ring she wore. The fine impersonation of *Sybil Amberly* by Mrs. Droppers called forth rounds of applause. As *Laura* and *Rose* Miss Dening and Miss Tuck gave able assistance to the central character. Mr. Tuke as *Spiggott*, and Mr. Kenny as *Hopkins*, were both excellent in their respective parts, especially the former. As *Lord Thirlmere* Mr. Herod had but little to do, but he did

that little well. A word of praise is due to Master von Fallot in the part of *Robert*.

The second performance of the Amateur Theatricals in Tokyo in aid of the Red Cross Hospital came off on the 12th instant before a crowded house, the composition of which differed from that of the preceding evening in that a very large number of Japanese were present, among them being Her Imperial Highness Princess Komatsu, their Excellencies Countess Saigo, Marquis and Marchioness Nabeshima, Viscountess Hijikata, and many other leading residents of the capital. Amateur theatricals are always difficult to criticise in the sense that they can not fairly be measured by the recognised standards of the regular stage, and yet in some respects they support even more rigorous scrutiny. The amateur necessarily lacks many of the conventional devices that form the professional's stock-in-trade, and impart to his acting a character recognised and appreciated, though seldom analysed, by the public. On the other hand, the amateur often gives us a new and highly artistic conception of a rôle, and when the plot of a play deals with life in the upper classes the amateur's rendering, in the great majority of cases, is incomparably more faithful than the professional's. "Uncle's Will," the first piece on Wednesday evening's programme, illustrated this point very forcibly. From first to last the performance was absolutely unmarred by any of the solecisms that would have been sure to obtrude themselves into a drawing-room performance by professionals. *Florence Marigold* (La Baronne d'Anethan) in all her moods was exactly what she would have been under similar circumstances in everyday life. The part is full of difficulties. Underneath the flippant cynicism of the brilliant girl between whom and the man she really loves a debasing pecuniary element has been thrust, there runs a current of rebellion against fate and of unacknowledged yearning to recall the happy days of love untouched by filthy lucre. A prey to many emotions, *Florence* becomes hypersensitive; passionately represents the slightest display of friendship upon the part of *Mr. Cashmore* (M. Vieugné), and is equally ready to attribute his coldness to any cause except the one that torments herself. All this was admirably rendered: a finished piece of acting such as would have evoked high applause under any circumstances. Above all, after the rubicon is passed, after the two, having signed away their title to conditional wealth, recover their freedom and learn that they love each other as fondly as ever, the transition from mutual raillery and abuse to placid affection was so capably depicted as to be almost affecting. Essential to the successful performance of such a rôle is the possession of a rich voice capable of marked modulation, and in that respect Madame la Baronne is exceptionally gifted. *Mr. Cashmore's* conception of his part seemed to us quite admirable. One's idea of the natural order of things is not much disturbed by displays of romantic dementia on the part of a sensitive girl; but from men we expect something of hard practicality, and the youth that finds love chilled as soon as its object inherits a fortune, belongs to a class so rare as to be almost ridiculous. But M. Vieugné managed to divest the rôle of the smallest element of incongruity. He was just the debonnaire loyal sailor who could cheerfully sacrifice everything except self-respect, and extricate himself from the most embarrassing situation with a shrug of the shoulders. They're Smith has committed one bad blunder in the composition of this generally capital comedietta. He makes *Cashmore* resort to actual rudeness in order to ensure that his proposal of marriage shall be rejected. We confess that we watched with no little curiosity to see what degree of prominence this blemish would receive, and were most agreeably relieved to find that *Mr. Cashmore* managed to shock *Florence* without outraging the sensibilities of his audience. M. Vieugné is to be most heartily complimented. He deserves undoubtedly to be ranked with the very best amateurs that have ever appeared on the stage of either Tokyo or Yokohama. *Mr. Barker*, the

eccentric old gentleman who can conceive no better use for fifty thousand pounds than to endow an asylum for lunatic dogs, found a very clever impersonator in Mr. Herod. The value of the part depends wholly on the rendering, and Mr. Herod, we think, made as much of it as was possible. His facial action was a study, and his garrulous efforts to satisfy the dictates of duty at the same time that he furthered the cause of covetousness, showed very skilful transitions of mood. Once or twice, indeed, he suffered his desire for the reversion of the big fortune to present some element of avarice not entirely compatible with the disposition of such a silly old faddist. But that is a matter of opinion. We mention it because such general excellence justifies special criticism.

The Committee made a most pleasant departure from ordinary custom by providing that even the interval between the pieces should not be without attraction. Mrs. Pownall and Miss Divers gave a duet ("Wedding Suite") upon the piano, rendered with great skill, and Count Coudenhove was to have sung the "Evocation of Nuns" but an unfortunate accident prevented his attendance.

Then followed the principal piece, "My Lord in Livery." This farce depends for its success almost entirely upon the efforts of the ladies. Sybil Amberly (Mrs. Droppers), Laura (Miss Florie Dening) and Rose (Miss Ella Tuck). Sybil's part to be ordinarily successful demands no little skill. In Mrs. Droppers' hands it became really striking. Her coquettish piquancy as she tripped across the stage fencing with Hopkins' unwitting questions about herself, was as pretty a bit of acting as we have ever seen, and her long sustained fit of trembling, broken by semi-hysterical monologue in the presence of the supposed burglar, can not be too highly praised. The roles of Laura and Rose, though apparently insignificant, require most careful rendering, and we may say at once that we have never seen minor parts better taken. Laura in her cook's costume was a study in peach-blossom and snowdrop, and Rose converted herself into the jauntiest of housemaids. We suggest to these ladies the advisability of caution. If they show themselves often in such frocks, the abominable fashion of the time will receive a death blow. Now-a-days ladies try to build up their "tops" on the lines of a London cab-driver's over-coat: the more monstrous the breadth they can impart to their shoulders, the more thoroughly do they feel *à la mode*. Thirty years ago the fair folk's fancy was to make balloons of their skirts: now their unique aim is to have a Herculean humerus. Heaven knows which is the more abominable sacrilege. There is nothing so exquisitely symmetrical in nature as the lines of the female body, and when women set themselves to substitute prodigious puffs and delirious inflations for the graces that God has given them, they are guilty of unpardonable impiety. It was an artistic oasis in the desert of deformities to see the sweet simplicity of Laura, the cook, but of course ladies that worship, as all properly constituted females do, at the shrine of fashion, should not expose their divinity to such risks. We must not dwell upon the costume question, however, lest we seem to set it above the acting, for which, in truth we have only the heartiest applause. Laura's horror when she learns that she has shaken hands with a footman; her march off the stage *à la* tragedy queen when Hopkins asks her to sew on a button for him, and her hysteria of terror when the supposed burglar is serving tea, were among the hits of the piece. Rose's by-play in her character of housemaid was also admirable. It was easy to see that both she and Laura had added many new and excellent conceptions to their original roles. Passing to the men, Mr. Tuke's Spiggott was a veritable *tours de force*. To an imitable make-up he added disguise of voice and manner so perfect that identification was impossible, and never once, even under the influence of terror and alcohol, did he deviate from the character of the empty-headed old butler, a combination of pomposity, servility, and conventionalism. Mr. Kenny, as Hopkins, was also thoroughly successful. He is

an old favourite on the stage in the Far East. Sometimes we have detected a propensity to over-act his part, but happily he escaped anything of that kind as Hopkins, and imparted spirit and interest to a rôle somewhat thin and colourless in conception. Mr. Herod took the part of Lord Thirlmere. It affords little scope for any display of ability, but Mr. Herod managed to throw a measure of life into it. Little Charley von Fallot did Robert, the page in buttons, and a better page it would have been difficult to find. In short, our readers will have gathered that every detail was carefully studied, and that the general result must be ranked among the best amateur performances ever given in the East. The arrangement of the stage was admirable. For much of the success in this direction Mr. Kenny, the Stage Manager, is to be applauded, especially for a moon manufactured in a thoroughly realistic manner by means of an electric light and a transparency. But we strongly suspect that ladies' aid must have been enlisted, for the draping of the room and the general disposition of the furniture showed the ineffable something that only female taste can impart. Of course we do not forget to mention the services of Miss von Fallot in the somewhat thankless rôle of Prompter and Property Manager. Her indefatigable good nature and thoroughness are gratefully remembered. Still more remiss should we be did we fail to offer, on behalf of the public, a tribute of thankfulness and applause to the Ladies of the Committee, especially Madame La Baronne d'Anethan and Mrs. Sannomiya. The labour and trouble devolving upon these two ladies must have been enormous. By them the affair was conceived and organized, and to them is chiefly due its remarkable success. Most of the rehearsals took place at the Belgian Legation, but some were held at the Imperial Hotel, and on each of these latter occasions the labours of the evening were lightened by Mr. Tuke's hospitality. After the Full Dress Rehearsal on the 10th instant, a capital supper was given by the same gentleman to all directly or indirectly concerned in the acting and preparations. Similar hospitality was extended by Viscount and Viscountess Akimoto to about 80 of the prominent residents of Tokyo after the fall of the curtain on the 11th, and the performance on the 12th concluded with a supper given by the Belgian Minister and the Baronne d'Anethan. Considering that the house was crowded to overflowing on both the 11th and the 12th, we can not doubt that the Red Cross Hospital will be materially benefited by the result.

CHINA NEWS.

The Hongkong Daily Press publishes the following letter giving an account of an incident said to have occurred at Sun-ui, in the province of Kwangtung:—

The better to carry out their hideous design, the heads of the family induced a Christian of the neighbourhood, their relation by marriage, to come to see them. On the 4th October this Christian took a conciliatory message from them to the catechumens. "There had been ill-feeling long enough," they said, "henceforth the Christians would be allowed to worship the Lord of Heaven and say their prayers as they thought fit." The Christians were too distrustful to accept these advances at first, but the next day, the 5th October, the day on which the Autumnal festival fell this year, one of the principal men of the village came to invite them officially to visit the ancestral temple, where the traditional repast in honour of the day was served. The Christian who had come the previous day urged that the invitation should be accepted and seven of the catechumens did accept, their names being Foun-u, Shing-tin, San-tin, Sz-cheung, A-sam, Tang-u, and A-pat. Arrived at the ancestral temple they were well received; a table was prepared for them and they were asked to be seated. The reconciliation would not be complete, hypocritically said Tsok-chin, if all the family were not there. Therefore the messenger was again sent to fetch the father and mother of Foun-u, as well as his grand-mother, a poor old woman eighty-three years of age. After some hesitation they went. Hardly had

they entered when the door was closed and they were shut in. Then commenced a great clamour. Fifty young men, all armed, surrounded the table where the Christians were sitting. A man named Tsok-chin acted as spokesman and called on them to renounce their religion. Shing-tin replied that they would rather die. Tsok-chin insisting, "You are losing your time," said Sz-cheung, "we are Christians and we will remain Christians." Hardly had he finished when the attack commenced, Sz-cheung was the first to fall, his skull fractured, and a blow with a spade cut open his abdomen. Thrown into confusion for a moment, the others, in order to escape the blows, made an attempt to pass through the crowd, but they were soon struck down in their turn, all receiving severe injuries. Foun-u was between his mother and grandmother, who tried to shield him from the blows, but the men dragged him away from them and he fell mortally wounded. While they were all lying unconscious, almost dying, the murderers hesitated a moment. Seeing the men all lying in pools of blood some of them were afraid, and the heads of the family began to reflect. "What has to be done?" they asked. "Of the wounded several would assuredly die. The most simple plan would perhaps be to go and find the chief of the notables, whose hatred of the Christians is well known." As the door was about to be opened some one remarked that several of those present would fly and give the alarm. It was then resolved that the messengers should leave through a hole made in the roof for them. The two principal murderers, Tsok-chin, who conceived the plot, and Sik-chao, then went to Wong Kwok-cheung. The catechist, having heard a rumour, was there before them, but the chief of the notables received him very badly, saying that the affairs of the Christians did not concern him; that the Foun family could manage their affairs as they liked and take what measures they thought fit against any member of the family. To the murderers he gave a better reception. "Remove," he said, all traces of the murder; kill the wounded and burn the bodies." With these words Tsok-chin and Sik-chao returned to the ancestral temple and entered it by the same way that they had left it. After having deliberated and drunk wine to give them courage the murderers resolved to act on the advice given by the chief of the notables. In an interior court a hole was dug in which a furnace for a wood fire was made, kerosene being poured on the wood. Then the wounded had to be despatched. Sik-chao said it was necessary to bleed the victims and to cut out the intestines, the heart, and the lungs. To this horrible work he set himself, with Hon-tsay and several others. Armed with large knives they fell on the victims and carried out to the latter the infamous programme.

Foun-u, Shing-tin, Sz-cheung, and A-sam despatched, and cut up into several pieces, the executioners were about to fall on Tang-u, when an old man, Tai-hon, interposed. "There has been enough of bloodshed," he said; "do you wish to wipe out the entire family?" His words made some impression, but Sik-chao, drunk with wine and blood, answered, "To leave these people alive would be to have witnesses against us. What are you thinking of?" "I will undertake," answered Tai-hon, "to prevent them taking criminal proceedings." "It is well," said several "but you shall answer for it with your head if they do." "I will answer for it with my head," answered the honest fellow. "Very well," said Sik-chao, "we will leave Man-fong (the father of Foun-u), his wife, Tang-u, and A-pat; but we have here only four bodies and there should be five. Where is San-tin?" Then the wretch mounted to the loft, where he saw San-tin lying and gave him two or three cuts, and then kicked the body down. In falling it struck a partly opened door and rebounded to the ground. As a shocking detail it may be mentioned that the son of Sz-cheung, A-kwan, a child of fifteen years of age, had to be a witness of the executions.

The night was now come and the furnace in which the bodies of the victims were to be burned was ready. Two or three logs and wood sprinkled with kerosene were at the bottom. Sik-chao, Hon-tsay, and the other murderers, their clothes and their persons covered with blood, took in their hands the entrails and the lungs, which they threw in first; then came the trunks, and above them they piled up more fagots, poured kerosene over the whole, and applied a light. The flames sprang up in the darkness of the night, lighting up the whole neighbourhood, and throwing even on the distant hills a sinister reflection. Throughout the village was the silence of death, Sik-chao and Hon-tsay, like two demons, passed the whole night in stirring up the fire with long bamboos.

By daybreak the infernal work was done; there remained only a smouldering mass, amongst

which, they thought, were only the ashes of the burnt bodies. What was their horror, when on removing the upper layer, they found almost intact the heads and the hearts of their victims. They quickly took them out, broke up the skulls by striking them with bamboos, and threw them with the hearts into baskets, which were passed out through the opening in the roof. The ashes and the surface soil which bore traces of the fire were scraped up and passed out by the same opening. In less than an hour the hole dug for the fire was filled up with fresh earth brought for the purpose. Still there were the blood stains on the floor where the victims had been killed. These were scraped out with a spade and the spots covered with sand.

At last the doors were opened and every one was free to go. Man fong, his wife, and the old grandmother regained their home. For Tang-ü and A-pai, who were unable to walk, sedan chairs were sent.

Where were the remains of the heads and entrails concealed? This is as yet unknown. All that is known is that the remains of the fire were thrown into the neighbouring river.

Such was the horrible tragedy enacted in the village of Tan-cheung on the 5th October.

The *Times of Ceylon* has discovered a delightful mare's nest. Our readers doubtless remember that the *Sendai Maru* left Kobe some time ago carrying about 500 emigrants for Guadaloupe. The Ceylon journal alleges that these men are not emigrants at all, but are intended to man the steamer *Tatsuta*, now lying at Aden because her British crew having been induced to leave her at the recommendation of H.M.'s Consul, it has been impossible for her to prosecute her voyage.

The *Pekin and Tientsin Times* has the following paragraph which will interest our readers in connection with the recent account of a Red Cross steamer visiting Port Arthur:—

Surgeon-Captain Henston, accompanied by members of the Red Cross Society recently formed here, left on Monday in the *Too-nan*, which has been converted into a hospital ship, for Port Arthur, to succour the sick and wounded. This step has been taken by order of the Viceroy, and the expenses incurred will, we understand, be borne by His Excellency. Among those who left in the *Too-nan* were the British Military Attachés Bower and Cavendish, Surgeon-Major James and four missionary doctors. There was a full supply of stretchers, splints, drugs, &c.

We take the following from the *North China Daily News*:—

Owing to the excitement at the Woo-sung forts on account of the receipt of news from Nanking warning the officers at Woo-sung and Shanghai to be prepared to receive a Japanese attack, a representative of this paper went down to Woo-sung yesterday to see what preparations were being made to obey the orders of the Nanking Viceroy and the central Government at Peking. He found that the General hitherto in supreme command there—Ts'ao Tè-ch'ing—had just been promoted to the Brigadier-Generalship of Langshan on the Yangtze by an Imperial decree of last week, and that the command of the forts and garrison had been given to Generals Pan and Muh, the subordinate officers of General Ts'ao. These two Generals now command three battalions each, while the battalions expected to reinforce the former will, most probably, be under a separate command also. At the North and South Forts, eleven large guns, 15 to 21 cent. calibre, sixteen machine guns, and twenty-two 6-pounder quick-firing guns have been added since last August to their offensive and offensive powers; but, unless the reinforcements alluded to above include gunners and artilleryists also, the present garrison of 2,400 men will have all they can do to work at the guns now in the forts. Upon being questioned as to how far the big guns could reach with their shells, the officers at the forts said that they could reach Tsung-ming Island easily. Every one seemed anxious to fight, declaring "that the Nanyang land forces would make the Peiyangs ashamed of themselves;" but many apparently said so "for effect," the general idea being that Woo-sung was safe enough, and that it would be the last place the Japanese would attack considering the commercial importance of Shanghai. At any rate, in spite of this, the Viceroy Chang's orders seem to be faithfully obeyed, and every preparation is being made to give the Japanese "a welcome" when the time comes. When the forts were entered yesterday the place was busy and quite lively. On two parade grounds there were men going through battalion-drill (foreign style); and here and there

were to be seen squads of men practising "resisting an assault;" while again on the walls facing the entrance of the river and far way to seawards, could be seen gunners practising loading and aiming with the big guns; but without actually firing. Flags were waving and signals were being made from the forts with some native gunboats in the torpedo channel to the north, this side of Tsung-ming Island, and apparently some attempts were being made either to lay more torpedoes in the North Channel or to fish others up for the purpose of testing.

The Tientsin correspondent of the same paper writes, under date December 1st:—

The Red Cross expedition to Port Arthur returned to day. Its mission was unsuccessful, save as an expression of sympathy and readiness to help the wounded. On hearing of the fall of Port Arthur, the Viceroy was asked if he could furnish a vessel for members of the Society—medical and lay—to go to the relief of the wounded, and the *Too-nan* was placed at their service. Two or three reporters and military attachés, by special permission of the Viceroy, also took passage. The party were not permitted to land, but were treated with the greatest respect and courtesy. An excellent letter was sent them expressive of the high appreciation in which their humanitarian visit was held, but declining their assistance, as was to be expected—there was no need for it.

They could gather but little information. The Japanese killed and wounded were about 300, and the Chinese was given as low as 600 and as high as over 2,000. The Japanese left an open way towards Talien-wan for the Chinese soldiers to escape, of which they largely availed. Everything was found intact. The Chinese killed their own wounded before leaving—in contrast to the Japanese caring for them. Sixteen Japanese gunboats were outside, but only four fired a shot. The people are returning and bringing presents of pigs, etc., and on Thursday evening entertained the victors with theatricals. The Japanese are evidently preparing for another important move. Chinese rumour says they are at Shan-hai-kwan.

Our readers will note the curious sentence "the Chinese killed their own wounded before leaving." Perhaps that accounts for the fact hitherto found so perplexing; namely, that while some 2,000 bodies of dead Chinese were counted, the wounded demanding treatment did not aggregate 100.

ARREST IN THE HARBOUR.

Some excitement was caused on the Bund on Friday noon just as the *Empress of India* was about leaving the harbour for Vancouver. It appears that Mr. W. Gordon, of Messrs. W. Gordon & Co., wine merchants, of Main Street, had obtained a warrant for the arrest of A. R. Lamb, a clerk in the firm's employ, who had taken a passage on the Canadian Pacific steamer that morning, the charge against the man being that he "feloniously and fraudulently did embezzle and steal certain moneys, to wit \$400, belonging his employers." Armed with the warrant from H.B.M.'s Court, Mr. George Kircher, the constable, proceeded in a steam launch across the harbour and got on board the *Empress of India* just as she was abreast the lightships. Lamb's arrest was quickly effected and his baggage was put over the vessel's side. In the afternoon, Lamb was brought before His Honour Judge Wilkinson, and formal evidence having been given of his arrest, the accused, who made no demur, was remanded to the British gaol to appear in Court again at 10.30 a.m. on Saturday.

DEATH OF MR. NOBUKITI KOIZUMI.

We regret to announce the death of Mr. Koizumi, Manager of the Specie Bank, which took place at his residence at 2 a.m. on the 8th inst. Mr. Koizumi had been ailing for some time, and two or three days before the end, his malady took the form of inflammation of the stomach, defying all medical treatment. The deceased was only 42 years old. He made finance his chief study from the time of his graduation from the Keiogi-juku, spending several years in London to acquire facility in banking methods in that metropolis of the world's business.

The first Director of the Specie Bank when it was established 14 years ago, he showed great ability as a financier and great tact as a manager. But he resigned the post before long, and did not resume it until the Presidency of Mr. Sonoda Kokichi. His death is a great loss to Japan. We are asked to intimate that the funeral will take place this afternoon, leaving the deceased's residence at 1 p.m. and proceeding to the Kobayama Cemetery.

SHANGHAI NEWS.

Some hundreds of sailors and marines from the British fleet at Woo-sung arrived at Shanghai on December 6th on general leave. They were towed up by torpedo boats. The *N. C. Daily News* estimates that these visitors, who came in two batches of 1,100, would spend about \$20,000 during the time they were on shore, each lot spending about \$10,000 during the forty-eight hours they were on leave. These sailors were very orderly during their run on shore, much to their credit be it said.

Admiral Fremantle was to leave Shanghai in the *Alacrity*, bound for Hankow, on the 9th inst.

Two foreigners who visited Tsingpu recently were stoned by boys on the walls as their boat passed along the creek outside the city. One of the foreigners, a British subject, reported the matter to the British Consul, and Mr. Jamieson promptly wrote to the Taotai desiring him to request the Tsingpu Magistrate to take such steps as will prevent a repetition of such conduct in the future.

Fire broke out in Tiendong Road, near to Woo-sung Road at half-past 4 o'clock on the afternoon of December 7, says the *N. C. Daily News*, and with their usual promptitude, the firemen hastened to the scene. Their efforts were very successful, and in less than twenty minutes there was no danger of the flames spreading. Some fifteen houses were destroyed, the fire having crossed the street and attacked the buildings on the opposite side. Most of the telephone wires were burnt through, as was one of the electric light wires. The electrical department did not believe its name, for before 5 o'clock the burnt wire had been replaced, notwithstanding the delay caused by some beams falling on the new wire before it was properly stretched. Admiral Fremantle visited the locality in company with Inspector Howard and expressed his high appreciation of the way in which the firemen did their work. The property on one side of the road belonged to the Land Investment Co., and Messrs. Dowdall and Hanson are agents for the rest. The houses were insured.

It was reported in the Shanghai Settlement on the 5th inst. that telegraphic news had been received from Hongkong of the death of Mr. H. Hoppius, the head of Messrs. Siemens & Co., but that firm, says the morning journal of Shanghai, has not received any such announcement though he was known to be very ill, and it is therefore to be hoped that the report of his death is premature.

China, says the *Mercury*, is not behind the times, in some ways at least, as the following story shows. Outside the northern gate of a city in Anwei, an old temple has been for years occupied by a few nuns, and even these have found it hard to get enough to keep alive. But lately, by some mysterious or miraculous means, a very large, egg-shaped stone has appeared in their enclosure. The nuns state that it was dropped there by a strong wind, and as it is said to be too heavy to be lifted by a thousand men, this is considered as the most satisfactory reason by the country people. But the nuns are reaping a harvest; people flocking to the place in large numbers and making liberal donations to support the votaries of the temple where such a wonder occurred. Is not this very like *fin de siècle* religion in the most civilized parts of Europe?

The British gun vessel *Pigmy* arrived at Kiukiang on the 3rd inst. and left for Hankow the same day. She will relieve the *Peacock* and then winter at Hankow; the latter vessel will proceed to Shanghai, calling at the ports en route.

Advices to the *Mercury* from Tientsin, dated the 1st inst., state that, though much ice was then coming down the river, it was showing no signs of blocking at the bends, and it was expected that the river would remain open until after the next spring tides—i.e., until the 14th or 15th.

The Chinese Native papers report that General Wei, who was degraded and ordered to Peking for examination, has put the blame of his remission on to another General, whose name he does not give, but who is his superior. The full particulars are being kept quiet, and the penalty has not yet been announced.

COMPARISONS.

IF any evidence were needed to prove the usefulness of illustrating Japanese modern history by apposite vignettes from European, it would be furnished by Dr. J. N. SEYMOUR'S letter, published in our correspondence columns. As to the tone of the letter we shall say nothing. It is evidently written under the influence of strong feeling, and besides we have nothing to do with the graces of style or courtesies of method exhibited by our correspondents.

Dr. SEYMOUR protests against the "exceedingly wearisome and needless habit of making every instance of the wrongdoings of Japanese an occasion to call attention to the misdeeds of Europeans." In thus speaking, he allows himself to be betrayed into one of those generalizations always easy to formulate and nearly always unjust. Against whom does he prefer his charge of habitual and invariably invidious comparison? Evidently against the *Japan Mail*. It is untrue. The *Japan Mail* does not follow such a habit. Not that the editor would be for a moment deterred by any apprehension lest some of his readers might find the lesson too apposite to be pleasant. The truth is seldom agreeable. But to quote precedents may readily be mistaken for a plea of justification, and two wrongs can never make a right. On the other hand, speaking broadly, we doubt whether anything could be more useful than an ethical concordance showing clearly the points of convergence and divergence in the morals and manners of the East and the West. The whole intercourse of the Occident and the Orient is governed by a process of tacit comparison. It is uniformly coloured by an assumption of superiority on the side of the European and American races. In their hearts thanking the Creator that they are not as their Eastern brother, they look down upon him and seldom exhibit towards him a mood more liberal than one of supercilious tolerance. Such a habit of mind has its uses. But it has also its terrible abuses, and many of the latter would certainly be checked did the European or American recognise that the stones he throws so freely at Orientals often shatter his own windows, though ignorance of his national records renders him blind to the catastrophe. Consider the particular incident upon which this controversy turns. It has been made the occasion of declaring that the Japanese have only a thin veneer of civilization, incapable of resisting the friction of abnormal events. Veneer of civilization forsooth! The Japanese were a refined and highly civilized race when our forefathers clothed themselves in hides and lived a life of semi-barbarism. There is no real question of civilization and non-civilization as between Europe and Japan. There is only a question of one kind of civilization against another

But many a European, in his pride of comparison, sees only his own civilization and relegates every other to the rank of barbarism. It is well that he should be sometimes invited to contrast the actual facts of European and Japanese histories, instead of living entirely in a vision land of moral arrogance.

With regard to the Port Arthur affair and Brigadier-General NICHOLSON, we find some difficulty in seriously following Dr. SEYMOUR'S line of argument. How can he possibly deny that the illustration is apposite? It is true that he "protests against the indecency of implying that the conduct of Brigadier-General NICHOLSON furnishes any parallel to that of a drunken coolie." Indecency! Where is the indecency? Dr. SEYMOUR will pardon us if we brush aside such platform claptrap. The story of the Indian Mutiny in general and of Brigadier-General NICHOLSON'S counsels in particular was adduced to show that even a Western people, and even one of its most respectable representatives, may be betrayed into cruel excesses by the passion of revenge. Some of the Japanese soldiers and coolies appear to have been betrayed into such excesses at Port Arthur by that very passion. Immediately their conduct was cited as proving the palpable thinness of Japan's "veneer of civilization." Could anything be more apposite in such premises than the transgression of civilized limits for the sake of revenge by a Western people forty years ago? For the rest, what does Dr. SEYMOUR mean by asking whether General NICHOLSON'S "courage in stating his opinion is to injure his reputation?" That kind of contention seems to us to be mere persiflage. No one finds fault with General NICHOLSON'S courage in stating his opinion. What we find fault with is his opinion. Dr. SEYMOUR is right in saying that JUSTIN MCCARTHY is our authority. But as to JUSTIN MCCARTHY'S "History of Our Own Times" being "a libellous compilation of newspaper extracts," we must decline to accept our correspondent's verdict. Newspaper extracts of the kind accessible to a compiler of modern history in England constitute sources of information far superior to anything available before the days of such journals as *The Times*, the *Standard*, the *St. James's Gazette*, the *Manchester Guardian*, and so forth. At all events, even supposing that NICHOLSON did not enunciate any such opinion, the general tone of the British press and, above all, of the English newspapers in India, during the Mutiny, to say nothing of the acts of revenge alleged to have been perpetrated by the soldiery, indisputably destroy our title to infer the absence of civilization in a nation because its troops, excited to phrensy by the atrocities of their foes, retaliate in kind when occasion offers. We do not dream of

offering any excuse for the things said to have been done at Port Arthur. None can condemn them more heartily and uncompromisingly than we do. But we enter a protest against the palatable injustice of dubbing the Japanese people uncivilized because some of Japan's soldiers, under circumstances of the most infuriating nature, departed temporarily from the excellent canons hitherto obeyed by them, and were guilty of acts which, after all, can be paralleled by reference to the recent history of our own nation.

THE CHARACTER OF MARLBOROUGH.

THE *Quarterly Review* for October contains a review of WOLSELEY'S "Life of the Duke of Marlborough," which has hitherto been completed only to the time of the accession of Queen ANNE. The review opens with a well-known quotation from FROUDE'S essay on the "Science of History," published in *Short Studies of Great Subjects*. The quotation runs as follows:—"It often seems to me as if history was like a child's box of letters, with which we can spell any word we please. We have only to pick out such letters as we want, arrange them as we like, and say nothing about those which do not suit our purpose." The review suggests, and goes far to prove, that this was the method pursued by MACAULAY in his treatment of the characters of MARLBOROUGH and of WILLIAM OF ORANGE respectively; that, with the hand of a master, he painted the one all in shadow, the other all in light. MACAULAY, says the reviewer, has, "consciously or unconsciously, transferred to his pages charges against MARLBOROUGH which he can only have taken from pamphlets, the writers of which he has himself denounced as habitual liars." The peculiarity of MACAULAY'S wonderful memory was that the phrase he required, or the fact that he wished to use, came always and instantaneously to the tip of his pen, but the source from which he had obtained it was a matter of no importance. That MACAULAY is profoundly untrustworthy, that he must be regarded rather as a brilliant romance-writer than as a historian, has been maintained by several careful and unbiassed critics, notably Mr. PAGET, Mr. SAINTSBURY, and Mr. LESLIE STEPHEN; but his pages are so fascinating and are still so widely regarded as authoritative for the period of our history that they cover, that the types he created for us of MARLBOROUGH and of WILLIAM still dominate the popular mind. They form the basis also of what is presented concerning this period by the writers of shorter histories. Undoubtedly, then, the popular estimate of MARLBOROUGH is that conveyed in the subjoined quotations from GREEN'S "Short

History of the English People." After describing MARLBOROUGH's earlier relations with JAMES II., GREEN goes on to say: "No sentiment of gratitude to his older patron hindered MARLBOROUGH from corresponding with the Prince of ORANGE, from promising ANNE's sympathy to WILLIAM's effort, or from deserting the ranks of the KING's army when it faced WILLIAM's in the field. . . . The sense of his power over ANNE soon turned MARLBOROUGH from plotting treason against JAMES to plotting treason against WILLIAM. . . . His plan was to drive WILLIAM from the throne by backing the Tories in their opposition to the war as well as by stirring to frenzy the English hatred of foreigners, and to seat ANNE in his place. . . . So notorious was his treason, that on the eve of the French invasion of 1692 he was one of the first of the suspected persons sent to the Tower. . . . His passion for his wife was the one sentiment which tinged the colourless light in which his understanding moved. In all else he was without love or hate, he knew neither doubt nor regret. In private life he was a humane and compassionate man; but if his position required it, he could betray Englishmen to death, or lead his army to a butchery such as that of Malplaquet. Of honour, of the finer sentiments of mankind, he knew nothing; and he turned without a shock from guiding Europe and winning great victories to heap up a matchless fortune by speculation and greed."

It is not possible for us to reproduce at length the argument by which Lord WOLSELEY and his reviewer endeavour to rebut these charges, but we may hope to convey its general tenour. First, to allude to the minor charges of penuriousness, we take the following quotation from the review:—"In many respects he (CHURCHILL as a young man, at the court of the Restoration) was far superior in morals to the crowd around him. He neither drank nor gambled. Naturally the fact that his father had been beggared by taking the side of the KING during the Civil War made money a pressing necessity for CHURCHILL. It was surely a virtue, not a vice, that, having no money to spend, instead of running into debt, he acquired a habit of careful economy. That such a habit formed in youth is hardly ever shaken off, and degenerates into niggardliness long after there is no need for saving, is one of the commonest experiences of life. We all know instances of it. They are not attractive, certainly, but we might as well praise or blame trees for throwing out their leaves in spring as complain of the wealthy Duke of MARLBOROUGH for blowing out a superfluous candle, because JOHN CHURCHILL, if he was to be honest, had to stint himself in rushlights."

Turning to the graver charges of treason and double treason, we find that the

following is the drift of the argument by which the condemnation of MACAULAY is to be reversed. CHURCHILL was by inheritance and education a Tory of the Cavalier type, to whom the KING was King by right divine, and who regarded non-resistance as a religious duty; but he was also a sincere Protestant, and thus throughout the reign of JAMES II. he was constantly torn in two directions at once. It was by CHURCHILL's generalship that MONMOUTH was defeated at Sedgemoor, and it was to CHURCHILL, therefore, that JAMES owed the preservation of his Crown; but, notwithstanding all his loyalty, profound disgust was excited in his mind by the subsequent fiendish cruelties of JAMES and Judge JEFFREYS during "the bloody assize." That was in the summer of 1685. In the autumn of the same year, LOUIS XIV. of France revoked the Edict of Nantes, and the effect of this measure on the subsequent course of his history in England can hardly be overestimated. On JAMES, with whom Catholicism amounted to a disease, it had the effect of awakening a feeling of rivalry; and, though he ostentatiously welcomed the refugees from France, and publicly protested against the action of LOUIS, there is little doubt that he congratulated him in private, and looked forward the more eagerly to the time when, with Catholic officers leading an Irish army, he could begin dragonnades on his own account in England. That, at least, was the belief of the Protestant English, stirred to horror by the tales of the refugees, and to fear by the increased contempt for law displayed by the KING. CHURCHILL was by no means one of the first to take action in the matter; he knew nothing of the negotiations with WILLIAM until some time after they had been opened. When he did know of them it was difficult for him to decide how to act. His theoretical belief in divine right was unshaken, but his Protestantism was firmer than ever. To add to his difficulties he knew that on him more than on any other man in England the future depended. Should he side with WILLIAM, the KING's power would crumble away; should he lead the KING's army against WILLIAM, he could easily repel the invader. But then, in the latter case, there would be another bloody assize, bloodier than the first, and none knew better than MARLBOROUGH how powerless he was, notwithstanding all his services to JAMES, to move the marble-hearted KING to moderation. In his perplexity, MARLBOROUGH applied for advice to TURNER, Bishop of Ely, and was told that "it would be rebellion against GOD if he sided with those who sought to destroy the civil and religious rights of the people." It was on this advice that CHURCHILL acted when he abandoned JAMES and fled to WILLIAM's camp.

When this step had once been taken, its result were beyond his control; he had

never wished for the deposition of JAMES and the accession of WILLIAM, he had wished merely to oppose JAMES's unlawful acts and to defend the Protestant religion; but he was compelled to acquiesce in WILLIAM's accession to the throne as the only alternative to anarchy. In Lord WOLSELEY's view, the Revolution upset all MARLBOROUGH's ideas of loyalty. His only conception of loyalty, and that of those among whom he had been brought up, was for the KING by divine right. His subsequent plottings were due to a desire to hedge, to secure safety for himself and his family in any event, at a time when it was scarcely possible to say who might ultimately be on the throne, and due to further dissatisfaction at the way in which he was treated by WILLIAM. The *Quarterly* reviewer has another interpretation of MARLBOROUGH's conduct, one more favourable to the great general. It is based upon a re-reading of the character given by MACAULAY to WILLIAM OF ORANGE; but want of space forbids our following the argument any further. It is sufficient to say that those who read the article will be inclined, without by any means entirely exonerating MARLBOROUGH, to revise the harsh judgement they had previously formed of him as a double-dyed traitor.

CHINA'S LAST RESOURCE.

SOME very striking information is vouched for by the Tientsin Correspondent of the *China Gazette*. He learns, he tells us, from official sources, that General VON HANNEKEN has been fully authorized to direct the movement of all the forces by water and land, and all commanders are to obey his instructions. He is also authorized to memorialize the Throne personally. He is further authorized to raise immediately ten battalions of troops as his own staff brigade. That is to say, if the story is true, a German officer has been appointed by China Commander-in-Chief of all her military and naval forces.

It is a very surprising story, but it is by no means incredible. More than thirty years ago, when the progress of internal dissensions threatened the Government of China with dangers hardly less serious than the present, the traditional policy of keeping foreigners at arm's length was abandoned, and the Government in its extremity had recourse to foreign aid. Finally, when it appeared that some of the foreign officers might become even more threatening than the Taepings themselves to the stability of the Empire, the command of the Imperialist army was given to GORDON, with a result that China is not likely to have forgotten.

The Taeping rebellion, however, was a very different affair from that in which China is now engaged. The men whom the Imperialist army had to face were Chinamen like themselves, similarly or-

ganized or disorganized, similarly equipped or unequipped. The rebellion, when it was over, may have seemed to the Chinese to have been, after all, an insignificant affair: certain it is, at least, that its significance was not fully appreciated; for, though some appearance was made of arming and drilling troops in western fashion, Japan has shown the world how flimsy was the pretence. Though a few exceptional men may have sighed for better things, Chinese officialdom as a whole remained enclosed within its shell of hoary conservatism, impervious to the quickening influences that in thirty years have remodelled Japan to the core.

But her island neighbour, whom she despised not less than hated for what she deemed subserviency to the evil ways of the western barbarians, has given a rude shock to her slumbers. China is being taught, far more thoroughly than she was taught either by England or by France, how impotent are her undeveloped resources, to cope with the trained military energy of western civilization. Her armies are out-generalled, her navies out-maneuvred. Her gunners and her riflemen expend vast quantities of powder and shot with little more effect than that of filling the air with smoke. Her men, behind almost impregnable fortifications, resist a Japanese charge as ineffectually as if they were in the open field. After one experience of Japanese rams, torpedoes, and big guns, her naval officers dare not trust themselves in the open sea. It is not surprising then if in her despair China is once more eager to learn from foreigners the secret of Japan's success.

If the report is true, what will be the result? VON HANNEKEN is a man of courage and resource, but the reorganization of the Chinese military and naval forces under the very guns, as it were, of a vigilant and active enemy is likely to prove a task beyond his powers. If, indeed, the Chinese can supply him with ample funds, if part of these funds can be expended in the purchase of munitions of war from some foreign Power careless of incurring the hostility of Japan, if he can obtain a large number of highly trained and trustworthy foreign officers to drill and lead his regiments, and above all, if the Chinese distrust and hatred of foreigners accentuated as they are owing to the victories of the Japanese, do not prove an insuperable obstacle to the enforcement of efficient discipline, VON HANNEKEN may yet be able to organize a powerful resistance to the armies of Japan. But these contingencies seem little likely to be realized, and only after the conclusion of peace is it probable that China, if she has indeed at last learned the lesson that no disasters or humiliations have hitherto been able to teach, will have the opportunity of retrieving the blunders of the past. At present the answer of the Fates will probably be that given to the foolish virgins in the parable, "Too late! Too late! Ye cannot enter now."

COMPARISONS—AND FALSE INFERENCES.

WE wish especially to direct our readers' attention to a letter signed "Mercator," which we publish in another column. It is a temperate statement of certain views and principles from which few intelligent men will be found to differ, and with which we ourselves, at least, are entirely in accord. The only sentence that has perplexed us in the letter is the question, "Such being the character of these executions, why do you regard them as being on a par with the very offences they were intended to put an end to?" If our readers will be kind enough to consider the passages we subjoin, they will, we feel confident, share our perplexity. On December 7th we wrote, in an article dealing with the conduct of the Japanese troops and coolies at Port Arthur:—

It is recorded that during the Indian Mutiny a distinguished British officer, Brigadier-General Nicholson, urged the passing of a law to authorize flaying alive, impalement, or burning of the murderers of the women and children in Delhi, and that a leading English paper emphatically declared that Alva's methods with the people of the Netherlands were the only measures proper for England's soldiers to adopt toward the rebels in India. In truth, there are times when the elementary passions of men's primitive condition surge over and obliterate the restraints of civilized culture. Something of that kind happened at Port Arthur.

On December 11th, in reply to a letter criticizing that article, we wrote:—

The story of the Indian Mutiny in general and of Brigadier-General Nicholson's counsels in particular was adduced to show that even a Western people, and even one of its most respectable representatives, may be betrayed into cruel excesses by the passion of revenge. Some of the Japanese soldiers and coolies appear to have been betrayed into such excesses at Port Arthur by that very passion.

Now can any sane man who reads those extracts base on them a statement that we regard the executions of the Indian mutineers by blowing them from cannon as comparable with the massacre at Port Arthur? What we said was that the commission of certain atrocities, and more especially the mutilation of the dead, will inflame the most civilized people with the rage of madness; and we referred to the history of the Indian Mutiny in illustration of that fact. But our comparison was not between the massacre at Port Arthur and the military execution of the rebels by blowing them from guns; it was between the spirit of wild revenge that actuated the Japanese responsible for the massacre and the spirit of wild revenge that took possession of a large section, both civil and military, of the English people at the time of the Indian Mutiny. In consequence of that spirit of revenge certain barbarous methods of punishment were proposed by Englishmen, but, happily, were not carried into effect; in consequence of that spirit certain atrocities were, it is alleged, committed by the English soldiery: those proposed methods of punishment and those alleged atrocities are what we compare with the atrocities said to have been committed by the Japanese at Port Arthur. No-

thing can palliate such outbursts of primitive savagery as these, to which, unfortunately, all humanity is prone. But our contention is that it is an injustice to condemn a whole nation as "barbarous" on account of an isolated outburst of revenge. The manifest desire of Japan has been to conduct this war in accordance with the principles that for the last half century have regulated the conduct of civilized belligerents; and, waging war with a Power that openly disregards those principles, she has yet succeeded on the whole, in carrying them into effect. The occurrences at Port Arthur are a grim incident in the campaign; and Japan will do well to take strong measures to prevent anything of the kind in the future.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

JOHN BROWN AND THE NEGRO CHILD.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Two letters have appeared in your columns during the past few weeks with reference to the widely circulated story about John Brown's having stopped while on his way to the scaffold to kiss a negro child.

The alleged incident in itself considered, is wholly devoid of either interest or importance, as the kissing of a negro child is altogether a matter of individual taste with which outsiders have no manner of right to intermeddle. Unfortunately, this absolutely groundless story has been used to throw a halo of romance about the memory of Brown, and to give a touch of gentleness to the last hours of a man whose life was marked by almost constant violence and strife. It has even been made to do service in illustration of the life and spirit of the Lord Jesus Christ.

But those who do not view either the character or the deeds of Brown through the hazy atmosphere of sentiment, but estimate the man by the bald facts of history, experience a distinct sense of recoil when he, or anything connected with him, is used to illustrate the life or spirit of the Christ. Hence the effort to expose the fictitious character of the incident in question.

Born and reared almost within cannon shot of Harper's Ferry and Charlestown (not Charleston, which is a different and distant place), I have been familiar from childhood with the story of this raid and have known several persons who were directly connected with the trial and execution of John Brown. In the light of these facts and upon the explicit testimony of a man who was a member of Brown's military escort, I ventured to challenge the historicity of the story, but Dr. Gordon replied that he deemed the testimony of "one unknown witness" inadequate proof. This was a perfectly legitimate position, as every man has a perfect right to pass upon the value of the evidence presented in any given case; though it would have been quite pertinent to inquire whether he had exercised the same just and judicial temper as to the acceptance of the story in the first instance. If not, a story so readily received ought to be quite as easily rejected.

Since then Mr. E. H. House has given additional statements adverse to the historicity of the alleged incident. Within the past few days, further evidence has come to my notice from a source which I had entirely forgotten, and in order to clinch the thing I give below an extract from a letter written by General "Stonewall" Jackson, who had been ordered to the town in charge of the cadets of the Va. Military Institute to guard against any possible disorder. The statement is found in "Life and Letters of 'Stonewall' Jackson"—page 130.

"Jno. Brown was hung to-day at about half-past eleven a.m. He behaved with unflinching firmness. . . . Brown rode on the head of his coffin from his prison to the place of execution. . . . The open wagon in which he rode was strongly guarded on all sides. Captain Williams marched immediately in front of the wagon. The jailer, high sheriff, and several others rode in the same wagon with the prisoner."

Brown had his arms tied behind him, and ascended the scaffold with apparent cheerfulness," &c., &c., &c.

The letter is very full and gives a circumstantial account of everything connected with the execution, and even describes minutely the prisoner's dress.

Thus the story that a negro child (or any one else for that matter) could break through a strong guard of soldiers and get into the arms of a prisoner who was being conveyed in a wagon to the place of execution is shown to be not only groundless, but in the last degree absurd. Thanking you in advance for the insertion of this communication, I am, yours very truly,

H. TUCKER GRAHAM.

Takamatsu, Kagawa-ken.

COMPARISONS ARE ODISIOUS.

SIR,—However necessary it may be when we criticise others to bear in mind that we ourselves are not spotless, the habit of making every instance of the wrong-doings of Japanese an occasion to call attention to the misdeeds of Europeans tends to become exceedingly wearisome and, I should hope, needless. Especially is this the case when the supposed analogous instances are far from apposite.

I find in your issue of the 7th an article on the lamentable occurrences at Port Arthur. It being apparently desirable to find something similar amongst Europeans, you say:—"It is recorded that during the Indian Mutiny a distinguished British officer, Brigadier-General Nicholson, urged the passing of a law to authorize flaying alive, impalement, or burning of the murderers of the women and children in Delhi." I do not see any analogy. In one case an officer of great experience and of high reputation, as well amongst the natives as amongst his own countrymen, urges his opinion that the punishment of simple death is insufficient for the atrocious crimes of semi-civilized people—an opinion, not the outcome of blind frenzy, but formed with deliberation. As his physical courage cost him his life, so it appears his courage in stating his opinions is to injure his reputation. As for the other case, you have stated that drunken and infuriated coolies killed peaceable inhabitants. In hoping that the reports are exaggerated we all agree. I protest strongly against the indecency of implying that the conduct of Brigadier-General Nicholson furnishes any parallel to that of drunken coolies. And is your statement about him true? I have heard and read much about him, and believe your only authority for it—why did you not mention it?—is the libellous compilation of newspaper extracts which Justin McCarthy miscalls *History*, and which he arranged apparently to furnish arguments for his own political party.

Your obedient servant,

JOHN NICHOLSON SEYMOUR.

December 9th, 1894.

THE YAMAGATA EARTHQUAKE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you kindly publish the following approximate statement of Receipts and Expenditures on behalf of the sufferers from the recent earthquake in Yamagata-ken?

RECEIPTS.	YEN.
Foreigners in Tokyo	472.74
Foreigners in Yokohama	308.20
Foreigners in Osaka	129.00
Foreigners in Sendai	73.00
Foreigners in Kyoto	62.00
Foreigners in Niigata	47.00
Mr. Miller, Morioka	30.00
Foreigners in Kobe	6.00
Mr. Mackenzie, Fukui	5.00
Japanese of Niigata and vicinity	4.35

Total

EXPENDITURES.	YEN.
Household Utensils	78.87
Wadded quilts (<i>Futon</i>), 330 pieces	382.80
Straw Mattresses (<i>Kusubuton</i>), 275 pieces	60.50
Japanese Clothing (<i>Kimono</i>), 339 pieces	138.20
Japanese Sauce (<i>Shoyu</i>), 30 casks	29.85
Workmen's trousers and hats	30.00
Expenses of making and ordering quilts	23.00
Telegrams, English and Japanese	2.80
Freight	15.77

Total

Balance on hand

The above statement is merely an approximate one, as owing to one or two slight mistakes made in copying receipted bills, I have not been able to estimate with complete accuracy the number of

different articles bought. In a short time, however, I hope to publish a perfectly correct statement. The present one, however, will serve to give contributors an idea of how their contributions have been expended so far.

Had the money come into my hands as one lump sum the committee here might have spent it all very profitably in Niigata, as things are much cheaper in this region than further north. Coming as it did, however, little by little, we were forced to suit our purchases to existing funds and so there is now a large balance on hand. The articles most needed by the sufferers seem to be bedding and clothing, and as these have to be ordered from country towns in the vicinity of Niigata, it takes from one to two weeks to get an order filled. This fact together with the refusal by the ship companies to receive any more goods this year on account of the uncertainty of the weather, compelled us to stop buying some two weeks ago. Since that time we have been busy attending to the making up of articles ordered, and seeing to their getting shipped. So far all articles bought have been shipped to Sakata, but a few days ago we wrote for information regarding the sufferers in the villages of Nishu and Higashi Tagawa-gori, as reports have reached us to the effect that there is great destitution in these places. We are now awaiting the answers to the letters sent out, and it may be that one of the Committee will visit these two prefectures to assist in relief work there. It is but fair to say here that the Committee is very greatly indebted to several Japanese friends for their able and ready assistance. Special mention must be made of Mr. Chohachi Suzuki, who, in spite of his sixty odd years, has worked day and night to obtain the greatest possible number of articles with the least possible money. Largely through his influence also, the members of the churches in Niigata, were enlisted in the good work, and the women alone contributed the making up of our 100 quilts.

It is perhaps needless to add, that the destitute people of Sakata are loud in their expressions of gratitude for what has been done. The *foreigner* will have a warm place in their hearts henceforth.

I may close this communication by saying that there is still a great amount of destitution in the earthquake region, and if any who read this letter are disposed to contribute, or add to previous contributions, I shall be only too glad to acknowledge such and report expenditures later.

Yours, on behalf of the Committee,

HILTON PEDLEY.

Niigata, December 4th, 1894.

THE MASSACRE OF CHINESE AT PORT ARTHUR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Before the writers in the foreign journals, and the foreign residents generally, condemn as "barbarous" and "uncivilized" the revenge taken by the Japanese soldiery for the torture and mutilation of their comrades-in-arms, would it not be well for the British at least, without going further, to look back upon some pages of their own national history during the last hundred years?

During the Peninsular war, many Spanish towns were sacked, and given over unreservedly to the rapine and pillage of the army under Lord Wellesley, and that in the ordinary course of war, and not in retaliation for such atrocities as were practised by the Chinese upon the Japanese.

In the New Zealand war, whole villages (or *pahs* as they are called) of innocent people were fired into and destroyed by British troops in retaliation for murders committed by individual Maories upon the families of unoffending settlers. Again, an Island in the Pacific (its name has escaped me at this moment) was visited by a British man-of-war which shelled the entire island, leaving, so far as is known, not a single inhabitant alive, in return for murders committed some time previously on the crew of some British trading vessel.

And to come to quite recent times no one who remembers the awful tragedy of Cawnpore during the Indian Mutiny can have forgotten how by order of the Commander-in-Chief, the minions of Nana Sahib, who it is to be presumed acted in obedience to his orders, were blown to atoms from the cannon's mouth.

All these retaliations, well-deserved as they were, were made under the sanction of a so-called "Christian" Government and its officers, and neither the British people, nor the other nations looking on, cried out "shame!"

But with regard to every action of the Japanese, we have suddenly become most remarkably sensitive, and it would appear that we have constituted to ourselves the right to sit in calumny (our sympathies and feelings not being theirs) and

judge them from a far more humanitarian standpoint than we used for ourselves in the instances given above.

Without attempting to justify the Japanese, I venture to say that every British soldier worthy of the name, when animated by the spirit of comradeship and stimulated by the heat of action, would under similar provocation, have acted in a precisely similar manner, and so will all soldiers continue to do so long as war lasts in the world. And while war with all its inevitable stimulants of the most savage propensities of mankind, continues to be practised by so-called "Christian" nations, and is sanctioned by so-called "Christian" churches by prayers to God "to bless our arms" and thanksgiving to God for "victories over our enemies"—I say—while such farces on the true spirit of Christianity are "liable at any political outburst to be evoked in any part of the 'civilized' and 'Christian' world, let us pause before we arrogantly judge the actions of the soldiery of a nation not even professing our 'Christianity,' and which has so very recently adopted our 'civilization,' until, in the words of the Christ, who if he came (not only to Chicago, but to any so-called 'Christian' city in the world, could not but cry out 'Ye hypocrites!') we are able to say 'Let him who is perfect cast the first stone!'"

I am, Sir, yours, &c.,

December 10th, 1894.

JUSTICE.

"COMPARISONS."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Permit me to point out that the blowing of rebels from cannon during the Mutiny of 1857 has nothing in common with the indiscriminate slaughter of defenceless and innocent people.

The Indian authorities found ordinary measures did not prevent the commission of outrages on women and children. The fanaticism of the rebels made them proof against the terrors of mere physical death, and it was found necessary to combat that fanaticism by their superstitions. They believed that blowing from cannon meant annihilation, destruction of both soul and body, and the authorities employed this mode of execution not in revenge but as the most effective means of overawing wretches whom nothing else could deter from unspeakable cruelties.

I believe it will be found that these executions took place with due deliberation and enquiry, and that the men condemned were in each instance combatants guilty not merely of treason, but of barbarous cruelty to helpless women and children. Such being the character of these executions why do you regard them as on a par with the very offences they were intended to put an end to?

The taking of life, even by judicial process, cannot be justified, except as a deterrent from crimes which cannot otherwise be prevented. The grim methods adopted in India were not more cruel than the ordinary modes of execution adopted in all civilized lands. There is, from the point of view of physical suffering, less cruelty than in hanging or in electrocution. It is simply a more impressive terroriser than the gibbet and the garrote, and capital punishment is nothing more nor less than a terroriser any way.

Yours faithfully,

December 11th, 1894.

MERCATOR.

"COMPARISONS."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your article of December 11th says:—"The story of the Indian Mutiny in general . . . was adduced to show that even a western nation may be betrayed into cruel excesses by the passion of revenge. Some of the Japanese soldiers and coolies appear to have been betrayed into such excesses."

But, there is no incident in "the story of the Indian Mutiny in general," except the blowing of rebels from cannon, which can even colourably be regarded as an *excess* into which the British nation was betrayed.

I submit that your language conveyed the impression, shared by many foreigners, that that measure was a "cruel excess" into which we as a nation had been betrayed, and my object in addressing you was to remove that impression. It did not occur to me that you would characterize the excited intemperance of irresponsible men, whether Generals or Editors, as *national excesses*, or as similar in character to the acts laid to the charge of the victors at Port Arthur.

The truth is, so it seems to me, that you have inadvertently used the word *nation* a little loosely.

While very justly disclaiming national responsibility for the alleged outrageous acts of Japanese

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

troops at Port Arthur, you assumed the national responsibility of Britain for the outrageous words of irresponsible people.

Yours faithfully,

MERCATOR.

December 13th, 1894.

[We did not write "a western nation." We wrote "a western people." Our correspondent misquotes. But the point is unimportant. We invite Mercator's attention to the following extracts from McCarthy's History—"It must be said by any one looking back on that painful time that some of the public instructors of England betrayed a fury and ferocity which no conditions can excuse on the part of civilized and Christian men who have time to reflect before they write or speak. . . . There was for a while little talk of suppression. . . . The talk was not of suppression but of revenge. Public writers and speakers were shrieking out for the vengeance that must be inflicted on India when the rebellion had been put down. For awhile it seemed a question of patriotism which would propose the most savage and sanguinary measures of revenge. . . . If people were so carried away in England where the danger was so far remote, we can easily imagine what were the fears and passions raised in India where the terror was, or might be, at the door of every one." &c. It appears difficult to determine how far the people of England may be acquitted of any share in these excesses. However, it certainly was not our intention for a moment to bring any sweeping charge.—Ed. 7.M.]

CHE RICORDARSI, NELLA MISERIA.

- Oh for a moment in which
I need not think of "funds"!
Oh for a chance to get rich,
And finish forever with duns!
- Oh for a hope that will not
Prove ashes in my hand!
Oh to get rid of the lot
And get back to my native land!
- And oh, for the love of God
To lead me out of the slime!
Before I'm under the sod
To have one more chance to climb!
- These are my thoughts as I gaze
Round the shabby, ill-kept room;
And the memory fills with amaze
That I changed so much light for such gloom!
- I have dreamed such an ugly dream!
How happy to wake at last
And find things are not as they seem,
My youth and my manhood not past;
- To look back with an innocent eye
On a day with no minute ill-spent,—
To feel no desire to fly
Because I'm "behind" with the rent!
- Will the Inexorable Judge
Never let me retrieve the past?
Am I doomed forever to drudge
With each day the same as the last?
- The night is dark, and the chill
Grows strong in my cheerless room;
I'm old; I am sad; I am ill;
I have broken the web on my loom.

W.

THE YOKOHAMA SAILING CLUB.

The Yokohama Sailing Club has now brought to a close its eighth season, during which twenty-four races have been sailed, twelve by each Division, and of which the following is an analysis:—

A DIVISION.

Date.	Courses.	Miles.	Wind.	Character of Race.	Winners.
May 10	Home.	8½	Light S.E.	Class.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.
May 19	Home.	8½	Light S.E.	Class.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.
May 25	Nakane.	6½	Light to moderate S.	Arbitrary Handicap.	1 Spray, 2 Maid Marion, 3 Ronin.
June 9	Home.	8½	Light on-steady S.	Measure-ment Handicap.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.
June 16	Kawasaki.	14	Strong S.W.	Arbitrary Handicap.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.
July 4	Nakane.	10½	Fresh S.S.W.	Arbitrary Handicap.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.
July 14	Kawasaki.	14	Fresh S.	Measure-ment Handicap.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.
Aug. 25	Home.	8½	Fresh S.	Measure-ment Handicap.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.
Sept. 1	Home.	8½	Strong S.W.	Arbitrary Handicap.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.
Sept. 8	Home.	8½	Fresh N.E.	Measure-ment Handicap.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.
Sept. 22	Mitsunaka.	15	Moderate N.E.	Measure-ment Handicap.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.
Oct. 6	Home.	8½	Light N.E.	Measure-ment Handicap.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.
Oct. 20	Kawasaki.	14	Fresh N.	Measure-ment Handicap.	1 Maid Marion, 2 Daimyo, 3 Sea Gull.

Sano Yama	17	13	121	33.58	4.23	4	3	1	Record.

In the above tables the distances are expressed in nautical miles, and the elapsed times are the actual times taken to sail each race without any correction for time allowance.

The Record Prizes in the several classes were won by the following boats:—

- 39 Rating Class.....Maid Marion.....22 points.
- 32 Rating Class.....Spray.....19 points.
- 26 Rating Class.....Sea Gull.....20 points.
- 17 Rating Class.....Daisy.....11 points.
- 14 Rating Class.....Sayonara.....14 points.
- 12 Rating Class.....Jessica.....8 points.

The average speed of the Record Prize winners is about half a knot higher than last year, mainly in consequence of having had more favourable winds. As it is interesting to compare the performances of the boats with what they have done during previous seasons, we append the average speed of the Record Prize winners for the last three years as well as for the present one.

1891. Miles sailed. Speed in knots.		
39 Raters ... <i>Aborigine</i>	17	3.28
32 Raters ... <i>Dainyo</i>	163	3.73
26 Raters ... <i>Molly Bawn</i>	143	3.48
17 Raters ... <i>Jessie</i>	36	3.31

1892. Miles sailed. Speed in knots.		
39 Raters ... <i>Aborigine</i>	81	2.17
32 Raters ... <i>Dainyo</i>	155	3.71
26 Raters ... <i>Molly Bawn</i>	155	3.45
17 Raters ... <i>Jessie</i>	58	2.91

1893. Miles sailed. Speed in knots.		
39 Raters ... <i>Maid Marion</i>	133	3.54
32 Raters ... <i>Mary</i>	116	3.79
26 Raters ... <i>Molly Bawn</i>	161	3.48
17 Raters ... <i>Daisy</i>	42	2.91

1894. Miles sailed. Speed in knots.		
39 Raters ... <i>Maid Marion</i>	143	4.23
32 Raters ... <i>Spray</i>	148	4.29
26 Raters ... <i>Sea Gull</i>	157	3.71
17 Raters ... <i>Daisy</i>	42	3.49

Although, on the whole, last summer was anything but a season of strong winds, the races were sailed in stronger breezes than they were last year, and, though the wind was variable in direction, it so happened that there was only a very moderate amount of windward sailing, certainly much less than half of the total distance sailed.

The direction and force of the wind were as follows:—

A. Division.—1 race ... North-east Light.		
1 race ... North-east Moderate.		
1 race ... North-east Fresh.		
1 race ... South-east Light.		
2 races ... South Light.		
2 races ... South Fresh.		
1 race ... South-west Fresh.		
2 races ... South-west Strong.		
1 race ... North Fresh.		
B. Division.—3 races ... East Light.		
2 races ... South Light.		
1 race ... South Moderate.		
2 races ... South Fresh.		
1 race ... South-west Strong.		
1 race ... North Moderate.		
1 race ... North Fresh.		
1 race ... Variable Light.		

Twenty-four races have been sailed during the past season in which thirty different boats have taken part, as against twenty-six races last year in which twenty-nine boats sailed. This is exclusive of two extra races sailed by boats of the A. Division, three extra sailed by the B. Division, one Sendos' race, and one A. Division race which was not completed in consequence of calm weather, our analysis only taking account of those races for which record points were awarded.

The number of entries was about the same as last year but there was not such a good proportion of starters (probably for a reason which we shall venture to offer later on); however, in proportion to the number of starters a much larger number sailed over the whole course. The following table shows the fluctuations during the last three years:—

	No. of races.	No. of boats.	Average speed.	Complete course.
1892...A. Division.....	12	11	3.7	5.0
1892...B. Division.....	12	13	5.7	4.4
1893...A. Division.....	13	16	9.5	7.4
1893...B. Division.....	13	13	7.6	5.8
1894...A. Division.....	12	15	7.1	6.5
1894...B. Division.....	12	15	7.8	6.8

There were a large number of prizes offered for competition, generally four for each race, and with a few exceptions these prizes (many of which were handsome and valuable trophies) were specially presented for the different races by members of the Club or friends who take an interest in the sport, the balance being provided out of the Club funds. Formerly the boats had only to compete for these honours with others of about the same rating, except on special occasions when the whole division sailed together under an arbitrary handicap, and even then provision was often made for the division of the prizes amongst the different classes. But this year a different plan has been adopted, and in the A. Division there was only one class race, four of the others being under arbitrary handicap, and seven with only ordinary time allowance. The result of this is that some of the owners, recognizing the uselessness of sailing their small boats in competition with larger ones with the small time allowance, which is only calculated for class racing, and is altogether inadequate under any other circumstances, have lost much of their interest in the racing. One consequence of not sailing the different classes separately was that *Maid Marion* and *Spray* carried off nearly all the prizes

prizes in the A. Division, and there is little doubt that had *Maid Marion* been in good racing trim she would have monopolized nearly all of them. *Dainyo*, although a good boat in her own class, was only able to win one first prize during the season, and with one exception all of the 26 Raters had to put up with inferior prizes. If this system is to be continued those owners who are satisfied with a boat of less than 39 Rating will henceforth have to forego the pleasure of taking part in the racing, as with four or more good boats in the 39 Rating class (as there probably will be next year) it would be out of the question to expect any success with a 26 or even a 32 Rater. It is not so much the intrinsic value of a prize that is considered but its denomination. A prize given for the 26 Rating class ranks as a first prize, whereas if the classes are all sailed together the same prize would rank only as a third, which makes all the difference to the winner, while if there happened to be several big boats in the race the probability is that the 26 Rater would not get any prize at all.

The B Division until this year consisted of only one class, but the boats being of various sizes the prizes were given in such a manner that the small boats might have a share in the winning of them. The necessity of dividing the Division into classes being recognized, however, a special meeting of the members of the Sailing Club was held on the 21st of April last, and the B Division was divided into three classes of 17, 14, and 12 Rating respectively.

In spite of that resolution the boats have been sailed regularly throughout the season as one class, and under ordinary time allowance, with the exception of one race under arbitrary handicap. This, and the outside course, which is unsuitable for small boats, put the 14 and 12 Raters entirely out of the racing. Eleven out of the twelve first prizes were won, as might be expected, by boats of 17 Rating, and the remaining one fell to a boat of 16 Rating on an occasion when the 17 Raters either gave up or did not start. It is thought by some that 17 Rating is small enough for Yokohama (and if they are to be sailed outside the breakwater no doubt that is so) and that boats of a less rating than 17 are not worth any consideration. No doubt it would lead to better sport if the whole class were of one rating and could be sailed together without time allowance, but it is hard that those members of the Club who for various reasons have only boats of less than 17 Rating, should not be able to join in the racing, and it is anything but encouraging to beginners—a point that we think should not be lost sight of.

Four new boats have been built during the past summer, viz., one 39 Rater, two 17 Raters, and one 12 Rater; the last named, *Sano Yama*, sailed in one race but not being a racing boat need not be described here.

Mary, the new 39 Rater, is a fine boat built in the modern style with a great deal of overhang both forward and aft, with rather small displacement and easy lines. She is rather lean in the bilge and heels over considerably under canvas, but she is really the first boat in the A. Division that has been built to sail under the length and sail area rule, and will no doubt be able to give a good account of herself next season. So far the *Mary* has only sailed once—and that in the fastest race yet sailed in Yokohama. She finished first and won the first prize, making an average speed of just seven knots. The course was fourteen miles long, of which three quarters of a mile was dead to windward, and the remainder sailed with the wind free. Her dimensions are about as follows:—Length over all, 50 feet; on load water line, 33 feet; extreme beam, 11 feet; beam at water line, 9 ft. 6 in.; draft, 6 ft. 9 in.; displacement 11 tons; lead ballast, all on keel, 6½ tons; sail area 1,175 square feet.

Nandaka, 17 Rater, is 25 ft. over all, 15 ft. on water line, 6 ft. beam and carries 320 feet of canvas. This boat is built on full rounded lines, something after the style of *Hokiboshi*, but rounded up more sharply, and is a much larger boat. At first she was fitted with a centre-board and was found wanting in stability; afterwards a lead fin was substituted and although at first her performance was very disappointing a few slight alterations have since made her apparently the fastest boat in the B. Division. This boat was built without any carefully worked out design and was aptly named the *Nandaka*. She is a specimen of the kind of boat that, being successful, is likely to be built under the present rule.

Cocktail is a similar boat to *Isabel*, except that she is a trifle smaller and carries a larger spread of sail; she is a fast boat, although at present she has met with but small success in racing against the machines. However, she is a good substantial boat and as safe in any weather as an open boat will be; with careful handling she should

have a share of the prizes next season. Several of the boats underwent alterations last spring with varying results.

Aborigine was fitted with an iron keel and a new cutter rig, but did not give her owner satisfaction, and he is now building a new boat for the 39 Rating class which will no doubt put him in the front rank of the racing again. We have not got her dimensions, but she looks a fine roomy boat with plenty of power, just the kind of boat for a skipper who likes to crack on in a hard breeze.

Neptune was fitted with a fin keel and is a powerful and rather unhandy boat, but has shown speed at times off the wind. With a more moderate sail plan and a better fitting suit of sails this boat would probably give a good account of herself, especially in a fresh breeze with smooth water.

Spray had her inside ballast removed and an equivalent weight added to her lead keel; she was also strengthened and coppered, and fitted with a new suit of sails, with the result that she has had a very successful season. There is some talk of turning this boat into a 39 Rater next season by giving her additional canvas. This change would no doubt give her a better speed in light winds, a point in which she is now deficient, but with heavier spars she would probably not be so fast or comfortable in a good sailing breeze as she is now.

Sea Gull has been altered from a centre-board to a fin keel and is much improved by the change; her present rig appears to be too heavy for her, however, and no doubt her speed could be still further increased by fitting her out with a light cutter rig. To this boat alone belongs the honour of having sailed in and completed the whole of the races of the season.

There were sundry alterations made in some of the small boats but none of sufficient importance to be particularly mentioned here.

The Yokohama Sailing Club is prospering year by year, and now has a much larger number of members than ever before, and the interest taken in the sport by the community at large is evidenced by the number of prizes presented to the Club, many of them by gentlemen whose only experience on salt water is an occasional voyage by mail steamer. The boats entered on the Club books have also increased in number and quality, and if there be any truth in rumour, a still further increase by the building of several more new boats, both large and small, may be expected in the course of the next twelve months.

REVIEW.

Japan and the Japanese: Essays. By KANZO UCHIMURA. 1894. The Minyusha, Tokyo.

IT was with considerable interest, not to say awe, that we approached the study of this work. We were informed by the advertisement that "though thousands of books have been written relating to Japan and the Japanese by the crowds of Foreign Tourists and Authors, we dare say hardly a book worthy of serious perusal has been presented to the public." A work, that, as the advertisement implied, would completely throw into the shade such trifling productions as those, for instance, of Rein, Chamberlain, and Griffis, must indeed, we thought, be one deserving of the most respectful treatment. Nor, after painfully perusing his book, do we feel, in all seriousness, any other sentiment than that of respect for Mr. Kanzo Uchimura, respect for his honesty, his earnestness, his not inconsiderable learning, for the sincere endeavour he has made to temper his patriotism with a just measure of independent criticism of Japan. But we fail to see that his work will be of the smallest use to any person whatsoever: either to Japanese, for if Mr. Kanzo Uchimura has anything to say to his countrymen, he will say it much more effectively in his native language; or to Englishmen, for no Englishman, unless for his sins he is a reviewer, is likely to have patience to read the book. In his preface, indeed, the author makes a somewhat pathetic excuse for his venturing to write in a foreign language, and suggests that when so much is written about Japan by travellers who have examined it "at the rate of forty miles an hour," something of native origin may not be wholly unwelcome, concluding with the almost regal statement that "with an entire confidence in our aims and purposes and no confidence whatever in our syntax and gerund-laws, these are sent forth for what they are really worth, and no more."

The thought has struck us that perhaps this book is meant for a retaliation in kind; that Mr. Kanzo Uchimura wishes to take revenge on the English language for the deadly wounds inflicted on Japanese by numerous missionaries who venture to preach in that unattainable tongue;

that, perhaps, he wishes especially to repay the distinguished foreigner—not a missionary—who spoke in Japanese after six months residence in the country. But on mature consideration we are convinced that this is not so; but that the author really wishes to set before English readers Japan as she appears to a cultured Japanese of to-day. But, wishing this, why did he not adopt the simple course of writing in co-operation with some Englishman possessing a good working knowledge of the Japanese language and the necessary degree of sympathy with the genius of the Japanese people? In this way the author might have thrown his views into a form which Englishmen would have been willing to read; a form in which all serious desire to learn what the author had to say would not have been irresistibly overcome, as it is overcome in the book before us, by a sense of the ludicrous nature of his errors? A candid and intelligent English friend would have saved him from the following gem of absurdity:—"Our business in these chapters is to study few representative Japanese, and try to show the different phases of the 'Spirit of Yamato' that we make so much of. Enough has been written of its porcelains and lacquer-wares, of 'the Japanese Bride' and other stupid things." Such a friend would have told him that he wrote nonsense when he wrote the following: "Japan is not one piece; as most islands are. Large Madagascar is such; Java and Sumatra are such; Formosa is such, and even great Britain is at most only three of four pieces. But Japan is complex as all high organisms are. Some 524 islands go into the formation of the Empire. The four largest of them are complicated structures. Indeed, *Comparative Geography shows Japan to be essentially European in structure*, though Asiatic in situation. This may explain a great deal why the Japanese out of all Asiatic nations were the first to welcome the European ideas, and how Liberty and Equality found such favours with them." Such a friend would have warned him of the laughter-provoking double meaning of the sentence with which he concludes a paragraph on the skill displayed by the Japanese in the finer manual arts: "The time may come when we may beat the world with the tips of our fingers."

But we should be loath to lead our readers to conclude that Mr. Kanzo Uchimura's book is worthy only to be laughed at. His mind is of a philosophical turn, and at times, notwithstanding crudities of expression, he exhibits an almost Carlylean vigour and directness of thought. Witness the following quotation: "That is a most unphilosophical criticism that condemns Japan for her long seclusion from the world. A Wisdom higher than all wisdoms hath ordered it so, and the country was better for having remained so, and the world was, and is, the better for her having been kept so. The inaccessibility to the world is not always a curse to a nation. What benignant father would have his children prematurely thrown into the world that they might come under its so-called 'civilizing influence'? India with her comparative accessibility to the world became an easy prey to European selfishness. What did the world with Inca's empire and Montezuma's peaceful land? They condemn us for our seclusion. We open our gates, and Clives and Cortez are let in upon us." And here is some outspoken criticism of Japan. "See our language, what an unwieldy thing it is. The wholesale introduction of Chinese characters was an absolute necessity before we could express our thoughts. The literature we possess is a meagre thing compared with that of any advanced nation, and even that which we possess is strongly tinged by thoughts other than ours. In art, too, our original modes came all from China or India. We have been ruled by laws originally framed for other people. We have no religion of our own to speak of, and have always been zealous for any kind of Faith of exotic origin. Indeed there is something very melancholy about this our love of novelty and 'imported articles.' Every Chinaman or European or American who has something to say about God and Universe is sure to have some followers in this land. Buddhism of any sect, Christianity of any denomination, and Philosophism of any school, can have some disciples here. And oftentimes religious bickerings and janglings that ought to have no business outside of their own lands, are transplanted here, and some among us are so stupid as to join the respective camps, and call themselves Methodists, Presbyterians, Catholics, Quakers, and what-not, and renew among themselves the quarrels that others have engendered for their own purposes. Pity that this fair land is made an experimental field for 'isms' of all kinds. Would that our receptability be not made use of in that way both by ourselves and by our neighbors who must have their views adopted by us just exactly as they do."

No, we have certainly no wish to laugh at Mr.

Kanzo Uchimura; we feel for him a genuine respect. But it is precisely because he has something to say, and because occasionally, as in the above extracts, he says it well, that we regret that his book is as a whole marred by ludicrous and almost innumerable errors; we regret that he has chosen to dispense with much-needed assistance in his struggles with the English language—a weapon that none can wield with effect unless he is native and to the manner born. Let all future Japanese writers of English take warning by Mr. Kanzo Uchimura—unless, indeed, in their patriotic zeal they really wish to create a peculiarly Japanese variety of English, just as they have created a Japanese cut of trousers and a Japanese shape of shoe, have borrowed from the west without being servile imitators. Awful thought! The existence of an American type of literary English distinct from that used in the parent isle is already sufficient grief to all lovers of our language—but what if there should arise a third standard of literary English, the literary English of Japan?

THE TOKYO CONFERENCE.

On Thursday afternoon, December 6th, a meeting of the Tokyo Conference was held in the Union Church, Tsukiji. There was a large attendance. The address was given by the President, Rev. Dr. Greene, upon "The Outlook for Christianity in Japan."

The CHAIRMAN of the meeting, in introducing Dr. Greene, made mention of the fact that the day was the 25th anniversary of the arrival of Dr. Greene in Tokyo.

The address was of deep interest throughout. The speaker compared the attitude of Japan toward Christianity when mission work was in its beginning, with its present attitude. He then noticed the tendencies of Japanese Christianity at present, and the indirect influences which were being brought to bear upon Japan by her contact with Christian nations. One of the most encouraging signs of the times was that modern civilization was not a civilization of this country or that country, but the civilization which was a unit. Japan, in appropriating this civilization, was also taking with it the thought and tendencies which accompany it, which were essentially Christian.

It is hoped that the entire address may soon appear in print.

At the close of the address a short business session was held. The Council in their report recommended that the Tokyo Conference be disbanded owing to the lack of interest and support. After some discussion a substitute motion was passed that a committee consisting of the President, Secretary, and Treasurer be elected annually, to secure a course of lectures for the general public.

This substitute motion was unanimously carried, and Dr. Greene was elected President, Rev. G. W. Tait, Secretary, and Rev. T. S. Tyng, Treasurer.

As no name was formally decided upon, the Committee thought that the "Tokyo Lecture Association" would be an appropriate name for the new organization. Any one in Tokyo or Yokohama sending his name to the Secretary will be notified of the meetings of the Association. The expenses will be met by collections taken as often as necessary, at the public meetings.

SAPPŌ AND KAPPŌ; ESOTERIC JUJUTSU.

By H. MORINAGA.

CHAPTER I.—JUJUTSU.

Jujutsu is a military art which was highly esteemed in the Feudal Ages of Japan, by which a person may, without using any weapon, or at best a small one, act on the offensive or defensive against others who do or do not use arms. But it is really in its nature an excellent means of physical exercise, for which reason it has come to be studied at the present day by amateurs, school boys, and many others. The art has been known under several names—Kempo, for example, Jujutsu, Judo, Yawara, Kogusoku, Kumiuchi, etc.—all of which are nothing but different styles of one and the same thing. Concerning its origin there are two opinions: those who hold the one maintaining that the art was first introduced from China, while their opponents contend that it originated in Japan. The former tell us that a certain Chin Genbin, of the Ming, the last native dynasty of China, introduced and taught the art to his Japanese pupils who are known to have afterwards been skilled exponents of the system:—Kukunō Hichirō-yemon, Isogai Jiro-sayemon, and Miura Yojimōn.

But it is firmly believed by some of those who share the second opinion that Jujutsu was already prevalent in the era of the Hojo regency, some six hundred years ago; and many evidences have been collected by others relating to the existence of the art in certain ages, later than the above period, but still previous to the years in which the said Chin Genbin is known to have been in Japan. One of such evidences comes from records inherited by the Takenouchi family in Kume, Hojo-gun, Mimasaku-no-kuni, who belong to the legitimate line of the masters of the Takenouchi-ryu, a school or style of Jujutsu; as well as from the "Bujutsu Ryusaioku" (a List of the Founders of Several Styles employed in the Military Art), both of which show that the founder of the Takenouchi style of Jujutsu, named Takenouchi Hiramori, flourished during the Temmon era, above 350 years ago, in the reign of Go-nara, the 104th Emperor of Japan. Jujutsu must therefore have already so far developed in those days as to boast several styles, while the said Chin Genbin was, according to every trustworthy showing, naturalized in Japan about 340 years ago: in the Manji period, in the reign of Gosei-in, the 110th Emperor. The same is also proved of the founder of the Kiraku and some other styles. It will be seen from these arguments that the second of the two parties are quite justified in rejecting the view of their opponents. I am not, however, inclined to give full credit to this. In our opinion the Jujutsu of the present day should be understood as a special Japanese art, developed by the exertions and investigations of the Japanese themselves, who have brought it at present to such a state of perfection as they have several styles, irrespective of the question whether the art received any aid from Chinese sources or not. The styles practised are numerous. The Kiraku-ryu, Takenouchi-ryu, Yoshin-ryu, Shimonshiindo-ryu, Sekiguchi-ryu, Shibukawa-ryu, Asayama Ichiden-ryu, Kyushiu-ryu, Kito-ryu, Ryoishinto-ryu, Araki-ryu, Shimmei Sakkwatsu-ryu, and a few others, are the best known.

Let us next consider the five departments common to each and every style, into which the study of the art is divided. They are (1) Kumiuchi or Randori (contesting or fighting in order to determine superiority by strength and skill); (2) Kata (the formalities observed in such contests); (3) Sappo or Atemi (the art of causing apparent death); (4) Kappo (the art of recalling to life, after such apparent decease); and (5) Bone-setting. I will add some few short remarks with regard to the nature and efficacy of these five divisions. Kumiuchi or Randori, the first, occupies an essential and the greatest position in Jujutsu. It is similar to wrestling in form, but quite dissimilar from it in spirit. This, however, requires several years of application to become so skilled as to be able to reap advantage from it. Kata, the second, teaches us the methods of contest in Jujutsu, the throws and falls, and is, in its nature, an interesting and vital division. But the forms of contest are so very numerous that their thorough comprehension requires a length of time not less than that demanded by the first. With regard to the last, Bone-setting, we need not particularize, as it may easily be understood from the term itself. But the third and the fourth departments, namely the arts relating to momentary suspension of life or its restoration, are those of most essential merit and interest special to Jujutsu, in which, without spending too much time over the task, a good practical degree of skill is obtainable even by reading the literature on the subject. For the above reason these two divisions have been selected as the themes of this treatise.

CHAPTER 2.—ART OF CAUSING APPARENT DEATH.

Despite the difficult nature of this topic considered as a metaphysical question, Death may be explained physiologically without much error as the entire suspension of the functions of the respiratory organs or circulatory system. Such suspension is the direct cause of death, while hunger, strangling, sickness, and many other causes which are thought by common people to be directly responsible, are nothing but indirect ones. Yet the suspension of life may not be final and entire, and patients in such condition may be made to recover by proper means. This deathlike state is known to physicians by the name of "apparent death" as distinguished from real death. Now the department of Jujutsu which treats of the various ways superinducing this condition, according to certain well-defined rules and methods, is called *Sappo* or *Atemi*. These teach the art of attacking the body of an opponent in such places where the momentary suspension of life may most easily be brought about, and this is done without using arms or weapons, by simple kicking, thrusting, hitting, or dragging. It is, however, necessary

that he who relies upon these arts, either when acting on the offensive or defensive, should be prompt and skilled in the art of restoring his adversary and releasing him from any such momentary suspension of life. This restoration is known as *Kappo*.

CHAPTER 3.—PARTS OF THE BODY USED IN ATTACKING.

Kicking, thrusting, hitting, and strangling are the four means of *Sappo* by which human life may be momentarily suspended. All these should, however, be practised according to the strict tenets of *Sappo*; and the portions of the body brought into action by those relying upon these arts, are as follow:—

- (1). The extremities of the foot (used in kicking). These are divided into the tip of the toe, and the front part of the sole.
- (2). The fist (used in thrusting).
- (3). The elbow (used in hitting).
- (4). The knee-pan (used in hitting).
- (5). The edge of the hand (used in hitting).
- (6). The forehead (used in hitting or butting).
- (7). The index-finger or middle-finger, shaped like the letter V (used in gouging).
- (8). The two hands (used in strangling).

By a skilful employment of these portions of the body, a wonderful rôle may be played in an offensive as well as defensive way. But I ought at present to leave these questions untouched, and add a few remarks relating to the common and simple means of warding against the attacks to which they lead. The parries are different according to circumstances, but I briefly mention (1) the parry with the fist; (2) the placing of one's hand on or above the place aimed at; (3) the seizing of the enemy's fist with one hand; (4) the rapid shifting of one's body from side to side; (5) the holding of one's left (or right) arm straight before the breast and then drawing back the body to the right (or left, if the arm be the right); and several others.

CHAPTER 4.—PARTS OF THE BODY ASSAILED.

I now proceed to explain what parts of the human body are specially adapted to attack. Should they be properly assaulted by kicking, thrusting, hitting, or strangling, it would cause a severe shock to the nervous system, or to the circulatory or respiratory organs, and a consequent momentary or total suspension of life. They are, therefore, known as the places to be aimed at in *Sappo*.

(Fig. 1.)

(天頭) Tendo, (鼻先) Udo, (額) Kasumi, (人中) Jinshu, (咽喉) Tokko, (喉中) Hichu, (松風) Matsukaze, (村脚) Murasame, (腰中) Danchu, (膝下) Karushita, (水月) Suigetsu, (月影) Tsukikage, (咽喉) Inazuma, (草履) Kusanabiki, (脚指) Karisute.

Figure 1 shows the general outlines of such positions. *Tendo*, cerebral suture, in the head, is the point at which the frontal and two parietal bones come together, and below which the cerebrum lies, so that a strong cerebral shock and instant death may easily result from a blow here. *Udo*, the nasal septum, in the face, lies just below the forehead and between the eyes. As the branches of the ophthalmic and other nerves are continued

in this region, they as well as other nerves under and around them may be so excessively disturbed as to cause loss of sensation. *Kasumi*, on the temples, lies on either side of the face behind the orbital process, where the temporal and other important nerves pass; while *Jinshu* is that part below the nose where the trigeminal, portio dura, and other nerves as well as the superior coronary branch of the facial artery are situated. Any violent excitement at these points may, therefore, cause a sudden suspension of sensibility. *Tokko* is behind and a little below the ear, where any forcible blow may cause disturbances in the posterior auricular artery and nerve and the other arteries and nerves lying there, and consequent cessation of life. *Hichu* lies at the base of the throat below the larynx, while *Matsukaze* and *Murasame* lie the one to the left, and the other to the right of this spot. Any strong pressure, such as strangling, in these regions may cause apparent death owing to suffocation and the sudden great disturbing of the nerves lying there. *Danchu* is situated in the centre of the median line of the sternum. Behind it lie the heart and the lungs, so that these important organs are excited by an attack at this point. The two *Karushita* are just below the mammary glands. An assault here causes a strong shock to the respiratory and circulatory organs. *Suigetsu* lies below the ensiform appendix of the sternum. Behind it the stomach and the liver are situated; and the nerves and arteries connected with them may be so rudely shaken as to cause instant death. *Tsukikage* is a little beneath the extremity of the twelfth rib on the right side. A blow on this part will shock the liver and gall-bladder, as well as the nerves and arteries connected with them, so greatly as to superinduce a state of stupor or death. *Den* or *Inazuma* lies a little below the end of the twelfth rib on the left-hand side. The spleen and the stomach are largely situated in this part, so that they and the other organs there lying may be fatally excited by a local attack. *Kusanabiki* is on the Tendo Achilles. It may cause a great shock to the system if one be kicked or struck there, because such a blow would unduly excite the saphenous tibial.

Besides the above mentioned parts, there are some other important ones. They are: (1) *Kasho*, which are the testicles; (2) *Shakutaku*, on the wrist; (3) *Karisute*, on the foot, just above the toes. All these parts when assaulted, especially the first, may superinduce the instant loss of sensibility.

CHAPTER 5.—HOW TO STUDY THE SAPPÔ AND THE DIFFERENCE BETWEEN IT AND OTHER MODES OF KILLING.

The last two chapters have explained what parts of the assailant's body may be used, as well as what points on the opponent's body should be attacked according to the *Sappo* Arts. Now in order to cause another's apparent death according to the rules of *Sappo*, a person must attack the parts described without using any weapons but his bare hands, feet, or some other portions of his body, as already set forth. Moreover, with regard to the various parts of the opponent's body to be attacked, the *Udo*, *Kasumi*, *Jinshu*, *Tokko*, *Danchu*, *Karishita*, *Suigetsu*, *Tsukikage*, *Inazuma*, *Myojo*, *Kosho*, *Kusanabiki*, *Yenzui*, and *Karisute* had better be thrust at, hit, or kicked; while the *Hichu*, *Matsukaze*, and *Murasame*, should be subjected to strangling or pressure; and the *Shakutaku*, fractured. All these forms of assault must be done with vigour and celerity. There are several previous methods of training used by the masters of Jujutsu for these purposes. Those to which reference is made in the following may be recommended as easy and efficacious. They are:—

- (1). To suspend a bag from the ceiling by a cord or rope, and to kick, thrust at, or hit it;
- (2). To attack domestic and other animals according to the rules above described.

The animals thus kicked or strangled into apparent death may be speedily resuscitated according to certain rules of which I shall speak hereafter.

I have next to explain the difference existing between the *Sappo* and the other means of the deprivation of life. Unlike many similar means we do not entirely destroy human life in *Sappo*, nor is there any evidence of actual killing, for as soon as a man is "killed" he may be resuscitated by *Kappo*. Moreover, what is most striking in *Sappo*, is the total non-existence of any intention to put others to death, so that even if they were actually killed, it would be only by mistake or owing to a want of skill.

CHAPTER 6.—ARTS OF RESTORATION FROM APPARENT DEATH.

We have already described in Chapter 2 the two kinds of death, apparent and real. In apparent death, life is not wholly destroyed; for respiration, circulation, bodily heat, and other

functions become almost imperceptible or seem to have completely ceased. Such conditions may result from violent mental shock, sickness, hunger, drowning, freezing, strangling, fatigues, poison, electricity, suffocation, etc., as well as by *Sappo*. Now *Kappo*, or the art of restoring persons in a state of apparent death, is one invented by the masters of Jujutsu. The *Kappo* methods may be employed without any regard to the real cause of death, and in an immediate and convenient manner. The names and number of the *Kappo* are various and differ according to the style of Jujutsu practised. But they are none the less similar and almost the same in reality. Those which I am going to describe and explain in the following chapters, are the commonest and most important ones, selected as models of several other but similar ones taught in different styles of Jujutsu.

CHAPTER 7.—SASAI KAPPO.

This is usually reckoned as the first and simplest *Kappo* of Jujutsu applicable to the resuscitation of those who have lost consciousness in consequence of a thrust, kick, strangulation, and some other similar reason. There are two forms of this *Kappo*, which I shall now explain in the proper order.

1.—THE FIRST FORM.

One who sets out to resuscitate another by this first form, should stand at the latter's back. He should bring the latter to an ordinary sitting posture by raising him beneath the shoulders, and holding him in that position by applying his right knee-pan to the back-bone, between the fifth and sixth vertebrae (v. Fig. 2); while his two hands should be placed on the right and left breasts.

(Fig. 2.)

2.—The index and middle fingers of the hands should be so placed on the breasts as to enclose the ensiform appendix of the sternum, and make their ends reach the *ganka* or mammary glands (v. Fig. 3).

(Fig. 3.)

Rigidly keeping this attitude the would-be restorer should draw the unconscious man towards him so that his hands will rise to a little above their former position and the body of the lifeless person be pushed forward a little (v. Fig. 4).

(Fig. 4.)

At this instant the senseless man will recover his senses. The operator should then, for a better and more perfect restoration of the patient, push his hands, still lying on the patient's breast, lightly twice or thrice down to the base of the sternum.

II.—THE SECOND FORM.

When adopting this form, the position to be assumed by both the operator and the unconscious man, is similar to that of the form just described, except that the hands of the operator have to be placed on both sides of the chest of the sufferer, somewhat above the lower ribs and under the armpits (v. Fig. 5.)

(Fig. 5.)

The hands thus placed should be pushed a little forwards and upwards so that the body of the lifeless man will incline outwards. As soon as this process is complete, the apparently dead will be restored; but for his better restoration the operator should put both hands on his breasts and push them lightly to the base of the sternum as set forth in Form I.

CHAPTER 8.—YERI KAPPO.

Any would-be restorer who uses the Yeri Kappo method should first seat himself at the right side of the senseless person; and, while grasping the latter's neck with the left hand, which should be kept firmly in this position to the end, bring the patient to an ordinary sitting posture, and maintain the body in that posture by applying his left knee to the backbone (v. Fig. 6).

(Fig. 6.)

He should then gently stroke around *Danaku* which, it will be remembered, is the centre of the patient's breast, using his right hand for this purpose somewhat in the shape of the kana *no* (v. Fig. 7).

(Fig. 7.)

This must be done not only because of its intrinsic value in aiding the process of restoration, but also on account of its extrinsic value in making ready for the administration of the remaining useful parts of this Kappo. Now when the strokeings are finished, the operator should rub the

patient's body downwards to the abdomen, beginning from the top of the sternum. He should repeat the same movement on both sides of the breast and abdomen; and as soon as he has finished the rubbings on the left side he should at once open the fingers and thumbs without removing his hand, so as to form the letter V (v. Fig. 8), the tip of the middle finger being placed over and above that of the forefinger, and then apply the fingers so adjusted on both sides of the *Kaigon*, which is below the belly, holding his right arm and elbow parallel to and between the upper part of the legs of the senseless man.

(Fig. 8.)

He should then simultaneously push the fingers upwards, and press the patient's body downwards from the neck with his left hand, which is already placed there as explained (v. Fig. 9).

(Fig. 9.)

The patient will recover his senses at this moment. This Kappo is a higher and more efficacious mode of restoration than the *Sasai Kappo* last mentioned, so that patients who fail to be restored by the latter may recover their senses through the adoption of this.

CHAPTER 10.—SO KAPPO.

There are three kinds of *So-Kappo*, all of which are of the highest and most valuable description. By employing them almost all kinds of apparent death yield to treatment. The names are:—

- I. *Hainyu So-Kappo*.
- II. *Kikai So-Kappo*.
- III. *Ura-Katsu*.

With regard to the uses and efficacy of these three Kappo modes, the first should be noted as more efficacious than the second, though the application is quite the same; while the third is quite different from either, and specially practiced on the back of a patient.

I.—HAINYU SO KAPPO.

The operator should place the body of the senseless man face-upwards, the legs being stretched out horizontally. He should then sit astride the lower abdomen (v. Fig. 13), and stroke both

(Fig. 13.)

sides of the chest with the palm of his right hand commencing from below and describing a semi-circle or parabola in the movement. This peculiar movement is technically known as *yanagi makwai*, or "willow-branch-stroking," while the movement in imitation of the figure of the Kana "no" is termed *no-ji makwai*. Having several times

repeated this operation, the next step is to push the part beneath the *Suigetsu*, which is below the ensiform appendix of the sternum, with the palms of both hands, especially with the balls of the thumbs, with the other fingers outstretched and uplifted. (v. Fig. 14.)

(Fig. 14.)

At this moment the patient usually recovers his senses; but if he does not do so after one such exhibition, a repetition should be carefully made; not one but as many as may prove necessary to superinduce positive restoration of consciousness. If the fainting-fit is (to enter more fully into an explanation of this important Kappo) very stubborn, the operator should in this as well as in the next Kappo, give great heed to what he is doing. He should, for instance, place a wedge of wood or paper between the jaws, so as to prevent the senseless man from biting off the tip of his tongue. He should also place the head a little lower than the body, with the mouth upwards, in order to avoid cerebral anemia. Moreover, he should, for the sake of better treatment and ultimate complete restoration, place the hands of the patient under his head; or still better he should be assisted by another man or other men who should sit by the head and, holding the hands of the patient, move them gently back and forth with a circular sweep, some sixteen or seventeen times.

II.—KIKAI SO KAPPO.

All the processes observed in this Kappo are identical with those of the last one, excepting that the part to be pushed upwards lies in this case beneath the navel of the patient, and the operator has consequently to assume his position above the thighs of the patient.

III.—URA-KATSU.

This method affects the back of an unconscious person. It is therefore necessary for the operator to turn the body of the patient face-downwards. To do this, the operator should, approaching the body from the right hand, seize the neck with his left hand and then pull the body towards himself, so as to bring it to a position facing downwards (v. Fig. 15).

(Fig. 15.)

When so placed, the restorer should sit astride it and stroke the back several times. He should then put the balls of his thumbs on both sides of the fifth lumbar vertebrae and push upwards. The patient may be restored by so pushing. This pushing should, however, be repeated if the patient is not brought back to his senses by the first treatment. A special practical use of this method is possible in the case of drowned persons.

CHAPTER 11.—SAN KAPPO.

Reference has already been made to the application of Kappo to apparent death from drowning, strangling, fainting, and many other causes. Indeed Kappo may be applied to almost all kinds of apparent death. Now the so-called *San Kappo* is the application of *So-Kappo* to apparent death from drowning, strangling, etc. Why it has been given this special name, is not known, but it must, I think, be attributed to the frequency of the application of *So-Kappo* to such cases. Anyhow,

every employment of *Kappo* in an apparent death where the condition of the patient is serious, should be preceded by a certain degree of medical training, or at least be accompanied with special care and skill. These are the points specially taught in *San Kappo*. But it is not necessary to enter into a minute description of these points, because it is obvious that this treatise need not enter upon a disquisition of matters more easily acquired by a study of medical books.

CHAPTER 12.—HOW TO STUDY KAPPO AND THE DIFFERENCE BETWEEN THIS METHOD AND ORDINARY REVIVIFICATION.

There are two ways to study *Kappo*, by either of which one may grow skilled in its practice, even without meeting with actual cases of apparent death. The first is to cause some one to simulate unconsciousness and then to apply *Kappo* to him according to the foregoing rules. The other way is to try the methods on lower animals, they being at the time in a condition of apparent death, with the view of reanimating them. One possessed of a knowledge of comparative anatomy will not experience any difficulty in the degree of applicability even in such cases.

With regard to the difference between *Kappo* and ordinary Revivification, there exist two essential dissimilarities:—

First, by the former art an unconscious man may be restored in a simpler and more rapidly effective manner than by the latter. It is not necessary to dwell here upon the simplicity and swiftness with which senseless men are restored by *Kappo* in many training schools of Jujitsu.

Secondly, an unconscious man may be restored according to *Kappo* in whatever direction his body may be, as there are many *Kappo* methods only the most important of which have been above described; while such advantages do not exist in the ordinary modes of Revivification, which are comparatively few in number. This is owing to the extremely simple yet highly developed nature of the *Kappo*.

The above is only a hasty and necessarily imperfect treatment of the most important features of *Sappo* and *Kappo*. Superficial as the description hitherto given may appear, it is none the less obvious that *Sappo* and *Kappo* are arts worthy of profound study and the attention of scientific Europe and America. The rules given are not of recent invention; some, indeed most, of them, date from a period of centuries ago, which renders the fact of their efficiency all the more remarkable. We have progressed in many departments of science; yet, like the Great Pyramid of Egypt, the study of the past often reveals the surprising fact that our ancestors were in some respects wiser than ourselves.

THE RACE BALL.

Postponed from the 5th November in consequence of the sad event which plunged all the European Courts into mourning, the Race Ball promoted by the N.R.C. took place on Thursday evening in the Public Hall, and was a pronounced success. With very few exceptions all the invitations issued were accepted, and at 9.30 when the Ball began over 300 persons must have been present. The Diplomatic Corps was strongly represented, including the President of the N.R.C., Her Britannic Majesty's Representative, Baron and Baroness D'Anethan, M. and Mme. Harmand, the Secretaries of the French, Italian, and other embassies, etc. The arrangements, which were admirable in every way, were somewhat different to recent public balls. The lesser hall was arranged as a ladies' cloak and sitting-room, having a passage-way between leading to the vestibule. This apartment was tastefully garlanded in evergreens and pot-plants, with a large symbolical horse shoe adorning the wall immediately facing the doors. The large public hall was set apart for dancing, and here the artistic fancy and clever ingenuity of the Decoration Committee were displayed to the fullest effect, the *salon* being transformed into a miniature race-course. A Grand Stand was erected in the left-hand corner looking towards the stage, with the Judge's Box in the opposite corner. On each side of the stage were the Weighing-in Room and the Parimutuel. Round the hall ran some low rails, with the starting and fulcrum posts at each corner. "The rails" were hung with racing saddles and other paraphernalia appertaining to the horse, while racing colours—riding jackets and caps—with here and there stirrups, spurs, and whips, were hung upon the walls. Horse-shoes of huge proportions were also plentiful. Supper was laid in the Green-room, the stage being reserved for "sitting out." Red and white streamers were stretched from the

chandelier to the corners and sides of the ceiling, and over the stage hung a shield bearing the initials of the Club. This was supported by two Japanese national flags. There was a welcome absence of hunting in the general scheme of decorations for which the Committee are to be heartily thanked.

Dancing was kept up with great verve until early this morning, the excellence of the floor and the good time kept by the Yokohama Town Band greatly enhancing the pleasure of the dancers. The following was the programme exclusive of extras:—

- | | |
|-----------------|------------------|
| 1.—Waltz. | 9.—Waltz. |
| 2.—Waltz. | 10.—Lancers. |
| 3.—Lancers. | 11.—Waltz. |
| 4.—Waltz. | 12.—In the Barn. |

| 8.—Waltz. | 16.—Waltz. |

HEATS IN THE ATHLETIC SPORTS.

The preliminary heats in the 100 Yards and the Hurdle Races of the Amateur Athletic Sports of the Yokohama Cricket and Athletic Club, arranged to come off on Saturday, were run on Thursday afternoon. Mr. Dodds acted as Starter, Mr. Pinn as Time-keeper, and Mr. Litchfield as Judge. No very good times were made. Details:—

100 YARDS.—1ST HEAT.

| H. R. Mair, 4 yards | 3 |
| E. B. Forman, 3 yards | 0 |

The limit men got off well, but Pinckney had caught them half way down, and then he passed Allcock. The scratch man eventually won easily. Time, 11 secs.

2ND HEAT.

- | | |
|---------------------------------|---|
| W. D. S. Edwards, scratch | 1 |
| B. H. Pearson, 1 yard | 2 |

Edwards got off well and soon took the lead which he maintained to the end, winning by a yard and a half. Time, 11½ secs.

3RD HEAT.

- | | |
|-------------------------------|---|
| E. J. Libeaud, 4 yards | 1 |
| W. K. H. Carew, 7 yards | 2 |
| E. Adel, 2 yards | 0 |

Libeaud caught up Carew about half way down and held the lead home, Adel hurting his leg within thirty yards of the post. Time, 12 secs.

HURDLE RACE.—1ST HEAT.

- | | |
|------------------------------|---|
| H. Pinckney, scratch | 1 |
| R. Abenheim, 8 yards | 2 |
| B. H. Pearson, scratch | 3 |
| B. Sharp, 8 yards | 0 |

Abenheim maintained his start for some distance, but the Scratch men then drew up and Pinckney got on level terms. At the third hurdle from home, Abenheim and Pinckney were level with Pearson close up. Sharp then blundered and was one of the hunt. Won by a yard, same distance between second and third. Time, 18½ secs.

2ND HEAT.

- | | |
|-------------------------------|---|
| H. E. Campbell, 8 yards | 1 |
| R. C. Ross, 8 yards | 2 |

Ross lead for some distance but was in the end lead home easily by Campbell. Time, 20 secs.

LETTER FROM AUSTRALIA.

(FROM OUR OWN CORRESPONDENT.)

Healesville, Victoria, October 28th.
The conclusion of the most celebrated libel action ever tried in this colony—the Speight v. Syme action—has furnished matter for surprise to a large section of the public. The second trial extended over 87 days, and resulted in a verdict for the defendant on nine out of the ten counts brought forward by the plaintiff. On the other count, though a verdict was returned for the plaintiff, the damages assessed were one farthing. It has been asserted, and I think on good authority, that Mr. Justice Williams, before whom the case was tried, has given a new interpretation to the Law of Victoria respecting libel. The learned judge argued that a journal may publish matter which is libellous and substantially untrue and yet may be excused on the plea of fair comment. "Fair comments," said the judge; "might be exaggerated, harsh, severe, stinging, incorrect, absolutely untrue and yet be permissible." Hitherto it has been supposed that, before availing itself of the claim of fair comment, a journal had to prove that the facts published were substantially true. But according to Mr. Justice Williams' misconception of the facts does not deprive a writer of the right of drawing incorrect inferences and making

incorrect comments. In the present case the jury decided that on all the counts the *Age* had libelled Mr. Speight and had published statements which were substantially untrue, but added that with the exception of one point only the action of the *Age* was permissible on the plea of fair comment. It is generally felt that this verdict gives the utmost freedom to public discussion, and harsh as it may seem to the individual concerned, it is conducive to the general benefit. According to this verdict, every citizen has the right to blunder as much as he pleases when commenting on public affairs. Unless he can be shown to be a rogue the law cannot touch him. But after all that can be said in its favour, the new interpretation of the law is somewhat perplexing to unsophisticated minds. The question which suggests itself to such minds is, what is unfair comment?

Mr. Andrew Laing, by publishing a number of erroneous statements respecting the literary taste of Melbourne, has elicited some interesting facts bearing on the public library of the metropolis. Though Melbourne is the youngest of the great cities of the British empire, it has a Public Library which compares favourably with home centres of commerce and industry. The Manchester Public Library has founded in 1852, and, excluding its branches and lending department, consists of 99,845 volumes. Birmingham founded its Public Library in 1861, which consists of 119,476 volumes. The Liverpool Library counts 103,587 volumes on its shelves. But the Melbourne Library, excluding its lending and county branches, consists of 133,301 volumes. This institution is visited by 423,669 persons every year, that is roughly speaking by the entire population of the city and suburbs.

The death of Dr. Macartney, the first and only Dean of Melbourne, at the age of 95, has removed from the stage a figure of historic interest. Dean Macartney's tenure of office covered the whole history of the metropolis. He came in Victoria in 1848, lived through the stirring scenes which followed the first discovery of gold, and watched the growth of what was then a mere hamlet into one of the finest cities in the world. Few places have increased so rapidly. Cathedrals and warehouses, hospitals and colleges, mansions and business houses have sprung up with the rapidity of mushrooms. The late Dean was not a great preacher nor an original thinker, but was endowed with great common sense and deep benevolence, which qualities tended to gather around him a wide circle of friends. No man in the city was better known. Every one gazed with interest on the bent figure and wasted face crowned with silver-white hair. In belief, the late Dean was a devout Evangelical Churchman, but was held in great respect by men of all denominations.

A lady bicyclist, Mrs. E. A. Maddock, of Sydney, has caused a sensation by riding triumphantly over the 600 miles of mountains, swamps, sandy plains, corduroy tracks, creeks, ploughed land, and macadamised roads that divide the capitals of Victoria and New South Wales. Mrs. Maddock is the first lady who has accomplished this feat. She took nine days over the journey and showed no signs of fatigue at the end.

The Melbourne University, like so many noble and hitherto well supported institutions, is feeling the effects of the general depression, and is seriously hampered for want of funds. The University was founded in 1853 with a permanent annual endowment of £9,000. This sum was devoted to the creation of four professional chairs, and to the purchase of all necessary accessories. For thirty years the institution made steady progress. In 1883 it was seen to be desirable to extend the field of teaching, and an additional government grant was asked for and received. Step by step the annual endowment was increased until it reached £17,250: of which £9,000 was provided by special appropriation and the balance £8,250 was placed on the yearly estimates. The receipt of the latter sum depended on the temper of the existing Government, and it was foreseen by the late Dr. Hearn that its reduction or entire withdrawal might some day land the University in trouble; as, naturally, the Council of the Institution in obtaining men from England had to guarantee their salaries for long and fixed periods. But when government after government fulfilled with regularity the moral obligation under which it stood to the Institution, the Council grew bold, and pressed by the necessity of extension, the staff was increased until it numbered 13 professors, 17 lecturers, 10 demonstrators and assistant demonstrators, and a large body of examiners. The professors who were engaged in England were obtained through the Agent-General, and in order to secure the best talent available, definite contracts on a life tenure were made with the incoming officers. With the high efficiency developed the attendance of students kept increasing until it reached

600, and the fees paid by them equalled the whole amount of the Government grant. But, as is well-known to your readers, evil days came upon the colony in 1892, and they grew worse in 1893. Hard pushed for the wherewithal to pay the interest on the enormous debts of the State, the Government commenced cutting down grants right and left, and the supplementary vote of the University was reduced in 1892-93 by £2,500, and by a further sum of £1,000 in 1893-4, thus leaving a total annual grant of £13,750, of which £9,000 was as before, provided by special appropriation and £4,750 by estimate vote. To meet the deficiency thus caused, the University Council retrenched its lay officers, its lecturers, and its examiners, and the accused increments of the professors, this latter measure giving rise to the vexed question of breach of contract. After further reductions and the cutting down of such expenses as the maintenance of the gardens in proper order, the Council still found it hard to make two ends meet, and at this juncture were confronted with the proposal of the Tattersall Government to reduce the vote by a further sum of £2,750. This calamity was temporarily averted by a change of Government, but while the finances of the colony remain in their present disordered state, the danger of further curtailment will still exist. What the University desires and the public are disposed to support, is a permanent increase of the special appropriation in lieu of the ever changing supplementary vote. There is no denying that the University year by year turns out some first class men. Its graduates are prominent in the Church, at the Bar, on the Bench, and in the medical world, and it would be a thousand pities to see such an institution languish for want of funds in a community that until very lately has been able to offer £10,000 stakes to the winner of the Melbourne Cup, and that even in these depressed times supports its theatres, race clubs, and places of amusement with a liberality that astonishes persons unversed in colonial habits and peculiarities.

The Tattersall government is a thing of the past. A general election took place on September 20th, as a result of a want of confidence vote which had been passed in the House, and a thorough political revolution took place, resulting, among other things, in the unseating of the Speaker of the House, Mr. Bent, a very old parliamentary hand. The causes of the defeat of the late government are variously stated by the organs of existing political parties. Sir James Tattersall was undoubtedly one of the most popular premiers the colony has ever had, and showed in his administration no small amount of tact, common sense, and knowledge of the real situation of affairs. He himself attributes his sudden removal from office to the fact that he had proposed to reduce very considerably the income of members of the House as well as their number. The subject of finance is a very sore one just at present, and it seems to me that no cabinet embarrassed with such complications as now exist and weighed down with the problem of how best to meet an ever increasing yearly deficit, can enjoy popularity for many months. Increased retrenchment and increased taxation afford the only possible remedy for the existing state of affairs, and resort to these measures is bound to excite animosity among the undiscerning masses which form such a large section of the electors. Times are hard, and the political shoe pinches every part of the colonial foot—no wonder that men keep voting for a change without knowing whether the change will be for the better or the worse. Mr. George Turner is the new Premier. He has the support of the labour members as well as others, and no doubt for a while will hold his own against what cannot but be regarded as a somewhat formidable opposition at present led by Sir James Tattersall.

On October 12th, a most disgraceful scene took place in Collins-street, Melbourne, which, owing to the reputation of the two chief actors, caused a great sensation in the city. One of the leading surgeons of Victoria, Dr. O'Hara, and one of the best known barristers, Mr. Turves, Q.C., fisted each other in the presence of an immense crowd in the very heart of the city. The incident arose out of an address by Mr. Turves to the jury in the case of *Madame De Alba v. the Freehold Investment and Banking Company*, in which he intimated that Dr. O'Hara had received 1,000 guineas for an illegal operation. Such a base and groundless assertion made in the absence of the person whom it concerned, called forth a severe rebuke from the Judge, but this did not hinder the repetition of the statement of the advocate in every paper of the colony, and when Dr. O'Hara was informed by his solicitors that he could have no legal redress, as a barrister when conducting a case was allowed to say anything that he deemed necessary in the interest of his client, he naturally felt a desire to take his revenge in some other way.

Despite the disorderly nature of the encounter, both combatants enlisted the sympathy of a number of friends, and the following account of the affairs by one great local wit, "Oriel," gives a good idea of how such *fracas* are regarded by the typical pugilistically inclined colonial:—

The constable on duty in Collins-street yesterday arrived upon the scene of the encounter between Mr. Turves and Mr. O'Hara too late to stop the combatants. He has, however, furnished a report of the occurrence, which reads as follows:—

Faiz, me oi was cast down an' me stip was subdued
As I walked down me bate in the mornin';
An' I thought to meself in a sorrowful mood
Of the peaceful ould land I was born in,
Where there's funnin' an' fightin' whenever ye please
An' ye never need wait for a hidin',
An' life is worth livin', begorra, bekase
'The people aren't all law-abidin'.

In spite av me helmet, an' jumper, an' pay,
An' likewise me long term of service,
I made up my mind to go back 'cross the say,
Whin I suddenly saw Misher Turves;
An' sorra a bit did I think of the flag,
Or the shamrock, or harp-strings of Tara,
Whin I saw how the gentleman laid down his bag,
An' put up his fives to O'Hara.

Twas a swate bit of argumentation they made;
Shure I felt me heart warm whin I seen 'em,
An' a matter of twenty-nine stone, sir, they weighed,
Did that pair of logicians between 'em.
'Twas a legal discussion, don't call it a fight.
Can I make a report? 'Deed I can, sir.
Some questions were put with the left and the right
'That were mighty unpleasant to answer.

First the lawyer, employin' much vigour and force,
Presented a telling indictment,
And Sawbones then ordered a blood-letting course
For relievin' the patient's excitement.
But counsel had pleas upon which he relied,
And began to grow bolder and bolder,
Till his frind on the other side promptly replied
With a biff that came straight from the shoulder.

The lawyer druv arguments home on the chest,
And enlivened thim wid observations
On the point av the jaw wid the heel av his fist
'The docthor performed operations.
There were pleas that were weighty and pleas that
were strong,

Faiz the trial put both on their mettle;
But which av thim's right, likewise which av thim's
wrong.

Well—it ain't for a "bobby" to settle,
Were it not for the Victorian high duties,
and the vexatious wharfage charges and trade
shackles generally, Melbourne might become the
emporium for Australia. But as matters now
stand, large business firms have in many cases been
compelled to transfer their central offices from
Melbourne to Sydney. But Victoria is beginning
to be alive to the situation, and the system of pro-
tection and isolation followed in this colony during
the part few years is felt on all sides to be re-
sponsible for many of the burdens under which the
community groans.

H.B.M. COURT FOR JAPAN.

Before JAMES TROUP, Esq., Assistant-Judge.
SATURDAY, December 8th.

THE EMBEZZLEMENT CASE—SENTENCE: FOUR MONTHS' IMPRISONMENT.

Albert Rothschild Lamb, a clerk, was charged this morning on the prosecution of Mr. W. Gordon, of Messrs. Gordon & Co., wine and spirit merchants, Main Street, Yokohama, with embezzling the sum of \$400, the monies of his employers.

Mr. Gordon asked for an adjournment until Mr. Lowder could appear and lead the prosecution.

His Honour remarked that prosecutor had had the case in his hands since yesterday, and could surely have instructed Counsel by this time.

Mr. Gordon said that he was willing that the case should proceed. Mr. Lowder would be in Court within a few minutes.

His Honour said that as Counsel would require time to look up the case, he thought an adjournment would be necessary even then. Meanwhile, accused was remanded in custody for a quarter of an hour.

Upon the Court reassembling, Mr. Lowder, who was present, said that he was not appearing in the case. He, however, had been informed by the accused that he would like an adjournment till Monday to obtain advice in the case, and had informed him that doubtless the Court would entertain favourably an application of that kind.

His Honour (to accused)—Have you any application to make?

Accused—Yes, sir.

His Honour—What do you apply for?

Accused—I should like to apply for an adjournment till Monday in order to make a defence.

His Honour—You will have an opportunity to make a defence even without an adjournment. If it is only to make a defence no adjournment is necessary, the case can go on.

Accused—But I have not been able to make any arrangements yet.

His Honour—Have you taken any steps to secure any advice upon the matter?

Accused—I have not had an opportunity. I was taken straight from the ship to the gaol.

His Honour—If you had asked the keeper of the gaol he would have sent your request to the proper quarter, and no impediment would have been placed in your way.

Accused—A friend of mine tried to see me and was refused.

His Honour—We do not thrust friends upon prisoners. If you had made an application to see your friend your request would have been acceded to. But he came himself without knowing whether you wanted to see him or not. If you had made an application for the presence of any person we would have seen what we could do for you. Now, what do you wish to do?

Accused—I should like to consult a certain party in the matter.

His Honour—I do not see how I can grant your request for an adjournment on those grounds. I do not wish to put words into your mouth, but is it your wish to seek legal advice?

Accused—Yes, I wish to get legal advice.

His Honour—You don't say that simply because I used those words just now?

Accused—No, I really wish to seek advice.

His Honour—The Court is perfectly willing to give you an opportunity to obtain legal advice in the matter—that is your wish I gather?

Accused—Yes, your Honour.

His Honour (to Mr. Gordon)—Have you anything to urge against the adjournment?

Mr. Gordon—I am perfectly satisfied.

His Honour—Then I further remand accused, to give him an opportunity to obtain legal advice, until Monday morning at 10.30 o'clock.

MONDAY, December 10th.

Albert Rothschild Lamb, was brought up on remand again this morning on the charge of embezzlement.

Mr. Lowder said he appeared for the prisoner. Mr. Gordon conducted the prosecution in person.

His Honour said that the adjournment took place on Saturday just as the Court was about to take evidence. The proceedings were resumed from that point.

William Gordon, wine merchant, carrying on business at No. 74, Main Street, Yokohama, was then sworn. He deposed—Lamb sold some goods realising \$402.50, and appropriated the amount to his own uses. That is all I have to say.

His Honour—I think the Court desires a little more detail as to the time this happened and so on. You have not stated who Lamb is, or to whom the goods belonged.

Witness continuing—Lamb was a clerk in my employ, and these goods were my property, to wit 35 cases of brandy. The purchaser is a store-keeper or general dealer in Honmura named Kasuga. The sale was made on Thursday the 6th inst., and Mr. Lamb tried to disappear the following day, Friday: that, your Honour, is the case in brief.

Mr. Lowder (in cross-examination)—I believe, Mr. Gordon, that you are not desirous of pressing the charge?

Witness—I am not.

Mr. Lowder—You wish the prisoner to be dealt with as leniently as possible?

Witness—As leniently as the Court can in the case.

Mr. Lowder—How long has he been in your employ?

Witness—He has been employed by me for about eighteen months or two years, certainly a little over 18 months, I think.

Mr. Lowder—Did he come to you with a good character from his former employers?

Witness—Very good indeed from a former employer.

Mr. Lowder—Could you name him?

Witness—Yes, he is Mr. Howard, agent of the P.M.S.S. Company.

Mr. Lowder—What have you to say as to his character for honesty up till the 6th of December?

Witness—I have no fault to find in that respect.

Mr. Lowder—If you had been asked to give him a character previous to that date, it would have been a good one?

Witness—I should have qualified it.

Mr. Lowder—I am speaking as to his honesty.

Witness—I do not know that I could exactly answer that in the affirmative.

His Honour—You have stated certain facts Mr. Gordon, but you have not informed the Court

how these facts come to your knowledge. Are they within your personal knowledge, and if so, in what way did they come to your knowledge?

Witness—Mr. Lamb was not at the office on Friday morning, the 7th, when I had occasion to inquire for him about something. I asked the godown man, Luchini where Mr. Lamb was. He said that Lamb had told him that he was going to the dentist. After that one of my godown boys told me that this brandy had been sold the previous day. Whereupon I asked if he knew whether Mr. Lamb had received the money or not on delivering the goods. He informed me that he knew that Lamb had received the money. It was then that I came to the Consulate to take the steps I did.

His Honour—How did you discover where Lamb was?

Witness—I did not discover it, but I went down to the hatoba to see whether Mr. Lamb was anywhere about. I don't know how I got the suspicion in mind that he might be going by the steamer. I had been to the hatoba before I heard the boy's statement regarding the selling of the brandy. I did not confirm the boy's statement before I came to the Consulate.

His Honour—Am I to understand that when Mr. Luchini told you that Mr. Lamb had gone to the dentist's you conceived the notion that he was probably going away by the steamer?

Witness—Well, I did not believe that he, Lamb, had told Luchini the truth, because he had always before told me personally when he was going out in the forenoon. I have also had applications for Mr. Lamb's position before that day, which may have influenced me and induced me to believe that he was going away.

His Honour—You have not told me how you knew that the brandy had been sold.

Witness—I have said that the boy told me of its sale the previous day. I had not missed the brandy before I went to the hatoba to look for Mr. Lamb.

His Honour—What made you go to the hatoba to look for him?

Witness—I don't know, unless it was by reason of receiving applications for his position. I may have gone down to the hatoba on the impulse of asking him why he was going away so hurriedly without telling me.

His Honour—Did you suspect him of dishonesty then?

Witness—No. I may qualify that by stating that he had a small book-debt with me. I knew before that that he was in debt, by his own confession. The Japanese boy came to me at the hatoba and conveyed the information regarding the brandy. It was that which induced me to take the steps I did.

His Honour—Then I understand that it was through your thoroughly believing the statement of the boy that you came to the Consulate and laid the charge. Have you verified it?

Witness—Yes, I have.

His Honour—What were Lamb's specific duties.

Witness—To sell or take orders for wines and spirits, give godown orders for them; keeping the accounts and rendering them monthly. I have looked into this matter, seen the *banto* of Kasuga who has proved paying the money for the brandy. I made these inquiries immediately after leaving the Consulate. It would have been Lamb's duty to make an entry in the books regarding the brandy. There is no entry in the day-book. I have no receipt from the purchaser of the brandy as it was a cash transaction. It has not been the rule in the office to take such a receipt. I have in the office a delivery order for the brandy in Lamb's handwriting. Lamb was competent to sell the brandy and hand it over without receipt if he got the cash for it, and provided that he had sold it at the proper selling price. Knowing the quality of the brandy, I can say that \$402.50 would not be the proper price for 35 cases. My retail price at present is \$20—so that it should have been about \$700 in all.

His Honour inquired if prosecution had any further witness to call.

Mr. Gordon replied that he could bring witnesses if necessary.

Mr. Lowder—If I may be allowed to interrupt at this juncture the course of these proceedings, I should like to inform the Court that I have one witness as to character present in Court. I should have like to have had three other witnesses to testify as to prisoner's character, but unfortunately two have left the country, while the third is ill in bed in Tokyo—as I was informed only this morning—and he will not be able to attend for several days. But if I am allowed to call now the evidence of Mr. Howard, who has already been mentioned in the course of these proceedings, I should be able to produce his evidence as to character. Then if the Court is with me in this, I

should with your Honour's permission upon the evidence which this witness can give, make earnest appeal to your Honour to take into consideration the antecedents of the prisoner and the circumstances of the case, and ask you to arrive at the conclusion that the case before the Court can be properly dealt with under the Summary Jurisdiction Act of 1869. I think, your Honour, that you will agree with me, all things considered, that the prisoner can be adequately punished under the Summary Jurisdiction Act, and if you are with me, I shall now proceed to call Mr. Howard.

His Honour said he would take Mr. Howard's evidence.

Benjamin Chandler Howard, Agent in Yokohama of the P.M. S.S. and O. & O. Companies was then sworn. He deposed—I am acquainted with the prisoner at the bar. He was in the service of the Company prior to entering that of Mr. Gordon. He was employed by the Company for about three months. I found him faithful and attentive to his duties, so much so that after he left us I recommended him elsewhere, giving him a good character. He left us simply on account of somebody else being sent out from the Home office. He left through no fault of his own.

There being no further evidence to lead, His Honour formally addressed the prisoner. He presumed, he said, that prisoner had been instructed by Counsel upon the difference between summary jurisdiction and the other method of English procedure, of letting the case take the usual course—trial by jury; and then warned him that he need not testify or make any statement unless he chose; but that any statement which he might like to make would be taken down in writing and might be used against him in any future proceeding.

Prisoner said he understood the position.

The Clerk of the Court then read the full charge as follows:—

William Gordon, of Yokohama, being first duly sworn, charges that on the 7th day of December instant, at Yokohama, within the jurisdiction of this Court, Albert Rothschild Lamb, then being a clerk of the said William Gordon, feloniously and fraudulently did embezzle and steal the sum of \$402.50 contrary to the Larceny Act, 1861.

His Honour (to prisoner)—What have you to say to that charge: are you guilty, not guilty, or do you decline to plead?

Prisoner—I plead guilty, your Honour.

His Honour duly entered the plea of guilty upon the record.

Mr. Lowder—The prisoner desires to express, through me, his Counsel, both to the Court and to the prosecutor, his deep contrition for the offence to which he has just now pleaded guilty. He has nothing to say in excuse or extenuation of his crime, and the condemnation of his own conscience has already preceded that which is awaiting him at the hands of the Court. I may be allowed to state that he desires to make all such reparation to his late employer as lies in his power, and I therefore ask the Court to make, under the 27th Section of the Summary Jurisdiction Act, paragraph 3, an order of restitution to the owner of the goods embezzled. I may also point out that this is the prisoner's first offence; that he is a young man of good education and excellent connections; and that by pleading guilty to the charge preferred against him, he has, so far as lay in his power, tried to save public time and public money. Under these circumstances, Your Honour, I think the ends of justice will be met by the infliction upon him of a merciful sentence.

His Honour—Prisoner at the bar, it is my duty to convict you of embezzlement, as charged. It is a very painful position in which you find yourself. A young man of your antecedents should never have been led to commit such an act as that to which you have just pleaded guilty. I shall not expatiate upon it, but will confine myself to the hope, as no doubt it will be so, that this unfortunate affair will be such a lesson to you for all your future life, that you will avoid anything of the kind again, and elsewhere—I cannot say here, but in a place where such an offence has been committed it is practically impossible—you will endeavour to regain that character, now lost, which you had with a previous employer. In view of what has been said by the last witness, as well as the prosecutor's desire that you should be dealt with leniently, I am willing to reduce your punishment to a penalty within the limits of my power and discretion. I therefore sentence you to undergo an imprisonment of four calendar months within the goal of this place. You will have to pay the costs of the case, and an order will now be entered for restitution of the property wrongfully applied.

The Court then rose.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

SOLUTION TO PROBLEM No. 154.

WHITE.

1—Q to Q Kt 5
2—Q to R B 5 ch.
3—B to Kt 2 mate

BLACK.

1—P to K B 7
2—Kt x Q

2—B to K 6
3—Q to Q 3 mate

if 1—P to Q 4
2—P to B 6

Other variations obvious.

Correct solutions received from Omega, Digamma, Shogi, W.H.S., Kr., and J.D.

Additional correct solution of No. 153 received from Kr.

W.A. DE H.—Your solution of No. 152 is incorrect. Key-moves are seldom captures; captures and checks at the same time, never.

PROBLEM No. 156.

By G. C. Heywood.

BLACK.

WHITE.

White to play and mate in three moves.

Mrs. J. W. Showalter and Mrs. H. Worrall have at length met in New York to do battle for the Ladies' Chess Championship of the United States. The first game was played last month and resulted in favour of Mrs. Showalter. Mrs. Worrall won the 10th and opened with P to Q 4, but resigned on the 67th move. No further details to hand as yet. The Masters' tournament was drawing to a close, Steinitz leading, although he lost one game to Albin through exceeding the time-limit.

A DISCOVERY.

The Russian expert, D. N. Pawlow, of Moscow, made a most wonderful discovery in a game which was played by Steinitz, by cable, against the Liverpool Chess Club. After Black's nineteenth move the board presented the following position:

BLACK—(STEINITZ).

WHITE—(LIVERPOOL).

Liverpool played Q to R 5 and the game proceeded thus:—

30..... R takes Kt; 31—P takes R, Kt to Q 5; 32—Kt to K 7 ch.; Q takes Kt, and black won two minor pieces for a rook.

Strange to say, neither Steinitz nor Liverpool saw the simple continuation, as discovered by the Russian, viz.:

30—Kt (Kt 6) to K 7 ch.; Kt takes Kt; 31—R takes Kt, R takes B; (if 31—Q to h, white wins with 32—B takes P, etc.); 32—Kt takes R ch.; Q takes Kt; 33—Q to Q 5 ch. etc.

GAME No. 190.

A pretty game from the *British Chess Magazine*.

7—P to Q 4	7—P to B 6 (a)
8—B to K B 4	8—P to Q 4
9—Kt to B 3	9—P to B 3
10—Q to Q 2	10—Kt to B 3 (b)
11—Castles	11—B to Kt 2
12—B to K 5	12—Q Kt to Q 2
13—Q to B 4	13—K to K sq. (c)
14—P takes Q P	14—R to B sq.
15—R to K sq.	15—Q to K 3
16—P to Q 6	16—Q to K 3
17—B to B 4	17—K to Q 4 (d)
18—Kt takes Kt	18—K to Q sq. (e)
19—B takes B	19—Q takes R ch. (f)
20—R takes Q	20—R takes Q
21—Kt takes R	21—P to Kt 4 (g)
22—Kt to K ch.	

and mate in two more moves.

NOTES BY MR. FREEBOURGH.

- (a) Thought best by players who count on B—P takes B or B to B 4 ch. Otherwise a temporary loss of time.
 (b) If 22..... B to Kt 5; 22—B takes Kt, threatening Q to B 4 ch., if the piece be taken.
 (c) To carry the K to the Q side. This device was suggested by Mr. Potter, who subsequently qualified his views as to its chances of success.
 (d) If 17..... Q takes B White wins by 18—B takes Kt, dis. ch.
 (e) If 18..... R takes Q; 19—Kt to B 7 ch. wins both Q and R. It is a curious position.
 (f) He might now have taken the Q. The probable continuation would be 19..... R takes Q; 20—R takes Q, P takes Kt; 21—K R to K sq.; R to K 5; 22—R takes R, P takes R; 23—R takes R P, Kt to Kt 5; 24—B to Kt 5, to play R to R 8 ch.
 (g) 21..... Kt to Kt 5 is better, but his game is lost.

GAME No. 191.

Played recently in Dublin between Mr. Porterfield Rynd, the Irish champion, and Mr. Hugh Browne, of Nottingham.

WHITE.	BLACK.
P. Rynd.	H. Browne.
1—P to K 4	1—P to K 4
2—P to K B 4	2—P takes P
3—Kt to K B 3	3—P to K Kt 4
4—P to K R 4	4—P to Kt 5
5—Kt to Kt 5	5—P to Q 4
6—P to Q 4	6—P to R 3
7—B takes P	7—P takes Kt
8—R P takes P	8—P to K R 4
9—P takes P	9—Q takes Q P
10—B to Q 3	10—Kt to K 2
11—Castles	11—Q takes P ch.
12—K to R sq.	12—Q takes Kt P
13—R to K sq.	13—R to Kt sq.
14—Kt to Q 2	14—Q to H sq.
15—Kt to K 4	15—B to Kt 2
16—B takes P	16—Q Kt to B 3
17—Kt to Q 6 ch.	17—K to B sq.
18—R to K B sq. ch.	18—B to B 4
19—B takes B	19—K takes B
20—R takes Kt ch.	20—K to K 2
21—B to B 7 ch.	21—K to K 3
22—Q to K 2 ch.	22—Kt to K 4
23—R to K sq.	

and wins.

GAME No. 192.

The following pretty game was played at the Graz (Styria) Chess Club, between Professor J. Berger and Herr Hartstein:—

RUY LOPEZ.

WHITE.	BLACK.
J. Berger.	A. Hartstein.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—Kt to B 3
4—P to Q 3	4—P to Q 3
5—P to B 3	5—B to K 2 (a)
6—Q Kt to Q 2	6—B to Q 2
7—B to R 4	7—Castles (b)
8—P to K R 3	8—P to Q Kt 3 (c)
9—P to K Kt 4	9—Kt to Q R 4
10—B to B 2	10—B to B 3
11—Kt to B sq.	11—Kt to Q 2 (d)
12—Kt to Kt 3	12—Kt to Kt 2
13—Kt to B 5	13—B to B 3
14—P to K R 4	14—K Kt to B 4
15—P to R 5	15—P to K 3 (e)
16—P to Kt 5 (f)	16—B takes Kt P (g)
17—K R to Kt sq.	17—Kt to K 3 (h)
18—P to Q 4	18—P takes P
19—P takes P	19—B to Q 2
20—P to Q 5	20—Kt (K 3) to B 4
21—Kt takes Kt P	21—K takes Kt
22—Kt takes B	22—P takes Kt
23—B takes P	23—P to K B 3

24—B to R 6 ch. (j)	24—K to B 2 (k)
25—R to Kt 7 ch.	25—K to K sq.
26—P to K 5	26—P to B 4
27—Q to Kt 4 (l)	27—P takes Q
28—B to Kt 6 ch.	28—R to B 2
29—R to Kt 8 ch.	29—K to K 2
30—B to Kt 5 ch.	30—R to B 3
31—B takes R mate.	

ANALYSIS.

- (a) Or the King's Pinnchette Defence, 3..... P to K Kt 2.
 (b) Casting might be delayed advantageously till White given indications upon which side he will castle. Anyhow, it is advisable against a superior player, which is the case in this instance.
 (c) A more than indifferent move, the intention being Kt to Q R 4, challenging the exchange of Bishops; but for that purpose he could play at once Kt to Q R 4, without losing time with the text-move. White's K B is out of play at present, and might, therefore, be left undisturbed. He could have continued with 8..... P to Q 4, and in the least favourable variation his Q B P would be doubled, but then White would have to play the King without casting, with a retarded development besides; but Black has already at this early stage the inferior game. Black's weakness is the square K B 4. White threatens to place a Knight at that square, which cannot be prevented, because if P to K Kt 3, then White forces an open K R file in advancing his K R P. Such a weakness is indicated is quite enough to lose the game. With White it is only a matter of procedure.
 (d) The King's Pawns should not be moved in this position; certainly not without compulsion. He might have played 15..... Kt to K 3.
 (e) The beginning of an elegant final combination, illustrating sufficiently Black's shortcomings in the defence.
 (f) Better would have been 16..... P takes P; 17—R to K Kt sq., Kt to K 3, &c.
 (g) 17..... P to K B 3 would have been continued—18—P to Q 4; 18—P takes P; 19—Kt to B 3; 20—B to R 3; 21—P to Q 4; 22—Kt to Q 4; 23—Kt to K 6; 24—Q moves to Q 3; 25—B to Kt 4; 26—P to B 4, and wins.
 (h) A subtle and problem-like move.
 (i) If 24..... K takes B, then 25—R to Kt 6 ch., K to R 2, 26—Q to Q 2 and mate cannot be averted, and if 24..... K to R 2, then 25—P to K 5 dis. ch., P to B 4; 26—Q to Kt 4, K R to Kt sq.; 27—B to Kt 7 and wins.
 (j) Very pretty, and the sequel of 24—B to R 6 ch.

ARRIVAL OF THE "YORKTOWN."

The U.S.S. *Yorktown* arrived in Yokohama last Friday, the 7th instant, thirteen days from Honolulu. She experienced fair weather the entire trip, and averaged a speed of something over eleven knots an hour while under way. The main dimensions of the ship are; extreme length, 230 feet; extreme breadth, 36 feet; draft, 16 feet. Her engines are of the horizontal, triple expansion type, and she is propelled by twin screws of the type adopted for the United States Naval ships, and their material is manganese bronze. Her battery consists of six 6 inch breech loading rifles, four of the usual type of quick-firing guns, and six machine guns. The *Yorktown* was built in 1888 by the Cramps, of Philadelphia, and was commissioned for service in April, 1889. On the trial trip her speed was 16.66 knots per hour on a developed I.H.P. of 3,200. The coal capacity of this ship is quite remarkable, being no less than four hundred tons, twenty-five per cent of her displacement. At her mean load water draught she has a displacement of 1,700 tons, and with her bunkers full of coal she is capable of steaming 4,300 knots at an average speed of about ten knots per hour. The destination of the *Yorktown* is not yet known, but it is believed that she will join the Flag-ship at Chefoo in the course of the next month or six weeks. The following is a correct list of the officers at present attached to the United States cruiser *Yorktown*:—Commander William M. Folger, Lieutenant Thomas H. Stevens, Lieutenant Herman Pickbush, Lieutenant J. Marshall Robinson, Lieutenant William G. Hannum, Lieutenant (j.g.) Daniel P. Menefee, Ensign Chester M. Knepper, Ensign Frederick A. Taut, Chief Engineer Harrie Webster, Surgeon George P. Lumsden, Passed Assistant Paymaster Edwin B. Webster, Assistant-Engineer Albert Moritz, Pay Clerk William J. Tobin. Several of the officers of the ship have been in Japanese waters before, but of these but one or two have made any considerable stay in Yokohama.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, December 10.

The departure of the French troops is timed for them to reach Madagascar in April, when they will at once start for the Capital, Antananarivo, returning to the coast in October.

London, December 12.

A Russian Loan has been placed on the London market and the fact is regarded as an evidence of more satisfactory relations.

(FROM "TOMORROW PAPER.")

Paris, November 21.

The Hereditary Grand Duke of Saxo-Weimar is dead.

Earthquakes have occurred in Sicily and Calabria, by which several hundred persons were killed.

(FROM THE "SIAM OBSERVER.")

Paris, November 15.

The Committee of the Chamber of Deputies has reported favourably on the expedition to Madagascar and the special credit demands by the government. M. Dupuy said that it was not a question of the extension of the French Colonial Empire, but that the expedition was necessary only as a means of upholding the existing rights of France in Madagascar.

The enquiries which are now being made in connection with the arrest of Captain Dreyfus on the charge of divulging State secrets to Italy and Germany, have revealed the fact that there exists in Paris a wide-spread system of espionage whereby such information is regularly obtained for foreign governments by collusion with French officials. Two Germans have been arrested in this connection.

London, November 16.

The Duchess of Montrose is dead.

[London, December 1.

The situation in Waziristan is disquieting, as large numbers are joining the tribesmen. More troops have been sent, and others have been warned to hold themselves in readiness.

For some time the situation in Waziristan, on the North-Western frontier of India, has been occasioning anxiety to the Indian government. In July the Waziris murdered some men of the Zhoib Valley tribal levy. In the following month the Commissioner of the Dera Ismail Khan District warned the political authorities in the Zhoib Valley that the Waziris were again on the war-path and suggested that the greatest precautions should be taken to guard against the intended depredations at all the outposts and general acts of violence on travellers by the Gomal Pass. It was believed then that the disaffection was resultant on the finding of a recent *Firga* held at Dera Ismail Khan to decide the case against the murderers of the late Mr. Kelly, overseer, Fort Sandeman Division. The Waziris resented the sentence passed. They were reported to have murdered three of their most influential Maliks who suggested the sentence in the *Firga*, and were in a great state of furious excitement and bent on violence. It was subsequently decided to send a political officer, with a military escort, to enquire into the state of things and delimitate the boundaries. It is this force the tribesmen are now threatening.—Ed. N.C.D.N.]

London, December 3.

The Japanese Government have purchased the Chilean cruiser *Esmeralda*.

A Treaty of Commerce has been signed between Italy and Japan.

London, December 4.

Yokohama despatches state that, if the war is concluded now, Japan is willing to accept an indemnity of four hundred million yen, together with the cession of the territory now occupied by the Japanese, otherwise Japan demands far larger concessions, and will grant no armistice unless China sues for peace and makes over Peking and other pledges to Japan.

A message from President Cleveland praises the progress of Japan, and her laudable desire to complete a domestic autonomy, giving Japan a full equality in the family of nations.

London, December 6.

The natives in Cairo are greatly incensed with France owing to her refusal to consent to the conversion of the Unified Debt, and thereby preventing any reduction of the land-tax.

London, December 7.

A Chinese Gold Loan of a million and a quarter sterling, bearing interest at four and a half per cent. per annum is about to be issued in London.

The *Times* states in a leading article that the hearty thanks of the nation are due to H.R.H. the Prince of Wales, for the unsurpassed tact, dignity, and good feeling displayed by him during his recent stay in St. Petersburg.

It is reported that Ashantee will shortly be declared a British Protectorate.

There was prolonged uproar at the opening of the Reichstag, owing to the Socialist members refusing to rise to cheer the Emperor.—N. C. Daily Mail from

(FROM JAPANESE PAPERS.)

(The following telegram, dated the 13th inst., despatched by Mr. Sone, Japanese Minister to France, has been received by the Foreign Department.)

The President of the House of Representatives died on the 12th inst.

Hiroshima, December 14.

A telegram, dated the 13th inst., despatched by the Commander-in-Chief of the First Army, and received by the Head-quarters to-day, was to the effect that Major-General Tachimi troops are now encamped at Tsao-po-ken, with the enemy at Lien-shan-kwan. On the 12th the advance column dispatched from Feng-hwan met a stronger force of the enemy at Saimatsui. The Japanese soldiers gradually withdrew and the enemy proceeded towards the south. Early the following morning a fight took place. The enemy had 4,000 men, and were extended over some 6,000 metres. The Chinese intend to assault our troops from Saimatsui and Ai-yang, and we have made preparations to repel them. Our detachments will attack the left wing of the enemy to-morrow (14th). The Commandant of the Fifth Army Division despatched to-day (13th) a regiment of soldiers from To-shan-chen to Feng-hwan, and To-shan-chen was occupied by a division of soldiers from Chiu-lien-cheng.

(The following Shanghai telegram was received by the Nippon Yusen Kaisha yesterday.)

A rumour is current to the effect that Newchwang has been occupied by the Japanese Army.

Söul, December 13.

Boku Yei-ko was received in audience by the King and Queen to-day.

Li Kei-yeu, Minister of War, and Gen Sei-yei, Minister of Agriculture and Commerce, have resigned.

Jo Ko-kan will arrive in the capital to-morrow (14th).

Shin Ki-zen will be admitted to the Cabinet.

Osaka, December 14.

The first batch of spoils taken at Phyöng-yang and Chiu-lien arrived here from Ujina to-day in a train consisting of thirty carriages. They comprise over seventy Krupp guns, Gatling guns, Chinese made mountain and field pieces, over two thousand small arms, some 2,700,000 rounds of ammunition, swords, spears, etc.

Shanghai, December 13.

Although Japan will demand an indemnity from China at the conclusion of the war, the Pekin Government will be unable to pay the money. The Customs duties collected at various ports is very small at present, and if increased taxes are imposed there is danger of a rebellion breaking out. It is, therefore, generally believed by the foreign residents at this port that China will be obliged to raise a loan abroad in order to satisfy the Japanese demands.

A British officer is said to have stated that if Japan occupies any districts in China as a surety for the indemnity, England will lend the money to China, and England will hold the district in lieu instead of Japan.

Rumour has it that England has decided to purchase Formosa, Cheung-shan, and Chefoo from China, and has taken steps to that end.

REPORTS.

The British steamer *Sikh*, Captain J. Rowley, reports:—Left Tacoma, Wash., the 22nd November and Victoria, B.C., the 23rd at 8 a.m. Arrived at Yokohama the 12th December at 9 p.m. Very strong south-easterly gales and heavy sea experienced during the entire passage.

The American steamer *Peru*, Captain Friele, reports:—Left San Francisco the 24th November at 3 p.m.; experienced strong south and westerly winds with rough sea during the passage. Arrived at Yokohama the 13th December at 3 p.m.

LATEST COMMERCIAL.

IMPORTS.

No good news. The general market is dull and sick. For Blankets and some kinds of Cloth suitable for Army use there is a demand, and good prices could be obtained for the right thing. But all else is flat, stale, and unprofitable.

COTTON PICK GOODS.

	PER PIECE.
Grey Shirtings—8½ yds. 39 inches	\$2.25 to 2.75
Grey Shirtings—9½ yds. 45 inches	2.30 to 3.25
I. Cloth—7½ yds. 39 inches	1.60 to 1.90
Indigo Shirtings—12 yards, 34 inches	1.70 to 2.35
Prints—Assorted, 21 yards, 30 inches	1.75 to 3.75
Cotton—Italians and Sattinas Black, 39 inches	0.10 to 0.21
Velvets—Black, 35 yards, 22 inches	6.75 to 9.00

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes direct into the hands of the Wholesale and Retail Buyers, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammation. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1894.

ATKINSON'S WHITE ROSE

Fragrant and delicate, its sweetness is over-delightful. No-one but Atkinson's, the original and only true Essence.

ATKINSON'S
OPOPANAX HELIOTROPE
WOOD VIOLET TREVOL

and other well-known Perfumes are superior to all others for their strength and natural fragrance.

Of all Perfumes,
J. & E. ATKINSON,
24, Old Bond Street, London.

CAUTION! Only genuine with shield-shaped blue & yellow label & word Trade Mark, a "White Rose," and address in full.

January 13th, 1894.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DEC. 22ND, 1894.

BIRTH.

On the 20th inst., at 52, Main Street, Yokohama, the wife of J. G. DORRING of a Daughter.

SUMMARY OF NEWS.

MR. JANNI has been appointed Secretary of the Club Hotel.

THE German steamship *Cam* has got aground near, Fort No. 2, Saratoga Spit.

THE Yokohama Skating Club start the season with a balance in hand of \$124.20.

DETAILS of recent operations in Manchuria have been received during the week.

MR. R. N. ST. JOHN has been installed W.M. of the Yokohama Lodge, No 1092, E.C.

THE new secretary of the Russian Legation, Mr. Gregoire de Wollant, has arrived in Tokyo.

THE cold weather was ushered in last Saturday with a very cold "snap;" sleet fell in Yokohama during the morning.

AN imperial salute of 31 guns was given by the Russian ships in harbour on the 18th inst. in honour of the Czar's birthday.

MR. CHINDA, formerly Japanese Consul at San Francisco, has been appointed to the Consulate at Ninsen, an office of the first class.

THE death is announced of Mr. Mutsuchi, late President of the Yokohama Chamber of Commerce.

which took place on the 17th inst. The deceased had been suffering from heart disease.

MR. MITSUNASHI, Secretary of the Kanagawa Kencho, to the general regret of the foreign community, has been retired.

THE dispute between the Governor of Kanagawa and the local assembly way result in the Governor sending in his resignation.

AN Austrian claiming to be a "Baron" has been arrested in Yokohama on a charge of robbing a young Englishman on board the *Verona*.

THE Yokohama Sailing Club, after a most successful season, have re-elected their Secretary and Treasurer, Mr. G. H. Scidmore, by acclamation.

THREE boys, a cook, and a sailor were burnt to death on the *Ujigawa Maru*, which caught fire while near Naka-no-shima, near Shimonoseki, on the 4th inst.

THE Amateur Theatricals in the Public Hall on Saturday drew a crowded house. The performance was excellent. Two ladies made their debut in the course of the evening.

SNOW is reported to have fallen in Osaka, Toyama, Kanazawa, Fukui, Nara, Chiha, Kyoto, Tottori, Hiroshima, Otsu, Yamaguchi, Uwajima, and Nagasaki on the 15th inst.

It was notified by the Minister of the Navy on the 15th inst. that the Naval Department was removed to No. 1, Kasumigaseki, Nichome, Kojimachi, Tokyo, on that day.

MR. KATO, newly appointed Japanese Minister to England, gave a banquet on the 17th inst. at the Imperial Hotel to a number of distinguished persons. He left for Europe in the *China*.

FIELD-MARSHAL COUNT YAMAGATA has been promoted Inspector-General of the Army. The Count has been released from the office of President of the Privy Council at his own request.

ELEVEN fishermen belonging to Niigata Prefecture were caught in a sudden gale while fishing in a boat off Kameyo-mura, Kita-gambara District, on the 9th inst. The boat capsizing, two of them were drowned.

THE Choral Society's concert on Wednesday evening was a pronounced success. Cowen's "Rose Maiden," was the principal item. The Philharmonic Society made a most gratifying entry into public life at this concert.

THE master of the steamer *Mount Lebanon*, which stranded on No. 2 Fort at the entrance to the Bay, on Nov. 22nd, has been cautioned to be more careful by a British Marine Court of Inquiry sitting at H.B.M.'s Consulate.

SOME Malay seamen on the steamer *Afghan* declined to continue voyaging along the coast of Japan by reason of the cold, but H.B.M.'s Consul pointed out to them that they must serve the time of their articles, and ordered them on board ship.

THE number of beggars in Yokohama having increased of late, and the recent conflagrations in the native town being believed to have originated through them, the Japanese police authorities arrested some forty or fifty of the fraternity on the 14th inst.

THE English mail caught up the French mail at Singapore, being three days to the good at that port, and the M.M. boat four days behind. The Christmas mails brought by American, French, English, and Canadian packets were

be delivered within twenty-four hours of each other and thus establish a record.

THE amount of money paid in rebates by the Nippon Yusen Kaisha to the United Cotton Spinning Factories, in accordance with the terms of the arrangement between the two parties for the reduction of cotton freights from Bombay, during the year ending October last, was about yen 70,000.

REUTER TELEGRAPHS:—Alan Ferguson, the son of Sir James Ferguson, of Kilkerran, Ayrshire, and Member of Parliament for North-east Manchester, has been sentenced to one year's imprisonment for setting fire to Trinity College, Glenalmond, Perth, where he was a scholar. *The Times*, in the course of a leading article, urges the necessity of China acknowledging her defeat, and making overtures of peace to Japan. By so doing she would compel Japan to show her hand, and if the latter's demands were too great the European Powers might then be disposed to interfere. Japan, continues *The Times*, cannot hope to be permitted to assimilate any large slices of the territories of China since she could not do so without infringing the interests of the European Powers. The French troops occupied Tamatave on December 12th. The Hovas fled precipitately, amidst great excitement. A few days afterwards it was reported that the Queen of the Hovas had intimated her unconditional acceptance of the conditions imposed by the French, who would probably demand the armed occupation of the Capital until the treaty has been executed. In Rome certain Deputies have been charged with forgery. King Humbert has prorogued Parliament.

THERE is a good all round improvement in the Import trade, and a rise in prices in several commodities can be reported. Yarns of all counts, except 28/32 singles, have received considerable attention, and at an advance in price. Heavy Grey Shittings have been taken on a good scale, and 8½lb., both "spot" and "future," are in good demand, all for more money. In Fancy Cottons the principal demand has been for Prints and Velvets, for which quotations have advanced. Turkey Reds are quiet, but can only be bought at an advance on recent rates. There is not a great deal doing in Woollens outside the Blanket business, but for these the demand is extensive and constant. The Metal trade has revived at last, and holders are now getting a rise on all kinds of Iron—Bars, Pig, and Plates being all in good request, while there are inquiries for various other Metals. Wire Nails are only active in regard to deliveries of previous contracts, which are good. Tin Plates are not in much demand, and the stock appears to be large. There has been a good current business in Kerosene at late rates, and deliveries are heavy. The Sugar trade has been active, and sales have exceeded arrivals. The stock of old Formosa has been entirely cleared off, and there is only a very small stock of Manila on offer. There have been good sales of White sorts, and fair deliveries, all at better rates, with a healthy condition of the market. Silk was quiet at the commencement of the week, but extensive operations followed, and the business of the past few days has been so extensive as to make a considerable impression on the stock, quotations closing firm all round. In Waste Silk there has been a small daily business, and holders are still strong, though carrying a stock close upon 20,000 piculs. Considering the time of year, there has been a fair demand in the Tea market, and any parcels above Medium grade find ready buyers at full prices. Exchange has again fluctuated, the latest movement being upward, though not so firm.

URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Port Arthur affair still finds apologists in the columns of the vernacular Press. Our readers will be interested to hear what the *Shin Choya Shimbun* has to say about the conduct of the Japanese soldiers. "It is a regular habit with civilized Christians of the West to see no wrong in anything they do themselves to Oriental and other non-Christian races, and to be blind to every element of right or justice in the conduct of the men they call heretics. Nothing is more to be lamented by humane people than the destruction of innocent lives. Civilized Occidentals have often laughed at Orientals and other heretics or savages, as though they were no better than fattened animals destined to die under the butcher's knife. During the past century, the history of savage nations that have come in contact with Christian Occidentals is all but written in blood. Our Second Army is railed against by Westerns, especially by Englishmen, on the ground that it wantonly killed a number of peaceable Chinese citizens at Port Arthur. We do not deny that some among the many soldiers and coolies belonging to the Second Army, impelled by a spirit of revenge, allowed themselves to pass the strict bounds of discipline in putting pigtailed creatures to the sword, on the night of the fall of Port Arthur. But nothing could be more unfair than to denounce the whole Army as guilty of nefarious cruelty, because some of its subordinate members went a little too far in their work of retaliation upon the barbarous Chinese. To cut a long story short, Occidentals ought to look at themselves in the mirror of Modern History, before they assert a title to attack the conduct of our soldiers at Port Arthur."

Now that Count Inouye is known to have displayed considerable energy, tempered by suavity, in urging his views upon the Peninsular Court, the old question of Korean reform has again come on the tapis. The *Kokumin* treats it *more suo*, roughly and curtly. It says that the authorities, Japanese as well as Korean, have only one principle to act on, namely to make the Koreans Japanese, and Korea a new Japan. From the tone adopted by the *Kokumin*, we fail to perceive whether it aims at the intellectual development of the Koreans so as to place them on the same plane as the Japanese; or whether it advocates an overwhelming immigration of Japanese into Korea, so as to make the Korean people Japanese in reality. The *Yifu* has an elaborate article upon the same topic. What Korea has to undergo at the present crisis, says the liberal organ, is not a reform, but a revolution. The system of caste, the main source of social, political, and other evils in the Peninsular Kingdom, must be abolished before anything new is attempted. On the whole, Korea should follow the steps taken by Japan since the Restoration of 1868, but, in doing so, she should by all means avoid the sad blunder committed by her exemplar at the outset of the *Meiji* era. The blunder in question was the failure of the Japanese Government to reorganise the judicial system before entering upon the reorganization of the administration. Our contemporary proceeds to enumerate six principles of vital moment to the success of Korean reform. They are as follow:

1. To make the protected State secure the services of a great cabinet adviser.
2. To take steps for the abolition of the caste system and for placing all classes on an equal footing, in full enjoyment of the same rights of citizenship.
3. To have able men employed in the service of the new Government.
4. To reorganize the police system.
5. To provide for the sound administration of justice.
6. To take measures to improve the military organization.

In conclusion, the *Yifu* recommends the Japanese Government to send to Korea a body of *shinshu*. Our contemporary is persuaded that Japan cannot furnish to Korea any better

class of men than those old feudal warriors, invaluable as policemen, to the secure blessing of good order for peaceable Koreans, and as soldiers to subdue the ignorant and untractable Tong-hak rebels.

The 8th session of the Imperial Diet is another topic that occupies the attention of the vernacular Press. The *Yomiuri* and other Progressionist organs are most explicit in the expression of their views. The *Yomiuri* has a leader headed "Moral Calibre of the Government and the Parliament," from which we take the following:—"It is needless to say that the majority of the Lower House entertain very different political ideas from those held by the present Government. But the existing state of affairs, which bids fair to make Japan in the near future greater than she ever was in her three thousand years of existence, should satisfy the Opposition that they ought to keep all their bitter feelings against the Government in a state of abeyance. The Government, on its part, should respond to this peaceable Parliamentary feeling by effecting a sweeping retrenchment of administrative expenses. Not that the People's House should play the craven and invite the Government to follow its timid example. Nothing is farther from our sentiment. We only hope to see the Government and the Diet prove equal to the situation, thus making the people unlearn the evil lesson of the past, namely, that constitutional institutions are merely vehicles for causing the people and the Government to quarrel with each other. Unfortunately the relations between the Sat-cho statesman and the popular leaders in the Lower House, the special session at Hiroshima excepted, have tended to persuade the people that parliament is merely an arena for fighting. None the less, the members should not forget that this time they are about to sit in ordinary session, and not merely for the purpose of discussing war matters. They should by all means prove themselves up to the standard of a great nation's representatives, and not allow themselves to be blinded to their normal functions by the glamour of belligerent matters." The *Kokkai* touches upon the same subject. It says much about the necessity and probability of the Diet's working in perfect harmony with the Government so as to make the State emerge from the present war glorified and enriched, but asserts in impassioned terms that the Diet should not fail to prove itself a trustworthy protector of the Constitution by demanding an explanation of the clause relating to tariff changes in the new Treaty between Great Britain and Japan, and calling upon the Government to answer for the unconstitutionality of having fixed rates of customs duties, which are indirect taxes, without previously seeking the consent of the House.

Now that most of the vernacular papers have expressed their views about the terms of peace that ought to be imposed upon China, the *Yifu* has come forward with a new demand, which it thinks equal in importance to either a guarantee of the independence of Korea or the cession of territory. It is that China should duly apologize for the insulting language she has been in the habit of employing toward Japan in her public documents, and should emphatically promise never again to fall into the same phrasology.

Various other topics are discussed by the Tokyo journals. Brief reference to them will suffice. The *Yomiuri* recommends the Authorities to bring the Tai Wōn-kun to Japan, where he might live a life of profound repose, much to his own and his country's good. The *Yifu* regrets that the Authorities have not followed its advice concerning a foreign loan, and recommends them not to neglect any measure calculated to mitigate the evils likely to appear in Japanese commercial and industrial circles in the sequel of the two domestic loans just issued. The opening of the 4th National Exhibition to be held in Kyoto from April next, is spoken

of by the *Kokumin Shimbun* as likely to produce many desirable results. Among other things, the advent of Europeans and Americans in much greater numbers than on any similar occasion in the past, is prophesied. Nevertheless, the Government is recommended by our contemporary to postpone the Exhibition till the conclusion of the war. The *Niroku* states that the Japanese forces in China have already succeeded in occupying Chinese territory extending from the 121st to the 124th degree of east longitude, and from the 38th to the 41st degree of north latitude. Our contemporary congratulates the nation upon its forces having more than half accomplished the object cherished by that journal, namely the occupation of the whole space included between 120° and 124° E. long. and 21° and 41° N. lat. The *Nippon* publishes a communicated leader in which the education of Korean youths after the improved Japanese system is urged upon the Authorities as of not less importance than any other matters of State. The *Kokumin* enters a strong protest against the Japanese industrial classes, declaring that they reckon too much upon State aid and too little upon their own energy and enterprise.

EDITORIAL NOTES.

MR. STANLEY'S LECTURES.

THE Rev. F. J. STANLEY, formerly Professor of English Literature at the Waseda Semmou-gakko, appears to be delivering a very successful course of lectures in the United States on Japan and the Japanese. One of his most attractive subjects is said to be "The China-Japanese War; its causes and significance, viewed through the centuries, retrospective and prospective." The American people are evidently eager to hear all about this burning question. They are reported to be almost universally in favour of Japan, considering that she has "right, dignity, and justice on her side." Mr. Stanley takes the philosopher's view of the situation. He applies to Japanese bayonets Bismarck's celebrated saying at the siege of Paris, "German bayonets think." China, he holds, "met her Waterloo at Ping-yang and Japan achieved her Trafalgar at the mouth of the Yalu. Why should England and France desire to interfere to prop up the tottering Government at Peking? Let Japan conquer and subdue China fully; after which the latter will be ready to accept modern civilization, give freedom to all arts and sciences, and admit the gospel freely." An attractive prospect truly. Doubtless it is from that point of view that many good people regard the issues of the present war. But other thoughts present themselves to practical folks when they contemplate the period of anarchy that China may possibly have to pass through before emerging into the new civilization.

TROUBLE IN THE LOCAL ASSEMBLIES.

THE relations between the Gifu Local Assembly and Governor Sokabe have never been very amicable. At the last meeting a collision again occurred with the result that the Home Office has ordered its dissolution. The trouble arose about outlays connected with certain works which the Assembly contended had been defrayed by the Governor without having been laid before the Standing Committee as was usually the case. In Article XXXVIII. of the Law of Local Assemblies, says the *Mainichi*, a certain agreement is provided between the Governor and the Standing Committee as to the items for which the concurrence of the latter is necessary before the Governor may issue his order, but the Committee considered that in the settled account for the 26th fiscal year it discovered a breach of that agreement on the part of the Governor. They maintain that without soliciting their concurrence he altered the works connected with the renovation of inundated districts in no less than 204 localities and that he defrayed on his own judgment a sum of about 12,100 yen, the cost of certain works connected with earthquake districts. On the Committee's demanding an explanation from the Governor, they only received a per-

functory answer. The opinion of the Assembly was asked as to what steps ought to be taken in the matter. One of the members moved that the question should not be passed over in silence, but that redress should be obtained and the rights of the Assembly asserted. But as the present is not a time for causing unnecessary trouble, the Emperor being filled with anxiety for the welfare of his country, it was suggested that the Governor should be once more approached in a conciliatory manner and urged to conduct himself in future in a strictly constitutional manner. He moved that a committee of seven members be elected for the purpose. This was approved and the Committee waited on the Governor. The latter, however, refused to see it, and consequently a vote of want of confidence in him was passed by a majority of 30 to 15. Upon this the Governor came to Tokyo to state the particulars of the trouble to the Home Minister and to ask his advice as to the course the ought to pursue under the circumstances. The Home Minister apparently condemned the action of the Assembly for it was dissolved on the 10th instant.

The Toyama Local Assembly has also been suspended, though the nature of its offence is not specified in the vernacular papers.

Governor Nakano's relations with the city members of Yokohama have been growing more and more strained, and we now learn that the members have tendered their resignation in a body. The trouble is, as we have already mentioned in these columns, in connection with the Prison Expenses.

THE ARREST OF VISCOUNT AKIMOTO'S ROBBER.

On the evening of the 28th of October, as our readers will doubtless remember, the godown of Viscount Akimoto's residence in Surugadai was broken into, and articles were stolen to the value of over 300 yen. The detectives, to whom the matter was at once reported, were of opinion that the robbery must have been the work of an experienced thief, and steps were promptly taken to bring the culprit to light. Second-hand clothing shops were carefully searched, and at last several of the garments stolen were discovered in a small shop in Shitaya, kept by one Mizutani Ukichi. A clue having thus been furnished, the malefactor, Tokuya Gentaro and two accomplices besides the shop-keeper, were arrested on the 10th ult. The chief offender had already been imprisoned several times on charges of larceny, his last term having expired only on the 10th of October. Indeed he was still under police surveillance when he broke into Viscount Akimoto's godown. The greater part of the articles of clothing had been deposited in a pawn-shop in one of the suburbs of the metropolis, and when the robber was arrested he had in his hand a small trunk containing the stolen jewels.

ARMY BEEF.

We had recently occasion to refer to the stoppage of beef contracts for the Army on account of irregularities said to exist in the dealings of certain unscrupulous contractors. In this connection a Tokyo correspondent writes us as follows:—I am glad to see reference in the *Mail* to the action taken by the Military Authorities in refusing to make contracts for army beef for a certain period. I have met with several people engaged either in the preparation of the beef or its canning, and from personal observation can testify that the material sent across the sea to Japan's brave soldiers is even in the best instances very poor stuff. Tests of a number of tins coming from several contractors resulted in the discovery that the tinned beef was, in the majority of cases, badly cooked and altogether too hastily got up. Of course, this is largely attributable to the necessary speed with which the contracts are carried out, there being invariably a time limit. At the same time, it does seem hard that such indigestible and fearfully tough beef should be supplied. It is always prepared in Japanese style, i.e. boiled with a large proportion of sweetened *shoyu*, and hence has, to the European palate, an unpleasantly sugary

taste. This boiling process was not in a single instance properly done, the beef being so tough as to be almost beyond the powers of mastication. It seems to me that the mistake lies in the fact that large contractors sublet portions of their contracts to very small tradesmen, who seek to turn an honest penny in this manner. I know of one maker of toys who spends most of his night-time in preparing beef on a small scale; another, a petty inn-keeper; a third, a dealer in paper and oil. It is scarcely to be expected that such cooks could do otherwise than spoil the broth. The large contractors themselves rarely take the trouble of making the proper inquiries into the doings of their underlings.

UNDAUNTED COOLIES.

According to the *Miyako Shimbun*, one of the very best Tokyo *Ko Shimbunshi*, on the day following the fall of Port Arthur, a band of some eighty or ninety coolies, under the direction of Capt. Maruta, were suddenly confronted by a body of Chinese soldiers fleeing from the Port. The Chinese were over six hundred strong and nearly all armed with swords, though they had thrown away their guns. Of the coolies only twenty-three carried swords, all the rest being absolutely weaponless. Seeing that it was impossible to avoid a collision with the fleeing Chinese, Captain Maruta turned towards the coolies and urged them to stand their ground; they too were citizens of Great Japan, though not soldiers; it therefore behoved them to remember their birthright and die fighting bravely, if need be. To this the armed coolies replied with an exultant shout and made a determined and desperate attack on the already disheartened foe. Their comrades followed their example and rushed forward with naked hands, resolved to wrest the needed weapons from the Chinese. A furious *mélée* ensued, which speedily resulted in the total discomfiture of the Chinese, who left over fifty of their number dead or dying on the ground, while the rest continued their headlong flight. Only two coolies were killed outright, less than a dozen others being wounded.

OFFICIAL QUESTIONS ABOUT SERICULTURE.

A few days after the great meeting of Japanese agriculturists, briefly reported in these columns, a meeting of sericulturists was held in Tokyo also under the guidance of Mr. Mayeda. Among other problems discussed by those present, four were submitted by the Department of Agriculture and Commerce. They ran thus:—

- 1.—As to the process of universally informing Japanese sericulturists of the result of sericulture in France and Italy each year.
- 2.—As to the process of informing Japanese sericulturists of the reports sent by Japanese Consuls on matters relating to silk.
- 3.—As to the necessity of marking out the districts where cocoons are to be bought with a view to insuring the manufacture of silk of as uniform a quality as possible.
- 4.—As to whether the convention between those belonging to the Sericulture Guild should be still kept in force.

The following replies were given by the Association:—

- 1.—The Noshomusho should station competent correspondents in the important districts of France and Italy to report on the condition of sericulture by cable to the Department, which in turn should inform the Central Office of the Japanese Sericulture Guild. The latter again should at once take steps to convey the intelligence to sericulturists throughout the country.
- 2.—The Consular Reports are published in the *Official Gazette* as well as in the Commercial Reports issued by the Foreign Department, but they are generally almost useless on account of the delay in publication. The reports should therefore be at once transferred to the Central Office.
- 3.—Want of uniformity in the quality of silk is a great fault in Japan, and is the principal reason why Japanese silk is unpopular in foreign markets and does not fetch a high price. To mark out the districts where cocoons should be bought would not remedy this evil so long as the variety of worms reared in a given district is diverse. The uniformity of eggs must be brought about before uniformity in the quality of cocoons can be expected. As the different varieties of worms require special climatic conditions, it would of course be impossible to rear only one kind throughout Japan, but some few varieties, as, for instance, the *Koishimaru*, are well adapted to the climate of almost any locality in Japan and produce at the same time a fine thread.
- 4.—The convention having been framed about a decade ago, it should be revised to meet the requirements of the present time.

A CHRISTMAS HYMN.

The Rev. E. Champneys Irvine, M.A., Rector of Christ Church, Yokohama, has written a

beautiful Christmas hymn, which he dedicates to the Venerable F. W. Farrar, D.D., Archdeacon of Westminster. The opening verse of the hymn, which is set to John Darwall's tune, and will be sung on Christmas Day, is as follows:—

Light of the world! we hail
The memory of Thy birth,
The sweet and solemn tale
Of how Thou camest to earth;
When heaven's portals
In splendour light,
Its armies bright
O'er Bethlehem's field.

DEATH OF MRS. JOSEPH.

The Shanghai papers announce with regret the death at Hongkong on the 14th December of Mrs. Joseph. The deceased lady had been suffering from a prolonged attack of typhoid fever. She was greatly esteemed for her sterling good qualities, and much sympathy is felt for her bereaved husband, the popular Hongkong Superintendent of the P. & O. Company.

ERRORS OF AUTHORS.

In an article on this subject, the *Globe-Democrat* (U.S.) enumerates many of the well-known mistakes made by celebrated authors "from the queer mental obliviousness which sometimes leads men to forget or to ignore facts which are perfectly obvious to everybody but themselves, and at most times to themselves also." Many of those mentioned are from Shakespeare, who is notorious for his disregard of the facts of chronology; he speak of cannon, for instance, in the days of King John; he causes one of his characters to mention printing a couple of hundred years before the days of Gutenberg, and another to allude to striking clocks in the days of Julius Cæsar; he makes Hector quote Aristotle. His geography was not less remarkable, for Bohemia, according to him, had seaports, and Delphos was an island. But after all, what does it matter, for why should an imaginative genius concern himself about the actual forms of time and space? And one of the mistakes quoted by the *Globe-Democrat* is its own, not Shakespeare's. Commenting on the speech made by the ghost in "Hamlet":—

But that I am forbid
To tell the secrets of my prison house,
I could a tale unfold, whose lightest word
Would harrow up thy soul, freeze thy young blood,
Make thy two eyes, like stars, start from their spheres,
Thy knotted and combined locks to part,
And each particular hair to stand on end
Like quills upon the fretful porcupine;
But this eternal blazon must not be
To ears of flesh and blood. List, list, oh list!

—this paper says, "if the passage has any meaning it must refer to the story of the murder, which the ghost, in spite of his earnest assertion that he is forbidden to disclose it, immediately proceeds to narrate." This suggestion appears to us absurd. Just before, the ghost had been on the point of describing the expiatory tortures that he had to undergo, saying that he was

Doom'd for a certain term to walk the night,
And for the day confined to fast in fires,
Till the foul crimes done in my days of nature
Are burned and purged away.

If he described his torments more minutely, *Hamlet's* hair would stand on end from excess of horror; but he is forbidden to tell the secrets of his prison-house, and he therefore goes on at once to speak of his own murder, as more immediately concerning *Hamlet*.

If the *Globe-Democrat* was looking for mistakes in "Hamlet," it might have referred with much more effect to the inconsistencies that are apparent in the references to the age of the hero. Nothing serves better than these mistakes to exhibit the extraordinary carelessness of Shakespeare, a slovenliness that in a lesser man would be regarded as inexcusable. In the earlier part of the play there are frequent references to *Hamlet's* extreme youth. He has only just left the University and wishes to go back there to complete his studies. His passion for *Ophelia* is described as "a violet in the youth of primy nature;" and *Laertes*, throughout the warning he gives his sister against regarding *Hamlet's* passion as serious, speaks of *Hamlet* as being at an age at which passion, though it may be fierce, is very transient "forward, not permanent, sweet, not lasting;" *Horatio*

speaks of him as "young *Hamlet*"; *Hamlet's* mother would appear to have been still a comparatively young woman. On the other hand, no one can read the play with care without observing that as the action progresses Shakespeare more and more conceives of *Hamlet* as possessed of a mind much more mature than that of a youth under twenty: no such youth would have made the famous soliloquies; many of his remarks exhibit considerable experience of the world; and finally, in the Gravedigger's Scene, we learn expressly that *Hamlet* is at the very least thirty years of age. Such inconsistencies as these are far more serious blemishes to a work of art than a few unimportant anachronisms.

"The phenomena of the moon's changes," says the *Globe-Democrat*, are of a nature that seems to befog the poetic mind to an incredible extent. Rider Haggard, for instance, in his romance, "King Solomon's Mines," tells of an eclipse that took place at the new moon, a blunder that was not much worse than that of Dickens, who speaks of the new moon in the east in the evening, and Besant hardly improves on the situation when, in "The Children of Gibeon," he makes a new moon come above the eastern sky at two o'clock in the morning. So, also, Coleridge gets his ideas of the moon fearfully confused when, in the "Ancient Mariner," he speaks of a new moon rising in the east with a bright star between her horns." We can cap these curiosities of lunar astronomy by a reference to a mistake that has never, so far as we know, been pointed out by any critic. In the third scene of the first act of Browning's "A Blot on the 'Scutcheon,'" *Mildred* and *Guendolen* are in *Mildred's* chamber. *Mildred*, who is expecting *Mertoun*, is eager to be alone, and says,

"Dear *Guendolen*, 't is late!
When yonder purple pane the climbing moon
Pierces, I know 't is midnight."

Now this surely can only mean, that as *Mildred* has sat night after night watching for *Mertoun*, every night at midnight the moon has risen to the same spot in the heavens, so that the moonlight has entered the room through the blue pane at a particular angle. Of course it may mean that on the previous night the moon had pierced the blue pane at ten minutes past eleven, and therefore *Mildred* knew that it would do so at mid-night to-night. But young ladies are seldom so accurate as that; and it seems more probable that the moon in question was a poet's moon, not subject to the laws that regulate the actual planetary system.

THE PROFITS OF LYING.

In early youth, we—in common, we suppose, with most of our readers—used to develop our skill in penmanship by copying over and over again such excellent but untruthful maxims as "Honesty is the best policy," and "Virtue is its own reward." In the new copy-book now being prepared for use in the London Board-Schools these antiquated maxims are, so we are informed, being replaced by others more consonant with experience, such, for instance, as "Virtue brings its own punishment," and "Lying is the surest road to literary success."

This last maxim has been suggested to the authorities by the remarkably speedy manner in which Mr. A. H. Savage-Landor has reached the proud position of being regarded as an authority on Far Eastern Questions by English magazine editors. It is but a year or two since he published a book, "Alone with the Hairy Ainu," which for colossal lying was almost unequalled in the whole history of "Traveller's Tales"; and now hardly a month passes in which he does not favour an evidently appreciative public with his mendacious expatiations of China and Japan. His latest contribution in this kind is published in the *Fortnightly Review* for November, and is entitled "Burning Questions of Japan." The best description we can give of Mr. Landor's paper is the old one: "What is true is not new; and what is new is not true."

the former, though it was true when written by the authors from whom Mr. Landor stole it, is not true in present-day Japan; and that whenever Mr. Landor begins a sentence with the words "I have myself seen," a particularly outrageous falsehood is sure to follow. A gentleman of Mr. Landor's originality is, like many similar travellers, not content to accept any of the recognized modes of transliteration of Japanese; he strikes out a new line for himself. His choicest specimens are perhaps *mouseme* and *Guecha*. It is curious that such trash as Mr. Landor's should be taken seriously, and even devoured with avidity, by the public; but then, as we said at the beginning, the old copy book maxims are all wrong. We are more than ever convinced of this when we learn that what is probably the very worst book ever written on Japan, "The Japs at Home," by Mr. Douglas Sladen, is about to be issued in a fifth edition.

EXEMPLARY PUNISHMENT.

ON August 10th of the present year a most aggravated instance of murderous assault was recorded in a town in Niigata Prefecture. There had been a local festival of some sort on the day in question, and the eighteen-year-old son of a well-to-do resident couple proceeded to drink to excess in questionable honour of the occasion. He had been spoiled by over-indulgence from his youth up, and at this early age was married to a young lady of good repute. The young wife was living in the house of her father-in-law, and both she and the parents of the scapegrace son were greatly disturbed by his dissipated and violent habits. As evening came on the son returned, and with the greatest rudeness began to make unreasonable requests of his wife and trembling parents. Not having his wishes immediately complied with, he fetched a sword from a closet and pursued his wife into the kitchen where he gave her four ugly wounds on the back and neck. His father and mother rushed in to interfere, and these two the unnatural drunkard hacked and slashed with maniacal fury. He was finally overpowered by the neighbours and police, fortunately before actually killing any of his three victims, but two of them are still confined to bed from their hurts. The case was shortly afterwards brought up before the Niigata Local Court, and although the injured people refused to incriminate the son as they might have done, the judge deemed the case one of the utmost gravity. The sentence recently passed upon him was ten years' imprisonment with hard labour, and subsequent police surveillance for three years. The sentence was accompanied with the rider that the Court hoped he would find time during this long period to appreciate the heinousness of his crime and learn what was meant by filial piety.

A PUNNING FETE.

INSPIRED by the fêtes recently celebrated in most of the larger towns and cities, says an Ehime contemporary, the people of an out-of-the-way village in this prefecture resolved, a day or two ago, to have a little celebration of their own in honour of the victories achieved by the arms of Japanese. There isn't so very much money in the village, yet nearly one hundred and ninety sturdy peasants subscribed to make the day pleasantly memorable, the speech-making and sports to wind up with a big spread in the evening. Everything passed off as per programme, and the villagers spent a most enjoyable day. When evening came by they repaired to the one inn that could accommodate them and sat down in eager expectancy of the comestibles. But in front of each guest were placed only a bowl of bonito soup, a plate of bean-curd, and a pair of chopsticks. Long faces were drawn at the sight of this meagre bill of fare, when suddenly the Chairman arose and said: "Gentlemen, you should not be astonished at the food set before you. With your two chopsticks (*ni-hon-hashi*, or *Nippon hashi*) you must disembowel the bean-curd (*tofu*, which can also be read *Kara* (empty or China) *fu*); and to this patriotic act you should add a sip of the

soup (dried bonito is *katsuo-bushi*, or, with similar sounding ideographs, "conquering warriors"). There are no other dishes (*betsu ni shina nashi*, where *shina* can mean either "article," "dish," or "China")." The celebrants took this punning speech in very good part, and had hardly devoured the rather unappetising viands before a real and this time excellent supper was served to make up for their abstinence.

TWO EXPERT SWORDSMEN.

AMONG the police constables immediately despatched to Korea after the announcement of hostilities, were two Tokyo policemen selected for their remarkable skill in the use of the national weapon, the sword. One came from the Asakusa District—always a troubled spot—and the other from Kyobashi. According to reports forwarded to the Metropolitan Police Head-quarters these men have been most assiduous in the discharge of their duties. Until the end of last month they had had no opportunity to exhibit their skill as swordsmen, but on the 23rd ultimo they were suddenly attacked by a large body of Tong-haks, "numbering several hundred," says the *Asahi Shimbun*. By no means daunted, they drew their weapons and charged the motley crowd of malcontents, striking with the flat instead of the edge. Finding, however, that the Tong-haks meant to kill them and would not take a hint to disperse, they began fighting in real earnest: cut, thrust, parry, with slashing blows such as only the Japanese sword can give. It seems incredible, but the *Asahi* avers that the Asakusa constable either killed or left for dead no less than thirty-seven of his assailants, while his comrade was only half-a-dozen short of that number. Upon the news of this brilliant feat reaching Tokyo, the Chief of Police sent for the wives of the two men and told them how heroically their husbands had fought. The women—we still quote the *Asahi*—wept for joy at the news. The two experts are said to have come out of the *mille* with nothing worse than a few scratches or cuts of a light description.

THE WOUNDED AND FALLEN.

It is remarkable, observes a metropolitan contemporary, that the wounds received by our soldiers in the field, are invariably in the front of the body. Not one has yet been met with who has been cut or shot in the back. Our dead are found generally lying on their backs, with more than one fatal wound. The Chinese dead are found in every conceivable position, and nearly every one has a wound inflicted from behind. The fallen Japanese generally hold either a gun or sword in their stiffened and nerveless fingers; the Chinese dead are most frequently weaponless, while many have torn their clothes half off, as if seeking to obliterate all trace of their military calling. The bravery of the Japanese wounded was most conspicuous in the capture of Port Arthur. Even those severely injured repressed their groans and met the surgeon's knife without a murmur. Instead of cries of mortal anguish the brave sufferers would call out, "Has Port Arthur fallen?" or often "Is the Colonel safe?" while the dying murmured, "Death is nothing so long as we have succeeded in taking the Port." The Red Cross assistants were hardly ever entrusted with last messages for relatives across the sea. With their dying gasps the fallen would put some half-intelligible question as to the certainty of victory, and the assurance that the Japanese troops had carried all before them would bring a last flash of triumph to dying eyes. Such are the statements made by the vernacular press.

CHINESE INFORMERS.

ACCORDING to the *Asahi's* War correspondent, the fugitive Chinese after the fall of Port Arthur in several cases turned informer in order to curry favour with their victors. In one instance the information given by a certain prisoner led to the betrayal of the hiding place of Chinese soldiers who, with one exception, resisted capture and were killed. The

one who escaped did so by reason of making no attempt whatever at resistance, and he therefore sought for a reward by telling of the lair of another thirty odd soldiers, all of whom were subsequently surrounded and cut down. Thus, moralizes the *Asahi*, the baseness of two men led to the death of nearly seventy others. It appears, however, that similar instances have quite frequently occurred elsewhere, indeed even before the Chinese army got free of Korean territory.

THE EIGHTH SESSION OF THE DIET.

When the extraordinary session of the Diet held in Hiroshima was over, says the *Yomiuri*, even the Radicals who at one time were counted among the friends of the Government were heard to declare that they would in the Eighth Session insist upon Government expenses being greatly retrenched. It is needless to say that desire was shared by the different wings of the Opposition, the Progressionists, Unionists, and Constitutional Reformists. A change seems, however, to have since come over their views, for many of them now say that anxious as they are to retrench official expenditure, they foresee that the exaction of this point would bring the Diet and the Government into collision, which of course is most undesirable at the present juncture of national affairs. Only a portion of the Constitutional Reformists still adhere to their first resolution and are determined, it is said, that the expenditures shall be cut down by 10 per cent. To the suggestion made by some that the usual duration allotted to an ordinary session of the Diet, that is to say, three months, should be curtailed this year, that the Diet should rise after all the bills of urgent importance have been discussed, the majority are opposed. It is true that the shortening of the session would be perfectly constitutional, did both Parliament and Government consent to it, but it would be an unwise policy. So frequent have the collisions been between the Legislature and the Executive that business men have often condemned the Diet for doing nothing for the benefit of the business world. This is therefore just the time when bills of non-contentious character should be deliberated and disposed of. Quite a change has taken place in the political world since the beginning of the war. Parties that were previously most hostile have now come together in a friendly manner, and even the relations between them and the Ministry, which were formerly anything but genial, have become more or less softened. At present the Radicals, Progressionists, Constitutional Reformists, and National Unionists exist only in name, and it often happens now that the views held by one party exactly correspond with those of another. Military matters, not politics, are the topic of the day, and the Democracy gives its consent to almost any measure introduced by the Government in connection with the war. But should a question of peace arise before the Japanese Army is within the walls of Peking, the hitherto smooth surface of political waters will be lashed into fury, and the Ministry and Opposition driven into terrible collision. The latter is quiet now, but only waiting its opportunity to continue its outcry against the Government.

IMPORTANT OFFICIAL CHANGES.

Mr. MITSUNASHI, Secretary of Kanagawa Prefecture, is gazetted to the Retired List from the 14th inst., his position being given to Mr. Arakawa Gitaro, Secretary of Gumma Prefecture, who is succeeded by Mr. Takeda Chiyosaburo, Superintendent of Nagano Police, and the latter position is taken by Mr. Toda Tsunetaro, Councillor of Nagano Prefecture.

STOLEN WATCHES.

In a note relating to the details of the Great Fête in Tokyo, the other day, we gave on the authority of a metropolitan contemporary, the number of watches stolen on December 9th in Ueno Park and its vicinity as nine only. It now appears, however, that this simply represents the number of people who on the same evening deposed to having been robbed of their time-keepers. The total number of watches

taken from known thieves on that day and now waiting to be claimed by their owners at the Central Police Bureau, is considerably over four hundred, and the Police Authorities have instructed the Tokyo press to urge the real proprietors to come forward quickly. It is now stated that no less than one hundred and fifty pickpockets were arrested during the course of the day.

A SEAMAN'S DEATH.

Among the many incidents recorded of notable instances of bravery on the part of the Japanese soldiers or sailors, one of great pathos is told by a magazine devoted to the enumeration of such facts. It was in the naval engagement off the Yalu that a warrant officer of one of the smaller Japanese men-of-war was struck by a bullet in the chest, just as he had mounted the railing in order to carry out a command. Losing his grasp the poor fellow dropped into the sea, mortally wounded. In a few seconds thereafter his head was seen to rise once more and for the last time above the waves, when with all his fast-fading strength the dying hero cried out *Nippon Banzai!* and then sank for ever. His cry had been distinctly heard above the roar of the cannon and the noise of conflict.

THE JAPANESE NAPOLEON.

MAJOR-GENERAL TACHIMI has been given the sobriquet of "the Japanese Napoleon" by the vernacular press. Napoleon, it is declared, was of all generals the most skilled in utilising the resources of an enemy's territory and making himself perfectly at home in the most imminent perils. This is particularly true of Tachimi as well. The men in his brigade have had more than their legitimate share of hard fighting, yet in a hostile land they are well-cared for and invariably in good spirits, placing the most implicit confidence in the strategic genius of their chief. General Tachimi has on several occasions profited by his minute acquaintance with the enemy's territory and movements. He lets no advantage slip, and is as calm as a summer sea with foes on all sides.

A RATHER TALL STORY.

THE *Shanghai Mercury* is responsible for the following:—A report has reached us, from what we consider reliable sources, that the English cruiser *Raccoon*, whilst cruising off the coast of Madagascar, was fired at by a French man-of-war. The *Raccoon* immediately retaliated by firing a torpedo at her, sinking her.

DEATH OF A MEMBER OF THE HOUSE OF PEERS.

THE death is announced of Mr. Mayeda Kenkichi, member of the House of Peers, which occurred on the 20th inst. The funeral will take place to-morrow (23rd), the bier leaving the house at Meguro at 8 a.m. The deceased was the elder brother of Mr. Mayeda Masana.

ACCIDENT IN A COAL MINE.

ON Friday's *Official Gazette* says that the roof of a portion of the Nambu mine at Suway-mura, Atsuta District, Yamaguchi Prefecture, collapsed on the 14th instant, and the mine is inundated by salt water. Five men and two women are missing. It is feared that they have been killed.

FIELD-MARSHAL YAMAGATA.

Field-Marshal Yamagata was received in audience by the Emperor on the 18th instant. His Majesty addressed him as follows:—

We were greatly pained to learn that sickness had overtaken you during the campaign, and we despatched an envoy to inquire about you. Finally, being anxious to learn direct from you the enemy's condition, we directed that you should return. It gives us great satisfaction to observe that your health is now improving. We relieve you of your present office and appoint you to one of a deliberative character. We desire that you receive treatment for your malady, and give us the benefit of your counsels.

On the 20th the Marshal was appointed to the post of Inspector-General of the Army (*Kan-gun*) vice Lieut.-General Miyoshi, who becomes a Privy Councillor.

THE SECOND WAR LOAN.

The amounts subscribed to the Second War Loan up to the 14th instant were, we learn from the *Shogyo*, as follow:—

	Yen.
Total applied for at Central Office of the Nippon Ginko from the 11th inst. to 4 p.m. of the 15th instant..	48,883,450
Total applied for to the local agents of the Nippon Ginko from the 11th to the 14th instant	17,627,800

Grand Total 66,511,250

The applications sent into the Nippon Ginko and to the local agents of the same bank subsequent to 4 p.m. of the 15th instant are believed to amount to about 20 million yen. If so, the subscriptions exceed the prescribed sum by about 40 million yen. The *Shogyo* is highly gratified at the success that attends the floating of War Loans in Japan. As was expected, many of the wealthy peers have this time come forward with subscriptions. Princes Shimazu and Mori and Marquis Mayeda each applied for Bonds to the value of half a million yen, while Marquises Kuroda, Nabeshima, Ikeda, Yamanouchi, Hachisaka, Asano, and a few others subscribed from 200,000 to 300,000 yen each. The project at one time entertained by the Peers' Club of contributing a portion of its fund towards giving comforts to soldiers and marines in the enemy's country, was not carried out. It was decided, instead, to purchase War Bonds to the value of one million yen. We are told by the vernacular press that in view of encouraging a spirit of thrift, the Treasury is resolved to accept all subscriptions under 200 yen.

THE LATE MR. KOIZUMI NOBU-KICHI.

We are indebted to Mr. Fukuzawa, one of the most intimate friends of the late Mr. Koizumi Nobukichi, Manager of the Yokohama Specie Bank, for the following brief account of the deceased's life:—

Mr. Koizumi was born in Wakayama in 1848, and was the eldest son of Mr. Koizumi Bungo, a retainer of the Lord of Kii. When only 10 years of age, his uncommon ability attracted the notice of the Councillors of the Han Office, and he was sent to Tokyo to study English in the private school founded by Mr. Fukuzawa. In 1871, at the early age of 23, he was appointed a Professor in the Kaisei Gakko, the embryo of the present Imperial University. Five years later we find him prosecuting his studies in London, from which place he returned after a three years' sojourn. He then entered the Finance Department which, however, he left the next year to fill the post of Vice-President of the Yokohama Specie Bank, founded about that time. In 1881, he undertook a tour through Europe and America for the purpose of inspecting their economic condition. On his return home in 1882, he was again sought for by the Finance Department, and given the office of accountant. In 1890, he entered the Bank of Japan, and two years later, was appointed Manager of the Specie Bank, which post he held till his death. He was confined to his bed from the 1st instant, and growing worse and worse, succumbed to the disease from which he was suffering on the 8th instant. What the trouble was we are not informed. Mr. Fukuzawa speaks in the following manner of the ability and character of the deceased:—Mr. Koizumi's attainments in scholarly matters were extraordinary. He had a great love for reading, and was well versed in many subjects. In mathematics, his favourite study, he excelled, and this, by self-tuition. His character was firm, resolute, pure, and totally devoid of any selfish sentiment. He earned universal respect. He was an ideal *Samurai*. In him, says Mr. Fukuzawa, modern Western culture and the *Samurai* spirit of the *Genroku* era were united. Not only will he be mourned for the sake of the Kiyogi-juku, whose ornament and pillar he was, but also the whole country will lament the death of the great man that has passed away.

WAR NEWS.

SATURDAY, DECEMBER 15TH.

There appears to be no doubt that Captain Kani, an officer serving with the Mixed Brigade in the Liau-tung peninsula, committed suicide on the 28th of November, through chagrin at having been unable to take part in the attack on the Rh-lun Fort. The officer had sailed with the Second Army in high spirits, resolved to earn distinction or forfeit his life. Shortly after arriving at Chin-chow he was attacked by dysentery, and though, despite medical advice, he managed to march with his company to the assault of the Fort, his disease prostrated him a few hundred yards from the parapet, and he had to be carried to the rear. Removed subsequently to Port Arthur and placed under treatment, he managed to escape from hospital on the morning of the 28th November, and was found shortly afterwards lying dead at the very spot where he had succumbed a week previously. He had stabbed himself in the throat with his sword, and in his pocket was found a letter that ran thus:—"It was here that disease compelled me to halt and suffer my men to attack the Fort without me. Never can I wipe out the disgrace while I live. To vindicate my honour I die here, and leave this letter to speak for me."

The *Kokumin* tells a strange story that is at once too explicit and not explicit enough. Among the documents found at Port Arthur after its capture, says our contemporary, one indicated that a man-of-war of a neutral Power violated the rules of neutrality by giving to the Chinese secret information of Japan's military operations. When the Japanese Squadrons and the flotilla of transports were assembled at the mouth of the Ta-dong, a foreign man-of-war, painted white, steamed in and, after a brief survey, headed seaward again. Her conduct was thought strange and suspicious at the time, but no special attention was paid to the matter until the finding of a telegram in Port Arthur, sent by the Viceroy Li to Admiral Ting and Taotai Kung, under date 9 a.m. on the 7th of October. The message was to the effect that, according to information secretly furnished by a foreign man-of-war, the Japanese troops were to be carried over-sea to the attack of Port Arthur. The utmost speed should therefore be employed to complete the repairs of the *Ting-yuen*, *Chen-yuen*, *Chang-yuen*, *Chi-yuen*, and *Kwang-ping*, so that they might be able to put to sea, and demonstrate that the Chinese fleet was still strong enough to oppose the landing of a hostile army. With the Pei-yang Squadron serviceable, the Japanese, however intrepid, would not venture to attempt the operation of landing troops, and the Chinese Fleet could thus protect the empire's shores without firing a shot. That is the *Kokumin's* story. It seems to us totally unworthy of credence. In the first place, the date of the supposed telegram is conclusive. The Second Army had not left Ujina on the 7th of October, and the transport conveying it could not possibly have been assembled at the mouth of the Tadong river by that time. In the second place, how is it conceivable that a foreign vessel, looking in for a moment at the mouth of the Tadong and seeing a number of Japanese ships anchored there, could divine that Port Arthur was their objective point? In the third place, is it in the smallest degree probable that the Viceroy Li, telegraphing to Admiral Ting and Kung Taotai, would have given as his authority secret information furnished by a foreign man-of-war? We dwell upon these details because the only war-ships painted white in Eastern waters are the British and the French, and the *Kokumin* evidently intends to suggest the former. The story, as it stands, seems to us a palpable and clumsy falsehood.

It is evident that General I's troops, which, as our readers doubtless remember, recently moved down to attack the First Japanese Army's positions near Feng-hwan, are fighting much better than any other Chinese braves have fought during the present war. We explained in a recent issue that the roads traversing Manchuria

in the mountainous country eastward of the main route from Chiu-lien to Mukden group into a single line at Saimatsui, and became three lines at Aiyan-pien-man, 15 miles farther south. Of these three lines two lead to Feng-hwan. General I's forces, advanced against Feng-hwan along both roads from Saimatsui. His van was met *en route* by a company of Japanese infantry sent out on reconnaissance from Feng-hwan. This happened on the 12th inst. The Japanese, outnumbered, had to fall back to Yinien-shan, a little town only 6 miles from Feng-hwan. The next day (13th) a battalion from Feng-hwan marched against the enemy, but finding him over 4,000 strong, with a front extending across the two roads from Aiyan-pien-man—i.e. over a distance of 6,000 metres—the troops acted on the defensive, and made dispositions for attacking his left wing on the 14th. Of course the result of the latter engagement is not yet known. Meanwhile, the battalion stationed in Tangshan-cheng—a town 18 miles south of Feng-hwan on the main road—was ordered up to reinforce the troops in Feng-hwan, and a battalion from Chiu-lien was marched forward to Tangshan. Major-General Tachimi's brigade is still at Tsao-hoken, a town 40 miles beyond Feng-hwan on the main route. He would be cut off from the main army did Feng-hwan fall into the enemy's possession, but there is not much fear of that, we imagine. At all events, I's Tartars are exhibiting courage and dash that seem quite refreshing as compared with the behaviour of the Chinese hitherto.

Another detachment of the First Army is advancing against Haicheng. It would probably have reached that on the 12th instant, had it not found a force of some 8,000 Chinese at Tomu-cheng, about 18 or 19 miles from Haicheng. Dispositions were made to attack from two directions, and it was expected that a battle would take place on the 12th.

The *Yomiuri Shimbun* says that there are 15,000 regular Chinese troops in Mukden, fully accoutred and armed with repeating rifles, and that they drill regularly every day.

We read in the *Hochi* that the Pei-yang Squadron is fairly caught in Wei-hai-wei and can not escape anywhere. Apparently Admiral Ting has abandoned the idea, for he has caused a number of chains to be stretched in the harbour to obstruct the entry of Japanese torpedo-boats. We can not tell how far this account may be correct.

The *Yomiuri Shimbun* denies that Count Kuroda's journey to Hiroshima is connected with military affairs, and alleges that he goes simply on ministerial business.

After the Second Army has taken Fu-chow, the next place of importance before reaching Newchwang is Kaiping. The *Jiji* says that Sung is at Kaiping with 10,000 men; that the walled town measures 840 yards from north to south and 650 yards from east to west; that the walls are over 30 feet high and that the place is very strong. Its inhabitants number 30,000 and it enjoys the advantage of excellent river communication with the sea.

MONDAY, DECEMBER 17TH.

A telegram from Hiroshima, dated noon on the 14th instant, says that a party of 50 Chinese soldiers attempted to cut the telegraph-wires between Chiu-chow and Port Arthur on the 9th instant but were detected and dispersed by a troop of Japanese cavalry, five of them being killed and three taken prisoners.

H.E. Count Saigo, according to the *Yomiuri Shimbun*, will proceed to Port Arthur in compliance with a request from the Headquarters of the Second Army, there being various important business to settle in connection with the employment of Port Arthur as a naval station.

The *Nichi Nichi Shimbun*, on the strength of a telegram sent from Hiroshima at 2.30 p.m. on the 14th instant, says that the *Genkai Maru* looked into Wei-hai-wei on the 30th ult. and saw there 6 Chinese men-of-war, among them being the two ironclads.

The *Hochi Shimbun* alleges that the plan of joint operations to be undertaken by the First

and Second Armies was finally decided on the 13th instant.

Lieut.-General Nozu, according to the *Yomiuri Shimbun*, while not alleging that any special strategic reason exists for taking Mukden, says that if the thing is to be done at all it ought to be done now. The roads throughout Manchuria are in excellent condition at present and the rivers and marshes are frozen. The country is thus in a most favourable condition for marching troops and transporting war material, whereas in the Spring, when the thaws set in, many places will become virtually impassable.

We read in the *Yomiuri Shimbun* that the reasons assigned by Chinese officers taken prisoners at Port Arthur, for the defeat of their troops are, first, that the effects of the shrapnel shell, of which they had had no previous experience, were most demoralizing; and secondly, that the Japanese troops could not be stopped by bullets but charged at close quarters in the face of any fire.

No less a journal than the *Keisai Zasshi* begins to sound a note of impatience at the want of celerity shown by the Authorities in handling the forces of the country. The Second Army took Port Arthur 24 days ago but has not yet got within striking distance of Newchwang. The First Army's advance guards reached the foot of the Motien Pass a month ago but has not yet got over it. Difficulties of transport and the illness of Field-Marshal Yamagata doubtless account for much. "But we do not believe that even if the First Army and the Second Army combine they will be strong enough to capture Pekin in the face of the immensely larger forces massed in Chili to oppose an enemy's advance. If it be desired to take Pekin and bring this war to a termination, the Third Army should be sent out immediately to unite with the First and Second Armies in assaulting the strongholds of Chili. And if three armies be not sufficient, let a fourth or even a fifth be sent. There is no comparison between the advantages of striking rapid and conclusive blows with a great army and those of delivering small and slow strokes with an inferior force. That was Bismarck's principle. No man knew better the evils of delay. Ota Nobunaga obeyed the same maxim. There are Generals gifted with such strategical talent that they can achieve immense results with insignificant forces, but a country must not rely upon the chance of such coups. The policy of the nation should be to put forth its strength to the utmost so that success may be attained and peace restored as speedily as possible. There can be but one object contemplated by Japanese military men—the capture of Pekin. Is there any better way to compass it than by the resolute advance of a powerful army?"

Intelligence from Lieut.-General Nozu show that the First Army is engaged with General I's Tartar forces to the eastward of Feng-hwan. On the 12th instant a reconnoitering party sent out from Feng-hwan met the enemy's advance guard on the road to Aiyan-pien and being greatly outnumbered, fell back to a town called Yimien-shan about 6 miles from Feng-hwan. The following morning at daylight a battalion from Feng-hwan under the command of Colonel Tomoyasu marched to attack I's forces, but finding them several thousands strong with a front extending over 6,000 metres, it became necessary for the Japanese to alter their tactics. The road between Aiyan-pien and Feng-hwan bifurcates a little outside each place, its two branches forming an elongated loop, and I's men were advancing by both branches. Reinforcements having been moved up, Colonel Tomoyasu's battalion advanced at 6.30 a.m. on the 14th instant to attack the enemy's left wing—that is to say, the portion of his troops marching by the southern branch of the loop. A sharp engagement resulted. The Tartars mustered fully 4,000, as was subsequently learned from prisoners. How long the fight lasted we do not know, but the Japanese with a loss of 73 killed and wounded—among the latter being 3 officers—drove the enemy

back and pursued him as far as Changling-tz, a place which, according to the most accurate maps available, is 56 miles by road (*via* Ai-yang-pien) from Feng-hwan but only 42 miles as the crow flies. It should be observed that the telegram conveying this intelligence reaching An-tung at 11.50 p.m. on the 14th instant, that is to say, on the day of the action. We do not clearly understand how the fact of the enemy's having been pursued to a distance of 40 or 50 miles can have been known so early, but the telegram is official. The Chinese loss in killed and wounded had not been ascertained at the time of sending the despatch, but we learn that 4 guns were captured. By this operation on the part of Colonel Tomoyasu's battalion the whole of the enemy's left wing was rolled back along the southern loop of the Feng-hwan-Ai-yang-pien roads. It will readily be inferred, however, that had his right wing been left unmolested at the same time it might have delivered a disastrous flank attack from the northern road against Tomoyasu's column. Accordingly, Major-General Tachimi was ordered to move from his position at Tsao-ho-ken against the rear of the enemy's right wing. No report as to the result of his operations has yet been received.

TUESDAY, DECEMBER 18TH.

Further details of Colonel Tomoyasu's fight with the left wing of General I's Tartar Army on the 14th instant, give the number of Japanese killed as 12, and the number of wounded 63, among the latter being 3 officers and 7 non-commissioned officers. The enemy abandoned 4 Krupp guns (2 mountain and 2 field), but the number of his killed is not yet certain, the mountainous character of the country rendering investigation difficult. A hundred and thirty-nine bodies have, however, been found. There were 16 prisoners, and several horses as well as a quantity of war material fell into the hands of the Japanese. Apparently I's right wing retreated when the left was beaten, for we hear nothing more about the attack that was to have been delivered against the former by Major-General Tachimi, moving from Tsao-ho-ken *via* Saimatsui. The Commander-in-Chief, telegraphing from An-tung under date 11.40 p.m. on the 15th instant, says that a column under Major Mihara moved out of Tsao-ho-ken on the 14th instant to cut off the fugitives from the fight of that morning along the Feng-hwan-Ai-yang-pien road. Mihara was to push on to Saimatsui, thus following the route previously indicated for Tachimi's battalion.

There is now some intelligence of the Divisions that recently moved from Sui-yen to the assault of Hai-cheng—i.e. the Division operating westward in the direction of the Newchwang-Mukden road, and converging toward the northward movement of the Second Army from the Liau-tung Peninsula. It will be remembered that this Division was originally expected to reach Hai-cheng by the 15th instant, but that its scouts having reported the enemy massed in considerable force at Tomu-cheng, 18 miles south-east of Hai-cheng, an action at that place seemed probable. Lieut.-General Nodzu now telegraphs that, on the 11th instant, the advance guard found, in the neighbourhood of Tao-hotz (a hamlet 5 miles south of Tomu-cheng), three Chinese Generals with a force of 3,000 infantry, 400 cavalry, and 5 field guns. After a brief skirmish, the enemy retreated in the directions of Tomu-cheng, leaving the Japanese in possession of Tao-hotz. Another body, numbering about 4,500 with 6 guns, was still in position three or four miles to the north-west (at Potsao-do-ken), and against the right wing of these troops an attack in force was to be made on the 12th instant. Its result was not known at Headquarters (An-tung) up to the 15th instant, the telegraph at Ta-tung and Taku-shan being out of order. In the message conveying the above intelligence, Lieut.-General Nodzu mentions that the forces of the enemy have increased at various points, and he shows a disposition to assume the offensive, but that his troops have been completely broken in the neighbourhood of Feng-hwan.

Dr. Ishizaka, Chief Medical Officer with the First Army, reports that of 62 men wounded in the fight near Feng-hwan on the 14th instant, 3 officers, 5 non-commissioned officers, and 44 privates—52 in all—have been admitted to hospital, together with 2 Chinese. The remaining 10 wounded Japanese were too slightly hurt to need admission. He adds that 150 corpses of the enemy have been found. From the same telegram we learn that the Japanese loss at Tapia-ken on the 20th November was 20 killed.

The Tong-haks are not yet completely quelled. A telegram from Major Umayabara in Seoul reports that about 3,000 of them assembled in Pyong-chan on the 1st instant, and that a fight took place between them and a Japanese force. The rebels were dispersed after a two hours' struggle, with a loss of 70 killed, 10 taken prisoners, and an unascertained number of wounded. There was no casualty on the Japanese side. It is evident that the Tong-haks are now receiving short shrift.

An account of the trip recently undertaken by the *Nichi Nichi's* war-correspondent from Feng-hwan to Lien-shan-kwan (a distance of about 52 miles) gives us some idea of the hardships to which the Japanese troops quartered in those parts of Manchuria are exposed. Starting from Feng-hwan at 2 p.m. on the 18th ult., he reached Sueh li-tien by dusk of the same day. On the 19th, he arrived at Tsung-yuen-pao, the place re-occupied a few days ago by Tachimi's Brigade after the enemy had been driven back to Tsao-ho-ken. Between Sueh li-tien and Chin-chia-ho, a distance of about 9 miles, there are two steep hills. When the correspondent reached Tung-yuen-pao he saw from 20 to 30 Japanese soldiers who had returned there from one of the stations further on in consequence of their supply of food having given out. Both they and the correspondent were obliged, terribly exhausted as they were, to retire to bed with their hunger unsatisfied. From Tung-yuen-pao to Tsao-ho-ken the distance is about 5 miles, but so worn out was the correspondent that he took more than 5 hours to traverse it. At the latter place he met with Captain Kato's party that had returned from Lien-shan-kwan, and further on he came across a sergeant who was kind enough to give him half of the ration of food he carried. Invigorated by that nourishment, he at last reached Lien-shan-kwan where he found Lieut.-Colonel Tomita. Lien-shan-kwan is a poor hamlet of about 40 houses. Owing to the difficulty of carrying provisions, the food of the troops consisted of a mixture of rice, beans, and millet at the rate of 4 *go* a day for each man. Lien-shan-kwan is situated in the narrow gorge of a valley and is surrounded on three sides by the peaks forming Mo-tien-ling. It is not a good place for military purposes, consequently, the Lieut.-Colonel's troops afterwards found it necessary to fall back a little toward Feng-hwan. Mo-tien-ling is the strongest place on the road to Lien-yang, being entirely formed of rocks and destitute of foliage. At first it was occupied by a Japanese reconnoitering party, but as the "lesser Mo-tien-ling" stands in the north, making the defence of the position difficult, the place was abandoned. The enemy then advanced and took possession of it, placing a gun on each side of the summit that commands the road leading up to the pass. On the tops of all the peaks that surround Lien-shan-kwan, a peasant was stationed by the enemy to watch the movements of the Japanese troops. While in Lien-shan-kwan, on the 21st ult., the *Nichi Nichi's* correspondent heard that the enemy quartered in Saimatsui had advanced as far as Tsao-ho-cheng, threatening to cut off the retreat of the Japanese troops in Lien-shan-kwan. That would have been very serious, as the troops had only enough provisions left for four days. The correspondent left Lien-shan-kwan on the 22nd ult. and reached Feng-hwan the next day. He met on the road a party of Japanese coolies drawing waggons of provisions northward under an escort of soldiers.

WEDNESDAY, DECEMBER 19TH.

The operations of the Third Division, under

the command of Lieut.-General Katsura, forming the left wing of the First, have now resulted in the taking of Hai-cheng. After a delay of some two weeks, dictated apparently by the desire of synchronizing the northward movement of the Second Army in the Liau-tung Peninsula and the westward movement of the First, the march of Katsura's troops from Sui-yen was resumed in the beginning of December.

It had been ascertained that Tomu-cheng, a town 18 miles south-east of Hai-cheng, was occupied by the enemy in considerable strength. Tomu-cheng lies at the junction of two roads, one coming from Feng-hwan (70 miles distant), the other from Sui-yen (49 miles). The main body of the Japanese Division moved by the latter road, and two battalions under Major-General Oseko, striking northward from Sui-yuen entered and marched by the Feng-hwan road. On December 11th the enemy's most advanced post (Tao-hotz) on the Sui-yen road was reached. His force, consisting of 3,000 infantry and 400 cavalry, with 8 guns, was driven back after a brief resistance. Next day another body, 4,500 strong with 6 guns, was dislodged from a position (Potsao-do-ken), 3 or 4 miles farther on, and the Japanese following up their advantage, took possession of Tomu-cheng the same afternoon. Meanwhile, Major-General Oseko, on the other road, had defeated a force stationed 13 miles from Tomu-cheng (at Panchia-paotsz), and the two wings entered Tomu-cheng almost simultaneously, having had only 7 men wounded in the two days' operations, against 104 killed and wounded on the enemy's side. Thence they advanced together on the following day, and at 11 a.m. Hai-cheng was in their possession. Its garrison was found to consist of only 1,500 men, who after a show of resistance retired in the direction of Lao-yang. There were no casualties on the Japanese side in the capture of Hai-cheng, and the enemy's loss is not yet ascertained. The occupation of Hai-cheng is of considerable strategical importance. It places the Japanese on the high road from Newchwang to Mukden. At Hai-cheng they are within 32 miles of Newchwang on the South, and 40 miles of Lao-yang on the north. At Lao-yang the road from Feng-hwan enters the Newchwang-Mukden road nearly at right angles. Thus, if the Japanese push on to Lao-yang, they command the latter road and get in rear of the troops guarding the Mo-tien Pass. Moreover, from Lao-yang to Mukden is only 43 miles. It therefore falls within the range of possibilities that Mukden may be captured within the next three weeks, though the probability of such an operation is not strong.

The *Nippon* believes that it is the policy of the Chinese Generals confronting the right wing of the Japanese First Army, to send forward all the strongest and hardest of the Manchurian regulars—men thoroughly inured to the rigours of the climate—and launch them repeatedly against the Japanese outposts. If that be so, Major-General Tachimi's battalion, now stationed at Tsao-ho-ken, 40 miles north of Feng-hwan, may soon have plenty of fighting.

According to the *Shogyo Shimpō*, General Sung is at Kaiping with 6,000 soldiers. He has erected entrenchments at about 10 places, but the scheme of defence is weak. The houses in the town are all occupied by Chinese soldiers, and crime is prevalent. In expectation of an attack from the van of Oyama's Army, which much soon be up to the place, Sung is said to have applied to Tientain for reinforcements.

Some Japanese men-of-war, says the *Nippon*, visited Wei-hai-wei on the 7th instant, and saw 9 Chinese war-ships in the port and 7 torpedo-boats. A chain was stretched across the entrance to the harbour.

The same journal alleges that on the 8th instant 3 soldiers and 16 coolies were frozen to death at Talien. The thermometer falls at night 6 degrees below freezing point.

When the Chinese fugitives from Port Arthur attempted to attack Chin-chow on the 22nd ult., about 300 turned toward Su-chia-tun and assailed it. The place was a subsidiary position occupied by the Japanese, and was on that occasion defended by only 12 soldiers led by

Sergeant Fukuda, who told off two to defend each of the four corners and caused the others to take up their position at the gate. The men resorted to various ruses in order to deceive the besiegers as to the true strength of the garrison. While the place was invested by the enemy, attempts were three times made to send reinforcements from Chin-chow, but each time the presence of an overwhelming number of Chinese frustrated the design. At last about 30 marines from Talien came to the rescue of the gallant little band at Su chian-tun, and dispersed the enemy after the siege had lasted 7 hours. After all the fugitives from Port Arthur had been scattered and the neighbourhood of Chin-chow cleared, Sergeant Fukuda was summoned by Major Saito to give an account of the defence of Su-chian-tun which the Sergeant did in the most modest terms. The Major was full of praise for the bravery of the Sergeant and his little party, and desired to convey his sentiments in a substantial way. Having, however, no fit object about him, he took off the sleeve buttons that he was wearing and gave them to the Sergeant. To the soldier who undertook the dangerous mission of carrying intelligence of the assault to the Japanese at Talien for the purpose of enlisting their help, the Major presented the knot of his sword.

THURSDAY, DECEMBER 20TH.

Reports from the scene of fighting in south-western Manchuria show the enemy to be in great force there. The *Nichi Nichi* publishes a telegram from Hiroshima to the effect that information received from Hai-cheng indicates the presence of 1,500 infantry and 300 cavalry, with 4 guns, at Tsietsing; 20,000 of all arms in Twan-tien; 30,000 in Kaiping and 8,000 cavalry in Tashima-ling. Twan-tien is said to be particularly strong, fortifications having been constructed there, and three or four guns mounted.

It appears from a telegram in the *Fiji*, that a Major of the Head-quarter Staff, whose name is not given, died of wounds received in the operations near Hai-cheng.

The *Fiji Shimpō* alleges that foreign troops have started from Tientsin for Peking, in order to mount guard over the various foreign legations, and that the Chinese Government is much perturbed at the step. The Tung-li Yamén declares that if any guards be needed, the Chinese Government is ready and able to furnish them.

We read in the vernacular press that every effort is being made to strengthen Wei-hai-wei, and the Chinese men-of-war there have their fires banked, apparently with the intention of escaping somewhere.

The *Kokkai* says that a Tael per day is offered for naval volunteers in Newchwang.

In the same paper we read that the Japanese Garrison in An-tung is excellently provided with provisions, having 2,000 *koku* of rice and a practically unlimited supply of fire-wood, taken from the enemy. The climate is very inclement. The thermometer reads 19° in the morning and 56° at noon.

The talk of the customs revenue of Formosa being pledged to England for a loan, is again renewed. Nothing is less probable.

FRIDAY, DECEMBER 21ST.

Official telegrams as the further movements of the left wing of the First Army are not to hand, but the *Hochi Shimbun* says that after the capture Hai-cheng the troops marched immediately in the direction of Ying-ken. If that be so, the operation was evidently undertaken with the intention of co-operating with the Second Army, now moving up the Liao-tung peninsula to the attack of Kaiping. Ying-ken is a fortified town at the mouth of the Liao river. It is 30 miles south-west of Hai-cheng by road, and 25 miles north-west of Kaiping. Moreover, it commands the direct coastwise route from Kaiping to China proper, as Hai-cheng commands the inland routes. With the Japanese forces at Hai-cheng and Ying-ken, General Sung in Kaiping is completely trapped. His westward lines of retreat are sealed. Whether the First Army will

march from Ying-ken to attack Kaiping in rear, while Oyama's force assaults it from the front, or whether the task of taking the place will be left to the Second Army alone we can not predict. The *Kokkai* publishes a Shanghai telegram embodying intelligence from Newchwang to the effect that Kaiping was to be attacked on the 17th instant, and that Sung with his 6,000 men forming the garrison was surrounded. General Sung has never shown any special military capacity. With immense advantages of position on the north bank of the Yalu, he allowed himself to be signally outmanoeuvred. The Shanghai telegram speaks of his having only 6,000 men. But a statement given in the *Nichi Nichi Shimbun* on the 19th instant said that no less than 58,000 troops were massed in or about Kaiping under Sung's command; namely, 30,000 in the town itself, 20,000 in Twan-tien (not Kwan-tien as erroneously printed in our last issue), and 8,000 cavalry in Tashima-ling. Twan-tien is about 3 miles north-east of Kaiping, and Tashima-ling is some 5 miles farther on the same road. Troops posted in Twan-tien and Tashima-ling would obviously be intended to resist an attack from the eastward, that is to say, an attack from the Japanese First Army. It is not easy to believe that Sung has such an army under his immediate command. Another telegram from Hiroshima, published by the *Fiji Shimpō*, puts the total number of Chinese troops in Newchwang and its vicinity at 29,000, or 58 regiments, of which 18 regiments were in Hai-cheng, 15 are in Kaiping, and 25 are in Newchwang. A Chinese regiment nominally contains 500 of all ranks, but is seldom up to its full strength. We are strongly disposed to accept the Newchwang telegram as the most trustworthy with regard to the question of numbers, and to believe that the garrison of Kaiping does not greatly exceed 6,000, while Newchwang has 10,000, and Hai-cheng had 7,000. It would seem, if the *Hochi*'s information be correct, that the Japanese are not going to Newchwang until after the fall of Kaiping. From Hai-cheng a march of 13 miles westward would have taken them to Newchwang, but they have apparently turned south-west to Ying-ken. (We have to ask our readers to note that our statement in a previous issue as to the direction and distance of Newchwang from Hai-cheng was an error.)

An impression appears to prevail among some journalists that the Tartar forces have pushed back the right wing of the First Japanese Army, and that the positions held by it are considerably southward of what they were a few weeks ago. That is a misapprehension. General I's attempt to recover Feng-hwan has failed completely, and his troops are scattered among the mountains between Feng-hwan and Kirin. Moreover, the Japanese advance guard is stationed at Tsao-ho-ken, 13 miles south of Lien-shan-kwan. The most distant point reached in the forward movement—if we except Tachimi's mountain march between November 20th and November 30th—was Lien-shan-kwan, and we know from correspondents that Lien-shan-kwan is strategically a bad post. Under any circumstances, it would not have been held unless a continued advance toward Mukden were contemplated. For several weeks the Japanese plan of campaign, so far as concerns the right wing of the First Army, has been—as we can now perceive—merely to hold Chiu-lien and Feng-hwan and to thrust back the Chinese forces in the north and east. With such a programme there could be no object in pushing outposts forward to a great distance, thereby merely creating a long and weak line of communications. How much embarrassment the rigour of a Manchurian winter may bring to the Japanese we can not tell, but they certainly have not suffered anything like dislodgement at the hands of the enemy.

The *Fiji Shimpō*'s correspondent recounts a story of an anonymous Chinaman residing in Pitszwo, in the Liao-tung peninsula, a man of large fortune and considerable erudition as well as experience. He is said to have passed the necessary examination for official appointment more than once, but being a constant and most outspoken critic of the Viceroy Li, he

never obtained a nomination to office. When the Japanese occupied Pitszwo, this Chinaman treated the troops with the greatest hospitality, and presented a sum of 500 taels to the war chest. He subsequently sought Japanese citizenship, and from time to time furnished most useful information to Count Oyama. His elder brother is now with Marshal Oyama, procuring intelligence and acting as guide.

The *Official Gazette* publishes a detailed list of the casualties in the naval battle of September 17th. We give the figures:—

Ship.	Officers.		Men.	
	Killed.	Wounded.	Killed.	Wounded.
Matsushima	2	5	33	71
Chiyoda	0	0	0	0
Itsukushima	0	1	13	17
Hishidate	2	0	1	9
Hiyet	3	3	16	34
Fuso	0	2	2	10
Yoshino	0	2	1	9
Tachibana	0	0	1	2
Akitsushima	1	0	4	10
Naniwa	0	0	0	1
Akagi	2	2	9	15
Suikyo Maru	0	1	0	10
Totals	10	16	80	188

Thus the total casualties were 90 killed and 204 wounded.

The *Kokkai* has a suggestive note. After speaking of the facts that the troops in Port Arthur were the picked soldiers of Viceroy Li, that the Taotai ran away before the fight, and that Generals Chang and Tung were apparently in command, our contemporary goes on to say:—"There is one thing to be applauded in the conduct of the Chinese soldiers, namely their fearlessness at the moment of death. Some of them held out swords—weapons of the kind formerly used by women in Japan—and asked to have their heads cut off, offering their necks to the blade." That is very interesting, but does not the *Kokkai* perceive its meaning? Men who offer their heads to their victors are usually taken prisoners, not killed, in civilized warfare—if there be such a thing.

The *Fiji* says that the experience gained in this war indicates that the best plan to pursue with the Chinese is to fight them at close quarters. At 800 metres they stand their ground and shoot resolutely. At 400 metres they begin to run away. At 50 metres they throw down their arms and cry for mercy.

We read in the *Kokkai* that two wealthy and popular Chinese residents of Port Arthur have been appointed officials of the civil government with the object of inducing the inhabitants to return to their houses and resume their occupations. The first to come back were very poor folks, and it was found necessary to dole out to them rations of rice. Seven hundred presented themselves at the outset, but their numbers have gradually increased and great crowds now apply everyday. They are helped out of a store of 1,000 *koku* of rice found in the place at the time of its capture.

The weary record continues of encounters between the Tong-haks and detachments of Japanese soldiers sent to quell them. It is unnecessary to give names of places that convey no meaning to our readers. In every case the fights end alike—numbers of the rebels killed or taken prisoners and no casualties on the Japanese side. Happily the trouble is beginning to be settled.

THE "BREMA."

The German steamer *Brema*, Captain Haselmann, went badly ashore inside No. 2 Fort, Saratoga Spit on Tuesday. She left the anchorage in the afternoon and got down near the Foils soon after sundown. On Wednesday Captain Efford, Lloyd's Surveyor, went down to render assistance, and three lighters were despatched to receive cargo. At four o'clock next morning more lighters went down to the spot, in response to a summons, and after discharging 200 tons she hauled off on Thursday noon, and returned to harbour. The vessel was conveying the remainder of her Manila cargo of sugar from Yokohama to Kobe.

KOREAN NEWS.

We gather the following news from a letter of the *Nichi Nichi's* Seoul correspondent:—A matter to be greatly regretted is the want of judgment of the King of Korea and his dependence upon the Queen when any important decision has to be given. Whenever Count Inouye pays a visit to the King on business, a sort of shutter behind the latter's seat is invariably opened and through it the Queen secretly listens to the conversation. As the talk becomes more and more important the opening is increased and not infrequently the Queen's voice is heard by the Count whispering to the helpless King the answers he should give. The Heir-Apparent is endowed with as little intellectual development as the King. His chief amusement is being with the Court ladies. Occasionally he sits by the King and listens to Count Inouye's remarks about the reform of the country, but if the conversation lasts for more than two or three hours he invariably retires on the plea of indisposition. A rumour quoted by the vernacular papers a few days ago to the effect that the Queen of Korea had fainted while seated beside her husband and listening to the Count, is untrue, for the simple reason that the Queen has never publicly seen the Count, Korean Court etiquette forbidding her to see any man outside the circle of her relations. The Tai Wön-kun is a born diplomatist. He seems to have consented to undertake the Regency, not with any desire to reform the country, but merely to satisfy his own selfish wishes, and to indulge in luxuries, as he did several years ago when he enjoyed similar power. He keeps from three to four hundred hangers-on at his residence, all of whom are terrible desperadoes, ready to carry out every order given by their master. The relations between him and the Queen have for a long time been very bitter, but such is the Queen's sagacity that, on the nomination of the aged Prince to the Regency, she appealed so fervently to him that even his hard heart was touched and she escaped what at first had seemed inevitable—displacement and degradation. She treats her husband as a mere puppet, and though open hostility between the two has not yet broken out, that must come sooner or later. The precautions taken by the Tai Wön-kun about his own safety when at the Court are extraordinary, everything he eats and drinks being brought from his house. The corruption of the Korean Court passes the imagination of those who have not seen it. Only a few days after Count Inouye had submitted a minute Representation about the reform of the country, to his great surprise four or five Vice-Ministers of State were dismissed without the knowledge of the Prime Minister. The Count afterwards learnt that this was primarily due to the action of certain influential Court eunuchs, who had induced the Queen to carry out their wicked desires. The present Ministry is absolutely powerless, and the reason of Kin Koshin's appointment as Premier was because he had incurred less of the Tai Wön-kun's hatred than his rivals. Although the Court is very poor, the amount of money wasted is extraordinary. The Queen, it is said, spends no less than 200,000 yen a year in prayers and sacrifices on account of a large number of men and women having been put to death through her malice, whose spirits have to be propitiated. Prince Wi-hwa's mother was one of the victims of the Queen's jealousy. In short, concludes the *Nichi Nichi's* correspondent, with the Tai Wön-kun and the Queen filled with insatiable ambition, with the King spiritless and his heir foolish, with the Ministers utterly lacking in power and dignity, and with the whole nation devoid of patriotism—when we consider all these things, the situation of Korea and its government may well be pictured in our imagination. Count Inouye has the part to play of a modern Hercules.

A NEW BENEVOLENT SOCIETY.

Messrs. Oshikawa, Honda, Matsumura, Hasada, Iwamoto, and other prominent Christians have conceived a new benevolent idea, namely, that of establishing a Society to impart spiritual education to the people of foreign countries. The Society has been named Dai Nippon Kaigai Kyoiku Kai, or the Japanese Educational Society for foreign countries. Korea is to be chosen as the first field of action, it being considered Japan's duty to help her neighbours, the Koreans, out of the state of disorder and decline into which they have fallen. The projectors have hopes that, degenerate as the Koreans are, there may be young men among them who, if their minds are properly cultivated, will perhaps grow up to be the restorers of Korea as the elder Saigo, Kido, Yoshida, and Yokoi were of Japan. One of the projectors will visit Korea and investigate its actual condition, after which the status and process of instruction to be given will be determined. The present idea is to found a private school in Seoul to be followed by the establishment of similar institutions in all the important localities. Instruction is to be given on a Christian basis. Should competent teachers not be forthcoming the projectors will undertake the task themselves. A tour of inspection will be made in the early part of next year and the scheme will be carried out with all possible speed. The initiation expenses will be from 400 to 500 yen and the support of the public is earnestly requested.

JAPAN'S FOREIGN COMMERCE.

The Customs Returns up to the end of November of this year are as follow:—

	Yen.
Exports	101,467,463.000
Imports	107,902,949.180
Total	209,370,412.480

That Japan's foreign commerce is advancing steadily is a clear fact. Never before, however, have either the imports or exports reached as high as 100 million yen in one year. It is true, says the *Nichi Nichi*, that, involved as Japan is in a great foreign war, the public were prepared to see an increase of imports, but it was never expected that both imports and exports would be so unusually active as has been the case. Nothing could be more satisfactory to Japan at this crisis. Turning to the Customs Returns for the last two years we find the following figures:—

	Yen.
1893	89,712,864
1893	88,257,172
Total	177,970,036
1892	91,102,754
1892	71,326,079
Total	162,428,833

There is still a month left, and it is therefore not unlikely that the sum total of Japan's commerce may be as high as 230 million yen this year. The fall of foreign exchange has no doubt had much to do in bringing about that satisfactory result, but it is also greatly owing to the development attained of late years by Japan's commercial enterprise. While the continued victories achieved by the Japanese arms have already won for her a high position in the eyes of Western nations, her commerce appears to be also conquering in war of a more peaceful nature. On comparing the Customs returns of this year with those of the corresponding period of 1893, we find that the principal export items with their respective increase this year are as follow:—

	Yen.
Silk	10,668,381
Coal	1,665,289
Habutaye	3,072,707

The chief import items with their increase are:

	Yen.
Raw Cotton	4,372,543
Tea	1,086,203
Rice	5,386,198

GRAND MEETING OF JAPANESE BUSINESS ASSOCIATIONS.

The project that Mr. Mayeda has tried to bring about for many years; namely, a combination of the various business enterprises in this country under one system, has at last been happily consummated. For three days ending with the 12th instant, representatives of eight agricultural, industrial, and commercial guilds founded under the auspices of Mr. Mayeda, met at the Yayoi-kan, Shiba Park, and discussed various topics of mutual interest, among others, the best method of keeping up intimate and coöperative relations with each other. The Guilds that sent representatives to the meeting were the Nippon Agricultural Society, Nippon Tea Society, Nippon Silk Society, Nippon Commercial Society, "Five-two Staples" Society, Nippon Match Society, Dai Nippon Commercial and Industrial Society, and the Kyushu Colliery Society. More than 300 took part in the deliberations, all of them being men highly experienced in one or another of the subjects discussed. Among the guests were the Governor of Tokyo, Mr. Tomita, a Member of the House of Peers and ex-President of the Nippon Ginko, Mr. Watanabe Koki, Mr. Sonoda Kokichi, Surgeon-General Takagi and others. After speeches had been made by Mr. Mayeda, Viscount Enomoto—the latter, by proxy—and various representatives of the different guilds, the discussions commenced. Among the topics deliberated were the following:—

As to foreign exchange. The Committee's report on this point was to the effect that for ten years to come Government aid to the extent of tens of thousands of yen a year should be petitioned for.

As to foreign transportation. The Committee's report was that as the extension of navigation is a matter of extreme importance for the prosperity of Japanese commerce, it should be carefully deliberated.

As to stationing official inspectors at foreign ports whence commodities are sent to Japan. The Committee suggested that on account of the importation of live stock, the Government should be requested to station competent inspectors at San Francisco and at various ports in Korea.

The Committee also considered that suitable representations should be submitted to the Government on the following points:—
The initiation of inquiries by the Hokkaido Board, and also by the respective Local Offices into the agriculture, industry, and commerce of the various districts under their control.

The appointment of a Consulting Committee on matters of agriculture, industry, and commerce in the respective localities.

The regular appointment of a Higher Consulting Assembly in the Department of Agriculture and Commerce on matters pertaining to agriculture, industry, and commerce.

The strict control of Japanese men and women now residing abroad, and also of those who intend to go abroad at some future time.

To Japanese agriculturists, merchants, or those engaged in important practical pursuits who intend to go abroad, special protection should be extended by the Government.

As to the question of a grand meeting of the Union being held once a year, it was decided that it should take place every March. It was also decided that the periodical called the *Sangyo* now issued by one of the Union Guilds should be enlarged.

Other questions brought on for discussion were in connection with the management of mechanics; evil practices in vogue between producers and consumers; information about the import and export business at the various Treaty ports which the respective Custom Houses should be asked to furnish in future to each Guild in the Union; the establishment of silk inspection offices and of similar offices for articles exported from Yokohama and Kobe, with warehouses belonging to them; the foreign agents in which agents should be appointed; the dispatch of competent men to foreign countries by the various Guilds of the Union for

purposes of business inspection. Several Committees were elected to carry out enquiries into the above questions and were requested to give the results of their investigations by a certain specified date. A monetary question was also brought in, and it was decided that a representation should be made to the Government on the matter. The meeting closed with suitable speeches by Mr. Mayeda and other gentlemen.

At the instance of Mr. Otani Kahei, a prominent Yokohama tea merchant, it was resolved to raise a fund for the Central Union Office. Mr. Otani and other other prominent members of the Union met at Mr. Mayeda's house on the evening of the 14th instant for the purpose of discussing the subject. They finally decided to procure a fund of about a million yen for the use of the Union in carrying out its programme. A special Committee is to be elected for the purpose.

MR. MITSUHASHI'S RETIREMENT.

We trust that the retirement of Mr. Mitsuhashi, Secretary of the Kanagawa Kencho and Vice-Director of the Yokohama Harbour Works Bureau, may prove very temporary. With the reasons of the step we are not acquainted, but Mr. Mitsuhashi's official career has been so successful, above all, in that part of it connected with his management of foreign affairs, that we can not credit any intention of dispensing with his services for long, neither can we suppose that his private business will be allowed to interfere seriously with his resumption of office. It would be difficult to find a man more eminently qualified for the posts he has held, or one whose remarkable tact indicates him more clearly as an official suited for the delicate work of conducting affairs pleasantly and smoothly with a heterogeneous community like that of Yokohama.

THE PORT ARTHUR ATROCITIES.

INTERVIEW WITH "THE TIMES" CORRESPONDENT—AN EYE-WITNESS.

Mr. Thos. Cowen, *The Times* war correspondent at the seat of operations, who returned to Yokohama from Hiroshima on Friday morning, has kindly favoured a representative of this journal with an interview. The conversation quickly turned to Mr. Cowen's recent experiences at and around Port Arthur.

We have been hearing a lot lately, Mr. Cowen, of the atrocities committed by the Japanese soldiery after the fall of Port Arthur, and naturally much comment has been evoked: you, as an eye witness of the operations which culminated in the fall of the famous fortress, could throw much light upon the affair.

Well, of course what I have to say belongs to my employers, but with that reservation, I should be only too glad, was the reply, to place you in possession of all the facts so far as they came under my personal observation. But to begin with, I should like to mention that when I was in Chin-chow before the army moved on to the attack of Port Arthur, I learnt through my interpreter, who speaks Chinese fluently, that some Japanese spies—two I believe—had been caught by the Chinese and tortured. Chinese official documents proving this were captured. Whether the men were dead before being burnt is uncertain, but that they were tortured and burnt is beyond all doubt.

By the way, Mr. Cowen, were you in the skirmish of the 18th November?—Yes. Creelman and I were with the advanced patrol of the Japanese, and when the Chinese retreated we both rode forward to have a better view of what was going along. It was rather a hazardous proceeding on our part, but even our *belles*, who were unarmed, refused to go back when we ordered them, and they accompanied us as far as we went. We must at one time have been fifteen miles ahead of the main army. All along the track there were traces of the Chinese retreat, both on the road and in the fields. As we rode along we saw the bodies of some Japanese soldiers who had fallen in the earlier part of

the foray. All their uniforms were stripped from them and every corpse had its head and right hand cut off. Two or three of them were disembowelled and nameless atrocities had been perpetrated on others. The sight was most revolting and was sufficient to excite revengeful feelings in the hearts of the best disciplined men. We returned to camp at dusk and met the stretchers going out to bring in the dead. The bodies were not all recovered that night, for next morning other stretchers went out afield.

Did you remain long in camp there?—Oh, no. The next day, the 19th, I went with the patrol to a large village among the hills near Port Arthur. We did not see any Chinese—though afterwards we heard there were 600 in the place, and our little party would have been in a tight fix if these gentry had shown fight. They were in hiding, and one of our party was shot before the danger was seen. He fell off his horse, but I do not think he was killed, because when they sent later to recover his body it was not to be found anywhere. We afterwards heard from the Chinese in Port Arthur, and from Hart, Reuter's agent there, that this trooper was conveyed into Port Arthur, and must have been still alive, for they tortured and burnt him.

Of course you have heard with what indignation the Japanese received the news of the Chinese putting a price upon the heads of the Japanese soldiers?—Oh yes, and by-the-bye, Hart says that he saw the rewards being paid to Chinese soldiers for Japanese heads. When Port Arthur was taken proclamations offering the rewards for heads were found upon the walls.

It has been alleged that the Japanese officers took no steps to restrain their men from committing deeds of needless violence?—Well, I can say, as an eye witness, that on the march the Japanese officers did their best to diminish the excitement caused by the atrocities perpetrated by the Chinese upon the persons of their enemies. They had the bodies covered, and as quickly as possible removed from the sight of the soldiers.

Is there any truth, Mr. Cowen, in the story that the mutilated bodies of the Japanese were deliberately—for the set purpose of working up the men's feelings—laid out along the roads up which the Japanese advanced to the attack upon Port Arthur?—Such a statement is utterly wrong, there was no such laying out, and no working up of excitement.

And now, Mr. Cowen, a few questions in regard to what happened after the capture of the Chinese stronghold?—I would first explain that when the Japanese entered the town they had every reason to expect a good deal of opposition. A large Chinese army was known to have been in the place, although nobody knew where it had gone to. Under the circumstances, it was as likely as not that the Chinese soldiers had taken to the houses and would endeavour to pick off the Japanese as they advanced along the streets. But there was no resistance. I was in a very good position to see everything and there was no resistance at all. Still it was perhaps reasonable that the Japanese on their entry should fire at everything that they saw moving. At first I was disposed to feel horrified at this, but after mature deliberation I have come to the conclusion that the Japanese were not so much to blame.

Do you mean on the first day, Mr. Cowen, or the three days following the fall?—I refer to the first day alone. I was greatly surprised next day to find them still killing the Chinese. They practically routed out the whole of the town: every house was entered and searched; the Chinese were driven out and killed; some were even killed in the houses.

Did you go into any of these houses yourself?—Yes.

And did you see anything horrible going on inside?—Yes, there were some surprising sights. I saw some bodies under the beds having bullet wounds upon them—evidently the poor creatures had tried to hide themselves under the beds. Some corpses I saw were in a kneeling position—they had evidently been killed while kow-towing.

Did you see, Mr. Cowen, any officers with

some officers with the men, they were apparently directing them, so far as I could see.

Were the Chinese only shot down?—Oh, no. Afterwards I saw the Japanese using their swords a good deal. Some men were hacking at dead bodies, for some that I saw had deep gashes with no blood. In a few cases there was deliberate mutilation and disembowling: two or three Chinese corpses I saw were dismembered.

Who were the perpetrators of these deeds?—They were all done by soldiers in uniform: not the work of coolies, so far as I could see. I saw that some of the bodies of the Chinese were in plain clothes, but under the jackets were cartridge belts, some half full. A few had weapons. Some of the men in plain clothes wore Chinese soldiers' boots; so altogether I don't think the Japanese are to blame in regarding all the inhabitants of Port Arthur as hostile. It was so very plain that the Chinese soldiers had disguised themselves; the hillsides around Port Arthur were strewn with their uniforms.

Then in your opinion, Mr. Cowen, the Japanese soldiers' conduct was not so blameworthy, taking all into consideration?—Not on the day of the taking of the port, but what I do blame them for is that after all resistance was over they went on killing Chinese instead of taking them prisoners. The actual number of Chinese killed in the battle was probably a good deal below 1,000; the Japanese official returns, I believe, place it at 4,000; all the balance in my opinion could have been taken alive. But then, as I have explained before, the atrocities committed by the Chinese would have excited the sanest man.

You say that the killing of unresisting Chinese continued during the second day?—Yes, it went on much the same, diminishing only as the supply of Chinese ran short. In fact, it went on as long as I stayed there. I got on board the steamer on the afternoon of the 25th and we left on the morning of the 26th, and there was still shooting going on—we could hear it.

A statement has been made that there were no women killed in Port Arthur?—I saw several women killed and a few children. I saw also a rather large number of women—some scores—whom the Japanese left unhurt. They evidently tried in a general way not to injure any women or children.

These, then, Mr. Cowen, are the startling facts which were first to appear in an American journal?—I don't think they should startle humanity more than war news ordinarily does. Such things have been done before. I don't think they are worse than the actions of some English and French armies. The ordinary events of any war can furnish any amount of sensational writing if war correspondents care to go in for "piling up the agony." Some people delight in "strong" writing. There is one thing I should like to have stated unequivocally, and that is I saw no house to house fighting at all. I had a splendid position to see everything that happened, and I can emphatically state that there was no resistance on the part of the Chinese, after the town was taken.

And do the Japanese really try to suppress information?—No, to my knowledge they have suppressed nothing, even when adverse to themselves. It is important to have that clearly understood. But at the same time, I must say they are most aggravating in the matter of giving information. They treat us with great kindness and courtesy, supplying us with food and wines, horses and coolies, the best they have to give; but information they will not give. Their reticence is carried to quite ridiculous extremes. I wish to goodness they would give us less champagne and more news. If the officials had fulfilled their promise to supply information and to facilitate pressmen, I could have gone from the headquarters of Count Oyama's Army to Lieut.-General Nodzu's Camp in Manchuria and back here instead of wasting a whole month in Hiroshima.

With apologies for detaining Mr. Cowen so long, I am, Sir, very respectfully,
Yours faithfully,
Original representative retired, after mutual exchange of courtesies.

THE WHITE LILY SECT.

RECENT advices have brought the not unexpected tidings that the members of the White Lily, or Lotus Sect, in China are giving trouble in several of the central provinces, and that an uprising is feared in one or two places. If indeed any of the Chinese secret associations is to be apprehended, it is this one in particular, known throughout the Empire as the *Peh-lien Kiao* (or *Ko-lao Hwai*), literally "White-lily (lotus) Society;" for although there are numberless minor associations scattered throughout the various provinces there are but three that constantly menace the preservation of tranquillity: the *San-ho* or *Tien-ti Hwai* (Triad or Heaven-and-Earth Society), the White Lotus, and the Moslem organizations. The power of the first-named, among whose sectarians the Taiping Rebellion is believed to have originated—for the leader himself, LI HSUEN-CHI, was a member of this society—is now popularly supposed to be broken; at all events the limits of its activity are confined to Yunnan and the two Kiang, although Kwang-tung was, until recent years, a favourite gathering-spot where many adherents were numbered. The White Lily Society, on the other hand, is as active as it has ever been, and there can be little doubt that it is receiving at present large additions in the shape of those who believe that the days of the present dynasty are few and that a wholesale change should be effected in the administration.

This fraternity, though not so old and without so sanguinary a record as that of the *San-ho Hwai*, is said to have first come into prominence about reign of the Emperor KIEN-LUNG. During the somewhat brief reign of his immediate successor, KIA-KING, the association assumed proportions of formidable magnitude. From the very beginning, the *Peh-lien Kiao* has shown that its one great aim is to annihilate the Manchu dynasty and reinstate the lineal descendants of the last Chinese Emperor. One of the first acts of this desperate band was an attempt to blow up the Imperial Palace. The secret, however, leaked out in time, for at the moment when the success of the plot seemed assured a great rain-storm set in, which frustrated all arrangements: an alarm was raised, and the Palace and its inmates were saved from certain death. Subsequently the details of the conspiracy were laid bare as well as the names of the ringleaders discovered, and this was necessarily the signal for a most fierce and prolonged crusade against the sect, every means being employed to stamp the fraternity out of existence. Literally thousands were executed, the leaders in particular being compelled to expiate their audacious offence under tortures as cruel as the innately cruel Chinese only can devise. Yet

the Society still exists, and since the overthrow of the Taiping Rebellion and the subsequent decay of the Triad Society it has once again become formidable. It is undeniable that the object of its existence is political, but there can, none the less, be no doubt that the adherents of the *Peh-lien Kiao* both preach and practise those doctrines of mysticism which have ever exercised so strong an influence over the Chinese mind. The members are strict vegetarians, and conduct themselves in public as well as in private in accordance with certain regulations, the infringement of which is punishable with death. Both sexes are freely admitted into the congregations of the Society, contrary to the rules of other similar organisations, and this is, perhaps, an additional reason for its popularity. The Buddhistic bias of the *Peh-lien Kiao* is not only discernible in the vegetarianism enforced upon the members, but in the very badge or symbol adopted, the White Lotus being nothing more than the thalamus of the deified SAKYAMUNI. Its Taoistic inclinations are also perceptible in the mystic doctrines professed by the initiated, and the magic rites they are supposed to observe. This is Taoism, pure and simple. Such practices give them a strong hold on the superstitious fears of the outside world, the majority of the Chinese ascribing supernatural powers to the initiates, whom they credit with being in direct communication with the sprites and goblins of the "middle world." But perhaps the most clever part of the whole is that the founders succeeded in borrowing so much from the two most popular religions in China, and in such a manner that even devoted adherents of this or that creed can find nothing distasteful to them in the doctrines upheld by the Society.

It will be seen from the above that the organisation is a really powerful one, and one also calculated to undermine or find adherents in all classes of society. It is a foe of no contemptible dimensions, and that it can outlive the most rigorous persecution is proof of its vitality. The unquestioned weakness of the present dynasty must give fresh impetus to the cause espoused by the *Peh-lien Kiao*, which may yet prove a very formidable factor in the problems of the Far East.

THE PORT ARTHUR AFFAIR.

DOUBTLESS the attitude of all fair-minded persons with regard to the Port Arthur affair has been one of suspended judgment. We have not as yet had any authoritative statement of what really occurred at the capture of the fortress. Newspapers have given their own versions of what war correspondents are supposed to have said, and it has been hinted that the correspondent of the *New York World* is about to publish revelations

calculated to startle humanity. Altogether the impression conveyed is that the behaviour of the Japanese soldiers was most cruel and bloodthirsty; that they slew combatants and non-combatants without discrimination, and that they continued this fierce slaughter throughout three days following the capture. Among the four newspaper correspondents present at Port Arthur, three were wholly novel to the work they were required to record. They had never before seen anything of war, and even its ordinary incidents must have been shocking to them. Of course we do not desire to suggest that their evidence is without value, but the public will certainly be inclined to pay far more attention to the testimony of the military *attachés* who accompanied the Army, since they necessarily enjoyed the best opportunities of observing the operations, and were moreover competent to estimate them by expert standards. One of these *attachés* has now returned to Tokyo, and we learn from him that the statements hitherto published by the local foreign press must be received with the greatest reservation, and very largely discounted before the residuum of truth is reached. In the first place, this observer states that the civilians, or at any rate the non-combatants, had all left the town of Port Arthur before the assault of the forts, and that a number of the soldiers had either discarded their uniforms altogether, or thrown civilian garments over them. These men, thus disguised, continues our informant, fought even more resolutely than their comrades, and subsequently escaping into the town, maintained their resistance there. The result was a good deal of house-to-house fighting, in which the Japanese used their swords freely, and when a Japanese sets out to use a sword in earnest, the results are often very terrible. That there was unnecessary cutting down seems pretty certain, and it is very conceivable that the cuts and slashes often assumed a character suggestive of mutilation. But our informant did not see anything from which wilful mutilation could fairly be inferred, and he does not believe that genuinely peaceable citizens were killed, or that if a few were killed, the thing was intentional. The sum of his opinion is that the Japanese, employing their swords and rifles under circumstances where discrimination was difficult and in the sequel of many Chinese barbarities sufficient to have infuriated the soberest troops in the world, were doubtless guilty of excesses, but not by any means of such excesses as have been laid to their charge. Of the death of women or children he neither saw nor heard anything, and his conviction is that there were no women or children in Port Arthur at the time. Finally, he is emphatic in his denial of the allegation that indiscriminate slaughter was continued through

several days. The whole affair, so far as the town of Port Arthur was concerned, began and ended during the night of the 21st November. From the following morning nothing of the kind was to be seen.

We think it right to lay these facts before our readers. They are not conclusive, inasmuch as some of the testimony is negative, and negative testimony can not possess much weight as against positive. But they show, at all events, that the stories hitherto circulated must be received with caution, and that the public should be careful about attaching implicit credence to the allegations of writers, some of whom are proverbially disposed to take the harshest possible view of every offence charged against the Japanese, and one seems to be deliberately resolved to work up this affair into a sensation of which he himself will be the central figure.

THE OPERATIONS IN MANCHURIA.

THE progress of military events in Manchuria has of late been difficult to follow intelligently, and it may be well at this stage to attempt an explanation such as will not only help our readers to understand the present position but also furnish them with some clue to the future. At the outset it must be observed that until 1875 there was preserved on the northern bank of the Yalu, between the territories of China and Korea, an uncultivated neutral zone about 40 miles in width. On the Chinese edge of this zone the great frontier town and fortress was Feng-hwan, and there, naturally, many of the roads connecting with eastern, northern, and western Manchuria converge. A knowledge of this fact helps materially to elucidate the operations reported from Manchuria during the past month.

The Chinese troops are divided into three armies, one working in the western section of the district involved, one in the northern, and one in the eastern. The army in the western section has for its principal bases Newchwang and Hai-cheng, the latter being an important fortified town on the high road from Newchwang to Mukden. This army consists partly of troops originally engaged in the defence of Chiu-lien and Feng-hwan; partly of the Newchwang garrison, and partly of a Mongolian force—said to be 10,000 strong—that recently moved down and crossed the Liao river a few miles above Newchwang. After the battle of Hu-shan (October 25th) and the fall of Chiu-lien (October 26th), some of the beaten troops retired westward along the Yalu, and took up positions in An-tung, Ta-tung, and Taku-shan. Driven thence by the Japanese, they headed inland, taking Hai-cheng as their ultimate objective point, but halting meanwhile at Sui-yen, a wealthy town of some 20,000 inhabitants. There they were joined by another body of fugitives from Feng-hwan, so that they mustered altogether about 6,000, under the command of Generals SEH and TANG. These troops, unlike their comrades in other divisions, appear to have been well disciplined and kept under effective control. On the 16th November, Major-General OSEKO, who had been ordered to move from Taku-shan to the assault of Sui-yen, reached the latter place at the head of two battalions. Co-operating with him was another column that had marched from Feng-hwan to take the enemy in rear, and so accurately timed were the movements of the two forces that the enemy, finding himself assailed from two sides, retreated, without offering any resistance, but in good order, in the direction of Hai-cheng. The Japanese, on their side, having placed a garrison in Sui-yen, withdrew their battalions to Taku-shan and Feng-hwan, their apparent intention being to postpone any further advance westward until the successful operations of the Second Army against Talien and Port Arthur should set it free to march north and co-operate with the First Army.

Turning now to the operations in the Liao-tung Peninsula, we find that on the November 22nd Port Arthur was completely occupied, and a few days later Marshal OYAMA's forces began to move north. Having returned to Chin-chow and established his Head-quarters there, the Marshal ordered an advance against Fu-chow, an important walled town of 25,000 inhabitants, about 53 miles north of Chin-chow. It was believed that Fu-chow would be defended, as General SUNG with several thousand men held the place. But on December 5th, the Japanese van entered the town without encountering any resistance. The advance was then resumed toward Kaiping, a city of still greater importance, 63 miles distant. Kaiping is only 30 miles from Newchwang: It is the point at which the coast road from Newchwang turns inland toward Sui-yen (53 miles distant). Troops at Sui-yen would be in touch with troops at Kaiping. News of the occupation of Kaiping may be daily expected.

Meanwhile, the First Army—or, to speak more correctly, the moiety of it consisting of the Third Division—had resumed its westward movement against Hai-cheng, the chief town on the Newchwang-Mukden road. Had no opposition been encountered, Hai-cheng would probably have been reached by December 15th. But the Japanese scouts reported that Tomu-cheng, 18 miles south-east of Hai-cheng, was held by a large force of the enemy, and this intelligence proved correct, for when, on December 11th, the Japanese advance guard reached the vicinity of Tao-hotz (a village 5 miles south of Tomu-cheng) it found there 3,000 infantry, 400 cavalry, and 8 field guns. Despite their strength, the three Chinese Generals in command offered no resolute resistance, and retired in the direction of Tomu-cheng.

Original from the period of the campaign a new site of the Liao-tung. A large force

This engagement did not clear the road to the last named place, for it was ascertained that another body of Chinese, numbering about 4,500, with 6 guns, were still in position at Potsaoao-ken, 3 or 4 miles to the north-west. An attack was delivered on the 12th instant against the right wing of this body, but the result is not yet known.

Leaving for the moment this part of the campaign—i.e. the operations westward of the main road from Feng-hwan to Mukden—let us consider the rest of the field. Roughly speaking, the main roads traversing the districts of Manchuria involved in the war take the shape of the letter "T." Newchwang and Mukden lie at opposite extremities of the head-line; Lao-yang at the junction of the head-line and stem, and Chiu-lien at the base of the stem. Had YAMAGATA'S Army contemplated a direct advance upon Mukden, as was at first supposed, it would have followed the stem of the "T" until it struck Lao-yang, and would then have turned northward along the head-line. The march along the stem to Lao-yang is about 139 miles, and the march from Lao-yang to Mukden about 43 miles. But there being no intention of an immediate movement against Mukden, YAMAGATA fixed his head-quarters at Chiu-lien and his divisional head-quarters at Feng-hwan, throwing forward his outposts to convenient distances.

It may be noted here that the First Army consists of two Divisions, the Third and the Fifth, and that these were separated after the occupation of Chiu-lien and Feng-hwan, the Third Division being told off for the campaign westward, and the Fifth for the campaign northward and eastward. The general head-quarters of the whole remained at Chiu-lien, so long as YAMAGATA was in the field, but after that officer's departure for Japan, Lieut.-General NOZU, upon whom the command then devolved, moved the head-quarters to An-tung, a town on the north bank of the Yalu seven miles below Wi-ju.

The farthest point actually occupied by an outpost of the Fifth Division was Lien-shan-kwan. It lies on the main road (the stem of the "T"), 52 miles beyond Feng-hwan and 89 miles beyond Chiu-lien. The advance-guard of Major-General TACHIMI's battalion—TACHIMI has commanded the van of the Fifth Division, and OSEKO, the van of the Third Division, since the invasion of Manchuria—entered Lien-shan on November 12th. Twelve or thirteen miles further on is the celebrated "Heaven-touching Pass" (Mo-tien-ling). A reconnaissance (November 15th) having shown this pass to be strongly held by the enemy, no resolute attempt was made to force it, the reconnoitering party falling back upon Lien-shan-kwan, with a loss of 1 killed and 3 wounded.

Original from the period of the campaign a new site of the Liao-tung. A large force

of Tartars, under General I, began to move against the Japanese positions from the east. These troops were said to be the Amur Army, a highly trained body of about 15,000 men. Apparently it was considered that their presence on the frontier might be dispensed with for a time. General I planned his movement primarily to recover Fenghwan, and secondarily to cut off any Japanese outposts occupying positions north of that place. Apprised of his design, the Japanese Generals adjusted their programme to defeat it. Two objects doubtless suggested themselves as important. One was to prevent a junction between I's army and the forces defending the main road to Mukden. The other was to get into touch with I's columns as quickly as possible. In pursuit of the latter purpose, a reconnaissance was sent eastward from Fenghwan toward a fortified town called Aiyang-pien-man. In pursuit of the former, Major-General TACHIMI undertook to lead a battalion first in an easterly and then in a northerly direction. Let us, for the moment, confine ourselves to TACHIMI's operation. The Chinese forces guarding the approaches to Mukden had the choice of two ways to effect a union with I's troops. They might either move down the main road over the "Heaven-touching Pass" and push the Japanese back until the branch-roads leading east in the direction of Sung's advance were opened; or they might leave the main road at Lao-yang, and striking eastward and southward through the mountains, reach I's outposts, keeping always at a considerable distance from the main road, and therefore beyond the ken of the Japanese, so long as the latter refrained from any excursions eastward. We can not tell whether any such project was entertained by the Chinese, but the hypothesis that they did entertain it seems to furnish the only intelligible explanation of the Japanese Generals' dispositions. TACHIMI left the main road at Tsao-ho-ken (12 miles south of Lien-shan-kwan and 40 miles north of Fenghwan), and pushed on as far as Tsichia-pao, a little town among the mountains, 19 miles north-east of the Mo-tien Pass, or the crow flies. There he encountered (November 30th) a considerable force of the enemy, and scattered them, their loss being 25 killed and a quantity of small arms and ammunition, while TACHIMI'S casualties were 2 killed and 4 wounded. This effected, he retracted his steps and emerged again upon the main road. The operation had established the fact that no idea of effecting a junction with I's army by the eastward routes was entertained by the Chinese north of Mo-tien-ling.

When TACHIMI set out upon the above expedition, the Japanese outpost at Lien-shan-kwan was withdrawn to Tsao-ho-ken, and there, on November 25th, it was attacked by a body of 1,500 Chinese moving southward along the main road from

the pass. The enemy were driven back after a severe fight, in which the Japanese casualties aggregated 40. It seems plain that this was an attempt on the part of the Chinese to coöperate with I's movement. The road branching eastward to Saimatsui—where I's men were concentrating—is entered from the main route at Tsao-ho-ken, and if the Japanese could have been dislodged from the latter place, not only would a line of communication have been opened with I, but also TACHIMI'S battalion, then moving on as above described, would have been cut off from its base of communications.

Let us turn now to the second operation undertaken in connection with the appearance of I's Tartars upon the scene—namely the reconnaissance along the road leading from Feng-hwan to Aiyang-pien-man. On the 20th of November, it came into contact with I's advance-guard at a place called Tapia-ken (29 miles from Feng-hwan), and the enemy's force being greatly superior, the Japanese had to retire, with a loss of 1 officer and 20 men killed. Subsequently, a stronger body of the troops stationed at Tsao-ho-ken pushed eastward as far as Saimatsui, doubtless with the intention of keeping the roads clear for Major-General TACHIMI'S return, but although the Tartars retired before this advance, no attempt was made by the Japanese to occupy Saimatsui. Doubtless the forces immediately available were not sufficient for that purpose. I's movement against Feng-hwan, however, received a momentary check. It was now evident that he contemplated such a movement, and as his forces were considerable, the Japanese outposts were drawn in, so as to effect greater concentration in the neighbourhood of the menaced stronghold. TACHIMI'S battalion, on its return (probably about December 8th) to the main road after the engagement in the mountains to the north-east of Mo-tien, did not remain at Tsao-ho-ken, but took up a position south. By so doing TACHIMI opened the Saimatsui-Tsao-ho-ken road to I's troops, but it is easily conceivable that strategic reasons dictated such a course. At all events, General I took advantage of the line of approach thus offered to him. He shaped his programme so as to advance against Feng-hwan both from the north along the main road, and from the east along the Aiyang-pien road. It will be well to consider these advances separately. That along the main road resulted in the massing of three thousand Tartars at Kimka-hotsu (5 miles south of Tsao-ho-ken). On December 10th, TACHIMI'S battalion attacked this body, cut it in two and drove it back *pile-mêle*, a part toward Tsao-ho-ken and the remainder along the eastern road. General I himself seems to have commanded in this engagement. He lost about 100 men, and the Japanese 30.

Turning now to the operations of the remainder of I's troops—i.e. the

body—we find them moving against Feng-hwan in two bodies from Aiyang-pien. The road between the two places bifurcates at a little distance from each, its branches forming an elongated loop. I's men moved by both routes. The Japanese appear to have looked for their advance along the northern branch of the loop only. A reconnaissance sent out along that road found the enemy in strength on December 12th, and fell back to Yinien-shan, about 6 miles from Feng-hwan. The next morning at daylight a battalion from Feng-hwan marched to attack these troops. It was then discovered that the enemy was fully 6,000 strong, and that he was advancing by both arms of the loop, his front extending over a distance of some 6,000 metres. This involved a change in the Japanese plan of operations. It was resolved that the attack from Feng-hwan should be delivered against the enemy's left wing—i.e. along the southern branch of the loop roads—while Major-General TACHIMI, moving from his position at Tsao-ho-ken, took the right wing in the rear. Meanwhile, the garrison in Feng-hwan was strengthened by bringing up the battalion stationed at Tang-shan-chen (a town lying between Chiu-lien and Feng-hwan), a battalion from Chiu-lien being pushed forward to take its place. On the morning of the 14th December, at 6.30, two battalions under Colonel TOMOYASU marched out of the Feng-liwan against I's left wing. The hostile forces soon came into collision, and a sharp engagement ensued, ending in the complete rout of I's men. They fled, leaving 4 guns (2 mountain and 2 field guns), 16 prisoners, and a number of horses as well as a quantity of material. Their casualties are not precisely known, the mountainous character of the district rendering search difficult, but 150 bodies had been found at the date of the latest advices. The Japanese had 12 killed and 63 wounded, among the latter being 3 officers. I's men fled chiefly in the direction of Saimatsui, scattering thence along the mountain roads to the north-west. A portion followed the Kirin road eastward, so that the force was completely broken. As for I's right wing (on the northern branch of the loop road) it does not appear to have awaited TACHIMI'S attack from the rear. At all events, nothing more is heard of that attack, though the Commander-in-Chief reports the enemy on the east of Feng-hwan totally routed, and says that a pursuing column was despatched from Tsao-ho-ken in the direction of Saimatsui to cut off the fugitives.

Summing up the above details, the position in Manchuria resolves itself into this:—One Division of the First Army, having beaten off General I's attempt against its right flank, holds Feng-hwan, and has its most distant outpost at Tsao-ho-ken. Another farther north, another Division is marching against Hai-cheng, and

has reached within 18 miles of that place; and a portion of the Second Army is advancing north up the Liau-tung Peninsula, with Kaiping for its immediate objective.

THE NEW IDEAL OF THE SEX RELATION.

THE *Quarterly Review* for October contains an article entitled "The Strike of a Sex," a clever but partial criticism of certain books on the movement for the emancipation of women. The article is a review, first and chiefly of "Marcella" and "The Heavenly Twins," but many of the most vitriolic passages are inspired by a reference to other more extreme works on the question, and notably to FRAU VON TROLL-BORÖSTYANI'S book "Die Gleichstellung der Geschlechter" ("The Equality of the Sexes"). The article opens with a description of the famous "Insurrection of Women" of the Fifth of October, 1789, when a host of Anarchist women, led by the courtesan THÉROIGNE MÉRISCOUR, assembled before Versailles resolved to do justice on MARIE ANTOINETTE. Perhaps this was, as the *Quarterly Review* says, at once the most tragic and the most ludicrous of all the famous days of the French Revolution; but it is obviously unfair to suggest, as the reviewer suggests, that it was a fitting opening to the movement for the emancipation of women. It is no less unfair to condemn that movement on account of some of the proposals of the more extreme among its supporters. For if we were to apply the same canons to some of the other great movements of history, what would be the result? Our opinion of the value of early Christianity would depend chiefly on the disgust inspired in us by a contemplation of the anchorites of the fifth and sixth centuries—the dirty savages who inhabited the lauras of Egypt, Palestine, and Syria; we should condemn that great revival of Christianity known as the Reformation on account of the more violent utterances of LUTHER and the excesses of the Anabaptists of Münster; we should see nothing but evil in that great revolt against a belated feudalism known as the French Revolution, because some of the pages of its annals are stained by blood shed in the days of the Terror.

If the *Quarterly Reviewer* had wished to find the true prelude to the woman's movement, he would have found it, a century ago indeed, not in France but in England; he would have found it in MARY WOLLSTONECRAFT'S book, "A Vindication of the Rights of Women." This book is remarkable no less for the extreme vigour than for the studied moderation of its tone; and it is interesting from two curiously opposite points of view, for it shows us how much since it was written women have gained in details, and at the same time that the essential demanded by MARY WOLLSTONECRAFT, an entire change

in the reciprocal attitudes of the two sexes, is still far from realisation.

No one, however reactionary, can now read without a smile some of the works most severely criticized by MARY WOLLSTONECRAFT—works that in their time, only a century ago, were regarded as standards on the subject of female propriety. Dr. GREGORY, for example, recommended constant dissimulation to girls who were so unfortunate as to be endowed by nature with a robust physical constitution, for a frail and sickly habit of body was supposed to constitute an essential part of feminine charm. The Rev. Dr. JAMES FORDYCE, again, in one of his sermons addressed to women, says, "Let it be observed that in your sex, manly exercises are never graceful: that in them a tone and figure, as well as an air and deportment, of the masculine kind, are always forbidding; that men of sensibility desire in every woman soft features and a flowing voice, a form not robust, and a demeanour gentle and delicate." Happily among us, men of sense have in so far replaced men of sensibility, that those who would with especial zest choose sickly women to be their wives and the mothers of their children are not often to be met with; and on all hands women are encouraged to take more or less "manly exercises." Still, we can remember that on the introduction of lawn tennis not much more than twenty years ago, when women began to abandon in favour of the new game the demure seductions of croquet, there was a wide-spread outcry that their conduct was "unfeminine," and at the present day we find a similar denunciation of the practice of bicycling by women—apparently on the ground that this exercise, if women are to perform it with ease and grace, forces them to adopt a quasi-masculine attire.

But if in some of these details women have gained ground in the last century, in essentials, in the inner nature of the relationship that obtains between men and women, there has been little change since the publication of MARY WOLLSTONECRAFT'S book. Though most men would explicitly refuse their assent to POPE'S sneer, that "every woman is at heart a rake," yet most men implicitly exhibit a profound faith in that maxim by the manner in which they advocate and enforce for those women over whom they have any sort of legal or moral control, the fullest segregation from the world that western opinion will tolerate and that women themselves will endure. By this we do not mean literally that women are shut up in a seraglio; but in the mental sphere an almost Turkish exclusiveness is recommended and practised, and men with the women they have trained combine to howl down as "unsexed" those rare women who betray an interest in the social problems and social diseases with which their sex is especially concerned. And how

thoroughly the average man in his heart believes the truth of the dictum of POPE, has been more than once borne in on us by his chance utterances; never perhaps more fully than by a conversation we had with a friend three or four years ago. He had been reading a paper by GRANT ALLEN, in which that prince of paradox had enunciated the opinion that any woman ought to regard it as an honour to be the mistress of a BYRON or a SHELLEY. "If our leading magazines," said my worthy friend, "are going to publish such articles as this, what power on earth will suffice to keep women moral?"

But the main vigour of MARY WOLLSTONECRAFT'S attack was directed against that false view of the sex-relation which then dominated, and which still dominates, the minds of most men and of most women. It was thus expressed by ROUSSEAU in a passage in "Emilius": "The education of women should always be relative to that of men. To please, to be useful to Us, to make Us love and esteem them, to educate Us when young, and take care of Us when grown up, to advise, to console Us, to render Our lives easy and agreeable: these are the duties of women at all times, and what they should be taught in infancy." And the same view is expressed, less frankly, by the *Quarterly Reviewer*, in his criticism on "Marcella": "the wife's duty," he says, "will always be that of reconciling the noble *Raeburn* with himself and life, or cheering him forward on the lines of his own nature—of believing, understanding, helping." Against ROUSSEAU'S view of womanhood, MARY WOLLSTONECRAFT'S book was a spirited protest—a protest of which the modern movement for the emancipation of women is in part the fruit. As Mr. C. KEGAN PAUL says in the preface to his edition of her "Letters to Imlay," speaking of "A Vindication of the Rights of Women," the book is a reiterated claim that women should be treated as the friends and equals of men, not as their toys and slaves. To the summary prettily put by the *Quarterly Reviewer* of *Marcella*'s duties to *Raeburn*, we have the modern answer given by *Nora* in IBSEN'S play of "A Doll's House." She asks her husband what he considers her holiest duties. Without hesitation he replies, her duties to himself and to their children. To his astonishment she rejoins that she has other duties equally sacred, her duties to herself. MARY WOLLSTONECRAFT said the same thing a hundred years earlier: "Speaking of women at large, their first duty is to themselves as rational creatures."

It has often been objected to the Woman's Movement that by it women will lose rather than gain; for in effect, though indirectly, they already rule men. In a sense it is true that, just as in that age in which a pretended reverence for womanhood served as a cloak for ill-usage and

Chivalry,"—so now, women do at times rule men, by the exercise of all that is worst in their own natures, and by the encouragement of all that is weakest in man's. To such specious advocacy of wrong, MARY WOLLSTONECRAFT had a ready answer. "I do not," she said, "want women to have power over men, but over themselves," and again, "it is not empire, but equality and friendship, which women want." For women who love to rule man by the power of their sex, she breathes an outspoken contempt. "To little respect," she says in one place, "has that woman a claim . . . who smiles on the libertine while she spurns the victims of his lawless appetites and their own folly."

But MARY WOLLSTONECRAFT, in her advocacy of the emancipation of women, never underestimated the reality and extent of sexual differences, she never forgot that, as EDWARD CARPENTER has well expressed it, woman is called upon "to bear children, to guard them, to teach them, to turn them out strong and healthy citizens of the great world." She would have disapproved of the proposals of certain modern reformers to hand over the care of children to the State; just as she disapproved of the fine ladies of her time who committed their domestic duties entirely to the hands of servants. But MARY WOLLSTONECRAFT held that the present system, in which, as GEORGE MEREDITH says, man's ideal of woman is that she should be "at once a parasite and a chalice," is not the system best fitted to prepare her for the performance of her supreme duties.

We have quoted GEORGE MEREDITH, and in truth those who wish to understand the true meaning of one of the grandest, if it be not the grandest, of the movements of the nineteenth century, will do so best by a study of the great novelist. No writer has excelled MEREDITH in the portraiture of woman, no writer has ever better understood at once her greatness and her limitations, none has shown more sympathy with her new aspirations, none has more bitterly satirized the terrible consequences, alike to man and to woman, of the existing sexual ideal. "The Egoist" is, in fact, in its central purpose, a study of the sex-relation, and the same may be said of "One of Our Conquerors." Speaking of *Nataly*, in the latter work, he says, that at a certain crisis in her life, when she was reflecting on her relations with *Victor Radnor*: "She reproached herself for an abasement beneath his leadership, a blind subservience and surrender of her faculties to his greater power, such as no soul of a breathing body should yield to man: not to the highest, not to the Titan, not to the most Godlike of men. Under cloak they demand it. They demand their bane." And later, speaking of *Nataly's* daughter, *Nesta*, who was oppressed by a young

girl's first glimpses of the true nature of the present arrangement between the sexes, and, who, by the canons of society, was not allowed to appeal for a fuller knowledge of the depths of sin and shame, he writes: "Thus was she, too, being put into her woman's harness of the bit and blinkers, and taught to know herself for the weak thing, the gentle parasite, which the fiction of our civilization expects her, caressingly and contemptuously, to become in the active, while it is exacted of her—O Comedy of Clowns!—that in the passive she be a rock-fortress impregnable, not to speak of magically encircled. She must also have her feelings; she must not be an unnatural creature. And she must have a sufficient intelligence; for her stupidity does not flatter the possessing man. It is not an organic growth that he desires in his mate, but a happy composition. You see the world which comes of the pair."

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE JAPANESE NEW TESTAMENT TRANSLATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Not being yet sufficiently acquainted with the Japanese language to be a critic, I take this method of asking some one, capable of answering, in regard to some points in the Japanese New Testament.

1. In Acts, 8.33, we have, in the Japanese, *tada shiki sabaki* (righteous judgment). What authority is there for the word *righteous*? The word *Klaus*, means, discrimination, judgment, decision, sentence; and in some four different English translations I happen to have, not one translates the word by "righteous judgment." Three uniformly say, "In his humiliation his judgment was taken away;" the fourth has it, "In his humiliation his condemnation was extorted."

2. In I Tim., 3.11, we have the word *foshitsuji* (deaconess). The word *yuvu* means, "a woman;" "a married woman, a wife." The English translations all fail to give it "woman-deacon." Two say, "their wives," and one, "The women," and one "women."

I shall be thankful for any explanation on the above points, from those of a more extended acquaintance with the language than myself, either through the columns of the *Mail* or by private correspondence.

Most respectfully and sincerely,

J. M. MCALEB.

13 Tsukiji, Tokyo, December 15th.

PORT ARTHUR & JAPANESE PAPERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Almost as surprising as the massacre itself at Port Arthur is the "vindication" which the *Mail* translates from the columns of certain Japanese papers. "Under these circumstances, wholesale slaughter was necessarily the order of the day," says the *Fiji*. On the whole, after much reading of so-called apologies of barbarities, the *Fiji's* is the most extraordinary, and shows a bottomless state of moral sentiment. All that the *Nichi Nichi* can offer in defence is that "War is by nature cruel. Circumstances must be left to determine the number of lives lost." Such are the opinions expressed after all we have heard about Japan's efforts to introduce civilized methods of warfare. We have listened to innumerable stories about the humanity of the Japanese soldiers in contrast to the Chinese. We have been told stories of this and that Japanese officer who protected the Chinese in time of distress. We have read notifications of Japanese Generals, enjoining the highest rules of civilized warfare—I need only refer to the *Mail* of November 8th, where it is stated that "General Oyama has issued an order

general order inculcating the obligation of treating all peaceable Chinese kindly," etc. Most fair-minded people were inclined to take all these anecdotes, notifications, etc., in good faith, though at times there did seem a little parade of virtue in them. But now what are we to think? As soon as Japanese soldiers indulge in cold-blooded barbarities, all that can be said is "War is by nature cruel." "Wholesale slaughter was necessarily the order of the day." In a communicated article which appeared in the issue of December 8th, the *Mail* took quite a different point of view. It was then expressed that "it is to be hoped that a searching investigation will be ordered." The writer also hesitates to express himself further, "pending the receipt of fuller evidence." This was certainly a right attitude of mind on the subject, but now that fuller evidence is coming in are we still to dwarf judgment and reason by defending the indefensible? The Japanese people may well ask to be rid of such apologists as the *Fiji* and the *Nichi Nichi*. A strong nation faces its calamities and acknowledges its errors. Let us hope that the *Fiji* and *Nichi Nichi* are still unaware of the extent of the massacre and that their defence was printed partly in ignorance of the facts.

December 17th, 1894.

DANGER.

YOKOHAMA SKATING CLUB.

The Annual General Meeting of this Club was held in the Club Hotel on Monday afternoon, there being present Messrs. W. W. Campbell, H.M. Arnold, W. Sutter, and J. O. Averill.

The meeting was an informal one, Mr. Averill reading the Report and stating that the accounts showed a balance of \$124.20; both of which were duly passed.

THE REPORT.

The season of 1893 and 1894, as shown by the record of temperature, was not a favourable one for skating, there being only light frosts of a few days duration followed by intervals of warm southerly winds, rain, and snow. Mr. Campbell and Mr. Averill spent considerable time in the preparation of the rink. A heavy scraper (patent applied for) designed and built under the personal supervision of Mr. Campbell, was found very useful in clearing away the soft mud and levelling the surface of the rink. By availing of the slightest indications of frost and carefully nursing the ice we were enabled to enjoy skating of a more or less satisfactory kind on thirty-six different occasions. The number of names on the subscription list for last season was sixty-nine, and the finances of the Club are in a satisfactory condition as shown in the accompanying account.

E. & O. E.
Yokohama, December 17th, 1894.

On the motion of Mr. Arnold, the old Committee were re-elected, Mr. J. O. Averill being substituted for Mr. C. S. Averill; it being now composed as follows—Messrs. W. Sutter, W. W. Campbell, and J. O. Averill.

YOKOHAMA SAILING CLUB.

The eighth Annual General Meeting and an extraordinary general meeting of the Yokohama Sailing Club took place on Monday evening at the Club Hotel to receive the reports of the Committee, Secretary, and Treasurer, and to consider proposed alterations in rules.

There were present, Messrs. J. F. Lowder (in the chair), Alan Owston, F. Owston, W. W. Campbell, J. O. Averill, T. M. Laffin, L. Salas, and J. B. Davis. At Weston, J. Martin,

E. Andreis, W. R. H. Carew, A. Wall, Boeck, Birmingham, E. Worth, E. V. Thorne, J. McGill, E. J. Marshall, R. McCance, T. Browne, T. Abbey, J. B. Gibbs, W. Cabell, C. V. Schmidt, and G. H. Scidmore, Hon. Sec.

The CHAIRMAN, after calling on the Secretary to read the notice convening the meeting, remarked that it was the pleasure of the meeting he would call on the Secretary to read the Report and Statement of Account, but he thought they had been in their hands a sufficient time for them to peruse the contents.

On the proposition of Mr. THORN, seconded by Mr. WESTON, the report and accounts were taken as read.

Mr. SCIDMORE remarked, in connection with the finances of the Club, that there had been a considerable increase in the item for steam launches and the printing of new rules which had become necessary. The Sailing Club had been unable to obtain, as of yore, the services of the steam launches, as they had been chartered for use on the torpedo station, so they had to obtain extra launches and pay proportionately for them. The amount of their cash prizes were smaller than last year, this amounting to \$170 in 1893 and to only \$40 in 1894. But other presented prizes were more numerous and large in the place of the cash. The expenses came up to \$600. The Committee had come to the conclusion, at the desire of the members, to spend their money, which they had done as shown in the accounts. They did not want any funds, therefore all they had collected was spent, leaving a balance of 68 cents due, which, by contribution of the Treasurer and Secretary, made up the round sum of \$600.

The CHAIRMAN pointed out that there being nothing further to explain, the next business would be the passing of the report and accounts.

On the motion of Mr. BIRMINGHAM, seconded by Mr. AVERILL, the following report and accounts were passed:—

REPORT.

The Committee has much pleasure in reporting that, during the season of 1894, the Club has prospered, and there is abundant promise of its future popularity and growth. Our membership has increased, and we now have upon our roll 8 honorary members, 132 active members, and 4 absent members. Twenty-four record races (12 in each division), two extra races for the A division, three extra races for the B division, and a sendo's race were sailed.

The prizes were numerous and valuable, and the hearty thanks of the Club are due to the following-named gentlemen and firms for their generosity in presenting them:—

Her Britannic Majesty's Minister.	Mr. J. O. Averill.
The Minister of the United States.	Mr. T. Abbey.
The French Residents.	Mr. W. R. H. Carew.
The Italian Residents.	Mr. E. L. Conan.
The Swiss Residents.	Mr. A. M. Forbes.
The "Japan Daily Advertiser."	Mr. J. B. Gibbs.
The "Box of Curios."	Mr. W. H. Hardy.
Messrs. Kelly & Walsh.	Mr. T. J. Ho' Vell.
Messrs. Lane, Crawford & Co.	Mr. J. W. Hall.
Messrs. Byton & Pratt.	Mr. N. P. Kingdon.
Messrs. Caudrelier & Co.	Mr. J. Kernan.
The Oriental Hotel.	Mr. T. M. Laffin.
The Officers of Her Britannic Majesty's Men-of-War.	Mr. J. F. Lowder.
Messrs. R. & C. Abenheim.	Mr. James Murch.
Mr. C. S. Averill.	Mr. John McLean.
	Mr. E. J. Marshall.
	Mr. A. Oswon.
	Dr. T. H. Tripler.
	Mr. S. Toke.
	Mr. S. E. Unite.
	Mr. A. Wood, and
	The owners of the <i>Nandeska</i>

The Committee, both collectively and individually, as usual, added their donations with much pleasure. The Treasurer's report shows about \$400 spent for prizes, but the total value of all prizes given, amounts, we believe, to more than three times that sum.

In the A division, *Mary*, which was completed only in time for the last race, was the sole addition during the season, but many alterations and improvements were made in existing yachts.

In the B division *Cocktail* and *Nandeska* were launched, and made fair records.

Spray had a very complete overhauling resulting in a practically new vessel, and she has proved the most successful craft of the season, finishing the racing with 15 winning flags, taking the 32 Rater Record Prize with 19 out of a possible 21 points, 32 Rater Champion Pennant, and becoming holder of the Weston Challenge Shield, beating the *Maid Marion* eight times in eleven meetings, and making an average speed in the 158 miles of race she sailed of 4.20 knots per hour. She also made the record for fastest time over the Club Course, viz.:—6.18 knots on September 8th.

Aborigine had extensive alterations in ballast and sail plan, but failed to show the requisite speed to score from our present fleet, and her owner is now building a fine new craft to replace her. Her best performance was in the 158 mile race, when she sailed at 4.20 knots per hour. *Neptune* is practically a new yacht and made her debut as a racer this season. She shows great speed

off the wind in moderate breezes, but is not very manageable at times.

Maid Marion's record is one of split sails and broken gear, but, in spite of her bad luck, she takes the record prize for 39 raters.

Daimyo had to lower her colours in the 32 rating class, but the unusual number of fresh breeze races sailed accounts for this, as in light airs she almost invariably ran away from her competitors. On August 11th, however, in a gale, she went over a five miles course with ease when *Spray* broke down and no other yacht would venture out. She saved her time from *Maid Marion* in 4 out of 11 meetings.

Wanderer competed in several races, and recorded her first winning, beating *Neptune* under handicap and taking fourth place and a prize.

Mary sailed but one race and gives promise of upholding the well earned reputation of her designer and owner.

Sea Gull received extensive alterations which enabled her to improve her previous scores and did some remarkable work in strong breezes and heavy sea. On several occasions she made very close finishes with *Daimyo*, and on September 8th beat the latter on time allowance. In addition to the Queen's Birthday Prize she scores best in the record of 26 raters.

Box of Curios showed very good speed for short bursts, frequently heading the fleet in starts, but had to yield the palm to *Sea Gull*.

Ronin raced persistently through the season, but was no match for her larger sisters. She obtained Mr. Lowder's Consolation Prize.

Men-of-war boats.—A large launch and several cutters from Her Britannic Majesty's vessels were welcome additions to our races, but were sorely handicapped in competing with craft specially constructed for racing.

Dan raced so seldom that we are persuaded her merits were sacrificed.

Nina, the smallest of the A division, was only raced effectively once, and then showed that her size only was her weak point.

Among the boats of the B division the racing was close and keen.

Daisy, as during last season, secured record prize for 17 raters. By several alterations she was well "tuned up" and she was skilfully handled throughout the season.

Hokiboshi, with minor alterations in ballast and centre-board furnished, exciting sport in her contests with *Daisy*, and lost the record prize by only one point.

Isabel during the early part of the season gave promise of carrying off most of the laurels, but failed to continue in well doing.

Nande-ha, as her owners discovered and attended to her qualities and requirements, has shown steady improvement, and we believe that still more can be accomplished with her.

Vixen, *White Violet*, and *Petrol*, of the 16 raters, were well handled. The first named proved herself the best of the trio.

Sayonara did well, but not so well as we were led to expect. On June 9th she easily won over her division and the *Sagamore's* boat, in light weather.

Shark and *Jessica* were pluckily sailed, frequently in weather that was amenable for such small craft. *Jessica* appears to be the better of the two.

A most promising feature of the past season is the welcome accession to our ranks of a number of Japanese members: and the recent arrival from Germany of a handsome yacht for one of the Imperial Princes we hail as further evidence that the glorious sport will prosper in the future.

Our rules have worked satisfactorily and need but little change, and our recommendation concerning them is, that, for the present, we "let well enough alone."

TREASURER'S ACCOUNT, YOKOHAMA SAILING CLUB, SEASON OF 1894.

RECEIPTS.		Yen.
Cash balance from W. W. Campbell	31.82
Annual dues from members	856.00
Entrance fees for races	35.00
Cash prizes	40.00
Subscription to sendo's race	25.50
Contribution to balance68
		Yen 600.00

DISBURSEMENTS.		Yen.
For prizes	309.00
For steam launch hire	50.74
For flag boat hire	30.00
For printing and stationery	84.55
For fees to stewards and coxswains	5.46
For ammunition	2.50
For bill collector's commission	12.00
For bulletin board and sundries	8.83
		Yen 600.00

G. H. SCIDMORE, Honorary Treasurer.
Examined with the vouchers and found correct.
W. W. CAMPBELL.

Yokohama, December 11, 1894.

The CHAIRMAN then announced that the next business was the balloting for Chairman and Committee for the ensuing year, Messrs. Laffin and Thorne being appointed scrutineers.

The balloting resulted in the election of Messrs. G. H. Scidmore, J. O. Averill, T. M. Laffin, L. Campbell, and W. W. Campbell.

Mr. BIRMINGHAM proposed a vote of thanks to the Honorary Treasurer and Secretary. He was an enthusiastic yachtsman, and had carried

out his duties during the past year to the satisfaction of all the members.—(Hear, hear.)

Mr. THORN seconded. He would like to amend the proposition slightly, and that in the sense that the incoming committee be instructed keep Mr. Scidmore in his old position during the coming season.—(Applause.)

The CHAIRMAN thought that the Committee and the Club too, would be only too glad to secure Mr. Scidmore's efficient services during the coming year.—(Applause.)

Mr. SCIDMORE in returning thanks said that he would endeavour to do all that lay in his power to assist the Club in the coming year.

There being nothing further to bring before the annual general meeting, the Chairman declared it closed.

The CHAIRMAN then announced that the notice paper convening the meeting also announced that an extraordinary general meeting would be held that day to consider any proposition that might be brought before members in regard to alterations in the rules. He did not wish to interfere with any members who might desire to propose an alteration in the rules, but he felt that he must hold that the notice given of such intention was not sufficient to allow of any alteration of rules being made at that meeting. He was inclined to put a very stiff construction upon the rules, and if he was in error, it was an error on the safer side. It was most desirable that the notice paper should inform members of the specific alterations of the rules before they were called upon to discuss them, otherwise they might find themselves unconsciously carrying a motion altering the whole constitution of the Club.—(Hear, hear.) In support of his contention that the meeting could not propose any alteration in the rules, the Chairman quoted Rules 7, 8, and 13, and upon the construction which he based upon them, held that the notice given was not specific but general, and therefore the meeting could do nothing but debate any proposals for altering the rules in an informal manner.

Mr. SCIDMORE explained that the notice had been drawn up by the Committee after receiving several verbal intimations of proposed alterations in the rules from several members. These members, however, had made no written communications to the Committee, so that there was actually nothing to come before the extraordinary meeting.

The CHAIRMAN said that the best thing to do was to declare the meeting closed, but as there was such a large attendance of members present, the largest he had ever known, opportunity should be taken to discuss informally any alterations in the rules that might be considered necessary.

The meeting was thereupon closed, and an informal discussion took place upon a change in the starting line, arbitrary handicaps, a new class, etc., the Chairman suggesting that if any ten members thought that the suggestions which might arise during the conversation were worthy of adoption, an extraordinary meeting might be regularly called, with the specific alterations of rules with their reasons duly set forth.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

An ordinary meeting of the above-mentioned Society was held at the rooms of the Geographical Society (Chigaku-Kyokai), Nishikonyo-cho, Kyobashi-ku, Tokyo, on Friday, December 13th, at 5 p.m., Mr. C. D. West, M.A., in the chair.

The Hon. P. Le Port Trench, Joseph H. Longford, Esq., and Prof. S. Tanabe were unanimously elected members of the Society, the minutes of the last meeting having previously been read and duly approved.

Mr. K. Acton had sent, from London, a print showing the result of developing and taping "Soloi" paper, after a short exposure only had been given. The picture was clear in the whites, showed a full gradation, and was of a particularly pleasing colour. The following is the method of working the process:—

About one-fiftieth of the usual exposure is given (about one minute to bright sunlight, with a fairly dense negative) when a faint image only is visible. This image is then developed with the following solutions:—

A.	
Hydrokinone	1 ounce.
Sulphite of Soda	1 ounce.
Potassium Bromide	1 ounce.
Ammonium Bromide	2 ounces.
Water	64 ounces.

B.	
Caustic Soda	1 ounce.
Water	16 ounces.

C.	
Pyrogallic Acid	3 grains.
Water	1 ounce.

To be mixed in the proportions of A. 5 ounces, B. 1 ounce, and C. 1 drop.

When the print is placed in this solution, it first turns yellow, but gradually darkens. As the print further darkens in the after processes, it is necessary to develop only till about one half the intensity eventually wanted has been acquired. The time taken is from 20 to 30 minutes.

After development, the print is placed for a few minutes in the following solution:—

Acetic Acid 3 drams.
Water 128 ounces.

So far the light used should be yellow light, or the light of a gas or lamp flame. After the prints have been for a minute or so in the toning solution, made up as follows, white light will do them no harm:—

A.
Hypo-sulphite of Sodium 8 ounces.
Burned Alum 6 ounces.
Water 80 ounces.

After solution, 2 ounces of borax to be added.

B.
Chloride of Gold 15 grains.
Acetate of Lead 64 grains.
Water 8 ounces.

For use the solutions are mixed in the proportion of 8 parts A. to 1 part B.

A print sent by the American "Aristo." paper Company on paper called by the name of "Aristo-Platino" paper was shown. The surface of the paper was matt, and, although the toning had been with gold, the tint was as nearly as possible that of a platinotype.

The Chairmen then called on Messrs. W. K. Burton and T. Kondo to demonstrate the Kalotype process.

The demonstrators stated that they considered this process to have certain advantages over any other. They would not compare its general merits with those of the Platinotype process, which latter they considered the first of all processes, but it—the platin Kalotype process—had certain advantages of its own. It was cheap, was very easily worked, and was the only process they knew, giving a visible image, that would give a true black print from a thin negative and that seemed suitable to almost any kind of paper. The process depends on the fact that ferric oxalate is sensitive to light, being changed thereby into ferrous oxalate, which latter salt has the power of reducing various metallic salts, nitrate of silver amongst the number.

The process is a very old one, but that worked by the demonstrators was a modification of a recent form thereof, introduced by Mr. O. P. Bennett. The following is a description of the process:—

SENSITIZING SOLUTION.

Ferric Oxalate 75 grains.
Silver Nitrate 30 grains.
Water 1 ounce.

This solution is swabbed over the paper with a wad of cotton wool. The coating is, of course, made as even as possible, but streakiness that cannot be avoided does not, as a rule, show in the finished print. The paper is dried in front of a clear fire before the solution has time to sink into it.

Paper so prepared will keep for several days in any ordinary wrapping, for months in a calcium tube.

The quantity mentioned is enough to coat about 10 square feet of smooth paper, 5 feet of extra-rough drawing paper.

PRINTING

is done in the ordinary printing frames, the time taken being about one-third that needed for albuminized paper. The image is visible, and has the exact appearance of the image in the platinotype process—in fact it is of exactly the same nature—and any one accustomed to platinotype printing can readily judge when the paper should be taken from the frame.

DEVELOPER.

Rochelle Salt 1 ounce.
Saturated solution of Borax 10 ounces.

RESTRAINER.

A one per cent. solution of bi-chromate of potassium.

The effect of the restrainer is very marked. Without any of it the prints are liable to be "muddy" and to have impure whites. The least that is needed is 7 or 8 minims to each ounce of solution, and no more than this should be used for negatives such as are suitable for printing with albuminized paper or such as are at all hard. In printing from thin negatives, restrainer up to the extent of 30 minims per ounce may be used, the exposure being correspondingly increased. In this way it is possible to get brilliant prints from negatives too thin to give such by any other process.

The image develops from a pale yellow colour to a full deep black in a few seconds, but if the print be at once removed from the solution it will be found that the high lights are yellow. It must remain in the solution for at least quarter of an hour. It is to be observed that no further actual

developing action takes place during this time. Though the developer can be altered to suit different negatives, or even to a certain extent to compensate for error in exposure, the result cannot be modified in any way when once the print is in the developer.

In using smooth paper, a number of prints may be developed in the same solution, pouring the developer into a measuring-glass as soon as one print is developed, placing an undeveloped print on the top of this latter, and returning the developing solution, the prints being afterwards kept moving just as in the ordinary toning process. In using very rough paper, however, this procedure is not permissible, as the image gets rubbed from the tops of the roughnesses of the paper, with the result of a mottled effect.

After development the prints are washed in three or four changes of water, and are then placed in the

FIXING BATH

consisting of a one per cent. mixture of strongest ammonia and water, where they remain for about a quarter of an hour. Washing for half an hour completes the process.

A number of samples of work on different kinds of paper were shown, some being on common cartridge paper.

The proceedings ended with a vote of thanks to the chairman.

AMATEUR THEATRICALS IN YOKOHAMA.

No lack of public amusements, in one form or another, have been presented to the foreign communities of Tokyo and Yokohama during the last few weeks. Yet none among recent entertainments, we venture to think, have given greater pleasure in its own particular degree than was afforded by the amateur theatrical performance in the Public Hall on Saturday evening. Yokohama is always ready to welcome its amateur players: indeed, regret is deep and widespread that opportunities for a display of sincere goodwill towards them are rather too infrequent. The long interval which has elapsed since a similar performance was given here has, however, enabled Mr. Bayne to work up some very promising new material, and on Saturday evening a crowded and enthusiastic house had the pleasure of greeting two ladies and two gentlemen quite fresh to local boards, at least in this direction. Vastly pleasing were the acquaintances thus made.

The pieces given on Saturday evening are both old favourites and need little description. The first was the Comedietta, in one act, "To oblige Benson," which Tom Taylor adapted from the French Vaudeville, "Un Service à Blanchard." The cast was as follows:—

Mr. Benson (a Barrister)..... Mr. Henson.
Mr. Trotter Southdown..... Mr. Bayne.
Mr. John Meredith (a pupil of Mr. Benson's)..... Mr. White.
Mrs. Benson..... Miss Rice.
Mrs. Trotter Southdown..... Mrs. Read.

Place aux dames. Miss Rice, who we believe made her debut on Saturday, appeared as Mrs. Benson, and acted the part splendidly. Her voice and manner were throughout gracefully natural, her study of the character betraying great dramatic instinct and excellent application of the Art's first principles. Mrs. Read in her interpretation of the rôle of Mrs. Trotter Southdown was, as usual, gracefully arch and bewitchingly charming. It was a most finished performance in every way and won rounds of appreciative applause which were renewed time and again as the fun developed. As her husband, a man of bionic tastes and inclinations, yet choleric withal, Mr. Bayne took up a character which he has made his own and delineates in the greatest effect. Great was the joy of the audience when he blundered into a misunderstanding of his wife's benevolent schemes for rescuing the thoughtless Mrs. Benson from the possible consequences of a slight "indiscretion," and merrier still did every one become when he blundered back on to the right tack and tumbled to "the true inwardness of things." Mr. White, as Mr. John Meredith, the inane cause of the whole complication, and Mr. Henson—capitally made up—as Mr. Benson, carried out their respective parts in an admirable manner.

During the interval, the Yokohama Town Band gave a selection of music, and then the curtain rang up for Buckstone's Farce, in one act, "A Dead Shot." The cast was as follows:—

Captain Cannon..... Mr. Bayne.
Mr. Hector Timid..... Mr. Read.
Mr. Wiseman..... Mr. Hickman.
Mr. Fred. Thornton..... Mr. Balden.
Miss Louisa Lovetrick..... Miss Stone.
Chatter (her Maid)..... Miss Wheeler.

The action takes place somewhere about the time when George the Fourth, "the first gentleman of Europe," set the fashions for men, and the ladies wore frocks which we now designate as "First Empire." The plot is of the flimsiest, but what was lacking in this respect was made up by the good playing of all concerned. Miss Wheeler as Chatter, was the daintiest of dainty English serving maids, acting naturally, moving gracefully, speaking prettily, and infusing into all her actions and by-play that flavour of gentle pertness, free from all taint of familiarity, which seems to have gone out of fashion with domestics along with the disappearance of the still-room and the lavender-scented linen-butch. Miss Wheeler is to be decidedly congratulated on her debut. Equally successful was the playing of Mrs. Stone as Miss Louisa Lovetrick. A wilful woman determined to have her own way in love, she succeeded in attaining her desires, though the rejected swains, Mr. Hector Timid (Mr. Read)—a happily conceived impersonation—and Mr. Wiseman (Mr. Hickman), did not congratulate the happy man, Mr. Fred. Thornton (Mr. Balden), so much as they congratulated themselves. All the masculine parts were faithfully portrayed, Mr. Bayne as Captain Cannon again achieving a great success. At the close a basket of flowers was presented to Mrs. Stone and a bouquet was handed over the foot-lights to Miss Wheeler, thus bringing to a close a most enjoyable performance.

The frocks worn in both pieces were very charming; anything more becomingly handsome than Mrs. Read's dress in the Comedietta has seldom been devised. Miss Rice's frock was very pretty in design and trimming. The Empire gown worn by Mrs. Stone was admirable and with her hat made a very pleasant picture; and Miss Wheeler's simple dainty-muslin was in excellent taste.

THE YOKOHAMA CHORAL SOCIETY'S CONCERT.

The Yokohama Choral Society, in its concert given at the Public Hall on Wednesday evening, achieved a success of which it may reasonably be proud. Since its resuscitation a few years ago, the Society has made rapid strides forward, till now it has to contend with but few drawbacks, other than those incidental to all such institutions in a Far Eastern community of limited size. The chorus last evening mustered nearly sixty strong, and but for a weakness in tenors was of more than average calibre. Perhaps the energetic President will be able to remedy even this before long, and then we shall have the Society giving far more ambitious work than Cowen's beautiful "Rose Maiden." Perhaps, too, the Philharmonic Society—which made its first bow in public on Wednesday under the auspices of the older confederation—may, in that good time which we venture to hope is coming, be able to take its share in a full orchestral representation of one of the classic oratorios. Then the hearts of Yokohama music-lovers in general and concert-goers in particular will rejoice within them and be glad.

The Philharmonic Society opened the programme last night with a splendid rendering of Weber's "Peter Schmolli." The orchestra comprised sixteen performers; the 'cello, viola, bass, first and second violins, flute, clarinet, cornet, side-drum, and piano being represented. Hard and assiduous practise alone could have produced the pleasing result attained, and the audience loudly applauded the piece. Immediately after this overture, came the "Rose Maiden." The soloists were Mrs. W. W. Campbell (soprano), Mrs. James Walter (contralto), Mr. E. T. Nicholas (tenor), and Mr. S. L. Goldman (baritone). The accompanist was Mrs. Poole, and the President, Mr. J. T. Griffin, conducted. Mrs. Campbell and Mrs. Walter were both in excellent voice, and did full justice to their respective parts. Seldom have Mrs. Campbell's vocal abilities been heard to finer effect than in the solo "Bloom on, bloom on my Roses," "Roseblossom's" farewell to her old fairy-life. Her voice gains in graceful timbre, growing mellow, truer and sweeter, if that were possible, with each succeeding season. Mrs. Walter gave the contralto solo, "Yet chime they so sadly," with exquisite feeling, and was warmly thanked by a delighted house. Both ladies received several bouquets and baskets of flowers in the course of the evening. Mr. Nicholas, who has been somewhat indisposed of late, suffered greatly from nervousness, thus preventing his really nice voice from being heard to advantage; but when he conquered the feeling the pleasure derived from his tasteful interpretation of the music was of no mean degree. As baritone, Mr. Goldman was cast for some of the most difficult solos, but he acquitted himself well, and especially in the hardest of the lot,

"Where gloomy pine-trees rustle." This was worthy of highest praise. It is difficult to say which of the choruses pleased most, all were so well given. The introduction, "Green vale and vine clad mountain," went with a faultless rhythm; even better was the Wedding Chorus. The Chorus of Elves, soprano and contralto only, was sweetly given, and immeasurably better than the one preceding, which the male voices took alone. It is the prettiest chorus of the whole book, but needs delicate handling to be given effectively; this it received. Mr. Griffin is to be congratulated upon the efficient state of his choruses; only those who have had experience in choir-training know the hard work required to bring things to such a pitch of excellence, and in the success of last evening's performance the President's share is large. At the close of the Cantata, Mrs. Poole, who had accompanied throughout in her usual good taste, was handed some baskets of flowers: they were well deserved.

The Philharmonic Society contributed the opening overture to the second half, and gave a notable rendering of an old favourite, Boieldieu's "Caliph of Bagdad." Mrs. Irvine then sang "I love thee so," her rich and cultivated voice bringing out many new beauties in the song. It was redemanded, but the lateness of the hour precluded an encore being given. Another good number was a "Tarentelle" of Rheinberger's, given by Mrs. McNeill. Needless to say it was very charmingly rendered, and the house would fain have heard it all over again, had time allowed. Mr. Ramseger contributed a violin solo, "Air Varié," and evoked loud applause: his hand has lost none of its cunning with the violin and bow. The War March of the Priests from *Athalie*, given with great verve by the Philharmonic Society, brought a most successful concert to a close.

ROBBERY AND FORGERY BY AN ALLEGED AUSTRIAN "BARON."

An incident of a rather unpleasant character took place on board the P. & O. steamer *Verona* on her last trip from Hongkong to Yokohama. Among her passengers was a young Englishman named Frederick D. Bulloch on a tour round the world, and an Austrian, who gave himself out to be "Baron de Wolff," for the time being travelling on pleasure and interested in scientific pursuits. The passengers had met at Singapore and both on the P. & O. liner *Slam* and the *Verona* occupied almost adjoining state rooms. Notwithstanding Bulloch's aversion to the other, an acquaintance was struck up on the voyage. Everything went well until the day before arriving in Yokohama, when Mr. Bulloch missed his Letter of Credit and three Circular Notes for £10 a piece, on the British Linen Company's Bank, Lombard Street. Mr. Bulloch suspected the "Baron" from the very outset, as the latter was well acquainted with all his (Bulloch's) movements. He told Captain Tacque of his loss and his suspicions of the "Baron," and the Commander reported the matter to the P. & O. Agent here on the vessel's arrival. Mr. Bulloch then obtained advice, and put the matter into the hands of the police. Meanwhile, the pseudo "Baron de Wolff" put up at the Grand Hotel, but almost from the time of his landing Mr. Nishida, of the police, set detectives to watch the movements of the suspect, and obtain information of his doings. The "Baron" called at various places, and yesterday was seen to emerge from the P. & O. Office reading what seemed to be a letter, but which was subsequently ascertained to be a deposit receipt, the "Baron" having secured a berth on board the *Ancona* for Australia, the vessel leaving on 5th January. In the course of his wanderings the "Baron" went into the *Japan Gazette* office, and among other things ordered the printing of some books of Circular Notes, replicas of those lost by young Mr. Bulloch, alleging that he was the representative of Cook's Tourist Company, and had come out to look after the business here. So much the police obtained, and on this evidence Mr. Bulloch made out an informal affidavit at H.B.M. Consulate, and armed with it went with the police to the Austro-Hungarian Consulate, where a warrant was asked for. Mr. de Fleisch, the Consul, said he would send information through the Governor. This information turned out to be a letter ordering the suspected man to appear before the Austrian Consul. The police, however, proceeded to arrest the culprit, who was found drinking tea in a grog-shop near the Railway station, the "Baron" having already taken tickets for himself and luggage for Kyoto. The letter was shown him, and having owed up to the charge, consented to accompany the police at 7.30 p.m. He was

lodged in the police station for the night and on Thursday at 1 p.m. an informal trial took place at the Austrian Consulate, evidence being taken, and the accused was remanded in custody to the British Gaol.

Mr. Bulloch has since discovered that the Circular Notes stolen from him have both been signed and endorsed "Fred. D. Bulloch." He declares that he never signed these documents, and the statement is borne out by the appearance of the signatures, which, although somewhat similar to Mr. Bulloch's are rather clumsily executed, the formation of the letters being very laboured.

"Baron de Wolff," whose real name is W. Gruner, is of medium height, with black moustache and of good bearing. On his person was found 315 guilder and 10 sovereigns. Mr. Bulloch is a young man, travelling for his own amusement, and this incident in his tour will, no doubt, be rather an unpleasant recollection for him.

THE AUTUMN ATHLETIC MEETING.

More cheerless and bitterly cold weather than that which prevailed on Saturday afternoon, during the Autumn Athletic Meeting of the Yokohama Cricket and Athletic Club, would be difficult to imagine in this part of Japan. Before noon wisps of sleet had fallen and the wind that accompanied them blew keenly for the rest of the day. Notwithstanding this, a goodly number of spectators were on the ground, and by three o'clock, just as a little blue sky appeared to the westward, a large contingent of ladies put in an appearance and braved the wintry blasts till the close of the sports. The preliminary heats in some of the races having been run on Thursday, left only the finals in all events to be decided. The entries comprised forty-one names in all, but the nipping cold kept many from stripping. To Pinckney fell three first prizes and two second places. He is an excellent all-round athlete, and fully earned his honours. Edwards took the 100 Yards in 11 secs.; Libeaud the Half-Mile in 2m. 21s.; and McNeill the Walking Race in 9m. 15s. The other events provoked a good deal of laughter, and illustrated in varying degrees of nicely the old adage that "there's many a slip 'twixt cup and lip." The animal race brought out two calves, a cat, a duck, a pig, a turkey, and a monkey, and the duck won. The Boy's and Girl's races were all well contested, victory falling to the most deserving. The Yokohama Town Band was in attendance and gave a spirited selection of music under the trying circumstances. Praise is due to the officials for the manner in which the events were kept up to time, and more particularly to the Secretary, Mr. E. O. Kenyon, who was everything a secretary should be on such an occasion. The Committee and Officers were:—Judge—Mr. H. C. Litchfield, Starter—Mr. J. Dadds, Timekeeper—Mr. J. F. Pinn, President—Mr. J. P. Mollison, Captain—Mr. A. B. Walford; Secretary—Mr. E. O. Kenyon; Treasurer—Mr. H. V. Dickinson; and Messrs. K. F. Crawford, W. S. Stone, W. D. S. Edwards, D. McNeill, F. E. White, C. Gibbons, and B. H. Pearson. The Officers and Committee wore badges of blue and white violets, the happy fancy of a lady we imagine. Details:—

100 YARDS.—(Mr. A. C. Reid's and Mr. Jackson's Prize.)

W. D. S. Edwards, scratch 1
H. Pinckney, scratch 2
E. J. Libeaud, 4 yards 0

Edwards got off well, but Pinckney hung on determinedly and was only beaten by about six inches at the post; Libeaud close up. Time, 11 secs.

LONG JUMP.

B. H. Pearson, 6 inches 1
W. D. S. Edwards, scratch 2
H. Pinckney, scratch 3
W. R. H. Carew, 24 inches 0

Pearson won with a jump of 17 ft. 6½ in., not including his handicap; Edwards cleared 17 ft 4½ in.; and Pinckney 17 ft. 3½ in.

HURDLES.—(Mr. J. C. Chapman's Prize.)

H. Pinckney, scratch 1
R. Altenheim, 8 yards 2
H. E. Campbell, 8 yards 0

Campbell lead for a hurdle or so, then Altenheim went ahead, only to be collared at the sixth hurdle by the scratch man, who then took things easily and got home two yards to the good. Time, 19 secs.

HIGH JUMP.

H. Pinckney, scratch 1
B. H. Pearson, scratch 2
B. Sharp, 2 inches 3
B. C. Ross, 4 inches 0

Ross fell out at 4 ft. 5 in., Sharp at 4 ft. 7 in. Pearson at 4 ft. 8 in., Pinckney then cleared 4 ft. 10 in. and won.

EGG AND SPOON RACE.

E. J. Libeaud 11

Fourteen entered on the field for this most amusing race, and all came to grief except Libeaud, who literally romped home in 19 secs., with Pearson close at his heels, but with two spills to the bad.

QUARTER MILE.—(Ladies' Purse.)

H. Pinckney, scratch 1
E. J. Libeaud, 10 yards 2
R. C. Ross, 15 yards 0
E. Buxton-Forman, 10 yards 0
H. E. Campbell, 15 yards 0
B. Sharp, 15 yards 0
H. E. Allcock, 15 yards 0
B. H. Pearson, 5 yards 0
H. R. Mair, 10 yards 0

Allcock lead half way up to the far corner and then fell back among the rest. Pinckney disposed of the whole of his men going along the top stretch, with Libeaud close up. In this order the race finished. Time, 57 secs.

Miss Laura Smith, in presenting the trophy, the Ladies' Purse, to the winner said:—Among the various entertainments that contribute so much to the pleasure of life in Yokohama, none are more enjoyable, or more gladly responded to, than the Meeting of the Yokohama Cricket and Athletic Club for their athletic sports. All who have the privilege of witnessing or taking part in them will always recall the many happy scenes and experiences they represent as among the pleasantest associations of the past. They are as evergreen in our memory to-day as the rich and thrifty sward that covers this beautiful Cricket-field. Again we are indebted to the enterprise and hospitality of this Club for a most successful and enjoyable meeting, notwithstanding the inclemency of the weather. I need hardly add that the concern manifested in competing for the Ladies' Purse has been most gratifying to its contributors: and to you, Mr. Pinckney, as the successful candidate in this event, I gladly perform the office of presenting in the Ladies' name this small token of their appreciation of the earnest and spirited struggle you have just been engaged in, which placed you at the winning post in front of such worthy competitors. And when I hail you as champion of the Ladies' Purse and wish you God-speed in every honest struggle that may beset your future path—I know I not only echo the sentiments of every lady contributor, but all here present to-day.—(Loud and prolonged cheers.)

Mr. Pinckney bowed his thanks, and then Mr. E. O. Kenyon asked Miss Smith to thank all the lady subscribers to the Purse, in the name of the members of the Yokohama Cricket and Athletic Club, for their kindness and generosity. A bouquet was then handed to Miss Smith amid renewed cheering.

SACK RACE.

E. R. Morris 1
H. E. Campbell 3

The other competitors were: K. Wilson, R. C. Ross, H. R. Mair, D. McNeill, A. H. Lay, H. Goddard, Drummond, H. M. Arnold and another. Morris, who had his feet well placed, led off and got round the hurdle first. He was closely followed by Lay, Campbell, and McNeill, in the order named, the other competitors having all come to grief. Turning for home Campbell drew up on Lay and secured a good second to Morris. The whole performance lasted 25 secs.

THREAD AND NEEDLE RACE.

RUNNER. THREADER.
E. Buxton-Forman. Miss Alice Rickett 1
F. E. White. Miss Richards 0
E. R. Morris. Miss Eldridge 0
R. C. Ross. Miss F. Eldridge 0
H. E. Campbell. Miss Laura Smith 0
W. D. S. Edwards. Mrs. Healing 0
B. H. Pearson. Mrs. Blad 0
H. E. Allcock. Mrs. Eustace 0
E. J. Libeaud. Mrs. Pearson 0
W. R. H. Carew. Mrs. Carew 0
A. H. Lay. Miss Page 0

The competitors had to run with their needles and thread to a hurdle at which the ladies were standing, deliver up the needle to be threaded and then rush back. Buxton-Forman had an easy win, his running and Miss Alice Rickett's nimble threading only taking 20 secs.

HALF MILE.—(Mr. A. H. Dore's Prize.)

E. J. Libeaud, 20 yards 1
H. Pinckney, scratch 2
H. R. Mair, 20 yards 3
R. C. Ross, 20 yards 0
H. E. Campbell, 15 yards 0
E. Buxton-Forman, 20 yards 0

In the first round Mair lead, with Libeand, Ross, Pinckney, Campbell, and Buxton-Forman in the order named. Going up to the far corner, Libeand passed Mair, and Pinckney took third place. Along the straight the scratch man passed Mair and was within an ace of collaring Libeand; the latter, however, responded gamely to the cries of the onlookers and eventually won with 10 yards to spare. Time, 2m. 21secs.

ANIMAL RACE.—(50 Yards.)

DRIVER.	ANIMAL.	
R. Abenheim.....	Duck.....	1
W. W. Campbell.....	Calf.....	2
H. V. Dickinson.....	Turkey.....	3
W. H. Brackenbury.....	Calf.....	0
W. R. H. Carew.....	Monkey.....	0
D. McNeill.....	Rat.....	0
W. J. Kenny.....	Pig.....	0

The animals were handicapped as follows:—duck 25 yards, turkey 20 yards, pig 15 yards, rat 10 yards, monkey 5 yards, calves scratch. The duck waddled and partly flew straight home; Campbell's calf rushed recklessly down the course, Dickinson's turkey stalked in sedately; but the rest were nowhere. The squealing representative of "Ould Ireland," who was in charge of a typical Irishman, a regular "broth of a bluy," shillelagh, coat, hat and all, displayed very bad manners, and broke from the course at once. The monkey rather hesitated, as if questioning the propriety of the whole affair, the rat resolutely refused to lunge, while Brackenbury's calf declined to have anything at all to do with the business. The contest evoked roars of laughter.

BOYS' RACE—100 yards.

W. Carst, scratch.....	1
B. Abbey, 10 yards.....	2
R. Meiklejohn, 15 yards.....	3

Eleven lads ran, but scratch had the lead almost from the start.

GIRL'S RACE.

Hilda Page.....	1
D'Arcy Page.....	2
Mabel Rickett.....	3

The little maids were handicapped according to age, the winner, a seven-year-old runner, being the limit. Won easily.

GIRLS' RACE.

Mabel Rickett.....	1
Gertie Mendelson.....	2

This was under similar conditions as the previous race, and was won easily.

MILE WALKING RACE.

D. McNeill, scratch.....	1
B. Sharp, 15 yards.....	2
R. Abenheim, 10 yards.....	3
E. R. Morris, scratch.....	0

The men did not change positions in the first lap, but on entering on the second round McNeill forged into second place, with Abenheim third and E. Morris fourth, Sharp still maintaining a good lead. Abenheim retired during the third lap, and Morris in the fourth, leaving the race to be fought out by McNeill and Sharp. The former, who walked in splendid style the whole way through, won by two yards. Time, 9m. 15secs.

At the close, the valuable and handsome prizes were presented by Mrs. D. Jackson, who was rewarded with a bouquet and ringing cheers.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, November 20th.
Prof. D. P. Todd, of Amherst College, is perfecting plans for an expedition to Japan in 1896 to study an important eclipse of the sun.

Under the title of "Oriental Studies," Ginn and Co. publish a volume of papers read before the Oriental Club of Philadelphia during the past six years. One of these papers, by Stewart Culin, is entitled "Literature of Chinese Labourers."

Houghton, Mifflin and Co. announce "Occult Japan: The Way of the Gods," by Percival Lowell, as a "crown 8vo., gilt top, \$1.50" and with four illustrations. Ward, Locke, and Bowden announce "War in Korea: A Brief Treatise upon the Campaign now in Progress, its Origin and Probable Results," by J. Morris ("long resident in the East,") author of "Kotaka, A Samurai's Daughter." This brief treatise is published in Japanese at only 40 cents.

The December *Demorest's Magazine* contains an illustrated article on "The Empress Dowager of China" by Frank G. Carpenter; the December *Architectural Magazine* contains "A Toku-gawa Temple at Nikko" (illustrated); and the December *Frank Leslie's Popular Monthly* has an illustrated article on "The Old and the New in Japan." In connection with the last is striking

illustration of the attempt of illustrators and Editors to improve (?) an author's work. The writer of that article had made a careful selection of pictures to illustrate the curious juxtaposition and confusion of the old and the new in and around Mito. When the article appeared, some of the best illustrations were missing; others had been mutilated by irrelevant additions; and new illustrations appeared, not only inappropriate, but also inaccurate. For instance, into a view of the Mito Railway Station were inserted groups of Japanese, among whom were two carrying a *nori-mono*; and one new illustration was that of an *amma*, called "attendant at hot baths" and holding a pipe, instead of a whistle, in his mouth! Verily, the omniscience of an American editor or illustrator on "things Japanese" is indisputable.

Thurber's Art Gallery in this city has an exhibition a collection of Japanese "rare prints, the plates of which are not in existence." The views include "fine landscapes" by Hiroshige; "an interesting series of the pictures of Toyokuni"; several prints of Hokusai; pictures by Baicho Kuniyada and Gototei Kuniyada; some "fine prints" by "Toyokuni II.," three pictures by Kudo Suketsune; and "of other prints." The gems of the collection is Hokusai's badger with head outlined against the moon.

Professor E. F. Penelosa, of Boston, is to give a series of five lectures (November 23rd, 28th, 30th and December 5th) in the Art Institute of this city. A great treat is, of course, anticipated.

The Lowell Institute lectures this winter will be given by Prof. Rhys Davids, Ph.D., LL.D., on "Buddhism."

It is reported now, that the Republicans in the next Congress are planning to harass the administration with reference to its offered mediation in the war in the Orient; but it seems scarcely conceivable that partisanship would be carried to such an excess.

The first election in Hawaii resulted in a great victory for annexationists. On a recent trip of the *Nanshai* (?), carrying 900 Japanese from Japan to Hawaii, the crew mimed and the officers had to work the vessel for several days; the emigrants sympathized with the crew. A large number of Americans are said to be "dead broke" in Honolulu. There still come rumours of royalist uprisings, for which, however, the government claims to be fully prepared. Admiral Walker's report upon his trip to Hawaii has not yet been made public, and is being held back, if we may believe Republican newspapers, because it is favourable to the new Republic.

Tacoma, Wash., November 18th.
It is reported here that John E. Rockefeller and the Standard Oil Co. have induced the Amos Steamship Co. to operate in connection with the trans-Siberian Railway to locate the terminus of the trans-Pacific line at Everett, Wash., in which town Rockefeller is interested. The same authority says arrangements have been made in New York to start the line immediately and the new whaleback steamer *City of Everett* will be operated at Vladivostok, carrying building material for the eastern end of the trans-Siberian Road. The Great Northern Railway is supposed to be a factor in the business.

The Canadian Pacific Railway is reported to be seeking an entrance into Chicago via the Chicago, Lake Superior, and Pacific Railroad, "the building of which will soon commence."

There is among Mexicans a strong belligerent feeling against Guatemala; and preparations are being made for war which is likely to begin at any time. Similar preparations are under way also in Guatemala.

On the 15th inst., Moraes assumed the Presidency of Brazil and issued a manifesto calling upon all friends of the Republic to uphold him. "He guarantees that respect shall be observed for the liberties of the people. He also promises to exercise strict control of the finances of the country. He declares that economies will be effected in the various departments in order to bring about the equilibrium of the budget. The manifesto concludes with the statement that peace prevails both at home and abroad." Admiral da Gama, however, declares that the new President is too friendly with Peixoto to be satisfactory to the "insurgents," so that peace is not yet assured in Brazil. Denmark, under German influence, has also declared against American beef.

The latest reports from the doubtful places in the recent election indicate the success of Budd (Dem.), in California, and of Evans (Rep.), in Tennessee for Governor. The Democrats have gained a few Congressmen by corrected returns, and may have a total of 100; the Populists have 10 or 11; and the Republicans 255 or 256. Iowa, Minnesota, Wisconsin, and New Jersey are now known to have solid Republican delegations besides the States mentioned in my last letter; but Illinois have one or two Democrats in Congress. The only solid Democratic delegations are those of Florida, Georgia, Louisiana, Mississippi, and South Carolina. And yet the Republicans are not satisfied, but are reported to be preparing to contest about 20 districts where the election was very close!

Reuben F. Kolb, the defeated candidate for Governor of Alabama, has issued an address calling on his supporters to assemble at Montgomery on December 1, and see that he is inaugurated into the office of which he claims to have been twice defrauded.

The First Assistant Postmaster-General, in his annual report, condemns the abuse of the franking privilege and rural free delivery. Increased expenditures and decreased receipts in that department have caused a deficiency of more than \$9,000,000.

President Cleveland is said to favor taking the question of finances out of politics by creating a "currency commission" as a permanent body. There are many who favour also the creation of a permanent tariff commission.

Secretary Carlisle has called for bids on another bond issue for \$50,000,000. The new securities will be of the \$50 denomination, and will bear interest at 5 per cent.

R. G. Dunn and Co.'s *Weekly Review of Trade* said last Saturday: "In nearly all branches of business gradual improvement appears, and the hopeful feeling observed last week continues." *Bradstreet's* reported that last week's clearings exceeded the \$1,000,000,000 mark, and were the largest since last January.

The Labour Commission appointed to investigate the Pullman Strike has issued its report, in which the railroads receive severer criticism than the strikers. The next issue of the *Railway Age* will contain a reply from the railroad side. A Labour Congress which met here lately, and was addressed by able speakers, recommended a national commission to which should be referred all disputes between labour and capital for final adjudication.

On the 12th inst. Mr. Cleveland christened and launched the new steamship, the *St. Louis*.

The venerable Dr. McCosh, ex-President of Princeton University and an eminent philosopher and theologian, and Hon. R. S. Winthrop, who, after a long service in the U.S. House of Representatives, succeeded Daniel Webster in the U.S. Senate, recently died.

Forest fires in Colorado have destroyed several mining towns. Reports have come via London from America of a horrible massacre by Turkish troops, who are said to have killed 10,000 Christians.

On the 15th inst. Dr. A. S. Draper was installed as President of the University of Illinois, and the new \$160,000 engineering building was dedicated.

A guarantee fund of \$10,000 has been raised for the purpose of continuing the work of the Central Church in this city.

The twenty-first annual convention of the National Woman's Christian Temperance Union has been held in Cleveland, Ohio, and was attended by 500 delegates. The report of the President, Miss Frances E. Willard, told graphically of the year's work; and the Treasurer's report showed a balance of more than \$5,600 in the treasury with no outstanding bills. The report of the year's work in Kentucky was tersely summed up in five words: "Kentucky has defeated Colonel Breckenridge." The following is the new pledge for boys:—

I pledge my brain God's thoughts I think;
My lips no fire or foam to drink
From alcohol cup, nor link
With my pure breath tobacco's taint;
For have I not a right to be
As wholesome and as pure as she
Who, through the years so glad and free,
Moves gently onward to meet me?
A Knight of the New Chivalry
Of Christ and Temperance I would be,
In nineteen hundred, come and see.

The University of Pennsylvania has received \$100,000 from Mr. and Mrs. Henry H. Houston, of Philadelphia, for a students hall in memory of Howard Houston.

MARINE COURT OF INQUIRY.

YOKOHAMA, MONDAY, DECEMBER 17TH.

The STRANDING of the "MOUNT LEBANON."
A Marine Court of Inquiry was held at the British Consulate to-day to inquire into the circumstances attending the stranding of the British steamer *Mount Lebanon*, of Glasgow, Official number 84297, which stranded on fort No. 2 at the entrance to Tokyo Bay on the 22nd November, 1894.

The Court was constituted as follows:—
James Troup, Esq., H.B.M. Court, President.
Lieut. S. C. Wills, H.M.S. *Plover*;
C. H. S. Tocque, R.N.R., Esq., Commander P. & O. steamer *Verona*;
Clerk—W. B. Penny, Esq., H.M.S. *Plover*;
Master at Arms—Corporal John Collins, R.M., H.M.S. *Plover*.
The Clerk of the Court read the order of Lieut.-Commander Addington, of H.M.S. *Plover*, con-

vening and constituting the Court; and a letter from Captain Hendry, of the steamer *Mount Lebanon*, asking for a Court of Inquiry to be held to examine into the circumstances of the stranding of the *Mount Lebanon* on No. 2 Fort at the entrance to Tokyo Bay.

The following statement of the Master was then read:—

"I, Charles Hendry, master of the S.S. *Mount Lebanon*, of Glasgow, hereby declare that the said steamer, under my command, sailed from Kobe for Yokohama on the 23rd November, 1894. At 3.20 a.m. on the 22nd inst., in the approach to Tokyo Bay, Kannonaki Light bore mag. W. $\frac{1}{2}$ S.; dist. $1\frac{1}{2}$ miles. Altered course to N. 7° W. and at the same time put the engines to half speed, keeping a good look-out for the red sector which I supposed was shown from Kannonaki Lighthouse, and also for a buoy showing a fixed red light, supposed to be shown to the eastward of the new fort in course of construction in mid-channel. The mate, second mate, and myself were keeping a look-out on the upper bridge, and a man was on the look-out on the fore-castle. I warned them to keep a good look-out for a buoy showing a red light which should be visible on the port bow, also drawing their attention to the fact that no red sector was visible from Kannonaki. I had just come to the conclusion that some alteration had been made in the lights, and was going to turn the ship round to wait for daylight when the man on the look-out forward reported land ahead. The helm was immediately put hard a-port and the engines reversed, but before they took effect in stopping her way the ship took the ground on the rubble foundation of the new fort. No light was shown from the fort, but at daylight I drew the attention of the officers to the fact that a lantern was suspended to the signal staff on the fort, but no light was in it. There is no buoy showing a red light as stated in the latest Notice to Mariners moored anywhere near the fort; but there is a buoy showing a red light moored about S. W. by S. from the fort, distance one mile. This place is tight under the land and to the south of the main channel, and is no use whatever as a leading light for ships entering the port. I attribute the grounding of the ship to the carelessness of the lighting authorities. The vessel remained aground till 1 p.m. on the 23rd, when after having discharged a quantity of cargo she floated off, and we then proceeded to Yokohama where we arrived at 3 p.m. on the same day."

Charles Hendry, sworn, deposed:—The statement which has just been read I have already sworn to. There is a slight clerical error in it which I wish to correct. I wrote the statement just before leaving the port, and said that the bearing was N. 7° W., this should be N. 7° E. I allowed for the variation in the opposite direction. The bearing of Kannonaki Lighthouse, instead of being W. $\frac{1}{2}$ S. should be W. $\frac{1}{2}$ N. I have no additional statement to make.

Cross-examined by the President:—What was the latest Notice to Mariners which you received referring to a buoy showing a red light?—The Board of Trade Notice I received in Liverpool just before leaving. It is dated the 31st August.

Was that the latest notice?—Yes, with the exception of a September Notice which I saw on a board at the Consulate in Kobe.

When did you leave home?—On the 1st of September.

What was the date of the Kobe Notice?—It was the 1st September. I will hand to the Court the note I took of it. [Handed in.]

This Notice states that the lighted buoy exhibiting a fixed red light had been removed about one cable southward of the fort; then you expected to see it there?—Yes, I expected to see it there.

Had you seen a notice dated, Tokyo, 22nd August, stating the lighted buoy will be shifted 9 $\frac{1}{2}$ cables south 10 degrees W. of the fort?—No, I had not.

How many days had you been in Kobe?—Three days.

Had you an opportunity in the Consulate of seeing the light Notices?—I was only in the Consulate once, when I saw the Notice of the 1st September, and I took a note of that.

You stated that you expected to see a red ray, or red sector, from Kannonaki Light?—Yes, I expected to see it.

Had you seen at Kobe a Notice dated Tokyo Sept. 5 indicating the discontinuance of the red ray?—No, Sir, I had not.

Did you know anything of a staff-light on fort No. 2, Saratoga Spit?—No, Sir, not then.

Do you know the forts by their numbers?—Yes, Sir, I understand. I know now that a staff-light has been established on Fort No. 2.

By Lieut. Wills:—Did you expect to see a light on fort No. 3?—I expected to see a light there,

considering that the fort was in course of construction.

By the President:—You say that you never expected that a fort in course of construction would be without a light?—That is what I think, considering the fort's position in mid-channel. I have seen no Notice as to this fort or its lights.

Did you see a fixed white light showing from No. 2?—I saw a faint glimmer of a light after I stranded, which I supposed was from fort No. 2, considering its direction.

By Captain Tocque:—This course N. 7° E. was it a true course?—No, magnetic; the compass course was N.

What deviation were you allowing?—Seven degrees E.

All your courses were magnetic?—Yes, throughout the statement.

And the bearings also?—Yes, the bearings also.

By the President:—What kind of weather had you?—It was a clear night overhead, slightly hazy on the horizon; the stars were out.

Were your orders promptly carried out by everyone?—Yes, by everyone.

By Captain Tocque:—Did you reverse engines?—Yes.

By the President:—Did you see any Notice about torpedoes being laid down?—I saw a Notice in Singapore about submarine mines being laid down and took a note of it.

When were you in Singapore?—About the beginning of November.

Had you seen any Notice of some torpedoes being removed?—No.

What did the Notice say?—It merely gave the bearings of the different positions of the submarine mines.

Did it not say something about laying-to for a pilot?—No, nothing. There was nothing whatever about laying-to for a pilot.

You saw the notice about the mines?—Yes; the positions of the mines were to the westward of the forts.

Did you ever see a Notice saying that torpedoes had been laid down in the Bay, and that no vessels were permitted to enter or leave between sunset or sunrise?—No, I saw no such Notice.

You had never seen any notice at all regarding the entering of vessels between sunset or sunrise?—No, none at all.

You expected to see a buoy showing a red light a little on the port bow; what was the last Notice you received regarding that buoy?—The Notice of September 1st.

You did not see such a light?—No.

Did you see the buoy next morning?—Yes. I saw a small red light away on the port bow before I stranded, which I took for a junk light.

How was the buoy coloured when you saw it next morning?—Red.

What is its bearing?—I did not take it when on the fort, but I could give its approximate bearing.

You say that you saw a buoy with a red light on your port beam, distant about a mile from the fort?—Yes; but that was not the buoy or light we were looking for. I had no idea that the buoy was there. It appeared so close to the shore that I took it for the light of a junk.

Have you ever been to Yokohama before?—Never before.

This is your first visit to Japan?—Yes.

Had you any special reason for coming in at night?—Nothing special: I wanted to start work at daylight, that was all.

What is the number of your Board of Trade's Master's certificate?—No. 014164.

James McLean, Chief Officer, sworn, deposed:—I recognise the statement now handed to me as a statement written by me and sworn to.

The statement was read as follows:—

"On the 22nd November, 1894, at 3h. 35m. a.m. I, James McLean, Chief Officer of the steamer *Mount Lebanon* (having been called on deck to prepare the ship for harbour) went on the upper bridge. The Master and Second Officer were on the bridge at the time. The Master remarked that there was no red sector showing from Kannonaki Lighthouse, and told me to keep a good look-out for a red fixed buoy-light, sharp on the port bow. The vessel was then heading W.N.W. by compass, and going half-speed. About three minutes afterwards the man on the look-out reported land ahead, when the Captain at once gave orders to put the engines full speed astern and the helm hard-a-port, which was done, but before engines or helm had any effect, the ship ran aground on the fort in mid-channel. Orders were given to sound the bells and take soundings round the ship. We found the ship to be making no water, and depths of water of from 5 fathoms abait fore-tigging, deepening to 26 fathoms under the stern. The engines were again tried astern without effect. At daylight I saw a lantern

hanging to the flag-staff on the fort, but there was no light in it. During the day, while the Captain was at Yokohama for assistance, I was asked by one of the Japanese officials to go on the fort, and was requested to give him a written statement, with the details of the accident; this I did briefly, and was then asked to state that the Captain was aware of the alterations that had lately been made by the Japanese Government in the navigation of the channel between the forts. This I refused to do. The vessel remained ashore till 1 p.m. on the 23rd, when, after having discharged a quantity of cargo, she floated, and proceeded to Yokohama, where she arrived at 3 p.m. on the same date."

(Signed) "JAMES McLEAN."

To Lieut. Wills:—I could not say how Kannonaki was bearing when the course was altered, as I was not on the bridge. The vessel was bearing W.N.W. by compass when I came on to the bridge, and it was not altered from then until we struck. The deviation, I believe, was about 7° East; but I am not certain.

James Tasker, Second Officer, being sworn deposed to the correctness of a statement which he had written and handed in under oath.

The statement was read as follows:—

"At midnight of 21st 22nd inst. I, Jas. Tasker, 2nd mate of the above vessel, went on the bridge, relieving the 3rd mate. I found the ship steering N.E. by E. $\frac{1}{2}$ E. by compass and logging 10 knots per hour. The regulation lights were burning brightly, a moderate northerly breeze blowing, and the weather clear overhead with more or less haze round horizon."

"At 2 a.m. on the 22nd the course was altered to N.N.E. by compass. At 2.30 a.m. Tamogi Light was abeam, distant $1\frac{1}{2}$ miles, with Kannonaki visible on port bow. At 3 a.m. look-out was relieved and warned to keep bright look-out for buoy with red light. At 3.20 Kannonaki Light bore West by compass, distant 1 mile, when course was altered to North by compass. Continued steering north for 10 minutes, and at 3.30 altered course to W.N.W. by compass, and put engines at half speed. About 3.40 the Captain, who was also on the bridge during the whole of my watch, remarked to the first mate "that the red sector from Kannonaki had not been seen."

At 3.45 a.m. land was reported right ahead. Engines were at once reversed and helm put hard to port, ship striking immediately after. Sounded wells and tank and found ship making no water, and water round ship showing from 5 fathoms at fore rigging to 23 fathoms astern. No lights of any kind were visible on the fort till about 20 minutes after the ship had struck.

"We tried to get off by putting engines full speed astern, but without success. Tried again next day after having shifted 40 tons cargo from No. 1 hatch into No. 4 at top of high water, but again failed to get off."

"At 1 p.m. on Saturday (24th) got off after having discharged about 200 or 300 tons into lighters. Sounded well and tanks and found ship still making no water, so proceeded for Yokohama, where we arrived at 3 p.m."

(Signed) "JAMES TASKER."

To the President:—At the time we struck I saw a white light bearing about N.E.

Was it burning brightly?—No, it was quite dim. Did you see any red light on your beam?—Yes. Did you know what it was?—No; I took it to be a small vessel bound out, running before the wind. It was about a mile away.

How long before you struck did you see the red light?—About five or ten minutes.

What distance might you have run?—Close on a mile, I should think.

Have you ever been in this port before?—No, Sir.

The First officer recalled, said that he had never been in this port before.

The Court then adjourned for tiffin.

Upon reassembling at 2 o'clock, John Liest, an A.B. on the *Mount Lebanon*, was sworn, and deposed:—I was on the look-out on the right of the stranding, November 22nd. I reported no light until I reported land ahead. There was no light to be seen on the fort. I saw no other lights beyond those reported by the other look-out whom I relieved. I went on watch at 3 o'clock. The Lighthouse at Kannonaki had been reported before I went on the look-out. I do not remember to have seen a red light on the port-beam after going on watch. After we grounded I went off the look-out, and do not remember seeing any white light in any direction.

The President:—The Court does not consider it necessary to call the man at the wheel or the engineer, unless the master of the steamer desires to call them. If he thinks their evidence essential we will call them.

Captain Hendry said he saw no necessity to

call the men. The engineers could only testify as to the time the engines were stopped.

The President—The Court is satisfied as to the time the accident occurred, and therefore they can only give corroborative evidence.

Sueyoshi Takuro, a mechanical engineer in the Japanese Military service, cautioned, deposed—I have no direct or personal duty at the Fort No. 2, but my department is building a fort at the entrance to the Bay. I was not on the fort on the night of the 22nd November. There are no officers there during the night, only the constables being left in charge. I am appearing here under the instructions of my Chiefs, because I was instructed to go on board the *Mount Lebanon* at noon on the 22nd November, and make some inquiries as to the grounding of the ship on the fort. I saw a man named McLean on board and put to him several questions. The lamp exhibited on Fort No. 3 is used at nights for the purpose of giving light to people engaged in constructing the fort, and also as a signal to the boats laden with stones for the fort. The lamp has been exhibited every night since June, and burns until 12 o'clock, when it goes out. I visit the fort occasionally on business. I was last there on the 22nd of November, in connection with the stranding of the *Mount Lebanon*.

Marita Seikichi, a boatman, cautioned, deposed—I am employed by the Naval Department in connection with the forts. I was on Fort No. 3, on the night of the 21st-22nd of November. It was the custom to put up a light upon the fort when evening fell. It was a round lamp, like a ship's lamp. It is placed in position for the purpose of throwing light on the fort for the workmen and to guide the stone-boats. On the night of the 21st ult. it was lighted about the usual time, when the flag was hauled down at sunset and the light from Kannon-saki appeared. It burns until 12 or 1 o'clock. I can't say when it went out on the night of the stranding.

Captain Hendry, recalled, said—I did not see the fort before the look-out man. It is so low that the look-out man, about 20 feet below where I stood on the bridge, could see it long before I could. I should say that the fort is now about 20 feet above low water. I did not see it until the ship's stem was almost touching it. We had a cargo of rice on board from Rangoon. There were 31 in the crew, all told.

The Court then retired to consider its finding.

George Kircher, on the Court re-assembling, was sworn and handed in a certified copy of the *Japan Mail* of August 23rd, 1894, containing Notification No. 168 of the Department of Communications; and a copy of the same paper of Sept. 6th, 1894, containing Notification No. 177 of the same department; both notifications having reference to the alteration of lights and buoys in Uraga Channel.

The President then read the finding of the Court, and after reciting the circumstances attending the stranding of the vessel, proceeded—It appears further from the evidence put in respecting the lights, that by a Notice published in the local newspapers by the Department concerned of the Japanese Government, that the lighted buoy formerly moored one cable southward of the fort would be, from the date, shifted to 9½ cables S. 10° W. true from its former position, and by a further Notice dated Tokyo, September 5th, the red ray from Kannon-saki Lighthouse was from the 10th September to be discontinued, while from the same Notice intimation was given of the establishment of a staff-light on Fort No. 2, on Fut-tsu Spit. It would appear from this evidence that the red buoy light and the staff light were on the night of the casualty burning in the positions notified. The Court having regard to the circumstances above stated finds:—That the master by the time at least when he was abreast of Kannon-saki Light not seeing the red light from the buoy, as he had expected, and further being aware that a new fort was in course of construction in the channel, ought to have eased, and stopped if necessary, until he could pick up the new fort, or to have waited until daylight. That it was within the power of the master to have known beforehand of the discontinuance of the red ray from the Kannon-saki Lighthouse and the establishment of the staff light on Fort No. 2, as well as of the shifting of the red buoy. Being, as has been said, aware of the construction of the new fort, and having also seen a warning respecting mines in the Bay, it would seem but reasonable to expect that he should have made himself acquainted at his last port of call with any changes which might have been made in the lights. The Court therefore finds the Master in fault in not taking the precautions here indicated, and hereby cautions him to be more careful in future. The expenses of the Court fixed at £4 8s. (equal to \$44) are approved, and it is directed that they be paid by the Master.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, No. 5, Band, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

SOLUTION TO PROBLEM No. 155.

WHITE. BLACK.
1—R to R sq. 1—Any
2—Mates accordingly.

Correct solutions received from Omega, W.H.S., J.D., Shogi, E. J. King, and Krug.

PROBLEM No. 157.

A TOURNEY PROBLEM FROM THE "LEEDS MERCURY."

White to play and mate in two moves.

LADIES' CHAMPIONSHIP.

The fourth game of the chess match between Mrs. J. W. Showalter and Mrs. Worrell resulted in a win for Mrs. Showalter. The fifth game, was opened by Mrs. Worrell. She selected a Giuoco Piano for attack, and the game proceeded very evenly. Minor pieces were freely exchanged, and nothing but kings, queens, rooks, and pawns remained on the board after twenty-four moves had been registered. With 27—P to Q 4 and 28—P x P Black seemed not to have proceeded very correctly, as White managed to establish a passed pawn on the king's file. As was expected, the fight was then around White's king's pawn. Later on White brought her queen and two rooks on the open king's knight's file, and after fifty-three moves Mrs. Showalter resigned. The score now stands: Mrs. Showalter 3, Mrs. Worrell 1, drawn 1.

STEINITZ-LIVERPOOL CABLE MATCH.

Game A in the cable match between Mr. Steinitz and the Liverpool Club has been declared a draw. As Mr. Steinitz won the companion game (the Ruy Lopez), he scores a victory in the series. Since our last report of game A the following moves were made:—

38—R to B sq. 38—P to B 4
39—R to B sq. 39—R to B 5
40—R x R 40—P x R

and the position is like this:—

BLACK—(LIVERPOOL).

WHITE—(STEINITZ).

White (Steinitz) to move.

At this point the game was drawn.

GREAT MATCH IN LONDON.

The greatest chess clubs of the world, the Metropolitan and City Clubs in London, played a team match recently in which 100 players were engaged. The contest attracted great interest in metropolitan chess circles, as the pick of the talent was represented. Such cracks,

among others, as Blake, Guest, Gunston, Heppell, Hockvale, Hughes-Hughes, Hunter, Lorian, Rev. A. B. Skipworth, Smith (Morton), Smith (Stanley), and Rev. W. Wayte represented the Metropolitan Club, while Howell, Harold Jacobs, Grantham Williams, H. Jones, Herbert Jacobs, Dr. Marshall, Taylor, Ingoldsby, Dr. Ballard, Physick, and O. Jones were among the City players.

After four hours' play the Metropolitan proved victorious by 26½ games to 23½. A return match will soon be played.

GAME No. 193.

AN INTERESTING GAME.

WHITE. BLACK.
Mr. C. H. Capon. Mr. Howard Taylor.

Notes by Dr. Hunt (from the *Ingoldsby Legends*):

- (a) You are a naughty boy to take such things into your head.
- (b) Fell into the arms of neighbouring priest.
- (c) Come! I'll trouble you just to hand over that child.
- (d) The instant he awoke, he smoked something amiss, and said with some energy, "Hang it! what's this?"
- (e) The Prince Bishop muttered a curse and a prayer.
- (f) Looked very queer, too, and seemed not to know what exactly to do.
- (g) Like a blue-bottle fly on a rather large scale, with a rather large corking pin stuck through his tail.
- (h) And when once they have managed to take you in tow, 'tis a damned hard matter to make them let go.
- (i) A wink came sly, from that sinister eye.
- (j) My lords! you are done most remarkably brown.
- (k) Smiled with an air most graciously grim and vacated the chair.—A. L.

END-GAME No. 15.

The *Glasgow Herald* publishes the following position:—

BLACK.

WHITE.

White draws by—

1—R to B 8 ch. 1—Q takes R
2—Kt to B 7 ch. 2—R to Kt sq.
3—Kt to R 6 ch. 3—P takes Kt
Stalemate.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL"]

London, December 15.

The Porte has agreed that the British, French, and Russian Consuls at Erzeroum shall join the Armenian Commission to enquire into the recent outrages. This is regarded as important, as exhibiting a new grouping of Powers in Eastern affairs.

London, December 16.

The French troops occupied Tamatave on December 12th. The Hovas fled precipitately, amid great excitement.

In Rome certain Deputies have been charged with forgery. King Humbert has prorogued Parliament.

London, December 17.

The Queen of the Hovas has intimated her unconditional acceptance of the conditions imposed by the French, who will probably demand the cession of the Capital until the treaty has been executed.

London, December 20.

The black-mail scandals in Paris are extending, and more journalists have been implicated. It is also reported that several Senators and Deputies are concerned in the revelations that have recently been made.

(FROM THE "DAILY PRESS.")

Manila, December 10.

The San Miguel godowns were destroyed by fire yesterday afternoon. The losses of the Insurance Companies are estimated at \$120,000.

[The San Miguel godowns are in the San Miguel district of Manila with the Pasig river in front and the San Miguel Creek or Estero de Quiapo on the back and canals on the sides. They cover about 500 feet square. They insured loss is, we understand, distributed among several companies.]

London, December 11.

The initiative will be taken by Great Britain as to the proceedings by the Powers with regard to joint action about affairs in Armenia.

Prince Hohenlohe, Imperial Chancellor of Germany, has applied to the Reichstag for their sanction to prosecute the Socialist members, who, at the opening of the session, remained seated when cheers were given for the Emperor of Germany.

London, December 12.

It is reported from Shanghai that the Japanese, before considering peace proposals in any way, insist upon the surrender of all the Chinese officials who offered money rewards for Japanese heads.

The Armenian question has been virtually suspended; the Powers being inclined to await further accounts of the recent atrocities before taking any active steps in the matter.

The Liberal papers prophesy the emphatic rejection of the proposal made to the German Reichstag to prosecute the Socialist members.

The Chinese loan which was being raised in London has collapsed, and a loan which was being issued by Sir William Armstrong's firm has been abandoned because the Chinese are seeking to raise other loans at higher rates of interest.

Parliament has been summoned to meet on the 5th of February.

London, December 13.

The Suez Canal Company has offered to defray the funeral expenses of the late Ferdinand de Lesseps and to accord military honours to his remains.

London, December 14.

A sensation has been caused in Paris owing to the attacks made by the Press against General Mercier, the Minister of War. It is alleged that his removal from office has been decided upon in consequence of his incapacity to fill the post.

A Committee of the German Reichstag by a majority of five votes—nine against four—has refused permission to prosecute the Socialist member Liebknecht, for disloyal conduct on the occasion of the opening of the Reichstag on 6th December.—*N. C. Daily News.*

(FROM JAPANESE PAPERS.)

(The following telegram dated the 20th inst., despatched by Mr. Sone, Japanese Minister to France, has been received by the Foreign Department.)

M. Brisson has been appointed President of the House of Representatives.

Osaka, December 21.

Shortly after six o'clock this morning fire broke out in the No. 1 factory of the Temma Cotton Spinning Co., destroying 10,600 mules, 5,400 rings, and the other spinning machinery, but the boiler, engine-room, and mixing room were saved. The cause of the fire has not been ascertained, but as it occurred while all the workmen were out of the premises, in between the day and night shifts, it is believed that the fire could not be caused by friction of the mules. It is supposed, indeed, that the electric light wires may have originated the conflagration. The loss is estimated at not less than yen 200,000.

Hiroshima, Dec. 21.

Mr. Komura, Chief of the Japanese Civil Administrative Office attached to the First Army, arrived here this morning. Mr. Komura will be admitted to an Imperial audience to-morrow, and will leave for Tokyo the following day.

Lieutenant-Colonel Fukushima has been appointed Acting Chief of the Japanese Civil Administrative Office established in the districts occupied by the First Army.

Shanghai, December 21.

A conference between General Lien and the Viceroy Li has concluded, and the General will shortly leave for the northward in command of 50,000 soldiers. The Peking Government had already issued instructions to that end. Arms and ammunition for Lien's troops have been conveyed from Canton and Fukien. The above statement appears in a Chinese paper.

Kanazawa, December 21.

The Prefecture Assembly having passed to-day a vote of no confidence in Governor Minra, refused to discuss bills introduced by him, and then dissolved its sitting.

Kobe, December 21.

The German steamer *Wulan*, which arrived here yesterday from Shanghai with miscellaneous commodities, formerly belonged to the China Steam Navigation Co. Over thirty Chinese were on board the ship, but after inspection by the Japanese officials it was found that they had no connection with politics.

Shanghai, December 21.

The Japanese army captured Kaiping on the 18th inst.

General Sung, his officers and troops at Kaiping fled to Ying-ken, where serious disturbance now prevails.

The foreign residents of Kaiping have fled to Chin-chow (not Chin-chow in Lian-tung).

Kobe, December 21.

The French vessel *Duguay Trouin* left for Nagasaki to-day.

Hiroshima, Dec. 21.

A rumour is current that the Chinese Fleet, numbering some ten vessels, which has been staying at Wei-hai-wei, fled a few days ago, and hid in a port some 40 ri south-west of Shanghai.

LATEST COMMERCIAL.

IMPORTS.

At last there seems to be a break in the clouds, and fairer weather has set in all round, with a rise in prices as far as Cottons are concerned. Yarn has received considerable attention, all counts (except 28/32 singles) being taken freely at an advance. Grey Shittings, 8½lb, have been done at a rise both for "spot" and "future," while 9lb. have been taken up for consumption on a good scale. In Fancy Cottons, Prints and Velvets have had most attention; T-Reds being quiet at the advanced quotations. Woollens—These still hang fire, except for Blankets, which sell like hot rolls at a further advance.

COTTON PRICE GOVDS.

	PER POUND.
Grey Shittings—8½lb, 38 yds, 35 inches	\$2.25 to 2.90
Grey Shittings—9lb, 38 yds, 35 inches	2.50 to 3.25
P. Cloth—7½, 24 yards, 32 inches	1.60 to 1.90
Indigo Shittings—12 yards, 35 inches	1.70 to 2.35
Shittings—Assorted, 21 yards, 35 inches	1.75 to 2.75
Cotton—Italians and Sateens Black, 32 inches	0.16 to 0.21
Valuets—Black, 35 yards, 22 inches	7.00 to 9.15
Victoria Lawns, 12 yards, 12 inches	0.85 to 1.00
Turkey Reds—2.0 to 2.4lb, 24/25 yards, 30 inches	1.60 to 1.70
Turkey Reds—2.8 to 3lb, 24/25 yards, 30 inches	1.80 to 2.00
Turkey Reds—3.8 to 4lb, 24/25 yards, 32 inches	2.25 to 2.35
Turkey Reds—4.8 to 5lb, 24/25 yards, 32 inches	2.75 to 3.05

WOOLLENES.

	PER YARD.

Nos. 48, Two-fold	43.00 to 46.00

METALS.

Market looking up at last, and holders are getting an increase in price on all kinds of Iron; Bars, Pig, and Plates being all in request. Wire Nails are quiet, having been contracted ahead in good quantity, and these forward contracts are now arriving. Tin Plates are lower, with less demand, and it looks as though they had been over-imported of late.

	PER POUND.
Flat Bars, 1 inch	13.60 to 3.70
Flat Bars, 1 inch	3.70 to 3.80
Round and square up to 1 inch	3.60 to 3.80
Iron Plates, assorted	3.70 to 3.85
Sheet Iron	4.90 to 5.10
Galvanized iron sheets	9.00 to 9.25
Wire Nails, assorted	5.75 to 6.00
Tin Plates, per box	6.75 to 7.00
Pig Iron, No. 3	1.05 to 1.70

REMARKS.

A good current business with prices unchanged. There have been large deliveries for inland consumption and dealers have replaced without delay. Stock of American Oil 450,000 cases. Stock of Russian (which would have been quite depleted but for the recent arrival of the *Turbo* with 3,500 tons) is now 150,000 cases.

Chester	\$1.75 to 1.77½
Comel	1.75½ to 1.75
Devce	—
Russian Anchor	1.72½ to 1.75
Russian Moon	1.70 to 1.72½

SUGAR.

Brown—A good current business, and sales have exceeded arrivals. The old stock of Formosa is now quite cleared off, and the present holdings of Manila sorts does not much exceed 20,000 piculs. White—Small import, good sales at improving prices, fair deliveries leaving comparatively small stock. Healthy tone generally.

	PER POUND.
Brown Tabao	\$4.20 to 4.30
Brown Manila	4.90 to 5.00
Brown Daitong (New)	3.45 to 3.50
Brown Canton	3.70 to 4.25
White Java and Penang	6.60 to 6.70
White Refined	6.50 to 9.00

EXPORTS.

RAW SILK.

The week opened quiet, but soon a large business was initiated by the largest operator on this market, with the result that prices advanced all along the line; and the week closes with a very firm market and reduced stocks. Good Shinsin Filatures in full-sizes are now getting rather scarce.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes direct into the hands of the Wholesale and Retail Buyers, it offers unique advantages to advertisers.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an interest upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcers, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 21, 1894.

January 13th, 1894.

THE NEW TREATY

COPIES of the NEW TREATY, in Pamphlet form, are now on Sale at this Office. Price 50 Sen.

YOKOHAMA: SATURDAY, DEC. 29TH, 1894.

SUMMARY OF NEWS.

THE amateur theatrical performances in Tokyo netted \$1,356.62 for the Red Cross Hospital.

THE troubles in the local assemblies of Kanagawa, Ibaraki, Ishikawa, and Nara still continue.

VICOMTE DE LABRY, military attaché of the French Legation, has been promoted Captain.

A NUMBER of charitable ladies of Morioka have contributed one thousand yen to the War Department.

THE rumour that Count Matsukata will be appointed President of the Privy Council has no foundation.

THE section between Kokubuji and Kumegawa on the Kawagoye Railway was opened for traffic on the 21st inst.

CHRISTMAS DAY was mild and bright in Yokohama and Tokyo. The Churches all attracted good congregations.

THE football match on the afternoon of Christmas Day resulted in a draw, one goal being scored by either side.

THE Seamen's Mission gave the usual Christmas Dinner and entertainment on the 25th inst. Over one hundred sailors were present.

THE cold weather is having a favourable influence in the districts of Japan where dysen-

tery has been epidemic. But there are still thirty to forty cases reported weekly from Hiroshima, Tottori, and Kumamoto.

ABOUT eighty Tokyo pick-pockets were arrested by the police during the grand festival at Kanda, on the 20th and 21st inst.

THE Chinese fleet is supposed to be still under the shelter of the forts at Wei-hai-wei, Shanghai rumours notwithstanding.

THE Austrian *Chargé d'Affaires* in Tokyo presented gifts to all the poor residents in Ushigome, in celebration of Christmas.

THE members of the Yokohama Barristers Association have agreed to present a beautiful bronze incense burner to M. Boissonade,

COUNT ITO, the Premier, was received in audience by Her Majesty the Empress on the 21st inst. He has since returned to Hiroshima.

THE Austrian traveller who robbed an English tourist on the P. & O. liner *Verona*, on the way up from Hongkong, is to be sent to Trieste for trial.

THE notification prohibiting vessels entering or leaving Tokyo Bay from passing between the point of Hashirimizu and No. 3 fort, has been withdrawn.

FIELD-MARSHAL COUNT YAMAGATA intends to stay at Hiroshima, having found the climate there less rigid than that of Tokyo at this period of the year.

THE fortnightly meeting of the Yokohama Literary Society was devoted to readings, recitations, and music, having special reference to this season of the year.

THE Chinese fought desperately at the battle of Kang-wasai on the 19th. They received four bayonet charges before they broke. The fight lasted for five hours.

A VERY destructive fire broke out in the foreign concession Kobe on Monday morning. The whole of the premises occupied by Messrs. E. H. Tuska & Co. were destroyed.

THE torpedoes sunk between Konashimi and Itsukushima and Onashimi and Kamiyami in Hiroshima Bay have been removed, and vessels are now allowed to pass there at any time.

THE quarterly communication of the District Grand Lodge of Japan was held on Saturday last week. R.W.D.G.M. W. H. Stone was supported by a large number of the Craft.

KAWAKAMI OTOJIRO will give theatrical performances at the Minato Theatre, Yokohama, from the 2nd of January next. The China-Japan War forms the subject of the dramas.

THE funeral of the late Mr. Mayeda Kenkichi, a member of the House of Peers, took place in the capital on the 23rd inst., the ceremony being conducted in accordance with Buddhist rites.

MR. MORI YASUBI was elected on the board of managers at a recent general meeting of the Seventy-fourth National Bank, Yokohama, and Mr. Otani Kahei was chosen President of the Bank.

LIEUTENANTS TAKAKUWA YU and Miyaoka Naoki, of the Navy, have been promoted to the rank of Commander; and Commanders Ito Yoshigoro, Mitsu Munetaro, and Oda Toru to the rank of Captain.

THE eighth session of the Diet was officially opened on the 24th inst. Count Ito read the Imperial Speech. The Houses, having replied

to the Speech, elected various officers and then adjourned for the New Year holiday until the 8th January.

REAR-ADMIRAL DUPUY, Commander-in-Chief of the French Squadron in the East, who is now at Nagasaki with the *Bayard*, will hand over the command to his successor immediately upon his arrival in these waters. Admiral de Beaumont is expected to reach Yokohama on the 3rd of February.

THE recall of Mr. Komura, Chief of the Japanese Civil Administrative Office at An-tung, is explained as due to the Cabinet's intention of appointing him successor to Mr. Kato, Chief of the Political Business Bureau in the Foreign Office, who was lately appointed to represent Japan in England.

REUTER telegraphs:—Parliament meets on December 20th, and a resolution regarding the House of Lords will be proposed before the end of the session. An appeal to the country will follow soon after. The Hon. G. C. C. has arrived safely at Cabul. The Amir is slowly recovering his strength. Lord Elgin has held a grand durbar, attended by the ruling chiefs, high officials, and distinguished Anglo-Indians. The Viceroy made a great speech, declaring that this was an era of delimitation, and pointing to the prospects of a friendly delimitation of British territory all over the world. There was a great assembly of people on the occasion of the funeral of the late Vicomte Ferdinand de Lesseps, the Suez Canal Company, and the learned Societies being fully represented. The Opposition Party in the Italian Parliament vehemently resents the proroguing of Parliament at the present juncture. The garrison at Rome has been reinforced on account of the gravity of the situation. In consequence of the failure of two Banks in Newfoundland there is an absolute dearth of currency throughout the colony, which has entirely stopped business. A violent storm swept over Great Britain on Friday, Dec. 21st, causing immense destruction of property and loss of life. The Hungarian Ministry, though backed by a large majority in Parliament, has resigned, believing that it has lost the confidence of the Emperor, who appears disposed to listen to the Clericals against the Liberals. Lord Randolph Churchill is suffering from general paralysis, and is in a critical condition.

THE improvement in the Import trade noted last week, and the generally healthy condition of the market, continue to a great extent, though buyers are preparing for the holidays and do not seek to enter into new business on a large scale. These remarks apply particularly to Textiles, and somewhat to Metals, though in the latter trade there is evidence of considerable business after the holidays are over. Kerosene is quiet, following the recent large transactions, but prices are strong and the trade is in a healthy condition. There is nothing special to be said about Sugar, but the market is steady and values are unchanged. The Silk trade has been somewhat interfered with by the Christmas holidays, and quiet will probably prevail until after the Japanese have settled down to business at the termination of the "Shogatsu." There does not appear to be a large demand either from Europe or America, though orders are on hand that could be filled if holders were current. There is nothing to be said about Tea beyond the fact that there is now so little leaf left upon the market that prices are entirely controlled by owners. Rates of Exchange, in sympathy with silver, have again declined, and are without firmness at the close, the quotation this day being absolutely the lowest on record.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Diet has sat, but only to go through the routine of opening ceremonies and organization, and then to rise for the New Year's recess of a fortnight's duration. Thus we find in the columns of the vernacular Press no lengthened remarks upon the event. The *Nichi Nichi* gives a list of abridged manifestoes of the principal parties in the Lower House, and praising them, upon the whole, in high terms, prophesies that the present session will end peacefully and honourably, unless the Cabinet unwisely shows itself needlessly hostile to the parties. Our contemporary is persuaded the Government will introduce a comparatively small number of bills, and advises the members, on their part, to pay due respect to the present crisis by not failing to withhold any private bills that they deem of no particularly urgent importance. The Representatives are further advised to discuss the few bills they will find themselves called upon to consider, with great care and discretion, and not in the too common sweeping manner. "Should the Government," writes the *Mainichi*, "not fail, in conformity with the sentiment of the whole nation, to retrench its expenditures to the utmost, to introduce the necessary improvements in general administrative affairs, and to satisfactorily discharge its responsibility as regards belligerent matters, it is scarcely necessary to say that the members should endeavour to secure peace and nothing but peace between the House and the Government throughout the whole session." The *Niroku* writes that it cannot see any stormy days looming in the session, unless the Government wittingly fail to appear in a garb becoming the crisis. The *Kokkai* and the *Choya Shimbun*, formerly the *Shin-Choya*, write in nearly the same strain. The former surveys the political field of Japan at some length, and comes to the conclusion that the Diet and Government seem to have awakened from their old dream that they could benefit the State by engaging in a perpetual duel. The *Fiji* tells the Government not to lose sight of the grave responsibility now resting upon its shoulders, but to expect that the House will be as strong and unrelenting as ever in its attacks on abuses.

Under the startling caption of "China in Europe," the *Kokumin* writes: "If it is characteristic of China to assume a haughty and arrogant mien toward other States, and to build air castles upon her historical and territorial greatness, then England is indubitably China in Europe. The peculiar characteristics of China as a State are also those of England, only the latter has a veneer of modern civilization, which places her in a more advantageous light. Blot out the subjugation of India, the attack upon the Crimea, the victory of Waterloo, and the battle of Trafalgar from the history of England. Make her map smaller and her diplomacy less arrogant and more reasonable. How much intrinsic power will then remain to her? However much we may respect and honour England as a contemporary State, we should by no means allow ourselves to be blinded to the actual facts of her condition and the real bases of her power." The Independent journal proceeds with still more self-satisfaction and rhetoric to compare European statesmen with Li Hung-chang. The great Viceroy is condemned as having rashly entered upon the present war, his faculties being insufficient to penetrate the real circumstances and strength of Japan. It was fortunate, says our contemporary, for European States, that not one of them, but China put the strength of Japan to the test. Had a European State been called upon to play China's part, it cannot be doubted that her statesmen could not have met their destiny otherwise than as Li Hung-chang has met his, to the substantial injury of their nation and its prestige. So much were Japan's strength and civilization misunderstood before the war.

The *Fiji*, referring to the war fund, advises

the Authorities to decide upon the sale of Government railways, which are stated to have been once estimated at some 36,000,000 yen. Should an indemnity be obtained from China after the war, its nature and the circumstances of the country forbid its being used for the redemption of the Loans. Both for redeeming the already raised loans and for meeting an occasion in the future that might call for another loan, the public railways had best be disposed of at this juncture. Nothing lies in the way of achieving that masterly piece of financial policy. Every consequence that might attend it speaks loudly in its favour.

The *Nichi Nichi* sees a cause for regret in the Second Army's remaining so long inactive, since the capture of Port Arthur. The severity of the climate, it is true, may do much to hinder warlike operations on any large scale. But judging from the movements of the First Army, which is in still colder regions than the Second, it cannot be supposed that the latter is disabled by climatic conditions from making any new attempt. Too long repose is apt to discourage men and make them conceive an inordinate love of peace. What is worse, such inaction may furnish a pretext for foreign intervention. It is not to be doubted that Marshal Oyama has some large plan in contemplation, but to a bystander its execution promises to be productive of more good and less bad results if achieved with greater rapidity.

In order to secure the independence and integrity of Korea, the *Kokkai* says, nothing is more important than to relieve her financial embarrassments. Furnish her with some 10,000,000 yen upon the security of her customs duties and of the direct taxes levied in one or more provinces. She would then be able to repay the debt she owes to a Chinese merchant at a high rate of interest and upon the security of the Customs duties. She would also be able to achieve great improvements in various directions, and would find herself within a few years quite a strong, civilized, and wealthy State. The Authorities are recommended to persuade the Bank of Japan, or the Specie Bank to advance money to the Korean Government upon the security of the customs duties or other taxes. The execution of such a plan requires the guidance and superintendence of an able man. Hence Count Inouye is urged to remain at his present post for a long time to come.

The *Niroku* heads one of its leaders "The British Fleet in Eastern Seas," and writes as follows:—"What purposes has the British Asiatic Fleet to serve in so often appearing in the Yellow Sea, since the breaking out of the present war? Its mere appearance there is well enough. But what necessity obliges it to observe the motions of our Squadrons so closely? We are told that the British fleet is ever in the wake of ours and that, whenever the two meet, it invariably discharges salutes. Are we to be thankful for that courtesy? What did the English fleet do when the Japanese ships bombarded Wei-hai-wai months ago? Is it advantageous or disadvantageous for His Majesty's ships that British vessels should be so frequently seen in the Yellow Sea? Rumour has it that the movements of the British fleet in the East are under the control of Sir Robert Hart, Inspector-General of Chinese Customs, as well as of Admiral Fremantle, its Commander-in-Chief. We do not vouch for the truth of this rumour, but we have no hesitation in declaring that the present movements of the British fleet in the Orient cannot be regarded by us without umbrage."

Various other topics are touched upon by our Metropolitan contemporaries. We make brief reference to some of them. The *Choya* says that Korea must not be left to the care of political and military men alone. Religious teachers of any sect should go over at the first opportunity and teach her people the way of getting

peace for their souls. Religion often effects in unenlightened society what politics, education, and arms fail to accomplish. The *Mainichi* writes in a warm tone that the Government and the people in general should hold it one of their most sacred obligations to relieve the poor families left by the officers and soldiers who fought and died for their country in recent battles. Some of these families are pitifully described as poverty-stricken, and are recommended to the sympathy of all public and private persons. Referring to telegraphic intelligence from Shanghai to the effect that an envoy to sue for peace has been appointed to the Court of Japan by the Chinese Emperor, the *Nichi Nichi* writes that war operations abroad must be hurried on with even more energy than heretofore. The *Kokkai* draws the attention of the Japanese public to the history of British wealth and greatness, and says that the three elements of a nation's greatness are strong arms, stout diplomacy, and brisk commerce. The *Yomiuri* is pained at the troublesome Tong-hak rebels of Korea, and says that the best policy to subjugate these beggarly mobs is to start railways and other large engineering works as soon as possible, so as to give them employment and bread. The same journal states that it rests with the Japanese to lead the old decrepit Empire—meaning China, of course—into the path of modern progress, and that Japan cannot do that in any better way than by first planting civilization in the occupied territory and thus supply China with models. The *Choya* is afraid that Korean commerce may again fall into the hands of China merchants immediately after the termination of the war, and exhorts Japanese traders to take speedy steps to beat the Chinese in this peaceful but more protracted war. A correspondent of the *Nippon* gives his opinion of the text books to be hereafter used in Korean schools. Readers must be most carefully compiled, as nothing has so much influence as the books read by the young to drive out illusions and errors. Geographies and histories must be so written as to have Eastern and Western material in the proportion of seven to three, and of the seven, two and a half parts should relate to Korea, an equal portion to Japan, and the remaining two parts to China and other Asiatic countries. In histories, the reasons of the present war must be fully stated. It must also somewhere be written that Japan, or rather the *Taiko's* army, once invaded Korea merely in a spirit of revenge for a previous attack Korea had made upon Japan in conjunction with the *Gen* armies of China.

EDITORIAL NOTES.

YUSHU KWAN STATISTICS.

ALTHOUGH spoils taken from the Chinese have hitherto been exhibited in half a dozen different places, the Yushu Kwan, or Arsenal, attached to the Yasukuni Shrine at Kudan, Tokyo, has been the great centre of attraction. The first flags, uniforms, and weapons were there exposed to public gaze about the 20th of August, and since that date the exhibits have constantly varied and increased in number. According to the vernacular press, the exhibition, during the period, August 20th-December 15th, was visited by no less than two hundred and thirty thousand people, of whom one hundred and eighty thousand were adults. The admission fee to the Arsenal itself is three *sen* for adults and one *sen* for children, and from these two sources the sums of 5,400 *yen* and 500 *yen* were obtained respectively. The exhibits have thus proved a famous drawing card.

While writing of the Arsenal and the Yasukuni Shrine—which, it will be remembered, is dedicated to the manes of the Japanese that fall in war—a touching incident, recently related by a Tokyo contemporary, is called to mind. Some evenings ago, noticing quite a crowd gathered at the foot of the long wooden flight of stairs leading up to the Shrine, a local police constable made investigations. He found that the people were waiting with respectful sympathy the

wild grief of a poor woman, who, with her baby on her back, had thrown herself on the stairs and given way to a paroxysm of tears. A few questions elicited the sad fact that the bereaved wife had that day received the news of the death of her soldier-husband in the field. She was penniless and knew not where to turn for help. A small subscription was raised for her on the spot, but the woman being quite distraught with grief, it was the police-constable who received the kindly offering and finally led the woman, still shaken with sobs, away to her lonely and poverty-stricken home.

A QUEER STORY.

WHEN Mr. Maruki, the well-known Tokyo photographer, opened a branch shop in Sôul some years ago, says the *Shin-Choya*, a Korean named In Kohai was employed in the shop as a servant. He was, however, dismissed shortly afterward on account of some offence committed by him. Last summer, when the Ming Cabal was overthrown and the new régime established in Korea, a great change took place in the personnel of the Korean Government. Many Koreans hitherto unknown in officialdom were given important posts, their names being duly made public in the columns of the *Official Gazette* and other vernacular papers of Japan. Among those names Mr. Maruki and his employees came across the name of In Kohai as having received a high post at Court. At first they wondered at the identity of the name with that of Mr. Maruki's shopman, but afterwards dismissed the thought, never imagining that the Korean Government could be so corrupt as to give a high post to a mere servant. They afterwards learned, however, that such was the case. The high Court dignity was no other than the In who had run errands for the Sôul shop. In a few weeks he was promoted to be a Councillor of the Department of Agriculture and Commerce. Some time afterwards the mystery was solved. Mr. Maruki received news from Sôul to the effect that In was frequently employed as a bearer of secret messages from the Tai Wôn-kun to the ringleaders of the Tong-haks, and that his elevation to the prominent position he then filled was a reward for his services. In's prosperity was, however, of brief duration. In the beginning of November he and another man were arrested and imprisoned on the charge of having incited the Tong-haks to rebellion. They were examined before a tribunal in which Mr. Uchida, Japanese Consul in Sôul, sat as assistant. Since then nothing has been heard definitely about In, but a rumour is now circulated to the effect that the Tai Wôn-kun, apprehensive that his sinister proceedings might be divulged through In, caused him to be murdered while still in prison. The *Shin-Choya* does not give full credence to the above story, but says that the Japanese authorities are carrying on secret enquiries into the affair.

UNEQUAL ODDS.

A STORY of unusual interest is related in the columns of the Tokyo press, almost unparalleled for the pluck and determination it describes. It appears that on the 22nd of last month the Japanese camp at Sokaton (Japanese pronunciation), a hamlet not far from Chin-chow, had been left in charge of Ensign Fukada and only thirteen privates. Suddenly this little maniple became aware that they were being surrounded by Chinese. In truth no less than three hundred fugitives from Port Arthur, burning to revenge themselves on the Japanese, began to attack the camp, firing first at long and then at short range, not doubting but that they could easily overpower the scanty defenders. But the Japanese fought with cool desperation and every shot of theirs told. A body of thirty soldiers from another camp tried in vain to break through the Chinese cordon and go to the rescue of their countrymen; but it was not until seven hours had passed that they succeeded in doing this. They found the thirteen heroic defenders in a condition of the utmost exhaustion, though none was mortally wounded. So soon as the relieving detachment had forced their way through, the Chinese turned tail in

every sense and fled. Ensign Fukada thereupon, despite his tremendous fatigue, started off in the direction of Chin-chow, to make a report to his captain. On reaching the latter town, in company of only one of the men who had fought so well, he at once approached Captain Saito and would have spoken, but the exertion and fearful fatigue undergone made it impossible for him to utter a word. After trying in vain to speak his eyes began to fill with tears. Collecting himself with difficulty he said "I owe my life to my country," and was again silent. Seeing that further speech on his part was impossible, the soldier beside him took up the tale and related the tremendous odds they had successfully combatted with. The captain was stirred to enthusiastic admiration by the narrative and looked around for something to give the ensign. Finding nothing, he wrenched off his cuff-buttons, handed them to Fukada, and then tearing the tassel from his sword gave it to his no less brave comrade.

SAKATA.

DETAILS concerning the recent great earthquake in Niigata, and the fearful cataclysm that befell Sakata and its suburbs are now, in the absence of any very exciting news from the seat of war, taking up considerable space in the columns of the metropolitan press. One of the streets that suffered most was Honcho, the fourth ward being the scene of a series of the most appalling disasters. After the great shocks, and while the earth was still trembling, a number of people in a house in this ward ran across the street to the warehouse of a manufacturer of those huge earthen jars known as *kame*. The fire which followed the earthquake, reaching this place, the miserable refugees first put the children with them into some large jars, and finally themselves entered others. But the remorseless flames soon seized upon the warehouse, the roof of which shortly afterwards fell in, pinning the refugees in the jars and slowly roasting them alive. Excavations in this place have revealed a most deplorable sight; five men, three women and the above-mentioned children being found in attitudes expressive of the utmost torture. The details are too horrible to reproduce.

The name of Homma Mitsuteru ought, in this connection, to go down to posterity in company with Godefroi and Peabody. We referred to this gentleman some weeks ago, and stated at the time that he was the wealthiest citizen of Sakata and had lost eighteen godowns with their contents in the fire. It now appears that his losses have amounted to no less than one million yen, eighty-two of his godowns being utterly destroyed, with thirty thousand *koku* of rice. With all this, Mr. Homma has not spared the remainder of his great wealth in the interests of his fellow-citizens. He is now spending more than three hundred yen daily in feeding several thousand destitute people; over eight temples, schools, charitable establishments, and the like are being rebuilt for the convenience of the public at his own expense. Indeed, so lavish is he of his great wealth that it is rumoured that he is rapidly impoverishing himself. The people of Sakata and the vicinity look up to him, says a provincial contemporary, as they would to a god.

A BOY CAPTIVE.

A LITTLE Chinese boy, only 12 years of age, is now in the office of the Yusen Kaisha at Ujina. He was recently brought from Port Arthur by Mr. Matano, a gentleman in the service of the steamship company. It is said that when Port Arthur fell into the hands of the Japanese, a little boy was found in one of the hovels of the city crying bitterly by the side of the corpse of an old Chinaman. A civilian in the 1st Battalion of Artillery took pity on the child and led him to the camp. For two or three days the boy wept continuously, but at the end of that time he seemed somewhat comforted and told his story to the Japanese. It seems that he is a native of Tang-chow, in the province of Shantung, and that he has been an orphan for some years. The corpse, by the side of which he was found, was

that of his uncle, the keeper of a liquor-shop in Port Arthur, who had taken him under his protection. The civilian felt deep compassion for the lad on hearing his fate, and applied to Headquarters for permission to bring him up. This was at first refused on account of the child being a subject of the enemy, but through the kindness of Marshal Yamagata and a staff-officer the application was subsequently granted, and the boy was placed under the protection of the benevolent civilian. He was subsequently transferred to the care of Mr. Matano, who brought him to Ujina. Although timid and silent at first, he has now become familiarized with the place and people and appears to be happy. He is said to be a very bright lad.

THE MINGS AND CHINA.

A TOKYO contemporary is responsible for the statement that the Ming family in Sôul are outraged at the present turn of affairs. They see themselves and their servile partisans ousted from active participation in misrule, and resent the interference of Japan. Long since accustomed to find in China a ready coadjutrix, they have ever been willing to sell their own country to its pseudo-suzerain for the sake of momentary gain and autonomic power within limits. They are now doing their utmost to re-open negotiations with China, in order to regain a portion of their lost power. Of this there seems to be proof indisputable. A few days ago a Japanese constable seized a suspicious-looking man just as he was stealing out of the back part of the palace-grounds in Sôul. Letters found on his person showed that he was a secret messenger of Ming Eishun, and was on his way to Jinsen, there to join another man awaiting his arrival, with whom he was to proceed to Tientsin and carry cipher despatches to Viceroy Li. The contents of the letters carried by this go-between are not divulged, but they are alleged to be of prime importance, as they discover the existence of a widespread cabal aiming at the subversion of Japanese supremacy in Korea and the attendant restoration of the Mings. Vigilance has been redoubled in consequence of this discovery, and a strict guard is being kept over the malcontents. Nothing worse could possibly befall the Peninsula than to have the Mings again in power: unscrupulous and merciless aristocrats, who are lost to all sense of patriotism or open shame.

THREE SCAMPS.

ON the 7th instant the residence of the headman of Inara-mura, Oragôri, Gumma Prefecture, was approached by three men, who, with grave mien and authoritative bearing, demanded instant admittance. Two of the men were well-dressed in foreign style, the third wearing silken *haori* and *hakama*. Quite overpowered by the "style" of visitors, the rustic official begged to be acquainted with their names, and was both delighted and bewildered to learn that he had the honour of entertaining no less personages than the judge and public procurator of the Maebashi District Court, who had brought a first-class detective with them. They regretted to have heard of certain irregularities in his accounts, remarked his worship; this was a domiciliary visit rather than one of courtesy. It was their painful duty to make a thorough search of the premises, and he must by no means obstruct them in their unpleasant duty. Conscious of his rectitude, the headman began making some incoherent protests, but finally yielded to the seemingly inevitable, especially as the rank of this unwelcome guests forbade all interference with their actions. After rummaging about for a while they came across a package of bank-notes amounting to six hundred yen in all, and with sundry nods and whispered comments seemed to believe this to be the sought for *corpus delicti*. Turning towards the astonished headman, they remarked that they "regretted" being compelled to impound this sum, which they must take with them at once to Maebashi, whither he should shortly repair. The bereaved villager again offered a protest, but was cut short, and the visitors bowed themselves out. It took some

time for the headman to collect his disordered faculties, but when this operation was finally concluded he made his way to the nearest police-station to find out all about the dreaded judge and his henchmen. Then he soon learned that he had been the victim of an elaborate and successful fraud, the pseudo-legal luminaries being nothing less than swindlers. Instant measures were taken to arrest the three scamps, but the birds were too wary and are still at liberty.

MR. OTANI KAMEI.

The members of the Yokohama Tea Guild have presented a gold cup, accompanied by a letter, to Mr. Otani Kamei, their Chairman, in recognition of his services. The letter is to this effect:—The Guild was organised in 1884 and since then Mr. Otani has fulfilled the responsible duties of its Chairman with the most indefatigable assiduity. The Tea Guild was one of the first of its kind formed in Japan, and it was solely due to the wise management of Mr. Otani that the credit of the Guild increased, and that it contributed in a great measure to the development of one of Japan's most important industries. His relation to the Guild has been and is—for he still occupies the chair—that of a kind parent to his child. He has made its success his own, and has diffused a cordial and brotherly spirit among its members. He was constantly on the watch for the extension of the foreign export of Japanese tea, and the expense to which he was put by undertaking trial sales in Europe and America was not trifling. The successful enterprise at the World's Fair in Chicago, the Tea-house, was in no small measure due to his exertions. The zeal with which Mr. Otani furthers the interests of the tea industry cannot be too much admired. His name is respected not only in the circles of the tea industry but in the whole business world. The members of the Guild consider themselves most fortunate in having such a Chairman over them. Now that he has filled that office for a decade they think it due to him to show their respect and gratitude in some substantial way, however modest the memento may be.

DEATH OF MR. HOPPIUS.

SAYS the *Daily Press* of the 13th inst.:—The colony was saddened yesterday afternoon by the death of Mr. H. Hoppius, one of the oldest and most respected residents. Mr. Hoppius arrived in Hongkong in 1862 when he was twenty-one years of age, to join the firm of Messrs. Siemens and Co. In 1860 he was made a partner in the firm, and during the last twenty-five years he has been one of the leading men in local commercial circles, his sound business knowledge and ability being invaluable on the boards of the Hongkong and Shanghai Bank and the various Public Companies with which he was connected. Socially he was most popular, not less with the British community than amongst his own countrymen, and his presence was always warmly welcomed at any convivial gathering. He had been the President of the German Club since the establishment of that institution. He was also one of the senior Stewards of the Races and took a keen interest in all sporting matters. Notwithstanding his long residence in the East, Mr. Hoppius enjoyed robust health until a month or two ago, when a painful change was noticed in his appearance, and after a time his illness was found to be cancer in the stomach, to which painful disease he succumbed. As soon as the news of his death became known yesterday afternoon the flags at all the hongs were half-masted and expressions of regret were heard on every hand.

PRINCE WI-HWA'S RETURN TO KOREA AND THE SOUL VEGETABLE MARKET.

THE return of Prince Wi-hwa from his mission to Japan as special envoy, has been followed by a sudden rise in the price of vegetables in Sôul, say the Tokyo papers. Koreans are very fond of pickled vegetables, which they call *kimche*. This is an indispensable dish on their tables, corresponding to the Japanese *ko-ko*. When the season for preparing *kimche*

arrives, it is not uncommon to hear Koreans say that they have not had time to eat their dinners for several days. It is said that a wealthy Korean spends several hundred *yen* a year for the preparation of this article of food. Autumn is the usual time for curing the vegetables, but owing to the disturbed state of the country, the citizens of Sôul did not follow their usual custom this year. When, however, Prince Wi-hwa returned from Japan, and it became evident that Japan has no evil intentions towards Korea, but that she is ready to help and protect her neighbour when any grave trouble demands it, the apprehensions of the citizens of Sôul were removed, and they at once set to work to prepare their *kimche*. The vegetable market is consequently in a flourishing condition.

MASONIC GATHERING.

THE quarterly communication of the District Grand Lodge of Japan, was held in the Masonic Temple, Main Street, Yokohama, on Saturday evening, under the presidency of the R.W. D.G.M. Bro. W. H. Stone. There was a large attendance. The District-Grand Officers were installed as follows:—

Wor. Bro. Thornecraft, D.D.G.M.
Wor. Bro. E. Flint Kirby, D.G.S.W.
Wor. Bro. F. Reiz, D.G.J.W.
Bro. A. R. Morgan, D.G. Chap.
Wor. Bro. G. Hodges, D.G. Treas.
Wor. Bro. W. K. Burton, D.G. Reg.
Wor. Bro. H. Moss, Pres. D.B.G.P.
Wor. Bro. O. Keil, D.G. Sec.
Wor. Bro. H. J. Sharp, D.G.S.D.
Bro. Clay MacCauley, D.G.J.D.
Bro. G. McDonald, D.G. Supt. Works.
Bro. F. Marshall, D.G.D. of C.
Bro. T. Browne, D.G.S.B.
Bro. Alf. Wooley, D.G. Org.
Bro. Stan. E. Unite, D.G. Pur.

Stewards: Bros. E. L. Conan, Yokohama Lodge, No. 1093; S. L. Goldman, Otenosama Lodge, No. 1263; P. S. Lalcaca, Rising Sun Lodge, No. 1401, and Ernest James, Tokyo Lodge, No. 2015. During the course of the proceedings, W. Bro. L. D. Abraham, in the name of the four lodges of the district, presented R.W.D.G.M. W. H. Stone with a handsome complimentary jewel, the Lodge having attained its 21st anniversary. A banquet followed, and at its close Bros. Sharp, Unite, Pallister, Browne, Rosenfeld, Griffin, Delf, and others contributed a programme of vocal and instrumental selections and some recitations.

"MY JAPANESE."

We don't know who "S.L.G." may be, but we compliment him (or her) upon a very pleasant little jingle of rhymes with an appropriate setting to music, just published in the form of a topical song by the "Box of Curios Printing Office." The six verses of the song are all good, but we shall confine ourselves to quoting the third:—

The second in importance is
The Riksha-man by long.
He's on the go from dawn to dark,
Knows every shop and hang.
As long as you have tipped him well,
He's smart and quite polite,
But when you pay him proper fare
He'll shout with all his might:—
Dannasan, taranai
Mo fu sen, taihen hayai.

CHRISTMAS DAY.

BRIGHT, mild weather prevailed in Yokohama on Christmas Day, rendering the holiday additionally pleasant. Good congregations attended at the churches, and the services at Christ Church and Union Church were very hearty. Both of these sacred edifices were lavishly decorated with evergreens and flowers by lady members of the congregation. In the harbour several of the vessels dressed-ship. H.M.S. *Plover*, a detachment of whose men attended church on shore, was tastefully garlanded in evergreen, with a huge bunch of mistletoe hung between the masts as a central ornament. During the afternoon a game of football was played on the Cricket-field, a good many participating. In the evening the Christmas tea and ships' entertainment took place at the Seamen's Mission and proved a great success. Over one hundred seamen were present at the tea, and one

hundred and twenty-three were present at the entertainment, which began promptly at seven o'clock. Each sailor present received a Christmas gift. The Christmas ship, a fifteen foot boat decked and rigged correctly, and brilliantly illuminated from stem to stern, presented a very pretty sight during the progress of the entertainment, at the close her cargo was unloaded by children and the gifts were distributed. By the kindness of the Yokohama Engine Works a large steam launch was placed at the Chaplain's service to collect the seamen from their ships, and return them again at night when all was over. A hot dinner was provided at noon for all the poor men about town, and hot dinners will be furnished to these men daily as long as the provisions last. A sufficient number of gifts from the ship's cargo were reserved to be presented on Boxing Day to the sailor patients in the four foreign hospitals on the Bluff. Mention should be made of the very able manner in which several seamen contributed to the success of the evening's entertainment.

MR. HOSHI ON THE WAR.

THE following is the gist of Mr. Hoshi's speech delivered at a political meeting held by the Radicals at the Kinki-kwan on the 22nd inst. The subject may be briefly treated, he said, by dividing it into four sections, namely, (1) whether European Powers are in any way entitled to interfere in the matter; (2) whether China will continue the war; (3) whether it is possible for Japan to enjoy the advantages accruing from her victories; and (4) whether any plan suggests itself that will enable her to enjoy those advantages. Mr. Hoshi's opinion on the first point was that the law of nations does not justify the interference of foreign Powers in a war like the present. As to the question whether or not China will hold out, he was inclined to think that she would, the thought that Japan will demand the cession of a portion of Chinese territory besides the payment of an indemnity should China sue for peace, will most likely rouse her energy and induce her to continue the war until her last resources are exhausted. The third point, observed Mr. Hoshi, is very important, for when it comes to the question as to how Japan shall deal with the vanquished giant, the European Powers, especially England and Russia, will, it is needless to say, step in for the simple reason that the two are competing for influence in the Orient. Should Japan in that case reject all such interference and make up her mind even to wage war with those two Powers? That is a question that requires the most careful deliberation. Supposing that Japan were to decide to yield to the above mentioned Powers, should she not bring the war at once to a close, it being ridiculous to continue it when a victory obtained at the cost of 150 million *yen* is to bring her no benefit? Mr. Hoshi considers, however, that Japan should not stop half-way in the gigantic enterprise she has undertaken, and the question how to carry it out brings us to the last of the four given points. Diplomatic secrecy, said Mr. Hoshi, forbade his giving any precise statement, but in his opinion success or failure depends upon the ability of diplomats. On the whole, he remarked in conclusion, China can do no better than follow the example set by the Great Powers in the case of Poland.

MR. CREELMAN IN THE "WORLD."

THE following appears in the *San Francisco Chronicle*:—

It may be said with truth, however, that the inventive faculty is not peculiar to the correspondents of the Japanese newspapers, but that it has burgeoned and bloomed in the minds of some of those who write for the American press. I have before me James Creelman's vivid description of the battle of Ping-yang, which appeared in the *New York World* and a *San Francisco* newspaper on October 24th.

It was skillfully framed to convey the idea that the author was an eye-witness of the fight. "Hear," said he in a prefatory spasm of fine writing, "hear the story of the storming of Ping-yang by the Japanese army, and hear it from one who writes by lantern light from the outmost ramparts to escape

the terrific sound of victory that roars between the shattered walls of the old city." He then proceeds to describe the battle, which took place on September 15th, in stirring descriptive paragraphs like these:

"Now came a most magnificent spectacle of battle. A body of Manchurian cavalry, mounted on snow-white horses, descended from the north-east angle, galloped along the road skirting the city's western wall, and at the southern end of the road suddenly wheeled and charged down the valley where Nozu's troops were stretched across from hill to hill. On went the splendid troops of warriors, and the earth shook as they thundered into the valley with their long black lances set and their pennons dancing from the shining spear points. Few were armed with rifles and bayonets. On, on, over the stream and through the rice fields, the leaping mass of blue and scarlet rising and falling on the white billows and bristling with steel. Not a man stirred in the Japanese lines as the Manchurians swept down on the centre, prepared to cut their way through and escape.

When the cavalry were within 150 feet the earth seemed to open and vomit smoke and flame, and the whole infantry and artillery lines opened fire upon the doomed horsemen. Horses and riders went down together and were piled up in heaps. Forty of the cavalrymen escaped through the line, but were completely annihilated by a separate company of cavalry in the rear. Three hundred of the Chinese cavalry, also on white horses, charged from the hill flanking the western side of the twenty forts. The dense cloud of smoke in the valley prevented them from learning the fate of their comrades who had preceded them. As they galloped across the slope the Chinese artillerymen cheered them. Down into the gray mist of death they went, and when they reached the valley the Japanese line fell upon them. Not a man escaped."

One may well believe that after such a conflict the victors made enough noise to drive the most callous war correspondent to a quiet corner on the uttermost ramparts of Ping-yang; but how Mr. Creelman could have been put to that discomfort when the register of the Grand Hotel of Yokohama denotes his presence there as late as September 15th, the very day when the far-away Korean struggles had been fought out, is one of those questions which cannot be solved without putting trouble on the mind.

Possibly Mr. Creelman, who was in Tokyo on the 16th, and later made his way to Hiroshima, was only present on the field of Ping-yang on the 15th in his astral body. Even that explanation seems faulty, because an astral body would not have been likely to take umbrage at the sound of victory, or any other sound, however terrific it might have been.

"VICTORIA AND ITS RESOURCES."

We have received a copy of a really beautiful volume entitled "Victoria and its Resources." The author is Mr. E. Jerome Dyer. He commences with a history of Australia from the time of its discovery until the enactment of Victoria's constitution, and then proceeds, in chapter after chapter, to describe the social life, the physical geography and geology of Victoria, its horticulture, its vine culture and wine production, its land settlement, its trees, its animal life, its irrigation and intensive culture, its agriculture, its live stock husbandry, its dairy industry, its finances, its tariff and so forth, the facts being excellently marshalled in every case, and, so far as we can judge, exhaustive. The work is profusely and beautifully illustrated by Messrs. F. W. Niven and Company's "Crisp Photo" process, and ought to be interesting not merely to those directly concerned in Australia, but also to every subject of a country that rears such magnificent colonies.

THE ALLEGED AUSTRIAN BARON.

MR. UYAKI, Chief of the Yokohama Settlement Police Office, appeared before the Austrian Consular Court on the 21st instant, and gave evidence as to the arrest of William Grüner, who attempted to obtain a large sum of money by fraudulently using the name of a young English tourist, named Frederick Bullock. Grüner, who confessed to the crime, will be sent home by the next mail for trial.

CALENDARS.

ONE of the prettiest calendars we have ever seen is that of Mr. K. Tamamura, the well known photographer of Yokohama. It is a moonlight scene, apparently in platinum, with

an ample margin of finely chagrined white cardboard, on which are scattered boughs and leaves of maple, some of the leaves floating down a stream in the left lower margin. These calendars are a feature of the age in which we live. To our grandfathers the idea did not present itself that a vehicle for recording the days and months might be converted into a domestic ornament. But an artistic spirit has gradually pervaded the time. Mr. Tamamura's calendar deserves to be framed and hung up.

"STAR IN THE EAST LODGE, S.C."

THURSDAY being St. John's Day, the Installation of the W.M. and Officers of Lodge "Star in East," 640, S.C., duly took place. One of the largest assemblages of the Craft in Yokohama greeted Wor. Bro. Andrew Patterson when he rose to install R.W. Bro. T. E. Beatty as W. M. for the ensuing year. The ceremonies were most impressively gone through, the officers invested being:—

R.W.M.	T. E. Beatty.
I.P.M.	J. T. Griffin.
D.M.	A. Patterson.
S.M.	J. Diack.
S.W.	H. W. Lea.
J.W.	J. Turnoe.
Treasurer	C. A. Petersen.
Secretary	J. T. Griffin.
Organist	H. I. Choppe.
D. of C.	R. McCance.
S.D.	A. R. Clark.
J.D.	J. S. Robinson.
I.G.	E. C. Fox.
Steward	W. H. Forbes.
Steward	A. J. Hare.
Tyler	H. Ivison.

A banquet followed, during the course of which the usual Masonic toasts were duly honoured.

YOKOHAMA LITERARY SOCIETY.

THE one hundred and fiftieth meeting of the Yokohama Literary Society took place on Friday evening at the Van Schaick Hall. Owing to the exigencies of "mail-night," the attendance was not so large as might reasonably have been expected. As is the usual custom on the occasion of the last meeting of the Society in the old year, the programme consisted principally of musical selections, vocal and instrumental, though two readings having special reference to this season were given. The first of these was by Mr. W. F. Page, being a gossip essay upon old choir-singing of a hundred years ago. Mr. Page gave several illustrations of the queer pointing indulged in in those days, with particular reference to the old-fashioned fugue, which aroused a good deal of merriment. Mr. Sargent's reading was upon a Christmas Dinner partaken of in the Eastern States under peculiar circumstances. Songs were contributed by Mr. Townley, Mrs. Campbell, Mrs. Walter, and Miss G. Vincent: instrumental pieces being given by the President, Mr. Griffin, and his daughter, Mrs. Alexander, Mrs. Poole, Mr. Ramseger, and Mr. Poole, jun. Mrs. Walter's rendering of Tennyson's "Crossing the Bar," was very lovely. Both Mr. Townley's songs were re-demanded, but he only gave one encore. Miss Vincent's song, "When the children are asleep," was very prettily sung. "The star of Bethlehem," Mrs. Campbell's contribution, was warmly received. At the next fortnightly meeting of the Society, Mr. G. H. Scidmore intends giving an illustrated lecture upon Fiji and its people, which should prove very attractive.

COOLIES WITH THE SECOND ARMY.

FROM correspondence appearing in the vernacular press it seems certain that the coolies despatched with or to the Second Army are altogether a better lot than those sent to Korea immediately after the declaration of hostilities. In the earlier instance the rule followed appears to have been "first come, first served," the consequence being that little or no discrimination was exercised in the choice of proper men, complaints of the general unworthiness of the majority having been both loud and frequent. At present the applicant has to come up to quite a high standard, or is sure of dismissal. Among the last batch sent down to Hiroshima there were many of quite exceptional strength.

According to the *Yomiuri Shimbun*, a series of public tests was recently made of their lifting powers, and one, Seijiro, is said to have easily handled and carried on his shoulders a weight of not less than 70 *Kwamme*, or a little short of six hundreds pounds. Coolies hailing from the northern provinces are now given the preference, not only on account of their better resistance to cold but also because they are physically better proportioned and accustomed to a degree of exertion unknown to the labourers of warmer latitudes. On the other hand, these northerners are said to be always keen for a fight. But even out of the unpromising material set with the First Army a body of very sturdy and serviceable men has been formed; the objectionable characters have been gradually weeded out, and the reports as to their bearing are much more favourable than at first. The fondness for loot, however, seems ineradicable.

THE PRIVATE THEATRICALS IN TOKYO.

WE are requested to state that the gross takings in connection with the Private Theatricals in Tokyo were \$1,689.50, and the total expenses, \$332.88. The balance (\$1,356.62) has been handed by Madame La Baronne d'Anethan to the Red Cross Hospital. The Committee desire us to convey their hearty thanks to the various persons who assisted to bring about this most successful result, and to the newspapers that kindly inserted advertisements and notices about the Theatricals. We can not remember that such financial success previously attended any charitable effort of the kind in Tokyo.

ATTEMPTED SUICIDE BY A CHINAMAN.

THE *Boyei Shimbun* says that Ho Kwai-so, a Chinese employé at No. 33, Yokohama Settlement, was lately arrested by the Settlement Police on a charge of having used opium. The Chinaman was sent on the 26th inst. to the Chihō Saibanho for trial. About half-past four o'clock the same afternoon the man took up a knife, which was laying on a table near another prisoner, and stabbed himself in the abdomen in thirteen different places. The constables were then called in and deprived the man of the weapon. Dr. Yamanaka Ryoze was promptly on the spot and bound up the wounds, after which the Chinaman was taken to Tobe Prison.

RAILWAY ACCIDENT.

AN up-train which started from Kumamoto on the 19th inst. at 6.30 p.m. ran into a luggage train which was proceeding in the same direction. The locomotive, four freight cars, and two passenger carriages of the former, and two cars of the latter train were derailed. A brakeman was slightly injured. All the passengers were safe. The trains were passing along a curved line, and in the darkness, the light of the luggage train was not perceived until the collision occurred.

"THE TRUTH ABOUT THE WAR."

WE reproduce elsewhere from the *Boston Transcript* an article by Mr. Clay MacCauley on the causes of the present war. The editor of that journal refers to it in very complimentary terms:—"The history of the diplomatic struggle about Korea and its gradual change to war, is told by a correspondent of the *Transcript* with a fulness and particularity of detail which we have no hesitation in saying we have not seen equalled."

THE SAILING CLUB COMMITTEE.

MR. W. W. CAMPBELL informs us that he was not elected to the Committee of the Yokohama Sailing Club at the annual meeting on Monday last, there having been an error in counting of the votes. The Committee elected were Messrs. Scidmore, Averill, Laffin, Salabelle, and Weston.

MR. MITSUHASHI.

IT is stated that Mr. Mitsuhashi, ex-Secretary of Kanagawa Prefecture, has received private intimation of the Government's intention of appointing him Chief of the Japanese Civil Administrative Office at Chin-chow. He leaves for Hiroshima on the 30th inst.

WAR NEWS.

SATURDAY, DECEMBER 22ND.

A telegram from Shanghai published by the *Shogyo Shimpō* says that scouting parties of the Japanese Army have made their appearance in Lao-yang, and that three thousand fugitive Chinese troops from Hai-cheng have passed through that town making for Mukden, evidently too much demoralized to offer any resistance whatever. The telegram adds that Mukden is in a state of great excitement, a rumour being prevalent that Marshal Yamagata, at the head of 200,000 men, is on the point of attacking the city. This telegram is dated 10 a.m. on the 20th. There is, of course, nothing impossible in the intelligence that a column of Lieut.-General Katsura's forces has entered Lao-yang. Hai-cheng was in Japanese possession on the 13th instant, and from Hai-cheng to Lao-yang the distance by the high road is only 40 miles. If the Japanese have possession of Lao-yang, Mukden is at their mercy.

The Pekin Government, says a Shanghai telegram sent from Hiroshima to the *Hochi Shimbun* at 11 a.m. on the 20th instant, has commissioned General Tsang Kwo-chung to raise an army of 50,000 men in Shantung. The Government undertakes to arm and equip the troops, and the army is to act independently.

Fugitive Chinese soldiers have made their appearance in Chang-tien, near the Yalu river, says the *Kokkai*, and have stolen goods and food from the inhabitants to such an extent that the latter have made application to the garrison in Chiu-lien for protection against the marauders. A company has accordingly been sent against them.

The garrison in Newchwang is now put at only 5,000 or 6,000. They are said to be engaged in building forts.

According to the *Shogyo Shimpō* the troops now massed at Shan-hai-kwan aggregate 60,000. They are said to be composed of the following:—

The Viceroy Li's Chihli-tien forces	2,500
General Hanneken's recruits	3,000
Manchurian troops	1,500
Aihwui new levies	35,000
Hunan new levies	10,000
Kwangtung new northern levies	8,000

Total 60,000

The *Yiji Shimpō* makes a calculation as to the extent of the territory occupied by the Japanese forces in Manchuria. It says that the length from east to west is 104 Japanese *ri* and from north to south 35 *ri*, the total area being 1,840 square *ri*. We do not follow the calculation.

A telegram from Hai-cheng to the Headquarters at An-tung says that the Chinese forces in T'wan-tien and Kaiping have apparently retreated towards Ying-ken and Newchwang, and that an attempt made to send a letter from Hai-cheng to the American consul in Ying-ken was unsuccessful, the messenger having been unable to make his way through the enemy.

The Korean Government, says the *Kokkai*, has issued regulations for the protection of Chinese merchants. The gist of them is that the Chinese are restricted to Ninsen, Söul, Fusan, and Gensan, and are not allowed to go into the interior; that immediately on arrival at any of those settlements they must register at the local office; that if they commit any offence they are to be punished according to the laws of Korea, and that they may be deported if they offend repeatedly.

MONDAY, DECEMBER 24TH.

A telegram from Shanghai, dated 8.57 a.m. on the 21st, says that the Japanese forces occupied Kaiping on the 18th instant, the garrison of the place, under the command of General Sung, retiring precipitately to Yingkow, and the foreign residents making their way south to Chinchow. News from Shanghai is generally untrustworthy, but in this case confirmatory intelligence is published by the Domestic and Foreign News Agency, which adds that the capture was effected by the Second Army on the 17th and 18th instant, without any casualties.

Arrangements have at length been effected, writes the *Kokkai*, for the employment of the celebrated General Liu Ming-chuan. He is to march north soon at the head of 50,000 men. The Pekin Government has already issued the necessary orders, and arms and ammunition for his troops are to be transported from Kwang-tung and Fukien. Liu distinguished himself as the leader of the Black Flags during the "State of Reprisals" of 1884-5. He managed to give the French considerable trouble in Tonquin, but we doubt whether he is greatly to be dreaded as a general in a strange district.

The *Kokkai* publishes a telegram from Hiroshima saying that after all, the Peiyang Squadron has managed to effect its escape from Wei-hai-wai, and has taken refuge in a harbour about 100 miles south of Shanghai. There has been a great deal of irresponsible talk about Admiral Ting and his vessels being blockaded in Wei-hai-wai, and about the Japanese Squadron having placed torpedoes to prevent the exit of the ships, but it is not an easy matter to blockade a fortified harbour effectively when the guns mounted on the forts are sufficiently powerful to keep ships at a respectful distance. If, however, Admiral Ting has really taken his squadron away from Wei-hai-wai, and put it in an unprotected harbour, there is no reason why the Japanese should not find and attack him.

The *Hochi Shimbun*, commenting on the fact that whereas the Japanese troops, after taking Hai-cheng, were expected to move at once against Newchwang, they did not do so, but turned southward to Yingkow, justly notes that it would have been dangerous to push westward leaving a strong force of the enemy undispersed on the south at a distance of only 20 miles. Yingkow taken, the command of the Liao river is secured, and Newchwang becomes indefensible.

We have now an accurate account of the march of the Left Wing of the First Army from Sui-yen to Hai-cheng. Were we to reproduce it as telegraphed from Headquarters, it would be almost unintelligible to our readers. The facts, put into comprehensible form, are these:—Thirty-five miles from Sui-yen and 19 from Hai-cheng is a walled town called Tomu-cheng. It having been ascertained that the enemy occupied this town and its environs in considerable force, dispositions were made in that sense. Three roads lead from Sui-yen to Tomu-cheng. The first is almost direct; the second leads northward for a distance of 20 miles and then turns westward toward Tomu-cheng; the third follows, roughly speaking, the circumference of an arc having the first, or direct, road for its chord. It was decided that the Japanese army should advance by these three roads. According, on the 9th of December, Major-General Oseko's battalions set out by the northern road, and Colonel Sato's troops by the southern, the main body remaining in Sui-yen until the following day, when it, too, marched out by the direct route. On the 11th instant at 11 a.m., the cavalry forming the advance guard of the main body came into collision with a small force of the enemy (at Rhtao-hotsu, 30 miles from Sui-yen), and drove them back without difficulty. A larger body, numbering about 2,000, was posted on heights in the neighbourhood, but on the approach of the Japanese centre at 3 p.m., these troops retired in the direction of Tomu-cheng. Meanwhile, the left wing under Colonel Sato had pursued its march by the southern road without encountering any resistance until it arrived within 4 miles (at Potsao-ho-ken) of Tomu-cheng, when its progress was opposed by the enemy's right wing, consisting of some 800 men. A brief skirmish sufficed to drive these troops back. The advance was not continued that day against Tomu-cheng, the Japanese centre halting for the night at Rhtao-hotsu, and the left at Potsao-ho-ken, both being within 5 miles of the point of attack. At dawn on the 12th instant the advance was resumed. The plan was a combined assault of the Japanese left and centre against the enemy's right, but it having been found that all his forces

posted outside Tomu-cheng had retired during the night, a battalion was pushed on at once to Tomu-cheng, reaching that place at 9 a.m. Thence, too, the Chinese had fled. Not a solitary soldier was to be seen. A column was therefore detached to pursue them, and the Japanese centre and left entered Tomu-cheng almost simultaneously. The right, however, under Major-General Oseko, having had a longer distance to march and having also encountered some opposition from a Chinese force of about 1,000 men, did not reach Tomu-cheng until a few hours later. In the afternoon of the same day (12th), the general advance was resumed, and after covering 7 miles the troops halted for the night at Yang-hwa-tien, being then within 12 miles of Hai-cheng. The following morning (13th) at daylight, the troops were again put in motion, and again the Chinese pursued their familiar tactics, leaving some 1,500 of their number to delay the Japanese outside Hai-cheng, while the main body retreated, without firing a shot, in the direction of Lao-yang (north) and Newchwang (west). The Japanese, finding themselves confronted by 1,500 of the enemy, apparently forming his van, deployed, and advanced to the attack, one battalion marching against the centre and two others under Oseko against the left. But before Oseko's assault could be delivered, the Chinese broke and fled. At 11 a.m., the Japanese entered Hai-cheng, detaching two columns to pursue the enemy toward Newchwang and Lao-yang. The Japanese losses in the two days fighting had aggregated 11 killed and wounded, among the killed being Lieut.-Colonel Sakakiwara of the staff. The enemy's loss had been about 100, together with considerable quantities of small arms and ammunition. It was found that very few of the inhabitants had left Hai-cheng. The advent of the Japanese forces was welcomed, the people bringing various gifts. On the 14th a temporary bureau for purposes of civil administration was established, and special measures were taken for the protection of Christians. It appears that Colonel Sato's force, constituting the Japanese left, did not enter Hai-cheng, but continued to advance on the road south of the Tomu-cheng-Hai-cheng route in the direction of Kaiping. This movement was checked at Shih-mien-ling, 18 miles away from Kaiping, Sato's scouts having reported that the enemy was massed in great strength at Twantien and Goton, in the environs of Kaiping. According to intelligence obtained from the people of the country, the Chinese troops in Kaiping and its vicinity consisted of 1,500 men under General Sung, 2,000 under General Seh, 2,000 under General Neh, 1,500 Mongolians, and 500 fugitives from Fu-chow, making 7,500 in all, besides whom there were 1,500 at Suelt-ts-ling, a point midway between Tomu-cheng and Kaiping. From the 15th instant these various bands began to retreat northward as though their intention was to fall back upon Newchwang, and it was reported that General Sung, at the head of 30,000 men, had commenced to march, but his destination remained uncertain. Meanwhile, it was ascertained that the garrison remaining in Newchwang did not exceed 500 men.

The above operations placed the Japanese forces in a position of great importance. Hai-cheng is on the high road from Kaiping to Lao-yang and Mukden, and is also situated at the point where that road is joined by the road to Newchwang. Thus posted, the Japanese were interposed between Sung's army and Lao-yang, on which place the Chinese would probably have desired to fall back, unless he choose to make for Yingkow and retreat towards China proper by the coast routes. He might, indeed, have remained at Kaiping, but as the Second Japanese Army was moving against that place from the south, and the Left Wing of the First Army had gained a position on the north, threatening also to sweep down to Yingkow and thus intercept the coast route, it became necessary for Sung to move out of Kaiping and open a line of retreat for himself in some direction. A glance at the map will show that by moving eastward he might

have struck a blow at Katsura's line of communications with Sui-yen, but the Japanese had guarded themselves against that kind of enterprise by the evolutions of Sato's forces. Sung, in short, had allowed himself to be caught in a trap. He was more than a week late in taking a decisive step and the result was the complete disintegration of his army. Leaving Kaiping on the 17th instant at the head of 10,000 men, he attempted to carry his army past Hai-cheng on the West, between that town and Newchwang, so as to strike the main road to Lao-yang at a point north of Hai-cheng. This manoeuvre carried him across the Japanese front, and on the 18th instant the Third Division of Katsura's forces marched to intercept him. At dawn on that day Major-General Oshima's brigade marched to a place called Hang-chia-shan, and on the following morning Major-General Oseko moved to Kai-chiatun. The two bodies then advanced together, and in the afternoon encountered the enemy a little to the west of Hai-cheng. Oshima's brigade and the reserves came into action first. The fight appears to have been one of the most stubborn hitherto fought by the Chinese. It lasted 5 hours, and was finally decided by bayonet charges, of which the Japanese made four before they succeeded in breaking Sung's array. The Chinese were finally routed. A portion fled westward and a portion southward, so that Sung's design of marching north for the defence of Lao-yang and Mukden was completely defeated. Spies now report that there are 2,000 Chinese with 2 field-pieces in garrison at Lao-yang, and 17,000 between Hai-cheng and Lao-yang.

Our readers will note in the above accounts a point requiring elucidation. The Shanghai telegram says that Kai-ping was occupied by the Japanese troops on the 18th instant, and the Domestic and Foreign News Agency adds that it was occupied by the Second Army without meeting any resistance. Lieut.-General Katsura's report, however, makes no mention of the capture of Kai-ping, but merely represents Sung as evacuating the town on the 17th and attempting to effect a junction with the troops massed to the north of Hai-cheng. Katsura being in command of a wing of the First Army might very naturally omit any reference to an operation performed by the Second. On the whole, it seems probable that Sung's retreat from Kai-ping was really in consequence of the advance of the Second Army against that place, and that the First and Second Armies have thus been working together.

The garrison of Chefoo is put at 3,000 by the *Kokkai*. Forts have been constructed along the coast, and a vigilant watch is kept.

WEDNESDAY, DECEMBER 26TH.

According to the *Yomiuri Shimbun*, the capture of Kaiping was effected, not by the Second Army, but by the left wing of Katsura's Division. We explained in our last issue that when Katsura advanced on Haichien from Suiyen his left wing under Colonel Sato operated on the south of the general line of advance, and ultimately confronted Sung's forces in the neighbourhood of Kaiping. The enemy was then found too strong to justify attack by Sato's small command, but on the 17th and 18th, as already related, Sung evacuated Kaiping, and by marching round westward of the position of the Japanese main body attempted to effect a junction with the Chinese forces massed between Haichien and Lao-yang, the result of which operation was the battle of Hungwasai, in which Sung suffered complete defeat. The *Yomiuri* now says that after Sung's evacuation of Kaiping, Sato's force marched in on the 20th instant and took possession of the place without meeting any resistance. That sounds probable, but if we accept it the operations of the Second Army remain to be explained. It was generally supposed that after the capture of Chinchow by the Second Army on the 6th instant, an immediate advance was made northward against Kaiping, 63 miles distant. But if that were the case, Kaiping should have been reached several days ago, however leisurely the march of the force detached by Oyama for the purpose. We conclude therefore

that the Second Army did not advance against Kaiping unless indeed the *Yomiuri's* telegram be incorrect. It is an equally reasonable hypothesis that Sung evacuated the town on the 17th in consequence of appearance of the Second Army on his south, and our readers will remember that a Shanghai telegram gave that explanation of his movements. The point must remain for the moment uncertain. We may, however, conclude that if the Second Army did not advance beyond Chinchow, it is kept within easy reach of Port Arthur and Talien for the purpose of taking part in some operation involving transport over-sea.

The account of the battle of Hungwasai, published in our last issue, said that the casualties were as yet unascertained. The *Nichi Nichi Shimbun*, however, quotes a telegram sent from Hiroshima at 11 a.m. on the 23rd instant to the effect that the killed and wounded on the Japanese side aggregated 200. That seems a very trifling loss when we consider that the enemy was 10,000 strong, that the battle lasted five hours and that the Japanese had to make four bayonet charges before Sung's forces were broken. The shooting of the Chinese must be phenomenally defective, but if, while inflicting comparatively little loss on their foes, they stand for five hours in front of rifles and guns that, according to all testimony, are pointed with remarkable skill, there can be no question that they possess some of the stuff of which good soldiers are made. The *Yomiuri* states that after the battle the Chinese troops had to cross the Liao river in their flight, and that numbers were drowned or frozen to death. The Japanese left a small force of troops to hold the ground, and the rest of the army returned to Hai-cheng.

It is reported that all the foreign residents of Newchwang have left the place, taking the overland route, presumably to Talien or to China proper. Our readers have probably been puzzled about the position of the Japanese army with respect to Newchwang. The fact is that the Chinese town of Newchwang and the foreign settlement of Newchwang are quite different places. The latter is situated about 13 miles from the mouth of the Liao river, whereas the former is 80 miles higher up the river, measuring along its sinuosities, and 30 miles distant by road. Little by little, owing to the silting up of the river, the original town of Newchwang ceased to be a trade centre, its place being taken by Ying-taz, or Ying-kow (called also Ying-ken) which is now known as Newchwang and is the site of a foreign settlement. The old town of Newchwang is now a place of scarcely any importance, with a very small population. From Hai-cheng a march of 13 miles to the west would have brought the Japanese troops to the original town of Newchwang, whereas they would have had to turn southward and cover 33 miles in order to reach Ying-kow. It is evidently their intention to take the latter place, but presumably they will encounter resistance. They may also find it necessary to march northward against Lao-yang (40 miles) between which place and Hai-cheng about 17,000 of the enemy are said to be massed. The statement that the foreign residents have fled from Newchwang overland, is explained—supposing that any such flight has taken place—by the fact that the Liao river is closed by ice during four months and a half—from the middle of November to the end of March—so that communication with the outer world is completely cut off, except by means of couriers from Tientsin or Talien. Of course the reason of an exodus of foreigners would be apprehension, not of the Japanese troops, but of the defeated Chinese braves.

The following extract from a letter written by a foreigner present at the taking of Port Arthur will interest our readers:—"You will no doubt have heard by this time everything there is to be said about the attack on Port Arthur. As one of the officers here expressed it to me the other day, 'la faiblesse des chinois est incroyable.' They certainly did not fight it out to the end at Port Arthur, as the very small numbers of dead Chinese soldiers found at their posts most plainly

showed. They kept up a heavy fire on the Japanese, as the latter advanced to the attack—both west and east. But their fire was ineffective, and this must have had a somewhat demoralising effect on them. At any rate, from whatever cause, they did not await the attacks, but left their positions before the Japanese reached them, except in the case of a very few men who remained in the most western fort and were killed at their posts. The Japanese Artillery fire was good, but my impression is that the range was rather too long for their shrapnel shells to be properly effective, and in the case of the western forts the Chinese position was so much higher than the Japanese that the defenders were able to get excellent cover. Of course, from the nature of the case, the Japanese Artillery had to be contented with a poor position—and if the Chinese gunners had been any good, the Japanese Field Artillery ought to be now non-existent. They were completely commanded by the Chinese, who were able not only to bring a frontal fire on them from the Western forts, but a flanking fire from at least one of the Eastern Forts, and from positions near the town. As it was, the Artillery duel went on for nearly an hour, and only one Japanese horse was wounded. The Chinese defence was a most disjointed one—and there was evidently no guiding spirit—whilst the Japanese plan of attack was well adopted to overcome such a defence. It would have failed I think against a good defence. The Japanese, however, evidently have a very small opinion of the Chinese soldiers, and this was exemplified again at Kinchow, on the same day as the capture of Port Arthur, when about 1,300 men defended a line of 2½ miles against some 7,000 or 8,000 Chinese, successfully driving them off, and pursuing them for some distance. We are quite in ignorance here of future movements—though it would be, I should think, a great mistake for Japan to halt now—in fact I think she has halted too long already. In the meantime, we are very fairly comfortable here. All the Japanese officers are exceedingly attentive and kind; and we have just had the Band playing to us in our own court-yard. I think I ought to add something more. First of all, the way everyone worked on the march from Ta-lien-wan was beyond all praise. All day and all night long the stores were being dragged forward, and there must have been very little sleep indeed for 3 nights; and especially was this the case with the siege artillery, who, with most inadequate means of draught (2, 3, or 4 ponies for each carriage), over a bad road, managed by the most splendid efforts, to get their guns into position by daylight on the 21st. We saw them start from Ta-lien-wan on the 18th, and we passed them on the road on the 19th. My companions declared there was no chance of their being at the front in time—but I was very much struck with the way they were working, and sure enough at 5.30 p.m. on the 20th they began to pass Headquarters. We were in the saddle at 2 a.m. on the 21st, and the guns were still on the road to the front, and at daylight they opened fire just after the Field Artillery began. It was first class. And I think one ought to say something of the Japanese Infantry. It is all very well to say the Chinese defence was weak, but that does not detract from the good work of the Japanese Infantry. It was a grand sight to see them advancing against the Forts—and I have no doubt whatever that their steady, rapid, unhesitating approach had more effect than anything else in making the Chinese defence weak. To wait for close quarters in those circumstances requires better soldiers than the Chinese, but a weak or hesitating advance might have proved disastrous."

The *Yi Shi Shimo* says that H.E. Chang Yui-wan, a member of the Tsung-li Yamén, has been appointed by the Chinese Government to proceed to Japan and sue for peace; that an Imperial Decree in that sense has been issued, and that the envoy will start in a few days. It is known that considerable pressure has been brought to bear on the Chinese Government, especially by General Brown, to induce it to take this

step, and that a promise to despatch an envoy was obtained from it some time ago. But whether there is a serious intention of accepting Japan's terms may well be doubted. We do not suppose that the present Japanese Cabinet would prove very difficult to deal with. But, on the other hand, we are equally convinced that China does not recognise her peril sufficiently to accept the minimum demands formulated by Japan. If she sends an ambassador, it will probably be merely to save her face; to show that she is not obdurately bent upon prolonging the struggle, and that she respects the counsels of the Great Powers. Meanwhile, several weeks must elapse before H.E. Chang reaches Japan, even supposing that he starts immediately. For he will have to proceed overland, taking steamer probably at Chefoo.

We read in the *Yiji Shimpō* that the Pekin Government recently ordered the Imperial Stores to be opened and the weapons kept there to be given to the troops assembled for the protection of the capital. Apparently these rifles and field guns were entrusted to the troops indiscriminately. Selection was made of those best disciplined and trained, and they were formed into an Army of Guards, all their old-fashioned muzzle-loaders, spears, and so forth being taken from them. It was expected that the exchange would be completely effected by the middle of this month, and that all the troops stationed between Pekin and Tungchow (18 miles) would be fully equipped by January 1st. The number of men to be thus armed was 80,000, and if to these be added 24,000, trained in Western tactics, it results that a force of over 100,000 men are now assembled to protect Pekin.

The troops that hang upon the east of the Japanese line of communications from Chiu-lien to Feng-hwan, having their head-quarters at Saimatsui, are said by the *Yomiuri Shimbun* to be of three kinds: first, a kind of local militia, the members of which engage in agricultural and commercial pursuits under ordinary circumstances but in time of war carry arms and take the field. These men offer no kind of effective resistance. Like the Tong-haks in Korea, they disperse at the approach of the Japanese, and re-assemble so soon as the latter retire. Secondly, bands of fugitive soldiers that have escaped from the various engagements. Thirdly, the forces of Kirin, which are fairly well disciplined and equipped.

The *Nichi Nichi* has an interesting note. It says that a certain Chinese of great wealth, who, when war broke out, left his home and took refuge at Pu-lan-tien, in the Lia-tung peninsula, lately came to the conclusion that if he remained there he should certainly be killed by the Chinese troops, and that his best plan would be to seek Japanese naturalization. He has accordingly set out for Japan, carrying with him 500,000 taels, which he will present to the Government in Tokyo. He is said to be worth many millions, and to have a complete household equipage of gold, silver, and jade.

Another encounter between Japanese troops and the Tong-haks is reported. It is the old story: no casualties on the Japanese side, 12 Tong haks killed, 9 prisoners, and various horses, cattle, rifles, ammunition, &c., taken.

THURSDAY, DECEMBER 27TH.

The battle of Hung-wasai on the 19th instant was evidently the most fiercely fought struggle that has taken place in the open during the war. The Chinese at Phyōng-yang made a protracted and obstinate fight, but then they were behind parapets. At Hung-wasai they were in the open, yet they stood for five hours, and received four bayonet charges before they broke. There seems to have been a great disparity in the forces engaged. According to the original accounts, the Japanese had acquired information of Sung's intention to try and force his way to a junction with the troops massed northward of Hai-cheng. But the *Hochi Shimbun* tells a different story. It alleges that Major-General Oseko had no idea of meeting the Chinese troops, but was on the march for Ying-kow

(Newchwang) from Hai-cheng when he encountered Sung's forces between Hung-wasai and Hachiaho. If that be so, Major-General Oseko can not have had more than 4,000 men under his command at the outside, for his force is spoken of as a detachment.

The Japanese losses, as given by the *Kokkai*, were:—

	Killed.	Wounded.	Total.
Officers	2	12	412
Sergeant-Majors	2	1	
Rank and File	50	345	

That is the heaviest loss sustained by the Japanese in any single engagement after Phyōng-yang since the commencement of the war. What the Chinese casualties were remains still unascertained, but there is no doubt that they were very large, especially if we include the men drowned or killed by cold in attempting to cross the Liao. Sung's attempt to effect a junction with the forces northward of Hai-cheng was completely defeated. His army of 10,000 broke into three sections and fled by various routes in the direction of Shan-hai-kwan. The distance from Newchwang to Shan-hai-kwan is about 200 miles, but of course it is not to be supposed that Sung and his braves are so demoralized as to make no rally on this side of the latter place. At any rate the advent of beaten troops flying for their lives has a distinctly demoralizing effect upon their comrades.

We read in the *Nippon* that General Liu Kwan-yi has been given command of the Tinnan-chuen army, and that General Sung is at the head of all the Chinese forces north of Chang-cheng. It may be presumed that after losing Fuchow and Kaiping without a show of resistance, and being signally defeated at Hung-wasai, Sung's credit with the Throne will be materially impaired.

The variety of estimates published with regard to the strength of the Chinese forces massed at Shan-hai-kwan and in the interval between that place and Taku, is bewildering. Recently we were told that the Viceroy Li had put the total at a quarter of a million, but the *Nippon* now says that the aggregate does not exceed 45,000, of whom the greater part are new recruits.

It was generally supposed that after the capture of Fuchow by a column of the Second Army under Major-General Nogi, the troops would push on to Kaiping. But the *Yomiuri* now tells us that they were for the most part withdrawn to Chinchow, and that Nogi set out from the latter town on the 13th instant with a regiment, taking the road to Pitszun, his object being connected with the line of military telegraph between that place and Takushan. The regiment left in Fuchow subsequently retired to Pulantien, where it is now quartered. There must be some ulterior object in keeping the Second Army thus unemployed.

The *Yomiuri Shimbun* says that a requisition for certain articles needed by the Japanese troops was levied on the citizens of Fuchow, but as everything was paid for there was no discontent whatever. The people of the locality are astonished at the discipline preserved by the troops.

Lieut.-General Nodzu telegraphing from Chin-lien under date of the 26th instant, says that, according to a report forwarded from Hai-cheng on the 24th, Sung's troops, after their defeat at Hung-wasai, at first fell back upon Newchwang and Yingkow, but subsequently retired to Tienchwang-tai, where they were joined by Ma's forces, hitherto stationed in Newchwang. At present there are no Chinese troops in Newchwang (by this Newchwang we understand the old town, 30 miles up stream from Ying-kow, not the present Newchwang, where the foreign settlement is). Cavalry scouts sent out on the 19th instant, reported that about 3,000 troops were advancing from Ying-kow by the sea-shore route, from which we understand an advance in the direction of Kaiping.

It is stated that the Korean Government has resolved to ask Japan for a loan of five million yen, and to issue paper money to the extent of fifteen millions.

The *Yiji Shimpō* says that there was much excitement at Chefoo after the fall of Port Arthur, every one believing that Wei-hai-wei would be attacked immediately, and that some wealthy Chinese merchants entreated the British Consul to have a thousand marines landed for the purpose of restraining the violence of the disorganized Chinese soldiery. The Consul, it is added, held a meeting of his colleagues to consider this strange request.

FRIDAY, DECEMBER 28TH.

Lieut.-General Nozu reports things in *statu quo* at Feng-hwan and in its neighbourhood.

The *Shogyo Shimpō* reports that Kung, the Taotai of Port Arthur, being interrogated by the Pekin Government as to the reasons of the capture of the place, replied that the event must be ascribed to the faulty plan of the fortifications, which were impossible to defend against a resolute attack. This answer has given great umbrage to General von Hanneken, and he is said to have addressed a memorial to the Taung-li Yamen, denouncing Kung, and laying the blame entirely on the defective character of the defence. That is a dangerous game to play. It naturally creates bad blood, and we are not surprised to learn from the *Shogyo Shimpō* that Hanneken's relations with the Chinese Generals are strained. Concerning the fall of Port Arthur, the most conclusive explanation we have yet heard is that the Chinese failed altogether to make any use of their infantry in the defence of the forts. They had ten thousand infantry in garrison, but they did not tell off a single rifle to the parapets, leaving their defence entirely to the artillery. Such, at any rate, is the account we have received, and it affords an ample explanation of the singular facility with which the place was captured. The strongest fortress in the world, if defended by artillery only, could not successfully resist resolute attack. The Chinese did use their infantry. They posted them to cover the town of Port Arthur, and a brief but hot struggle took place between them and the attacking column. Worse tactics could scarcely be conceived.

It is extremely difficult to discover the truth as to the whereabouts of the Peiyang Squadron. According to some of the vernacular papers it succeeded in making its escape some days ago from Wei-hai-wei and took refuge in a port about 100 miles south of Shanghai. Now, however, the *Yomiuri* says that a recent reconnaissance showed ten ships at anchor in Wei-hai-wei, and that on the approach of the Japanese scouting vessels the Chinese men-of-war got up steam but made no attempt to come out. We find it difficult to believe that the Peiyang Squadron has really left Wei-hai-wei and made its way to the south of Shanghai. That would mean total abandonment of the Gulf of Pechili, in other words, retreat from the scene of active operations. Some people hold that so long as the Northern and Southern Squadrons retain any fighting capacity China will not sue for peace. That is a view not without reason, but if the principal of the two Squadrons is to eliminate itself from the defences of the seat of government we do not see how it can contribute to China's confidence.

According to the *Asahi Shimbun* the troops assembled for the defence of Pekin number 133,701. That is the most minute estimate yet published, but as to its accuracy we cannot say anything. Our contemporary goes on to say that among these troops only 30,000 carry weapons of modern construction, but that orders have been issued for equipping the rest out of the Imperial stores in Pekin. In addition to the above troops, the *Asahi* says that 150,000 are massed about Tung-chow and Tientsin, of whom 20,000 are cavalry armed with rifled carbines, the infantry all carrying repeating rifles of Austrian or German manufacture.

KOREAN NEWS.

Quite a revolution has taken place in the Korean Ministry. Several of the Ministers, suspected either of intriguing to bring the Ming faction again into power or of otherwise obstructing the reform of the country, have been rejected and in their places men sincerely desirous of reforming Korea, appointed. Prominent among the new appointments are those of Boku Yeiko and Jio Kohan, the former as Minister of the Interior and the latter as Minister of Justice. Jio was a prominent coadjutor of the late Kim Ok-kyūn in his attempts to introduce a radical change into Korea, and has only just returned from America whither he went after flying to Japan from the pursuit of the Ming faction. The rank of the two new Ministers was restored to them before they entered the Cabinet and they had audience with the King. The Ministry is now composed as follows:—

Premier Kim Koshin.
Minister of the Interior..... Boku Yeiko.
Minister of Foreign Affairs..... Kim Inshoku.
Minister of Finance..... Gyo Ichu.
Minister of Public Works..... Shin Ki-yen.
Minister of Agriculture and Commerce..... Gen Seiyei.
Minister of Education Boku Teiyo.
Minister of Justice..... Ju Kohan.
Minister of War..... Cho Giyen.

Changes have also been effected in the Vice-Ministerhips. An Keijn is now Vice-Minister of Finance and Kim Kachin of Public Works, and the post of Secretary-General of the Cabinet is now filled by Yuki Chiyel. The Ministry is divided by the *Kokumin* into three groups, according to the principles entertained by each of them. The Ministers of Foreign Affairs, of Finance, and of Agriculture and Commerce are classed as Neutral Conservatives; the Premier and the Ministers of Education and of War are Moderate Progressionists, and the Ministers of Home Affairs and of Justice, Progressionists. The *Kokumin* considers that the new Ministry is composed of able men perfectly in accord with the policy to be pursued by Japan toward Korea. No Japanese can hope to have a Cabinet better composed, as it would be impossible to find men of greater capacity in Korea at the present moment.

The two combinations of malcontents, the Tong-haks and the Ming faction, are believed to have come to an understanding, and it is said that several ringleaders of the former secretly visit Sōul to consult about their intrigues with the leaders of the latter. Strict watch is therefore being kept on all the roads from the Tong-hak districts to the capital and travellers of suspicious appearance are obliged to undergo examination. The rebels are said to have since changed their route to Sōul and are seeking to reach it via Chemulpo to which place they go by sea. The police of Jinsen discovered that fact and succeeded in seizing two Tong-haks on the 12th instant who arrived at the port disguised as rice-merchants. The citizens of Sōul being greatly agitated by the secret plots of the Mings and Tong-haks, two more battalions have been despatched by the Japanese Government to strengthen the defences of the capital. These troops reached Chemulpo on the 12th instant.

The new Korean Government is engaging Japanese Councillors for the various Departments of State. Mr. Takehisa, Chief of the Japanese Police force in Sōul, has been appointed Councillor to the native police, and the other Councillors to be engaged are said to be Mr. Saito Shuichiro, as Cabinet Councillor, Mr. Okamoto, as Councillor to the War Office, and Mr. Nagashima, as Councillor to the Education Department. Mr. Niio, an official of the Okura-sho, was recently ordered to proceed to Sōul, and it is believed that he is to fill the post of Councillor to the Finance Department of Korea.

A railway has been constructed along the northern bank of the Tadong River reaching from the mouth to Phiyōng-yang. It was commenced on the 10th ult., and was to be completed in the space of one month.

THE CONSTITUTIONAL REFORMISTS.

The Constitutional Reformists held an ante-Parliamentary meeting on the 16th instant at their office at Kyobashi. More than 60 members were present, among whom we may note Messrs. Kusumoto, President of the House of Representatives, Suzuki Shigeto, Kawajima, Otagashi, Haseba, and Gamo, all members of the Diet. Mr. Suzuki occupied the chair, and a discussion took place as to the policy to be pursued by the Party at the coming session. It was decided that the present Ministry should be held responsible for the relative merits of the domestic and foreign policy recently pursued by the country. But that holding, as the Party does, that any grave matter affecting the destiny and prestige of the country ought to be dealt with in a cordial union of the whole nation, the question of the responsibility of the Ministry should be deferred to some future occasion. Affairs of State, however, should not be neglected even though the country is involved in a foreign war, and therefore the following important questions must be put to the Association composed of members of the Diet identified with the Party in order that it may decide whether they shall be introduced to the House as Bills for deliberation in the next session. The questions are:—Amendment of Press Laws, Election Laws, Local System, Organization of the Houses, Registration Laws, and Mining Laws; Abolition of Peace Preservation Regulations, Special City Government System, Game Laws, Laws of the Audit Office, Custom House Laws, Laws for Controlling State property, Preservation of Forests, Representation about the Extension of Navigation and the Control of Rivers.

In addition to bringing up the foregoing questions, the Party will endeavour to retrench the current administrative expenses in order to lighten the burden of the people, who may perhaps be asked by the Government to disburse more than usual on account of the extraordinary war outlay.

POLITICAL MEETING OF PROGRESSIONISTS.

The Progressionists held a lecture meeting at the Kinki-kan, Kanda, on the 17th instant. There were ten speakers, among whom we may note Messrs. Shimada Saburo, Vice-President of the House of Representatives, Ozaki Yukio, Tanaka Shozo, and Hadano Denzaburo, all Members of Parliament. The subjects were, as might have been expected, almost entirely connected with the engrossing topic of the day. The notorious "Tochigi contingent" first spoke on the question of Government finance. Next, he explained why he had voted for the war outlay of 150 million yen at the session held in Hiroshima, and then, with his usual indifference to sequence of ideas, he began to calumniate the *Nichi Nichi*. He was relieved of the trouble of winding up his confused speech by the police present, who forbade his proceeding any further. Mr. Hadano's subject was "An outside Glance at Japan." We hear foreign critics observe now-a-days, said he, that Japan's ultimate success depends upon her diplomacy. Some foreign papers even go a step further and venture to doubt whether Japan's diplomacy will be equal to her requirements. The people should attempt to aid the Government in bringing about a satisfactory result in that direction. "Chinese Policy" was the topic on which Mr. Ozaki aired his views. There is but one course to be pursued by Japan in her Chinese policy, said he, and that is to march her troops persistently onward till Peking is taken. Should China then declare herself vanquished and sue for peace Japan's sovereignty in the east will be established. Japan should demand the cession of the Liautung Peninsula, Formosa, and some important district on the eastern coast of China. The Peninsula is essential for the maintenance of Korea's undisturbed independence; Formosa, to safeguard against the encroachment of

European Powers, and a piece of the eastern coast of China as a starting point from which to enlighten the barbarous Chinese and to lead them out of darkness and ignorance. China of course will demur to those demands, continued Mr. Ozaki, but if she does so, Japan must be still more ambitious and must proceed to subjugate the whole of the Middle Kingdom, which will not be a difficult task. The last speaker was Mr. Shimada. He compared the present Chinese dynasty to the Tokugawa Shogunate in its last stage, and observed that, just as at the time of the Restoration the natural course of events necessitated the overthrow of the Regency, so also the present dynasty of China is doomed to fall. To Japan has Heaven entrusted the work of destroying it. He next dwelt on the intervention of foreign Powers and how little they are to be feared. Judging from the fact, he observed, that the French and Russian troops were considerably disgusted by the Chinese who are mere boys at fighting compared to the Japanese, the latter need never dread a strong European army. Japan should therefore pursue her original programme and continue to march her troops on. If China sues for peace, our soldiers should be caused to enter Peking and all negotiations should be carried on in the Chinese capital.

MR. VON BRANDT ON THE RESULTS OF THE WAR.

Herr von Brandt, formerly German Minister in Peking, in a review of Mr. G. Curzon's "Problems of the Far East," discusses the questions that will confront China after the present war. Of these questions he considers the revision of the present tariff as of direct importance to foreigners also. China's customs dues, about five per cent. *ad valorem*, were fixed in 1858, and represent to-day less than half their original value, a fact that closely concerns the Chinese Government and its finances. The proposal for revising the tariff, which is sure to be made, should be considered in a friendly spirit, he thinks, and the opportunity should be utilized to secure the opening of a number of navigable waterways as well as the definite regulation of the inland dues now levied on imported goods. For the higher tariff ample compensations, he thinks, would be found in the construction of railways for strategic and economic purposes, especially for the prevention of the periodic famines in the inland and mountainous districts, in the increase of industrial establishments in the interior, and in the better working of the existing mines; "but with a view to Germany's special interests," he continues, "we shall have to see to it that in the treaties then to be made we are not left behind by our rivals. The recent Anglo-Japanese treaty is a good example of how well others understand to look out for their own interests. For her own chief imports England has secured the continuance of low tariff rates; but she sacrifices on the altar of Japan's demand for an autonomous tariff all commodities that are imported in lesser quantities and in which our own industry is chiefly interested." For the protection and promotion of German interests in China, Herr von Brandt recommends the continuance in the Budget of the few hundred pounds for the retaining of the services of German experts in technology, who are also well versed in the language, the customs, and the needs of China, and strongly deprecates the proposed discontinuance of the item in question, especially at a time like the present. Another danger to German interests he sees in the desire to abandon the principle not to employ any Consul unless he is capable of speaking Chinese, a principle adhered to for about twenty years, and to substitute for the present Consuls, mostly former interpreters, men whose training has been chiefly of a legal and judicial character, an old struggle not yet fully settled even in the diplomatic service of Great Britain, though there, also, some of the most successful men had been originally interpreters. Knowledge of Chinese, Herr von Brandt thinks, must be made an inalienable condition of entrance and

advancement in the consular service, and China and service there, must not be treated, to the lasting detriment of other interests, as a sort of intermediate station for people who desire to be promoted more rapidly.

THE "NIPPON" AND THE "NIROKU" ON FOREIGN WAR CORRESPONDENTS.

When foreign war-correspondents applied for permission to join the Japanese Army, writes the *Nippon*, not only was it granted, but they were treated with the greatest courtesy. Have they repaid the kindness and hospitality extended to them by the Government and the Army? Not at all. The courtesy was entirely thrown away. The correspondents seem to have a grudge against Japan from the way in which, though ignorant and inexperienced in matters of war, they freely indulge in calumnious criticism on the operations of the Japanese Army. The *New York World's* correspondent is a notorious example. He is said to have telegraphed to the office of the newspaper he represents to the effect that the Japanese perpetrated a massacre in Port Arthur and butchered innocent women and children. We hear that when that piece of false intelligence appeared in the *New York paper* many of its readers began to view the doings of Japan and her army with unfriendly eyes. In our opinion every correspondent capable of despatching such false and malicious intelligence should be excluded from following the Army. What was the so-called massacre? The matter assumes a totally different complexion when we remember that the Chinese do not take the trouble to warn citizens to leave dangerous spots and that therefore a number of innocent persons fell under the Japanese fire, and that as great numbers of Chinese soldiers disguised themselves as townsfolk in Port Arthur, making it impossible for the Japanese to discriminate, every male adult was seized, and if he offered resistance or attempted to run away, was killed. If the character of non-combatants is clearly established, the Japanese not only leave them unmolested, but even taken the trouble to help them, as in the case of a troupe of actors found in Port Arthur. They were allowed to go free besides being paid for their performance by the Japanese officers and soldiers. Such are the facts of the much-talked-of Port Arthur affair, and yet the above-mentioned correspondent, without taking the trouble to enquire into the real phase of the matter, but simply coming across corpses of women and children, jumped to the conclusion that the Japanese had been guilty of a massacre in Port Arthur and telegraphed to America to that effect. We are accustomed, concludes our contemporary, to the discourteous writings of foreign newspapers published in the Treaty Ports, but knowing what class of men their editors are, we do not attach any importance to what they have to say against Japan and the Japanese. We did expect, however, that writers for respectable foreign papers would prove themselves to be gentlemen. We find we are entirely mistaken. They conduct themselves no better than Treaty Port editors—with the most unpardonable ingratitude they seem to be bent on calumniating Japan. The government should take steps to get rid of such obnoxious pests.

The *Niroku* has also something to say on the same subject. We have always thought it strange, it writes, that the Japanese Authorities treat foreign newspaper correspondents, some of whom may secretly be unfriendly towards this country, with such hospitality. We do not necessarily object to such a course being taken, but we hold most emphatically that they should at the same time be placed under strict control. It is said that Mr. Creelman, who accompanied the Second Army as the *New York World's* war-correspondent, telegraphed to that paper that the Japanese soldiers had been guilty of a terrible massacre after the taking of Port Arthur. We do not think that the message was the outcome

of any malicious intention on Mr. Creelman's part to do the Japanese Army an injustice, but attribute it to that common fault of reporters—the desire to give startling news to the papers they represent. The evil effect of Mr. Creelman's action forces us, however, to condemn it. As there was not the slightest truth in the report, we cannot pass it over in silence. If Mr. Creelman's despatch is believed by Western nations, the status of the Japanese Army will be lowered in their eyes and the revision of the Treaty with America and other Powers may be retarded. Therefore we say that war-correspondents should be carefully controlled by the Japanese Authorities.

THE TELEGRAPHIC SERVICE.

The *Hochi* has a well reasoned article urging that the Government should reduce the charges on telegrams, not only because it is of prime importance at present to facilitate communications as much as possible, but also because the step would be attended by an increase of revenue. So long as charges are levied at existing rates, it is not possible to make use of the telegraph service as freely as the public desires. The necessity of economizing, even in the case of persons that do have recourse to the wires, leads to such abbreviation that messages often become unintelligible. That a reduction would be followed by an increase of Revenue is proved by the result of a similar step taken some six years ago, when the charge was reduced by a quarter. What the *Hochi* advocates is that the present charge, that is to say 15 *sen* for the first 10 characters and an additional 10 *sen* for every additional 10 characters, should be reduced to 10 *sen* for the first 10 characters and 5 *sen* for every additional 10. People apprehensive lest such a reduction might cut into the Revenue, are scoffed at by the *Hochi*. It is not in a position to give trustworthy statistics as to the actual receipts from the service, but it is persuaded that they must have been increased in an extraordinary manner since the war began, judging from the fact that the present capacity for manufacturing telegraph stamps is said to be barely sufficient to meet the demand. The *Hochi*, ignoring the fact that such recourse to the wires is quite abnormal, takes it as evidence that a lowering of rates could not impair the normal revenue.

In this context we may mention that the form of the *Hochi* was considerably changed a few days ago. It has become a higher "illustrated newspaper,"—to use its own denomination—and its style has been popularized so as to make its writings intelligible to common folks. Formerly the full title read "*Yubin Hochi Shimbun*," or "Postal Intelligencer." But the prefix "*Yubin*" has now been struck off, and the paper is simply called *Hochi Shimbun*.

We are told, at the same time, that the editorial staff has been completely changed, and that the journal has severed connexion with the Progressionist Party, whose organ it had previously been. Ozaki Minoura and others are therefore no longer engaged upon its staff, but what writers have replaced them we are not told. Nor are we informed about the new proprietor. Formerly, when the paper was an organ of the Progressionists, Count Okuma is said to have given it a monthly subsidy of from 500 to 600 *yen*. Nevertheless, it did not prosper, and this furnishes a good proof how difficult it is in Japan to keep up a purely political organ. The *Shin Choya* has also divested itself of the prefix "*Shin*," and is to be called hereafter merely *Choya Shimbun*. The *Shin Choya* was the result of dissensions among the staff of the defunct *Choya*, and the seceders were obliged to prefix the adjective *Shin* because their opponents announced their intention of keeping up the publication of the original *Choya*. That intention was never fulfilled, however, and so the enterprising seceders have grown aggressive and appropriated the title for their own paper.

The failure of the *Hochi* reminds us of a saying now current that the war subjects the Tokyo papers to a severe trial. It is a crucial test of their journalistic ability. Those with good resources and efficient organization are becoming more and more prosperous, while others can barely eke out a struggling existence. In point of number of copies issued every day, the *Tokyo Asahi* and the *Choho* head the list. Scarcely less thriving are the *Yiji*, the *Nichi Nichi*, and a few others, whose subscribers have increased by thousands since the war. Three or four others are at the opposite pole, some of them so hard pressed as to be unable even to give any regular pay to the members of their staff. Those unhappy papers maintain a lingering existence by resorting to every conceivable shift; but it is believed that the termination of the war will see their final collapse.

MR. HASEBA ON THE RESOURCES OF THE LIAU-TUNG PENINSULA.

Mr. Haseba, M.P., recently returned from the Liau-tung Peninsula, has been interviewed by a representative of the *Kokumin*. He says that what he had frequently heard about the richness of Korea in minerals was confirmed while he was staying for a short time at the mouth of the Tadong, waiting for the departure of a steamer to take him to the Liau-tung Peninsula. He was taking a walk along the coast when he accidentally came across several pieces of mineral, some apparently containing precious metal, and others iron. The eastern coast of the Peninsula where the 2nd Army disembarked, is a shoal for a considerable distance, thus making landing extremely difficult. This shoal may however be utilized in a very profitable manner, namely for purposes of salt manufacture, as is done in Kyushu and elsewhere. The manufacture of salt must be very profitable in China, where it can only be procured at a very high price. Between Pitswo and Chin-chow Mr. Haseba saw that all the fields were well cultivated, but what struck him as strange, was the sparse population in proportion to the extent of cultivated land. He afterwards learned that thousands of labourers come over to the Peninsula from the opposite coast of Shantung every year at the seasons of planting and harvesting and are employed by landed proprietors of the districts. The people do not, however, know much about utilizing land. They are, for instance, almost entirely ignorant of the benefits of irrigation. Mr. Haseba saw in many places facing the Yellow Sea wide stretches of land which could be converted into splendid rice-fields. In all the streams that he came across the water was pure and the bottoms gravelly, like the rivers in the famous rice districts of Okayama and Hizen. The planting of trees is also important in the Peninsula, as they are very scarce. Pines and cedars should be planted extensively for the control of rivers and also for the sake of their timber. That the soil is well suited for afforestation is evident from the fine full-grown trees to be seen in the grounds of old castles, temples, and such places. A personage of importance told Mr. Haseba that in order to open up the resources of the Peninsula and Manchuria, a railway should be laid from Port Arthur to Chiu-lien and that from thence it should branch to the Russian frontier at the Amoor and to Fusan via Pyongyang and Seoul. Mr. Haseba entirely endorses that idea. The same authority observed further that grapes, wheat, and mulberry trees are produced abundantly in Manchuria, and that the profit derived from them must be immense. Mr. Haseba closed his conversation with a few remarks about the difficulties attending the commissariat business, into the details of which we need not, however, enter.

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

LOCAL TROUBLES.

It is curious to remark how, though in the Central National Assembly the Opposition has decided to avoid any collision with the Government in view of the tremendous struggle in which Japan is involved with China, the local branches appear to utterly disregard that reason and pick quarrels with greater gusto than ever. Besides the cases we have already referred to in Gifu, Toyama, and Kanagawa, we are now obliged to note similar occurrences in Ishikawa, Nara, and Ibaraki. The Ishikawa Local Assembly appears to have been carried beyond the bounds of ordinary order and decency. It is made up of two rival factions, one led by the Chairman, and the other, by the Vice-Chairman, the former being against the Kencho while the latter is friendly to it. On the 15th instant, when the hour for the assembly to meet arrived, not one of the anti-Kencho party had appeared, and the rival members resolved therefore to commence business regardless of the absence of their opponents. Free from the obnoxious opposition of the other faction, bill after bill was voted in the form in which it was introduced by the Kencho. While they were proceeding in exultation, however, the members of the opposite faction entered the room headed by their leader, the Chairman of the Assembly. A scene of violent commotion ensued. The Chairman demanded that the Vice-Chairman should cede his seat, which the latter refused to do on the ground that the Assembly was in the middle of a deliberation. To this the Chairman angrily replied that he had not asked to have his place taken, and forced the Vice-Chairman to leave the chair. After a violent dispute between the members of the rival factions and between the Local Secretary and the anti-Kencho faction, the Chairman moved that as the Vice-Chairman had acted in violation of the Local Government System Law, and as the members who had taken part in the deliberation were equally guilty, their attendance should be forbidden for the space of one week. This was carried amid the wildest confusion, and the Assembly rose. The next day another scandalous scene was enacted. In defiance of the resolution that had been passed, all the pro-Kencho members took their seats. Presently the Secretary entered, and, before the Chairman had announced the opening of the meeting, he rose and declared that, in virtue of the right with which he had been invested by the Governor, he ordered the revocation of the resolution passed the previous day in connection with the suspension of certain members from attendance at the deliberations of the Assembly. The Chairman took no heed of the utterances of the Secretary, saying that they had been made without observing due process, nor did the clerk enter them in the records. The Chairman then declared the meeting open and immediately ordered all members whose attendance had been forbidden to leave the room, calling each one by name. Seeing that neither the members nor the police on duty took any notice of his orders, he next announced his intention of excluding the recalcitrant members from the debates and of not counting their votes. The meeting then rose for that morning, in spite of the Secretary's order that it should proceed. In the afternoon a similar scene took place and the Chairman at last adjourned the Assembly. Governor Mitama was confined to his bed during these turbulent proceedings. His place was taken by Secretary Tatsuoka, who is now in Tokyo for the purpose of obtaining the advice of the Home Minister as to what steps should be taken.

We also hear of a collision between the Governor and the Assembly in Nara. The alleged reason for the dissatisfaction of the Assembly with Governor Furuzawa is that he settled many matters arbitrarily without consulting the Standing Committee. On the day when one of the members moved that the Assembly should declare the Governor's actions unconstitutional and insulting, Mr. Furuzawa himself appeared and undertook his defence in person. A violent dispute arose between him and the Assembly.

but the motion was carried by an overwhelming majority, only two members having voted against it.

The nature of the trouble in the Ibaraki Assembly is not yet clear, as the information about it is telegraphic. It appears, however, that a vote of want of confidence was passed against the Chairman, upon which the Assembly was suspended.

MEETING OF THE NATIONAL UNIONISTS.

The National Unionists held their general meeting on the 20th instant at their Tokyo office. In the absence of Viscount Shinagawa, President of the Society, at Hiroshima, Mr. Yasuba, the Vice-President, took the chair. The following manifesto and programme have been decided on:—

MANIFESTO OF THE NATIONAL UNIONISTS' PARTY.

Now that the Japanese expedition against China is about to initiate a revolution in eastern politics, and the spirit of self-assertion has manifested itself throughout the realm, no one is against enlarging the defences of the country. In short, the great programme of the National Unionists is now about to be put into force. What our Party should do at the present juncture is to give its support, in accordance with the principles of justice and in conformity with the dictates of public interest, to those that share its opinion, and to endeavour to win over to their side those of different views so as to ensure the prosperity of the empire and the happiness of the people. As to the policy to be pursued by the party in the coming session of the Diet, it shall be regulated according to the programme given below:—

PROGRAMME.

A radical change having come over the atmosphere of Oriental politics, various arrangements necessary for the future requirements of the empire should now be decided on. As, however, matters relating to the war demand urgent attention, the following policy should be pursued by our Party in the coming session:

Matters connected with the war and military equipment should be attended to in conformity with the spirit of the Representation voted in the 7th session of the Diet. In order to carry that spirit into practice the Government's current expenses should be retrenched. Bills connected with the transference of prison expenditures to the charge of the Treasury, the education subsidy, and so forth, although of great importance, must be laid aside for awhile. But all problems relating to urgent affairs should be solved as far as the resources of the country admit, and matters not requiring money improved. Legislative amendments should be introduced and the mechanism of self-government perfected. Matters of importance connected with the revised Treaty should also be investigated, and laws and regulations relating thereto, established.

Then follow the bills to be brought forward in the next session. Suffice it to say that these are 40 in all, and that many of them coincide with those that the Radicals intend to introduce.

One of the foremost women physicians in England, Dr. Anderson Brown, has established an industrial farm for inebriate women. The test of the practicability of outdoor life as a cure for drunkenness will be made under the auspices of the Woman's Temperance Association.

Depending on words for the coherence of his tunes, the Greek did not feel the necessity of limiting himself to the natural order of tones suggested by the partials. Though he used this order, he constructed others, by so commencing and ending his tunes that the half steps which we have observed differ from the natural order in their relations to the first tone. The relative position of these half steps, in the order of the tones, determined the various scales or modes. These arbitrary modes gave marked peculiarities to the tunes constructed upon them, and widened the Greek's power of expressions, though in a direction that prohibited any great advance. The very individuality of the tunes fitted them to express simple emotional states, for certain tunes could be easily associated with certain feelings. Constant use would fix these associations, so that we can understand why the Greek resented any change or novelty in his music. Plato's writings on music and the incident of the Spartans banishing a musician for adding another string to his lyre illustrated this point. Thus peculiar modes became stereotyped and the Greek music petrified, as did the art of Egyptian sculpture.

MR. KOMURA'S ACCOUNT OF AN-TUNG.

Mr. Komura is now in Tokyo, having been relieved of his post as Chief of the Administrative Office in An-tung to succeed Mr. Kato, it is said, as head of the Political Bureau in the Foreign Office. He was interviewed by several Japanese war-correspondents in Hiroshima, from whose reports to the respective Tokyo papers that they represent we take the following:— Manchuria is very fertile but thinly populated. The latter fact is attributable to its being the birth-place of the reigning Dynasty, on which account emigration from other provinces is restricted. An-tung, for example, was only opened two decades ago. It is now a town of some 30,000 inhabitants. Mr. Komura did not find the work of governing the district hard, as the inhabitants had suffered so much from the depredations of the Chinese soldiers that they were glad to come under Japanese protection. His greatest difficulty was to get the natives to return to their homes, from which they had been driven by the ravages of the Chinese soldiers, but he succeeded by various devices in inducing more than one-half of the inhabitants to resume their peaceful avocations. The staff of the Office was at first greatly insufficient, and it was kept extremely busy, especially as the circle which it controlled gradually enlarged with the march of the Army. The Office now superintends the whole of the An-tung District, part of Kwantien and Feng-hwan. A good many gendarmes and constables have subsequently been sent to the place, so that the work of the Office has been lightened. Not less than sixty complaints are brought by the natives to the Office every day, the majority being in connection with difficulties about the price of articles requisitioned by the troops. Whenever a complaint of this kind was lodged, Mr. Komura caused the alleged offender to be brought before him and he was examined in the presence of the accuser. This was done merely to conciliate the natives, for the alleged offenders were always set free after the complainants had left the Office. In this way the natives were satisfied, and they are loud in their praises of the strict justice of the Office. The Japanese gendarmes, though dreaded by them, are also greatly respected. The administration is carried on as much as possible on the principle of self-government. Every village is obliged to elect a head-man to whom the management of village affairs is entrusted. Mr. Komura is of opinion that the natives of Manchuria are easily governed, for though at present a little excited by the war, they are naturally docile and tractable. In this respect they contrast favourably with the Koreans. The latter are still in secret awe of China, are ignorant of the value of money, and indolent. The Manchurians are entirely free from those faults. Mr. Komura made various enquiries to ascertain whether the natives of Manchuria secretly hanker after the Government of their own country, but he was convinced that that sentiment was only entertained by very few and that not in a strong degree. A curious method of punishing those guilty of minor offences is now in force in An-tung, namely, subjecting them to fasting, the duration being determined according to the nature of the offence. This simple process is said to be very efficacious, the Tartars being great epicures. It is an outcome of necessity as well as of expediency, for provisions are scarce in those districts and steps have therefore to be taken to economize them as much as possible. Of course persons guilty of grave crimes undergo capital punishment. Mr. Komura says that as the market prices of commodities in An-tung have been fixed on the basis of the average of number of years, they are not so high there as in Chin-chow.

It is said that Ruskin's habits of life are remarkably regular. He told a friend recently that in two years his time of going to bed and getting up had not varied fifteen minutes.

Dr. James R. Cocke, a successful Boston physician, is perhaps the only man in the world who, having blighted from infancy, took up the study of medicine and excelled in its practice.

LETTER FROM TIENTSIN.

(FROM A CORRESPONDENT.)

December 7th, 1894.

The exact degree of neutrality to be shown not only by foreign Powers, but by all foreigners, during the war now raging between Japan and China, is a matter hard to decide. Any one who comes from abroad to live as a guest of either of those countries must observe the common laws of universal courtesy, of international comity, and wish for the welfare, permanence, and peace of the people among whom he lives. Otherwise he had better stay away. Especially true is this of one engaged in true broad missionary operations, seeking for national as well as individual regeneration and development. For one, then, living in Japan, he should as a friend of Japan, wish for Japan's success. For one living in China, he should wish for China's success. May it not be possible at this time of actual war that one may be so far the friend of both as to wish for the success of both? From the position of one thus living in China and intending to work for the good of China, I discern certain important factors of vital import to Japan as well as to China. One is this, that if this war is to result in any lasting benefit to the people of China, the Japanese must not stop short of a conquest that will change the whole course of the Empire. It is now recognized that when the English and French troops marched into Peking, there was hope that the country would be so opened that methods of improvement to the people might be at once initiated, but when that war was over the huge mass by its own inertia fell back into its old stolidity and ancient conservatism. It is now the hope of every true friend of China, that the work of Japan by and through this war may be so conducted that the whole world will recognize that through it this populous people have been impelled forward into the sphere of prosperity. Far better for Japan that she relinquish a demand for monetary indemnity and set in motion new principles of liberty and purity, of enlightenment and progress, such as will bless all nations of men.

To one who has studied the really highest principles of modern international law, there may come a fear that as a result of this war both Japan and China may more than ever become military nations, rising with each other and hating each other, burdening the masses of the people with unbearable taxation, rather than accepting the mutually advantageous methods of peace and arbitration. At the Parliament of Religions held in America last year emphasis was laid on the brotherhood of man. At other Congresses there held the strongest minute unfolded the benefits of peace and arbitration, so that in due time disarmament may take the place of increased armaments. These are recognized principles. They are not to be pooh-poohed. They are not visionary; they are plain common sense. They have no mercenary designs; they seek for the good of the greatest number. Now the problem before us is on the one hand not to annihilate China, not to trample her in the dust, nor on the other is it to arouse the power which is really here into a tremendous warlike power, a menace to other nations by her enforced surroundings, and especially her contest with Japan, but to have each move along the pathway of peaceful development, turning up the wealth of the earth, bringing down the rain of the skies, touching the electric current which lies everywhere, and improving the material and moral condition of the multitudes. When Japan and China come together in the final contest which will claim Japan as conqueror, and without the interference of any other Power they arrange together the terms of peace, will they be the first in all the world, excelling the instructions or rather the example of the West, to decide each with the other that henceforth, when any complaint is made by one against the other, and mutual agreement is impossible, then the question will be left to the arbitration of mutually chosen parties for investigation and decision?

The highest tribunal now extant among civilized men is not a court of war, but a court of arbitration. For this wise men work and against it foolish men snarl.

IMPERIAL DIET.

The eighth session of the Imperial Diet was officially opened on Monday, 24th instant, at 11 a.m. The ceremony presented no features of interest so far as externals were concerned, the attendance of high officials being comparatively small owing to the absence of the Court and Cabinet in Hiroshima. The Emperor, of course did not attend, and the Imperial Speech was read by his Excellency Count Ito as follows:—
To the members of the House of Peers and the House of Representatives, greeting:

My Lords and Gentlemen,—

We hereby formally open the Imperial Diet.

We have commanded Our Ministers of State to lay before you the Budget for the twenty-eighth fiscal year of *Meiji*, and other necessary Bills.

Our expeditionary forces have been victorious in every battle, and are steadily advancing in the enemy's territory. In the face of a severe winter, they have endured bitter cold and suffered privations, and have repeatedly given fresh proofs of valour.

Our relations with the neutral Powers have become more cordial, and the work of Treaty Revision, which has long been the object of Our desire, has, apart from the satisfactory result already achieved, made favourable progress with respect to the negotiations still pending.

At this bright epoch of progress, it is Our desire to push forward the national civilization, and, assisted by the virtues of Our Ancestors, to secure a crowning glory such as shall befit the auspicious beginning. We call upon you to observe the political situation at home and abroad, and, by harmonious co-operation of the Government and the people, to promote Our wishes.

TUESDAY, DECEMBER 25TH.

HOUSE OF PEERS.

The House met at 9.50 a.m., the Order of the Day being the election of a Chairman of the Whole House and of the members of the Standing Committees.

The President, Marquis Hachisuka, read a draft of a Reply to the Speech from the Throne. An amendment was proposed but rejected, and the Reply was passed as follows:—

The undersigned, Your Majesty's humble servants, members of the House of Peers, in all humility and reverence do offer the present address to Your August and Enlightened Majesty.

Your Majesty has been again so gracious, on the occasion of the opening of the present session of the Imperial Diet, as to favour us with a benevolent message.

Now that the great Imperial Standard is raised in the west, and the Imperial Arrow is flying northward, there is not among the expeditionary force either an officer or a private that fails to put forth his utmost exertions in the cause of his Sovereign, braving storms at sea and defying ice and snow on shore.

The work of Treaty Revision, which has long engaged Your Majesty's attention by day and by night, is rapidly making favourable progress; and the country's relations with foreign nations are more friendly than ever. Nothing can surpass the rapidity and sureness with which Your Majesty's plans are matured and carried out.

The undersigned, Your Majesty's humble servants, in obedience to Your Majesty's injunctions, respectfully intend to take due notice of the state of things at home and abroad, and to secure harmony between the Government and the people, thereby offering our assistance for the furtherance of the unprecedentedly grand Imperial programme relating to the promotion of the country's civilization and the maintenance of permanent peace. The above is reverentially submitted.

The elections were then proceeded with, that for Chairman of the Whole resulting as follows:

	Votes.
Vicount Ymi Kinnasa	84
Prince Konoyo	71
Vicount Tani	22

The Standing Committees having been chosen, the President announced that the House would rise for the New Year's recess until January 8th. The House rose at 12.55 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m., the Order of the Day being the election of Chairman of the Whole House and of the members of the Standing Committees.

Before proceeding to the elections, the President read a draft Reply to the Speech from the Throne. Various amendments were proposed and adopted, the Reply being finally passed as follows:—

The gratitude of the undersigned, Your Majesty's humble servants, the members of the House of Representatives, knows no bounds for the gracious message Your Majesty has been pleased to favour them with on the occasion of opening the eighth session of the Imperial Diet. While, on the one hand, the Imperial forces are making steady progress in the enemy's territory and, in defiance of every hardship, gaining the victory in every engagement, the Empire's relations with foreign Powers are becoming more and more friendly and are about to be placed on a new footing. That the Imperial prestige has been raised so high is entirely owing to Your Majesty's wisdom and courage. The undersigned, Your Majesty's humble servants, being fortunate enough to live in such an age, declare it their humble intention to discharge their legislative duties in a proper manner and thereby to carry out Your Majesty's wishes. The above is respectfully submitted by Your Majesty's humble servant Masataka, President of the House of Representatives.

The election for Chairman of the Whole resulted as follows:—

Mr. Suyehiro Shigeysu	149 votes.
Mr. Ishida Kwannosuke	130 votes.

The President said if the House did not object a recess for the New Year would be taken until January 8th.

Mr. Nakamura Yaroku objected, on the ground that the Emperor was working assiduously in Hiroshima without any rest, and that the Government offices were remaining open.

The House voted against Mr. Yaroku, and rose at 4.15 p.m. until the 8th proximo.

The following Government Delegates have been appointed:—

Mr. Suyematsu Kencho, Chief of the Legislative Bureau.
Mr. Hayashi Katsu, Vice-Minister of State for Foreign Affairs.
Mr. Hara Kei, Chief of the Commercial Bureau in the Foreign Office.
Mr. Matsuo Koki, Vice-Minister of State for Home Affairs.
Mr. Egi Chiyuki, Chief of the Bureau of Prefectures in the Home Department.
Mr. Tsuzuki Keiroku, Chief of the Engineering Bureau Department.
Mr. Furuchi Kintake, Chief Engineer of the Engineering Bureau.
Mr. Tajiri Inejiro, Vice-Minister of State for Finance.
Mr. Matsuo Shuzen, Chief of Finance Bureau in the Finance Department.
Mr. Megata Tanetaro, Chief of the Taxation Bureau.
Major-General Kodama Gentaro, Vice-Minister of War.
Vice Admiral Ito Toshiyoshi, Vice-Minister of the Navy.
Paymaster-General Kawaguchi Takesada, Chief of the Finance Bureau in the Naval Department.
Mr. Kioura Keigo, Vice-Minister of the Department of Justice.
Mr. Yokota Kunio, Chief of the Bureau of Civil Law.
Mr. Makino Shinken, Vice-Minister of Education.
Mr. Nakai Kinichiro, Secretary of the Department of Education.
Mr. Kaneko Kentaro, Vice-Minister of Agriculture and Commerce.
Mr. Fujita Shiro, Chief of the Bureau of Agriculture.
Mr. Wakamiya Seini, Chief of the Bureau of Commerce and Industry.
Mr. Takahashi Nakaji, Chief of the Bureau of Forestry.
Mr. Suzuki Dairyo, Vice-Minister of Communications.
Mr. Matsumoto Soichiro, Chief of the Railway Bureau.
Mr. Den Kenjiro, Chief of the Telegraph Bureau.
Mr. Nakabayashi Tokugoro, Secretary of the Department of Agriculture and Commerce.

THE PORT ARTHUR AFFAIR.

IT is certainly to be regretted that the first publication of testimony calculated to mitigate the strong accusations preferred by a section of the local foreign press against the Japanese soldiers engaged in the capture of Port Arthur, should have immediately evoked an exhibition of violent abuse and intemperate language. "Deliberate lie," "malignant falsehood," and so forth, are forms of language happily calculated to throw discredit rather on those employing them than on those against whom they are employed. No humane man could fail to condemn excesses such as are laid to the charge of the Japanese at Port Arthur. No humane man would seek to hide the facts of such excesses. But, on the other hand, no humane man could persuade himself to exaggerate them. The plain truth is what every one must desire to ascertain, and in this case the truth is to be reached by collating the evidence of the various eye-witnesses. The statements embodied in our article of the 20th instant were chiefly of a negative character. When a witness, examined in a court of law, says that he did not see such and such a thing, the question immediately put is "could it have occurred without your seeing it." If he can reply "no," and if he be a trustworthy witness, the inference is that the thing did not occur. If, on the contrary, he has to admit that it might have happened without attracting his attention, then his testimony becomes purely negative. In the case of Port Arthur, incidents that came under the direct notice of one or more observers, remain established whether they chanced or did not chance to come under the observation of another observer. No man can do more than speak for himself. The statements published by us were intended in that sense. We were careful to indicate their character by appending the reservation:—"These facts are not conclusive, inasmuch as some of the testimony is negative, and negative testimony can not possess much weight as against positive." As to there being question of a "deliberate lie" on the part of either our informant, or the Artist for *Black and White*, or the *Japan Mail*, the thing is absurd. Our informant simply recorded his own impressions in a casual conversation. He did not see "undisciplined slaughter continued through several days," and it was his belief that "the whole affair began and ended during the night of the 21st of November." Now, however, the Artist for *Black and White* comes forward and declares, on the strength of his own personal observation, as we understand, that "there was a good deal of undisciplined slaughter during the three succeeding days." That disposes of the point. We no longer entertain any

doubt, and our informant, we are persuaded, no longer entertains any doubt, that "undisciplined slaughter" did take place during three consecutive days. Nevertheless, in recording the fact it is just to note the negative testimony as well as the positive, since the former tends to show that the "undisciplined slaughter" did not take place on such a scale as to attract universal attention. One other word must be written on this subject of testimony. The original information received by us from one of the newspaper correspondents present at the taking of Port Arthur, was that the worst of the excesses were committed by the land-transport coolies, probably while in a state of intoxication. Further, nearly all the Japanese newspapers have alleged that resistance was offered in the town of Port Arthur by disguised Chinese soldiers, and that they used explosive bullets when the troops first passed through the streets. The Artist of *Black and White* denies that there was any resistance, denies that explosive bullets were used, and denies that the excesses were committed by intoxicated coolies. We accept his denials as an expression of his own belief, but we certainly can not regard them as more conclusive than the negative testimony referred to above.

It is necessary to protest against the very false complexion put upon the attitude of the *Japan Mail* in this matter. The *Japan Mail* was the first to condemn editorially the excesses attributed to Japanese soldiers and coolies at the taking of Port Arthur, and its strongly condemnatory language evoked much hostile criticism from the vernacular press. But the *Japan Mail* deemed it a point of simple justice to remind its readers that when the passions of soldiers have been vehemently excited by witnessing the brutally murdered corpses, and learning of the savage torture, of their comrades, the best discipline often fails to restrain terrible retaliation—as has been proved by cases recorded in the pages of history. The Artist of *Black and White* seems to recognise that, for he is represented as saying:—"I fully believe that any troops, so blinded with fury, would have shot at anything that came in their way, men, women, children, or dogs. It would be almost doubtful whether the best disciplined troops could have been controlled by their officers." But although it is just to take note of that feature, we do not admit its extenuating force with respect to excesses committed during the days following the assault. For them a grave responsibility rests on the officers as well as the troops, and public opinion may usefully be enlisted to check any repetition of such disgraces. We know, as a matter of fact, that the excesses committed by the troops are condemned in the most unequivocal manner by Japan-

ese high officials, and that the disgrace attending such acts is fully recognised. It would be re-assuring to learn that steps had been taken by the military authorities to punish the perpetrators, but probably we must remain without that knowledge for some time at all events. We can not, however, too strongly deprecate sensational and exaggerated writing, such, for example, as the filling of "eight columns" of an American journal with ghastly details, the description of which simply panders to a morbid appetite. That kind of thing can serve no useful purpose of any kind, and can scarcely fail to have misleading effects.

We can not allow to pass unchallenged an allegation appearing in the columns of the local foreign press to the effect that the editor of this journal, in publishing a *résumé* of statements attributed to a Military Attaché present at the taking of Port Arthur, made unauthorized use of a private conversation held in a club, thereby violating a social confidence and placing the author of the statements in an embarrassing position. In the first place, the conversation did not take place in a club, and was in no sense more confidential than are any words openly addressed to any conclave of listeners. In the second place, no reference would ever have been made in this journal to statements thus received had not the editor personally obtained, as he supposed, direct authorization to publish them, provided only that names were withheld. It now appears that such authorization was not intended, and that publication should have been contingent upon conditions not yet satisfied. The original conversation took place on Monday. The presumed authorization was obtained on Wednesday. The statements were published on Thursday. Briefly, a misunderstanding occurred. But it was a misunderstanding as to the point of publication only, not a misunderstanding as to the facts published. The question whether publication was authorized or was not authorized can not in any way affect the validity of the statements themselves. What appeared in the *Japan Mail* was, in all essentials, an accurate reproduction of the facts embodied in the conversation. We were careful to explain at the time that the testimony thus furnished being, for the most part, negative, could not receive the weight properly belonging to positive evidence. That reservation should have obviated any suspicion that the Attaché's statements were advanced in contradiction of the assertions of persons who avowed that they had seen things not observed by him. On the other hand, in so far as there was question of general judgments on the conduct of the soldiers, there can be no doubt that the views of a Military Attaché should carry more weight than those of an ordinary news-

paper correspondent. We claimed, and properly claimed, such weight for them. But it was never our intention to suggest that our informant's evidence should be taken as invalidating the emphatic narratives given by other observers of things actually falling under their own notice. These reservations made, the fact remains that we have now credible testimony tending to impart a less heinous character to the conduct of the Japanese troops, and it is certainly in the interests of truth and justice that such testimony should be published, whatever chorus of invective and abuse its publication may evoke from writers pledged by their own utterances to extreme verdicts. It is an old principle of law, happily translated into the actions of all honorable men, that to suppress evidence tending to dispel a calumny is to become, by implication, a party to the circulation of the calumny. That the facts embodied in our leading article of the 20th instant have been widely disseminated from the source to which we attributed them, is matter of public notoriety. Under any circumstances, it would have been our plain duty to publish them, though without distinct permission, as we supposed, their author, of course, would not have been indicated.

Before dismissing this subject, it may be useful to note two other points. The *Japan Mail* was the first journal in Japan that editorially described and condemned the acts committed at Port Arthur. The editor, receiving information of those acts from the correspondent of the *New York Herald* on the evening of December the 6th, immediately wrote an article which appeared in the *Japan Daily Mail* of the following morning. It embodied the statements made by the correspondent. Common justice required that in criticizing the conduct of the troops, note should be taken of circumstances tending to rouse their passions, and reference should be made to the effect produced by similar circumstances upon highly disciplined troops of other countries. That was done. Without such evidence of impartiality no editor could hope that his criticisms would carry weight with those to whom they were addressed. But the article concluded with words that we may be permitted to quote:—

Already infuriated by a passion for vengeance and now deprived of reason by the fumes of alcohol, these coolies and the soldiers, whether many or few, that participated in their crime, have inflicted lasting injury on their country's reputation. It is something to know that order was restored in the morning, and that thenceforth the kind treatment enjoined by Japanese military regulations was extended to all the inhabitants of the place. It is also something to remember how different had been the conduct of the troops at Chin-chow, a few days previously, when the taking of the town, far from bringing ruin and death to the people, inaugurated a season of charitable succour. The ferocity shown at Port Arthur was evidently due to the brutal cruelty previously exhibited by the Chinese themselves. But the delirium of vengeance, whatever its exciting cause, always disgraces humanity.

Even these words, strongly condemnatory

as they are, must now be held inadequate, since further testimony shows that the undisciplined slaughter continued through at least three consecutive days. We, however, wrote at the outset in conformity with the testimony then in our possession. But what we desire to note to-day is that the journal now rendering itself conspicuous by rude clamour and violent assertion of a monopoly of denunciation, spoke no word until the *Japan Mail* had spoken, and then openly avowed that though aware of "the dark deeds committed by the Japanese at Port Arthur," it "would have been content to have waited until the mails from America brought the revolting details of this gruesome story," had not the *Japan Mail* ventilated the subject. Need we point to the extraordinary morality of such an assertion? What the world thinks of the conduct of the Japanese soldiers weighs not one feather against what the Japanese nation thinks. The former involves a mere loss of reputation; the latter touches the question of regret and reformation. No editor has a right to withhold such facts under such circumstances. His first thought should be to employ his pen and his columns to the end that the pressure of public opinion may be brought to bear against any repetition of acts so reprehensible. It is indeed most regrettable that the cruelty of a section of the Second Army in Port Arthur should have overturned the edifice of fair fame painfully erected by Japanese troops throughout the previous stages of the war. But it would be incomparably more regrettable did the Japanese themselves defer even for a day the adoption of measures calculated effectually to check such abuses.

The second point we desire to note is an accusation that by our attempts to extenuate the conduct of the Japanese troops—attempts that we have never made except in so far as ordinary impartiality required—we have been the means of citing witnesses that otherwise would not have borne public testimony to the sanguinary doings at Port Arthur. A quaint reproach surely, indicating very clearly the morality of the writer preferring it. If we have been the means of eliciting such testimony, then it has been our good fortune to promote the cause of truth. The object of every journalist in this matter should be to elicit the whole truth. Whatever he can contribute to that end is so much distinct gain. The accusation levelled against us is, in fact, a compliment.

The morning on which he goes to the office in a new suit of clothes is the one day out of the three hundred and sixty-five on which a man takes notice that the office boy has neglected to dust his desk.

Duke Charles Theodore of Bavaria is the only royal physician in Europe. It has been suggested that the Duke of York's little son should qualify in the profession, although it is not very likely that the idea will ever be carried out.

THE JAPANESE PRESS ON FOREIGN NEWSPAPER CORRESPONDENTS.

THERE are some points deserving notice in the comments—produced elsewhere—of certain vernacular journals on foreign war correspondents. As to the writings of a section of the local foreign press, the *Nippon* is undoubtedly right. There are journals in Yokohama that disgrace the press. For violence and vulgarity of language they are unparalleled; for total disregard of truth and justice, they are without peers. Their sole idea of controversy is to be abusive, and the only argument they can appreciate is a personality. The Japanese do right to depise the comments of such journals. But when the *Nippon* calls the *New York World* a "respectable paper," it errs egregiously. Ninety-nine out of every hundred educated and thoughtful Americans, if asked to name the worst journal in the United States, would reply without hesitation, the *New York World*. It is a newspaper that lives by sensation, and aims solely at pandering to the morbid appetite of its readers. Its correspondent in the East may be everything that a correspondent ought to be, but the mere fact of his association with such a journal as the *World* would, we think, justify any commanding officer in refusing to allow him to follow the army for the purpose of reporting its operations. To be consistent with the style of the *World* and to write acceptably to its readers, a correspondent must be sensational. We have before us the account of the battle of Phyöng-yang contributed to the *World* by its war correspondent. As a specimen of word painting it has undoubted merits, but as a record of a historical event it is absurd. There is not a sober paragraph in the whole four columns, and the story is written throughout so as vividly to convey the false impression that the narrator was an eye-witness of the events he describes. Here is the opening sentence:—

Hear the story of the storming of Ping-yang by the Japanese Army, and hear it from one who writes by lantern light on the remotest ramparts, to escape the terrific sound of victory that tears between the shattered walls of the old city, while the smell of a thousand half-buried Chinese corpses rises from the darkened field, over which the conquering soldiery is still marching northward in pursuit of Korea's tigerish oppressors.

That is the fashion of the writing throughout. Worse than the sensational element, however, is the deception running through every line. Intentionally or unintentionally, the correspondent leads his readers to believe that he saw with own eyes everything he pictures, whereas he was not within hundreds of miles of Phyöng-yang when the battle took place. No honest man can read such writing without disgust. The fact that it teems with flattery of the Japanese ought not to make it in the smallest degree acceptable to the objects of its exaggerated and emotional panegyrics. A correspondent pledged to such a style must always deal in hyperbole. It

was inevitable that the *World's* correspondent, when he came to write about the Port Arthur affair, should endeavour to startle his readers. That is his business. Were he to write a moderate and just narrative it would be as much out of place in the columns of the *World* as a Quaker's costume at a carnival. He has sent a despatch, we understand, declaring that women and children were massacred; that the Japanese relapsed into barbarism, and that the foreign correspondents left Port Arthur in a body. Now it appears to be unfortunately true that some women and children were killed. But so far as we have been able to learn, their number was exceedingly small—two or three women and perhaps twice as many children. Moreover, we have the authority of *The Times* correspondent that he believes these most sad incidents to have been unintentional, and that he saw several women who were in no way molested. Even granting that one or two soldiers, maddened by the lust of blood, deliberately cut down every living thing they encountered, whether man, woman, or child, nothing could be more unjust or untrue than to describe that as a massacre of women and children by the troops, or to infer from it that the Japanese had relapsed into barbarism. As for the allegation that the foreign correspondents left Port Arthur in a body, its insertion in such a context amounts to a scandalous falsehood. The foreign correspondents did leave Port Arthur in a body, but their going had nothing whatever to do with the conduct of the troops. They went because they believed that nothing more was to be seen in the Liau-tung peninsula, and because they desired to attach themselves to the next expeditionary force. The notion of their departing because they were shocked is simply silly. It is the business of a correspondent to record what he sees, not to abandon his duty for the sake of making a moral demonstration. But if we can conceive a correspondent sufficiently romantic to decline the business of witnessing and describing horrors, we can not conceive, nor can any one conceive, an ordinarily truthful and honest correspondent leading the public to believe that he and his colleagues left the scene of warlike operations in a body by way of protest against inhuman outrages, when in fact their departure was dictated solely by their own convenience and by journalistic interests. That is a *suggestio falsi* admitting of no palliation.

Whatever may have been the measure of needless slaughter—speaking from a humanitarian point of view—perpetrated by the Japanese troops at Port Arthur, it is certain that no nation ever before was required to conduct a campaign under the eyes of a tribunal of nations. It is impossible to purge war of horrors.

The thing itself is horrible. Moreover, it arouses in those carrying it on passions that inevitably drive men to excesses more or less heinous. Organization and discipline are admirable in a fighting machine, but their effect is demoralizing in that they numb the sense of individual responsibility. A soldier is merely a unit of an organized mob, and, like the units of an ordinary mob, he will perform deeds from which, as an individual, he would instinctively recoil. In the last European war things were done that could not be too strongly denounced. Property was stolen, women were outraged, peaceable folks were murdered, and villages were burned. But the correspondents with the armies, recognising such incidents to be the inevitable concomitants of war, did not denounce them. With the progress of civilization, however, all standards are becoming higher. It is well that such should be the case, but let us always remember that we are applying higher standards.

SOME ENGLISH VIEWS OF THE WAR.

IN the *Nineteenth Century* for November, Mr. DEMETRIUS BOULGER, the author of the well-known "History of China," writes "The Korean Crux; a Word for China." The article is a curious one to find in the columns of a monthly magazine, for almost in every line it bears evidence of haste and hot-temper, and resembles a letter dashed off in excitement for the columns of a daily paper. It contains several misstatements of fact, and several prophecies that the event has falsified. Of the former we may give the following example:—"It is an incontrovertible fact, known to every Foreign Office in the world, that China was most averse to war, and that at the eleventh hour she would have made almost any concession in form to avert it. If anything like the same spirit had prevailed at Tokyo as at Peking last July, the war would have been averted; without a shot being fired, the reorganization of the Korean system could have been taken in hand under international auspices." Without enquiring too curiously how it is that Mr. BOULGER is so intimately acquainted with the private knowledge of "every Foreign Office in the world," we may say simply that it is quite untrue that China was willing to make any concession to avert war, referring, in proof of our assertion, to the despatches that passed between the Governments at Peking and Tokyo immediately before the war, authorized copies of which were laid before the House of Peers at Hiroshima on the 19th October. These despatches show that two things, and two only, were demanded by Japan: first, that China should renounce all claim to the suzerainty of Korea; secondly, that China should coöperate with Japan in the re-

form of the Peninsular Kingdom—or, if she preferred it, hold hands off while Japan undertook the reform alone. It is not germane to the matter to say that Japan has for years been preparing to fight China: of course it has always been obvious that if Japan should ever go to war it would more probably be with China than with any other country, and it was only a natural exercise of the instinct of self-preservation that she should prepare for such an eventuality: but with regard to the specific charge made by Mr. BOULGER, that Japan insisted on war in spite of China's reluctance, there stand the despatches, and they show beyond question that the charge is untrue. The general drift of Mr. BOULGER'S article, to which it is not necessary to devote further space, is that the friendship of China is of considerable value to England, while that of Japan is rather a danger than an advantage; that England ought to have interfered at the outset to prevent the declaration of hostilities; but that not having done so England may still retrieve the false step by a policy "passing into an active phase of friendship towards China." The reasons that should lead us to cultivate China's friendship are twofold: our trade with the Chinese Empire; and regard for the safety of our Indian dominions.

In the *Fortnightly Review* for November, Mr. R. S. GUNDRY writes on "Korea, China, and Japan." Mr. GUNDRY is the Secretary of the China Association, and, it may be remembered, addressed a few months ago a communication to the British Foreign Office on the subject of the revised treaty with Japan. This contained some conspicuous inaccuracies which we pointed out at the time; and Mr. GUNDRY, when all that was known in England of the sinking of the *Kowshing* consisted of scanty details received by telegraph, stated that the circumstances of the sinking of that vessel might serve "to illustrate the divergence between Eastern and Western ideas. The difference is not merely in code and technical provision, but in spirit and conception." Mr. GUNDRY'S article in the *Fortnightly* is considerably better than the letter above quoted might have led us to expect; but he presents the case almost entirely from the Chinese point of view, and he repeats and endorses certain errors that have been widely circulated concerning the cause of the war. He tells us, for instance, that "one object of this Korean enterprise is freely alleged to have been to divert popular attention from domestic quarrels," and the general tone of the paragraph in which the statement occurs shows that he himself credits the allegation. He says again that it is probable that a powerful contributory cause was the difficulty that Japan expected to arise in connexion with Treaty Revision with China: "successful war might enable Japan to dictate con-

venient arrangements for the future." For the rest, Mr. GUNDRY'S discussion of the probable course of the campaign, based as it is upon news now three months old, will not interest our readers, so we refrain from further comment on his article.

The most interesting of the articles in the leading monthly magazines is that in the *Contemporary Review*, entitled "The China-Japanese Conflict—and after. A conversation with Sir THOMAS WADE." Sir THOMAS WADE'S forty years' residence in China, during twelve of which he was British Minister at Peking, give him an almost unrivalled claim to speak with authority on the subject with which the conversation was mainly concerned—the Chinese aspect of the war. Sir THOMAS WADE recognized clearly two months ago what all the world is coming to recognize now, that the talk about the immense staying-power of China, of her huge population which could never be overcome by that of a comparatively small country like Japan, was merely the babble of ignorance. "It is not," said Sir THOMAS, "a question of numbers, but of science. The Manchus, who conquered China last, were less in number than the Japanese." His answer to the question, "But if the ablest Chinese so fully realise the weakness of their position, how is it that nothing is done? How is it that Japan finds her totally unprepared after so many warnings?"—may be quoted at length: "Ah, how and why indeed! It is another characteristic Chinese contradiction. Chinese perceptions are on one side, Chinese instincts and methods of reasoning are on the other. The sentiment of China was very well represented by a Chinese statesman who said to me, 'We intend to adopt Western machinery, but we shall keep our old customs and our old morality.' The more acute Japanese, on the other hand, clearly perceives that you cannot have one without the other: and that the machinery of Western life is merely the fruit, so to speak, of the ideas that underlie it. The consequence with China is that her attempts to adopt Western ideas have been continually defeated by her adherence to ancient and invincible custom. Those mouldy torpedo boats referred to are typical of much. The Chinese Government gets as far as to use a European for building and organizing a factory, and then the impulse is exhausted. It hopes, doubtless, that in this way it will get all it requires out of the West, while at the same time keeping it at arm's length."

Sir THOMAS makes a comparison between the Chinese and the Japanese character, and thinks that China "possesses many of the solid moral qualities that Japan seems to lack," and that "the Chinese are a more dignified and thoughtful race," but he immediately qualifies these statements by admitting that he knows the Japanese by hearsay only, and that

"they have moved of late years with such rapidity that his appreciations may be obsolete." Unquestionably they are obsolete—they date perhaps from fifteen or twenty years ago—and Sir THOMAS WADE seems to have viewed the Japanese through the spectacles of Sir HARRY PARKES. But his admiration for the many sterling qualities of the Chinese character, and his regret that a not impossible outcome of the war will be the disruption of China, we fully share; though with regard to the latter we cannot see any strong reason to believe that matters will proceed to that extremity. And here indeed we come to the point where we are most inclined to differ from Sir THOMAS WADE, the view he holds that the victory of Japan will be disastrous alike to China and to Japan. At the close of the article, speaking of the possible benefit to mankind at large from Japan's victory in the present war, regarded as a triumph of western civilization, he says:—"I cannot imagine, I must confess, that within a reasonable limit of time any such benefit is likely to result to the world as will counterbalance the misery that must for years be the lot of China's millions, as the logical consequence of her conquest by Japan. The Japanese, naturally, must attempt to impose themselves as a government upon the Chinese nation. In an attempt to that end . . . I feel satisfied that the Japanese will fail. Could they hope to be left to struggle single-handed with the Chinese, they would fail; and in the inevitable conflict with other Powers that I conceive certain to follow upon their failure, their own independence would more than possibly be compromised. To state the nearer outlook briefly, victory such as the Japanese are hoping to achieve would mean annihilation of Chinese nationality, to be in due time followed by a like suppression of her conqueror. What advantages are to be ultimately derived by the outer world from causes so awful to contemplate, is a problem which I must leave to more mature experience to solve."

We see no reason at present for taking so gloomy a view of the situation. War is at best a detestable mode of settling differences; but it is often the only mode possible, and it often brings compensatory advantages in its train. The advantages that have accrued to Japan from her success in the present war, notably the general recognition by Europe and America of the justice of her claim to enter the comity of nations, are already manifest to all. And to China also the war may prove a blessing in disguise. If, when the war is at an end, the Chinese Empire, perhaps with some restriction of boundaries, is still found on the map of Asia—and Japan, we believe, is the last to wish anything else, and has no intention, three centuries too late, of trying to fulfil the dream of TOYOTOMI HOJYOSHI—it will surely be a China

chastened and humbled, a China willing at last to receive from the "western barbarians" the learning she has heretofore despised. None the less, Sir THOMAS WADE'S warning is one that Japan would do well not to despise. Her uninterrupted successes in the war have not been from all points a national good, for they have tended to fan to too fierce a heat the fires of national enthusiasm. A continuance of these successes, culminating in a Japanese occupation of Peking, might indeed make the nation delirious with victory; and fantastic schemes of aggrandizement might force aside the sober counsels of the present Government. It is a real danger, though, we hope, remote; and the best security against its realization lies in the speedy conclusion of peace.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

"PEACE."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—And suddenly there was with the angel a multitude of the heavenly host praising God, and saying, Glory to God in the highest, and on earth peace."

What harsh, horrid discord, clang of sword, thunder of cannon, and groans of the dying are mingling with the song of the angels!

Still through the cloven skies they come
With peaceful wings unfurled,
And still their heavenly music floats
O'er all the weary world;

But man, at war with man, hears not
The love song which they bring:
O hush the noise, ye men of strife,
And hear the angels sing!

EIRENE.

PORT ARTHUR AND ITS LESSONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There is no use to attempt to cover up or gloss over the terrible retribution meted out by the Japanese at Port Arthur upon the people found in that place—soldiers or peaceful citizens—for the brutal treatment of Japanese by Chinamen upon all occasions when they have fallen into their hands. Neither the *Japan Mail* nor the Japanese Press can undo what has been done. What has been written by the war correspondents, eye-witnesses of what occurred at Port Arthur, has reached the reading public all the world over. They have written that it was an indiscriminate massacre. What these men have written will make history—no denials of the Japanese press will have weight with the Western world, regarding the statements made by these eye-witnesses. The reputation of the *World*, and *Black and White*, and *The Times* newspapers is such that what their correspondents have written will stand as truth, unless the military authorities having command of the operations connected with the taking of Port Arthur, officially declare that these correspondents were not at Port Arthur; or that they had no opportunity to witness what did take place. That excesses were indulged in the Japanese press acknowledge, but they seek to limit the measure thereof. Human nature is the same the world over. Humane methods between opposing forces in war are the outcome of discipline rather than the result of brotherly love. Where barbarities are initiated revenges in kind are sure to follow—all the civilization of the ages, all Christian teaching will not deter men from striking back in kind—that the Japanese forces in the field held their hand as they did prior to the episode at Port Arthur shows conclusively that they were under strong control. The eyes of the world were watching them to discover what might be to their credit or in what they might be censured. The world was amazed at the discipline displayed and the utter absence of any indications of inhumanity under the strong provocation offered from the very commencement of the war by the Chinese atrocities perpetrated upon the Japanese dead

and living who fell into their hands. Forbearance from cruelties by the Japanese produced no fruits—no mitigation of savagery was developed by the Chinese. Can it be wondered at that, at last, human nature developed itself; that revenge took possession of men who had become infuriated by the sight of their mutilated comrades. There is nothing to be condoned in this affair at Port Arthur. There is no nation that can show a fairer record than the Japanese in prosecuting war. If Port Arthur shows a stain upon Japanese civilization, the civilization of the western nations is conspicuous for carrying stains of as deep a dye and as ample.

Japan has no occasion to lower her crest because of Port Arthur; no western nation can say "I am better than thou." Let the world have the facts as they occurred, and be content with what was done.

Do the English people hold themselves one whit less civilized because of the terrible slaughter perpetrated in India by the English armies? The acts there committed were held to be justified by the circumstances that led up to them, and the sons of the men who were the actors in those deeds of blood defend their acts to-day. Japan has vindication in precedents without number.

Respectfully yours,
Yokohama, December 24th, 1894.

X.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In several of your recent issues, I found a number of letters charging the Japanese army at Port Arthur with cruelty. They seemed to me mere nonsense from that group of foreigners who are always alert in finding fault with the Japanese. I cannot, however, help giving a little serious thought to the matter. It seems, some people think that the Japanese soldiers were cruel at Port Arthur, and reasonably they deduce a fear that the Japanese soldiers will maintain their cruelty in future battles. Accustomed to the generous manner by which the Japanese army had been carrying on the war, the public had come to expect that the Japanese would continue their generosity throughout the war. The standard of the conduct of the Japanese soldiers had thus firmly been fixed on so high a place. I wish it would continue to be so. But alas! no human beings are perfect; and the Japanese are human no less than the Europeans who are squandering and even exhausting their wealth and energy in inventing deadly machines to destroy their own species, those Europeans whom no machines, however devilish, can satisfy.

I am not to deny here the cruelty of the Japanese soldiers at Port Arthur, for I have sense enough to perceive the cruelty of war themselves. But the modern standard of cruelty (!) is defined arbitrarily at a certain point by international law. Shooting at men, even at animals, intentionally is cruel; but when they rally in enemy's ranks and have loaded guns pointed at us, we may take the earliest chance to slaughter them first and say we are not cruel. It is cruel, I say; but no international lawyer would charge us with cruelty. On the other hand, if one butchers an innocent child or a helpless woman, he cannot escape the charge of cruelty. The difference in these two extreme cases is clear. But it is merely a matter of degree. We can imagine divers cases that may be inserted between these two extremes. How cruel the Japanese were at Port Arthur we can not easily determine. Granted that they were so cruel as to deserve such killings by some foreigners in the columns of the *Japan Mail*, are there not some excuses for the Japanese soldiers too?

Let us throw off all prejudices and consider fairly. The Japanese people are very sensitive as a nation. Once their feelings are aroused, they are not slow to give vent to their feelings too. How honourable the Japanese army had been at the former battles, all who are literate enough to read newspapers or possess any sense of hearing at all are perfectly aware. They had been, I dare say, more generous than any in history, supplied with as disastrous weapons as those they had. Their generosity was indeed not necessarily because they were so merciful. One of its chief reasons is that the standard of human morality is higher now than any previous age and the present international laws are modelled on that higher morality which the Japanese Armies claim to follow. Another reason is that the Japanese are so anxious to be known to the World as an enlightened civilized nation, and were determined to carry on the war in a most civilized manner. Thirdly, the battles previous to that of Port Arthur having been fought within the domain of Korea, Japan's ally, the Japanese were particularly careful of their conduct in the field.

The battles fought under these circumstances

were of course carried on exceptionally well. It is an indisputable fact that the Japanese gave positively much thought and took much trouble to that effect. The Chinamen were utterly senseless to such generosity of the Japanese. They merely laughed at the Japanese soldiers, and thought they were neither strong nor brave enough to seize the property of the native Koreans or enslave and employ peaceful civilians! They treated the Japanese just as cruel as any Vandal could imagine. Heads of the Japanese dead they cut off and carried away for the prize of ten taels each. Their torture of the Japanese captured was as devilish as any demon could devise. Japanese captives were nailed to the wall of their banquet hall to increase the pleasure of the fiendish rejoicings of the devilish Chinamen. Some were nailed on the skull to serve as candlesticks at their banquet. I have seen a photograph of two Japanese heads left on the ground, their eye-balls bored out, their noses chopped off, their mouths forced wide open and a price of cloth thrust through the mouth to the ear and tied neatly, presumably to facilitate the carrying them in hand for the prize. It is shocking enough to hear of it. Imagine what would be the feeling of the Japanese soldiers, sensitive as they are, who see with their own eyes such infernal treatment of their comrades and compatriots in a foreign land. I repeat the Japanese are human and are no more perfect than the most civilized Europeans. We must take human character as it is. Condemn them as you may, you are merely condemning a human weakness. Revenge, would it not be an idea that comes to your mind if you happened to be in a like position? If not, I would not hesitate to say that you would be called an idiot, a coward, a wretch without a human heart. My conscience tells me that is wrong. But the present standard of human intelligence has progressed no farther. We must acknowledge the existing state of human intelligence as it is.

I shall not go too far into sentimentality. The Japanese slaughtered the Chinese soldiers because they resisted the Japanese; that is right. They fired at the flying Chinamen because they are likely to face the Japanese again in future battles. The Japanese probably killed a number of peaceful civilians, but what else could the Japanese do when Chinese soldiers attempted to escape disguised in civilian's garb. Soldiers when they flee, their life is never guaranteed by international laws. It is different when they give up their arms and surrender to their enemy. As long as they attempted to deceive their enemy and escape, they might legally be killed. Was it proper for the Japanese to capture every Chinaman and inquire into his character on the busy battlefield? Nonsense! The Japanese indeed have been victorious so far, but Japan is by no means in a position to waste energy like that. Hurrying the execution of the war a single second means nothing but the restoration of a firm peace to the world a single second earlier; the slower the execution, the longer the suffering of the world at large. It is now Japan's duty to guard herself from the frauds of the deceitful Chinamen and to put the earliest possible end to the war. If Chinese soldiers disguise themselves as peaceful non-combatants and try to escape, it is only the Chinamen's fault that made the life of the Chinese civilians dangerous. The Japanese are not angels, and could not be bothered by such a deception of the Chinamen.

A few more words to conclude. The beastly and fiendish conduct of the Chinese soldiers is well known; how barbarously the defeated Chinamen acted in their escape is too well known. They make it their business to plunder everything they could lay their hands on, and to burn and ravage towns on their way to escape. It is evident that the more Chinamen the Japanese kill, the less will be the injury to the peaceful Chinamen who live along the roads where Chinese soldiers escape.

It is good that the public and even those few foreigners in Japan speak of the cruelty of the Japanese at Port Arthur. They had been accustomed to the too generous conduct of the Japanese soldiers. Absolutely their cruelty is undeniable, for all wars are cruel. Comparatively compared with the cruelty of civilized Europeans in their wars that modern history sets before us, who that has any sense, fair mind, conscientious conscience can condemn the Japanese army at large?

Japan's aim in the present war is a speedy restoration of a permanent and ultimate peace of the East. After this war the Chinamen will realize their barbarous vanity and learn their duty better to encourage and promote civilization for the general welfare of human species. The jealousy between Russia and Great Britain in the East which may fluctuate the prospect of the peace of the world shall

have also less opportunity for a warlike conduct. Japan thus is laying a firm foundation for the peace of the world in the present war. Japan's mission in this war between barbarism and civilization is by no means small. I request those who are seeking every chance to abuse Japan to confer a much more serious consideration in discussing about Japan.

Sincerely,

A. B. C.

Tokyo, December 20th, 1894.

LETTER FROM ST. LOUIS.

(FROM OUR CORRESPONDENT.)

St. Louis, Mo., November 19th.

Since the Republican tidal wave swept over the country the eyes of the great West are turned on the maneuverings of the leaders of that party, with speculations as to what it will do with its large majority in the next Congress. Democrats expect that the party will make enough mistakes to cause the presidential election two years hence to go their way. That Missouri should go Republican has been a marvel to both parties. The state has been strongly Democratic for years past.

St. Louis had a Christian Chinese burial this week. Quong Quy, who was employed in Tom Lee's Laundry on Washington Avenue, died on Tuesday, and was laid to rest amid Christian rites in the Wesleyan Cemetery. There are quite a large number of Chinese Christians in this city, and on the other hand as tough a crowd of the Celestials here as one would meet anywhere.

The murder of a Japanese girl in Denver by the name of Kiku Oyama on November 13th has created widespread attention. The girl was found strangled with a towel in a house of ill fame, where she was keeper. It is one of a number of such murders, and "Jack the Ripper," seems to have turned up again. To-day's advices are to the effect that many of the bad women are leaving Denver in terror. A man by the name of Dick Demady, a French Macquereau, has been arrested charged with the crime. It seems that a number of men have been engaged in the traffic of women until they have become insane with wickedness, and the murders are a consequence.

I had the pleasure of meeting two Japanese in St. Louis this week. The first was Mr. R. A. Koidzumi, who was Commissioner-General for Japan in the California Midwinter International Exposition. He told me that he was looking around for a place to open a Japanese store here. At present there is no store run by Japanese in the city, but Japanese goods of all descriptions can be bought at many of the leading stores. The other Japanese was Rev. George Suzuki, who graduated with honours at Central College in this State, and will return next month to Japan and take a professorship in the Kansei Gakuin at Kobe. Suzuki's parents live at Sendai.

Rev. Walter R. Lambuth, M.D., D.D., formerly Superintendent of the M. E. Church South Mission in Japan, preached last Sunday in one of the leading pulpits in this city. He gave it as his opinion that the war would have the effect of greatly forwarding the gospel in Korea and China. When asked if he purposed returning to Japan, he was unable to say. He did not think the time had come for a bishop to be elected for the Japanese Church, but was hopeful of the outcome of a federation of the publishing and school interests of the two Methodist Churches in Japan.

The China-Japan war still attracts much attention and interest here. Everybody here sides with Japan, and lauds her magnificent showing in her struggle. One thing is certain, Japan has gained more prestige with all foreign countries and has been advanced in the opinions of foreigners more than she could have gained in two years without the war. When the first talk came about "On to Peking" Americans laughed at the idea as an impossible task, and now Americans believe Japan can do almost anything.

St. Louis now has a Pure Food Exposition in progress, which will be open three weeks. The object is to advance the interests of pure food. Mrs. Lincoln, of Chicago, a noted woman on account of being the author of a cook book, gives daily lectures and practical lessons in cooking. The exposition is largely attended, and no doubt good sanitary results will follow it.

The American Protective Association and organization opposed to the spread of Catholicism in America has been creating much attention of late, especially in large cities during election times. The Catholics of this city have organized the continental League for the purpose of securing the names of the members of the A. P. A.'s and in several instances the books have been stolen and the names published. One secretary was knocked down late at night and robbed of the books of the order, and in other instances houses have been

entered violently. The election returns show that the A.P.A. sentiment prevailed wherever the issue was made.

The business industry of this country is looking up, and better days are no doubt at hand for the crippled business of the United States, which it has sustained during the past year and a half.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, November 30th.

The December *Harper's Monthly* contains an illustrated article upon "The Time of the Lotus," by Alfred Parsons; and the January number of the same magazine will contain a paper on "Fujisan," as "relating to types of Japanese society and Japanese country life," by the same writer and artist. A new edition of Morse's "Japanese Homes," is just ready from Harper Bros.

There are four Japanese young men in attendance at Mount Hermon Institute, Moody's well-known school near Northfield, Mass.

Dr. C. U. Gravatt, for three years connected with the Navy Hospital in Yokohama, and since then in service at Erie, Penn., returns to the Orient on the *Oceanic*. He is to be surgeon on the *Charleston*.

Rev. F. H. James, late of Shantung, China, is delivering a course of eight lectures on "China and the Chinese," in the Lowell Institute, Boston.

Japan was represented among the 255 students in attendance last year at Radcliffe College, Cambridge, Mass.

It is amusing to see how often in the American newspapers the Japanese word *hara-kiri* appears as *hari-kari*.

The new treaty between Japan and the United States has been signed by Secretary Gresham and Minister Kurino. The details are being carefully kept secret until ratification; but the following statements have appeared in print:—

The foreign settlements become incorporated with the general municipal system of Japan, the foreign consular authorities being replaced by Japanese judicial authorities. This sweeps away the extra-territoriality clauses of the existing treaties which have been so long repugnant to Japan, and which made an American, who infringed the Japanese laws, amenable to trial only before an American consul under American laws. In return for this concession by the United States, the existing limits of travel for Americans in Japan are abolished and the citizens of the United States and the subjects of Japan have full liberty to travel or reside where they will enjoy full protection for their persons or property. This, however, does not enable Japanese to come to the United States in violation of our contract labour laws.

The treaty is not to take effect until some time to be agreed upon after its ratification. A number of clauses relate to tariff duties and navigation laws, and throughout the whole convention each country is given every advantage extended to the most favoured nation. Discriminating duties on imports and exports are proscribed.

The Trans-Mississippi Congress at St. Louis discussed not only matters of local interest, but also the ever interesting topic of "Our Relations with Hawaii." There has not yet come to hand any news of a Royalist uprising in Hawaii; and matters are reported to be all quiet there.

Although there are so many big railroad corporations either in bankruptcy or not far from that condition, yet there is now a project, said to be backed by a strong English syndicate, to build the Atlantic and Pacific Railroad as an "air-line" from New York, via Chicago, to San Francisco.

The report made by the Labour Commission with reference to the great strike of last summer is still under discussion *pro* and *con*. The Commissioners insist that when the full report, with all the testimony, is printed by Congress, it will be found to be impregnable.

W. A. Johnson, who has just been re-elected Judge of the Supreme Court of Kansas for a term of six years, has announced that he has returned all his passes and "will receive no more favours from railroad corporations." All judicial officers ought to follow that good example.

U. S. Senator John T. Morgan, of Alabama, has been re-elected by the Legislature of that State.

It is possible that there will be some bloodshed in Montgomery, Alabama, to-morrow. Capt. Kilb insists that he will simply take the oath of office and will use only peaceable means to secure the position of Governor. But, as it takes only a small spark to kindle a conflagration, there is considerable anxiety over the outcome.

There were numerous bids for the new bonds, which went, at 117.077 for the entire loan, to what is called the Stewart Syndicate, composed of several large banking firms and corporations. As the Syndicate expect to sell for at least 119.077, and hope to realize 120, their profit will be about \$1,500,000. It is thought that the U. S. Treasury will net from \$50,000,000 to \$55,000,000 in gold.

The advocates of female suffrage are much elated over the recent election in Colorado. About

70,000 women voted, and "redeemed the State from Populist misrule." They cast 90 per cent. of their registered vote, and the men only 80 per cent. The women took a more active part in the campaign than the men took, and cast 10 per cent. more than one half of the total number of ballots cast. In Denver they were "looked upon as heroines and the saviours of the State."

There is a report, but also denied, that the refineries of the Sugar Trust will shut down in Boston, New York, Philadelphia, and Baltimore.

The election returns are now all in, so that the complexion of the next House of Representatives is exactly known, as follows:—

Republicans.....	244
Democrats	104
Populists	6
Silverite	1
Vacancy	1
Total.....	356

Republican majority 132

It will be seen from this that the Republicans have more than two-thirds of the membership of the House. These Republican members are distributed as follows:—

New England States.....	26
Old Middle States.....	66
Middle Western States.....	92
Far Western States	28
Southern States	32
	244

The Republicans have 19 solid delegations (Connecticut, Delaware, Idaho, Indiana, Iowa, Maine, Michigan, Minnesota, Montana, New Hampshire, New Jersey, North Dakota, Oregon, Rhode Island, South Dakota, Vermont, Washington, and Wisconsin); while the Democrats have only 6 solid delegations (Arkansas, Florida, Georgia, Louisiana, Mississippi, and South Carolina). The complexion of the next Senate is still undetermined.

The next session of the present Congress begins to-morrow. It is not anticipated that any legislation of importance except appropriation measures will pass. In the Senate the Republicans under the rules can probably block all the "pop-gun" tariff bills, if the Democrats try to pass them.

The President's message is looked for with unusual curiosity as to what he will say under the circumstances. The reports of several Cabinet officers have been published. Secretary Herbert of the Navy Department wants more battle-ships,—three armoured craft of about 10,000 tons each, and twelve torpedo boats. On the point of preparation for war in time of peace he says:—"The latest and one of the most impressive lessons in all history is now being taught by China and Japan. A nation, the most populous in the world, able to put millions of a fighting men into the field, is now, after suffering many disasters, scouting Europe and America for munitions of war. It relied upon its numbers. Now it is buying discarded guns and discarded ammunition, whatever it can get, to aid it in repelling the assaults of a people vastly inferior to it in numbers."

The Postmaster-General says with reference to mails to the Orient:—

By utilizing the fast steamers sailing once or twice a month from Tacoma, Wash., as well as the steamers sailing regularly three times a month from San Francisco, the opportunity for the exchange of mails with Japan and China has been increased to not less than four and sometimes five dispatches during one month. This is an actual gain of one or two dispatches a month, the additional dispatches being made through the post-office of Tacoma, which office by its seal and discretion justified the experiment of intrusting to it the care of these important international mails, which are required to be handled and treated in strict accordance with the stipulations of the universal postal convention.

No change has occurred in our means of communication with the Australian colonies—the service being regular once every four weeks from San Francisco to Sydney, performed by the Oceanic Steamship Company under an arrangement entered into with the colonies of New Zealand and New South Wales many years ago, but which is renewed from year to year. This department is not a party to the arrangement, but contributes toward the support of the service to the extent of its ability under the statutes in force by allowing to the Oceanic Steamship Company all of the postage collected on the mails conveyed by its steamers sailing under the United States flag, which amounts to about \$55,000 a year.

Advantage is also taken of opportunities offered for the dispatch of correspondence for the colonies by means of the Canadian line of steamers sailing from Vancouver, B.C., once a month, so that practically the frequency of the service has been doubled. The steamers above referred to call at Honolulu, and the Oceanic Steamship Company dispatches an additional vessel every month to that port. Besides, about one steamer a month en route for Japan and China calls at Honolulu, so that there are not less than three opportunities a month communication by mail with Hawaii, and generally there are not less than four.

The Indian Commission, of which Senator Dawes, of Massachusetts, is chairman, has submitted a report to the Interior Department. This report shows how shrewd whites, through the present tribal system of land-holding, have by intermarriage got hold of valuable tracts of land; and yet only one tribe (the Cherokee) has been found willing to adopt the severalty land-

holding system, recommended by the Commission. Miss Frances E. Willard has been re-elected President of the National W.C.T.U.

The climax of the foot-ball season comes about Thanksgiving time. The following are some of the important games of the past week or so: Yale 12, Harvard 4; Pennsylvania 18, Chicago Athletic Association 4; Dartmouth 0; Wisconsin 6, Minnesota 0; Purdue 28, De Pauw 0; Stanford 6, California 0; Nebraska 36, Iowa 0; Kansas 18, Missouri 12; Cornell 13, Lehigh 6; Virginia 34, North Carolina 0; Michigan, 6 Chicago 4.

The following poem is taken from the December *Ladies' Home Journal*:—

TO A JAPANESE NIGHTINGALE.

BY MARY MCNEIL SCOTT.

Dark on the face of a low, full moon
Swayeth the tall bamboo.
No flute nor quiver of song is heard,
Though sheer on the tip a small brown bird
Sways to an inward tune.
Oh, small brown bird, like a dusky star,
Lone on the tall bamboo,
Thou germ of the soul of a summer night
Thou quickening core of a lost delight
Of ecstasy bore afar.
Boar out thy bliss to the tingling air,
Sing from the tall bamboo,
Loosen the long, clear, syrup note
That shimmers and throbs in thy delicate throat,
Mellow my soul's despair!

PEDESTRIANISM IN YOKOHAMA.

Arthur Hancock, the professional walker, brought off his second match on Friday afternoon on the Cricket-ground. The competition was under similar conditions to the last, eight gentlemen walking two laps each, while Hancock covered the whole distance, 4 miles and 1,268 yards. The afternoon was bright and pleasant, attracting thereby a good number of spectators. Frosty mornings have broken up the track somewhat, making the going heavy, but the average times of the amateurs were much better than on the 27th September. Then the Yokohama men completed the distance in 43.10, yesterday they did it in 43.06, and each was under 5.40 for the two laps. Allcock, in September, did the fastest time, 5.11, a second slower than Hancock's best, but McNeill has pulled this down with ease to 5.08. A glance at the table below will show that Hancock was behind his September time by some 14 seconds, the figures being, September 27th, 43.16; December 21st, 43.30.

E. R. Morris opened the match and got round the first time in 2.28, with Hancock a yard behind. The second lap took 2.48, and at its finish Hancock was nearly level. Allcock, who drew away at the start, led by two yards at the end of the first lap, which he covered in 2.47; his next was slower, 2.52, but he was two yards to the good. Schellenberg, who has not a very stylish action, was clocked at 2.46 and 2.51, and increased the amateurs' lead to three yards. Sharp burst away with a splendid stride which took him round in 2.36, and 2.39, half a second less than E. R. Morris, who had held the best time so far. Carst, a youthful athlete of much promise, opened well, but the lead which he gained at the start was eventually reduced to about three and a half yards at the finish. His times were, 2.43, and 2.50. Then McNeill took up the race and by the time Hancock turned his first corner was 25 yards to the good. He increased this all the way along, and when Lias entered the field as his successor the professional had some 40 yards to make up ere he could get on level terms. Mr. McNeill took 2.29 and 2.39, the professional 11 and 13 seconds, respectively longer. In his impatience to be off, Lias started one and a half yards in front of the leader, but this was afterwards rectified by Archer being placed the like distance behind the line. Lias, who drew away from the very start, finished with a good 50 yards to spare, beating Hancock by some 36 seconds. Archer, the last competitor, increased the lead in the first lap, which he covered in 2.30, but in the last round Hancock put on the pace and coming down the straight reduced the distance which separated him from the leader. To win was beyond him, however, and when Archer passed the post Hancock was 23½ secs. to the lead. Mr. B. Hyde-Pearson acted as referee, Mr. Pinn as time-keeper, and Mr. Dodds as starter. Times:—

E. R. Morris	1st lap 2.28	2nd Hancock.
G. Allcock	1st lap 2.47	2nd 2.52
M. Schellenberg.....	1st lap 2.46	2nd 2.51
B. Sharp	1st lap 2.46	2nd 2.51
W. Carst	1st lap 2.43	2nd 2.50
D. McNeill	1st lap 2.29	2nd 2.39
F. J. Lias	1st lap 2.30	2nd 2.39
J. Archer	1st lap 2.30	2nd 2.39

THE TRUTH ABOUT THE WAR.

WHY JAPAN HAS FALLEN UPON CHINA.

Tokyo, October 27th.

Before this letter can reach the *Transcript* much of the misunderstanding engendered in America and Europe concerning the cause and course of the present war between Japan and China will have been cleared away, but what I send will be in time for a little more distinct telling of the truth. It would be claiming rather much to call Japan's invasion of Korea "righteous," but using the standard by which wars are begun even in the Christian West, the fair-minded man who knows the facts must justify Japan's present struggle. We need not read back into ancient history for reasons on which to base this assertion. It may be remembered, however, that a consequence of the old struggles between China and Japan over Korea, was to leave the little kingdom, at the opening of the new era for the East thirty years ago, in more or less intimate political and commercial relations with both the greater Powers, its status not definitely fixed with either. True, the Chinese had become during the Tokugawa period in Japan, the 250 years reign of the Shogun ("Tycoon"), dominant in Korean civil affairs, social life and trade; but for centuries, until 1790, Korea had been tributary to Japan as well as to China, and also, since 1615, until the end of the Tokugawa era, less than thirty years ago, the Koreans had always recognized it as their duty to Japan to send an embassy to the latter country to announce the accession to their throne of a new king.

A far-reaching change, however, in the relations of the three countries was begun by the Korean Government at the time Japan committed itself to the acceptance of civilization as it had been developed in Europe and America. This act on the part of Japan was, in the judgment of the Chinese, treason to the peoples of Eastern Asia. Whatever regard, in spite of centuries-long enmity, the Chinese may have had for the Japanese because of kinship in religion, art, social custom and order, and somewhat in blood, was thereupon changed into intense hate and contempt. What the Chinese felt the Koreans felt, too, and upon good opportunity the Government of the little kingdom, directed and encouraged by the greater Power, dared to make use of its changed mood. A decisive event occurred not long after the rule of the Tokugawa Shingun came to an end by the restoration in 1868 of the Japanese emperor to active reign. The Japanese Government sent an envoy to inform the Korean court of the "restoration" and to renew expressions of international friendship. But the envoy was refused reception or recognition, and his message was ignored. This insult was borne by the Japanese without protest. But soon afterwards, when some shipwrecked Koreans were sent home by the Japanese, and some Japanese officials, accompanying them, with friendly messages to the Government, were refused a reception, the insult aroused much anger in Japan, and a war between Japan and China was prevented only by the earnest protests of a peace party in the councils of Japan's newly organized Government. This was the situation in which these far eastern nations were placed at the close of the first decade after the Japanese, through Commodore Perry's efforts, had opened their country to the larger world, and at the time the new era of Meiji, or "Enlightened Peace" had been begun.

The past twenty-seven years have made a record for Japan of a steady increase in the wealth, power, and knowledge which are characteristic of the western civilization it has accepted and furthered, and during these same years Korea, or rather China in Korea, as steadily resisted as far as possible all Japan's efforts, put forth under the stimulus of its new life. Naturally Japan, having entered into commercial relations with the world's peoples, has desired whatever expansion of trade might follow a larger intercourse with its immediate neighbours. But Korea has been all along compelled by China to put all possible obstacles in the way of Japan's or any other people's approaches. China sought to monopolize whatever gains Korea might yield. And yet Korea was not then, and had never been, a part of the Chinese empire. It was a tribute-paying, but never a subject state. Lying before me are some notes made by Captain J. M. James, now of Tokyo, the commander of the first Western vessel which penetrated Korean waters. In the summer of 1866, Captain James, with a small British steamer, the *Emperor*, entered the river on which the Korean capital, Seoul, is situated. With great care he sounded his way to a point about twenty-five miles below Seoul, when he was stopped at a large city named Kaug-hwa (Kiaug-hwa). After many difficulties he procured there

an interview with the governor of the city and an ex-ambassador from Korea to Peking. That notable interview closed with the following declaration, which for our present purpose is significant, it being the first expression of Korean opinion made to a foreigner seeking commercial relations with the "Hermit Kingdom": "The ex-ambassador, speaking Chinese fluently, seemed to appreciate our motives, and said they would much like to trade with foreigners independent of the Chinese, but at present no arrangements could be made to do so, unless we could get sanction of the emperor of China, a treaty being in force restricting trade to China only and that overland. So of course here ended our mission."

Japan's political relations with Korea were next marked by an event occurring in the year 1875. Japan had sent an envoy early in this year to Korea with messages similar to those sent thither at the time of the restoration, but again Korea had refused to become friendly with Japan or to have any extended trade intercourse with the Japanese people. In the month of August a Japanese war-vessel on the way to China stopped at Chemulpo in need of water and fire-wood. The Koreans fired on the landing party, wounding two of them. This act was not to be endured. The Japanese at once attacked their assailants and destroyed one of their forts. When news of the outrage reached Tokyo, resolute action was taken. A mission supported by a fleet was sent to Korea demanding the establishment of friendly relations between the two countries. Korea did not—could not—refuse. China, when appealed to by the Korean Government, refused to assume, as was China's habit, any responsibility for Korea's acts, and declined to defend Korea in this crisis. Korea thereupon sent a letter of apology to Japan and expressed readiness to enter an international compact. A treaty of friendship and commerce was then made between the two Powers, China taking no part whatever in the transaction. In fact, never to be forgotten, in the declaration of the first article of this treaty—"Chosen (Korea) being an independent State, enjoys the same sovereign rights as Japan." In May of the next year, 1876, Korea sent an envoy to Japan, opened its ports of Jinan and Ninsen to trade, and arranged for mutual representation at the courts of Seoul and Tokyo.

From this time Korea began to make, and for a time made, notable advances in the same path of civilization that Japan had entered under Commodore Perry's lead twelve years before. What the Americans had done for Japan, the Japanese had attempted for Korea. But with this fact the parallel stops. Korea was not to be allowed to follow Japan far. When the Chinese realized what had been inaugurated in Korea and understood that Korea might thereby be lost to the old order of Eastern Asia, cunning and persistent measures were taken to avert such a catastrophe. During the following seven years intrigue upon intrigue was carried through, under Chinese influence, in the Korean Court. In 1882 a new crisis was precipitated by the pro-Chinese and conservative factions. Riots and incipient rebellions were started, many members of the party directing affairs were killed, as also were several Japanese officers; the Japanese legation was attacked by a mob, and the Japanese minister, with a small guard, was compelled to fight his way in the sea-coast where he escaped in a small fishing-boat, to be picked up by a British man-of-war and carried to Nagasaki in Japan.

This was the beginning of the troubles which have developed directly into the present war. In the whole disastrous sequence of affairs since then it is clear now that China, and not Japan has been the aggressor. Japan's aggression, if any of its acts may be called aggression, was in its demand in 1875, that Korea's cruelty to shipwrecked or visiting vessels should stop, and that the country's isolation from the rest of the world should be given up. All trouble between Korea and Japan since then has been directly or indirectly of China's making. In 1882, China's significant public act was to take the chief fomentor of the rebellion and riots under its own protection and to shelter him in Tientsin.

The Japanese Government, as soon as possible after this outbreak, sent its minister back to Korea in a man-of-war and demanded an explanation and reparation. Korea was made to pay an indemnity of 500,000 yen (of which sum, however, 400,000 yen was afterward returned by Japan to Korea), to punish the chief criminals, to furnish a guard for the Japanese legation, and to apologize through an ambassador for the outrages. Thereafter both China and Japan stationed small bodies of troops in Seoul, and both the nations shared the training of the Korean soldiers. By this time two well-defined parties had divided whatever political interest there was in Korea. Progressionists, or

Independents, and Conservatives they were called. The former were in favour of advance in Western civilization, of national independence, and of resistance to Chinese interference; the latter were the adherents of Chinese emissaries and were the enemies of the country's new political and social aims. Towards the close of 1884 the tension between these two parties changed into open conflicts. The king thereupon appealed to the Japanese legation for help. The Japanese *chargé d'affaires* went to the palace with a small guard. There he was attacked by a force composed of both Koreans and Chinese. The Chinese soldiers captured the king's mother; the king out of filial piety went with his mother. The Japanese thereupon retired to their legation; the legation was at once attacked, burned to the ground and many persons killed. Again Japan sent an envoy demanding satisfaction for the assault made upon its representative. Again damages were promised in payment, apologies were offered, and the Koreans were compelled to rebuild the burned legation buildings. But this time Japan determined to try to make the future secure beyond hazard. Its representative went directly to the evident head-quarters of the Korean disturbance, the authorities in China. In March, 1885, Count Ito Hirobumi, now Japan's premier, so the last official history of Japan says, "accompanied by Lieutenant-General Saigō, proceeded to China and concluded with Viceroy Li at Tientsin a convention providing that China and Japan should withdraw their troops from Korea; that neither power should thereafter send a force thither without giving previous notice to the other, and that the Chinese soldiers who had taken part in the attack on the Japanese in Seoul should be punished. Friendly relations were thus established between Japan and China."

This was the situation reached ten years ago, and this has officially been the recognized relation of these three countries to one another down to the spring of this year, 1894. Nowhere in official documents does it appear that Korea has during this period been transformed into one of China's subject States. On the contrary, official papers, proclamations, and numerous treaties all show that Korea has been regarded by Japan and by other countries as a sovereign state; and China has distinctly announced itself at critical times as not responsible for Korea's acts.

The Tientsin treaty, however, did not prove to be any obstacle whatever to China's cherished attempts to hold its little neighbour back from following in the path of the new civilization opened up for it by Japan. But during the past ten years many Japanese availed themselves of the privilege of taking residence in the opened ports of Korea for the purposes of trade. Japan's trade in consequence, grew to be probably the most important part of Korea's commercial intercourse with the outer world. In this way the peace and progress of Korea naturally became of much additional moment to its near neighbours of this island empire, and Japan's treaty rights thereby acquired an added value. China's perpetual interference with Korea's affairs, therefore, could not be regarded by Japan except with solicitous interest. This interference has been visible in the miserable mis-management of every department of the Korean Government. Under Chinese influence the most complete and oppressive corruption pervaded the administration of civil affairs. And time and again during the decade past the country has been perilously disturbed by attempted resistance on the part of the people to their merciless governors. At last the decisive hour came, Japan's patience was exhausted; and the Tokugawa rising last spring was accepted by the Japanese Government as the occasion for settling once and for always, the long-threatening, perennially irritating and degrading condition of affairs arising out of Chinese dominance in the administration of the Korean state.

In the first official paper of the series relating to the suppression of the Tokugawa rebellion, dated June 6, but just now made public, the Chinese minister in Tokyo, notifying the Japanese government of the despatch of Chinese troops to Korea, used the needlessly aggressive phrase, "our tributary State." The words were not true in their intended sense. Japan repudiated them in its reply, and soon put into force its own determination to bring the whole matter to a settlement. This settlement was to be a thorough reform of a Korean maladministration. Japan invited China to join with it in this work. The Chinese authorities of course saw Japan's real meaning in this proposition. Reform such as that which Japan invited China to help to bring about in Korea necessarily meant Chinese help to destroy Chinese work. Naturally China refused. As naturally then, since Japan had determined to destroy the effects of Chinese corruption in Korea the Japanese Government announced that it would

proceed to bring about alone the needed reformation. The minister for foreign affairs in Japan in a despatch to China just now published but sent not long before the outbreak of hostilities summed up Japanese opinion as follows:—

Sad experience teaches us that the Peninsular Kingdom is the theatre of political intrigues and civil revolts and disturbances of such frequent recurrence as to justify the conclusion that the Government of that country is lacking in some of the elements which are essential to a responsible independence.

The interests of Japan in Korea, arising from propinquity as well as commerce, are too important and far-reaching to allow her to view with indifference the deplorable condition of affairs in that kingdom.

In this situation an attitude of unconcern on the part of Japan would not only be a denial of the sentiments of friendship and good correspondence which the Imperial Government entertain for Korea, but it would be a censurable disregard of the law of self-preservation.

The necessity for the adoption of measures looking to the peace and tranquillity of Korea is, for the reasons already given, a demand which the Imperial Government cannot permit to pass unheeded, for so long as those measures are delayed, so long will the cause of the disorder exist.

In the estimation of the Imperial Government, therefore, the withdrawal of their forces should be consequent upon the establishment of some understanding that will serve to guarantee the future peace, order, and good government of the country. That course of action is, moreover, it seems to his imperial majesty's Government, not only in perfect harmony with the spirit of the Tientsin convention, but it accords with the dictates of reasonable precaution.

The Chinese again refused to have anything to do with Japan's offer. Japan thereupon, as doubtless had been its expectation from the first, began the work of reform alone. But China continued to send reinforcements to her Korean army. Japan then warned China that the sending of any more troops would be regarded as a belligerent act. China sent more troops; one of the ships carrying these troops was met and sunk by the Japanese after waiting five hours for it to surrender, and after their own vessels had been fired upon by the troopship's convoy. Thus the war opened.

The whole history of the events which have led up to this tragic culmination is, I think, a record of an irrepressible conflict between leading the world's nations onward and upward and those which fetter and degrade them. Japan has been all along and is now, I think, in the right, so far as international right goes.

The course of the war, too, has so far shown Japan to be a faithful follower of the things which make for enlightenment, humanity, and peace. At another time I may make a record for the *Transcript* of the humane works of the Japanese campaigns. It is of such excellence and magnitude that it must command the admiration of the world when it shall have become fully known. Suffice it here that I quote two paragraphs from a proclamation lately issued by the minister of state for war. The cruel barbarities of the Chinese soldiers had become common talk and had aroused great excitement in this country, but in the midst of the excitement a Government message has been issued in which are these words:—"Belligerent operations being properly confined to the military and naval forces actually engaged, and there being no reason whatever for enmity between individuals because their countries are at war, the common principles of humanity dictate that succour and rescue should be extended even to those enemies who are disabled by wounds by disease.

"The Japanese troops must never forget that however cruel and vindictive the foe may show himself, he must nevertheless be treated in accordance with the acknowledged rules of civilization, his captured kindly and considerately protected. Even the body of a dead enemy should be treated with respect. Japanese soldiers should always bear in mind the gracious benevolence of their august sovereign, and should not be more anxious to display courage than charity."

I shall not write more now. My purpose has been chiefly to show by a rapid glance at recent events the main facts by which the present war has been brought into being. Evidently its causes had not been clearly understood in America and Europe. I have but set forth what I am confident is the true sequence of events which, notwithstanding all the ambition of Japan to secure national aggrandizement, or government attempts to quell internal dissensions, or to open ways for emigration, or to command the respect of Europe and

America, has led at last to Japan's determination to cast out of Korea the corrupting presence of bigoted and avaricious China.—CLAY MACCAULEY in the *Boston Evening Transcript*.

A JAPANESE SOLDIER.

BY SIR EDWIN ARNOLD.

(COPYRIGHT.)

The following appears in the *Daily Telegraph* of Nov. 17:—

Extract translated from letter of an officer in Marshal Yamagata's Korean Army: "I send you the enclosed true account of the death of Shirakami Genjiro, a young soldier, who was the first man killed at our battle of Song-hwan," &c.

Shirakami Genjiro,
Bugler in the Line!
You shall let our Westerners know
Why the kiku* shine!
Why the Sun-flag, gleaming
Bright from field to field,
Drives the Dragon, screaming,
Makes the Pig-tails yield.

Shirakami Genjiro
(Okayama man)
Left his ripening rice, to go
Fighting for Japan;
Musket on his shoulder,
Bugle on his breast,
Unto each beholder
Linesman, like the rest.

Sad for grey-haired husbandman,
Fatherly—in years—
Sad for pretty Yoshi San,
Proudly checking tears;
No one in the village,
Only Genjiro,
Careless of the tillage,
Glad to ship, and go.

But the Emperor doth proclaim
Soldiers must come forth!
Is there not despite and shame
To Nippon, in the North?
Good at target practice,
And bugle-calls to blow,
Duty bids! the fact is
Genjiro must go.

Ah, poor boy! the home-place
Never fairer seemed;
Never, out of Yoshi's face,
Softer sunshine beamed;
Yet his country calls him;
Dai-Nippon hath need;
Whatsoe'er befalls him
Genjiro will speed.

Traversed is the ocean,
Reached Korea's strand;
War's accursed commotion
Rages o'er the land;
But he knows his Nation
Watching at his back,
While he blows to station,
Blows for bivouac.

If 't were only given
Genjiro might do
By some grace of Heaven
Something brave and new.
Pleasing the General, perchance;—
Alas! 'tis never so!
A bugler nameless must advance,
And blow, and blow, and blow.

So blew and marched the Japan boy,
Still hearing in his breast
Deep loyalty for inmost joy,
Duty for food and rest;
Since, none be born so lowly
In that sweet Eastern land
Who love not Nippon wholly
Or fear for her to stand.

The battle-morning frowned,
The Sun-flags fluttered out
By Song-hwan, on Korean ground
Gathered the Chinese rout:
Then Genjiro, the peasant,
Fearless, virgin of war,
Saw the good sight and pleasant
Of foemen stretching far.

He stood against the General's side
The brazen bugle clasped;
The Leader glancing far and wide
His sabre-handle grasped:
Then drew—and, smiling, said
"Blow up the *Susumi*!
Louder than ever thy music played,
Sound me the charge this day."

And Genjiro, rejoicing,
Sets bugle-lip to lips;—

But, at the first loud voicing,
A bitter bullet slips
From forth a powder-cloud,
And, plunging in his breast
Stains—striking sharp and loud—
Baldric and cord and vest.
Oh, red it runs; the small stream
Will drain away his life!
Kindly the Leader's accents seem,
But 'tis the nick of strife.
"Let some hand from him take it
And blow my onset clear,
One minute lost will make it
A loss to cost us dear!"

"Nay, nay!"—eyes black with pride—
Cries wounded Genjiro,
"I was to sound, and none beside!
And surely I will blow!
This little thing, and fast
I may do for Japan!"
And forthwith loud he blew his blast,
Already a dead man.

He blew the charge so loud
It blared across the plain,
It rattled, large and proud,
From mountain unto main:
He blew so clear and soft
The Pig-tails made to fly,
Before the Sun-flags, borne aloft,
Could reach their enemy.

And, while he blew, the boy's blood
Fell, scarlet drop by drop,
The bugle's mouth—and his—inbrued,
Nor from that wound would stop
The trickling, trickling! Stouly
He sounded *Susumi*,
The call that bids all soldiers
Close in the deadly fray.
To tune of that brave clamour
The Song-hwan wall was won:
The fierce charge sped, the foemen fled,
The day's great work stood done,
But when they turned, victorious,
There! on the crimsoned ground,
Clasping his bugle, glorious,
Young Genjiro was found.

London, Nov. 14, 1894. EDWIN ARNOLD.

* The chrysanthemum-flowers, emblem of Japan. The *Shi-no-maru*, a Red Sun on a white ground, is the standard of Japan, and the Dragon on a yellow ground, of China.

GREAT FIRE IN KOBE.

SERIOUS DESTRUCTION OF PROPERTY.

Says the *Kobe Chronicle* of the 24th inst.:—The most extensive and destructive fire which has occurred in the Settlement this year broke out about a quarter to twelve on Sunday night on the premises in the rear of Lot No. 62, occupied by Messrs. Tuska & Co., and extended to the adjoining Lot No. 51, completely destroying a godown filled with matting and curios belonging to Messrs. McGlew & Co. Upon the first-named lot were the premises formerly occupied by Messrs. Hughes & Co., and of which Messrs. Tuska have only been tenants for a few months. The premises destroyed consisted of a two-storied house, with a bungalow built directly in front and connecting with it, two large godowns, and a packing house. The outbreak appears to have occurred in the boys' house, and must have been smouldering for sometime, for when the alarm was given and the fire brigade with its customary promptitude arrived on the scene, the corner of the connecting houses was well alight. Superintendent Sim quickly got his engines to work, but notwithstanding a plentiful supply of water, and the assistance of a number of native brigades, which came up in rapid succession, the fire steadily extended. By half-past twelve the two houses were ablaze, and one of the godowns on Lot No. 51, occupied by Messrs. McGlew & Co., had caught. This godown, as well as that adjoining, was stored with most inflammable material, mostly matting and curios, and as soon as the fire reached it, it blazed like tinder, at once rendering all hopes of saving any of the buildings on the two lots out of the question.

The efforts of the firemen were therefore directed to preventing the fire spreading to the adjoining lots, that on the south side being occupied by a large godown belonging to Messrs. Levy & Co., and on the other by a private residence, now empty, but formerly occupied by Mr. Trevithick. That the big godown of Messrs. Levy was saved reflects great credit on the firemen, as it was very close to the two blazing godowns and at one time it seemed as if it were bound to go. Happily the firemen were assisted by an almost total absence of wind, and managed to prevent

the flames from spreading in this direction,—a most fortunate circumstance, as had Messrs. Levy's godown caught, nothing could have prevented the destruction of the whole block, for the godown in question is very large, and is filled with packing cases and other exceedingly inflammable material. On the west side of Lot 60, where the house formerly occupied by Mr. Trevi-thick stands, good work was also done. The wall is well scorched, however, and the paint greatly blistered, showing the great heat which must have been thrown off by the burning pile of buildings.

It was not until four o'clock on Monday morning that the Superintendent could say that there was no further danger of the fire spreading, but the ruins continued smouldering until late on Monday evening, now and again breaking out into flame. Owing to the exertions of the firemen and the men engaged in salvage duty, all the books of Messrs. Tuska were saved, their loss consisting simply of office furniture, insured in the London and Lancashire.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

SOLUTION TO PROBLEM No. 156.

WHITE.
1—B to Q B 7
2—Q to H 5 ch.

2—B to B 4 ch.
3—Q to Kt 6, mate
3—Q to B 4, mate
2—Q to B 3 ch.
3—B to Kt 6, mate
2—Q to B 4 ch.
3—Q to Q B 4, mate.
Correct solutions received from Diganima, Ome-ga, Krug, J.D., Shogi, E. J. King, and W.H.S.

PROBLEM No. 158.

By J. H. BLACKBURN.

White to play and mate in three moves.

GAME No. 194.

AN AUSTRALIAN CORRESPONDENCE MATCH.

The following pretty game has been recently played between Warrumbrook and Ballarat. It reflects the greatest credit upon the conductors of the White forces, and is full of instruction.

BISHOP'S GAMBIT.

WHITE. Warrumbrook.
1—P to K 4
2—P to K B 4
3—B to B 4
4—B takes P
5—K Kt to B 3
6—P takes Kt
7—Kt to Q B 3
8—P to Q 4
9—Q to R 2 ch.
10—Castles
11—Q to Q Kt 5
12—Q to Q 5
13—Kt to K 5
14—B to Q 2
15—Q to B 4
16—Q R to K sq.
17—Kt to Q R 4

BLACK. Ballarat.
1—P to K 4
2—P takes P
3—P to Q 4 (a)
4—Kt to K B 3 (b)
5—Kt takes B
6—Q takes P
7—Q to K R 4 (c)
8—B to Q 3
9—K to Q sq. (d)
10—P to K Kt 4
11—P to K B 4
12—Kt to Q B 3
13—R to K B sq.
14—Kt to K 2
15—R to K B 3
16—P to Q B 3
17—K to B 2

18—Kt to B 5
19—Q to Kt 3
20—Kt to R 6 ch. (e)
21—Kt takes Q B P ch. Black resigns.

(a) This sacrifice is necessary to free Black's game.
(b) Usually Q to R 5 ch. is played at this point, followed by P to K Kt 4.
(c) The reply to Q to K 5 ch. is K to B 2, with good attacking chances.
(d) It should be stated that the game to move is identical with one played by Morphy, Walker, Mongredien, and others in consultation. Here the "Handbook" suggests K to B sq. for Black. But, as Mr. Harlin points out, there is no chance of a side attack for Black afterwards, and his hope rests upon that.
(e) A beautiful finishing stroke in reply to a natural move.

GAME No. 195.

A sparkling game, won by the well-known master, Jasnogrodsky, against an amateur in Cardiff.

SCOTCH GAMBIT.

WHITE. Amateur.
1—P to K 4
2—Kt to K B 3
3—P to Q 4
4—B to Q B 4
5—P to B 3
6—P to K 5
7—B to Q Kt 5
8—B takes Kt ch. (a)
9—Kt takes P
10—B to K 3
11—Kt takes P (b)
12—Q to B 3
13—Q takes B
14—Resigns.

BLACK. Jasnogrodsky.
1—P to K 4
2—Kt to Q B 3
3—P takes P
4—B to B 4
5—Kt to K B 3
6—P to Q 4
7—Kt to K 5
8—P takes B
9—Castles
10—B to R 3
11—B takes B
12—B takes P ch.
13—Q to Kt 4 (c)

NOTES.

(a) 8—P takes P for B takes P is better; the text move gives Black a strong centre, and opens the way for developing his B on the Q side.
(b) Very bad, for Black may evidently give up his queen.
(c) Forcing the game. White has no means of preventing check with the Q, which is threatened both at B 5 and K 6.

GAME No. 196.

TWO KNIGHTS' DEFENCE.

WHITE.
1—P to K 4
2—Kt to K B 3
3—B to B 4
4—Kt to Kt 5
5—P takes P
6—P to Q 4
7—Castles
8—R to K sq.
9—Kt takes B P
10—Q to B 3 ch.
11—R takes B ch.
12—B to Q 3 ch.

BLACK.
1—P to K 4
2—Kt to Q B 3
3—Kt to B 3
4—P to Q 4
5—Kt takes P
6—P takes P
7—B to K 3
8—Q to Q 2
9—R takes Kt
10—K to Kt 3
11—Q takes B
and White wins.

END-GAME No. 16.

AN ENDING QUERY.

The question is asked (Standard Union Brooklyn) whether White can here force a win. We think he can easily do so, but there are points to be noted, and we shall be glad of analyses from any correspondents. The question of first move is probably immaterial.

WHITE.

Can White, with or without the move, win?

WHITE.
1—K to Kt 4
2—K to Kt 5
3—P to R 6
4—K to Kt 6
5—Kt to Kt 5
6—Kt to Q 6
7—Kt to B 7 ch.
8—P to R 7 ch.
9—P Queens ch.
10—Q to Q 8 ch.
11—Q to Q 6 mate.

BLACK.
1—K to Kt 2
2—K to R 2
3—K to Kt sq.
4—K to R sq.
5—P to B 7
6—P Queens
7—K to Kt sq.
8—K to B sq.
9—K to K 2
10—K to K 3

GAME No. 197.

CHESS AT CHICAGO.

The following amusing skit, with notes by Mr. Spencer, of the Minneapolis Chess Club, lately

appeared in the *Leeds Mercury Weekly Supplement*. The presumption, which is considerable, is that it was played during the Chicago Fair, and it is probably as great a curiosity as any exhibited there:

MUZIO GAMBIT.

WHITE.
1—P to K 4
2—P to K B 4
3—K Kt to B 3
4—B to B 4
5—B takes P ch.
6—Kt to K 5 ch.
7—Q takes P ch.
8—P to Q 4 ch.
9—P to Q Kt 4
10—P to B 3 ch.
11—Kt takes B (e)
12—B to Kt 2 ch. (g)
13—Q to K 2 ch.
14—K to B 2 mate

BLACK.
1—P to K 4
2—P takes P
3—P to K Kt 4
4—P to Kt 5
5—K takes B
6—K to K 3 (a)
7—K takes Kt (b)
8—K takes Q P (c)
9—B takes P ch. (d)
10—B takes P ch.
11—K takes Kt (f)
12—K takes B
13—K takes R (h)
14—(i).

(a) Black starts for the World's Fair.
(b) Being awestruck, he takes a "horse."
(c) At this point he runs across a private citizen.
(d) The Bishop as a peacemaker.
(e) Horse kicks Bishop black.
(f) World's Fair being a good way off, he takes another horse.
(g) No use for the clergy.
(h) Safe arrival at the Rookery, Chicago Fair.
(i) Gathered to his fathers.

GAME No. 198.

Players unknown.

BERLIN DEFENCE.

WHITE.
1—P to K 4
2—B to B 4
3—Kt to K B 3
4—Kt to B 3
5—Q P takes Kt
6—Kt to Kt 5
7—B takes B
8—Q to B 3
9—Q takes Kt P

BLACK.
1—P to K 4
2—Kt to K B 3
3—Kt takes P
4—Kt takes Kt
5—P to Q 3 (a)
6—B to K 3
7—P takes B
8—Q to Q 2
9—Q to B 3

White mates in three moves.

NOTE.

(a) P to K B 3 was necessary to stop the advance of the Kt.

END-GAME PUZZLE (No. 17).

By A. G. STUBBS.

BLACK.

WHITE.

White to play and mate in two moves.

GAME No. 199.

A CHESSKIN.

A (tit-bit) recently played between Mr. Max J. Meyer (White) and another:—

WHITE.
1—P to K 4
2—P to K B 4
3—Kt to K B 3
4—B to B 4
5—Castles
6—Kt to Q B 3
7—P to K R 3 (b)
8—Kt takes P
9—B to B 7 mate.

BLACK.
1—P to K 4
2—Kt to Q B 3
3—P to Q 3
4—P to K B 3
5—Kt to K 2 (a)
6—B to Kt 5
7—B to R 4
8—B takes Q

(a) Of course inferior, or such combination as White here makes would be impossible.
(b) It is necessary first to drive the Bishop. If Kt takes P at once the reply is Kt takes Kt.

GAME No. 200.

A COLONIAL CHESSKIN.

An amusing game played in the Gawler tourney on June 2nd at odds of Pawns and two moves:—

REMOVE BLACK'S K B P.

WHITE.
1—P to K 4
2—P to Q 4
3—B takes Kt
4—Q R 5 mates!!!

BLACK.
1—.....
2—Kt to K R 3?
3—P takes B?

THE BOLD LITTLE PAWN.

[Written by Mr. J. G. Cunningham, and sung by Mr. G. C. Bennett at a recent meeting of Chess votaries.]

Two steps to the front does the little Pawn go,
And boldly defies all the arrogant foe.
He scorns now to fly, but is ready to die;
"Hark forward for victory!" still in his cry.
In the fierce battle's heat he knows not retreat,
But can die on the square where he's planted his feet;

For no belted Knight nor Bishop in lawn
Has so brave a heart as the Bold Little Pawn.

To the right and the left he scatters his blows
Midst the clustering ranks of his merciless foes;
Now he captures a Knight, and the Queen puts to flight;

As he forks them both in the midst of the fight;
With a deadly spring he cries "check" to the King,
While Bishop and Rook hear their death-knell ring.
Oh! no belted Knight nor Bishop in lawn
Has so brave a heart as the Bold Little Pawn.

Fierce rages the battle on every hand;
Sore pressed is the King by a ruthless band;
Yet his heart does not fail, though foes thus assail;
Pawn springs to his eighth square, a Queen now
all hail!

'Tis not yet too late, strike one blow for the State;
That blow is struck home, and the cry is "Check-
mate!"

Thus no belted Knight nor Bishop in lawn
Plays so brave a part as the Bold Little Pawn.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL"]

London, December 24.

A violent storm swept over Great Britain on Friday last, causing immense destruction of property and loss of life.

The Hungarian Ministry, though backed by a large majority in Parliament, has resigned, believing that it has lost the confidence of the Emperor, who appears disposed to listen to the Clericals against the Liberals.

London, December 26.

Lord Randolph Churchill is suffering from general paralysis, and is in a critical condition.

[FROM THE "DAILY NEWS."]

London, December 30.

The Budget Report in the Egyptian Council states that the condition of the fellahen (or peasantry of the country) is desperate, owing to over-taxation.

By two recent Imperial Decrees the arrest has been ordered of numerous Chinese Generals who were responsible for the loss of Port Arthur and the Forts at Talienswan.

Admiral Ting is also to be arrested and punished for cowardice, and for having failed to protect Port Arthur.

London, December 19.

The Foreign Ministers in Peking demand the right of bringing marines to Peking as guards for the Legations, and the required permission has been granted.

It is denied in Paris that the Queen of Madagascar has accepted any conditions. A Bill has been passed permitting young men from Reunion to volunteer for service in Madagascar.

Affairs in Rome are quiet. Several Deputies of the Opposition party have started for the provinces for the purpose of raising agitation.

[FROM JAPANESE PAPERS.]

Pekin, December 28.

(The following telegram was received by a certain Legation in Tokyo on the 28th.)

The collision between the peace and war parties in the Peking Government has reached an acute phase. Prince Kung, the Empress Dowager, and the Viceroy Li, propose to conclude peace at any price, but the Emperor, General Lin, and General von Hanneken protest against such a proceeding. It is said that the war party declare that any person who favours peace should be put to death, and that the war must be continued. Such being the state of affairs, although an Ambassador of peace may be sent to Japan, it will be difficult to invest him with powers under an Imperial ordinance.

Shanghai, December 28.

The appointment of Chang by the Emperor as Ambassador to Japan, to give for peace

been adopted nearly from motives of policy. It is doubtful whether he will leave for Japan. There seems to be considerable foundation for the rumour that he will not start on such a mission.

A few foreign employes in the Chinese Government have secretly left here for Hamburg. It is said to be an open secret that they have gone to buy arms for China.

It has been ascertained on good authority that the Viceroy Li has imparted to a foreign military employe the information that at a conference of the Tsung-li Yamen it was determined not to propose a stoppage of the war, or to conclude peace until Shan-hai-kwan has fallen, and that the previous proposals for peace were without foundation.

LATEST COMMERCIAL.

IMPORTS.

No particular change in this market. Buyers are preparing for the "Shogatsu" and while taking delivery fairly well of some old contracts, are for the moment adverse to entering new bargains. Prices generally unchanged.

COTTON PICK GOODS.

	PER PIECE.
Grey Shillings—8½ yds, 3½ yds, 3½ inches	\$2.25 to 2.90
Grey Shillings—9½ yds, 3½ yds, 45 inches	2.50 to 3.25

MILK.

The good feeling continues, but dealers are not anxious to make new contracts to any great extent. There are, however, symptoms of a good trade early next month.

	PER POUND.
Flat Bars, 4 inch	\$1.60 to 3.70
Flat Bars, 4 inch	3.70 to 3.80
Round and square up to 4 inch	3.60 to 3.80

Iron Plates, assorted	3.70 to 3.85
Sheet Iron	4.90 to 5.10
Galvanized Iron sheets	9.00 to 9.25
Wire Nails, assorted	5.75 to 6.00
Tin Plates, per box	6.25 to 7.00
Pig Iron, No. 3	1.65 to 1.70

KEROSENE.

Quiet market after the recent good business; but prices are strong and the outlook healthy.

Chester	\$1.75 to 1.77½
Camel	1.72½ to 1.75
Devise	—
Russian Anchor	1.72½ to 1.75
Russian Moon	1.70 to 1.72½

SUGAR.

Brown—No special feature. The unlucky *Brema* got ashore going out of port, but after some delay proceeded to Kobe with the balance of her cargo. White—Steady and unchanged.

Brown Talao	\$4.20 to 4.30
Brown Manila	4.90 to 5.00
Brown Daitong (New)	3.45 to 3.50
Brown Canton	3.70 to 4.25
White Java and Penang	6.60 to 6.70
White Refined	6.50 to 9.00

EXPORTS.

RAW SILK.

A fair amount of business was done early in the week; but the Christmas holidays have in some degree interfered with inspection and we note some rejections. Probably the near approach of the New Year may render sellers current, and we may yet see considerable business in the near future.

QUOTATIONS.—(NEW SILK.).

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes direct into the hands of the WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

November 3, 1894.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and arresting and subduing all inflammations.

Mr. J. T. Courcy, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas; and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 21, 1894.

ATKINSON'S WHITE ROSE

The original and only genuine. Renowned throughout the world as the most exquisite Perfume. Avoid Imitations.
